2006-08 ACCESSORIES & EQUIPMENT

Multiplex Control System - Civic (Except Hybrid)

COMPONENT LOCATION INDEX

NOTE: **Refer to the MULTIPLEX INTEGRATED CONTROL SYSTEM (GX) (SUPPLEMENT) article for additional information for the GX model.**

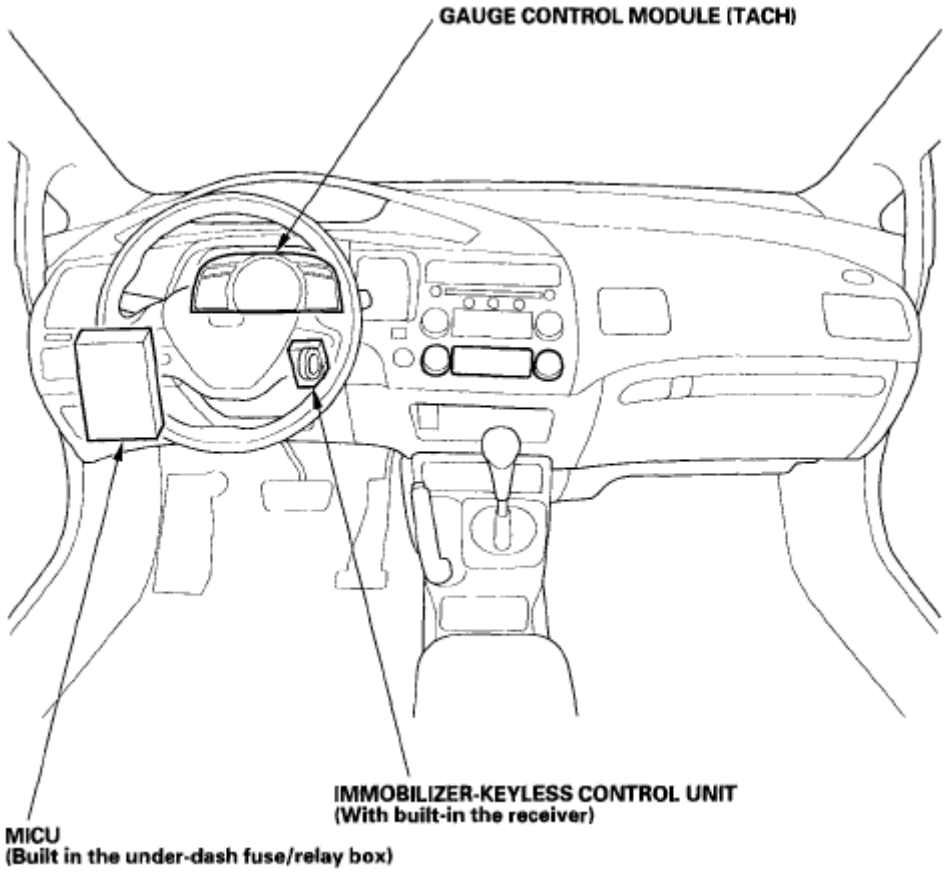

Fig. 1: Locating Multiplex Control System Components

GENERAL TROUBLESHOOTING INFORMATION

TROUBLESHOOTING CAN CIRCUIT RELATED PROBLEMS

NOTE: **Check the ECM/PCM for DTCs and troubleshoot ECM/PCM (see GENERAL TROUBLESHOOTING INFORMATION) or F-CAN loss of communication errors first.**

Using the HDS (Preferred method)

1. Go to B-CAN System Diagnosis Test Mode A to check for "Connected units" and DTCs (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

2. If no DTCs are retrieved, go to **B-CAN SYSTEM DIAGNOSIS TEST MODE C** (see) or D (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE D**).

Without HDS (Use only if the HDS is unavailable)

1. Check for communication circuit problems using B-CAN System Diagnostic Test (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE 1 AND TEST MODE 2 (WITHOUT THE HDS)**).
2. Check for DTCs.
3. Sort, and then troubleshoot the DTCs in the order below.
    - 1 Battery voltage DTCs
    - 2 Internal error DTCs
    - 3 Loss of communication DTCs (beginning with the lowest number first; for example, if B1008 and B1011 are retrieved, troubleshoot B1008 first)
    - 4 Signal error DTCs
4. If no DTCs are retrieved, use B-CAN System Diagnostic Test Mode 2 to check all inputs related to failure (see step 10**TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE 1 AND TEST MODE 2 (WITHOUT THE HDS)**).

How to display DTCs on the gauge control module (tach)

While in Test Mode 1, the DTCs which have been detected and stored individually by various B-CAN (Body-controller Area Network) units, will be shown one by one on the odometer display when the communication between the MICU and the gauge control module is normal. To scroll through the DTCs, press the select/reset button.

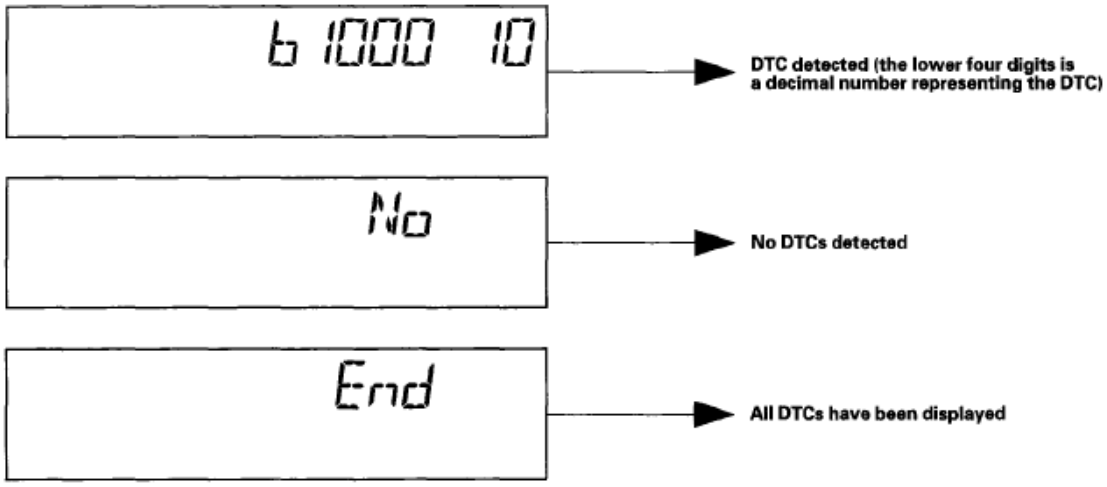

Fig. 2: Identifying Gauge Control Module (Tach)

The unit that has stored the code can be identified by the number shown on the multi-information display.

MICU REFERENCE

MICU	10
Gauge control module	50

How to clear the DTC

While in Test Mode 1, press and hold down the SELECT/RESET button for more than 10 seconds.

Loss of Communication DTC cross-reference chart

When an ECU is unable to communicate with the other ECUs on the CAN circuit, the other control units will set loss of communication DTCs. Use this chart to find the control unit that is not communicating.

1. Find the Transmitting Control Unit that is in the same row as all of the loss of communication DTCs retrieved.
2. Do the input test for the transmitting control unit.

BUS OFF AND INTERNAL ERROR CODES

DTC type	Related Unit		
	MICU	Gauge Control Module	Immobilizer-Keyless Control Unit
BUS OFF	B1000	B1150	B1900
ECU (CPU) Error	B1001		
ECU (EEPROM) Error	B1002	B1152	

RECEIVING UNIT/LOSS OF COMMUNICATION DTC

Transmitting Control Unit	Message	Receiving Unit/Loss of Communication DTC		
		MICU	Gauge Control Module	Immobilizer-Keyless Control Unit
MICU	RM		B1188	
	HLSW		B1155	
	WIPSW		B1156	
	MICU		B1157	
	DOORSW		B1159	
	DRLOCKSW		B1160	B1905
Gauge Control Module	VSP/NE	B1011		
	A/T	B1008		B1906
	CDS (SRS)	B1032		
ECM/PCM	ENG		B1168	
	A/T		B1169	
ABS or VSA Modulator-Control Unit	ABS or VSA		B1170	
EPS Control Unit	EPS		B1183	
SRS	SRS		B1187	

DTC TROUBLESHOOTING INDEX

NOTE: Check the ECM/PCM for DTCs and troubleshoot ECM/PCM (see GENERAL TROUBLESHOOTING INFORMATION) or F-CAN loss of communication errors first, then record all DTCs, and sort them by DTC type using the DTC troubleshooting index, then troubleshoot the DTC(s) in this order.

- Battery voltage DTCs
- Internal error DTCs
- Loss of communication DTCs (beginning with the lowest number first; for example, if B1008 and B1011 are retrieved, troubleshoot B1008 first).
- Signal error DTCs

MICU REFERENCE

DTC	Description	DTC type
B1000	Communication bus line error (BUS-OFF)	Loss of communication
B1001	MICU internal error (CPU error)	Internal error
B1002	MICU internal error (EEPROM error)	Internal error
B1008	MICU lost communication with gauge control module (A/T message)	Loss of communication
B1011	MICU lost communication with gauge control module (VSP/NE message)	Loss of communication
B1026	Front passenger's door lock switch LOCK/UNLOCK signal error	Signal error
B1032	MICU lost communication with the SRS unit (CDS message)	Signal error
B1036	IG1 line input error	Signal error
B1077	Windshield wiper (As) signal error	Signal error
DTC B1078	Daytime running lights signal error (Canada)	Signal error
DTC B1079	Daytime running lights signal error (USA)	Signal error
DTC B1127	Driver's door key cylinder switch signal error	Signal error
DTC B1128	Driver's door lock switch signal error	Signal error
DTC B1129	Driver's door lock knob switch signal error	Signal error

GAUGE CONTROL MODULE

DTC	Description	DTC type
B1150	Communication bus line error (BUS-OFF)	Loss of communication
DTC B1152	Gauge control module internal error (EEPROM error)	Internal error
DTC B1155	Gauge control module lost communication with MICU (Headlight switch message)	Loss of communication
DTC B1156	Gauge control module lost communication with MICU	Loss of communication

	(Wiper switch message)	
DTC B1157	Gauge control module lost communication with MICU (MICU message)	Loss of communication
DTC B1159	Gauge control module lost communication with MICU (DOORSW message)	Loss of communication
DTC B1160	Gauge control module lost communication with MICU (DRLOCKSW message)	Loss of communication
DTC B1168	Gauge control module lost communication with ECM/PCM (Engine messages)	Loss of communication
DTC B1169	Gauge control module lost communication with PCM (A/T message)	Loss of communication
DTC B1170	Gauge control module lost communication with ABS modulator-control unit (ABS message)	Loss of communication
DTC B1175	Fuel level sensor (Fuel gauge sending unit) circuit open	Signal error
DTC B1176	Fuel level sensor (Fuel gauge sending unit) circuit short	Signal error
DTC B1177	Battery voltage abnormal	Battery voltage
DTC B1178	F-CAN communication line error	Loss of communication
DTC B1183	Gauge control module lost communication with EPS control unit (EPS message)	Loss of communication
DTC B1187	Gauge control module lost communication with SRS unit (SRS message)	Loss of communication
DTC B1188	Gauge control module lost communication with MICU (RM message)	Loss of communication

IMMOBILIZER-KEYLESS CONTROL UNIT

DTC	Description	DTC type
B1900	Communication bus line error (BUS-OFF)	Loss of communication
DTC B1905	Immobilizer-keyless control unit lost communication with MICU (DRLOCKSW message)	Loss of communication
DTC B1906	Immobilizer-keyless control unit lost communication with gauge control module (A/T message)	Loss of communication
DTC B1925	Ignition key switch signal error	Signal error

SYSTEM DESCRIPTION

MICU CONTROL FUNCTIONS INDEX

The MICU (built into the under-dash fuse/relay box) is one of the B-CAN components. The MICU controls many systems related to the body controller area and a security system, and also works as a gateway to diagnose the other B-CAN connected ECUs with the HDS.

Refer to each system circuit diagram for details.

MICU CONTROL FUNCTIONS

System	Function
Multiplex Control	Sends the switch input signal information to the MICU and outputs the information. The MICU controls the ECUs electric load and communication based upon the information received the B-CAN.
On-Board Diagnosis	The MICU has a gateway function which sends the results of the MICU internal diagnosis and the B-CAN connected ECUs diagnosis to the HDS.
Self-Diagnosis	Test mode 1 diagnoses the communication line between the MICU and B-CAN connected unit. Test mode 2 checks the switch inputs connected to the MICU.
Interior Light (s)	The MICU controls the interior lights ON, OFF and dimming based upon the information of the related switches and/or the B-CAN related information.
Sleep Function	The MICU has a sleep function, which it enters during the power down mode.

The MICU also controls the function of these circuits:

- Entry lights control (map lights and ceiling light)
- Exterior lights control (including the daytime running lights control)
- Horn
- Interlock system
- Key-in reminder
- Keyless entry
- Lights-on reminder
- Power door locks
- Seat belt reminder
- Security alarm
- Turn signal/hazard flasher
- Wiper/washer

BODY CONTROLLER AREA NETWORK (B-CAN) AND FAST CONTROLLER AREA NETWORK (F-CAN)

The body controller area network (B-CAN) and the fast controller area network (F-CAN) share information between multiple electronic control units (ECUs). B-CAN communication moves at a slower speed (33.33 kbps) for convenience related items and for other functions. F-CAN information moves at a faster speed (500 kbps) for "real time" functions such as fuel and emissions data. To allow both systems to share

information, the gauge control module translates information from B-CAN to F-CAN and from F-CAN to B-CAN.

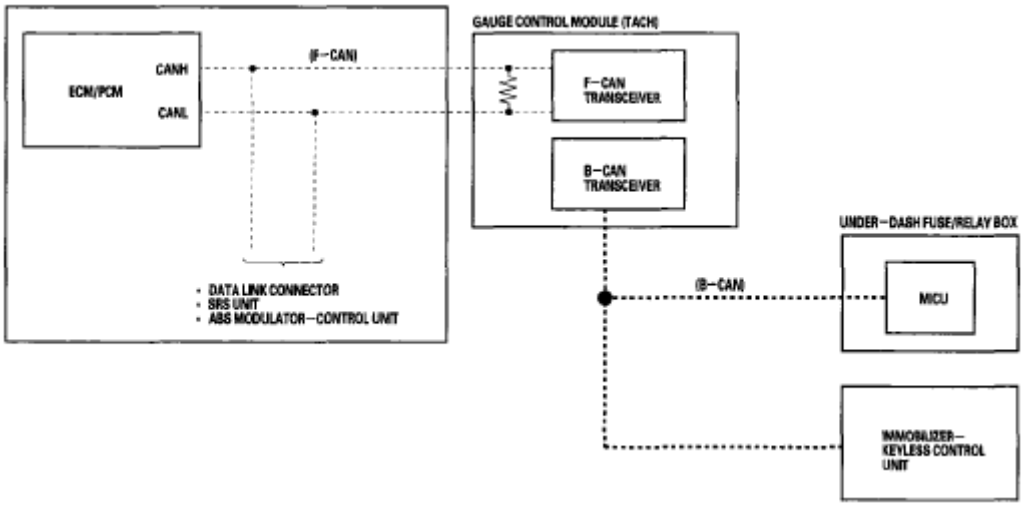

Fig. 3: Body Controller Area Network (B-CAN) And Fast Controller Area Network (F-CAN)

- The single wire method is used between the units not requiring the communication to move at a fast speed.
- Using a single wire method reduces the number of the wires used on the body controller area network.

GATEWAY FUNCTION

The gauge control module (tach) acts as a gateway to allow both systems to share information, the gauge control module translates information from B-CAN to F-CAN and from F-CAN to B-CAN.

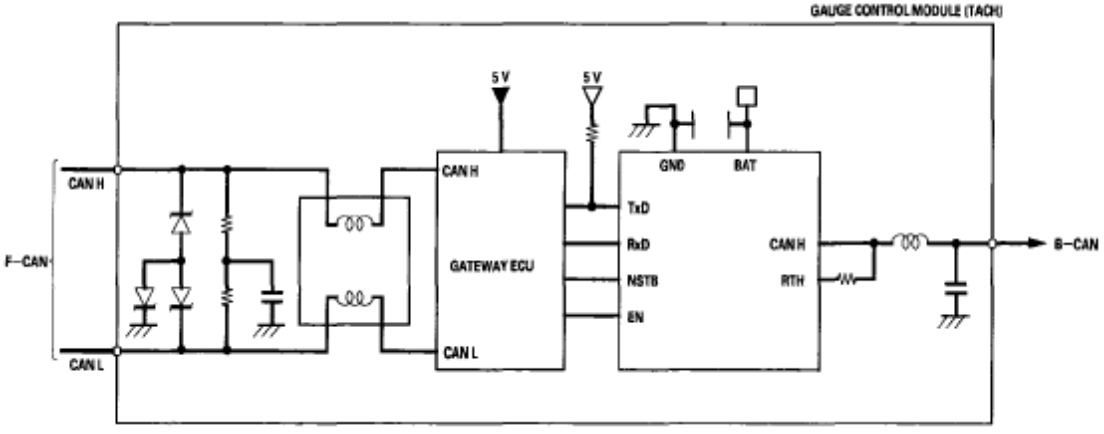

Fig. 4: Identifying Gateway Function

NETWORK "LOSS OF COMMUNICATION" ERROR CHECKING FUNCTION

The ECUs on the CAN circuit send messages to each other. If there are any malfunctions on the network, the odo/trip display on the gauge control module can indicate the error messages by entering the gauge self-diagnostic function (see **SELF-DIAGNOSTIC FUNCTION**).

4-DOOR ERROR CODE LIST

Error code	Type of communication line(s) error
Error 1	F-CAN communication
Error 2	B-CAN communication
Error 3	UART communication
Error 12	F-CAN and B-CAN communication
Error 13	F-CAN and UART communication
Error 23	B-CAN and UART communication
Error 123	F-CAN, B-CAN and UART communication

2-DOOR ERROR CODE LIST

Error code	Type of communication line(s) error
Error 1	F-CAN communication
Error 2	B-CAN communication
Error 3	F-CAN and B-CAN communication
Error 12	F-CAN and B-CAN communication
Error 13	F-CAN and B-CAN communication
Error 23	F-CAN and B-CAN communication
Error 123	F-CAN and B-CAN communication

NOTE: For further information about Error indication, refer to the gauge control module self-diagnostic function (see SELF-DIAGNOSTIC FUNCTION).

Example: Error 1

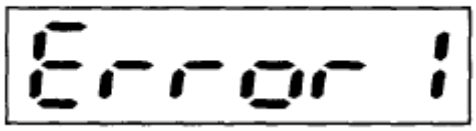

Fig. 5: Identifying Gauge Control Module Indicate Error Messages Display

SELF-DIAGNOSTIC FUNCTION

By connecting the HDS to the data link connector (DLC), the HDS can retrieve the diagnostic results from the MICU via a diagnostic line called K-LINE. The K-LINE is distinguished from the CAN line, and connected to the CAN related ECUs. The MICU is a gateway between the HDS and B-CAN related ECUs, and sends B-CAN diagnostic results to the HDS. When performing a function test with the HDS, the HDS sends an output signal through the K-LINE to the MICU. The MICU either relays the request to another ECU, or commands the function its self.

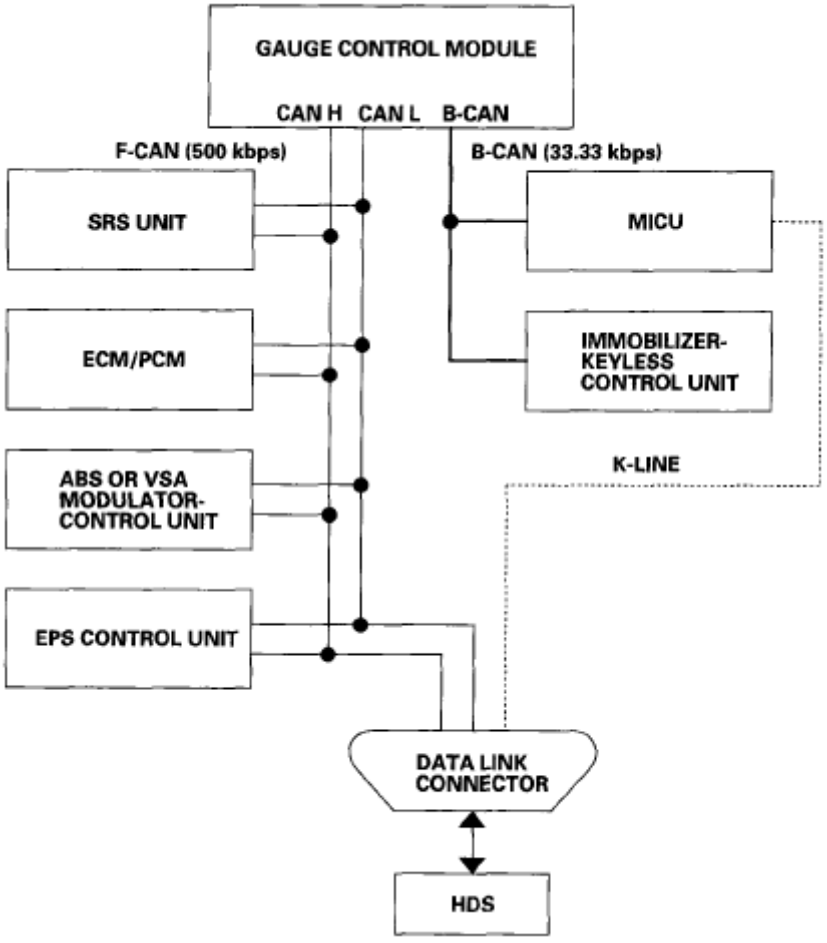

Fig. 6: Identifying Self-Diagnostic Function

WAKE-UP AND SLEEP FUNCTION

The multiplex integrated control system has "wake-up" and "sleep" functions to decrease parasitic draw on the battery when the ignition switch is OFF.

- In the sleep mode, the MICU stops functioning (communication and CPU control) when it is not necessary for the system to operate.
- As soon as any operation is requested (for example, a door is unlocked), the related control unit in the sleep mode immediately wakes up and begins to function.
- When the ignition switch is turned OFF, and the driver's door is opened, then closed, there is a delay about 40 seconds before the control unit goes from the wake-up mode to the sleep mode.
- The sleep mode will not function if any door is opened or if a key is in the ignition.
- The draw is reduced from 200 mA to less than 35 mA when in the sleep mode.

NOTE: Sleep and Wake-up Mode Test (see SLEEP AND WAKE-UP MODE TEST).

FAIL-SAFE FUNCTION

To prevent improper operation, the MICU has a fail-safe function. In the fail-safe mode, the output signal is fixed when any part of the system malfunctions (for example, a faulty control unit or communication line).

Each control unit has a hardware fail-safe function that fixes the output signal when there is a CPU malfunction, and a software fail-safe function that ignores the signal from a malfunctioning control unit, which allows the system to operate normally.

HARDWARE FAIL-SAFE CONTROL

Fail-safe function

When a CPU problem or a abnormal power supply voltage is detected, the MICU moves to the hardware fail-safe mode, and each system output load is set to the pre-programmed fail-safe value.

SOFTWARE FAIL-SAFE CONTROL

When any of the data from the B-CAN circuit cannot be received within a specified time, or an unusual combination of the data is recognized, the MICU moves to the software fail-safe mode. The data that cannot be received is forced to a pre-programmed value.

POWER SUPPLY VOLTAGE MONITORING FUNCTION

The MICU monitors the power supply voltage (back-up voltage). If the voltage goes below 10 V, the MICU sends a MICU message and will not store DTCs.

POWER SUPPLY VOLTAGE MONITORING FUNCTION

	Input	Output
MICU	Battery voltage	MICU*
*: MICU internal circuit		

ENTRY LIGHTS CONTROL SYSTEM

The MICU controls the ceiling light ON/OFF and dimming based upon the input signals from each switch.

ENTRY LIGHTS CONTROL SYSTEM

	Input	Output
MICU	IG1 power supply Ignition key switch Driver's door switch Front passenger's door switch Left rear door switch (4-door) Right rear door switch (4-door) Driver's door lock knob switch (LOCK)	Interior light
B-CAN	Keyless LOCK signal	

LIGHTING SYSTEM (HEADLIGHTS, PARKING LIGHTS, SIDE MARKER LIGHTS, LICENSE PLATE LIGHTS, AND TAILLIGHTS)

The MICU contains the relay circuits of the headlight high/low beam and taillights, and controls the lighting system ON/OFF based upon the input signals from the combination light switch.

LIGHTING SYSTEM (HEADLIGHTS, PARKING LIGHTS, SIDE MARKER LIGHTS, LICENSE PLATE LIGHTS, AND TAILLIGHTS)

	Input	Output
	Headlight OFF switch	Headlights (low beam)

MICU	Headlight ON switch Dimmer switch Combination light switch (parking lights, side marker lights, license plate lights, and taillights) Passing switch	Headlights (high beam) Parking lights Side marker lights License plate lights Taillights

DAYTIME RUNNING LIGHTS

The MICU controls the exterior lights as a daytime running lights based upon the input signals from the each switch.

DAYTIME RUNNING LIGHTS

	Input	Output
MICU	Headlight OFF switch Headlight ON switch Dimmer switch Combination light switch (parking lights, side marker lights, license plate lights, and taillights) Passing switch	Headlights (low beam) Headlights (high beam) Parking lights Slide marker lights License plate lights Taillights
B-CAN	Transmission range switch (P position)	

TURN SIGNAL/HAZARD FLASHER

The MICU controls the turn signal/hazard flasher based upon the input signals from the turn signal and hazard warning switches.

TURN SIGNAL/HAZARD FLASHER

	Input	Output
MICU	IG1 power supply Turn signal switch (left/right) Hazard warning switch	Turn signal lights (left/right)

POWER DOOR LOCKS (VEHICLE SPEED SENSE)

The MICU controls the door lock actuators based upon the B-CAN and input signals.

POWER DOOR LOCKS (VEHICLE SPEED SENSE)

	Input	Output
MICU	IG1 power supply Driver's door switch Front passenger's door switch Left rear door switch (4-door) Right rear door switch (4-door) Trunk lid latch switch Driver's door lock knob switch (UNLOCK) Front passenger's door lock knob switch (UNLOCK)	Door lock (LOCK)

	Left rear door lock knob switch (UNLOCK) (4-door) Right rear door lock knob switch (UNLOCK) (4-door) Transmission range switch (P position)	
B-CAN	Vehicle speed pulse Engine RPM	

POWER DOOR LOCKS (NORMALLY LOCK/UNLOCK OPERATION)

The MICU controls the door lock actuators based upon the input signals of each switch.

POWER DOOR LOCKS (NORMALLY LOCK/UNLOCK OPERATION)

	Input	Output
MICU	IG1 power supply Ignition key switch Driver's door switch Front passenger's door switch Left rear door switch (4-door) Right rear door switch (4-door) Trunk lid latch switch Driver's door lock knob switch (LOCK) Driver's door lock switch (LOCK/UNLOCK) Driver's door key cylinder switch (UNLOCK) Front passenger's door lock switch (LOCK/UNLOCK)	Door lock actuators (LOCK/UNLOCK)

DOOR LOCK RESPONSE OPERATION

The MICU controls the door lock actuators based upon the B-CAN signals.

MICU INPUT/OUTPUT REFERENCE

	Input	Output
B-CAN	Door lock signals	Door lock actuator (LOCK/UNLOCK) Driver's door lock actuator (UNLOCK) Trunk lid release actuator

POWER WINDOW KEY-OFF OPERATION

The MICU controls the power windows key-off operation based upon the input signals.

POWER WINDOW KEY-OFF OPERATION

	Input	Output
MICU	IG1 power supply Driver's door switch Front passenger's door switch	Power window key-off timer

KEYLESS ENTRY SYSTEM

The MICU controls the door lock actuators based upon the input signals of each switch and the B-CAN signals.

KEYLESS ENTRY SYSTEM

	Input	Output
MICU	IG1 power supply Ignition key switch Driver's door switch	Door lock actuator (LOCK/UNLOCK) Driver's door lock actuator (UNLOCK)
	Front passenger's door switch	
	Left rear door switch (4-door)	
	Right rear door switch (4-door)	
	Trunk lid latch switch	
	Driver's door lock knob switch (LOCK/UNLOCK)	
	Driver's door lock switch (LOCK/UNLOCK)	Trunk lid release actuator
	Driver's door key cylinder switch (UNLOCK)	
	Front passenger's door lock switch (LOCK/UNLOCK)	
	Transmission range switch (P position)	
B-CAN	Keyless LOCK signal	

KEYLESS PANIC

The MICU controls the keyless PANIC based upon the B-CAN signals.

KEYLESS PANIC

	Input	Output
B-CAN	Keyless PANIC signal (action, headlight low, parking light and horn)	Headlights (low beam)
		Parking lights
		Side marker lights
		License plate lights
		Taillights

SECURITY ALARM SYSTEM

The MICU controls the lighting system and horn based upon the input signals of each switch and the B-CAN signals.

SECURITY ALARM SYSTEM

	Input	Output
MICU	IG1 power supply Ignition key switch Audio switch Driver's door switch Front passenger's door switch Left rear door switch (4-door) Right rear door switch (4-door)	Horn Headlights Parking lights Side marker lights License plate lights
	Trunk lid latch switch	
	Driver's door key cylinder switch (UNLOCK)	

	Driver's door lock knob switch (UNLOCK)	Taillights
	Front passenger's door lock knob switch (UNLOCK)	
	Left rear door lock knob switch (UNLOCK) (4-door)	
	Right rear door lock knob switch (UNLOCK) (4-door)	
	Trunk key cylinder switch	
	Hood switch	
B-CAN	Keyless LOCK signal Door lock signal	

KEY-IN REMINDER

The MICU controls the door lock actuators based upon the IG1, the driver's door switch, and the driver's door lock knob switch signals.

KEY-IN REMINDER

	Input	Output
MICU	IG1 power supply	Door lock actuator (LOCK/UNLOCK)
	Driver's door switch	Driver's door lock actuator (UNLOCK)
	Driver's door lock knob switch	

KEY INTERLOCK (A/T)

The MICU controls the key interlock solenoid based upon the IG1, the transmission range switch, and the park-pin switch signals.

KEY INTERLOCK (A/T)

	Input	Output
MICU	Ignition switch ACC Transmission range switch (P position) Park-pin switch	Key interlock solenoid

ANSWER BACK RESPONSE OPERATION

The MICU controls the lighting system and horn based upon the B-CAN signals.

ANSWER BACK RESPONSE OPERATION

	Input	Output
B-CAN	Answer back signals (headlight low, horn, parking lights)	Horn Headlights Parking lights Side marker lights License plate lights Taillights

WIPER/WASHER

The MICU controls the wiper motor and the washer motor based upon the IG1 and the wiper/washer switch signals.

WIPER/WASHER

	Input	Output
MICU	IG1 power supply	Wiper motor
	Wiper switch (INT and LO) Wiper switch (LO and HI) Wiper switch (MIST) Washer switch Wiper intermittent speed	Washer motor

COLLISION DETECTION SIGNAL (CDS)

The MICU controls the door lock actuators based upon the IG1 and the B-CAN signals.

COLLISION DETECTION SIGNAL (CDS)

	Input	Output
MICU	IG1 power supply	Door lock (LOCK/UNLOCK)
B-CAN	SRS signal (front, side and rear) Impact sensors	

HDS INPUTS AND COMMANDS

Certain inputs happen so quickly that the HDS cannot update fast enough. Hold the switch that is being tested while monitoring the Data List.

This should give the HDS time to update the signal on the Data List.

Because the HDS software is updated to support the release for newer vehicles it is not uncommon to see system function tests that are not supported.

Make sure that the most current software is loaded.

HDS INPUTS AND COMMANDS (INPUT)

	Headlight Alarm Chime	Sound alarm for 10 seconds.
	Seat Belt Reminder Chime	Sound alarm for 10 seconds.
Gauges (4-door)	Self Diagnostic Test	-

TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A

Check the ECM/PCM for DTCs and troubleshoot ECM/PCM (see **GENERAL TROUBLESHOOTING INFORMATION** for R18A1 or **GENERAL TROUBLESHOOTING INFORMATION**) or F-CAN loss of communication errors first, then perform this diagnosis if the symptom is related to the B-CAN system.

NOTE: Always cycle the ignition switch within 3 seconds when prompted in the DTC troubleshooting procedures .

1. Compare the symptom with this list of B-CAN related systems:
   - Gauge control module
   - Exterior lights
   - Turn signals
   - Entry light control
   - Interior lights
   - Door-open and trunk-open indicators
   - Horns (security and panic)
   - Chimes (key-in, seat belt, lights-on, and parking brake)
   - Power window/moonroof timer
   - Wiper/washer
   - Security
   - Keyless entry
   - Power door locks
   - Key interlock
   - Dash light brightness

   Is the symptom related to the B-CAN system?

   YES - Go to step 2.

   NO - Go to the system troubleshooting for the system with the symptom.

2. Connect the HDS to the data link connector (A), then turn the ignition switch ON (II).

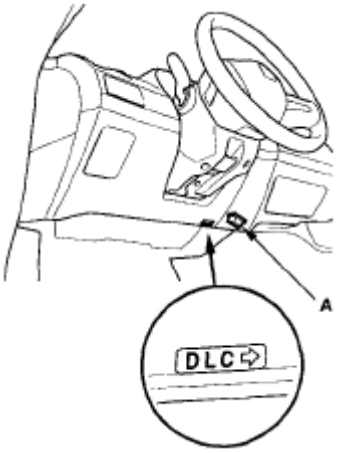

Fig. 7: Connecting HDS To Data Link Connector

3. From the BODY ELECTRICAL menu, select UNIT INFORMATION, and then select CONNECTED UNIT listed to see if the following control units are communicating with the HDS.
   - MICU
   - Gauge control module
   - Immobilizer-keyless control unit

   NOTE:
   - **If a unit is communicating with the HDS, DETECT will be displayed.**
   - **If a unit is not communicating or the vehicle is not equipped, "Not Available" will be displayed.**

   Are all control units communicating with the HDS?

   YES - Go to step 4.

   NO - If any of the control units are not communicating, go to **B-CAN SYSTEM DIAGNOSIS TEST MODE B** . If all units are not communicating or only the MICU is communicating, go to **DTC B1000** .

4. Select the system that has the problem from the BODY ELECTRICAL menu, then select DTCs.

   Are any DTCs indicated?

   YES - Go to step 5.

   NO - If the problem is related to one of the following items, go to **B-CAN SYSTEM DIAGNOSIS TEST MODE C** if the system does not stop or turn off. Go to **TEST MODE D** if the system does not run or turn on.

   - Exterior lights
   - Turn signals
   - Entry light control
   - Interior lights

- Horn (security and panic)
- Wiper/washer

If the problem is related to one of the following items, go to the troubleshooting for that individual system.

- Gauge control module
- Door-open and trunk-open indicators
- Chimes (key-in, seat belt, lights-on, and parking brake)
- Security
- Keyless entry
- Key interlock
- Dash light brightness
- Audio system
- Navigation (if equipped)

5. Record all DTCs, and sort them by DTC type.
6. Troubleshoot the DTC(s) in this order:

- Battery voltage DTCs.
- Internal error DTCs.
- Loss of communication DTCs. Begin troubleshooting with the lowest number first (Example: if DTC B1008 and B1011 are retrieved, begin by troubleshooting B1008).
- Signal error DTCs.

TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE B

Perform this diagnosis if any of the control units are not communicating (Not Available is displayed in the HDS) as found by the B-CAN System Diagnosis Test Mode A (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Using the HDS, select the system that has the symptom from the BODY ELECTRICAL menu.
2. Select DTCs, and then check for loss of communication DTCs.

   Are any loss of communication DTCs indicated?

   YES - Go to step 3.

   NO - Replace the MICU.

3. Perform the input test for the unit not communicating with the HDS.

UNIT NOT COMMUNICATING

Unit not communicating
MICU
Gauge control module (tach) (see **GAUGE CONTROL MODULE (TACH) INPUT TEST**)

Immobilizer-keyless control unit (see **IMMOBILIZER-KEYLESS CONTROL UNIT INPUT TEST**)

TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE C

Perform this diagnosis if a component that is controlled by the B-CAN system does not stop or turn off.

NOTE:

- **If the component does not turn on, go to B-CAN SYSTEM DIAGNOSIS TEST MODE D .**
- **See the B-CAN system unit input/output index for a list of input and output devices and the control units that monitor the input and controls the output devices (see HDS INPUTS AND COMMANDS).**
- **Always cycle the ignition switch within 3 seconds when prompted in the DTC troubleshooting procedures in this section.**

1. Check for DTCs by selecting the TEST MODE menu from the HDS.

   Are any DTCs indicated?

   YES - Go to B-CAN System Diagnosis Test Mode A (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

   NO - Go to step 2.

2. Turn off the switch that controls the malfunctioning component.
3. Select DATA LIST from the TEST MODE menu, and check the input of the switch that controls the component.

   Does the HDS indicate the switch is OFF?

   YES - Go to step 4.

   NO - Go to step 6.

4. In the DATA LIST, check the output signal of the malfunctioning component.

   Is the output signal OFF?

   YES - Go to step 5.

   NO - Replace the control unit that controls the device that will not turn OFF.

5. Check the relay, if applicable, then check for a short in the wire between the relay and the component, the relay and control unit, or the component and control unit.

   Are the relay and the wire harness OK?

   YES - Replace the control unit that controls the component that will not turn OFF.

NO - Replace the relay or repair the wire harness.

6. Check the switch, then check for a short in the wire between the switch and the control unit that monitors the switch.

   Is the switch and wire harness OK ?

   YES - Replace the control unit that monitors the switch.

   NO - Replace the switch or repair the wire harness.

TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE D

Perform this diagnosis if a component that is controlled by the B-CAN system does not run or come on.

NOTE:

- **If the component does not turn off or stop, go to B-CAN SYSTEM DIAGNOSIS TEST MODE C .**
- **See the B-CAN system unit input/output index for a list of input and output devices and the control units that monitor the input and controls the output devices (see HDS INPUTS AND COMMANDS).**
- **Always cycle the ignition switch within 3 seconds when prompted in the DTC troubleshooting procedures in this section.**

1. Check the fuse of the malfunctioning output device.

   Is the fuse OK?

   YES - Go to step 2.

   NO - Replace the fuse and recheck.

2. Check for DTCs by selecting the TEST MODE menu from the HDS.

   Are any DTCs indicated?

   YES - Go to B-CAN System Diagnosis Test Mode A (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

   NO - Go to step 3.

3. Turn ON the switch that controls the malfunctioning component.
4. Select DATA LIST from the TEST MODE menu, and check output signal for the malfunctioning component.

   Is there an output signal?

   YES - Go to step 5.

   NO - Go to step 9.

5. Check the relay and ground, then check for an open or a short in the circuit for the malfunctioning component.

   Are the relay and circuit OK?

   YES - Go to step 6.

   NO - Replace the relay or repair the wire circuit.

6. Perform the function test for the malfunctioning component.

   Does the output device pass the function test?

   YES - Go to step 7.

   NO - Replace the component.

7. With the malfunctioning output device connected, connect a voltmeter between the malfunctioning output device and body ground on the wire that the control unit uses to control the output device circuit.
8. Select MISC. TEST from the TEST MODE menu, and do the forced operation test of the malfunctioning component.

   Is there a change in voltage (12 V to 0 V or 0 V to 12 V)?

   YES - Replace the component.

   NO - Replace the control unit that controls the malfunctioning component.

9. Select DATA LIST from the TEST MODE menu, and make sure the switch signal input for the malfunctioning system indicates a change when operated.

   Does the switch input indicated ON when the switch is ON?

   YES - Replace the control unit that controls the malfunctioning component.

   NO - Go to step 10.

10. Check the switch and its ground (if applicable), then check for an open or a short in the wire between the switch and the control unit that monitors it.

    Is the switch and the wire harness OK?

    YES - Replace the control unit that monitors the switch.

    NO - Replace the switch or repair the wire harness.

TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE 1 AND TEST MODE 2 (WITHOUT THE HDS)

Special Tools Required

MPCS (MCIC) service connector 07WAZ-001010A

TEST MODE 1

Check the ECM/PCM for DTCs and troubleshoot ECM/PCM (see **GENERAL TROUBLESHOOTING INFORMATION**) or F-CAN loss of communication errors first, then perform this diagnosis if the HDS is not available.

1. Check the No. 23 (10 A) fuse in the under-hood fuse/relay box and No. 10 (7.5 A) fuse in the under-dash fuse/relay box.

   Are the fuses OK?

   YES - Go to step 2.

   NO - Find and repair the cause of the blown fuse.

2. Remove the left kick panel.
   - 4-door (see **FRONT DOOR SILL AREA - 4-DOOR**)
   - 2-door (see **DOOR SILL AREA - 2-DOOR**)
3. Turn the ignition switch ON (II), and move the ceiling light switch to the middle (door) position.
4. Connect the MPCS service connector (A) to the MCIC socket (B) in the under-dash fuse/relay box.

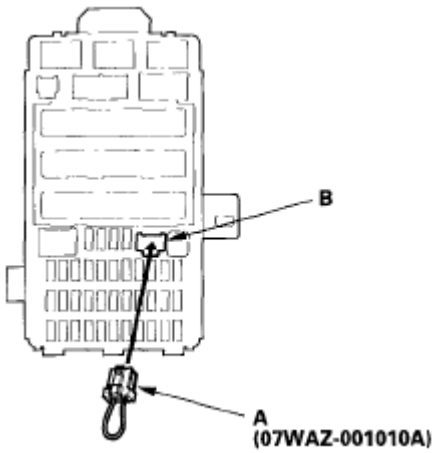

Fig. 8: Connecting MPCS Service Connector To MCIC Socket

5. Wait 5 seconds, and watch the ceiling light. When the ceiling light flashes quickly once, and then goes off the system is in Test Mode 1.
6. Check for B-CAN DTCs indicated by the gauge control module (tach) odometer/trip meter display while still in Test Mode 1. Push the odometer select/reset button to display the next code. After you get to the last code, the display shows END. If no DTCs are stored, the display will read NO.

   Are any DTCs indicated?

   YES - Go to step 7.

NO - Go to step 10.

7. Record all DTCs and sort them.
8. Troubleshoot the DTCs in this order:
   - Battery voltage DTCs
   - Internal error DTCs
   - Loss of communication DTCs (begin with the lowest number first; for example, if B1008 and B1011 are retrieved, troubleshoot B1008 first)
   - Signal error DTCs
9. Clear the DTCs by pressing and holding the select/reset button for about 13 seconds. You will hear a beep to confirm the code have been cleared. Operate the devices that failed, and recheck for codes.

Test Mode 2

10. Remove the MPCS service connector from the under-dash fuse/relay box socket for 5-10 seconds, then re-insert it to enter Mode 2. When the system enters Mode 2, the ceiling light will flash two times quickly and then go off.

NOTE: If the MPCS connector is disconnected for too short or too long of a time, or the ignition switch is turned OFF, the system will return to Test Mode 1.

11. The following tables list the circuits that can be checked in Test Mode 2. Operate the switch that is most closely related to the problem. If the circuit is OK, the ceiling light will blink once. If the circuit is faulty, there will be no indication.

MICU REFERENCE

Item
Driver's door lock switch (UNLOCK)
Driver's door lock switch (LOCK)
Driver's door lock knob switch (UNLOCK)
Driver's door lock knob switch (LOCK)
Driver's door key cylinder switch (UNLOCK) (1)
Driver's door key cylinder switch (LOCK) (1)
Front passenger's door lock switch (UNLOCK)
Front passenger's door lock switch (LOCK)
Front passenger's door lock knob switch (UNLOCK) (3)
Left rear door lock knob switch (UNLOCK) (4-door) (3)
Right rear door lock knob switch (UNLOCK) (4-door) (3)
Driver's door switch (OPEN)
Front passenger's door switch (OPEN)
Left rear door switch (OPEN) (4-door)
Right rear door switch (OPEN) (4-door)
Trunk lid latch switch (OPEN)
Trunk key cylinder switch (UNLOCK) (2)

Audio switch
Windshield wiper HI/LO switch
Windshield wiper INT/LO switch
Windshield wiper MIST switch
Windshield washer switch (ON)
Windshield wiper intermittent dwell time controller
Turn signal switch (LEFT)
Turn signal switch (RIGHT)
Hazard warning switch (ON)
Headlight switch (ON)
Headlight switch (OFF)
Lighting switch (ON)
Dimmer switch (ON)
Passing switch (ON)
Hood switch (OPEN) (3)
Transmission range switch (P)
Brake switch (ON)
(1) A second key is necessary to check the key cylinder inputs.Be sure to rotate the key cylinder switch two times to each position (lock and lock, unlock and unlock) to ensure the door lock knob switch is in the appropriate position. (2) USA LX, EX and Si models (3) With security

Does the ceiling light work properly in all switch positions?

YES - Go to function and input test for the system related to the failure.

NO - Repair the open, short, or replace the faulty switch.

SLEEP AND WAKE-UP MODE TEST

1. Shift to the sleep mode:

   Turn the ignition switch OFF, and remove the key. If the MICU receives no signals from the inputs listed below, it will go into sleep mode in less than 40 seconds.

   Driver's door lock switch (LOCK or UNLOCK)

   Driver's door key cylinder switch (LOCK or UNLOCK)

   Front passenger's door lock switch (LOCK or UNLOCK)

   Trunk lid latch switch (Trunk lid closed)

   Hazard warning switch (OFF)

2. Confirm the sleep mode:

   Check for voltage on the B-CAN communication line (PNK wires); there should be battery voltage in the sleep mode. Check the parasitic draw at the battery while shifting into the sleep mode; amperage should change from about 200 mA to less than 35 mA.

3. Shift to the wake up mode:

When the ignition switch is turned ON (II), the MICU, gauge control module, immobilizer-keyless control unit-receiver, and ECM/PCM wake up at the same time without "talking" to each other through the communication lines. When any switch in the multiplex integrated control system is turned on, it wakes up its related control unit which, in turn, wakes up the other units. After confirming the sleep mode, look in the following table for the switch most related to the problem. Operate that switch and see if its control unit wakes up.

NOTE: If any control unit is faulty and will not wake up, several circuits in the system will malfunction at the same time. In the table, the control unit is followed by a list of the switches and input signals that can wake it up.

Door switches (door open)

Driver's door lock switch (LOCK or UNLOCK)

Driver's door lock knob switch (LOCK or UNLOCK)

Driver's door key cylinder switch (LOCK or UNLOCK)

Front passenger's door lock switch (LOCK or UNLOCK)

Front passenger's door lock knob switch (LOCK or UNLOCK)

Left rear door lock knob switch

Right rear door lock knob switch

Trunk key cylinder switch (UNLOCK)*

Trunk lid latch switch (Trunk lid open)

Hood switch (with security) (hood open)

Hazard warning switch (ON)

Combination light switch (Parking, Headlight, Dimmer, Passing ON)

Ignition key switch (key inserted)

* : USA LX, EX and Si models

CIRCUIT DIAGRAM

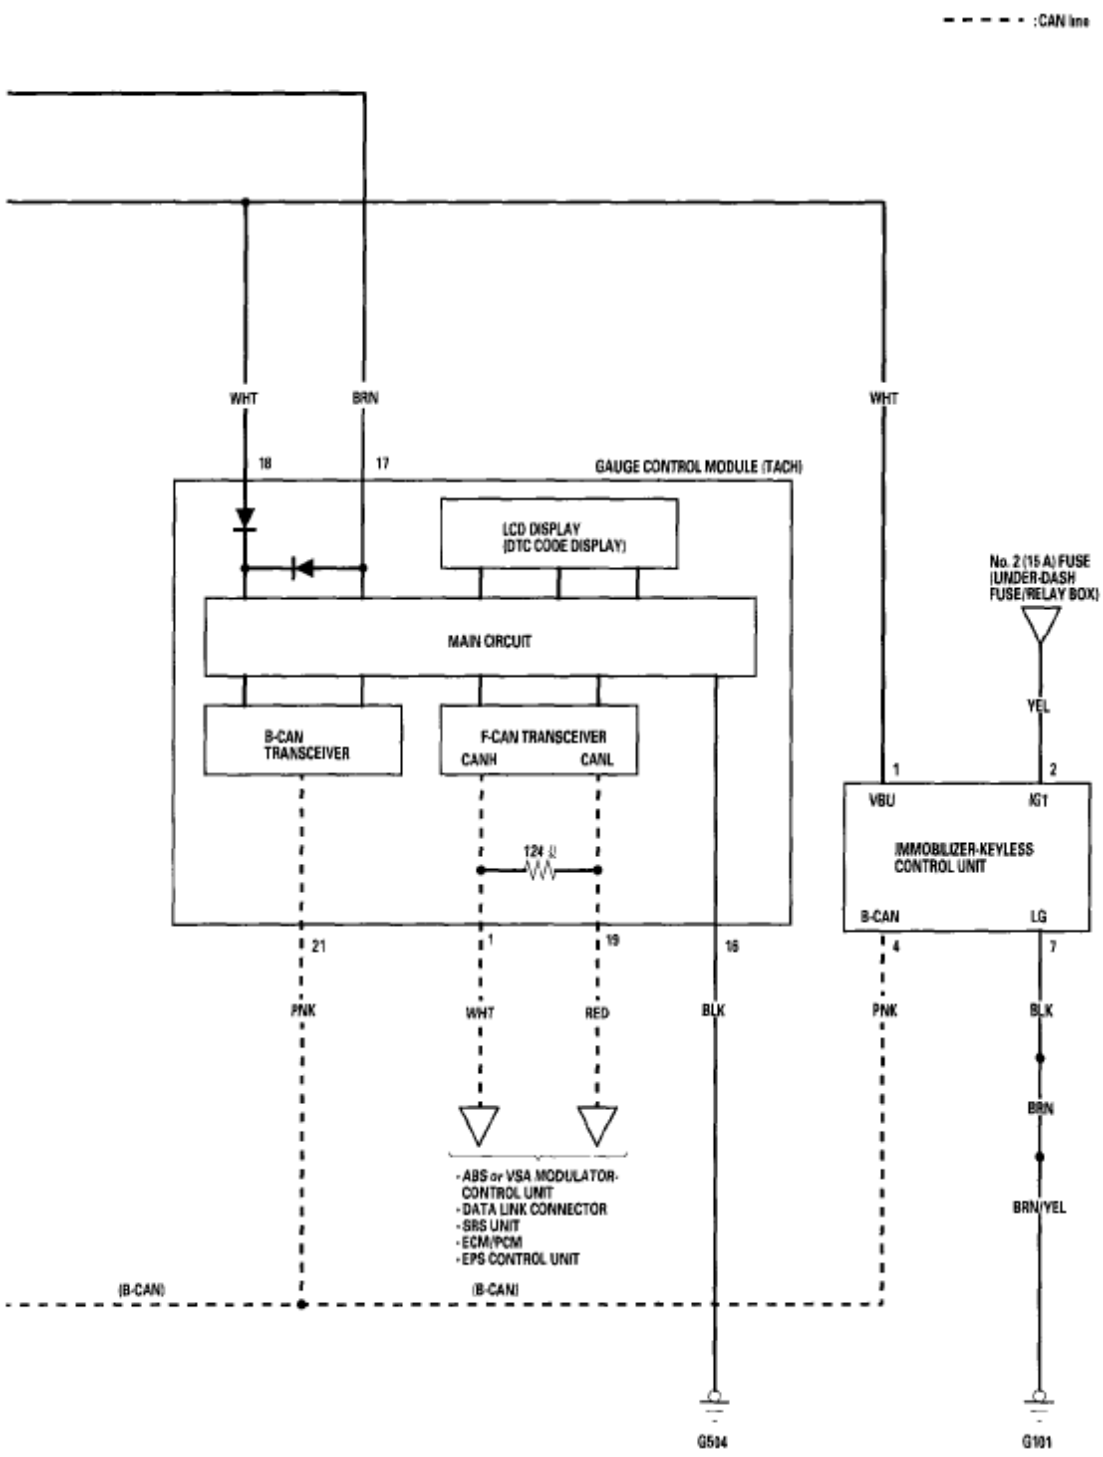

Fig. 10: Multiplex Integrated Control System - Circuit Diagram (2 Of 2)

DTC TROUBLESHOOTING

DTC B1000: COMMUNICATION BUS LINE ERROR

NOTE: **If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).**

1. Clear the DTCs with the HDS.
2. Turn the ignition switch OFF, and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

   Is DTC B1000 indicated?

   YES - Go to step 5.

   NO - Intermittent failure. The communication bus line is OK at this time. Check for loose or poor connections, or worn/shorted wires. If the connections are good, check the battery condition (see **BATTERY TEST**) and the charging system.

5. Check for DTCs with the HDS.

   Are DTCs B1008, B1011, and B1032 also indicated with DTC B1000?

   YES - Go to step 6.

   NO - Faulty MICU; replace the under-dash fuse/relay box.

6. Turn the ignition switch OFF.
7. Disconnect the appropriate connector at each control unit in **APPROPRIATE CONNECTOR AT EACH CONTROL UNIT** one at a time. Clear the DTCs, then recheck for DTCs after each unit is disconnected.

   APPROPRIATE CONNECTOR AT EACH CONTROL UNIT

Control Unit	Appropriate Connector
Gauge control module (tach)	36P connector
Immobilizer-keyless control unit	7P connector

   Is DTC B1000 indicated with each individual unit disconnected?

   YES - Go to step 8.

   NO - Replace the control unit that was disconnected and B1000 did not reset.

8. Disconnect all of the appropriate connectors for each of the units in table below.

   APPROPRIATE CONNECTOR AT EACH CONTROL UNIT

Control Unit	Appropriate Connector
Gauge control module (tach)	36P connector
Immobilizer-keyless control unit	7P connector

9. Disconnect the under-dash fuse/relay box connector Q(16P).
10. Check for continuity between the under-dash fuse/relay box connector Q (16P) No. 6 terminal and body ground.

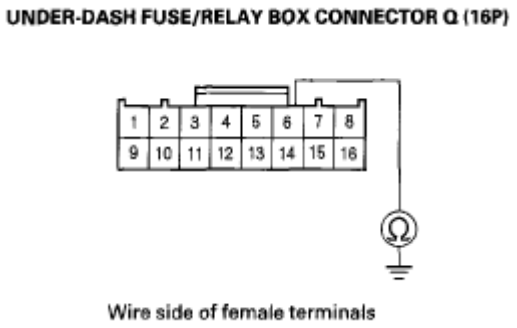

Fig. 11: Checking Continuity Between Under-Dash Fuse/ Relay Box Connector Q (16P) No. 6 Terminal And Body Ground

Is there continuity?

YES - Repair the short to ground in the wire between the under-dash fuse/relay box and the affected control unit.

NO - Go to step 11.

11. Measure the voltage between the under-dash fuse/relay box connector Q (16P) No. 6 terminal and body ground.

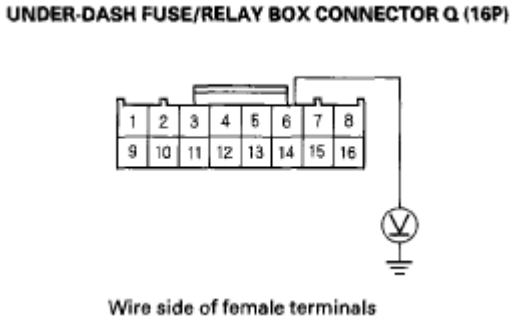

Fig. 12: Checking Voltage Between Under-Dash Fuse/ Relay Box Connector Q (16P) No. 6 Terminal And Body Ground

Is there less than 0.1 V?

YES - Replace the under-dash fuse/relay box. See **UNDER-DASH FUSE/RELAY BOX (ALL EXCEPT HYBRID)** .

NO - Repair a short to power in the wire between the under-dash fuse/relay box and the affected control unit.

DTC B1001: MICU (CPU) ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.

2. Turn the ignition switch OFF, and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1001 indicated?

YES - Faulty MICU; replace the under-dash fuse/relay box.

NO - Intermittent failure, the MICU is OK at this time. Check for loose or poor connections. If the connections are good, check the battery condition (see **BATTERY TEST**) and the charging system.

DTC B1002: MICU (EEPROM) ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch OFF, and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1002 indicated?

YES - Faulty MICU; replace the under-dash fuse/relay box.

NO - Intermittent failure, the MICU is OK at this time. Check for loose or poor connections. If the connections are good, check the battery condition (see **BATTERY TEST**) and the charging system.

DTC B1008: MICU LOST COMMUNICATION WITH GAUGE CONTROL MODULE (A/T MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch OFF, and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1008 indicated?

YES - Go to step 5.

NO - Intermittent failure, the gauge control module is OK at this time. Check for loose or poor connections at gauge control module (tach) 36P connector and at the under-dash fuse/relay box

connector Q (16P). If the connections are good, check the battery condition (see **BATTERY TEST**) and the charging system.

5. Check for DTCs with the HDS.

   Are DTCs B1011 and B1032 also indicated with DTC B1008?

   YES - Check for an open in the communication circuit between the MICU and the gauge control module (tach). If the circuit is bad, repair the open.

   NO - Go to the gauge control module (tach) input test (see **GAUGE CONTROL MODULE (TACH) INPUT TEST**).

DTC B1011: MICU LOST COMMUNICATION WITH GAUGE CONTROL MODULE (VSP/NE MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch OFF, and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

   Is DTC B1011 indicated?

   YES - Go to step 5.

   NO - Intermittent failure, the gauge control module is OK at this time. Check for loose or poor connections at gauge control module (tach) 36P connector and at under-dash fuse/relay box connector Q(16P). If the connections are good, check the battery condition (see **BATTERY TEST**) and the charging system.

5. Check for DTCs with the HDS.

   Are DTCs B1008 and B1032 also indicated with DTC B1011?

   YES - Check for an open in the communication circuit between the MICU and the gauge control module (tach). If the circuit is bad, repair the open.

   NO - Go to the gauge control module (tach) input test (see **GAUGE CONTROL MODULE (TACH) INPUT TEST**).

DTC B1032: MICU LOST COMMUNICATION WITH THE SRS UNIT (CDS MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch OFF, and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

   Is DTC B1032 indicated?

   YES - Go to step 5.

   NO - Intermittent failure, the gauge control module is OK at this time. Check for loose or poor connections at the gauge control module (tach) 36P connector, and at the under-dash fuse/relay box connector Q (16P). If the connections are good, check the battery condition (see **BATTERY TEST**) and the charging system.

5. Check for DTCs with the HDS.

   Are DTCs B1008 and B1011 also indicated with DTC B1032?

   YES - Check for an open in the communication circuit between the MICU and the gauge control module (tach). If the circuit is bad, repair the open.

   NO - Do the gauge control module (tach) input test (see **GAUGE CONTROL MODULE (TACH) INPUT TEST**).

DTC B1036: IG1 LINE INPUT ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch OFF, and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

   Is DTC B1036 indicated?

   YES - Go to step 5.

   NO - Intermittent failure, the system is OK at this time. Check for loose or poor connection at the gauge control module (tach) 36P connector, and at the under-dash fuse/relay box connector Q (16P). If the connections are good, check the battery condition (see **BATTERY TEST**) and the charging system.

5. Check for DTCs with the HDS.

   Is DTC B1008 indicated with DTC B1036?

YES - Troubleshoot the indicated DTC.

NO - Go to step 6.

6. Turn the ignition switch OFF.
7. Turn the ignition switch ON (II).
8. Check for voltage between the gauge control module (tach) 36P connector No. 17 terminal and body ground.

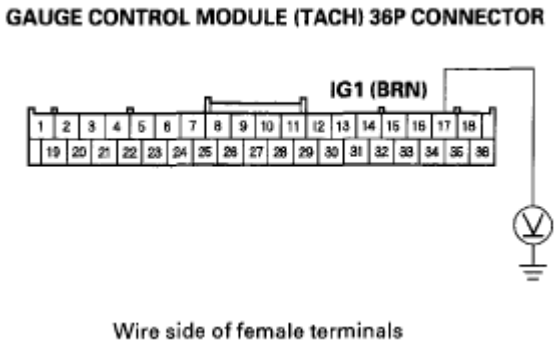

Fig. 13: Checking Voltage Between Gauge Control Module 36P Connector No. 17 Terminal And Body Ground

Is there battery voltage?

YES - Faulty MICU; substitute a known-good under-dash fuse/relay box and recheck.

NO - Check No. 10 (7.5 A) fuse in the under-dash fuse/relay box. If the fuse is OK, check for an open in the wire between the under-dash fuse/relay box and the gauge control module (tach), or repair a short in the wire between the under-dash fuse/relay box and the gauge control module (tach).

DTC B1150: COMMUNICATION BUS LINE ERROR (BUS-OFF)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch OFF, and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Are DTCs B1001, B1008, B1011, B1032, and or B1900 also indicated with DTC B1150?

YES - Troubleshoot DTC B1000.

NO - If only DTC B1150 is present, replace the gauge control module (tach) assembly. If no DTCs are present, it's an intermittent failure, the system is OK at this time. Check for loose or poor connections at the gauge control module (tach) 36P connector, and at the under-dash fuse/relay box

connector Q(16P).

DTC B1900: COMMUNICATION BUS LINE ERROR (BUS-OFF)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch OFF, and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Are DTCs B1000, B1008, B1011, B1032, and or B1900 also indicated with DTC B1900?

YES - Troubleshoot DTC B1000.

NO - If only DTC B1900 is present, replace the immobilizer-keyless control unit. If no DTCs are present, it's an intermittent failure, the system is OK at this time. Check for loose or poor connections at the immobilizer control unit 7P connector, and at the under-dash fuse/relay box connector Q (16P).

MICU INPUT TEST

1. Before troubleshooting the multiplex integrated control system, troubleshoot the B-CAN System Diagnosis Test Mode A (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).
2. Check the No. 10 (7.5 A) fuse in the under-dash fuse/relay box. If any fuse is blown, replace it and go to step 3.
3. Disconnect the under-dash fuse/relay box connectors E, F, G, K, and T.

NOTE: All connector views are wire side of female terminals.

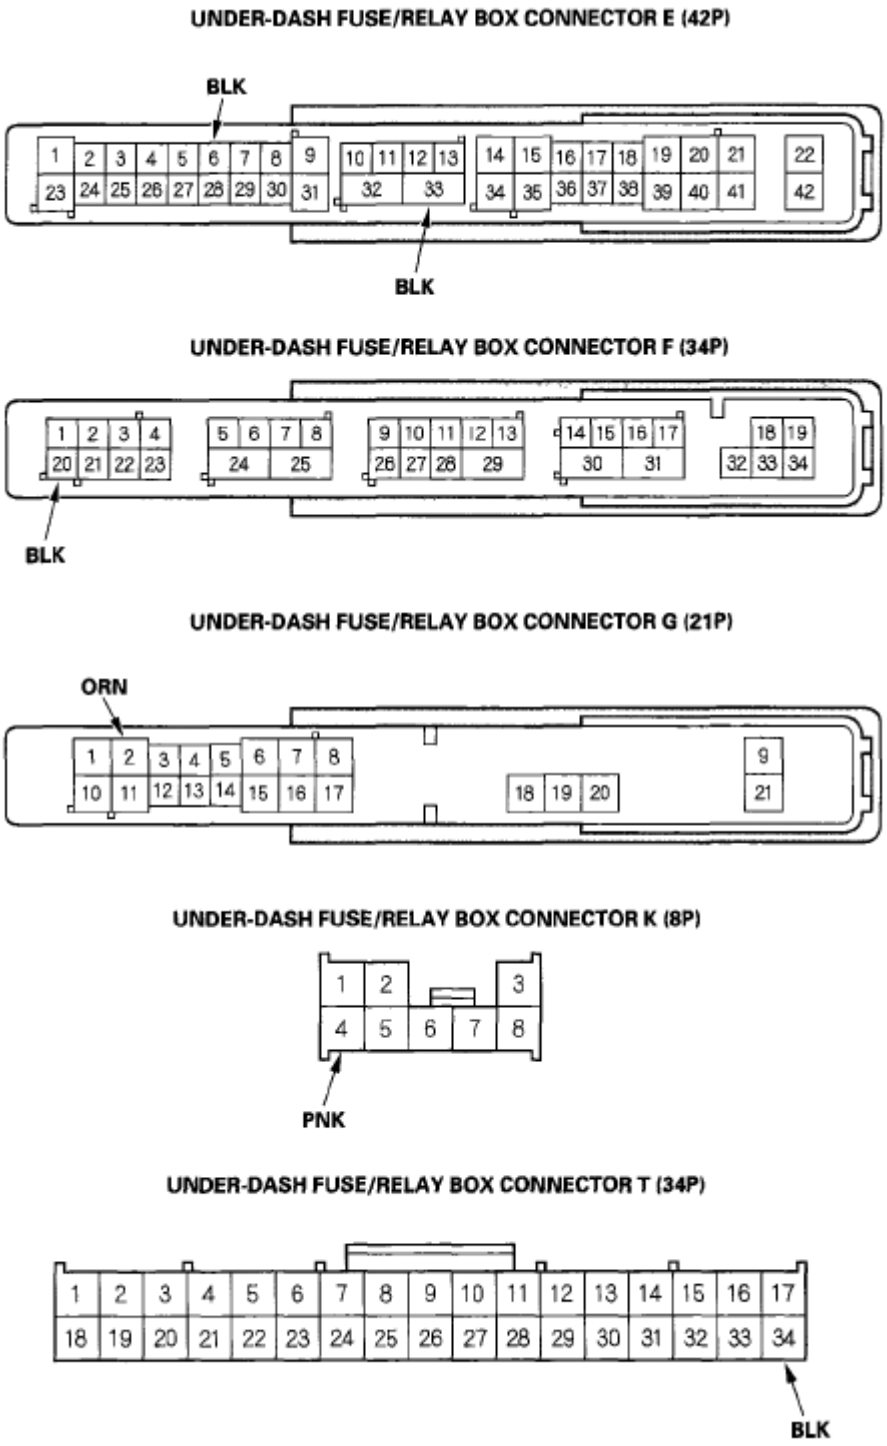

Fig. 14: Identifying Fuse In Under-Dash Fuse/Relay Box

4. Inspect the connector and socket terminals to be sure they are all making good contact.
   - If the terminals are bent, loose or corroded, repair them as necessary and recheck the system.
   - If the terminals look OK, go to step 5.
5. With the connector still disconnected, make these input tests at the appropriate connector.
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, go to step 6.

MICU INPUT TEST REFERENCE (CONNECTOR DISCONNECTED)

Cavity	Wire	Test condition	Test: Desired result	Possible cause if result is not obtained
G2	ORN	Under all conditions	Check for voltage to ground: There should be battery voltage.	• Blown No. 23 (10 A) fuse in the under-hood fuse/relay box • An open in the wire
K4	PNK	Under all conditions	Attach to ground: The ceiling light should come on.	• Blown No. 22 (7.5 A) fuse in the under-hood fuse/relay box • Blown bulb(s) • Faulty ceiling light • An open in the wire

6. Reconnect the connectors to the under-dash fuse/relay box, and make these input tests at the connectors.

- If any test indicates a problem, find and correct the cause, then recheck the system.
- If all the input tests prove OK, the MICU must be faulty; replace the under-dash fuse/relay box.

MICU INPUT TEST REFERENCE (CONNECTORS RECONNECTED)

Cavity	Wire	Test condition	Test: Desired result	Possible cause if result is not obtained
E6	BLK	Under all conditions	Check for voltage to ground: There should be less than 0.5 V.	• Poor ground (G602) • An open in the wire
E33	BLK	Under all conditions	Check for voltage to ground: There should be less than 0.5 V.	• Poor ground (G601) • An open in the wire
F20	BLK	Under all conditions	Check for voltage to ground: There should be less than 0.5 V.	• Poor ground (G401) • An open in the wire
T34	BLK	Under all conditions	Check for voltage to ground: There should be less than 0.5 V.	• Poor ground (G501) • An open in the wire

SYMPTOM TROUBLESHOOTING INDEX

SYMPTOM TROUBLESHOOTING INDEX

Symptom	Diagnostic procedure	Also check for
Cruise control cannot be set	1. Check for PGM-FI DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). 2. Check the No. 3 (10 A) fuse in the under-dash fuse/relay box. 3. Do the cruise control input test (see **CRUISE CONTROL INPUT TEST**). 4. Do the cruise control combination switch test (see **CRUISE CONTROL COMBINATION SWITCH TEST/REPLACEMENT**).	
Cruise control can be set, but the cruise main indicator does not come on	Do the gauge control module self-diagnostic function procedure (see **SELF-DIAGNOSTIC FUNCTION**).	Faulty gauge control module (tach)
Cruise control can be set, but the cruise control indicator does not come on	1. Check for PGM-FI DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). 2. Do the gauge control module self-diagnostic function procedure (see **SELF-DIAGNOSTIC FUNCTION**). 3. Do the cruise control input test (see **CRUISE CONTROL INPUT TEST**). Test the cruise control indicator signal input.	Faulty gauge control module (tach)
Vehicle does not decelerate or accelerate accordingly when the set/decel or resume/accel switch is pressed	1. Check for PGM-FI DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). 2. Do the cruise control input test (see **CRUISE CONTROL INPUT TEST**). Test the cruise control set/decel, resume/accel switch signal input. 3. Do the cruise control combination switch test (see **CRUISE CONTROL COMBINATION SWITCH TEST/REPLACEMENT**).	Open circuit, loose or disconnected terminals: YEL/RED, LT GRN or LT GRN/BLK, ORN
Set speed does not cancel when the brake pedal is pressed	1. Check for PGM-FI DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). 2. Do the cruise control input test (see **CRUISE CONTROL INPUT TEST**). 3. Test the brake pedal position switch signal input. Do the brake pedal position switch test (see **BRAKE PEDAL POSITION SWITCH TEST**).	• Short to power on the BRN wire • Faulty brake pedal position switch

Set speed does not cancel (engine rpm stays high) when the clutch pedal is pressed	1. Check for PGM-FI DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). 2. Do the cruise control input test (see **CRUISE CONTROL INPUT TEST**). Test the clutch pedal position switch signal input. 3. Do the clutch pedal position switch test (see **CLUTCH PEDAL POSITION SWITCH TEST**).	• Short in the LT BLU wire • Faulty clutch pedal position switch
Set speed does not cancel when the cruise control main switch is pressed	1. Check for PGM-FI DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). 2. Do the cruise control input test (see **CRUISE CONTROL INPUT TEST**). Test the cruise control main switch signal input. 3. Do the cruise control combination switch test (see **CRUISE CONTROL COMBINATION SWITCH TEST/REPLACEMENT**).	Short to power on the PNK, YEL wire
Set speed does not cancel when the cancel switch is pressed	1. Check for PGM-FI DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). 2. Do the cruise control input test (see **CRUISE CONTROL INPUT TEST**). Test the cruise control cancel switch signal input. 3. Do the cruise control combination switch test (see **CRUISE CONTROL COMBINATION SWITCH TEST/REPLACEMENT**).	Open circuit, loose or disconnected terminals: YEL/RED, LT GRN or LT GRN/BLK, ORN
Set speed will not resume when the resume/accel switch is pressed (with the cruise control main switch turned on, and set speed temporarily canceled by pressing the brake pedal)	1. Check for PGM-FI DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). 2. Check the brake pedal position switch adjustment (see **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT**). 3. Do the cruise control input test (see **CRUISE CONTROL INPUT TEST**). Test the cruise control resume/accel switch signal input. Test the brake pedal position switch signal input. 4. Do the cruise control combination switch test (see **CRUISE CONTROL COMBINATION SWITCH**	• Faulty brake pedal position switch • Open circuit, loose or disconnected terminals: LT GRN/BLK, ORN

	TEST/REPLACEMENT).	
Set speed will not resume when the resume/accel switch is pressed (with the cruise control main switch turned on, and set speed temporarily canceled by pressing the clutch pedal)	1. Check for PGM-FI DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). 2. Check the clutch pedal position switch adjustment (see **CLUTCH PEDAL, CLUTCH PEDAL POSITION SWITCH, AND CLUTCH INTERLOCK SWITCH ADJUSTMENT**). 3. Do the cruise control input test (see **CRUISE CONTROL INPUT TEST**). Test the cruise control resume/accel switch signal input. Test the clutch pedal position switch signal input. 4. Do the cruise control combination switch test (see **CRUISE CONTROL COMBINATION SWITCH TEST/REPLACEMENT**).	• Faulty clutch pedal position switch • Open circuit, loose or disconnected terminals: LT GRN/BLK, ORN
With the ignition switch ON (II), and the lighting switch turned on, the cruise control combination switch illumination does not come on	Replace the cruise control combination switch (see **CRUISE CONTROL COMBINATION SWITCH TEST/REPLACEMENT**).	

CIRCUIT DIAGRAM

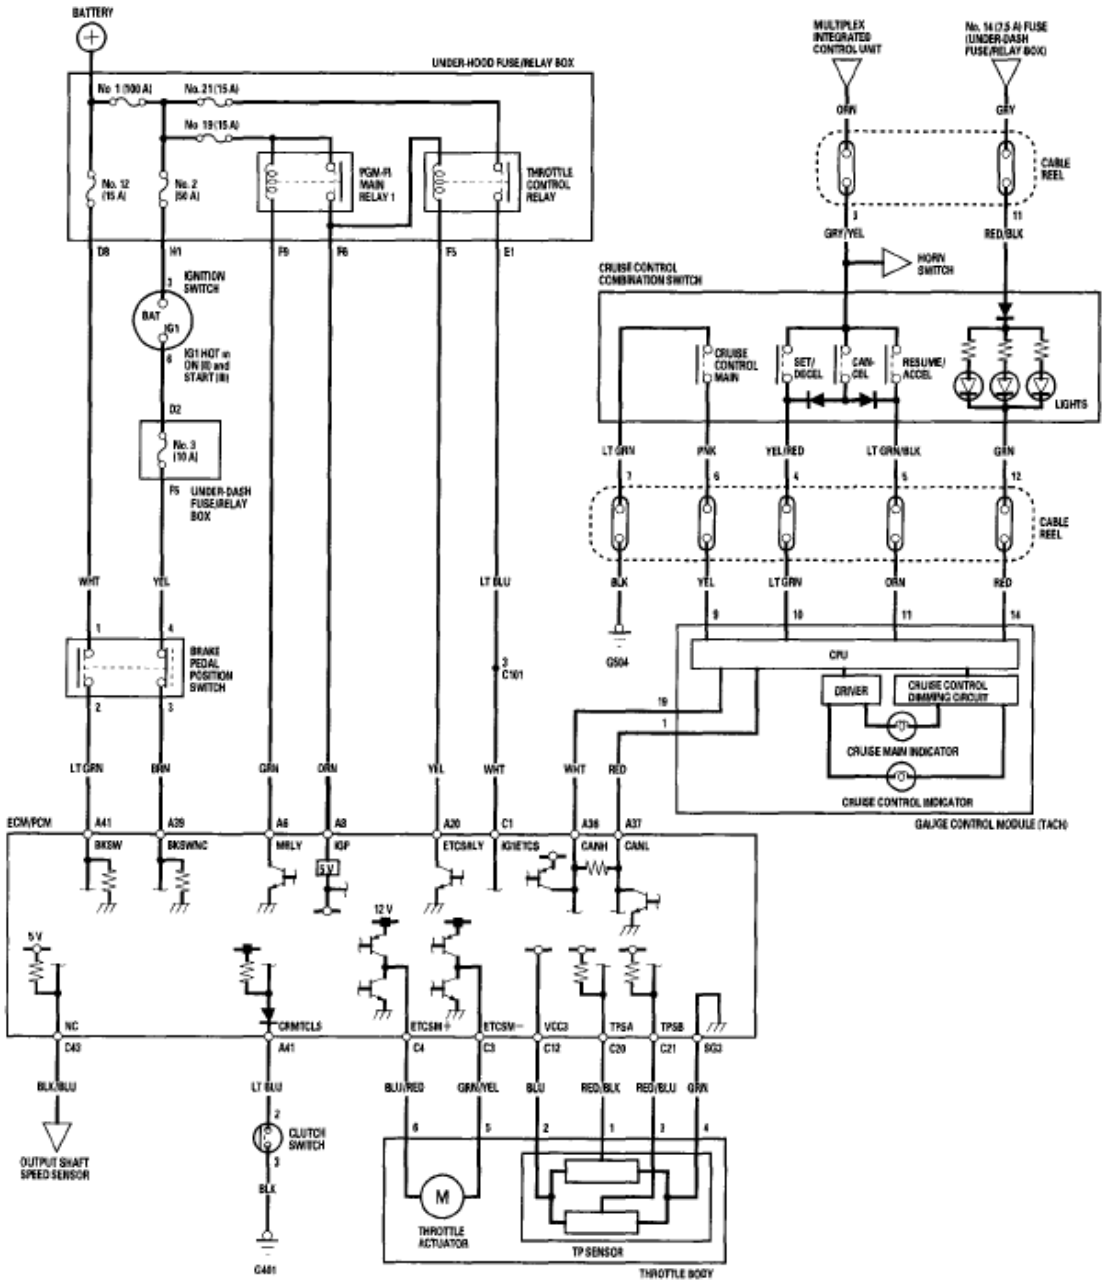

Fig. 2: Cruise Control - Circuit Diagram

CRUISE CONTROL INPUT TEST

NOTE: Always make sure you have the latest HDS software before doing the input tests.

1. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see **GENERAL TROUBLESHOOTING INFORMATION**).
2. Turn the ignition switch ON (II).
3. Make sure the HDS communicates with the vehicle and the engine control module (ECM). If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).

4. Go to PGM-FI, and check for DTCs (see **DTC TROUBLESHOOTING INDEX** .
5. Do the following tests while monitoring parameters in the PGM-FI DATA LIST with the HDS.

NOTE: Intermittent failures are often caused by loose circuit connections. While monitoring cruise control inputs, flex their circuits, and note if any of the test results change.

Cruise Control Input Test

Signal to be tested	Test condition	Parameter: Desired result	Possible cause if result is not obtained
Brake pedal position switch signal	Brake pedal pressed, then released	CRUISE BRAKE SW should indicate OFF when the brake pedal is pressed and ON when the brake pedal is released.	• Faulty brake pedal position switch • Blown No. 3 (10 A) fuse in the under-dash fuse/relay box • Open in the wire between the ECM and the brake pedal position switch • A wire shorted to ground between the ECM/PCM and the brake pedal position switch
Clutch pedal position switch signal	Clutch pedal pressed, then released	SHIFT/CLUTCH SW should indicate ON when the clutch pedal is pressed and OFF when the clutch pedal is released.	• Faulty clutch pedal position switch • Open in the wire between the ECM and the clutch pedal position switch • Short to ground in the wire between the ECM and the clutch pedal position switch • Poor ground G401
Cruise control main switch signal	Cruise control main switch ON and OFF	CRUISE MASTER (MAIN) SW should indicate ON when the cruise control main switch is turned ON and OFF when the cruise control main switch is turned OFF.	• Faulty cruise control main switch • Faulty gauge control module (tach) • Open in the wire between the gauge control module (tach) and the cruise control main switch • Short to ground in the wire between the

			gauge control module (tach) and the cruise control main switch
Set switch signal	Set/decel switch pressed and released	CRUISE SET SW should indicate ON when the set/decel switch is pressed and OFF when the set/decel switch is released.	• Faulty cruise control combination switch • Faulty gauge control module (tach) • Open in the wire between the gauge control module (tach) and the cruise control combination switch • Short to ground in the wire between the gauge control module (tach) and the cruise control combination switch
Resume switch signal	Resume/accel switch pressed and released	CRUISE RESUME SW should indicate ON when the resume/accel switch is pressed and OFF when the resume/accel switch is released.	• Faulty cruise control combination switch • Faulty gauge control module (tach) • Open in the wire between the gauge control module (tach) and the cruise control combination switch • Short to ground in the wire between the gauge control module (tach) and the cruise control combination switch
Cancel switch signal	Cancel switch pressed and released	CRUISE CANCEL SW should indicate ON when the cancel switch is pressed and OFF when the cancel switch is released.	• Faulty cruise control combination switch • Faulty gauge control module (tach)
Cruise control indicator signal	Start the engine, turn the cruise control main switch on, and drive the vehicle above 25 mph (40 km/h). Set and cancel the cruise control.	CRUISE INDICATOR should indicate ON when the cruise control is set and OFF when the cruise control is canceled.	• Faulty ECM • Cruise control was not set at the test by other malfunction

CRUISE CONTROL COMBINATION SWITCH TEST/REPLACEMENT

SRS components are located in this area. Review the SRS component locations (see **COMPONENT**

LOCATION INDEX) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) in the SRS before doing repairs or service.

1. Remove the driver's airbag (see **DRIVER'S AIRBAG REPLACEMENT**).
2. Remove the steering wheel trim.

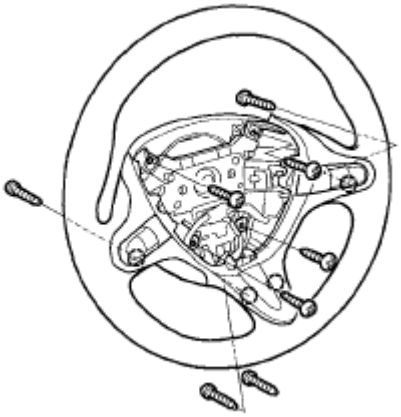

Fig. 3: Removing Steering Wheel Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the cruise control combination switch.

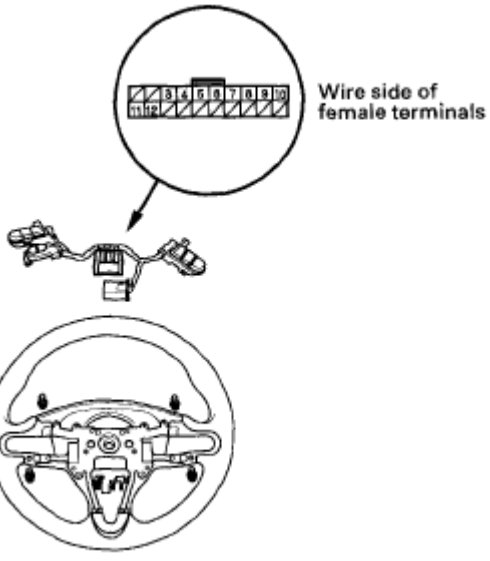

Fig. 4: Removing Cruise Control Combination Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Check for continuity between the terminals in each switch position according to **Fig. 5** .
   - If there is continuity, and it matches the table, but switch failure occurred on the cruise control input test, check and repair the wire harness on the switch circuit.
   - If there is no continuity in one or more positions, replace the switch.

Terminal / Position	6	7	3		5	4
Cruise control main switch (ON)	○	○				
Cruise control main switch (OFF)						
Set/decel (PRESSED)			○			○
Resume/accel (PRESSED)			○		○	
Cancel (PRESSED)			○			○

2006-09 ACCESSORIES & EQUIPMENT

Immobilizer System - Civic (All Except Hybrid)

COMPONENT LOCATION INDEX

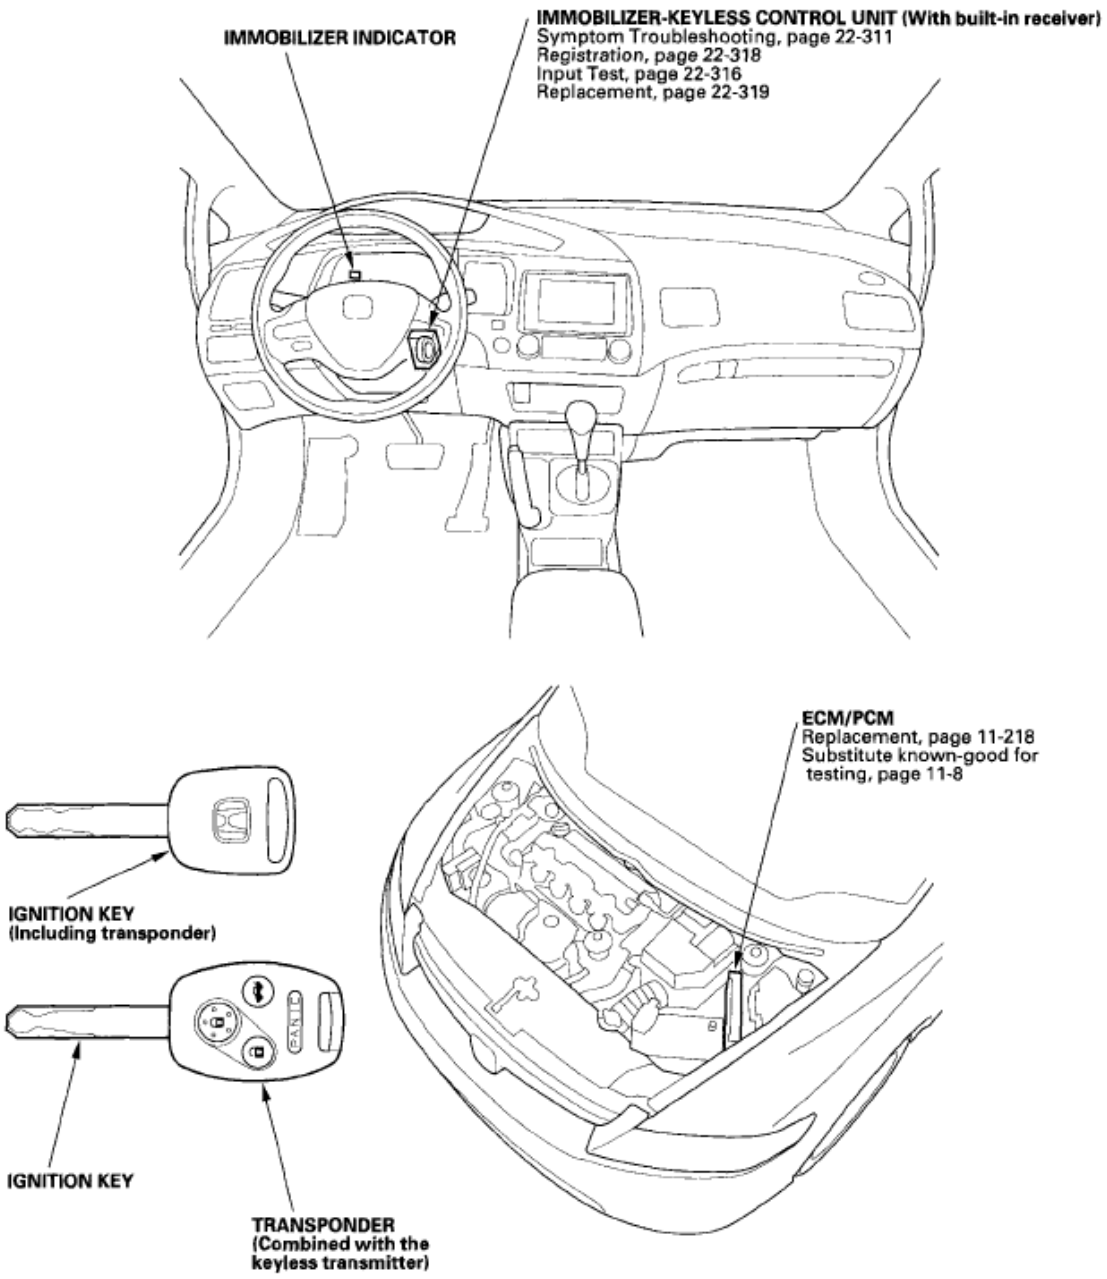

Fig. 1: Locating Immobilizer System Components
Courtesy of HONDA

SYSTEM DESCRIPTION

The vehicle is equipped with an immobilizer system that will disable the vehicle unless a programmed ignition key is used.

This system consists of a transponder combined with a keyless transmitter, immobilizer-keyless control unit, immobilizer indicator, imoes unit (built into the MICU), and the ECM/PCM.

When the immobilizer key (programmed by the HDS) is inserted into the ignition switch and turned to the ON (II) position, the immobilizer-keyless control unit sends power to the transponder in the ignition key. The transponder then sends a coded signal back to the immobilizer-keyless control unit which then sends a coded signal to the ECM/PCM and the MICU (imoes unit). The ECM/PCM and MICU (imoes unit) identify this coded signal, then fuel power is supplied.

NOTE: The transmitter is automatically programmed to the vehicle when a transponder is programmed by the HDS.

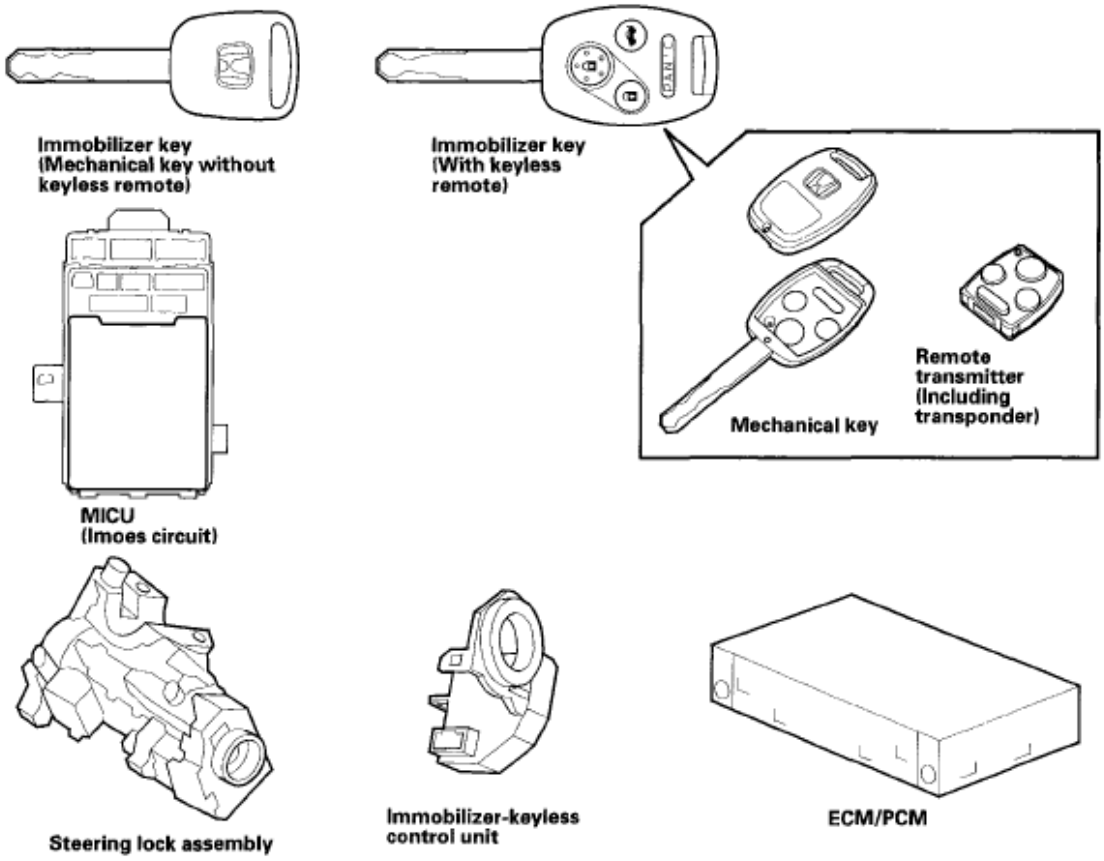

Fig. 2: Immobilizer System Description
Courtesy of HONDA

If the wrong key has been used or the code was not received or recognized by the unit, the indicator will come on for about 2 seconds, then it will blink until the ignition switch is turned OFF. When the ignition switch is turned OFF, the indicator will blink ten times to signal that the unit has reset correctly, then the indicator will go off.

CIRCUIT DIAGRAM

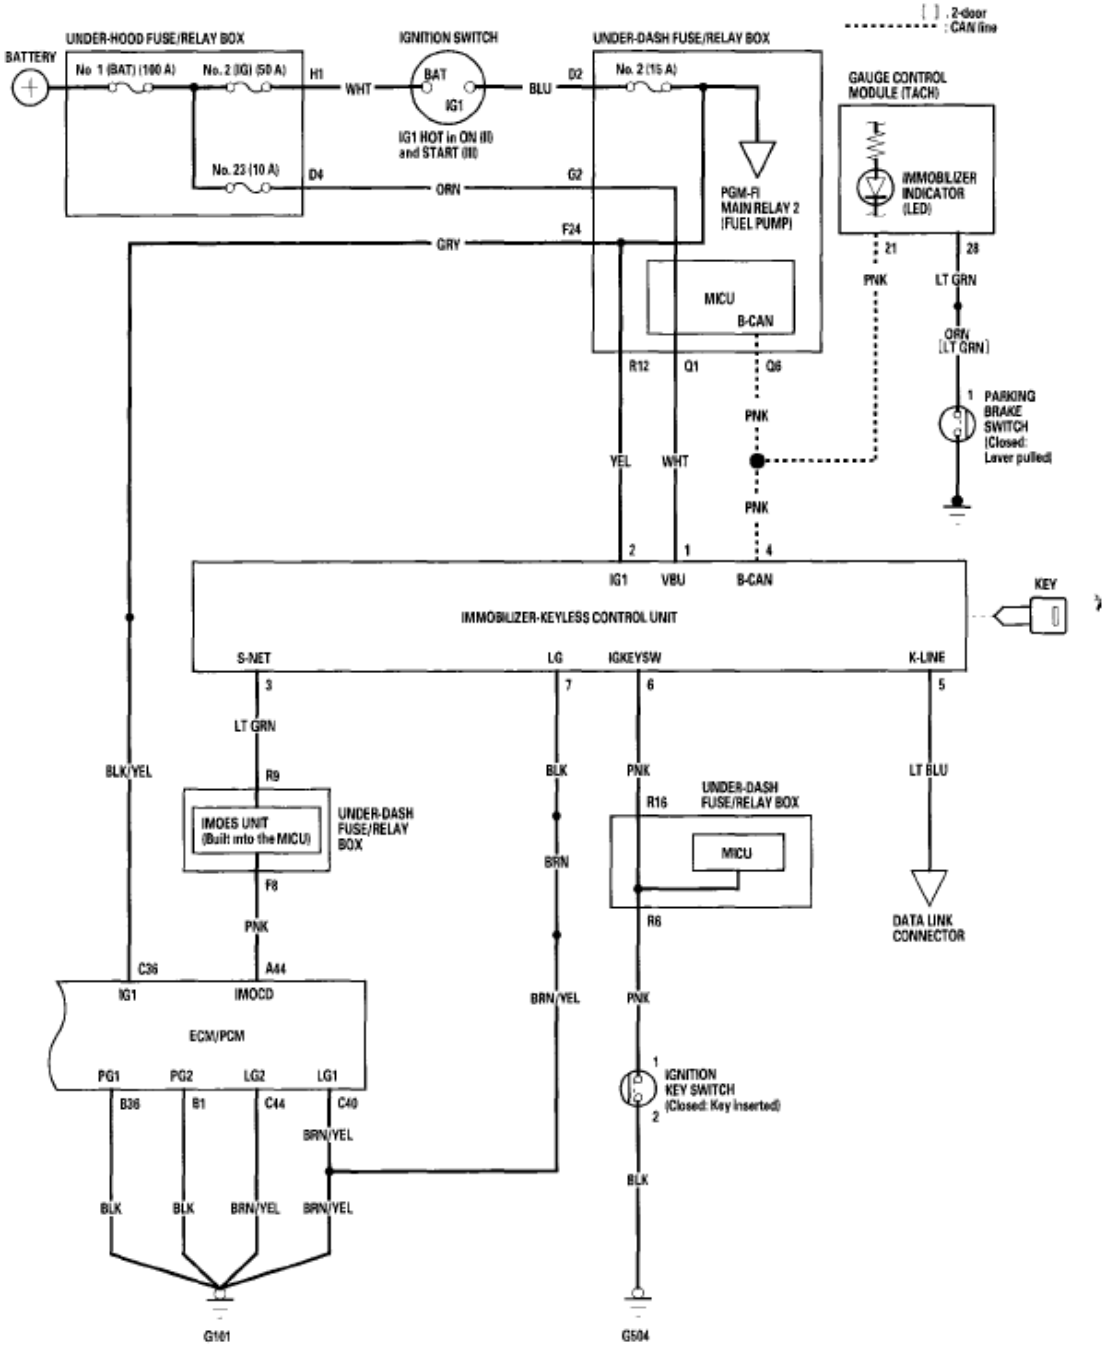

Fig. 3: Immobilizer System Circuit Diagram
Courtesy of HONDA

DTC TROUBLESHOOTING

DTC B1905: IMMOBILIZER-KEYLESS CONTROL UNIT LOST COMMUNICATION WITH MICU (DRLOCKSW MESSAGE)

NOTE: **If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).**

1. Clear the DTCs with the HDS.
2. Turn the ignition switch OFF, and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs witch the HDS.

   Is DTC B1905 indicated?

   YES - Go to step 5.

   NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections at the immobilizer-keyless control unit 7P connector, and the under-dash fuse/relay box connector Q (16P).

5. Check for DTCs with the HDS.

   Is DTC B1160 also indicated with DTC B1905?

   YES - Faulty MICU; replace the under-dash fuse/relay box.

   NO - Replace the immobilizer-keyless control unit.

DTC B1906: IMMOBILIZER-KEYLESS CONTROL UNIT LOST COMMUNICATION WITH GAUGE CONTROL MODULE (A/T MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch OFF, and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

   Is DTC B1906 indicated?

   YES - Go to step 5.

   NO - Intermittent failure, the gauge control module is OK at this time. Check for loose or poor connections at the gauge control module (tach) 36P connector and at the immobilizer-keyless control unit 7P connector.

5. Turn the ignition switch OFF, and then back ON(II).
6. Select the BODY ELECTRICAL menu, then enter the UNIT INFORMATION.
7. Check the condition of the gauge control module (tach) from the CONNECTED UNIT list.

   Is NOT AVAILABLE indicated?

   YES - Go to step 8.

NO - Replace the immobilizer-keyless control unit.

8. Do the gauge control module (tach) input test (see **GAUGE CONTROL MODULE (TACH) INPUT TEST**).

   Are all inputs OK?

   YES - Go to step 9.

   NO - Repair the faulty input, then recheck the DTCs.

9. Disconnect the immobilizer-keyless control unit 7P connector.
10. Disconnect the gauge control module (tach) 36P connector.
11. Check for continuity between the immobilizer-keyless control unit 7P connector No. 4 terminal and the gauge control module (tach) 36P connector No. 21 terminal.

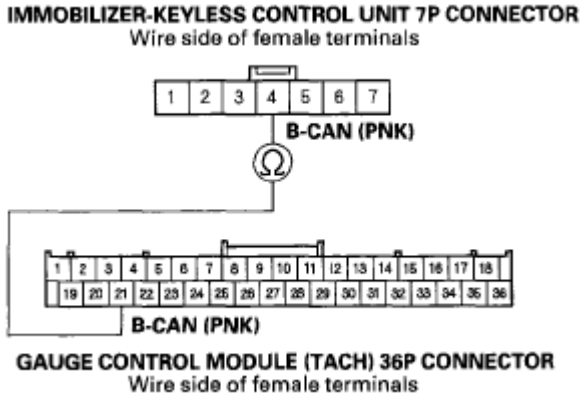

Fig. 4: Checking Continuity Between Immobilizer-Keyless Control Unit 7P Connector No. 4 Terminal And Gauge Control Module (Tach) 36P Connector No. 21 Terminal
Courtesy of HONDA

Is there continuity?

YES - Replace the gauge control module (tach).

NO - Repair an open in the wire between the immobilizer-keyless control unit and the gauge control module (tach).

DTC B1925: IGNITION KEY SWITCH SIGNAL ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch OFF and remove the ignition key.
3. Insert the ignition key into the ignition switch, and turn the ignition switch ON (II).
4. Check for DTCs with the HDS.

Is DTC B1925 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections at the immobilizer-keyless control unit 7P connector and at the ignition key switch 6P connector.

5. Turn the ignition switch OFF and remove the ignition key.
6. Disconnect the ignition key switch 6P connector.
7. At the ignition key switch side, check for continuity between the ignition key switch 6P connector No. 1 and No. 2 terminals.

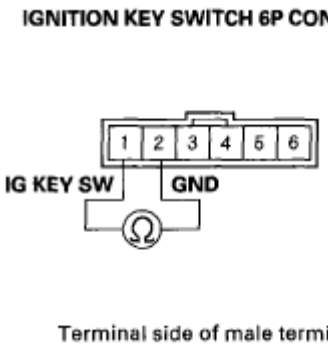

Fig. 5: Checking For Continuity Between Ignition Key Switch 6P Connector No. 1 And No. 2 Terminals
Courtesy of HONDA

Is there continuity?

YES - Faulty ignition key switch or short to ground, replace the steering lock assembly.

NO - Go to step 8.

8. Insert the ignition key into the ignition switch.
9. At the ignition key switch side, check for continuity between the ignition key switch 6P connector No. 1 and No. 2 terminals.

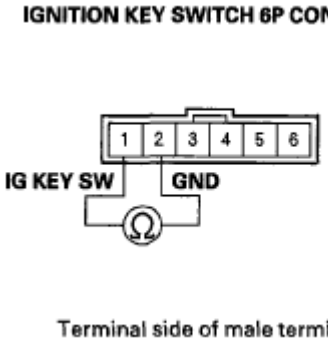

Fig. 6: Checking For Continuity Between Ignition Key Switch 6P Connector No. 1 And No. 2 Terminals
Courtesy of HONDA

Is there continuity?

YES - Go to step 10.

NO - Faulty ignition key switch, replace the steering lock assembly.

10. Disconnect the immobilizer-keyless control unit 7P connector.
11. Check for continuity between the immobilizer-keyless control unit 7P connector No. 6 terminal and the ignition key switch 6P connector No. 1 terminal.

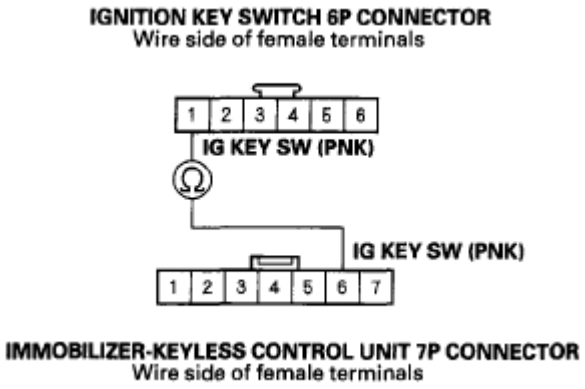

Fig. 7: Checking Continuity Between Immobilizer-Keyless Control Unit 7P Connector No. 6 Terminal And Ignition Key Switch 6P Connector No. 1 Terminal
Courtesy of HONDA

Is there continuity?

YES - Go to step 12.

NO - Repair an open in the wire.

12. Check for continuity between the immobilizer-keyless control unit 7P connector No. 6 terminal and body ground.

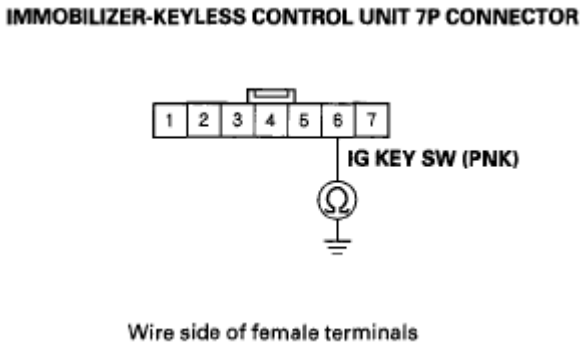

Fig. 8: Checking For Continuity Between Immobilizer-Keyless Control Unit Connector Terminal And Body Ground
Courtesy of HONDA

Is there continuity?

YES - Repair a short to ground in the wire or substitue a known-good under-dash fuse/relay box, and recheck. If the symptom/indication goes away, replace under-dash fuse/relay box.

NO - Replace the immobilizer-keyless control unit.

SYMPTOM TROUBLESHOOTING INFORMATION

SYMPTOM TROUBLESHOOTING BY THE IMMOBILIZER INDICATOR LIGHTING PATTERN

Immobilizer system condition can be checked by the immobilizer indicator lighting pattern.

Normal operation

If the immobilizer code is identified, the immobilizer indicator comes on for 2 seconds, then goes off after turning the ignition switch ON (II).

The immobilizer indicator does not come on when the ignition switch is turned OFF.

Immobilizer code is not identified

If the immobilizer code is not identified, the immobilizer indicator comes on for 2 seconds, then blinks after turning the ignition switch ON (II).

The immobilizer indicator blinks ten times, then goes off when the ignition switch is turned OFF.

Immobilizer indicator does not come on

If the immobilizer indicator does not come on after turning the ignition switch ON (II), there maybe an open or short in the F-CAN lines between the ECM/PCM and the gauge control module (tach). Watch the malfunction indicator lamp (MIL). If the MIL stays on, go to the PGM-FI system troubleshooting (see **MIL CIRCUIT TROUBLESHOOTING**).

Immobilizer indicator does not go off

If the immobilizer indicator does not go off after turning the ignition switch ON (II), do the gauge control module (tach) self-diagnostic function (see **SELF-DIAGNOSTIC FUNCTION**). If the indicator drive circuit is OK, do the SYSTEM CHECK with the HDS.

GENERAL CHECK BEFORE TROUBLESHOOTING

Before troubleshooting the immobilizer system, check the following general points and solve any if applicable.

- Battery is low; charge the battery fully, then troubleshoot the immobilizer system.
- Ignition key is not a genuine Honda part; use the Honda-approved key blank, register the key, then troubleshoot the immobilizer system.
- Key ring, or keys, or a key case is used; remove the key from it, and troubleshoot the immobilizer system with a key only.
- Aftermarket electrical part is attached; remove it, then troubleshoot the immobilizer system.

HOW TO TROUBLESHOOT

NOTE: If the HDS does not communicate with the vehicle, go to the DLC circuit troubleshooting (see DLC CIRCUIT TROUBLESHOOTING).

1. Do the PGM-FI system DTCs check. If there is any DTC, go to the **DTC TROUBLESHOOTING** .
2. Do the Body Electrical DTCs check. If there is any DTC, go to **BODY ELECTRICAL (TROUBLESHOOTING) (ALL EXCEPT HYBRID)** .
3. Do the system check using the HDS. If there is a system check number, do the troubleshooting for the item indicated (see **SYSTEM CHECK**).
4. Check the status log using the HDS. Troubleshoot the line with the highest counts (see **SYSTEM CHECK**). If all the lines are "0" zero, the problem may not be caused by the immobilizer system, check for ignition or fuel problems.

NOTE: Once repaired, clear the status log by removing the back up power fuse, or disconnecting the battery.

SYMPTOM TROUBLESHOOTING OF AN OPEN POWER SUPPLY AND GROUND CIRCUIT

If a malfunction occurs in the immobilizer circuit for the VBU, IG1 and GND (LG) lines, identify the lines to check with **Fig. 9** .

Symptom / Line Error		Immobilizer Indicator	Engine Start	Key Registration	Tester Communication	Keyless Operation
Terminal No.	Cause of Malfunction					
1	VBU line open or short	Comes on, then goes off.	Possible	Possible	Possible	Impossible
2	IG1 line open or short	Blinking	Impossible	Impossible	Impossible	Possible
3	S-NET line open or short	Blinking	Impossible	Possible	Impossible	Possible
4	B-CAN line open or short	Comes on, then goes off.	Possible	Possible	Immobilizer: Possible Keyless: Impossible	Impossible
5	K-LINE line open or short	Comes on, then goes off.	Possible	Impossible	Impossible	Possible
6	KEYSW line open	Comes on, then goes off.	Possible	Possible	Possible	Possible (in spite of the key is in the ignition switch)
	KEYSW line short to ground					Impossible
7	GND (LG) line open	Blinking	Impossible	Impossible	Impossible	Impossible

Fig. 9: Power Supply And Ground Circuit Troubleshooting Chart
Courtesy of HONDA

SYSTEM CHECK AND STATUS LOG

NOTE: The HDS can be used to:

- **Check the state of the immobilizer key registration and the IMOCD line**

by doing a SYSTEM CHECK.

- **Check the number of times the immobilizer control unit-receiver doesn't permit the engine to run by checking the STATUS LOG.**

1. Connect the HDS to the data link connector, then turn the ignition switch ON (II) and follow the prompts to the MAIN MENU.

NOTE: If the HDS does not communicate with the vehicle, go to the DLC circuit troubleshooting (see DLC CIRCUIT TROUBLESHOOTING).

2. At the MAIN MENU, enter IMMOBILIZER, then select the IMMOBILIZER SET UP.
3. Do the SYSTEM CHECK. If there is a system check number, do the troubleshooting for the item indicated.
4. Check the status log using the HDS. Troubleshoot the line with the highest counts. If all the lines are "0" zero, the problem may not be caused by the immobilizer system, check for ignition or fuel problems.

NOTE: Once repaired, clear the status log by removing the No. 7 (7.5 A) fuse in the under-dash fuse/relay box or disconnecting the battery.

SYMPTOM TROUBLESHOOTING

1. Troubleshoot the immobilizer system by the order of the priority shown:

SYMPTOM TROUBLESHOOTING CHART

Order of Priority	Symptom	Possible cause
1	Immobilizer indicator blinks after the ignition switch is turned OFF.	Symptom troubleshooting (see **IMMOBILIZER INDICATOR BLINKS**).
2	Engine does not start with the immobilizer key.	Symptom troubleshooting (see **ENGINE DOES NOT START WITH THE IMMOBILIZER KEY**).
3	Immobilizer indicator does not come on.	Check the MIL indication. • If the MIL comes on, go to the PGM-FI System MIL circuit troubleshooting (see **MIL CIRCUIT TROUBLESHOOTING**). • If the MIL does not come on, replace the gauge control module (tach).
4	Immobilizer indicator does not go off.	Symptom troubleshooting (see **IMMOBILIZER INDICATOR DOES NOT GO OFF**).

IMMOBILIZER INDICATOR BLINKS

NOTE: Before troubleshooting, check the items listed in GENERAL CHECK BEFORE TROUBLESHOOTING.

1. Turn the ignition switch OFF.
2. Connect the HDS, then turn the ignition switch ON (II).
3. Enter the IMMOBILIZER, then select the IMMOBILIZER SETUP.
4. Select the SYSTEM CHECK.

   Is the SYSTEM CHECK indicated?

   YES - Troubleshoot the immobilizer system according to the result of the SYSTEM CHECK (see **SYSTEM CHECK**).

   NO - Go to step 5.

5. Turn the ignition switch OFF.
6. Enter the vehicle, and remove the ignition key from the ignition switch, then close the all doors.
7. Operate the keyless transmitter LOCK and UNLOCK several times in the vehicle.

   Do the door lock actuators work normally?

   YES - Go to step 8.

   NO - Check for a poor ground (G101) and/or an open in the wire between the immobilizer-keyless control unit 7P connector No. 7 terminal and body ground (G101).

8. Turn the ignition switch ON (II).
9. Check for voltage between the immobilizer-keyless control unit 7P connector No. 2 terminal and body ground.

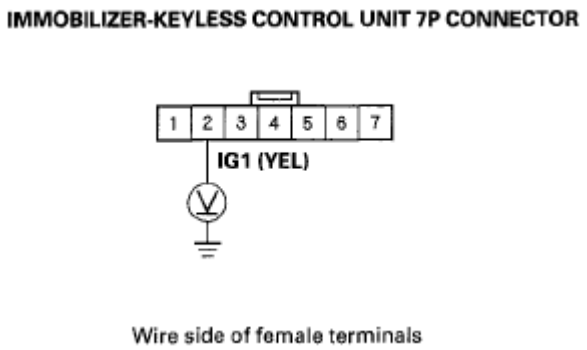

Fig. 10: Checking For Voltage Between Immobilizer-Keyless Control Unit Connector Terminal And Body Ground
Courtesy of HONDA

Is there battery voltage?

YES - Go to step 10.

NO - Repair open in the YEL wire between the under-dash fuse-relay box and the immobilizer-keyless control unit.

10. Check for voltage between the immobilizer-keyless control unit 7P connector No. 7 terminal and body ground.

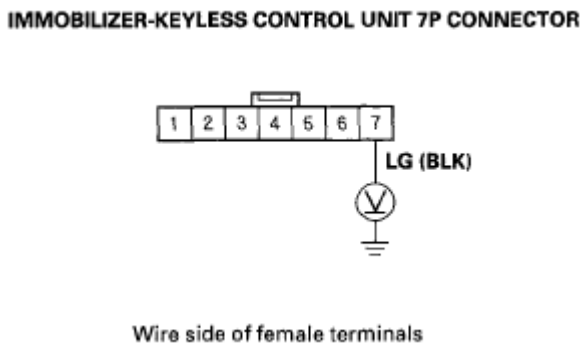

Fig. 11: Checking For Voltage Between Immobilizer-Keyless Control Unit 7P Connector No. 7 Terminal And Body Ground
Courtesy of HONDA

Is there 0.5 V or more?

YES - Repair poor connection or open between the immobilizer-keyless control unit 7P connector No. 7 terminal and G101.

NO - Replace the immobilizer-keyless control unit.

ENGINE DOES NOT START WITH THE IMMOBILIZER KEY

NOTE: Before troubleshooting, check the items listed in "GENERAL CHECK BEFORE TROUBLESHOOTING" and "HOW TO TROUBLESHOOT" (see SYMPTOM TROUBLESHOOTING INFORMATION).

1. Try to start the engine.

   Does the engine start?

   YES - Intermittent failure, the vehicle is OK at this time. Check status log.

   NO - Go to step 2.

2. Turn the ignition switch OFF.
3. Turn the ignition switch ON (II), and check the immobilizer indicator.

   Does the indicator come on for 2 seconds, then go off?

   YES - Go to step 4.

   NO - Go to the **IMMOBILIZER INDICATOR BLINKs** .

4. Turn the ignition switch to START (III).

Does the starter motor run?

YES - Go to step 5.

NO - Go to **STARTING SYSTEM (R18A1) (ALL EXCEPT HYBRID)** and check the starter motor.

5. Try to start the engine with the immobilizer key.

   Does the engine start?

   YES - Go to step 6.

   NO - Go to the **DTC TROUBLESHOOTING** .

6. Wait for a few minutes with the engine running.

   Does the engine stop?

   YES - Go to the **DTC TROUBLESHOOTING** .

   NO - The system is OK at this time.

IMMOBILIZER INDICATOR DOES NOT GO OFF

1. Turn the ignition switch OFF.
2. Connect the HDS to the data link connector.
3. Turn the ignition switch ON (II).
4. Enter the IMMOBILIZER, then select the IMMOBILIZER INFORMATION.
5. Do the SYSTEM CHECK with the HDS. Is N-1 OK indicated?

   YES - Replace the gauge control module.

   NO - Substitute a known-good immobilizer-keyless control unit, then register it and recheck. If the symptom goes away, replace the original immobilizer-keyless control unit.

SYSTEM CHECK

1. Connect the HDS to the data link connector.
2. Turn the ignition switch ON (II).
3. Monitor the System Check in the Immobilizer Info with the HDS.
4. If the HDS displays the "Normal", the immobilizer system is OK. If the HDS displays any other messages, check as follows:

SYSTEM CHECK

System Check No.	Status Log. Indication	System Check	Possible Cause

A-2	Possible	Communication error between the key and immobilizer unit	• Intermittent interruption between transponder and immobilizer-keyless control unit. • The immobilizer key type is incorrect non-Honda key. • Key failure (transponder failure) • No communication between the antenna and the immobilizer key by influence of metal such as key chains/key rings/other keys. • Low battery voltage.
A-3	Possible	No communication between the key and immobilizer unit	• The ignition switch was turned on with a non-immobilizer key. • The immobilizer key type is incorrect non-Honda key. • Key failure (transponder failure) • No communication between the antenna and the immobilizer key by influence of metal such as key chains/key rings/other keys. • Low battery voltage. • Immobilizer-keyless control unit failure
B-1	Possible	The ECM/PCM is not registered	• The ECM/PCM was not registered. Try to register the ECM/PCM using the HDS. • No communication between the ECM/PCM and the immobilizer-keyless control unit because of low battery voltage. • No communication between the immobilizer-keyless control unit and the ECM/PCM because of interference.
B-2	Possible	Error of communication format in ECM/PCM	• The ECM/PCM was not registered. Try to register the ECM/PCM using the HDS. • No communication between the ECM/PCM and the immobilizer-keyless control unit because of low battery voltage. • No communication between the immobilizer-keyless control unit and the ECM/PCM because of interference.
C-1	Possible	No registration of Imoes Unit	• Imoes unit was not registered. • No communication between the Imoes unit and the immobilizer-keyless control unit because of low battery voltage. • No communication between the Imoes

			unit and the immobilizer-keyless control unit because of interference.
C-2	Possible	Error of communication format in Imoes Unit	• Imoes unit was not registered. • No communication between the Imoes unit and the immobilizer-keyless control unit because of low battery voltage. • No communication between the Imoes unit and the immobilizer-keyless control unit because of interference.
D-1	Possible	S-net line short	• Harness short from the ECM/PCM to the immobilizer-keyless control unit. (S-net line short) • No communication between the ECM/PCM and the immobilizer-keyless control unit because of low battery voltage. • No communication between the immobilizer-keyless control unit and the ECM/PCM because of interference. • Immobilizer-keyless control unit failure • ECM/PCM failure
D-2	Possible	No communication between Imoes unit and Immobilizer Unit	• Blown fuse • Harness open from the Imoes unit to the immobilizer-keyless control unit. • No communication between the Imoes unit and the immobilizer-keyless control unit because of low battery voltage. • No communication between the Imoes unit and the immobilizer-keyless control unit because of interference. • Immobilizer-keyless control unit failure • Imoes unit failure
D-3	Possible	No communication between ECM/PCM and Immobilizer Unit	• Blown fuse • Harness open from the ECM/PCM to the immobilizer-keyless control unit. • No communication between the ECM/PCM and the immobilizer-keyless control unit because of low battery voltage. • No communication between the immobilizer-keyless control unit and the ECM/PCM because of interference. • Immobilizer-keyless control unit failure • ECM/PCM failuer
E-1			

E-2	-	Initial registration of Immobilizer Unit is not completed	The immobilizer-keyless control unit is not registered. Try to register the immobilizer-keyless control unit using the HDS.

IMMOBILIZER-KEYLESS CONTROL UNIT INPUT TEST

NOTE: Before troubleshooting the immobilizer system, troubleshoot the B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A) and check the No. 10 (7.5 A) and No. 38 (30 A) fuses in the under-dash fuse/relay box.

1. Remove the driver's dashboard lower cover (see **DRIVER's DASHBOARD LOWER COVER REMOVAL/INSTALLATION**).
2. Remove the steering column covers (see **STEERING COLUMN REMOVAL AND INSTALLATION**).
3. Disconnect the 7P connector (A) from the immobilizer-keyless control unit (B).

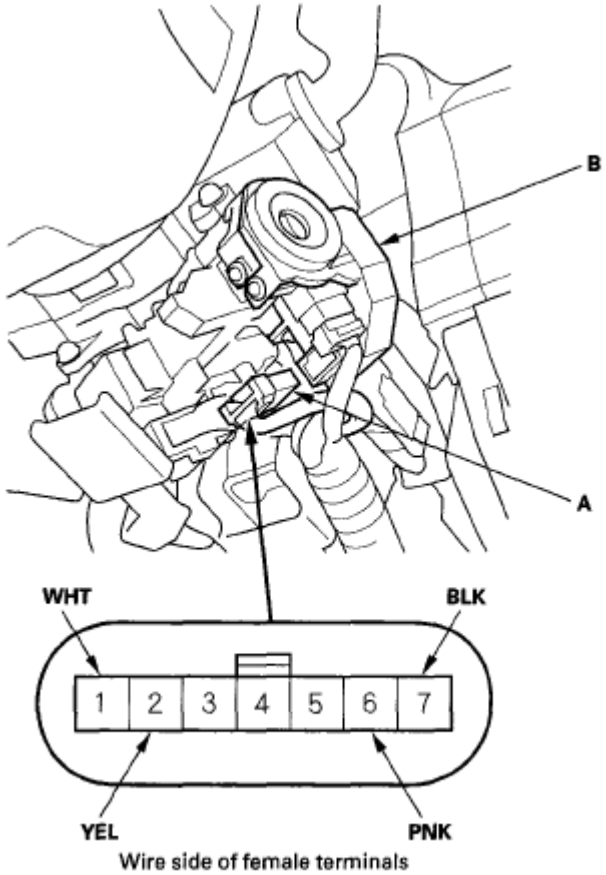

Fig. 12: Disconnecting 7P Connector From Immobilizer-Keyless Control Unit
Courtesy of HONDA

4. Inspect the connector and socket terminals to be sure they are all making good contact.
   - If the terminals are bent, loose or corroded, repair them as necessary, and recheck the system.
   - If the terminals look OK, go to step 5.
5. With the connector still disconnected, make these input tests at the connector.
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, go to step 6.

IMMOBILIZER-KEYLESS CONTROL UNIT INPUT TEST (CONNECTORS DISCONNECTED)

Cavity	Wire	Test condition	Test: Desired result	Possible cause if result is not obtained
1	ORN	Under all conditions	Check for voltage between immobilizer-keyless control unit 7P connector No. 1 terminal and body ground: There should be battery voltage.	• Blown No. 23 (10 A) fuse in the under-hood fuse/relay box • An open in the wire
2	YEL	Ignition switch ON (ID	Check for voltage to ground: There should be battery voltage.	• Blown No. 2(15 A) fuse in the under-dash fuse/relay box • An open in the wire

6. Reconnect the connectors to the immobilizer-keyless control unit, and make these input tests at the connector.
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, the immobilizer-keyless control unit must be faulty; replace it.

IMMOBILIZER-KEYLESS CONTROL UNIT INPUT TEST (CONNECTORS RECONNECTED)

Cavity	Wire	Test condition	Test: Desired result	Possible cause if result is not obtained
7	BLK	Under all conditions	Check for voltage to ground: There should be less than 0.5 V.	• Poor ground(G101) • An open in the wire
6	PNK	Ignition key inserted into the ignition switch	Check for voltage to ground: There should be less than 1 V.	• Poor ground (G504) • Faulty ignition key switch • An open in the wire

IMMOBILIZER KEY REGISTRATION

NOTE:

- **The HDS is required for registration of the immobilizer keys.**
- **Check for aftermarket electrical equipment that can cause problems with transponder operation.**

- **The immobilizer control unit-receiver can store up to six immobilizer Keys.**

ADD ONE NEW KEY

1. Have a registered key, a new immobilizer key, and the first pass word from the in system.
2. Connect the HDS to the data link connector.
3. Turn the ignition switch ON (II).
4. Select "IMMOBILIZER" from the "SYSTEM SELECT" menu.
5. Select "Add and Delete Keys", then "Add 1 key".
6. Do the registration according to the instructions on the HDS screen.
7. Check if the engine can be started by the newly registered key.

DELETE OR ADD MULTIPLE KEYS

NOTE: If any of the registered keys were lost, do the following procedure to delete the lost registered key.

1. Have all registered keys, all new keys, and the first password.
2. Connect the HDS to the data link connector.
3. Turn the ignition switch ON (II).
4. Select "IMMOBILIZER" from the "SYSTEM SELECT" menu.
5. Select "Add and Delete Keys", or "Delete or Add Multiple Keys".
6. Do the registration according to the instruction of HDS screen.
7. Check if the engine can be started by all the registered keys.

ALL KEYS ARE LOST

1. Prepare all new keys and have the immobilizer PCM code.
2. Connect the HDS to the data link connector.
3. Turn the ignition switch ON (II).
4. Select "IMMOBILIZER" from the "SYSTEM SELECT" menu.
5. Select "Add and Delete Keys", then "ALL KEYS LOST".
6. Do the registration according to the instruction of HDS screen.
7. Check if the engine can be started by all the registered keys.

IMMOBILIZER-KEYLESS CONTROL UNIT REPLACEMENT

1. Remove the driver's dashboard lower cover (see **DRIVER'S DASHBOARD LOWER COVER REMOVAL/INSTALLATION**).
2. Remove the steering column covers (see **STEERING COLUMN REMOVAL AND INSTALLATION**).
3. Disconnect the 7P connector (A) from the immobilizer-keyless control unit (B).

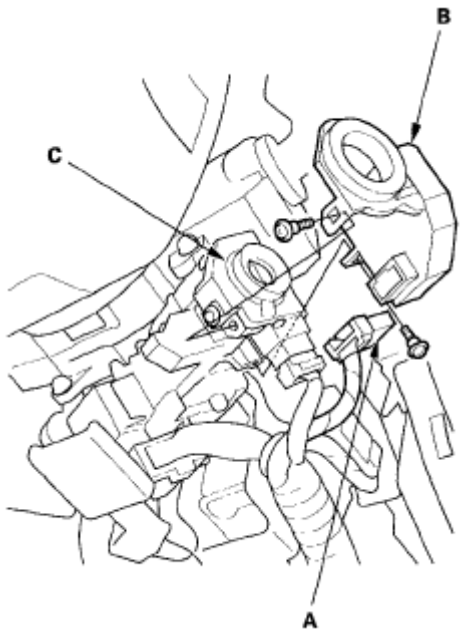

Fig. 13: Disconnecting 7P Connector From Immobilizer-Keyless Control Unit
Courtesy of HONDA

4. Remove the two screws and the immobilizer-keyless control unit from the ignition key cylinder (C).
5. Install the immobilizer-keyless control unit in the reverse order of removal.
6. After replacement, register the immobilizer-keyless control unit (see **IMMOBILIZER KEY REGISTRATION**), and make sure the immobilizer system works properly.

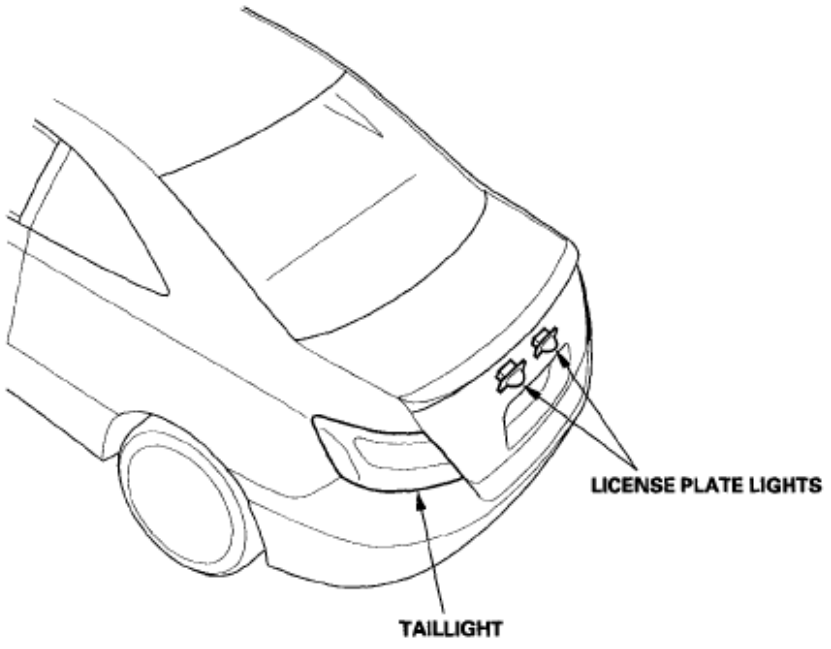

Fig. 3: Identifying Keyless/Power Door Locks/Security System Component Location (3 Of 3)

SYSTEM DESCRIPTION

SECURITY ALARM SYSTEM

NOTE: This applies to USA LX, EX and Si models.

The security alarm system is armed automatically after the doors, hood, and trunk are closed and locked. For the system to arm, the ignition switch must be off, the key must be removed from the ignition switch, and the MICU must receive signals that the doors, hood, and trunk are closed and locked. The alarm can be disarmed at any time by unlocking the driver's door with the key or pressing the UNLOCK button on the transmitter.

When everything is closed and locked, the only inputs that are grounded, and have 0 V, are the driver's door lock knob switch (LOCK position), and the audio unit or navigation unit (if equipped). In other words, all of the other switches are open, and have about 10 to 12 V, including the key cylinder switches. The security indicator in the gauge control module (speedo) begins to flash immediately after the vehicle is completely closed and locked, and 15 seconds later, the security system arms. If the security indicator does not flash, the system is not arming. A beep sounds and the parking lights flash to confirm the security alarm system is armed if the LOCK button is pressed a second time within 5 seconds.

If one of the switches is misadjusted or shorted internally, or there is a short in the circuit, the security system will not arm. As long as the control unit continues to receive a ground signal (0 V), it senses that the vehicle is not closed and locked, and the system will not arm. A switch that is slightly misadjusted can cause the alarm to sound for no apparent reason. In this case, a significant change in outside air temperature, the vibration of a passing truck, or someone bumping into the vehicle could cause the alarm to sound. There is no glass breakage or motion detector feature.

If anything is opened or improperly unlocked after the system is armed, the control unit receives a ground signal from that switch, and the 10 to 12 V reference drops to 0 V. If the audio unit or navigation unit (if equipped) is disconnected, the input loses its ground, and the input voltage goes to 10 to 12 V. The system sounds the alarm when any of these occur:

- A door or the trunk is forced open.
- A door is unlocked without using the key or the transmitter.
- The hood is opened.
- The audio unit or navigation unit (if equipped) is disconnected.
- The transmitter PANIC button is pressed.

When the system sounds the alarm, the horn sounds and the exterior lights flash for 2 minutes. The alarm can be stopped at any time by unlocking the driver's door with the key or by pressing any button on the transmitter.

PANIC MODE

The panic mode sounds the alarm in order to attract attention. When the PANIC button on the transmitter is pressed and held for 2 seconds, the horn sounds and the exterior lights flash for about 20 seconds.

The panic mode can be cancelled at anytime by pressing any button on the transmitter or by turning the ignition switch ON (II). The panic mode will not function if the ignition switch is ON (II).

KEYLESS ENTRY SYSTEM

The keyless entry system is integrated with the multiplex integrated control system. The multiplex integrated control unit (MICU) receives LOCK, UNLOCK and PANIC signals from the immobilizer-keyless control unit (keyless receiver).

The keyless entry system allows you to lock and unlock the vehicle with the transmitter. When you press the LOCK button, all doors lock. When you press the UNLOCK button once, only the driver's door unlocks. The other doors will unlock when you press the button a second time. The doors will not lock with the transmitter if a door is not fully closed, or if the key is in the ignition switch.

When the switch for the ceiling light is in the center (DOOR) position, it will come on when the UNLOCK button is pressed. If a door is not opened, the light will go off in about 30 seconds, and the doors will relock. If the doors are locked with the transmitter within 30 seconds, the light will go off immediately.

CIRCUIT DIAGRAM

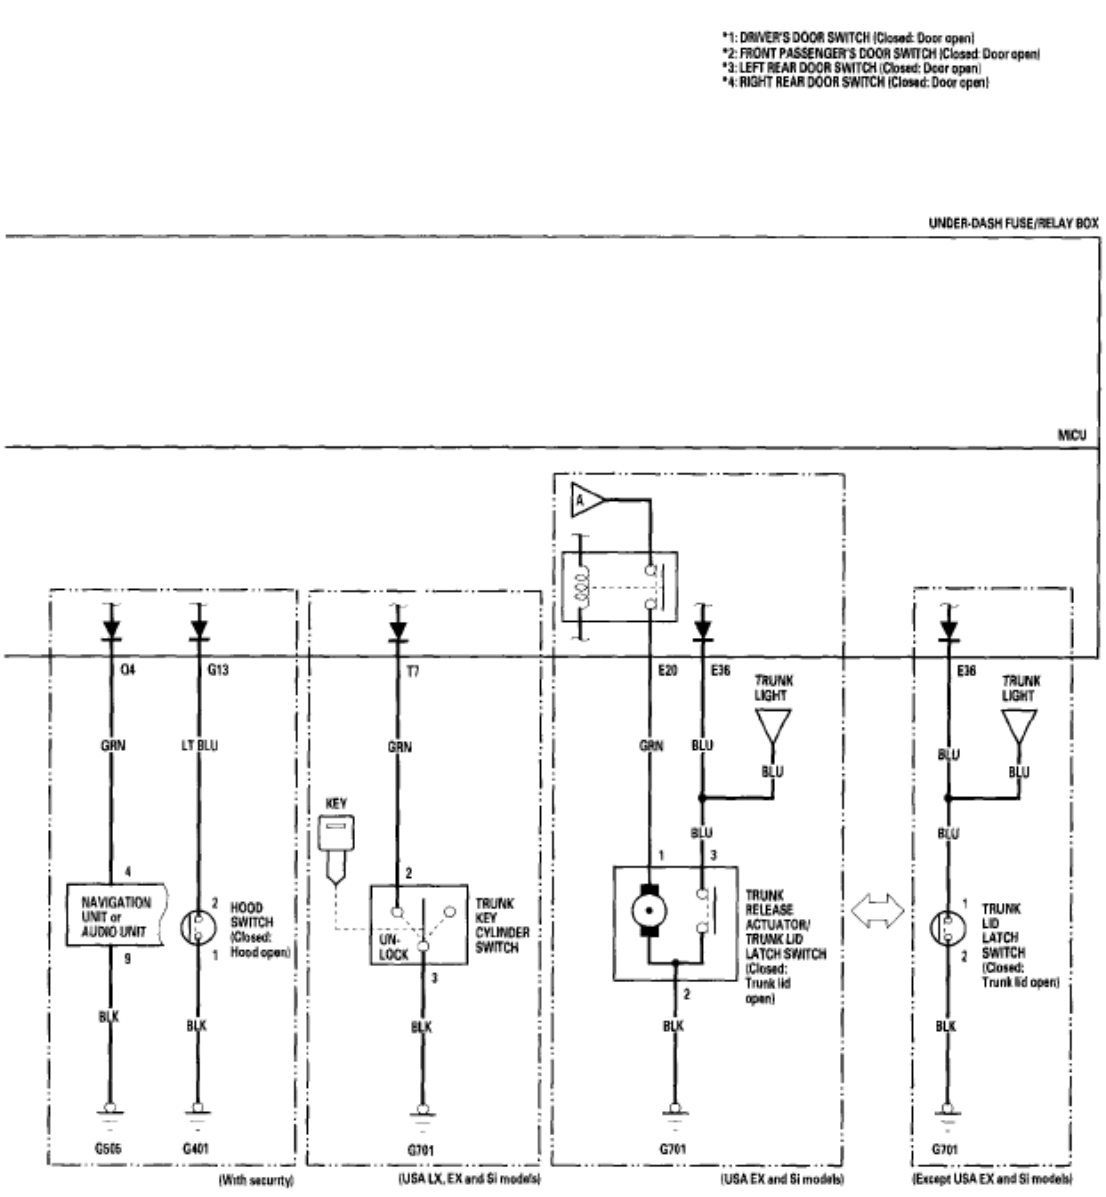

Fig. 7: Keyless/Power Door Locks/Security System - Circuit Diagram (4 Of 4)

DTC TROUBLESHOOTING

DTC B1026: FRONT PASSENGER'S DOOR LOCK SWITCH SIGNAL ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch OFF, and then back ON (II).
3. Operate the front passenger's door lock switch several times.
4. Check for DTCs with the HDS.

Is DTC B1026 indicated?

YES - Go to step 5.

NO - Intermittent failure. The front passenger's door lock system is OK at this time.

5. With the front passenger's door lock switch in the neutral position, select KEYLESS from the HDS and enter the DATA LIST.
6. Check the ON/OFF information of the FRONT PASSENGER'S DOOR LOCK SWITCH (LOCK) and FRONT PASSENGER'S DOOR LOCK SWITCH (UNLOCK) in the DATA LIST.

   Are both information indicators OFF?

   YES - Go to step 12.

   NO - Go to step 7.

7. Disconnect the front passenger's power window switch 8P connector.
8. Check the ON/OFF information of the FRONT PASSENGER'S DOOR LOCK SWITCH (LOCK) and FRONT PASSENGER'S DOOR LOCK SWITCH (UNLOCK) in the DATA LIST.

   Are both information indicators OFF?

   YES - Faulty door lock switch; replace the front passenger's power window switch.

   NO - Go to step 9.

9. Turn the ignition switch OFF.
10. Disconnect the under-dash fuse/relay box connector T(34P).
11. Check for continuity between the No. 1 (UNLOCK) and No. 6 (LOCK) terminals of the front passenger's power window switch 8P connector and body ground.

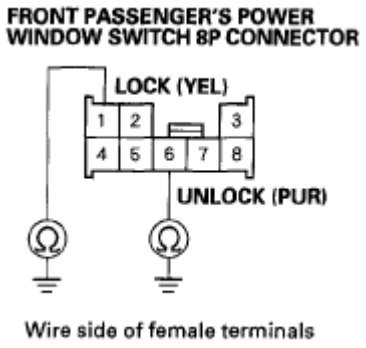

Fig. 8: Checking Continuity Between Front Passenger Power Window Switch 8P Connector Terminals And Body Ground

Is there continuity?

YES - Repair a short in the LOCK or UNLOCK wire.

NO - Faulty MICU, replace the under-dash fuse/relay box.

12. Turn the ignition switch OFF.
13. Disconnect the front passenger's window switch 8P connector.
14. Disconnect under-dash fuse/relay box connector T (34P).
15. Check for continuity between the No. 1 (UNLOCK) and No. 6 (LOCK) terminals of the front passenger's power window switch 8P connector.

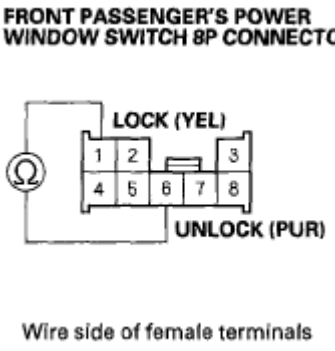

Fig. 9: Checking Continuity Between Terminals Of Front Passenger Power Window Switch 8P Connector

Is there continuity?

YES - Repair a short in the wire between the LOCK and UNLOCK wires.

NO - Substitute a known-good passenger's window master switch, and recheck. If the symptom/indication goes away, replace the original passenger's window switch. If not, the MICU is faulty, replace the under-dash fuse/relay box.

DTC B1127: DRIVER'S DOOR KEY CYLINDER SWITCH SIGNAL ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch OFF, and then back ON (II)
3. Insert the ignition key into the driver's door key cylinder switch, and turn the key in LOCK and UNLOCK positions ten times.
4. Check for DTCs with the HDS.

Is DTC B1127 indicated?

YES - Go to step 5.

NO - Intermittent failure. The driver's door key cylinder switch system is OK at this time.

5. With the driver's door key cylinder in the neutral position, select KEYLESS with the HDS, and enter the DATA LIST.
6. Check the ON/OFF information of the DRIVER'S DOOR KEY CYLINDER SWITCH (LOCK) and

DRIVER'S DOOR KEY CYLINDER SWITCH (UNLOCK) in the DATA LIST.

Are both information indicators OFF?

YES - Go to step 12.

NO - Go to step 7.

7. Disconnect the driver's door lock actuator 10P connector.
8. Check the ON/OFF information of the DRIVER'S DOOR KEY CYLINDER SWITCH (LOCK) and DRIVER'S DOOR KEY CYLINDER SWITCH (UNLOCK) in the DATA LIST.

Are both information indicators OFF?

YES - Faulty driver's door key cylinder switch; replace the driver's door lock actuator.

NO - Go to step 9.

9. Turn the ignition switch OFF.
10. Disconnect the under-dash fuse/relay box connector T(34P).
11. Check for continuity between the No. 31 (UNLOCK) and No. 32 (LOCK) terminals of the under-dash fuse/relay box connector T (34P) and body ground.

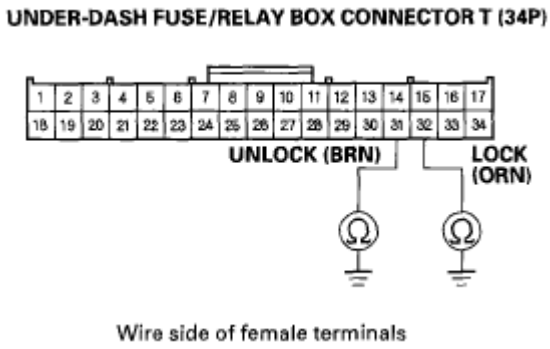

Fig. 10: Checking Continuity Between No. 31 And No. 32 Terminals Of Under-Dash Fuse/Relay Box Connector T (34P) And Body Ground

Is there continuity?

YES - Faulty MICU, replace the under-dash fuse/relay box.

NO - Go to step 12.

12. Turn the ignition switch OFF.
13. Disconnect the driver's door lock actuator 10P connector.
14. Disconnect under-dash fuse/relay box connector T (34P).
15. Check for continuity between the No. 31 (UNLOCK) and No. 32 (LOCK) terminals of the under-dash fuse/relay box connector T (34P).

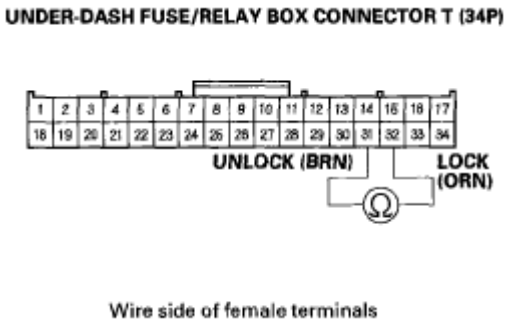

Fig. 11: Checking Continuity Between No. 31 And No. 32 Terminals Of Under-Dash Fuse/Relay Box Connector T (34P)

Is there continuity?

YES - Repair a short in the wire between the LOCK and UNLOCK wires.

NO - Substitute a known-good MICU, and recheck. If the symptom/indication goes away, replace the original MICU, if not, replace the driver's door lock actuator.

DTC B1128: DRIVER'S DOOR LOCK SWITCH SIGNAL ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch OFF, and then back ON (II).
3. Operate the driver's door lock switch LOCK/UNLOCK several times.
4. Check for DTCs with the HDS.

   Is DTC B1128 indicated?

   YES - Go to step 5.

   NO - Intermittent failure. The driver's door lock system is OK at this time.

5. With the driver's door lock switch in the neutral position, select KEYLESS from the HDS and enter the DATA LIST.
6. Check the ON/OFF information of the DRIVER'S DOOR LOCK SWITCH (LOCK) and DRIVER'S DOOR LOCK SWITCH (UNLOCK) in the DATA LIST.

   Are both information indicators OFF?

   YES - Go to step 12.

   NO - Go to step 7.

7. Disconnect the driver's power window switch 22P (16P)* connector.

*: 2-door

8. Check the ON/OFF information of the DRIVER'S DOOR LOCK SWITCH (LOCK) and DRIVER'S DOOR LOCK SWITCH (UNLOCK) in the DATA LIST.

   Are both information indicators OFF?

   YES - Faulty door lock switch; replace the driver's power window switch.

   NO - Go to step 9.

9. Turn the ignition switch OFF.
10. Disconnect the under-dash fuse/relay box connector T(34P).
11. Check for continuity between the No. 28 (LOCK) and No. 27 (UNLOCK) terminals of the under-dash fuse/relay box connector T (34P) and body ground.

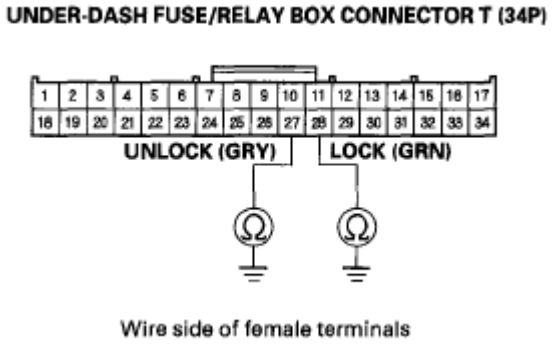

Fig. 12: Checking Continuity Between Terminals Of Under-Dash Fuse/Relay Box Connector T (34P) And Body Ground

Are there continuity?

YES - Repair a short in the LOCK or UNLOCK wire.

NO - Faulty MICU, replace the under-dash fuse/relay box.

12. Turn the ignition switch OFF.
13. Disconnect the power window master switch 22P (16P)* connector.

    *: 2-door

14. Disconnect under-dash fuse/relay box connector T (34P).
15. Check for continuity between the No. 28 (LOCK) and No. 27 (UNLOCK) terminals of the under-dash fuse/relay box connector T (34P).

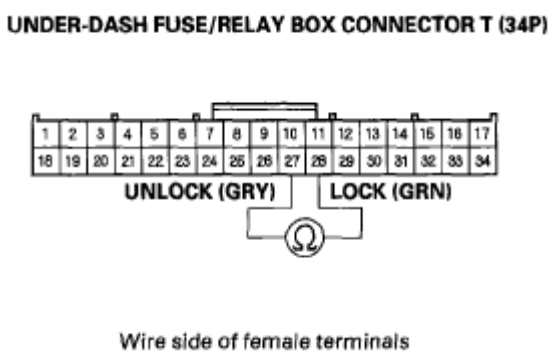

Fig. 13: Checking Continuity Between No. 28 And 27 Terminals Of Under-Dash Fuse/Relay Box Connector T (34P)

Is there continuity?

YES - Repair a short in the wire between the LOCK and UNLOCK wires.

NO - Substitute a known-good power window master switch, and recheck. If the symptom/indication goes away, replace the original power window master switch. If not, the MICU is faulty, replace the under-dash fuse/relay box.

DTC B1129: DRIVER'S DOOR LOCK KNOB SWITCH SIGNAL ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch OFF, and then back ON (II).
3. Operate the driver's door lock knob switch several times.
4. Check for DTCs with the HDS.

   Is DTC B1129 indicated?

   YES - Go to step 5.

   NO - Intermittent failure. The driver's door lock knob switch system is OK at this time.

5. Select KEYLESS from the BODY ELECTRICAL menu, and enter the DATA LIST.
6. Check the ON/OFF information of the DRIVER'S DOOR LOCK KNOB SWITCH (LOCK) and the DRIVER'S DOOR LOCK KNOB SWITCH (UNLOCK).

   Does the DRIVER'S DOOR LOCK KNOB SWITCH (LOCK) information indicator ON and DRIVER'S DOOR LOCK KNOB SWITCH (UNLOCK) information indicator OFF with the driver's door lock knob switch in LOCK position, and does the DRIVER'S DOOR LOCK KNOB SWITCH (LOCK) information indicator OFF and DRIVER'S DOOR LOCK KNOB SWITCH (UNLOCK) information indicator ON with the driver's door lock knob switch in UNLOCK position?

   YES - Faulty MICU, replace the under-dash fuse/relay box.

NO - Go to step 7.

7. Disconnect the driver's door lock actuator 10P connector.
8. Check the ON/OFF information of the DRIVER'S DOOR LOCK KNOB SWITCH (LOCK) and DRIVER'S DOOR LOCK KNOB SWITCH (UNLOCK) in the DATA LIST.

   Are both information indicators OFF?

   YES - Check for an open in the driver's door lock knob switch (LOCK) wire or the driver's door lock knob switch (UNLOCK) wire between the MICU and the driver's door lock knob switch. If OK, replace the driver's door lock actuator.

   NO - Go to step 9.

9. Turn the ignition switch OFF.
10. Disconnect the under-dash fuse/relay box connector T(34P).
11. Check for continuity between the No. 23 (UNLOCK) and No. 24 (LOCK) terminals of the under-dash fuse/relay box connector T (34P) and body ground.

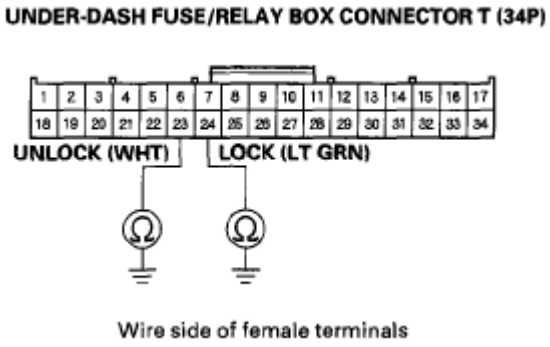

Fig. 14: Checking Continuity Between Terminals Of Under-Dash Fuse/Relay Box Connector T (34P) And Body Ground

Is there continuity?

YES - Repair a short in the LOCK or UNLOCK wire.

NO - Go to step 12.

12. Check for continuity between the No. 23 (UNLOCK) and No. 24 (LOCK) terminals of the under-dash fuse/relay box connector T (34P).

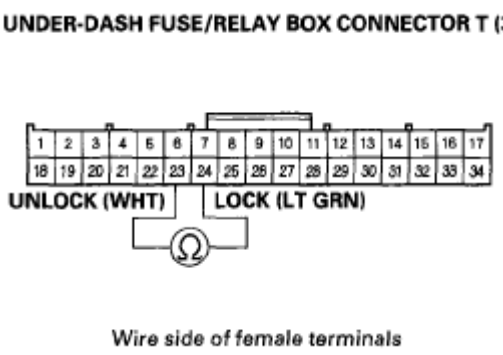

Fig. 15: Checking Continuity Between No. 23 And No. 24 Terminals Of Under-Dash Fuse/Relay Box Connector T (34P)

Is there continuity?

YES - Repair a short in the wire between the LOCK wire and UNLOCK wire.

NO - Faulty MICU, replace the under-dash fuse/relay box.

SYMPTOM TROUBLESHOOTING

POWER DOOR LOCKS/KEYLESS

1. If the door lock system works properly, but the keyless operation does not, refer to the immobilizer-keyless control unit symptom troubleshooting information (see **SYMPTOM TROUBLESHOOTING INFORMATION**).

NOTE: The door lock system does not function when:

- Any of the doors is open.
- Ignition key is in the ignition key switch.
- Ignition switch is ON (II).

SYMPTOM TROUBLESHOOTING CHART

No.	Symptom	Check Items
1	The doors will not lock or unlock.(1)	• MICU input test (see **MICU INPUT TEST**) • Driver's door key cylinder switch test (see **DOOR KEY CYLINDER SWITCH TEST**) • Door lock switch test (see **DOOR LOCK SWITCH TEST**) • Door lock knob switch test (see **DOOR LOCK KNOB SWITCH TEST**)
		• MICU input test (see **MICU**

		INPUT TEST) • Door lock knob switch test (see **DOOR LOCK KNOB SWITCH TEST**) • Driver's door switch test (check the door switch ON/OFF information with the HDS)
2	The doors will not lock. (1)	
3	The doors will not unlock.(1)	• MICU input test (see **MICU INPUT TEST**) • Door lock knob switch test (see **DOOR LOCK KNOB SWITCH TEST**) • Door switch test (check the door switch ON/OFF information with the HDS)
4	**KEYLESS OPERATION DOES NOT WORK (LOCK, UNLOCK, PANIC)**.	
5	**DOORS WILL NOT UNLOCK WITH THE TRANSMITTER, BUT WILL UNLOCK WITH THE DOOR SWITCH**.	
6	**DOORS WILL NOT LOCK WITH THE TRANSMITTER, BUT WILL LOCK WITH THE DOOR SWITCH**.	
7	**DOORS AUTOMATICALLY RELOCK AFTER BEING UNLOCKED WITH THE TRANSMITTER EVEN THOUGH A DOOR HAS BEEN OPENED**.	
8	**THE HORN DOES NOT SOUND WHEN PANIC BUTTON ON THE TRANSMITTER PRESSED (USA ONLY)**.	
9	Keyless operation will work even though the ignition key is in the ignition switch.	Ignition key switch test (see **IGNITION KEY SWITCH TEST**).

(1) If only one door is not working properly, check that door's lock actuator first, then check the other items listed in this table.

KEYLESS OPERATION DOES NOT WORK (LOCK, UNLOCK, PANIC)

NOTE:

- **Before troubleshooting, check the B-CAN DTCs. If any DTC is indicated, troubleshoot the indicated DTC first.**
- **Before troubleshooting, do the keyless transmitter test (see TRANSMITTER TEST/REPLACEMENT).**

1. Turn the ignition switch ON (II).
2. Try to start the engine.

Does the engine start?

YES - The immobilizer system is OK, go to step 3.

NO - Go to the immobilizer symptom troubleshooting (see **SYMPTOM TROUBLESHOOTING**).

3. Turn the ignition switch OFF.
4. Connect the HDS to the data link connector.
5. Close all doors, then turn the ignition switch ON (II).
6. Enter the BODY ELECTRICAL menu, and check the door switch parameters.

   Do all door switches indicate OFF?

   YES - Go to step 6.

   NO - Faulty door switch, or shorted door switch wire. Repair as necessary.

7. Remove the ignition key from the ignition switch.
8. Disconnect the immobilizer-keyless control unit 7P connector.
9. Check for voltage between the immobilizer-keyless control unit 7P connector No. 1 terminal and body ground.

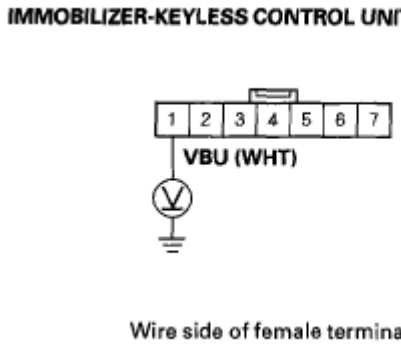

Fig. 16: Checking Voltage Between Immobilizer-Keyless Control Unit 7P Connector No. 1 Terminal And Body Ground

   Is there battery voltage?

   YES - Go to step 10.

   NO - Check the No. 23 (10 A) fuse in the under-hood fuse/relay box. If the fuse is blown, replace the fuse and repair a short to ground in the wire. If the fuse is OK, repair an open in the wire.

10. Disconnect the ignition key switch 6P connector.
11. At the ignition key switch side, check for continuity between the ignition key switch 6P connector No. 1 and No. 2 terminals.

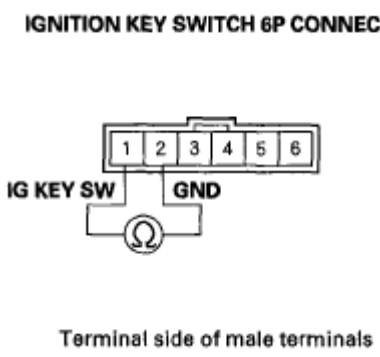

Fig. 17: Checking Continuity Between Ignition Key Switch 6P Connector No. 1 And No. 2 Terminals

Is there continuity?

YES - Faulty ignition key switch or short to ground, replace the steering lock assembly.

NO - Go to step 12.

12. Insert the ignition key into the ignition switch.
13. At the ignition key switch side, check for continuity between the ignition key switch 6P connector No. 1 and No. 2 terminals.

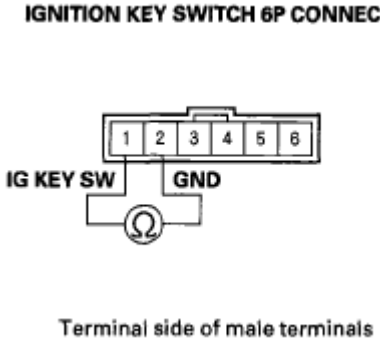

Fig. 18: Checking Continuity Between Ignition Key Switch 6P Connector No. 1 And No. 2 Terminals

Is there continuity?

YES - Go to step 14.

NO - Faulty ignition key switch, replace the steering lock assembly.

14. Check for continuity between the immobilizer-keyless control unit 7P connector No. 6 terminal and the ignition key switch 6P connector No. 1 terminal.

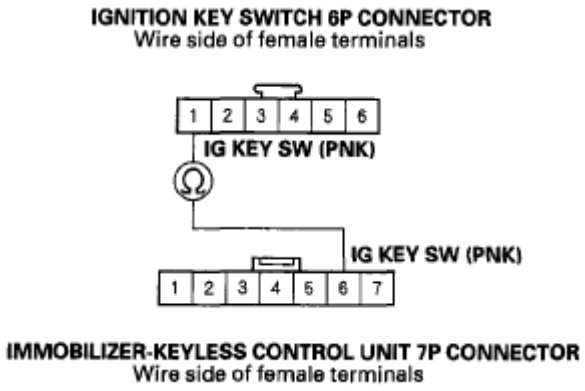

Fig. 19: Checking Continuity Between Immobilizer-Keyless Control Unit 7P Connector No. 6 Terminal And Ignition Key Switch 6P Connector No. 1 Terminal

Is there continuity?

YES - Go to step 15.

NO - Repair an open in the wire.

15. Check for continuity between the immobilizer-keyless control unit 7P connector No. 6 terminal and body ground.

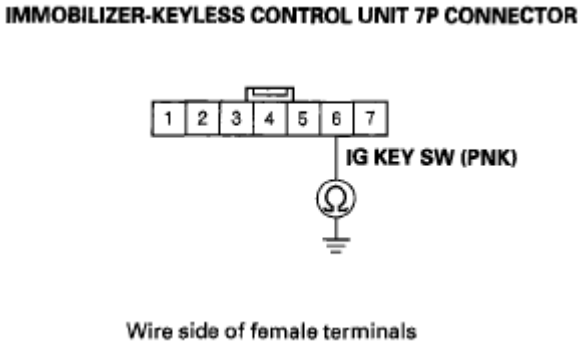

Fig. 20: Checking Continuity Between Immobilizer-Keyless Control Unit 7P Connector No. 6 Terminal And Body Ground

Is there continuity?

YES - Repair a short to ground in the wire.

NO - Replace the immobilizer-keyless control unit.

DOORS WILL NOT UNLOCK (OR LOCK) WITH THE TRANSMITTER, BUT WILL UNLOCK (LOCK) WITH THE DOOR SWITCH

NOTE: Before troubleshooting, check the B-CAN DTCs. If any DTC is indicated, troubleshoot the indicated DTC first.

1. Turn the ignition switch OFF.

2. Remove the ignition key from the ignition switch.
3. Close and lock the doors.
4. Try to lock/unlock the doors with the keyless transmitter.

   Do the door lock actuators work normally?

   YES - Intermittent failure. The system is OK at this time.

   NO - Go to step 5.

5. Open the driver's door.

   Does the key-in reminder chime sound?

   YES - Faulty ignition key switch, or short to ground on the ignition switch PNK wire. Repair as necessary.

   NO - Go to step 6.

6. Do the transmitter test (see **TRANSMITTER TEST/REPLACEMENT**).

   Is the transmitter OK?

   YES - Substitute a known-good MICU and recheck.

   NO - Replace the transmitter.

THE HORN DOES NOT SOUND WHEN THE PANIC BUTTON ON THE TRANSMITTER IS PRESSED

NOTE: Before troubleshooting, check the B-CAN DTCs. If any DTC is indicated, troubleshoot the indicated DTC first.

1. Press the PANIC button.

   Does the horn sound?

   YES - Go to step 3.

   NO - Go to step 2.

2. Press the horn button.

   Does the horn sound?

   YES - Go to step 3.

   NO - Check the horn circuit.

3. Turn the headlight switch ON.

   Do the headlights come on?

   YES - Go to step 4.

   NO - Check the lighting circuit.

4. Do the transmitter test (see **TRANSMITTER TEST/REPLACEMENT**).

   Is the transmitter OK?

   YES - Substitute a known-good MICU and recheck.

   NO - Replace the transmitter.

DOORS AUTOMATICALLY RELOCK AFTER BEING UNLOCKED WITH THE TRANSMITTER EVEN THOUGH A DOOR HAS BEEN OPENED

1. Turn the ceiling light switch in DOOR position.
2. Turn the ignition switch ON (II).
3. Close all doors.
4. Watch the ceiling light and the door indicator on the gauge control module.

   Does the ceiling light and door indicator go off?

   YES - Go to step 5.

   NO - Repair a short to ground in the wire between the MICU and door switch.

5. Open and close each door one at a time.
6. Watch the ceiling light and the door indicator on the gauge control module.

   Does the ceiling light and door indicator come on when the door is open, and go off when the door is closed?

   YES - Substitute a known-good MICU and recheck. If the symptom goes away, replace the original MICU.

   NO - Repair an open in the wire between the MICU and the door switch. If the wire is OK, faulty the door switch, replace the door lock actuator assembly.

TRIPPED SENSOR HISTORY

The security system stores information on the last tripped sensor if the security system has been violated. The information can be retrieved using the HDS.

To retrieve the last tripped sensor data:

1. Select HISTORY DATA from the security system test mode menu.
2. Select CURRENT DATA.
3. Confirm that the VIN matches the Vehicle then press the enter button.
4. Scroll through the data ist.
    - Sensors that were violated will indicate DETECT.
    - Sensors the were not violated will indicated NONE.
5. Inspect the DETECT circuit for:
    - Misadjusted or damaged switch.
    - Loose or corroded connections.
    - Intermittent short to ground.

MICU INPUT TEST

1. Before troubleshooting the keyless/poor door locks/security system, troubleshoot the B-CAN System Diagnosis Test Mode A (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).
2. Check the No. 10 (7.5 A) and No. 25 (20 A) fuses in the under-dash fuse/relay box. If any fuse is blown, replace it and go to step 3.
3. Disconnect the under-dash fuse/relay box connectors E, F, G, M, N, Q, R, and T.

NOTE: All connector views are wire side of female terminals.

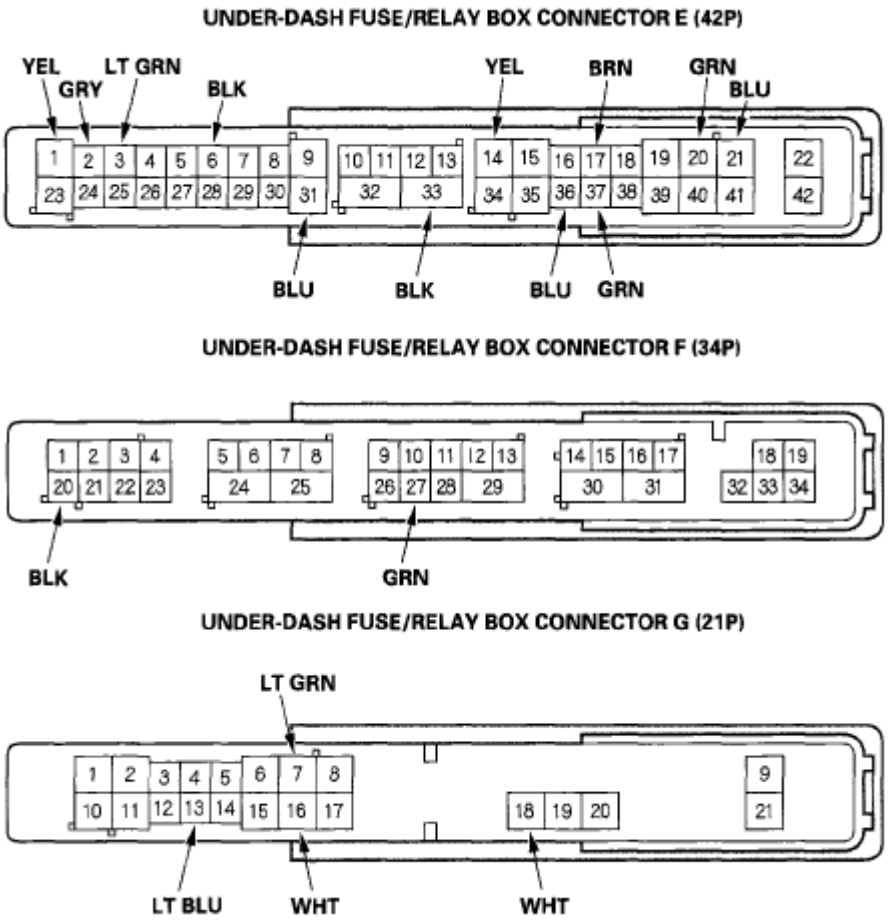

Fig. 21: Identifying Under-Dash Fuse/Relay Box Connector Terminals (1 Of 2)

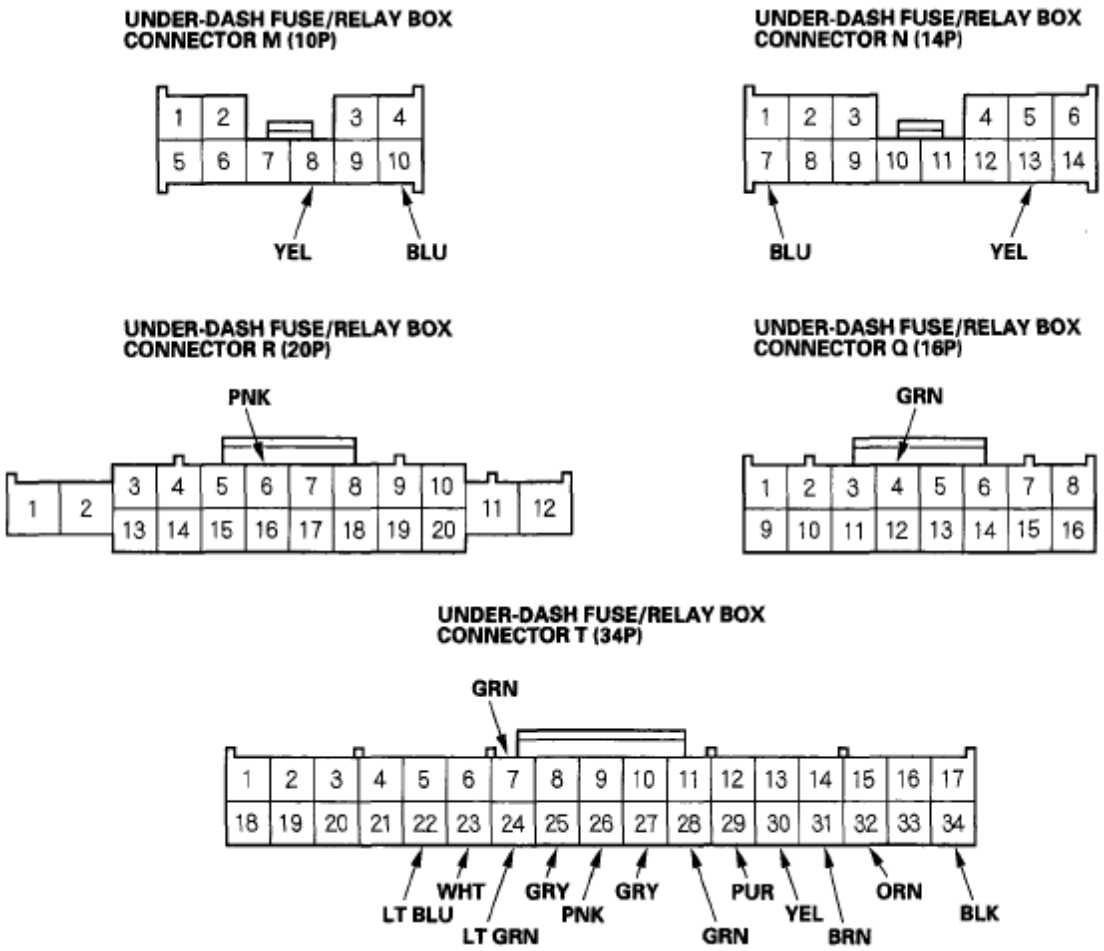

Fig. 22: Identifying Under-Dash Fuse/Relay Box Connector Terminals (2 Of 2)

4. Inspect the connector and socket terminals to be sure they are all making good contact.
   - If the terminals are bent, loose or corroded, repair them as necessary and recheck the system.
   - If the terminals look OK, go to step 5.
5. With the connector still disconnected, make these input tests at the appropriate connector.
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, go to step 6.

MICU INPUT TEST (CONNECTORS DISCONNECTED)

Cavity	Wire	Test condition	Test: Desired result	Possible cause if result is not obtained
G16	WHT	Under all conditions	Check for voltage to ground: There should be battery voltage.	• Blown No. 12 (15 A) fuse in the under-hood fuse/relay box • An open in the wire
G18	WHT	Under all conditions	Check for voltage to ground: There should be battery voltage.	• Blown No. 4 (50 A) fuse in the under-hood fuse/relay box

				• An open in the wire
G7	LTGRN	Under all conditions	Connect G16 and G7 terminals with a jumper wire momentarily: The horn should sound.	• Poor ground(body ground) • Blown No. 12 (15 A) fuse in the under-hood fuse/relay box • Faulty horn • An open in the wire
E20	GRN	Under all conditions	Connect G2 and E20 terminals with a jumper wire: The trunk release actuator should work (Trunk lid should open).	• Poor ground(G701) • Faulty trunk release actuator • An open in the wire
N7	BLU	Under all conditions	Connect battery power to the N13 terminal and ground the N7 terminal momentarily: The driver's door lock actuator should lock.	• Faulty driver's door lock actuator • An open in the wire
N13	YEL			
M8	YEL	Under all conditions	Connect battery power to the M8 terminal and ground the M10 terminal momentarily: The front passenger's door lock actuator should unlock.	• Faulty front passenger's door lock actuator • An open in the wire
M10	BLU			
E1 (4-door)	YEL	Under all conditions	Connect battery power to the E1 terminal and ground the E21 terminal momentarily: The right rear door lock actuator should unlock.	• Faulty right rear door lock actuator • An open in the wire
E21 (4-door)	BLU			
E14 (4-door)	YEL	Under all conditions	Connect battery power to the E14 terminal and ground the E31 terminal momentarily: The left rear door lock actuator should unlock.	• Faulty left rear door lock actuator • An open in the wire
E31 (4-door)	BLU			

6. Reconnect the connectors to the under-dash fuse/relay box, and make these input tests at the connectors.
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, the MICU must be faulty; replace the under-dash fuse/relay box.

MICU INPUT TEST (CONNECTORS RECONNECTED)

Cavity	Wire	Test condition	Test: Desired result	Possible cause if result is not obtained
E6	BLK	Under all conditions	Check for voltage to ground: There should be less than 0.5 V.	• Poor ground (G602) • An open in the wire
			Check for	

E33	BLK	Under all conditions	voltage to ground: There should be less than 0.5 V.	• Poor ground (G601) • An open in the wire
F20	BLK	Under all conditions	Check for voltage to ground: There should be less than 0.5 V.	• Poor ground (G401) • An open in the wire
T34	BLK	Under all conditions	Check for voltage to ground: There should be less than 0.5 V.	• Poor ground (G501) • An open in the wire
E2 (4-door)	GRY	Right rear door open	Check for voltage to ground: There should be less than 1 V.	• Faulty right rear door switch • An open in the wire
		Right rear door closed	Check for voltage to ground: There should be 5 V or more.	• Faulty right rear door switch • Short to ground in the wire
E3	LTGRN	Front passenger's door open	Check for voltage to ground: There should be less than 1 V.	• Faulty front passenger's door switch • An open in the wire
		Front passenger's door closed	Check for voltage to ground: There should be 5 V or more.	• Faulty front passenger's door switch • Short to ground in the wire
E17 (4-door)	BRN	Left rear door open	Check for voltage to ground: There should be less than 1 V.	• Faulty left rear door switch • An open in the wire
			Check for voltage to ground:	• Faulty left rear door switch

		Left rear door closed	There should be 5 V or more.	• Short to ground in the wire
E36	BLU	Trunk lid open	Check for voltage to ground: There should be less than 1 V.	• Poor ground (G701) • Faulty trunk lid latch switch • An open in the wire
		Trunk lid closed	Check for voltage to ground: There should be 5 V or more.	• Faulty trunk lid latch switch • Short to ground in the wire
E37	GRN	Driver's door open	Check for voltage to ground: There should be less than 1 V.	• Faulty driver's door switch • An open in the wire
		Driver's door closed	Check for voltage to ground: There should be 5 V or more.	• Faulty driver's door switch • Short to ground in the wire
F27	GRN	Transmission range switch in P	Check for voltage to ground: There should be less than 1 V.	• Poor ground (G101) • Faulty transmission range switch • An open in the wire
		Transmission range switch in any other position than P	Check for voltage to ground: There should be 5 V or more.	• Faulty transmission range switch • Short to ground in the wire
G13	LT BLU	Hood open	Check for voltage to ground: There should be less than 1 V.	• Poor ground (G401) • Faulty hood switch • An open in the wire
		Hood closed	Check for voltage to ground: There should be 5 V or	• Faulty hood switch • Short to around in the wire

			more.	
Q4	GRN	Under all conditions	Check for voltage to ground: There should be battery voltage.	A short in the wire
R6	PNK	Ignition key inserted into the ignition switch	Check for voltage to ground: There should be less than 1 V.	• Poor ground (G504) • Faulty ignition key switch • An open in the wire
		Ignition switch OFF and ignition key removed from the ignition switch	Check for voltage to ground: There should be 5 V or more.	• Faulty ignition key switch • Short to ground in the wire
T7	GRN	Trunk key cylinder switch unlocked	Check for voltage to ground: There should be less than 1 V.	• Poor ground (G701) • Faulty trunk key cylinder switch • An open in the wire
		Trunk key cylinder switch neutral	Check for voltage to ground: There should be 5 V or more.	• Faulty trunk key cylinder switch • Short to ground in the wire
T22	LT BLU	Front passenger's door lock knob switch unlocked	Check for voltage to ground: There should be less than 1 V.	• Poor ground (G504) • Faulty front passenger's door lock knob switch • An open in the wire
		Front passenger's door lock knob switch locked	Check for voltage to ground: There should be 5 V or more.	• Faulty front passenger's door lock knob switch • Short to ground in the wire
T23	WHT	Driver's door lock knob switch unlocked	Check for voltage to ground: There should be less than 1 V.	• Poor ground (4-door: G501,2-door: G401) • Faulty driver's door lock knob switch • An open in the wire
			Check for	

		Driver's door lock knob switch locked	voltage to ground: There should be 5 V or more.	• Faulty driver's door lock knob switch • Short to ground in the wire
T24	LTGRN	Driver's door lock knob switch locked	Check for voltage to ground: There should be 5 V or more.	• Faulty driver's door lock knob switch • Short to around in the wire
		Driver's door lock knob switch unlocked	Check for voltage to ground: There should be less than 1 V.	• Poor ground (4-door: G501,2-door: G401) • Faulty driver's door lock knob switch • An open in the wire
T25 (4-door)	GRY	Right rear door lock knob switch unlocked	Check for voltage to ground: There should be less than 1 V.	• Poor ground (G602) • Faulty right rear door lock knob switch • An open in the wire
		Right rear door lock knob switch locked	Check for voltage to ground: There should be 5 V or more.	• Faulty right rear door lock knob switch • Short to ground in the wire
T26 (4-door)	PNK	Left rear door lock knob switch unlocked	Check for voltage to ground: There should be less than 1 V.	• Poor ground (G602) • Faulty left rear door lock knob switch • An open in the wire
		Left rear door lock knob switch locked	Check for voltage to ground: There should be 5 V or more.	• Faulty left rear door lock knob switch • Short to ground in the wire
T27	GRY	Driver door lock switch unlocked	Check for voltage to ground: There should be less than 1 V.	• Poor ground (G503) • Faulty driver door lock switch • An open in the wire
		Driver door lock switch in	Check for voltage to ground:	• Faulty driver door lock switch

		neutral	There should be 5 V or more.	• Short to ground in the wire
T28	GRN	Driver door lock switch locked	Check for voltage to ground: There should be less than 1 V.	• Poor ground (G503) • Faulty driver door lock switch • An open in the wire
		Driver door lock switch in neutral	Check for voltage to ground: There should be 5 V or more.	• Faulty driver door lock switch • Short to ground in the wire
T29	PUR	Front passenger's door lock switch unlocked	Check for voltage to ground: There should be less than 1 V.	• Poor ground (G504) • Faulty front passenger's door lock switch • An open in the wire
		Front passenger's door lock switch in neutral	Check for voltage to ground: There should be 5 V or more.	• Faulty front passenger's door lock switch • Short to ground in the wire
T30	YEL	Front passenger's door lock switch locked	Check for voltage to ground: There should be less than 1 V.	• Poor ground (G504) • Faulty front passenger's door lock switch • An open in the wire
		Front passenger's door lock switch in neutral	Check for voltage to ground: There should be 5 V or more.	• Faulty front passenger's door lock switch • Short to ground in the wire
T31	BRN	Driver door key cylinder switch unlocked	Check for voltage to ground: There should be less than 1 V.	• Poor ground (G501) • Faulty driver door key cylinder switch • An open in the wire
		Driver door key cylinder switch in neutral	Check for voltage to ground: There should be 5 V or	• Faulty driver door key cylinder switch • Short to ground in the

			more.	wire
T32	ORN	Driver door key cylinder switch locked	Check for voltage to ground: There should be less than 1 V.	• Poor ground (G501) • Faulty driver door key cylinder switch • An open in the wire
		Driver door key cylinder switch in neutral	Check for voltage to ground: There should be 5 V or more.	• Faulty driver door key cylinder switch • Short to ground in the wire

DOOR LOCK ACTUATOR TEST

DRIVER'S DOOR AND LEFT REAR DOOR

1. Remove the door panel.
   - 2-door (see **DOOR PANEL REMOVAL/INSTALLATION**).
   - 4-door (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
2. Disconnect the 10P connector (A) from the actuator (B).

NOTE: Driver's door shown.

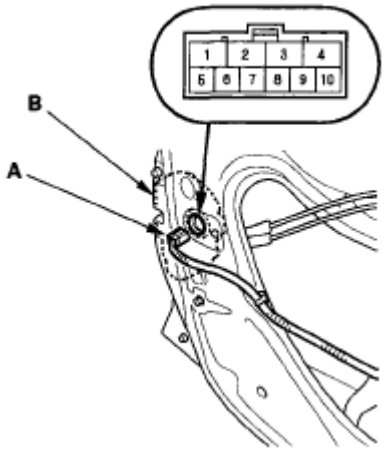

Fig. 23: Disconnecting 10P Connector From Actuator

3. Check actuator operation by connecting power and ground according to **Fig. 24** . To prevent damage to the actuator, apply battery voltage only momentarily.

Position \ Terminal	1	2
LOCK	⊕	⊖
UNLOCK	⊖	⊕

Fig. 24: Checking Actuator Operation Connecting Power And Ground Chart

4. If the actuator does not operate as specified, replace it.

FRONT PASSENGER'S DOOR AND RIGHT REAR DOOR

1. Remove the door panel.
   - 2-door (see **DOOR PANEL REMOVAL/INSTALLATION**).
   - 4-door (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
2. Disconnect the 10P connector (A) from the actuator (B).

NOTE: Front passenger's door shown.

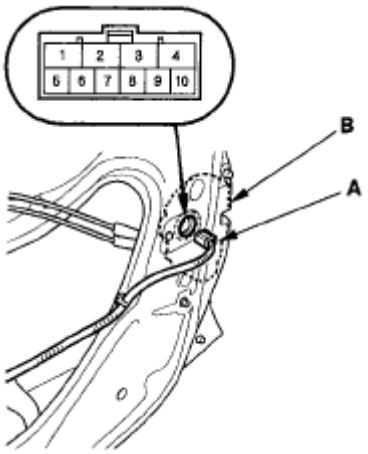

Fig. 25: Disconnecting 10P Connector From Actuator

3. Check actuator operation by connecting power and ground according to **Fig. 26** . To prevent damage to the actuator, apply battery voltage only momentarily.

Position \ Terminal	3	4
LOCK	⊕	⊖
UNLOCK	⊖	⊕

Fig. 26: Checking Actuator Operation By Connecting Power And Ground Chart

4. If the actuator does not operate as specified, replace it.

DOOR LOCK KNOB SWITCH TEST

DRIVER'S DOOR

1. Remove the driver's door panel.
   - 2-door (see **DOOR PANEL REMOVAL/INSTALLATION**).
   - 4-door (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
2. Disconnect the 10P connector (A) from the actuator (B).

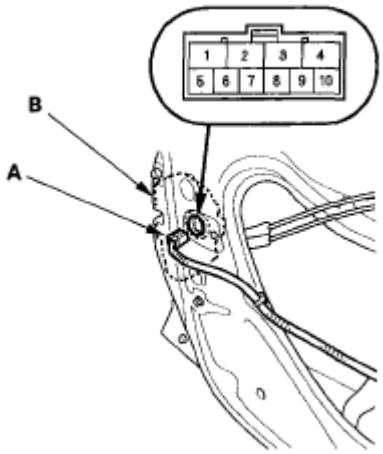

Fig. 27: Disconnecting 10P Connector From Actuator

3. Check for continuity between the terminals.
   - There should be continuity between the No. 6 and No. 5 terminals when the door lock knob switch is in the LOCK position and no continuity when the switch is in the UNLOCK position.
   - There should be continuity between the No. 7 and No. 5 terminals when the door lock knob switch is in the UNLOCK position and no continuity when the switch is in the LOCK position.
4. If the continuity is not as specified, replace the door lock actuator.

PASSENGER'S DOOR

1. Remove the passenger's door panel.
   - 2-door (see **DOOR PANEL REMOVAL/INSTALLATION**).
   - 4-door (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
2. Disconnect the 10P connector (A) from the actuator (B).

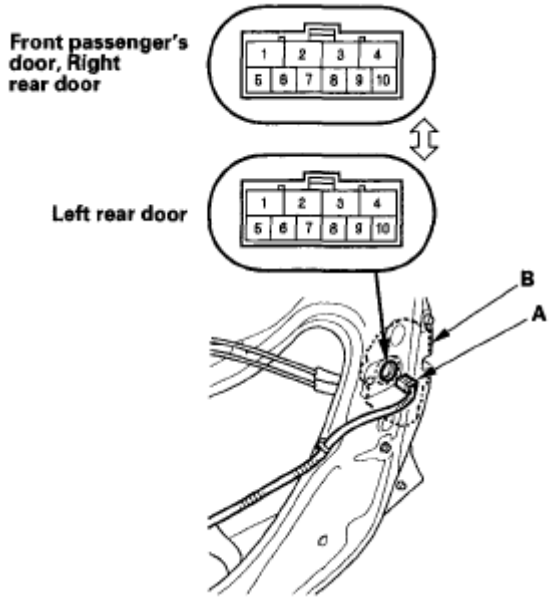

Fig. 28: Disconnecting 10P Connector From Actuator

3. Check for continuity between the terminals.

   There should be continuity between the No. 8 [No. 7] and No. 10 [No. 5] terminals when the door lock knob switch in the UNLOCK position and no continuity when the switch is in the LOCK position.

   [ ] : Left rear door

4. If the continuity is not specified, replace the door lock actuator.

DOOR LOCK SWITCH TEST

DRIVER'S DOOR (4-DOOR)

1. Remove the power window master switch and disconnect its connector (see **MASTER SWITCH TEST/REPLACEMENT**).

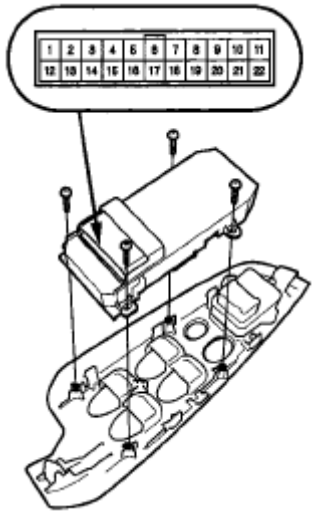

Fig. 29: Removing Power Window Master Switch (4-Door)

2. Check for continuity between the power window master switch 22P connector terminals.
   - There should be continuity between the No. 11 and No. 17 terminals when the door lock switch is in the LOCK position. (With security)
   - There should be no continuity between the No. 11 and No. 17 terminals when the door lock switch is in the UNLOCK position. (With security)
   - There should be continuity between the No. 11 and No. 19 terminals when the door lock switch is in the UNLOCK position.
   - There should be no continuity between the No. 11 and No. 19 terminals when the door lock switch is in the LOCK position.
3. If the continuity is not as specified, replace the power window master switch.

DRIVER'S DOOR (2-DOOR)

1. Remove the power window master switch and disconnect its connector (see **2-DOOR**).

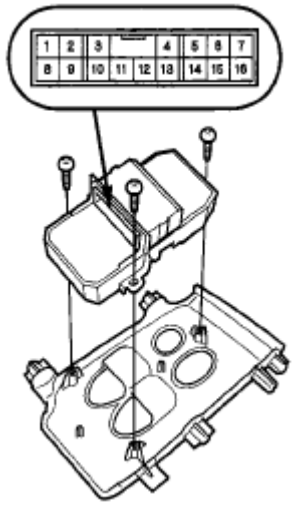

Fig. 30: Removing Power Window Master Switch (2-Door)

2. Check for continuity between the power window master switch 16P connector terminals.
   - There should be continuity between the No. 5 and No. 7 terminals when the door lock switch is in the LOCK position. (With security)
   - There should be no continuity between the No. 5 and No. 7 terminals when the door lock switch is in the UNLOCK position. (With security)
   - There should be continuity between the No. 6 and No. 7 terminals when the door lock switch is in the UNLOCK position.
   - There should be no continuity between the No. 6 and No. 7 terminals when the door lock switch is in the LOCK position.
3. If the continuity is not as specified, replace the power window master switch.

FRONT PASSENGER'S DOOR

1. 4-door: Remove the front passenger's window switch (see **PASSENGER'S POWER WINDOW SWITCH TEST/REPLACEMENT**).

   2-door: Remove the passenger's power window switch (see **DOOR PANEL REMOVAL/INSTALLATION**).

   NOTE: Shown is 4-door front passenger's door.

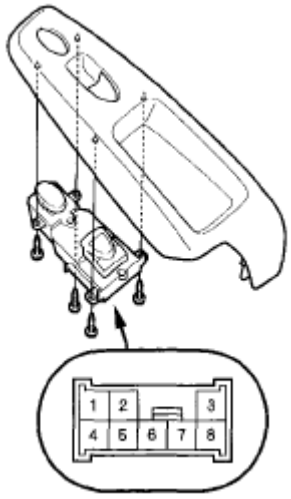

Fig. 31: Identifying Front Passenger's Door (4-Door)

2. Check for continuity between the front passenger's power window switch 8P connector terminals.
   - There should be continuity between the No. 1 and No. 2 terminals when the door lock switch is in the LOCK position.
   - There should be no continuity between the No. 1 and No. 2 terminals when the door lock switch is in the UNLOCK position.
   - There should be continuity between the No. 2 and No. 6 terminals when the door lock switch is in the UNLOCK position.
   - There should be no continuity between the No. 2 and No. 6 terminals when the door lock switch is in the LOCK position.
3. If the continuity is not as specified, replace the front passenger's window switch.

DOOR KEY CYLINDER SWITCH TEST

1. Remove the driver's door panel.
   - 2-door (see **DOOR PANEL REMOVAL/INSTALLATION**).
   - 4-door (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
2. Disconnect the 10P connector (A) from the key cylinder switch (B).

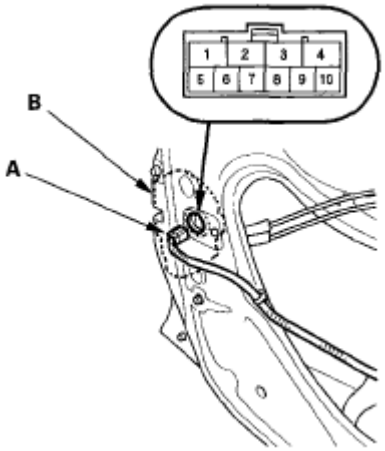

Fig. 32: Disconnecting 10P Connector From Key Cylinder Switch

3. Check for continuity between the terminals.
   - There should be continuity between the No. 9 and No. 5 terminals when the door key cylinder switch is in LOCK position. (With security)
   - There should be no continuity between the No. 9 and No. 5 terminals when the door key cylinder switch is in the neutral or UNLOCK position. (With security)
   - There should be continuity between the No. 8 and No. 5 terminals when the door key cylinder switch is in UNLOCK position.
   - There should be no continuity between the No. 8 and No. 5 terminals when the door key cylinder switch is in the neutral or LOCK position.
4. If the continuity is not as specified, replace the door key cylinder assembly (see **FRONT DOOR OUTER HANDLE REPLACEMENT**).

TRUNK RELEASE ACTUATOR TEST

1. Open the trunk lid.
2. Disconnect the 3P connector from the trunk lid latch switch/trunk release actuator.

Fig. 33: Disconnecting 3P Connector From Trunk Lid Latch Switch/Trunk Release Actuator

3. Check actuator operation by connecting power to the No. 1 terminal and ground to the No. 2 terminal momentarily. The actuator should work.
4. If the actuator does not work, replace the trunk lid latch switch/release actuator assembly (see **TRUNK LID LATCH REPLACEMENT**).

TRUNK KEY CYLINDER SWITCH TEST

1. Open the trunk lid.
2. Disconnect the 3P connector (A) from the trunk key cylinder switch (B).

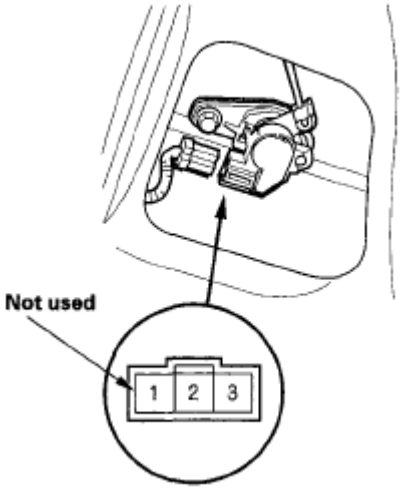

Fig. 34: Disconnecting 3P Connector From Trunk Key Cylinder Switch

3. Check for continuity between the terminals.
   - There should be no continuity between the No. 2 and No. 3 terminals when the trunk key cylinder switch is in the neutral position.
   - There should be continuity between the No. 2 and No. 3 terminals when the trunk key cylinder switch is in the UNLOCK position.
4. If the continuity is not as specified, replace the trunk key cylinder switch.

- 4-door (see **TRUNK LID LOCK CYLINDER REPLACEMENT**)
- 2-door (see **TRUNK LID LOCK CYLINDER REPLACEMENT**)

HOOD SWITCH TEST

1. Open the hood.
2. Disconnect the 2P connector from the hood switch.

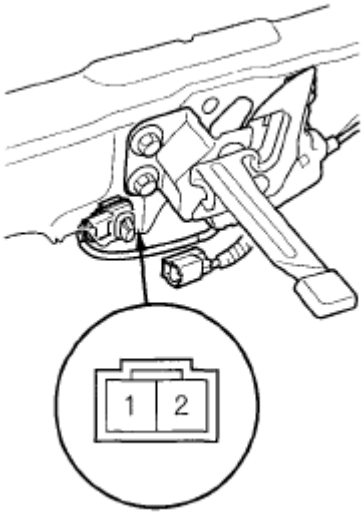

Fig. 35: Disconnecting 2P Connector From Hood Switch

3. Check for continuity between the terminals.
   - There should be continuity between the No. 1 and No. 2 terminals when the hood is opened (latch released).
   - There should be no continuity between the No. 1 and No. 2 terminals when the hood is closed (latch pushed down).
4. If the continuity is not as specified, replace the hood latch assembly (see **HOOD LATCH REPLACEMENT**).

TRANSMITTER TEST/REPLACEMENT

NOTE:

- **If the doors unlock or lock with the transmitter, but the LED on the transmitter does not come on, the LED is faulty; replace the transmitter.**
- **If any door is open, you cannot lock the doors with the transmitter.**
- **If you unlocked the doors with the transmitter, but do not open any of the doors within 30 seconds, the doors relock automatically.**
- **The doors do not lock or unlock with the transmitter if the ignition key is inserted in the ignition switch.**

WITH HDS

1. Press the lock or unlock button five or six times to reset the transmitter.

- If the locks work, the transmitter is OK.
- If any of the transmitter buttons does not work, replace the transmitter, then do the transmitter programming register (see **IMMOBILIZER KEY REGISTRATION**).
- If the locks don't work, go to step 2.

2. Connect the HDS to the data link connector.
3. Select the KEYLESS from the BODY ELECTRICAL menu, then enter the KEYLESS CHECK.
4. Press lock, unlock, trunk, or panic button and check the responce on the screen of the HDS.

NOTE: The door lock actuators may or may not cycle when receiving input from the transmitter.

- If KEYLESS ENTRY TRANSMITTER CODE IS RECEIVED is indicated, the transmitter is OK.
- If DIFFERENT KEYLESS ENTRY TRANSMITTER CODE IS RECEIVED is indicated, the transmitter is not registered to the vehicle, if necessary, reprogram and register the transmitter (see **IMMOBILIZER KEY REGISTRATION**).
- If KEYLESS ENTRY TRANSMITTER CODE IS NOT RECEIVED is indicated, go to step 5.

5. Open the transmitter and check for water damage.
   - If you find any water damage, replace the transmitter, then reprogram and register the transmitter (see **IMMOBILIZER KEY REGISTRATION**).
   - If there is no water damage, go to step 6.

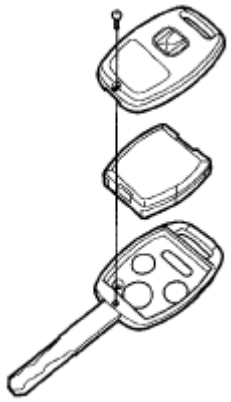

Fig. 36: Checking Transmitter For Water Damage

6. Replace the transmitter battery (A) with a new one, and press lock or unlock button and check the receive condition on the screen of the HDS.
   - If KEYLESS ENTRY TRANSMITTER CODE IS RECEIVED is indicated, the transmitter is OK.
   - If KEYLESS ENTRY TRANSMITTER CODE IS NOT RECEIVED is indicated, go to step 7.

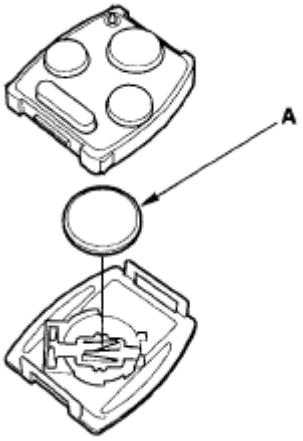

Fig. 37: Replacing Transmitter Battery

7. Use a different known-good keyless transmitter assembly and repeat steps 3 and 4.

NOTE: The keyless transmitter does not need to be programmed to the vehicle for this test.

- If (DIFFERENT) KEYLESS ENTRY TRANSMITTER CODE IS RECEIVED is indicated, replace the keyless transmitter and do the immobilizer system registration (see **IMMOBILIZER KEY REGISTRATION**).
- If KEYLESS ENTRY TRANSMITTER CODE IS NOT RECEIVED is indicated, the immobilizer-keyless control unit is faulty, replace it and do the immobilizer system registration (see **IMMOBILIZER KEY REGISTRATION**).

NOTE: As the keyless transmitter is combined with the immobilizer transponder, so when the transponder is registered by the HDS, the keyless transmitter programming is completed automatically.

WITHOUT HDS

1. Start the engine.
   - If the engine does not start, go to the immobilizer system troubleshooting (see **SYMPTOM TROUBLESHOOTING**).
   - If the engine starts, go to step 2.
2. Press the lock or unlock button five or six times to reset the transmitter.
   - If the locks work, the transmitter is OK.
   - If the locks don't work, go to step 3.
3. Open the transmitter and check for water damage.
   - If you find any water damage, replace the transmitter.
   - If there is no water damage, go to step 4.

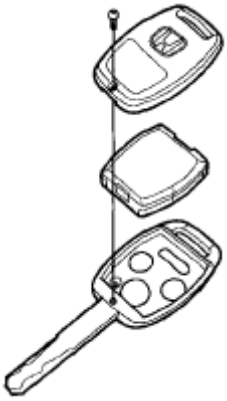

Fig. 38: Checking Transmitter For Water Damage

4. Replace the transmitter battery (A) with a new one, and try to lock and unlock the doors with the transmitter by pressing the lock or unlock button five or six times.
    - If the doors lock and unlock, the transmitter is OK.
    - If the doors don't lock and unlock, go to step 5.

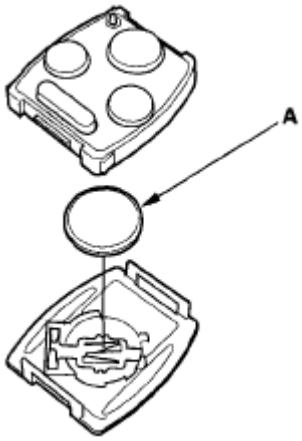

Fig. 39: Replacing Transmitter Battery

5. Reprogram and register the transmitter (see **IMMOBILIZER KEY REGISTRATION**), then try to lock and unlock the doors.
    - If the doors lock and unlock, the transmitter is OK.
    - If the doors don't lock and unlock, substitute a known-good transmitter and recheck (see **IMMOBILIZER KEY REGISTRATION**). If still not operating, replace the immobilizer-keyless control unit.

2006-09 ACCESSORIES AND EQUIPMENT

Openers - Civic

COMPONENT LOCATION INDEX

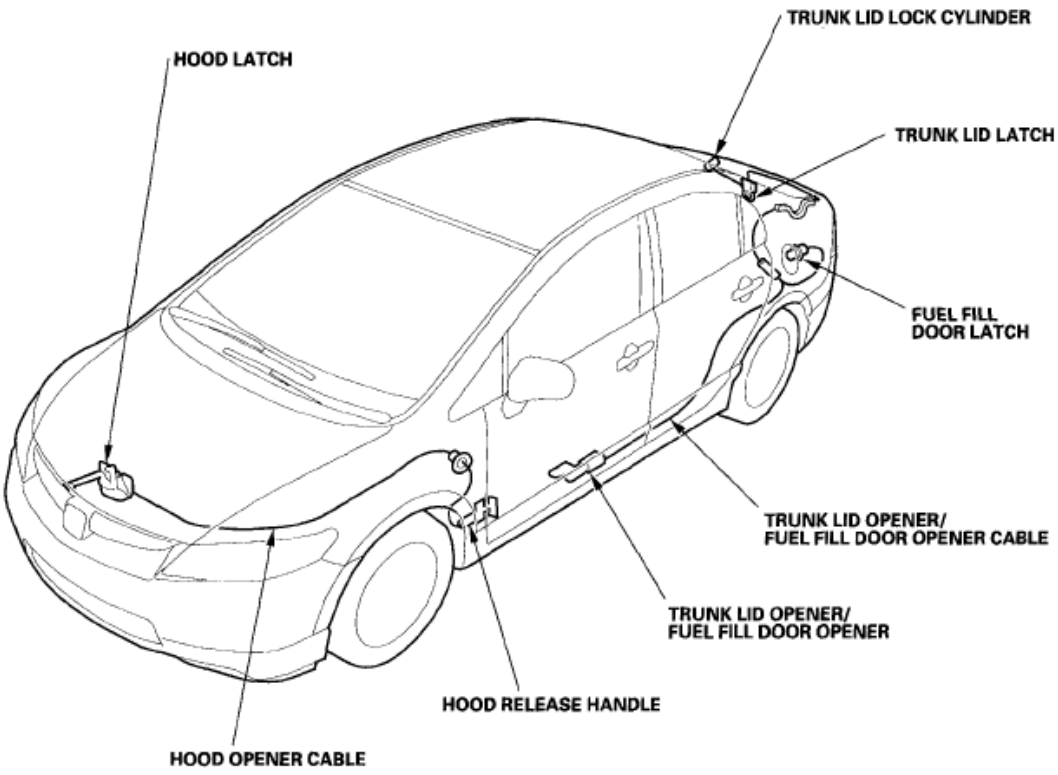

Fig. 1: Identifying Openers Component Location
Courtesy of HONDA

HOOD OPENER CABLE REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the body and related parts.**

1. Remove these items:
   - Front grille cover (see **FRONT GRILLE COVER REPLACEMENT**)
   - Front inner fender (see **FRONT INNER FENDER REPLACEMENT**)
   - Kick panel:
     - 2-door (see **TRIM REMOVAL/INSTALLATION - DOOR AREAS**)
     - 4-door (see **FRONT DOOR SILL AREA - 4-DOOR**)
2. Disconnect the hood opener cable (A) from the hood latch (B) (see **HOOD LATCH REPLACEMENT**), and remove the bolts (C), then remove the hood release handle (D). Take care not to kink the cable.

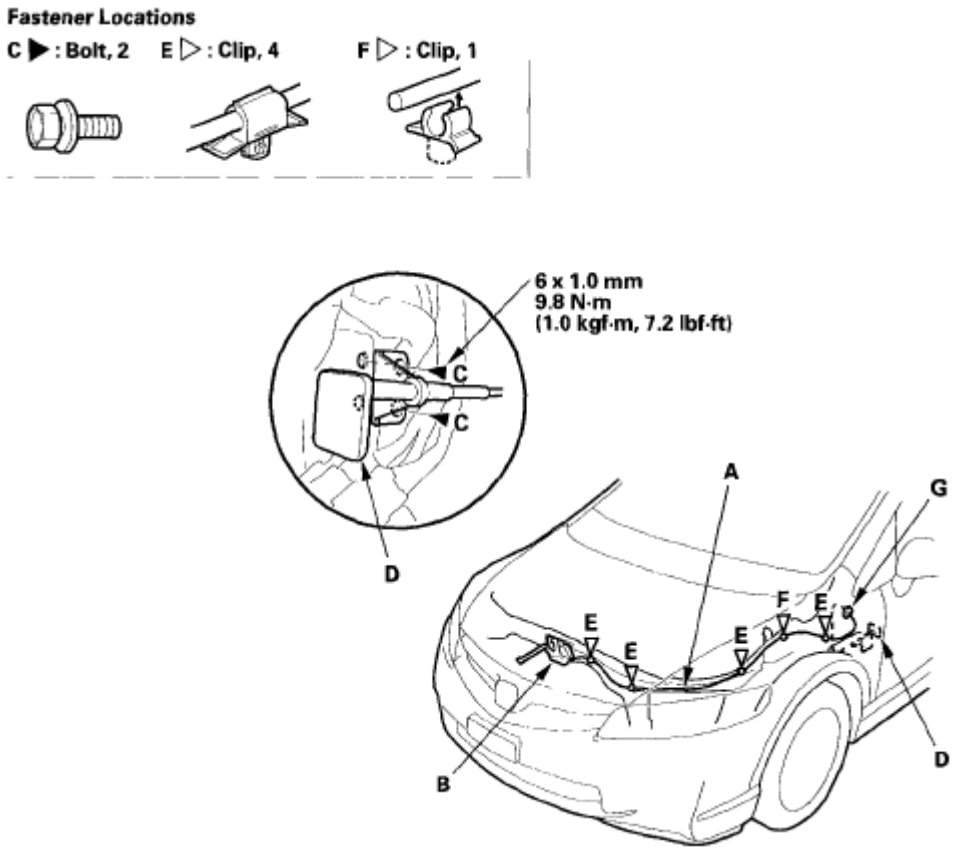

Fig. 2: Identifying Hood Opener Cable, Hood Latch And Hood Release Handle (With Torque Specifications)
Courtesy of HONDA

3. Using a clip remover, detach the clips (E), release the hood opener cable from the clip (F), and remove the grommet (G) from the body, then remove the hood opener cable from the vehicle. Take care not to kink the cable.
4. Install the cable in the reverse order of removal, and check if the clips are damaged or stress-whitened, and if necessary, replace them with new ones.

TRUNK LID OPENER CABLE/FUEL FILL DOOR OPENER CABLE REPLACEMENT

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) in the SRS before doing repairs or service.

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the body and related parts.**

1. Remove these items:
   - Rear seat cushion (see **SEAT CUSHION**)
   - Rear seat side bolster (see **SEAT SIDE BOLSTER - 4-DOOR**)
   - Front door sill trim, driver's:

    - 2-door (see step 4 on **DOOR SILL AREA - 2-DOOR**)
    - 4-door (see step 3 on **FRONT DOOR SILL AREA - 4-DOOR**)
  - Kick panels, driver's sides:
    - 2-door (see **DOOR SILL AREA - 2-DOOR**)
    - 4-door (see **FRONT DOOR SILL AREA - 4-DOOR**)
  - Rear door sill trim, both sides (see **REAR DOOR SILL AREA - 4-DOOR**)
  - B-pillar lower trim (see **B-PILLAR UPPER/LOWER TRIM - 4-DOOR**)
  - Side trim panel (see **2-DOOR**)
  - Trunk side trim panel, left side:
    - 2-door (see step 6 on **2-DOOR**)
    - 4-door (see step 6 on **4-DOOR**)
  - Trunk lid trim (for some models) (see **TRIM REMOVAL/INSTALLATION - TRUNK LID**)
  - Trunk lid opener/fuel fill door opener (see **TRUNK LID OPENER/FUEL FILL DOOR OPENER REPLACEMENT**)
2. Pull the carpet back as needed.
3. Release the opener cable (A) from the clips (B). Remove the cushion tape (C).

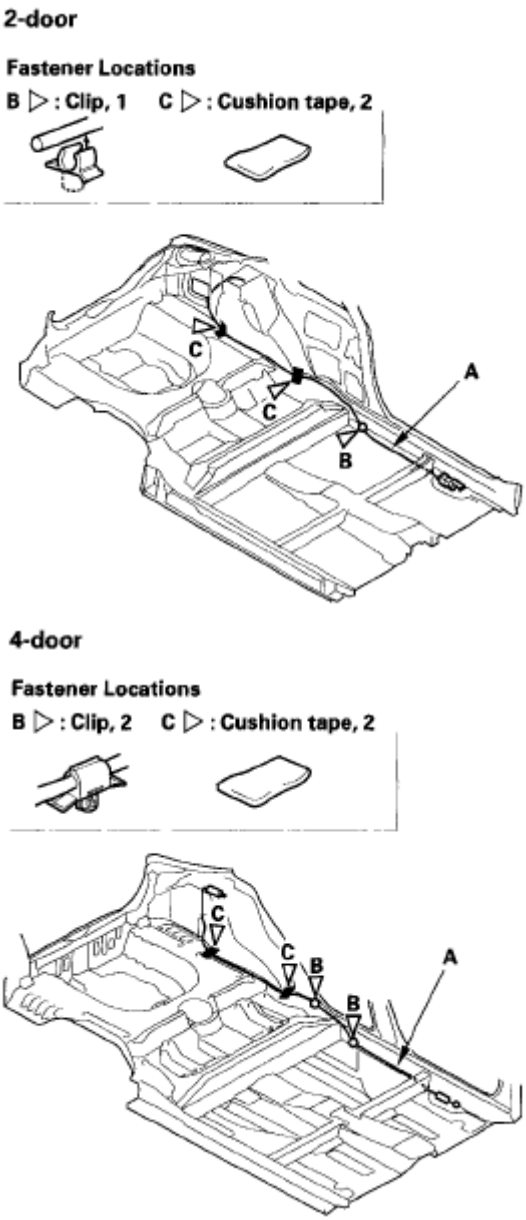

Fig. 3: Identifying Opener Cable From Clips And Cushion Tape
Courtesy of HONDA

4. Remove the screw. Remove the fuel cap (A) by turning it counterclockwise.

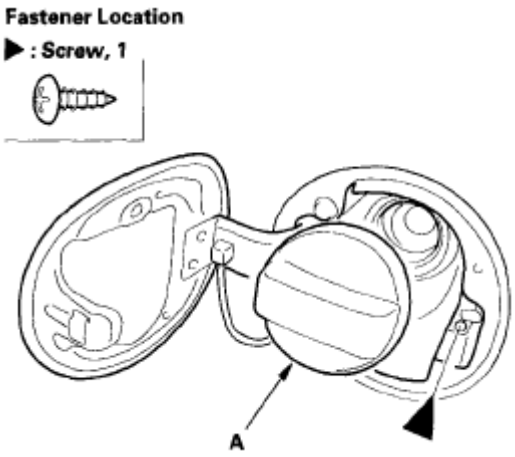

Fig. 4: Identifying Fuel Cap
Courtesy of HONDA

5. While pinching the hooks (A) from inside the vehicle, remove the grommet (B) from the body.

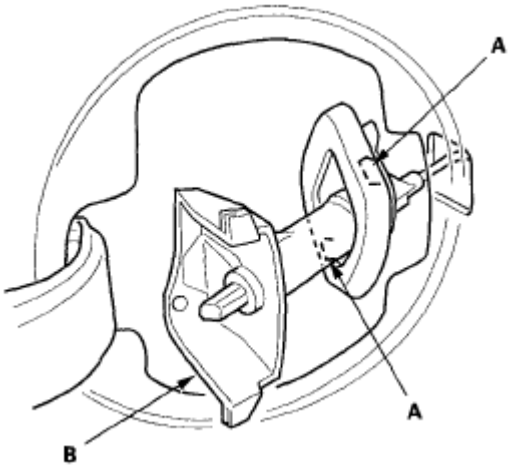

Fig. 5: Identifying Grommet From Body
Courtesy of HONDA

6. Release the hook (A), then remove the grommet (B) from the fuel fill door latch (C).

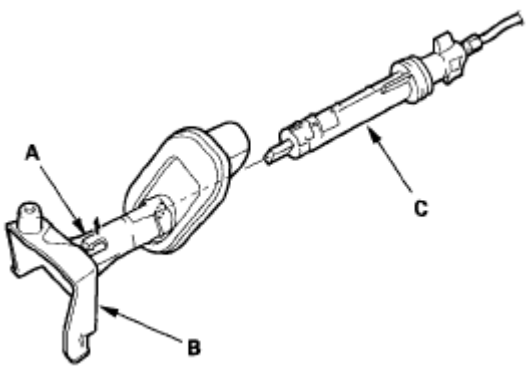

Fig. 6: Identifying Grommet From Fuel Fill Door Latch
Courtesy of HONDA

7. Remove the fuel fill door opener cable from inside the body.
8. Detach the opener cable junction box (A) from the body.

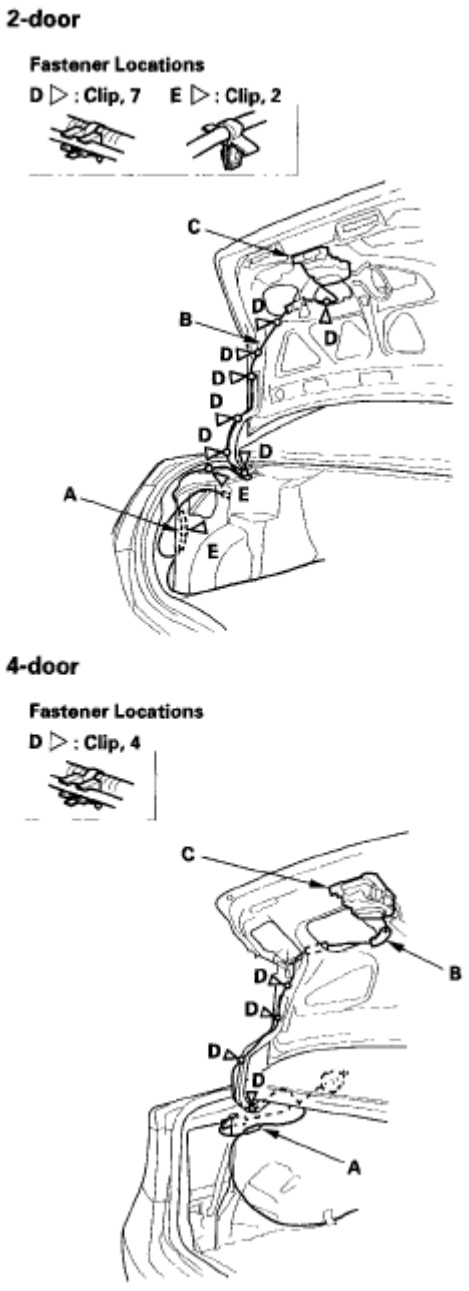

Fig. 7: Identifying Opener Cable Junction Box From Body
Courtesy of HONDA

9. Disconnect the trunk lid opener cable (B) from the trunk lid latch (C) (see **TRUNK LID LATCH REPLACEMENT**).
10. Release the trunk lid opener/fuel fill door opener cable from the clips (D, E).
11. Remove the trunk lid opener/fuel fill door opener cable from the vehicle. Take care not to kink the cable.
12. Install the opener cable in the reverse order of removal, and note these items:

- Align the marks (A) on the opener cable (B) with the cable clips (C) as shown.
- Replace any damaged clips, and replace the cushion tape.

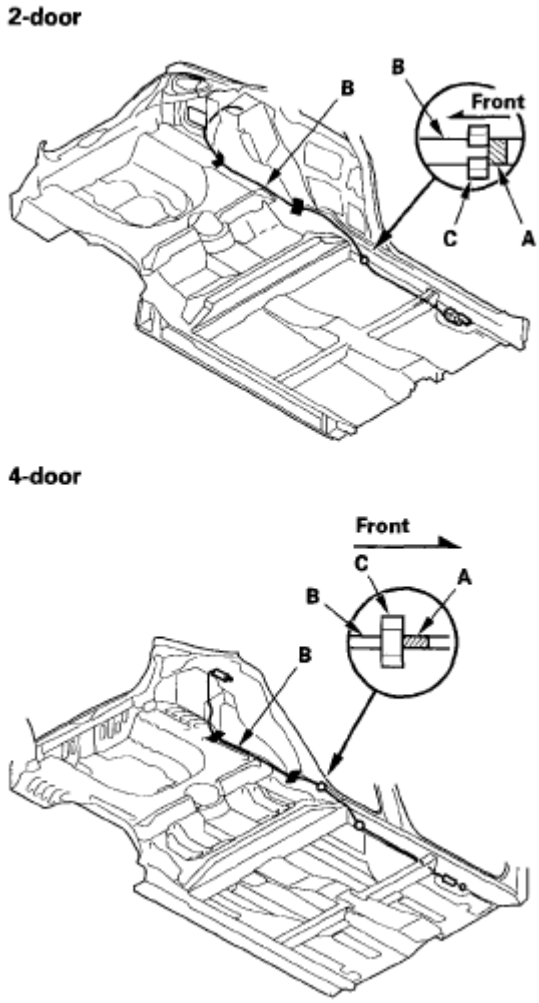

Fig. 8: Aligning Marks On Opener Cable With Cable Clips
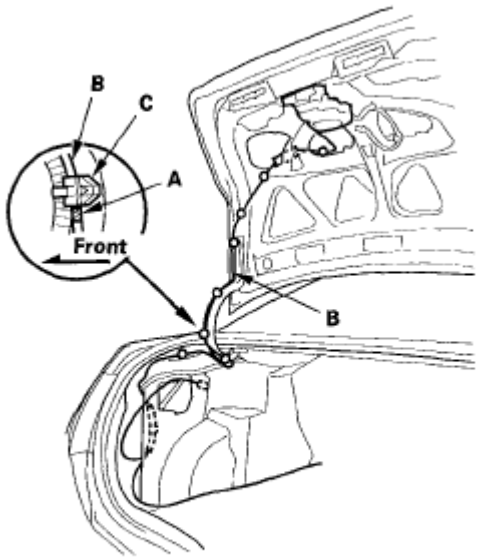
Courtesy of HONDA

2-door



4-door

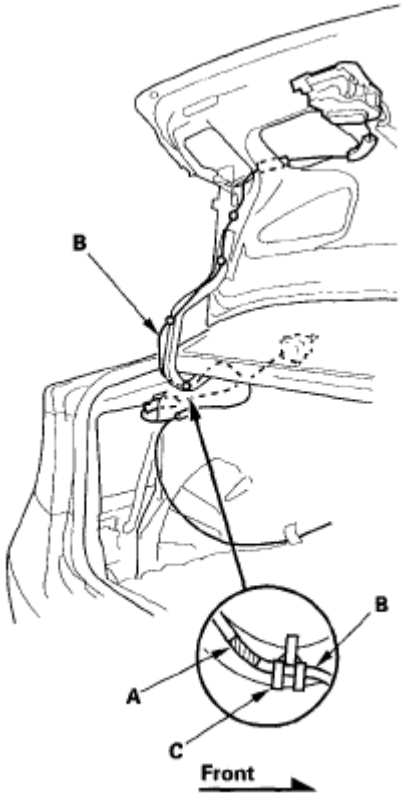


Fig. 9: Identifying Damaged Clips And Cushion Tape
Courtesy of HONDA

HOOD LATCH REPLACEMENT

1. Remove the front grille cover (see **FRONT FENDER TRIM REPLACEMENT**).
2. With hood latch switch: Remove the clip (A), then disconnect and detach the hood latch switch connector (B).

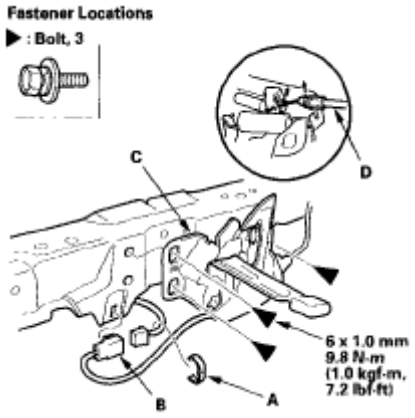

Fig. 10: Identifying Hood Latch Switch Connector (With Torque Specifications)
Courtesy of HONDA

3. Remove the bolts, then remove the hood latch (C) from the body, and disconnect the hood opener cable (D) from the hood latch.
4. Install the latch in the reverse order of removal, and note these items:
    - Apply multipurpose grease to each location of the hood latch indicated by the arrows.
    - Make sure the hood opener cable is connected properly and hood latch switch connector is plugged in properly (for some models).
    - Adjust the hood latch alignment (see **ADJUSTMENT**).
    - Make sure the hood opens properly and locks securely.

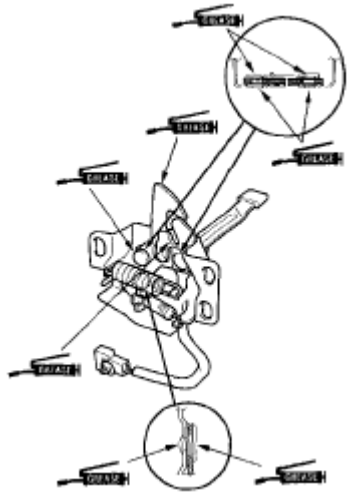

Fig. 11: Applying Multipurpose Grease To Each Location Of Hood Latch Indicated By Arrows
Courtesy of HONDA

TRUNK LID OPENER/FUEL FILL DOOR OPENER REPLACEMENT

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE: Use the appropriate tool from the KTC trim tool set to avoid damage when prying components.

1. Using a trim tool, detach the hooks (A) by prying the front side cap (B), then remove it from the front door sill trim (C), and remove the opener lock cylinder (D).

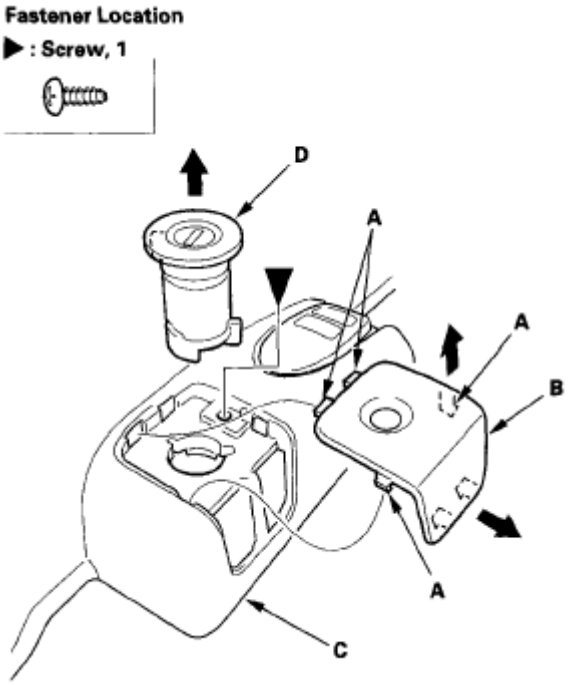

Fig. 12: Identifying Hooks, Side Cap And Lock Cylinder
Courtesy of HONDA

2. Remove the screw.
3. Remove the front door sill trim, 2-door (see step 4 on **DOOR SILL AREA - 2-DOOR**), 4-door (see step 3 on **FRONT DOOR SILL AREA - 4-DOOR**).
4. Loosen the bolt (A), and remove the bolt (B, C), then remove the trunk lid opener/fuel fill door opener (D).

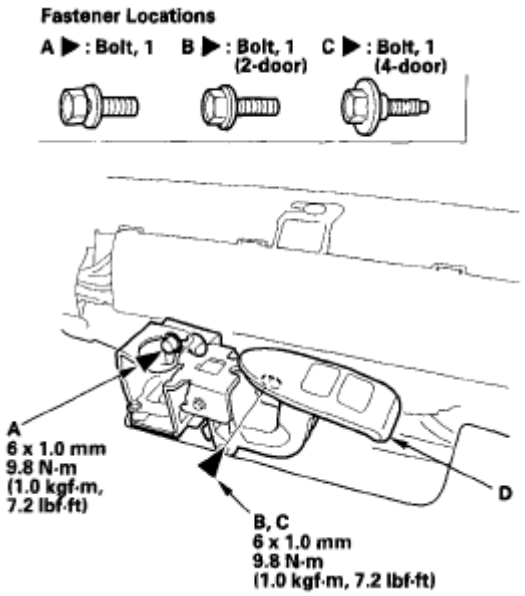

Fig. 13: Identifying Trunk Lid Opener/Fuel Fill Door Opener Bolt (With Torque Specifications)
Courtesy of HONDA

5. Disconnect the trunk lid opener/fuel fill door opener cable (A), then remove the opener (B). Take care not to kink the cable.

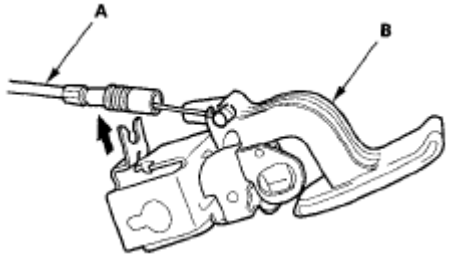

Fig. 14: Identifying Trunk Lid Opener/Fuel Fill Door Opener Cable
Courtesy of HONDA

6. Install the opener in the reverse order of removal, and note these items:
   - Make sure the opener cable is connected properly.
   - Make sure the trunk lid and fuel fill door open properly and lock securely.
   - Fix at the original position in the outer end of cable on the trunk lid opener/fuel fill door opener securely. And check the trunk lid latch operation: Make sure trunk lid latch, and fuel fill door latch unlock when pulling, and pushing the trunk lid opener/fuel fill door opener. If necessary, adjust the position of the cable end.

TRUNK LID LOCK CYLINDER REPLACEMENT

2-DOOR

1. Disconnect the cylinder rod (A), and if equipped, disconnect the cylinder switch connector (B).

NOTE: Check for damaged or stress-whitened rod fastener (C).

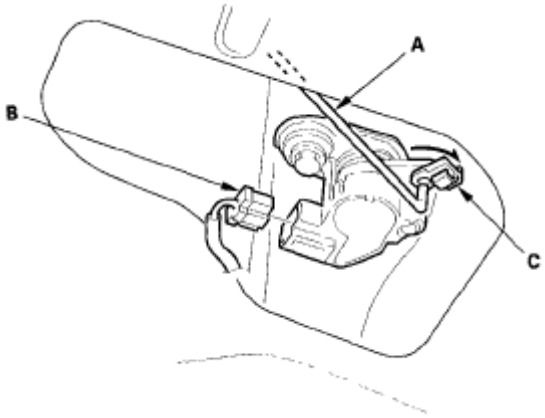

Fig. 15: Identifying Cylinder Rod And Cylinder Switch Connector
Courtesy of HONDA

2. Remove the bolt securing the lock cylinder (A). Then turn the trunk lid lock cylinder clockwise, and remove it.

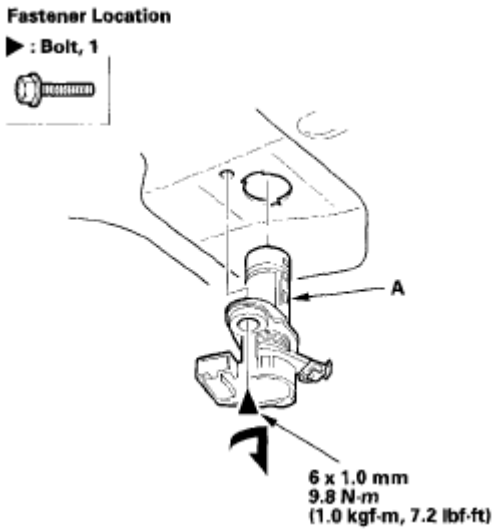

Fig. 16: Identifying Bolt Securing Lock Cylinder (With Torque Specifications)
Courtesy of HONDA

3. Install the lock cylinder in the reverse order of removal, and note these items:
   - Replace the rod fastener if it is damaged.
   - Make sure the cylinder switch connector is plugged in properly (if equipped) and the cylinder rod is connected properly.
   - Make sure the trunk lid opens properly and locks securely.

4-DOOR

1. If equipped, remove the trunk lid trim (see **TRIM REMOVAL/INSTALLATION - TRUNK LID**).
2. Disconnect the cylinder rod (A), and if equipped, disconnect the cylinder switch connector (B).

NOTE: Check for damaged or stress-whitened, rod fastener (C).

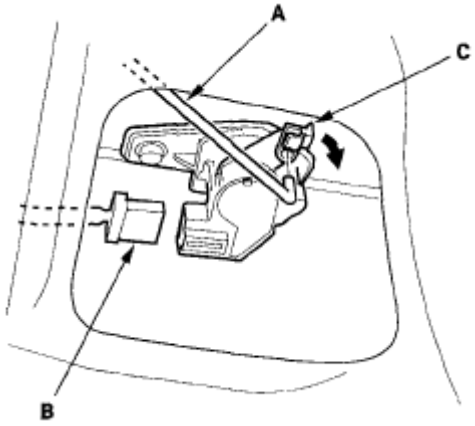

Fig. 17: Identifying Cylinder Rod And Cylinder Switch Connector
Courtesy of HONDA

3. Remove the bolt securing the lock cylinder (A).

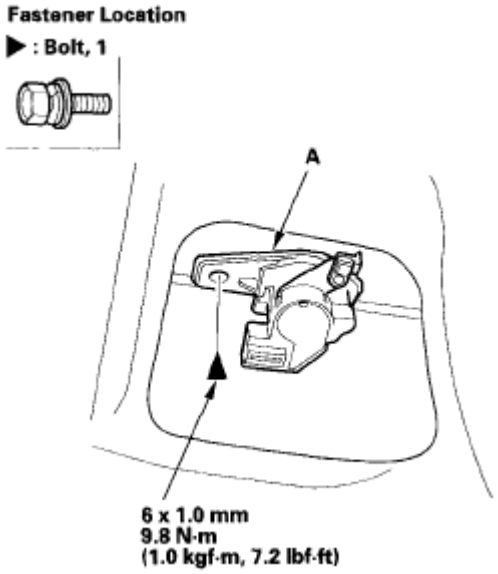

Fig. 18: Identifying Bolt Securing Lock Cylinder (With Torque Specifications)
Courtesy of HONDA

4. Remove the rear license trim (see **SIDE SILL PROTECTION TAPE REPLACEMENT**).
5. Remove the bolt securing the lock cylinder (A).

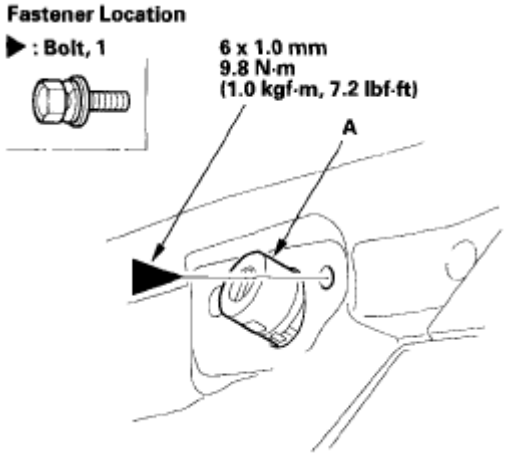

Fig. 19: Identifying Securing Lock Cylinder (With Torque Specifications)
Courtesy of HONDA

6. Turn the lock cylinder (A) to release the hook (B) from the trunk lid (C), then remove the lock cylinder.

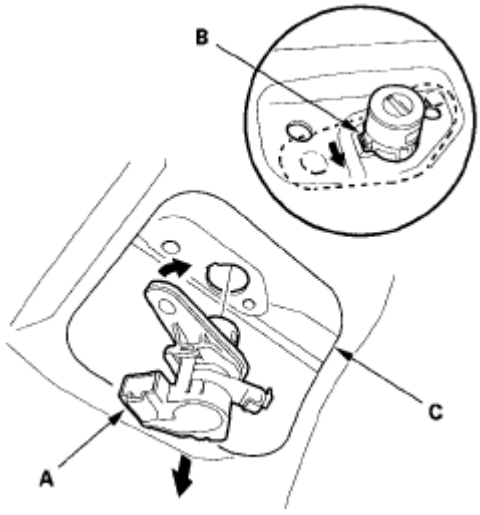

Fig. 20: Identifying Lock Cylinder, Hook From Trunk Lid
Courtesy of HONDA

7. Install the lock cylinder in the reverse order of removal, and note these items:
   - Replace the rod fastener if it is damaged.
   - Make sure the cylinder switch connector is plugged in properly (if equipped) and the cylinder rod is connected properly.
   - Make sure the trunk lid opens properly and locks securely.

TRUNK LID LATCH REPLACEMENT

1. 4-door: If equipped, remove the trunk lid trim (see **TRIM REMOVAL/INSTALLATION - TRUNK LID**).
2. Disconnect the cylinder rod from the lock cylinder:

- 2-door (see step 1 on **2-door**)
- 4-door (see step 1 on **4-door**)

3. Disconnect the trunk lid opener cable (A), and on power trunk lid latch model and security switch model, disconnect trunk lid latch switch connector (B). Take care not to bend the opener cable.

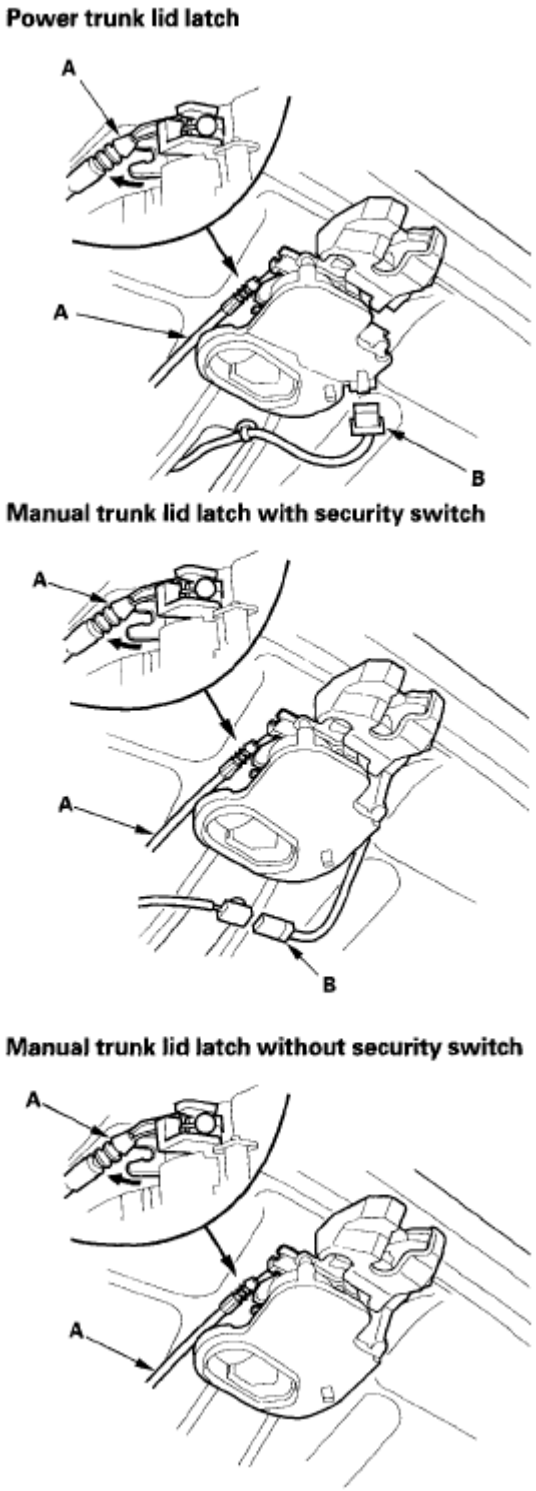

Fig. 21: Identifying Trunk Lid Opener Cable, And Trunk Lid Latch Switch Connector
Courtesy of HONDA

4. Remove the bolts from the trunk lid latch (A).

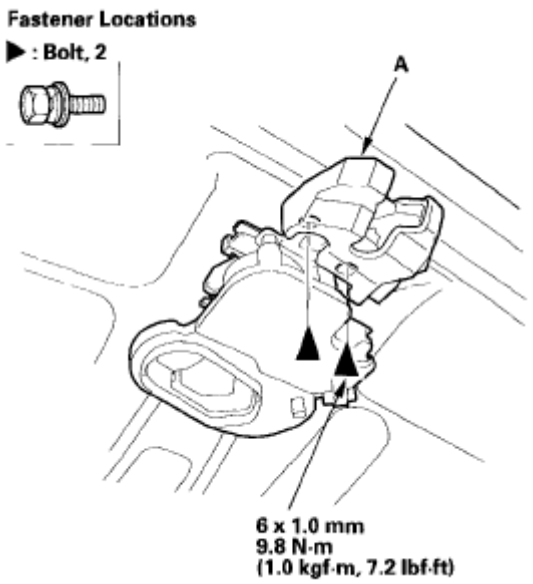

Fig. 22: Identifying Bolts From Trunk Lid Latch (With Torque Specifications)
Courtesy of HONDA

5. Pull the trunk lid latch (A) out, and disconnect the cylinder rod (B) from the trunk lid latch, and on no security switch model, disconnect the latch switch connector (C). Take care not to bend the cylinder rod.

NOTE: Check for damaged or stress-whitened rod fastener (D).

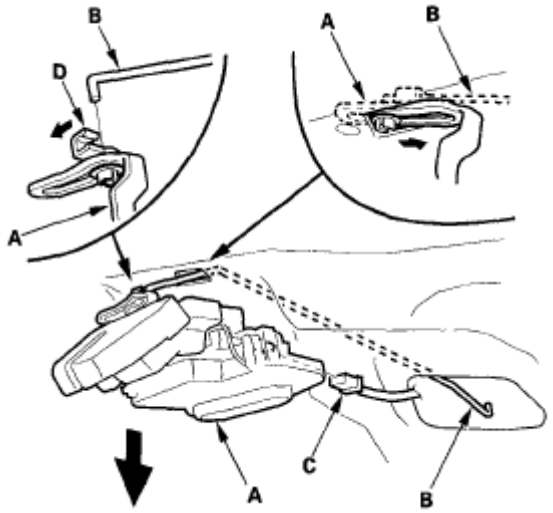

Fig. 23: Identifying Trunk Lid Latch, Cylinder Rod And Latch Switch Connector
Courtesy of HONDA

6. Install the latch in the reverse order of removal, and note these items:
   - Replace the rod fastener if it is damaged.
   - Make sure the connector is plugged in properly and the opener cable is connected properly.

- Make sure the trunk lid opens properly and locks securely.
- Fix the original position of the outer end of cable (A) on the trunk lid latch securely. And check the trunk lid latch operation:

  Make sure the trunk lid latch unlock when pulling the trunk lid opener/fuel fill door opener. If necessary, adjust the position of the cable end.

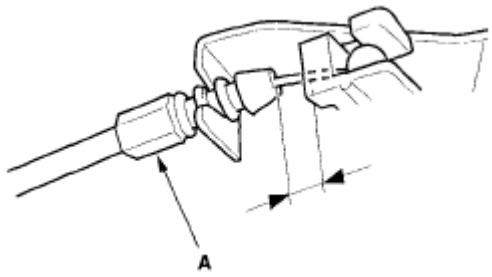

Fig. 24: Identifying Position Of Outer End Of Cable On Trunk Lid Latch Securely
Courtesy of HONDA

PC card will not play/card icon on audio screen cannot be selected (with navigation)	Symptom Troubleshooting (see **AUDIO DISC CANNOT BE INSERTED AND/OR EJECTED (WITH NAVIGATION)**)	

SYSTEM DESCRIPTION

OVERVIEW

The audio unit acts as the processor for all audio functions. Select audio functions from the audio unit, the audio remote,(on the steering wheel), or by using the navigation voice control system. The audio display provides the current audio status. For vehicles with navigation, additional audio information is available by touching the audio button on the navigation audio screen. (See the owner's manual and the navigation system manual for more details.)

The XM receiver passes its signal to the audio unit. In addition, it communicates with the audio unit via the GA-Net bus. Any open connections in the GA-Net bus circuit causes audio and navigation functions to appear inoperative.

For vehicles with navigation, pressing the open/close switch on the navigation display panel allows access to the CD slot and PC card.

A security signal is daisy-chained between the audio and vehicle components for integration into the vehicle's security system.

Speed-sensitive volume compensation (SVC)

Some audio systems are equipped with speed-sensitive volume compensation (SVC). The navigation or audio unit receives the vehicle speed pulse (VSP) from the ECM/PCM. The system processes the speed input and increases the navigation or audio system volume level as the vehicle speed increases to compensate for the various interior noises that occur at higher speeds. When the vehicle slows down, the volume returns to its normal level. The SVC has four settings: SVC OFF, LOW, MID and HIGH that can be adjusted using the navigation or audio unit. The SVC comes from the factory with the MID setting as the default.

To change the audio unit SVC setting, press the tune folder sound knob repeatedly until the SVC is displayed, rotate the knob to adjust the SVC to the desired setting (SVC OFF, LOW, MID, or HIGH).

To change the navigation unit SVC setting, press the AUDIO button, and then select the SOUND icon on the navigation display. Press the navigation display to select the desired setting (OFF, LOW, MID, HI).

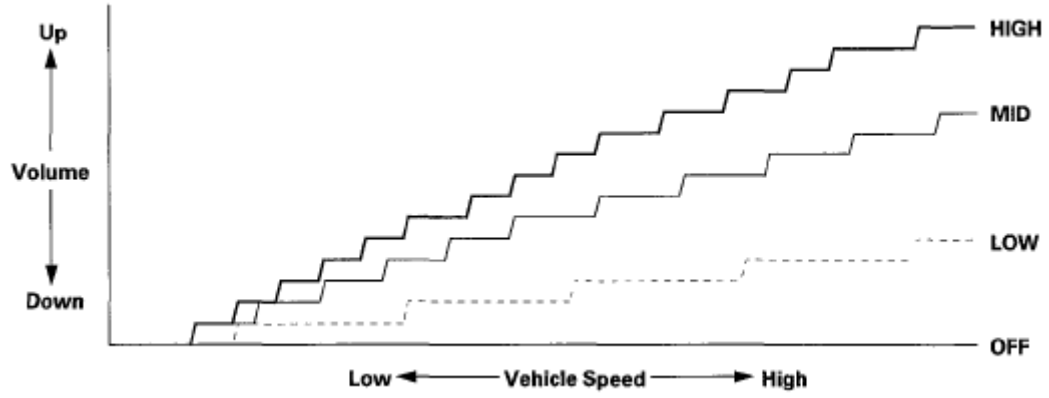

Fig. 4: Speed-Sensitive Volume Compensation (SVC) Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

The navigation system allows voice control of the audio, XM, PC card, and CD player. Voice control commands are communicated on the GA-Net (audio unit). When using the TALK/BACK button, the audio is muted on all speakers and you get navigation sound on the front channels. When using the navigation or route guidance (RG), the front speakers give the navigation sound and the rear speakers continue to play. For more information, see the **NAVIGATION SYSTEM (EXCEPT HYBRID)** article. The outline of the interruption function is shown in this table.

AUDIO OUTPUT AND CONTENTS REFERENCE

Contents	Audio output

Route guidance	Navigation voice output	Navigation voice output	Audio	Audio	Audio

GA-NET BUS CONFIGURATION

The GA-Net bus passes audio and navigation commands throughout the navigation and audio components. These commands include navigation touch screen and hard button signals, audio/XM selections by voice, and XM station and music title names. Because the entire bus is daisy chained between components (see diagram), any open or short in the GA-Net bus harness will cause any or all of these functions to become inoperative. Naturally the addition of any audio accessory must maintain the continuity of the GA-Net bus by installing the Y cable included with the accessory kit.

NOTE: All items may not apply to this vehicle. See the Owner's Manual for more information.

Audio Glossary

ITEM DEFINITION

Item	Definition
Active Noise Control	The active noise control system cancels some of the vehicle noise. This occurs in the 1,500-2,400 rpm range. Microphones detect the low frequency sound, and the system outputs a canceling sound from the audio speaker.
AM (Amplitude Modulation)	The type of transmission used in the standard radio broadcast band from 530 to 1705 kHz.
Amplifier	A device that increases the level of a signal by increasing the current or voltage.
Antenna	A device used to send or receive electromagnetic waves through the air.
ATA (PC Card)	A type of card that has been tested for use in playing WMA, and MP3 music files in the PC card slot. Sizes of up to 1 GB have been tested.
Auxiliary jack	Allows the customer to use a portable audio device to input music recordings.

Balance	A control that changes the relative volume of the left and right channels.
Band	A range of frequencies between two definite limits. Bands are assigned by the Federal Communications Commission for specific uses.
Bass	An adjustment for the low frequency sounds of around 160 Hz and below.
Byte	A unit of storage for computer files and memory. A CD holds approximately 700 million bytes.
Cassette	Audio or video magnetic tape container having two reels. Customers can insert it for recording or play back.
Compact Flash	A standard for small-size (3x4 cm), memory cards used in mobile computers, PDAs, digital cameras. Compact flash memory cards are available in size of 32 MB up to 4 GB or more and can be played in the audio PC slot. Sizes above 1 GB has not been tested.
CD (Compact Disc)	A 4.5-inch plastic disc containing digital audio recording that is played optically on a laser equipped player. Never use discs with a paper label. In a hot car, labels can curl up and jam the unit.
CD Changer	CD player that can store and play more than one CD. Two types are available. Some units accept CDs fed into the changer one at a time, and others accept a magazine (with CD's stacked in a container).
CD player	A component designed to play compact disc CD recording using a laser optical pickup. The signal from a CD player usually requires amplification.
Distortion	Inexact reproduction of an audio signal caused by playing music at levels the audio system cannot handle.
Dolby (noise reduction)	A processing system developed by Dolby Laboratories that reduces the background noise on recording media. The result is a clearer playback from the audio system.
DVD (Digital Versatile Disc)	A 4.5-inch CD-like format used for storing movies with digital audio and video features. The DVD-A format is a DVD format designed for DVD audio systems. Some vehicles can play DVD and DVD-A formats.
Equalizer	A device that changes the relative volume of individual frequency bands to suit personal tastes of the listener.
Fader	The control that adjusts the relative volume levels of front and rear speakers in a four-speaker system.
Format	To prepare a PC card to receive files, this function is performed on a PC. Always choose either FAT or FAT32 as the NTFS format is not accepted by the system. Pick the default sectors for the format method selected.
FM (Frequency Modulation)	The modulation used for radio and television sound transmission in most of the world. Less prone to interference than AM. The FM broadcast band covers roughly 87 to 108 MHz.
GA-NET	A data connection between the display panel, the navigation unit, and the audio system. The information passed on this bus are touch screen button commands, and audio and climate control settings directed by the navigation unit.
GB (Gigabyte)	A unit of memory or disk storage equal to billion bytes (1000 million bytes).
HDD	Abbreviation for hard disc drive. They are sensitive to heat and it is not recommended that they be used in the PC card slot for playing audio files.
Hertz (HZ)	The unit of frequency equal to one cycle per second (cps). One kilohertz (kHz) equals 1,000 cps; one megahertz (MHz) equals 1 million cps.
Integrated Amplifier	A component that combines a pre amp and a power amp into a single unit. A receiver combines an integrated amp and a tuner into a single unit.

Jewel Case	The hard plastic case that contains a compact disc or DVD. Always use a jewel case to prevent scratches on the underside of a CD or DVD.
LCD (Liquid Crystal Display)	A type of digital display that changes reflectance or transmittance when an electrical field is applied to it.
Memory	Circuitry or devices that hold information in electrical or magnetic form such as the AM/FM radio presets.
MB (Megabyte)	One million bytes. Written as 1 MB. Megabytes are used s a measure of digital storage space. For example, a CD can hold 650 MB.
Mic	An abbreviation for microphone. For vehicles with navigation, the microphone accepts navigation voice commands to control audio and navigation functions.
MP3 music files	MP3 is an audio coding format. MP3 is a poplar audio compression format on the Internet and computers. CDs, and PC card with these files can be played on some vehicle's audio system.
Mute	When the navigation gives guidance, the front speakers are muted (no music). When you use the voice control system, all of the speakers are muted.
Noise	Unwanted random sounds like buzzing, hiss, pops, static, whine, etc.
PC Card	The slot used for playing MP3 and WMA music files. The PC card is usually a combination of a small flash card in a PCMCIA adaptor that slides into the slot. The ATA, SD, and compact flash types of cards have been tested up to 1 GB.
PCMCIA	A computer standard for the slot that the PC card slides into. Another term for the PC card slot.
Processor	The part of an audio device that performs task/calculations. In the audio unit, the processor handles muting to allow the navi to speak voice commands, and the decoding/playback of the sound files etc.
Radio	A head unit that combines a tuner, a preamplifier, and often a power-amplifier.
Audio Remote switch	The switches on the steering wheel that control the audio system.
SCF (Cold Start Fix) screens	These screens are displayed if the system requires a GPS initialization. The vehicle should be moved outside into an open area away from buildings/power lines.
Stereo	A recording of at least two channels where you can hear sound or music from the left or right side.
SD (Secure Digital) card	This compact type of memory card allows for fast data transfer and has built-in security functions. SD cards have a small write-protection switch on the side.
Shield	A metallic foil or braided wire layer surrounding conductors which are designed to prevent electrostatic or electromagnetic interference (noise) from external sources such as buzzing, or popping sounds heard on the speakers.
Speaker (Loudspeaker)	A device that converts electrical energy into acoustical energy (sound).
Speed-sensitive volume compensation (SVC)	The SVC increases the audio volume to compensate for increased interior noise when the vehicle drives at freeway speeds.
Subwoofer	A loudspeaker made to reproduce the lowest audio frequencies, approx 25 Hz to 125 Hz.
Track	A sound recording on a CD, tape, or PC card.
Treble	An adjustment to control the volume of the high frequency sounds.
Tuner	A component (or part of a component) that receives radio signals and selects

	one broadcast from many.
Tweeter	A speaker designed to reproduce the higher frequencies (treble) only.
Voice Coil	A coil of wire wrapped around a tube and then attached to the speaker cone or diaphragm. When an audio signal is applied, the coil becomes an electromagnet and interacts with the permanent magnet causing the cone or diaphragm to vibrate. We interpret this vibration as sound.
Volume Control	Allows you to control the loudness of the music.
WMA music file	Windows Media Audio File. This is an accepted format for music files to be played on either a CD or a PC card.
Woofer	A speaker that is designed to reproduce bass frequencies only.
XM Radio	Satellite based radio transmission, which also uses a ground based repeater network to ensure seamless reception. The channels originate from XM's broadcast center, in Washington, DC, and uplink to two satellites. These satellites transmit the signal across the entire continental United States.
XM Receiver	The external component that receives and processes the XM signals from the XM satellites, and terrestrial (land) stations. The audio unit communicates to the XM receiver over the GA-Net bus.

SELF-DIAGNOSTIC FUNCTION

WITHOUT NAVIGATION

The audio system has a self-diagnostic function.

SERIAL NUMBER DISPLAY MODE

To obtain the audio unit serial number on a vehicle, do the following:

NOTE:

- **This procedure can only be performed when the battery power is disconnected from the audio unit and the audio unit displays CODE.**
- **To obtain the navigation unit serial number, refer to NAVI ECU in the navigation system diagnostic mode .**

1. Turn the ignition switch to ON (II).
2. With the audio unit turned off, push and hold the No. 1 and No. 6 buttons. While holding the buttons, push the VOL push PWR knob (A) to ON.

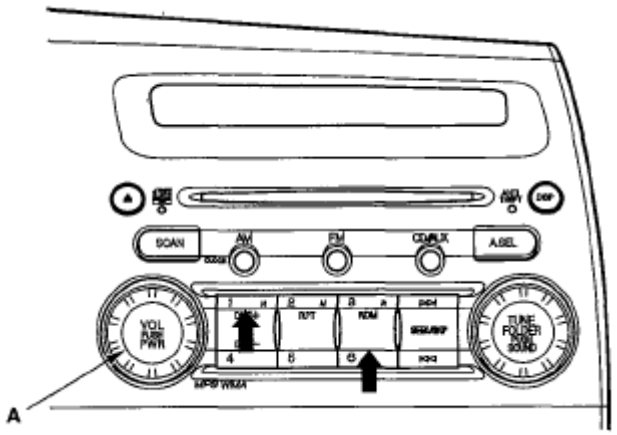

Fig. 21: Identifying Buttons And Self-Diagnostic Function
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. The display will show a 8 digit serial number.

   Eight digits of the serial number (example 12345678)

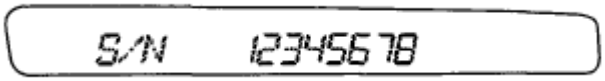

Fig. 22: Identifying Eight Digits Of Serial Number
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Use all 8 numbers as the serial number when using the Interactive Network (*i* N) to retrieve the 5 digit anti-theft code.
5. The serial number display mode ends when you turn the audio unit off, or turn the ignition switch to LOCK (0).

HOW TO CHECK FOR AUDIO SYSTEM CONDITION

NOTE: **The audio unit must be in the code enter screen before performing the self-diagnostic function.**

1. Turn the ignition switch to ON (II).
2. Push and hold the No. 1 and No. 6 buttons. While holding the buttons, push the VOL push PWR knob (A) to ON. Release the buttons and the self-diagnostic function begins.

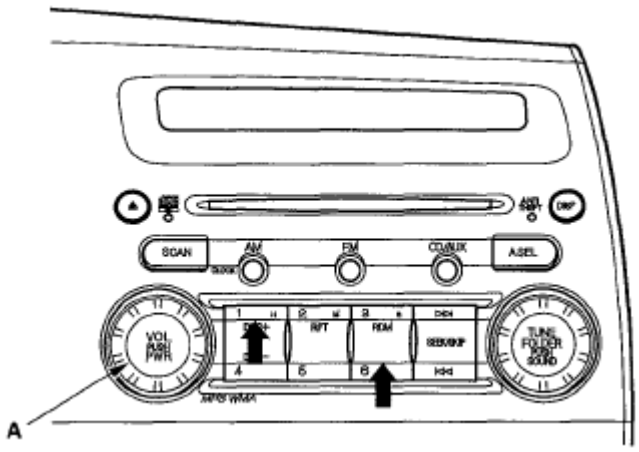

Fig. 23: Identifying Buttons And Self-Diagnostic Function
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. By pressing a preset button, the input will trigger the diagnostic mode that is assigned to that preset switch.

   NO. 3 button

   Entire LCD lighting/light-out mode: Turns on/off the entire LCD to show the presence or absence of an LCD failure.

   NO. 4 button

   Duty (for the Illumination dim) indication mode: Indicates the duty for the Illumination dim.

   NO. 5 button

   Vehicle speed pulse indication mode: Indicates the vehicle speed pulse.

   FM button (Push and hold 5 sec.)

   Reception level check mode: Indicates the reception level. When entering the reception level check mode, the AM/FM button is used to change the main/sub antenna.

   CD button (Push and hold 5 sec.)

   DRAM residual quantity indication mode: Indicates the DRAM residual quantity.

4. The self-diagnostic function will end when the audio unit is turned off, or the ignition switch to LOCK (0).

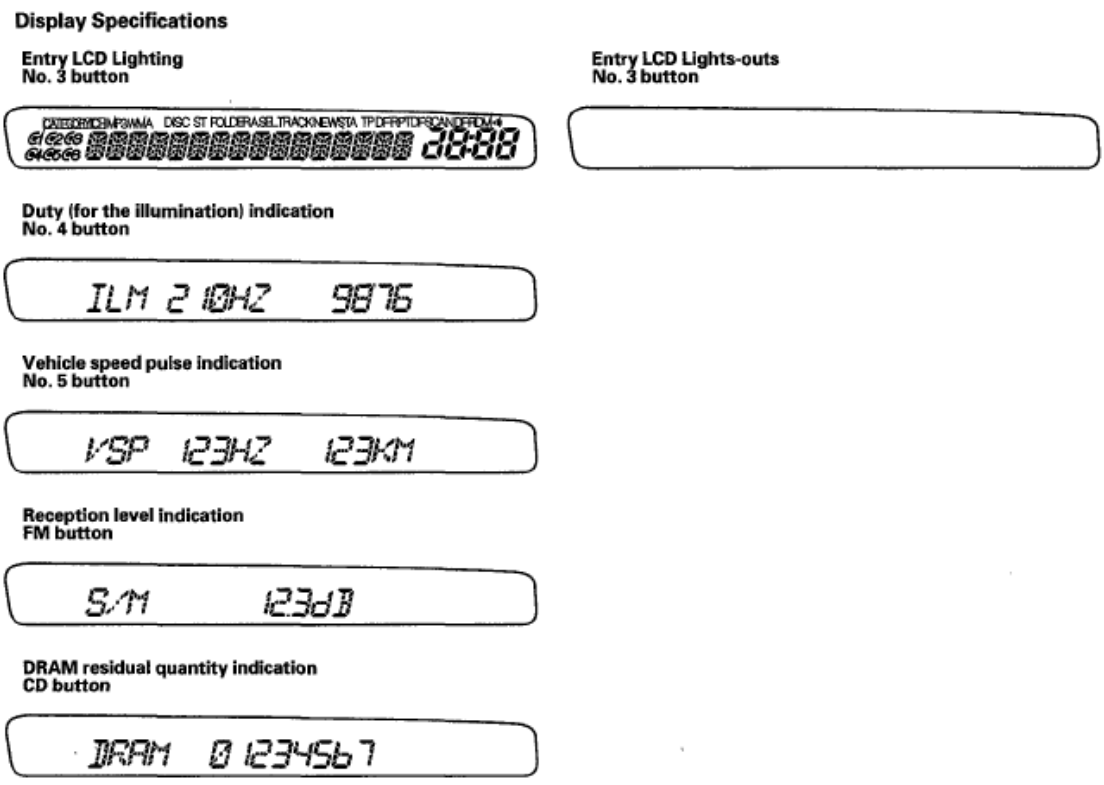

Fig. 24: CD Buttons Self-Diagnostic Function -: Display
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Speaker check mode

5. Turn off the audio unit.
6. Push and hold the No. 1 and No. 3 buttons. While holding the buttons, push the VOL push PWR knob to ON. Release the buttons and the speaker check mode will begin. A low-frequency hum should sound for about one minute. Change the test speaker by push the SKIP button. If you find a speaker(s) with no sound, check the speaker and harness connections. If the connections are good, replace the speaker and retest.
7. The self-diagnostic function ends when the audio unit is turned off, or the ignition switch to LOCK (0).

ERROR CODES

The audio system displays error codes when a problem is detected with the disc changer, the disc, the tape player, the XM radio, or the anti-theft code.

CD Error Codes ('06-07 models and '08 model with navigation)

CD ERROR CODES ('06-07 MODELS AND '08 MODEL WITH NAVIGATION)

Error Code Displayed	Possible Cause	Solution
DISC ERROR	The system cannot read the disc because an audio or video DVD is inserted into the unit. The CD may be inserted upside down.	Make sure the unit functions with a known-good CD.

MECH ERROR	There is a problem with the mechanism. A CD label may be jammed in the mechanism.	Replace the navigation unit.

CD Error Codes ('08 model without navigation)

CD ERROR CODES ('08 MODEL WITHOUT NAVIGATION)

Error Code Displayed	Possible Cause	Solution
BAD DISC-PLEASE CHECK OWNERS MANUAL PUSH EJECT	• CD label jammed in the mechanism. • CD eject mechanism or motor is inoperative. • CD spindle motor won't spin up the CD. • The wrong type disc is inserted.	Press the EJECT button and hold it for 5 seconds. If the disc does not eject, try again. If the disc still won't eject, replace the unit.

CD Error Codes ('06-08 models)

CD ERROR CODES ('06-08 MODELS)

Error Code Displayed	Possible Cause	Solution
HEAT ERROR	CD player is too hot. This can happen if the vehicle is parked in the sunlight all day and is warmer than 104 °F (40 °C).	The unit should function normally when it cools off, and internal temperature is less than 104 °F (40 °C).
FORMAT	Audio unit cannot read the files on the CD or CD-R.	Current track will skipped. The next supported track or file plays automatically. • Verify that CD, CD-R, or CD-RW file names end in CD-A or WMA. • Verify that CD, CD-R, or CD-RW with compressed music formats end in MP3 or WMA. • Other file formats like iTunes or Ogg are not recognized. • WMA files may have (DRM) copy protection and cannot be read.

XM Error Codes

XM ERROR CODES

Error Code Displayed	Possible Cause	Solution
LOADING	XM radio is acquiring audio or program information.	Wait until the radio receives the information.
	XM channel not in	

(XM) OFF AIR	service.	Try another XM channel.
(XM) NO SIGNAL	Loss of signal.	Both terrestrial and satellite antennas have lost signal. Park the vehicle outside with a clear view of the southern horizon.
(XM) UPDATING	XM radio is receiving information update from the network.	This message will disappear once the update finishes.
(XM) CHECK ANTENNA	XM antenna error.	Repair open or short in the satellite antenna. Substitute the XM antenna with a known-good one, and recheck. If the error is gone, replace the original XM antenna. If the error is still present, replace the antenna lead.
(XM) ANTENNA ERROR		
-	No signal from XM.	Check a known-good vehicle with XM radio. If the known-good vehicle has the same symptoms, contact XM Satellite Radio at (800) 852-9696.

Audio Unit Error Codes

AUDIO UNIT ERROR CODES

Error Code Displayed	Possible Cause	Solution
CODE ERROR 1	Anti-theft code mismatch (1st try).	Enter the correct anti-theft code.
CODE ERROR E	Anti-theft code mismatch (10th try).	Remove No. 23 (10 A) fuse in the under-hood fuse/relay box, then reinsert it. You will have 10 more tries to enter the correct anti-theft code.

SYMPTOM TROUBLESHOOTING

POOR AM OR FM RADIO RECEPTION OR INTERFERENCE (WITH NAVIGATION)

NOTE:

- **Check the vehicle battery condition first.**
- **Check for aftermarket accessories plugged into the vehicle accessory power sockets.**
- **Check the connectors for poor connections or loose terminals.**
- **Check the radio reception in an open area. Compare it to a known-good vehicle whenever possible. Poor reception/interference can be caused by the following:**
  - **The radio station is far away.**
  - **Atmospheric conditions are unfavorable.**
  - **Tall buildings, mountains, or high-voltage power lines are nearby.**
  - **Aftermarket metallic window tint.**

1. Turn the ignition switch to ON (II).
2. Do the seek stop test (see **SEEK STOP TEST**).

Is the test vehicle within 10% of the known-good vehicle?

YES -Multipath interference or weak station. Operation is normal.

NO -Go to step 3.

3. Check if the radio reception/interference is the same in several locations.

   Is the reception/interference the same?

   YES -Go to step 4.

   NO -Multi path interference or weak station. Operation is normal.

4. Start the engine.
5. Check the reception/interference.

   Is there noise (static or whine) only with the engine running?

   YES -Check the antenna and radio grounds. If OK, check the charging system and the ignition system.

   NO -Go to step 6.

6. Turn the ignition switch to LOCK (0).
7. Wrap aluminum foil (A) around the tip of a tester probe (B) as shown.

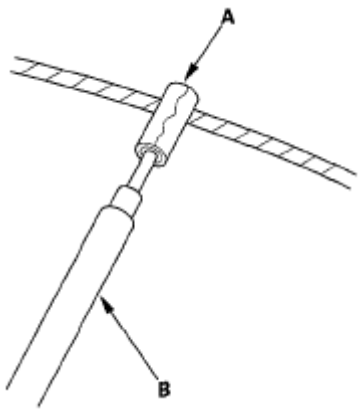

Fig. 25: Identifying Wrap Aluminum Foil And Tip Of Tester Probe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Check for continuity by touching one tester probe to the window antenna terminal (A), and move the other tester probe along the antenna wires.

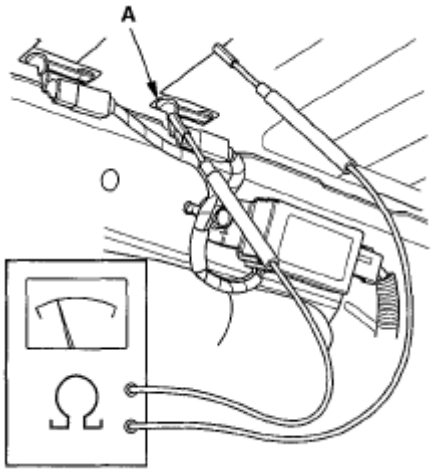

Fig. 26: Checking Continuity By Touching Tester Probe To Window Antenna Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity in all sections of the antenna?

YES -Go to step 9.

NO -Repair the window antenna wire. Go to **AM/FM ANTENNA REPAIR** .

9. Remove the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**). Check that the antenna lead is properly connected.

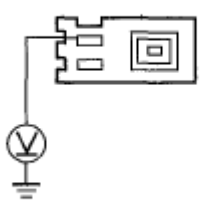
   Is it connected properly?

   YES -Go to step 10.

   NO -Reconnect the connector, and recheck the function.

10. Disconnect the AM/FM antenna lead 3P connector from the AM/FM antenna amplifier (see **AM/FM ANTENNA AMPLIFIER REPLACEMENT**).
11. Turn the ignition switch to ON (II).
12. Turn on the navigation unit.
13. Measure the voltage between the AM/FM antenna lead connector No. 3 terminal at the AM/FM antenna amplifier and body ground.

AM/FM ANTENNA AMPLIFIER 3P CONNECTOR



Terminal side of female terminals

Fig. 27: Measuring Voltage Between AM/FM Antenna Lead Connector Terminal At AM/FM Antenna Amplifier And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES -Go to step 18.

NO -Go to step 14.

14. Turn the ignition switch to LOCK (0).
15. Disconnect navigation unit connector G (3P).
16. Check for continuity between the AM/FM antenna amplifier connector (3P) No. 3 terminal and body ground.

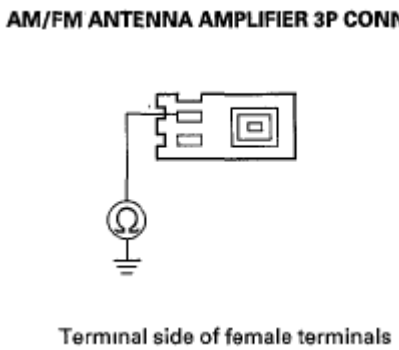


Fig. 28: Checking Continuity Between AM/FM Antenna Amplifier Connector Terminal 3P And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short to body ground in the wire between the navigation unit and the AM/FM antenna amplifier.

NO -Go to step 17.

17. Check for continuity between navigation unit connector G (3P) No. 3 terminal and the AM/FM antenna amplifier 3P connector No. 3 terminal.

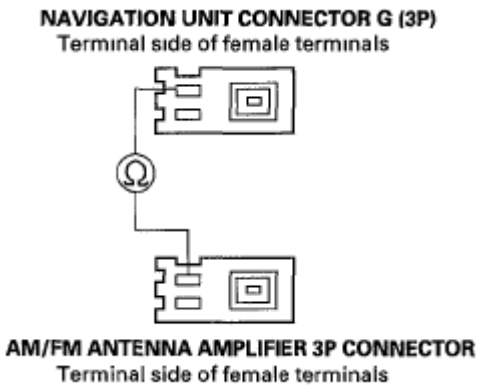

Fig. 29: Checking Continuity Between Navigation Unit Connector Terminal And AM/FM Antenna Amplifier 3P Connector Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Substitute a known-good navigation unit, and recheck.

NO -Repair open in the wire between the navigation unit and the AM/FM antenna amplifier.

18. Turn the ignition switch to LOCK (0).
19. Disconnect navigation unit connector G (3P).
20. Check for continuity between navigation unit connector G (3P) No. 1 terminal and body ground.

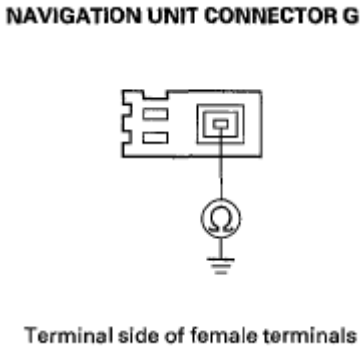

Fig. 30: Checking Continuity Between Navigation Unit G (3P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Replace the AM/FM antenna lead and/or sublead.

NO -Go to step 21.

21. Check for continuity between navigation unit connector G (3P) No. 1 and No. 2 terminals.

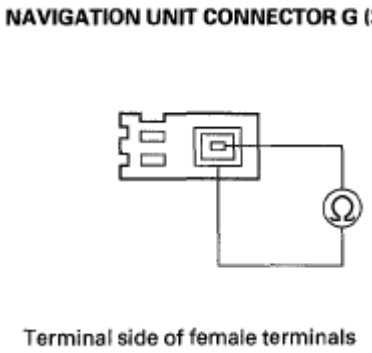

Fig. 31: Checking Continuity Between Navigation Unit G (3P) Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Replace the antenna lead and/or sublead.

NO -Go to step 22.

22. Check for continuity between navigation unit connector G (3P) No. 2 terminal and the AM/FM antenna amplifier 3P connector No. 2 terminal.

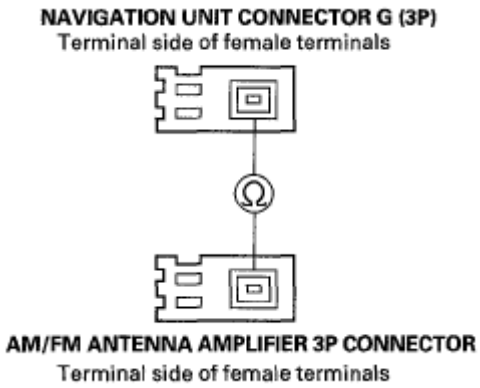

Fig. 32: Checking Continuity Between Navigation Unit G (3P) Connector Terminal And AM/FM Antenna Amplifier 3P Connector Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Replace the antenna lead and/or sublead.

NO -Go to step 23.

23. Check for continuity between navigation unit connector G (3P) No. 1 terminal and the AM/FM antenna amplifier 3P connector No. 1 terminal.

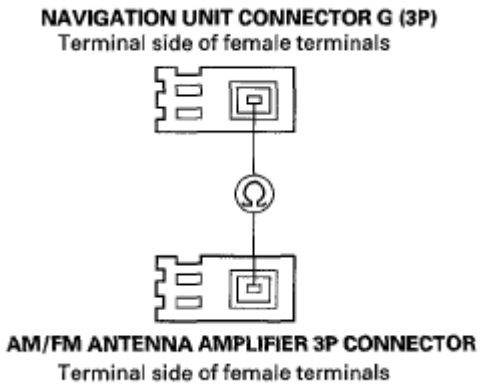

Fig. 33: Checking Continuity Between Navigation Unit G (3P) Connector Terminal And AM/FM Antenna Amplifier 3P Connector Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Replace the AM/FM antenna amplifier, and recheck. If the reception is still poor, replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

NO -Replace the AM/FM antenna lead and/or sublead.

POOR AM OR FM RADIO RECEPTION OR INTERFERENCE (WITHOUT NAVIGATION)

NOTE:

- **Check the vehicle battery condition first.**
- **Check for aftermarket accessories plugged into the vehicle accessory power sockets.**
- **Check the connectors for poor connections or loose terminals.**
- **Check the radio reception in an open area. Compare it to a known-good vehicle whenever possible. Poor reception/interference can be caused by the following:**
  - **The radio station is far away.**
  - **Atmospheric conditions are unfavorable.**
  - **Tall buildings, mountains, or high-voltage power lines are nearby.**
  - **Aftermarket metallic window tint.**

1. Turn the ignition switch to ON (II).
2. Do the seek stop test (see **SEEK STOP TEST**).

   Is the test vehicle within 10 % of the known-good vehicle?

   YES -Multipath interference or weak station. Operation is normal.

   NO -Go to step 3.

3. Check if the radio reception/interference is the same in several locations.

Is the reception/interference the same?

YES -Go to step 4.

NO -Multipath interference or weak station. Operation is normal.

4. Start the engine.
5. Check the reception/interference.

Is there noise (static or whine) only with the engine running?

YES -Check the antenna and radio grounds. If OK, check the charging system and the ignition system.

NO -Go to step 6.

6. Turn the ignition switch to LOCK (0).
7. Wrap aluminum foil (A) around the tip of a tester probe (B) as shown.

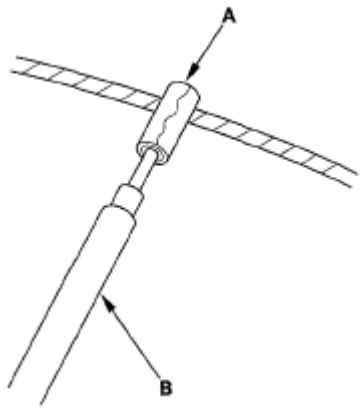

Fig. 34: Identifying Wrap Aluminum Foil And Tip Of Tester Probe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Check for continuity by touching one tester probe to the window antenna terminal (A), and move the other tester probe along the antenna wires.

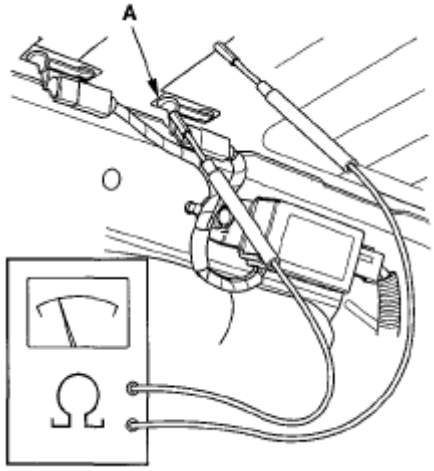

Fig. 35: Checking Continuity By Touching Tester Probe To Window Antenna Connector Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity in all sections of the antenna?

YES -Go to step 9.

NO -Repair the window antenna wire. Go to **AM/FM ANTENNA REPAIR** .

9. Remove the audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**). Check that the antenna lead is properly connected.

   Is it connected properly?

   YES -Go to step 10.

   NO -Reconnect the connector, and recheck the function.

10. Disconnect the antenna cable 3P connector from the AM/FM antenna amplifier (see **AM/FM ANTENNA AMPLIFIER REPLACEMENT**).
11. Turn the ignition switch to ON (II).
12. Turn on the audio unit.
13. Measure the voltage between the AM/FM antenna lead connector No. 3 terminal at the AM/FM antenna amplifier and body ground.

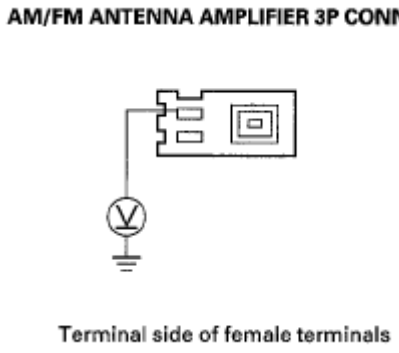

Fig. 36: Measuring Voltage Between AM/FM Antenna Lead Connector Terminal At AM/FM Antenna Amplifier And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES -Go to step 18.

NO -Go to step 14.

14. Turn the ignition switch to LOCK (0).
15. Disconnect audio unit connector G (3P).
16. Check for continuity between the AM/FM antenna amplifier connector (3P) No. 3 terminal and body ground.

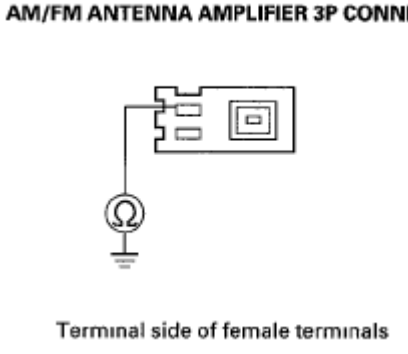

Fig. 37: Checking Continuity Between AM/FM Antenna Amplifier (3P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short to body ground in the wire between the audio unit and the AM/FM antenna amplifier.

NO -Go to step 17.

17. Check for continuity between audio unit connector G (3P) No. 3 terminal and the AM/FM antenna amplifier 3P connector No. 3 terminal.

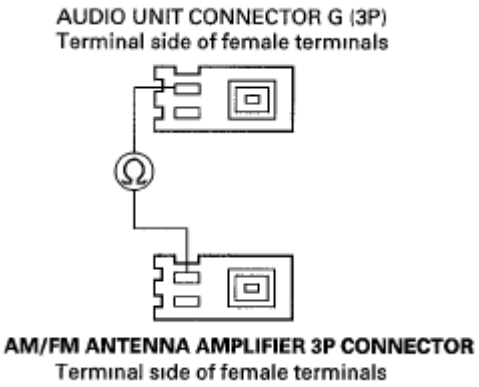

Fig. 38: Checking Continuity Between Audio Unit G (3P) Connector Terminal And AM/FM Antenna Amplifier 3P Connector Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Substitute a known-good audio unit, and recheck.

NO -Repair open in the wire between the audio unit and the AM/FM antenna amplifier.

18. Turn the ignition switch to LOCK (0).
19. Disconnect audio connector G (3P).
20. Check for continuity between audio unit connector G (3P) No. 1 terminal and body ground.

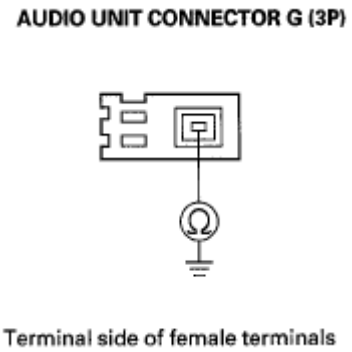

Fig. 39: Checking Continuity Between Audio Unit G (3P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Replace the antenna lead and/or sublead.

NO -Go to step 21.

21. Check for continuity between audio unit connector G (3P) No. 1 and No. 2 terminals.

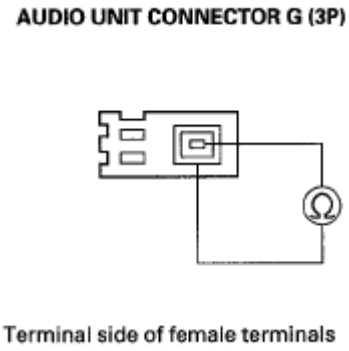

Fig. 40: Checking Continuity Between Audio Unit G (3P) Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Replace the antenna lead and/or sublead.

NO -Go to step 22.

22. Check for continuity between audio unit connector G (3P) No. 2 terminal and the AM/FM antenna amplifier 3P connector No. 2 terminal.

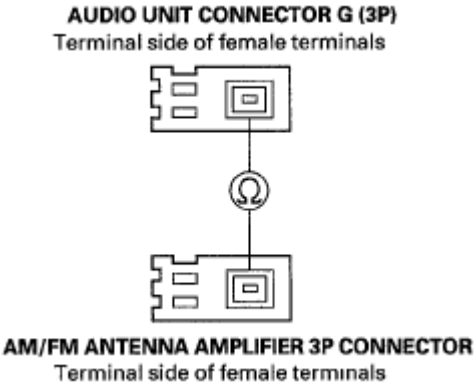

Fig. 41: Checking Continuity Between Audio Unit G (3P) Connector Terminal And AM/FM Antenna Amplifier 3P Connector Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Replace the antenna lead and/or sublead.

NO -Go to step 23.

23. Check for continuity between audio unit connector G (3P) No. 1 terminal and the AM/FM antenna amplifier 3P connector No. 1 terminal.

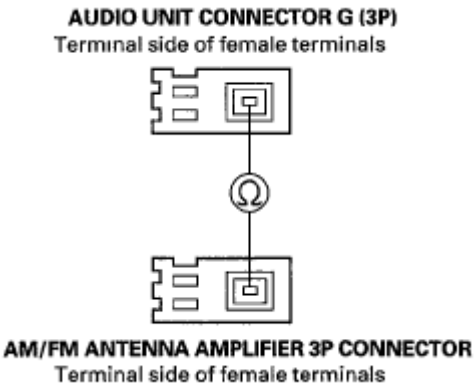

Fig. 42: Checking Continuity Between Audio Unit G (3P) Connector Terminal And AM/FM Antenna Amplifier 3P Connector Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Replace the AM/FM antenna amplifier, and recheck. If the reception is still poor, replace the audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).

NO -Replace the antenna lead and/or sublead.

AUDIO UNIT POWER SWITCH WILL NOT TURN ON (NO INFORMATION DISPLAY AND NO SOUND) (WITH NAVIGATION)

NOTE:
- **Check the vehicle battery condition first.**
- **Check the connectors for poor connections or loose terminals.**

1. Turn the ignition switch to ON (II).
2. Push the power switch ON to see if the navigation unit turns ON.

   Does the navigation unit display operate properly, and does the audio sound normal?

   YES -Intermittent failure, the system is OK at this time.

   NO -Go to step 3.

3. Turn the ignition switch to LOCK (0).
4. Check the No. 23 (10 A) fuse in the under-hood fuse/relay box and No. 35 (7.5 A) fuse in the under-dash fuse/relay box.

   Are the fuses OK?

   YES -Go to step 5.

   NO -Replace the fuse(s), and recheck.

5. Remove the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**). Check

that the navigation unit is properly connected.

NOTE: Eject all the discs before removing the navigation unit to prevent damaging the CD player's load mechanism.

Is it connected properly?

YES -Go to step 6.

NO -Reconnect the connector, and recheck the function.

6. Turn the ignition switch to ON (II).
7. Measure the voltage between body ground and navigation unit connector A (17P) terminals No. 14 and No. 17 individually.

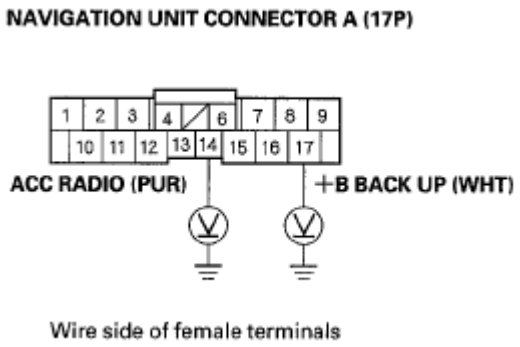

Fig. 43: Measuring Voltage Between Navigation Unit A (17P) Connector Terminals And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage on both terminals?

YES -Go to step 8.

NO -Repair open in the wire(s) between the No. 23 (10 A) fuse in the under-hood fuse/relay box and No. 35 (7.5 A) in the under-dash fuse/relay box and the audio unit.

8. Turn the ignition switch to LOCK (0).
9. Turn the ignition switch to ON (II).
10. Measure the voltage between navigation unit connector A (17P) No. 9 terminal and body ground, and navigation unit connector B (22P) No. 15 terminal and body ground.

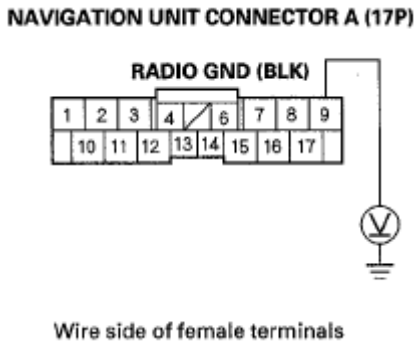

Fig. 44: Measuring Voltage Between Navigation Unit A (17P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

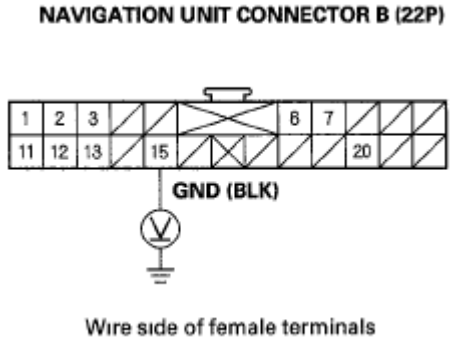

Fig. 45: Measuring Voltage Between Navigation Unit B (22P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.1 V on both terminals?

YES -Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

NO -Repair open in the wire between navigation unit connector A (17P) No. 19 terminal or navigation unit connector B (22P) No. 15 terminal and body ground (G505) (see **CONNECTOR TO HARNESS INDEX**).

AUDIO UNIT POWER SWITCH WILL NOT TURN ON (NO INFORMATION DISPLAY AND NO SOUND) (WITHOUT NAVIGATION)

NOTE:

- **Check the vehicle battery condition first.**
- **Check the connectors for poor connections or loose terminals.**

1. Turn the ignition switch to ON (II).
2. Push the power switch ON to see if audio unit turns ON.

Does the audio unit operate properly, and does the audio sound normal?

YES -Intermittent failure, the system is OK at this time.

NO -Go to step 3.

3. Turn the ignition switch to LOCK (0).
4. Check the No. 23 (10 A) fuse in the under-hood fuse/relay box and No. 35 (7.5 A) fuse in the under-dash fuse/relay box.

   Are the fuses OK?

   YES -Go to step 5.

   NO -Replace the fuse(s), and recheck.

5. Remove the audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**). Check that the audio unit is properly connected.

   NOTE: Eject all the discs before removing the audio unit to prevent damaging the CD player's load mechanism.

   Is it connected properly?

   YES -Go to step 6.

   NO -Reconnect the connector, and recheck the function.

6. Turn the ignition switch to ON (II).
7. Measure the voltage between audio unit connector A (17P) terminal No. 14 and body ground, and between terminal No. 17 and body ground.

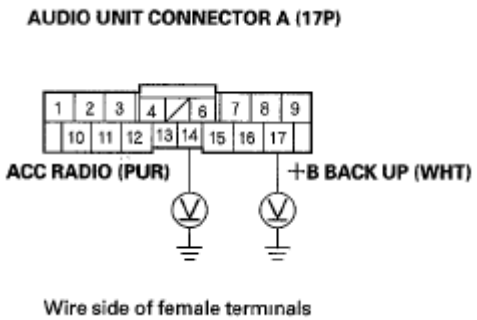

Fig. 46: Measuring Voltage Between Audio Unit A (17P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   Is there battery voltage on the both terminals?

   YES -Go to step 8.

   NO -Repair open in the wire(s) between the No. 23 (10 A) fuse in the under-hood fuse/relay box and No. 35 (7.5 A) in the under-dash fuse/relay box and the audio unit.

8. Turn the ignition switch to LOCK (0).

9. Turn the ignition switch to ON (II).
10. Measure the voltage between audio unit connector A (17P) No. 9 terminal and body ground.

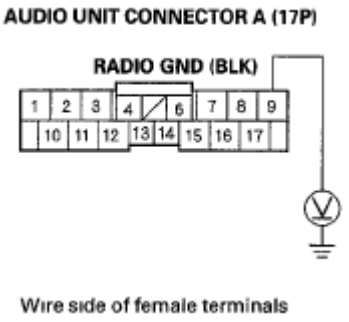

Fig. 47: Measuring Voltage Between Audio Unit A (17P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.1 V?

YES -Replace the audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).

NO -Repair open in the wire between audio unit connector A (17P) No. 9 terminal and body ground (G505) (see **CONNECTOR TO HARNESS INDEX**).

AUDIO UNIT POWER SWITCH WILL NOT TURN OFF (WITH NAVIGATION)

NOTE:

- **Check for aftermarket accessories plugged into the vehicle's accessory power sockets.**
- **Check the connectors for poor connections or loose terminals.**

1. Turn the ignition switch to ON (II).
2. Push the power switch OFF or turn the ignition switch OFF to see if the navigation unit turns OFF.

Is the navigation unit OFF?

YES -Operation is normal.

NO -Go to step 2.

3. Turn the ignition switch to LOCK (0).
4. Remove the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).
5. Measure the voltage between navigation unit connector A (17P) terminal No. 14 and body ground.

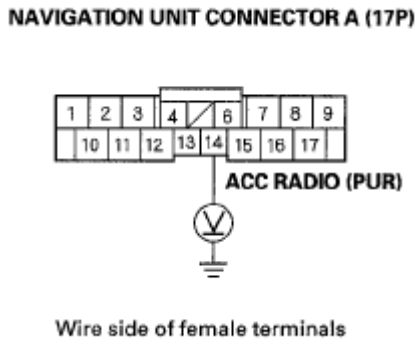

Fig. 48: Measuring Voltage Between Navigation Unit A (17P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES -Check for short to power on PUR wire.

NO -Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

AUDIO UNIT POWER SWITCH WILL NOT TURN OFF (WITHOUT NAVIGATION)

NOTE:

- **Check for aftermarket accessories plugged into the vehicle's accessory power sockets.**
- **Check the connectors for poor connections or loose terminals.**

1. Turn the ignition switch to ON (II).
2. Push the power switch OFF or turn the ignition switch OFF to see if the audio unit turns OFF.

   Is the audio unit OFF?

   YES -Operation is normal.

   NO -Go to step 3.

3. Turn the ignition switch to LOCK (0).
4. Remove the audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).
5. Measure the voltage between audio unit connector A (17P) terminal No. 14 and body ground.

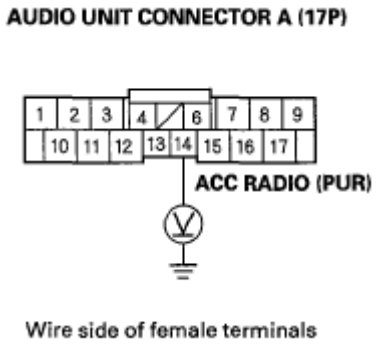

Fig. 49: Measuring Voltage Between Audio Unit A (17P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there voltage?

YES -Check for short to power on PUR wire.

NO -Replace the audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).

NO SOUND IS HEARD FROM SPEAKER(S) (DISPLAY IS NORMAL) (WITH NAVIGATION)

NOTE:

- **Check the vehicle battery condition first.**
- **Check the connectors for poor connections or loose terminals.**
- **Set the fader and balance positions to the center.**

1. Turn the ignition switch to ON (II).
2. Check for sound in each mode (AM, FM, XM, and CD).

   Is the sound OK in each mode?

   YES -Intermittent failure. The system is OK at this time. Check for loose connections at the navigation unit and speaker(s).

   NO -Go to step 3.

3. Check that the volume button is not set to the MIN level.

   Is it at the MIN level?

   YES -Raise the volume level, and recheck the function.

   NO -Go to step 4.

4. On the steering wheel, check the navigation TALK command.

   Is the navigation TALK command function set?

   YES -Cancel the navigation TALK command by pressing the navigation BACK button, then recheck

the function.

NO -Go to step 5.

5. Check to see if there is a specific speaker that has no sound.

   Do any or all of the speakers fail to sound?

   YES -Speaker(s) failed the test:

   - If at least one speaker is OK, go to step 6.
   - If all speakers fail to sound:
     - With premium sound system: Go to step 14.
     - Without premium sound system: Go to step 9.

   NO -Speakers all work, but sound quality is poor in step 1.

   - If sound is poor only with XM radio, or the XM radio does not function, go to **POOR OR NO SOUND WITH XM RADIO** .
   - If the sound is poor only with AM or FM, go to **POOR AM OR FM RADIO RECEPTION OR INTERFERENCE** .
   - If the sound is poor only with disc.
     - Try several known- good tapes/disc in the navigation unit.
     - If the sound quality is normal, the original disc is faulty.
     - If the sound quality is still poor, replace the navigation unit.
   - If the sound is poor in all modes, go to **SOUND QUALITY DIAGNOSIS** .
6. Turn the ignition switch to LOCK (0).
7. Remove the speaker(s) with no sound (see **SPEAKER REPLACEMENT**), and disconnect its connector.
8. Check the speaker 2P connector for a loose or poor connection.

   Reconnect the speaker 2P connector and recheck the symptom; does it still fail?

   YES -Go to step 9.

   NO -Operation is normal.

9. Make sure the ignition switch is in LOCK (0).
10. Measure the resistance between the (+) and (-) terminals of the speaker connector.

    Is there about 4 ohms?

    YES -

    - With premium sound system: Go to step 20.
    - Without premium sound system: Go to step 11.

NO -Faulty speaker(s).

11. Remove the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**). Disconnect navigation unit connector A (17P).

NOTE: Eject all the discs before removing the navigation unit to prevent damaging the CD player's load mechanism.

12. Measure the resistance between the following terminals of navigation unit connector A (17P) according to the table.

SPEAKER TERMINALS REFERENCE

Speaker	Terminal	Wire color
Driver's door speaker, Left tweeter	A12 (+)	LT GRN
	A3 (-)	PNK
Front passenger's door speaker, Right tweeter	A15 (+)	GRY
	A7 (-)	BRN
Left rear speaker	A11 (+)	YEL
	A2 (-)	BRN
Right rear speaker	A16 (+)	BLU
	A8 (-)	ORN

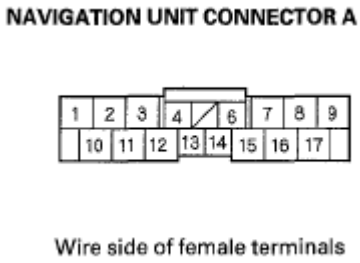

Fig. 50: Measuring Resistance Between Navigation Unit A (17P) Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 4 ohms?

YES -Go to step 13.

NO -Repair open or short in the wires between navigation unit and speaker(s).

13. Check for continuity between body ground and the following terminals of navigation unit connector A (17P).

SPEAKER TERMINALS REFERENCE

Speaker	Terminal	Wire color
Driver's door speaker, Left tweeter	A12 (+)	LT GRN
	A3 (-)	PNK
Front passenger's door speaker, Right tweeter	A15 (+)	GRY
	A7 (-)	BRN

Left rear speaker	A11 (+)	YEL
	A2 (-)	BRN
Right rear speaker	A16 (+)	BLU
	A8 (-)	ORN

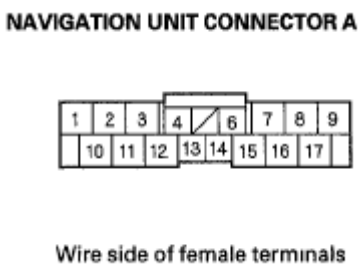

Fig. 51: Checking Continuity Between Navigation Unit A (17P) Connector Terminals And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short to body ground in the wire(s) between the navigation unit and speaker(s).

NO -Substitute a known-good navigation unit and recheck. If the symptom/indication goes away, replace the original navigation unit.

14. Measure the voltage between stereo amplifier connector A (20P) No. 10 terminal and body ground.

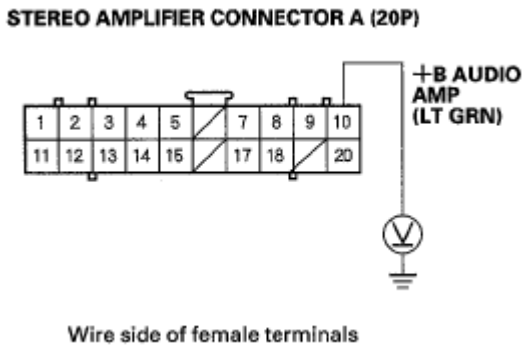

Fig. 52: Measuring Voltage Between Stereo Amplifier A (20P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES -Go to step 15.

NO -

- '06 model: Repair open in the wire between No. 5 (15 A) fuse in the under-dash fuse/relay box and stereo amplifier connector A (20P) No. 10 terminal.
- '07-08 models: Repair open in the wire between No. 17 (15 A) fuse in the under-hood fuse/relay

box and stereo amplifier connector A (20P) No. 10 terminal.

15. Turn the ignition switch to ON (II).
16. Measure the voltage between stereo amplifier connector A (20P) No. 9 terminal and body ground.

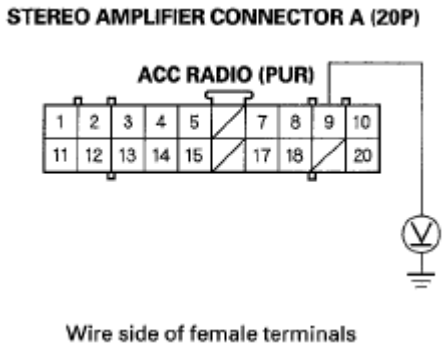

Fig. 53: Measuring Voltage Between Stereo Amplifier A (20P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES -Go to step 17.

NO -Repair open in the wire between No. 35 (7.5 A) fuse in the under-dash fuse/relay box and stereo amplifier connector A (20P) No. 9 terminal.

17. Measure the voltage between stereo amplifier connector B (14P) No. 7 terminal and body ground.

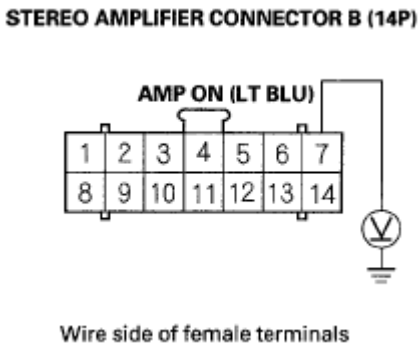

Fig. 54: Measuring Voltage Between Stereo Amplifier B (14P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES -Go to step 18.

NO -Repair open in the wire between the stereo amplifier connector B (14P) No. 7 terminal and navigation unit connector B (22P) No. 20 terminal.

18. Measure the voltage between stereo amplifier connector A (20P) No. 20 terminal and body ground,

and between stereo amplifier connector B (14P) No. 14 terminal and body ground.

'06-08 models

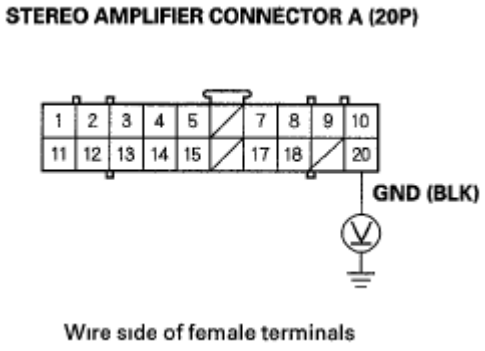

Fig. 55: Measuring Voltage Between Stereo Amplifier A (20P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

'06 model

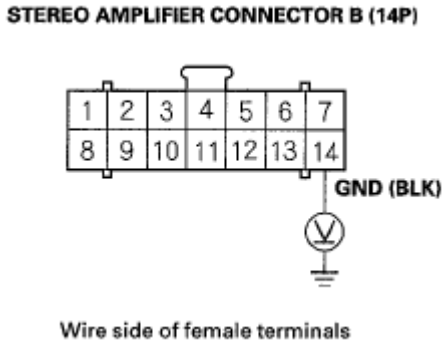

Fig. 56: Measuring Voltage Between Stereo Amplifier B (14P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.1 V on both terminals?

YES -Go to step 19.

NO -Repair open in the wire between stereo amplifier connector A (20P) No. 20 terminal or connector B (14P) No. 14 terminal and body ground, 2-door model (G505), 4-door model (G601).

19. Turn the ignition switch to LOCK (0).
20. Disconnect stereo amplifier connector A (20P).
21. Measure the resistance between the following terminals of stereo amplifier connector A (20P) according to the table.

SPEAKER TERMINALS REFERENCE

Speaker	Terminal	Wire color
	A3 (+)	LT GRN

Driver's door speaker	A13 (-)	PNK
Left tweeter	A4 (+)	RED
	A14 (-)	GRN
Front passenger's door speaker	A2 (+)	GRY
	A12 (-)	BRN
Right tweeter	A1 (+)	PNK
	A11 (-)	BLU
Left rear speaker	A8 (+)	YEL
	A18 (-)	BRN
Right rear speaker	A7 (+)	BLU
	A17 (-)	ORN
Subwoofer	A5 (+)	GRN
	A15 (-)	RED

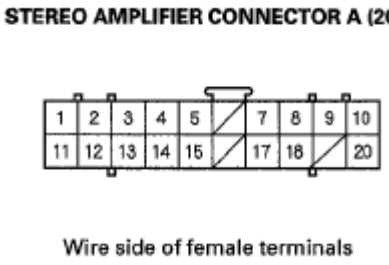

Fig. 57: Measuring Resistance Between Stereo Amplifier A (20P) Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 4 ohms?

YES -Go to step 22.

NO -Repair oper or short in the wires between stereo amplifier and speaker(s).

22. Check for continuity between body ground and the following terminals of stereo amplifier connector A (20P).

SPEAKER TERMINALS REFERENCE

Speaker	Terminal	Wire color
Driver's door speaker	A3 (+)	LT GRN
	A13 (-)	PNK
Left tweeter	A4 (+)	RED
	A14 (-)	GRN
Front passenger's door speaker	A2 (+)	GRY
	A12 (-)	BRN
Right tweeter	A1 (+)	PNK
	A11 (-)	BLU
Left rear speaker	A8 (+)	YEL
	A18 (-)	BRN

Right rear speaker	A7 (+)	BLU
	A17 (-)	ORN
Subwoofer	A5 (+)	GRN
	A15 (-)	RED

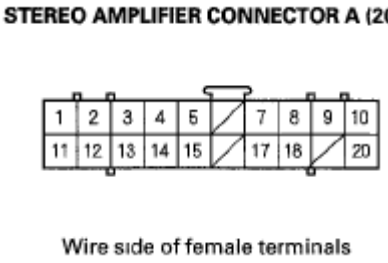

Fig. 58: Checking Continuity Between Stereo Amplifier A (20P) Connector Terminals And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short to body ground in the wire(s) between stereo amplifier and speaker(s).

NO -

- 2-door: Go to step 23.
- '08 4-door: Go to step 27.

23. Disconnect stereo amplifier connector B (14P).
24. Disconnect navigation unit connector A (17P).
25. Check for continuity between stereo amplifier connector B (14P) and body ground according to the table. Then check for continuity between the same terminals listed in the table and stereo amplifier connector B (14P) No. 2 terminal (the harness shield).

AMPLIFIER CONNECTOR REFERENCE

Amplifier connector	Wire color
B1	BLU
B3	BLK
B4	GRN
B6	BRN
B8	ORN
B10	WHT
B11	RED
B13	YEL

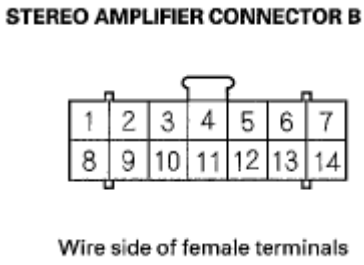

Fig. 59: Checking Continuity Between Stereo Amplifier B (14P) Connector Terminals And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short in the wire between the stereo amplifier and the navigation unit. Replace the appropriate shielded harness.

NO -Go to step 26.

26. Check for continuity between navigation unit connector A and stereo amplifier connector B according to the table.

NAVIGATION UNIT CONNECTOR AND AMPLIFIER CONNECTOR REFERENCE

Navigation unit connector	Amplifier connector	Wire color
A2	B10	WHT
A3	B8	ORN
A7	B11	RED
A8	B13	YEL
A11	B3	BLK

Courtesy of AMERICAN HONDA MOTOR CO., INC.

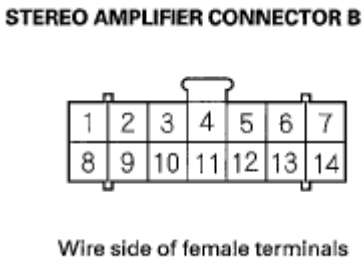

Fig. 61: Checking Continuity Between Stereo Amplifier B (14P) Connector Terminals And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Substitute a known-good navigation unit and recheck. If the symptom/indication goes away, replace the original navigation unit. If the symptom is still present, substitute a known-good stereo amplifier and recheck. If the symptom/indication goes away, replace the original stereo amplifier (see **STEREO AMPLIFIER REMOVAL/INSTALLATION**).

NO -Repair open in the wire(s) between the navigation unit and stereo amplifier.

27. Disconnect stereo amplifier connector B (14P).
28. Disconnect navigation unit connector A (17P).
29. Check for continuity between stereo amplifier connector B (14P) and body ground according to the table. Then check for continuity between the same terminals listed in the table and stereo amplifier connector B (14P) No. 2 terminal (the harness shield).

AMPLIFIER CONNECTOR REFERENCE

Amplifier connector	Wire color
B1	BLU
B8	RED

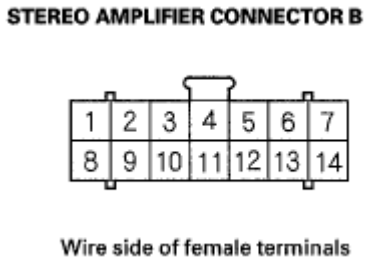

Fig. 62: Checking Continuity Between Stereo Amplifier B (14P) Connector Terminals And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short in the wire between the stereo amplifier and the navigation unit. Replace the appropriate shielded harness.

NO -Go to step 30.

30. Check for continuity between navigation unit connector A and stereo amplifier connector B according to the table.

NAVIGATION UNIT CONNECTOR AND AMPLIFIER CONNECTOR REFERENCE

Navigation unit connector	Amplifier connector	Wire color
A3	B8	RED
A12	B1	BLU

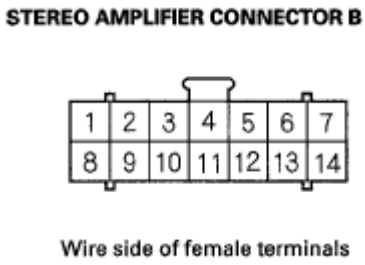

Fig. 64: Checking Continuity Between Stereo Amplifier B (14P) Connector Terminals And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Go to step 31.

NO -Repair open in the wire between the navigation unit and stereo amplifier.

31. Check for continuity between stereo amplifier connector B (14P) and body ground according to the table. Then check for continuity between the same terminals listed in the table and stereo amplifier connector B (14P) No. 5 terminal (the harness shield).

AMPLIFIER CONNECTOR REFERENCE

Amplifier connector	Wire color
B4	BLU
B11	PNK

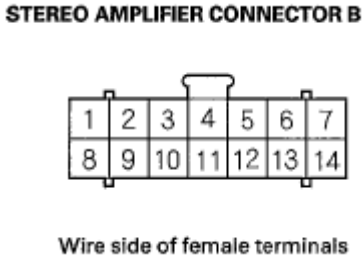

Fig. 65: Checking Continuity Between Stereo Amplifier B (14P) Connector Terminals And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short in the wire between the stereo amplifier and the navigation unit. Replace the appropriate shielded harness.

NO -Go to step 32.

32. Check for continuity between navigation unit connector A and stereo amplifier connector B according to the table.

NAVIGATION UNIT CONNECTOR AND AMPLIFIER CONNECTOR REFERENCE

Navigation unit connector	Amplifier connector	Wire color
A7	B11	PNK
A15	B4	BLU

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Go to step 35.

NO -Repair open in the wire between the navigation unit and stereo amplifier.

35. Check for continuity between stereo amplifier connector B (14P) and body ground according to the table. Then check for continuity between the same terminals listed in the table and stereo amplifier connector B (14P) No. 12 terminal (the harness shield).

AMPLIFIER CONNECTOR REFERENCE

Amplifier connector	Wire color
B6	LT GRN
B13	PUR

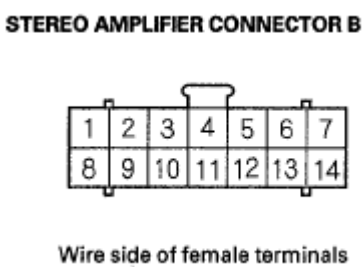

Fig. 71: Checking Continuity Between Stereo Amplifier B (14P) Connector Terminals And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short in the wire between the stereo amplifier and the navigation unit. Replace the appropriate shielded harness.

NO -Go to step 36.

36. Check for continuity between navigation unit connector A and stereo amplifier connector B according to the table.

NAVIGATION UNIT CONNECTOR AND AMPLIFIER CONNECTOR REFERENCE

Navigation unit connector	Amplifier connector	Wire color
A8	B13	PUR
A16	B6	LT GRN

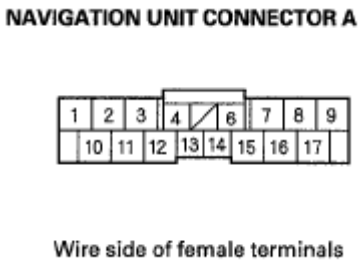

Fig. 72: Checking Continuity Between Navigation Unit A (17P) Connector Terminals And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

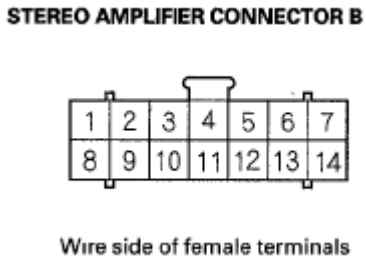

Fig. 73: Checking Continuity Between Stereo Amplifier B (14P) Connector Terminals And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Substitute a known-good navigation unit and recheck. If the symptom/indication goes away, replace the original navigation unit. If the symptom is still present, substitute a known-good stereo amplifier and recheck. If the symptom/indication goes away, replace the original stereo amplifier (see **STEREO AMPLIFIER REMOVAL/INSTALLATION**).

NO -Repair open in the wire between the navigation unit and stereo amplifier.

NO SOUND IS HEARD FROM SPEAKER(S) (DISPLAY IS NORMAL) (WITHOUT NAVIGATION)

NOTE:

- **Check the vehicle battery condition first.**
- **Check the connectors for poor connections or loose terminals.**
- **Set the fader and balance positions to the center.**
- **Before performing symptom troubleshooting, do the power switch will not turn ON troubleshooting (see AUDIO UNIT POWER SWITCH WILL NOT TURN ON (NO INFORMATION DISPLAY AND NO SOUND) (WITHOUT NAVIGATION)).**

1. Turn the ignition switch to ON (II).
2. Check that the volume button is not set to min level.

   Is it at MIN level?

   YES -Raise the volume level, and recheck the function.

   NO -Go to step 3.

3. Do the speaker check mode in the self-diagnostic function (see **SELF-DIAGNOSTIC FUNCTION**).

   Do any or all of the speakers fail to sound?

   YES -Speaker(s) failed the test:

   - If at least one speaker is OK, go to step 4.
   - If all speakers fail to sound;
     - With premium sound system: Go to step 12.
     - Without premium sound system: Go to step 7.

   NO -Speakers all work, but sound quality is poor:

   - If the sound is poor only with AM or FM, go to **POOR AM OR FM RADIO RECEPTION OR INTERFERENCE** (see **POOR AM OR FM RADIO RECEPTION OR INTERFERENCE (WITHOUT NAVIGATION)**).
   - If the sound is poor only with disc.
     - Try several known- good disc in the audio unit.
     - If the sound quality is normal, the original disc is faulty.
     - If the sound quality is still poor, replace the audio unit.
   - If the sound is poor in all modes, go to **SOUND QUALITY DIAGNOSIS** .
4. Turn the ignition switch to LOCK (0).
5. Remove the speaker(s) with no sound (see **SPEAKER REPLACEMENT**), and disconnect its connector.
6. Check the speaker 2P connector for a loose or poor connection.

   Reconnect the speaker 2P connector and recheck the symptom; does it still fail?

YES -Go to step 7.

NO -Operation is normal.

7. Make sure turn the ignition switch is in LOCK (0).
8. Measure the resistance between the (+) and (-) terminal of the speaker connector.

   Is there about 4 ohms?

   YES -

   - With premium sound system: Go to step 18.
   - Without premium sound system: Go to step 9.

   NO -Faulty speaker(s).

9. Remove the audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**). Disconnect audio unit connector A (17P).

   NOTE: Eject all the discs before removing the audio unit to prevent damaging the CD player's load mechanism.

10. Measure the resistance between the following terminals of audio unit connector A (17P).

SPEAKER TERMINALS REFERENCE

Speaker	Terminal	Wire color
Driver's door speaker, Left tweeter	A12 (+)	LT GRN
	A3 (-)	PNK
Front passenger's door speaker, Right tweeter	A15 (+)	GRY
	A7 (-)	BRN
Left rear speaker	A11 (+)	YEL
	A2 (-)	BRN
Right rear speaker	A16 (+)	BLU
	A8 (-)	ORN

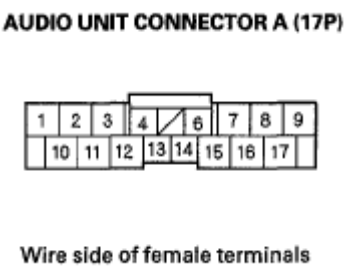

Fig. 74: Measuring Resistance Between Audio Unit A (17P) Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 4 ohms?

YES -Go to step 11.

NO -Repair open or short in the wires between audio unit and speaker(s).

11. Check for continuity between body ground and following terminals of audio unit connector A (17P).

SPEAKER TERMINALS REFERENCE

Speaker	Terminal	Wire color
Driver's door speaker, Left tweeter	A12 (+)	LT GRN
	A3 (-)	PNK
Front passenger's door speaker. Right tweeter	A15 (+)	GRY
	A7 (-)	BRN
Left rear speaker	A11 (+)	YEL
	A2 (-)	BRN
Right rear speaker	A16 (+)	BLU
	A8 (-)	ORN

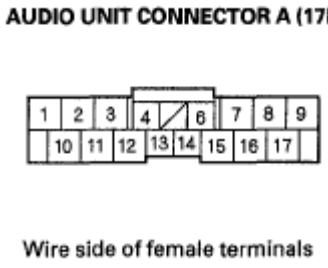

Fig. 75: Checking Continuity Between Audio Unit A (17P) Connector Terminals And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short to body ground in the wire(s) between the audio unit and speaker(s).

NO -Substitute a known-good audio unit and recheck. If the symptom/indication goes away, replace the original audio unit.

12. Measure the voltage between stereo amplifier connector A (20P) No. 10 terminal and body ground.

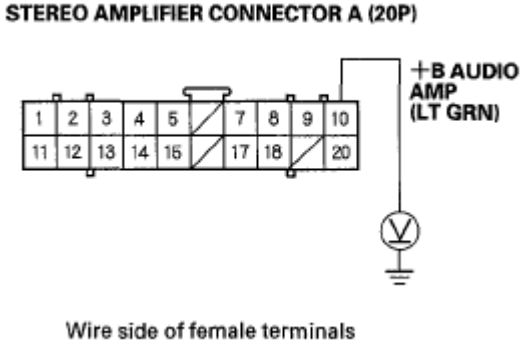

Fig. 76: Measuring Voltage Between Stereo Amplifier A (20P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES -Go to step 13.

NO -

- '06 model: Repair open in the wire between No. 5 (15 A) fuse in the under-dash fuse/relay box and stereo amplifier connector A (20P) No. 10 terminal.
- '07-08 models: Repair open in the wire between No. 17 (15 A) fuse in the under-hood fuse/relay box and stereo amplifier connector A (20P) No. 10 terminal.

13. Turn the ignition switch to ON (II).
14. Measure the voltage between stereo amplifier connector A (20P) No. 9 terminal and body ground.

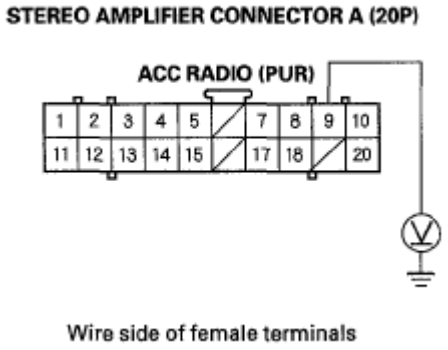

Fig. 77: Measuring Voltage Between Stereo Amplifier A (20P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES -Go to step 15.

NO -Repair open in the wire between No. 35 (7.5 A) fuse in the under-dash fuse/relay box and stereo amplifier connector A (20P) No. 9 terminal.

15. Measure the voltage between stereo amplifier connector B (14P) No. 7 terminal and body ground.

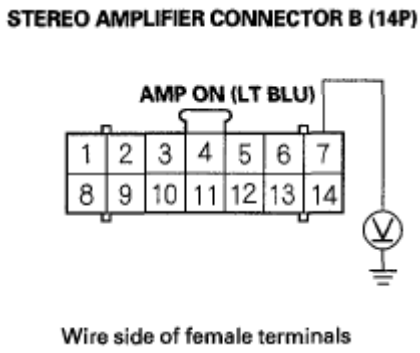

Fig. 78: Measuring Voltage Between Stereo Amplifier B (14P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES -Go to step 16.

NO -Repair open in the wire between the stereo amplifier connector B (14P) No. 7 terminal and audio unit connector B (20P) No. 16 terminal.

16. Measure the voltage between stereo amplifier connector A (20P) No. 20 terminal and body ground, and between stereo amplifier connector B (14P) No. 14 terminal and body ground.

'06-08 models

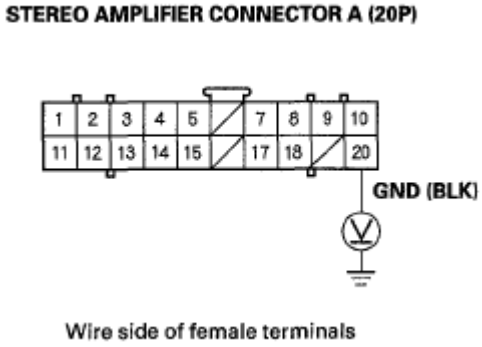

Fig. 79: Measuring Voltage Between Stereo Amplifier A (20P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

'06 model

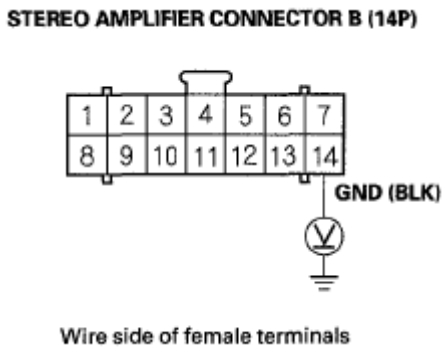

Fig. 80: Measuring Voltage Between Stereo Amplifier B (14P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.1 V on both terminals?

YES -Go to step 17.

NO -Repair open in the wire between stereo amplifier connector A (20P) No. 20 terminal or connector B (14P) No. 14 terminal and body ground, 2-door model (G505), 4-door model (G601).

17. Turn the ignition switch to LOCK (0).
18. Disconnect stereo amplifier connector A (20P).
19. Measure the resistance between the following terminals of stereo amplifier connector A (20P) according to the table.

SPEAKER TERMINALS REFERENCE

Speaker	Terminal	Wire color
Driver's door speaker	A3 (+)	LT GRN
	A13 (-)	PNK
Left tweeter	A4 (+)	RED
	A14 (-)	GRIM
Front passenger's door speaker	A2 (+)	GRY
	A12 (-)	BRN
Right tweeter	A1 (+)	PNK
	A11 (-)	BLU
Left rear speaker	A8 (+)	YEL
	A18 (-)	BRN
Right rear speaker	A7 (+)	BLU
	A17 (-)	ORN
Subwoofer	A5 (+)	GRN
	A15 (-)	RED

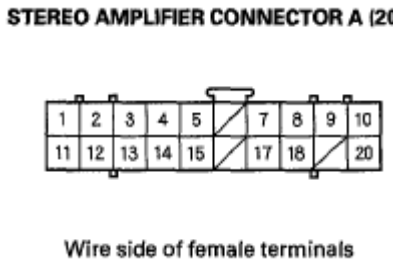

Fig. 81: Measuring Voltage Between Stereo Amplifier A (20P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 4 ohms?

YES -Go to step 20.

NO -Repair open or short in the wires between stereo amplifier and speaker(s).

20. Check for continuity between body ground and the following terminals of stereo amplifier connector A (20P).

SPEAKER TERMINALS REFERENCE

Speaker	Terminal	Wire color
Driver's door speaker	A3 (+)	LT GRN
	A13 (-)	PNK
Left tweeter	A4 (+)	RED
	AH (-)	GRN
Front passenger's door speaker	A2 (+)	GRY
	A12 (-)	BRN
Right tweeter	A1 (+)	PNK
	A11 (-)	BLU
Left rear speaker	A8 (+)	YEL
	A18 (-)	BRN
Right rear speaker	A7 (+)	BLU
	A17 (-)	ORN
Subwoofer	A5 (+)	GRN
	A15 (-)	RED

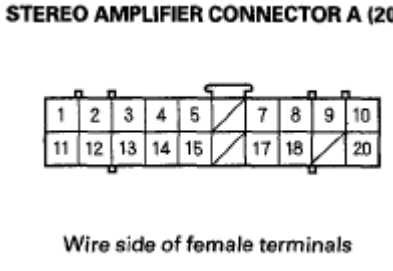

Fig. 82: Measuring Voltage Between Stereo Amplifier A (20P) Connector Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short to body ground in the wire(s) between stereo amplifier and speaker(s).

NO -

- 2-door: Go to step 21.
- '08 4-door: Go to step 25.

21. Disconnect stereo amplifier connector B (14P).
22. Disconnect audio unit connector A (17P).
23. Check for continuity between stereo amplifier connector B (14P) and body ground according to the table. Then check for continuity between the same terminals listed in the table and stereo amplifier connector B (14P) No. 2 terminal (the harness shield).

AMPLIFIER CONNECTOR REFERENCE

Courtesy of AMERICAN HONDA MOTOR CO., INC.

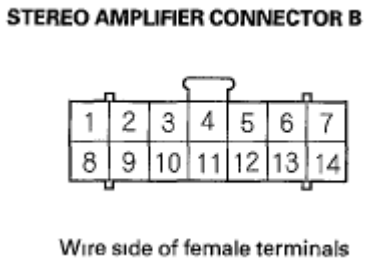

Fig. 85: Checking Continuity Between Stereo Amplifier B (14P) Connector Terminals And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Substitute a known-good audio unit and recheck. If the symptom/indication goes away, replace the original audio unit. If symptom is still present, substitute a known-good stereo amplifier and recheck. If the symptom/indication goes away, replace the original stereo amplifier (see **STEREO AMPLIFIER REMOVAL/INSTALLATION**).

NO -Repair open in the wire between the audio unit and stereo amplifier.

25. Disconnect audio unit connector A (17P).
26. Check for continuity between stereo amplifier connector B (14P) and body ground according to the table. Then check for continuity between the same terminals listed in the table and stereo amplifier connector B (14P) No. 2 terminal (the harness shield).

AMPLIFIER CONNECTOR REFERENCE

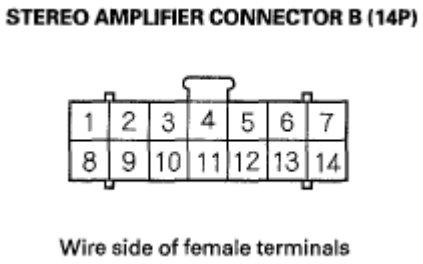

Fig. 97: Checking Continuity Between Stereo Amplifier B (14P) Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Substitute a known-good audio unit and recheck. If the symptom/indication goes away, replace the original audio unit. If symptom is still present, substitute a known-good stereo amplifier and recheck. If the symptom/indication goes away, replace the original stereo amplifier (see **STEREO AMPLIFIER REMOVAL/INSTALLATION**).

NO -Repair open in the wire between the audio unit and stereo amplifier.

AUXILIARY INPUT SOUND IS LOW OR CANNOT BE HEARD

NOTE:

- **Check the vehicle battery condition first.**
- **Check the connectors for poor connections or loose terminals.**
- **Use auxiliary stereo cables with 3.5 mm ends only.**
- **Auxiliary accessories may be played on the audio unit using the auxiliary input.**

1. Turn the ignition switch to ON (II).
2. Turn on the audio unit or navigation unit and connect an auxiliary accessory to the auxiliary input jack.
3. Check the volume operation.

   Is the sound normal?

   YES -Operation is normal at this time.

   NO -Go to step 4.

4. Make sure the auxiliary accessory volume is set to high.

   Is the volume set to high?

   YES -Go to step 5.

   NO -Raise the auxiliary accessory volume is set to high. Make sure the audio unit volume is turned

down before retesting.

5. Substitute a known-good auxiliary audio accessory and/or auxiliary stereo cable and recheck.

   Does the auxiliary audio accessory operate properly?

   YES -Original auxiliary audio accessory or auxiliary stereo cable is faulty.

   NO -Go to step 6.

6. Turn the ignition switch to LOCK (0).
7. Remove the auxiliary jack assembly (see **AUXILIARY JACK ASSEMBLY REPLACEMENT**), and check that the auxiliary jack assembly is properly connected.

   Is the auxiliary jack assembly connected properly?

   YES -

   - With navigation: go to step 8.
   - Without navigation: go to step 13.

   NO -Reconnect the connector, and recheck the function.

8. Disconnect auxiliary jack assembly 5P connector.
9. Disconnect navigation unit connector B (22P).
10. Check for continuity between body ground and navigation unit connector B (22P) according to the table.

NAVIGATION UNIT CONNECTOR AND AMPLIFIER CONNECTOR REFERENCE

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Substitute a known-good auxiliary jack assembly and recheck. If the symptom/indication goes away, replace the original auxiliary jack assembly. If the symptom/indication is still present, replace the audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).

NO -Open in the wire(s) between navigation unit and auxiliary jack assembly. Replace affected shielded harness.

POOR OR NO SOUND WITH XM RADIO (NAVIGATION UNIT CAN DISPLAY XM CHANNELS) (WITH NAVIGATION)

NOTE:

- **Check the vehicle battery condition first.**
- **Check the connectors for poor connections or loose terminals.**

- **Check the radio reception in an open area. Compare it to a known-good vehicle whenever possible. Poor reception/interference can be caused by tall buildings, mountains, or high-voltage power lines that are nearby.**
- **If you can only tune to channels 000, 001, 174, and 247, make sure the audio unit is set to the channel mode (see owner's manual), if it is set to channel mode, call XM satellite radio customer support and check the account activation status.**

1. Turn the ignition switch to ON (II).
2. Turn on the navigation unit and select XM radio.
3. Check for an error message on the display.

   Are there any messages displayed?

   YES -Go to **ERROR CODE LIST** .

   NO -Go to step 4.

4. Turn the ignition switch to LOCK (0).
5. Disconnect navigation unit connector E (14P) and XM receiver connector A (14P).
6. Check for continuity between navigation connector E (14P) and body ground according to the table. Then check for continuity between the same terminals listed in the table and navigation unit connector E (14P) No. 4 terminal (the harness shield).

NAVIGATION UNIT CONNECTOR REFERENCE

Navigation unit connector	Wire color
E6	RED
E14	GRN
E5	WHT
E13	BLK

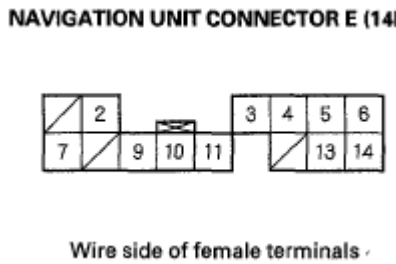

Fig. 106: Checking Continuity Between Navigation E (14P) Connector Terminals And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Short in the wire(s) between navigation unit and XM receiver. Replace the affected shielded harness.

NO -Go to step 7.

7. Check for continuity between navigation unit connector E (14P) and XM receiver connector A (14P) according to the table.

NAVIGATION UNIT CONNECTOR AND XM RECEIVER CONNECTOR REFERENCE

Navigation unit connector	XM receiver connector	Wire color
E5	A5	WHT
E6	A6	RED
E13	A13	BLK
E14	A14	GRN

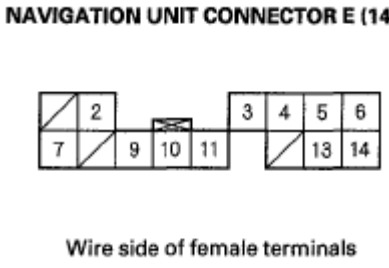

Fig. 107: Checking Continuity Between Navigation Unit E (14P) Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

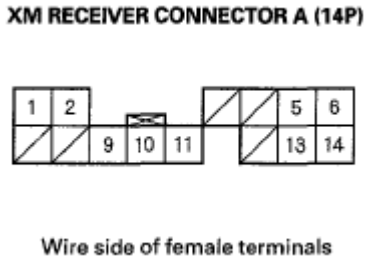

Fig. 108: Checking Continuity Between XM Receiver A (14P) Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Substitute a known-good XM receiver, then reconnect the all connectors and recheck. If the symptom/indication goes away, replace the original XM receiver. If the symptom/indication is still present, replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

NO -Repair open in the wire between the navigation unit and the XM receiver.

XM RADIO DISPLAY IS BLANK AND NO STATION INFORMATION IS DISPLAYED (WITH NAVIGATION)

NOTE:

- **Check the vehicle battery condition first.**
- **Check the connectors for poor connections or loose terminals.**

1. Measure the voltage between XM receiver connector A (14P) No. 1 terminal and body ground.

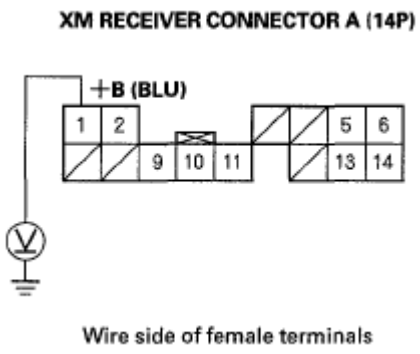

Fig. 109: Measuring Voltage Between XM Receiver A (14P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES -Go to step 2.

NO -Repair open in the wire between No. 23 (10 A) fuse in the under-hood fuse/relay box and XM receiver connector A (14P) No. 1 terminal.

2. Turn the ignition switch to ON (II).
3. Measure the voltage between XM receiver connector A (14P) No. 11 terminal and body ground.

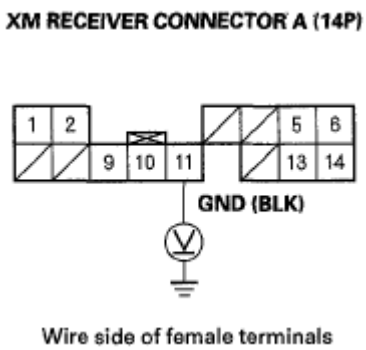

Fig. 110: Measuring Voltage Between XM Receiver A (14P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.1 V?

YES -Go to step 4.

NO -Repair open in the wire between the XM receiver connector A (14P) No. 1 terminal and navigation unit connector E (14P) No. 11 terminal.

4. Turn the ignition switch to LOCK (0).
5. Measure the voltage between XM receiver connector A (14P) No. 2 terminal and body ground.

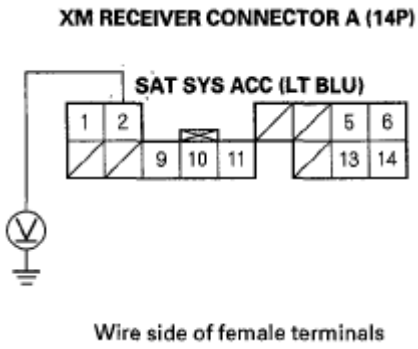

Fig. 111: Measuring Voltage Between XM Receiver A (14P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 10 V or more present?

YES -Go to step 7.

NO -Go to step 6.

6. Measure the voltage between navigation unit connector E (14P) No. 2 terminal and body ground.

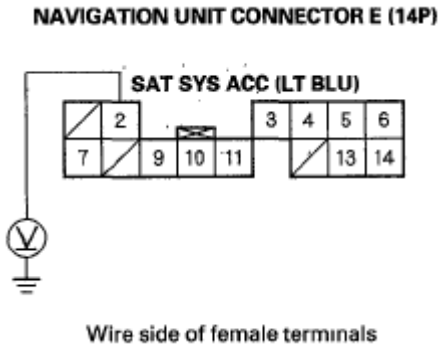

Fig. 112: Measuring Voltage Between Navigation Unit E (14P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 10 V or more present?

YES -Repair open or short to body ground in the wire between the navigation unit and XM receiver.

NO -Substitute a known-good navigation unit and recheck. If 10 V or more are present, replace the original navigation unit.

7. Turn the ignition switch to ON (II).
8. Measure voltage between the navigation unit connector E (14P) No. 2 terminal and body ground.

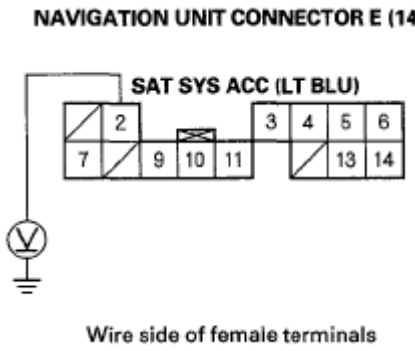

Fig. 113: Measuring Voltage Between Navigation Unit E (14P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.5 V?

YES -Go to step 9.

NO -# Substitute a known-good navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**) and recheck. If 0.5 V or less are present, replace the original navigation unit.

9. Turn the ignition switch to LOCK (0).
10. Disconnect navigation unit connector E (14P) and XM receiver connector A (14P).
11. Check for continuity between navigation unit connector E (14P) and body ground according to the table. Then check for continuity between the same terminals listed in the table and navigation unit connector E (14P) No. 3 terminal (the harness shield).

NAVIGATION UNIT CONNECTOR REFERENCE

Navigation unit connector	Wire ester
E9	BLU
E10	PNK

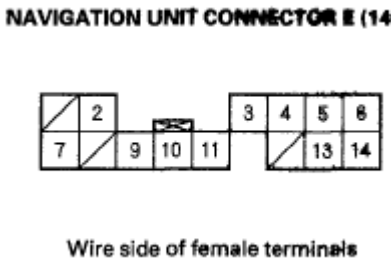

Fig. 114: Checking Continuity Between Navigation Unit E (14P) Connector Terminals And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Short to body ground in the wire(s) between navigation unit and XM receiver. Replace the affected shielded harness.

NO -Go to step 12.

12. Check for continuity between navigation unit connector E (14P) and XM receiver connector A (14P) according to the table.

NAVIGATION UNIT CONNECTOR AND XM RECEIVER CONNECTOR REFERENCE

Navigation unit connector	XM receiver connector	Wire color
E9	A9	BLU
E10	A10	PNK

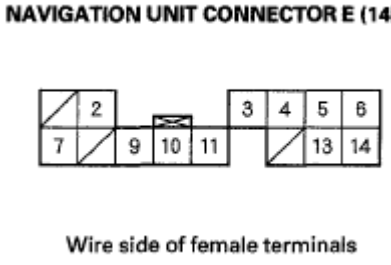

Fig. 115: Checking Continuity Between Navigation Unit E (14P) Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

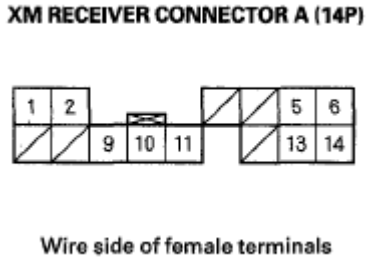

Fig. 116: Checking Continuity Between XM Receiver Connector A (14P) Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Substitute a known-good XM receiver, then reconnect all connectors and recheck. If the symptom/indication goes away, replace the original XM receiver. If symptom/indication is still present, replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

NO -Open in the wire(s) between navigation unit and XM receiver. Replace the affected shielded harness.

AUDIO SYSTEM SOUND IS WEAK OR DISTORTED (DISPLAY IS NORMAL)

NOTE:

- **Check the vehicle battery condition first.**
- **Check the connectors for poor connections or loose terminals.**

1. Check for sound in each mode (AM, FM, XM, and CD).

Is there sound from the speakers, and is the sound quality normal in each mode?

YES -Intermittent failure. The system is OK at this time. Check for loose connections at the navigation unit, audio unit, amplifier, and each speaker.

NO -Speakers all work, sound quality is poor.

- If the sound quality is poor only with the XM radio, or the XM radio does not function, go to **POOR OR NO SOUND WITH XM RADIO** .
- If the sound quality is poor only with AM or FM radio, go to **POOR AM OR FM RADIO RECEPTION OR INTERFERENCE** .
- If sound is poor in all modes, go to **SOUND QUALITY DIAGNOSIS** .

NAVIGATION UNIT BUTTON ILLUMINATION DOES NOT WORK (WITH NAVIGATION)

NOTE:
- **Check the vehicle battery condition first.**
- **Check the connectors for poor connections or loose terminals.**

1. Turn the ignition switch to ON (II).
2. Turn the combination lighting switch to the parking light position.
3. Check the illumination of the navigation unit buttons.

   Are the buttons illuminated?

   YES -Intermittent problem: the navigation unit is OK at this time. Check for loose or poor connections at the navigation unit connector A (17P).

   NO -Go to step 4.

4. Check the illumination of several other buttons not related to the navigation system.

   Are the buttons illuminated?

   YES -Go to step 5.

   NO -Troubleshoot the interior lights. Start by checking the No. 14 (7.5 A) fuse in the under-dash fuse/relay box. If the fuse is OK, check for an open in the wire between the under-dash fuse/relay box and the navigation unit.

5. Turn the ignition switch to LOCK (0).
6. Disconnect navigation unit connector A (17P).

   NOTE: Eject all the discs before removing the navigation unit to prevent damaging the CD player's load mechanism.

7. Disconnect gauge control module (tach) 36P connector.
8. Check for continuity between navigation unit connector A (17P) No. 1 terminal and gauge control module (tach) 36P connector No. 14 terminal.

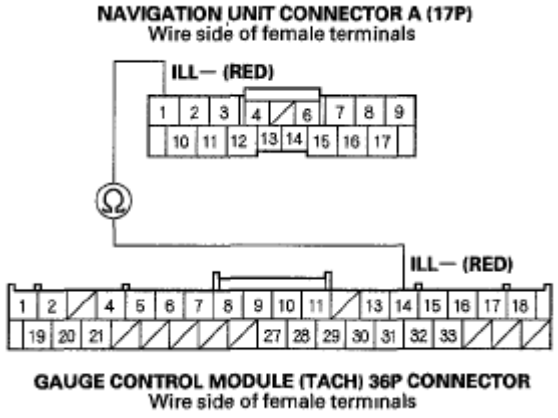

Fig. 117: Checking Continuity Between Navigation Unit A (17P) Connector Terminal And Gauge Control Module (Tach) 36P Connector Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Go to step 9.

NO -Repair open in the wire between the gauge control module and the navigation unit.

9. Turn the ignition switch to ON (II).
10. With the headlight switch still on, measure the voltage between navigation unit connector A (17P) No. 10 terminal and body ground.

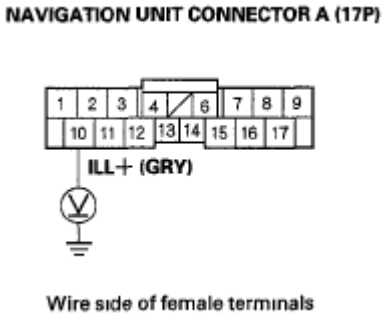

Fig. 118: Measuring Voltage Between Navigation Unit A (17P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES -Check the connections at navigation unit connector A (17P). If all connections are OK, replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

NO -Repair open in the wire between the under-dash fuse/relay box and the navigation unit.

AUDIO UNIT BUTTON ILLUMINATION DOES NOT WORK (WITHOUT NAVIGATION)

NOTE:

- **Check the vehicle battery condition first.**
- **Check the connectors for poor connections or loose terminals.**

1. Turn the ignition switch to ON (II).
2. Turn the combination lighting switch to the parking light position.
3. Check the illumination of the audio unit buttons.

   Are the buttons illuminated?

   YES -Intermittent problem: the audio unit is OK at this time. Check for loose or poor connections at the audio unit connector A (17P).

   NO -Go to step 4.

4. Check the illumination of several other buttons not related to the audio system.

   Are the buttons illuminated?

   YES -Go to step 5.

   NO -Troubleshoot the interior lights. Start by checking the No. 14 (7.5 A) fuse in the under-dash fuse/relay box. If the fuse is OK, check for an open in the wire between the under-dash fuse/relay box and the audio unit.

5. Turn the ignition switch to LOCK (0).
6. Disconnect audio unit connector A (17P).

NOTE: Eject all the discs before removing the audio unit to prevent the CD player's load mechanism.

7. Disconnect gauge control module (tach) 36P connector.
8. Check for continuity between audio unit connector A (17P) No. 1 terminal and gauge control module (tach) 36P connector No. 14 terminal.

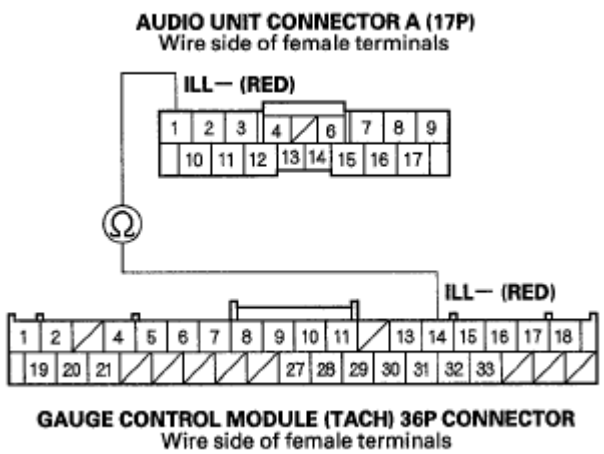

Fig. 119: Checking Continuity Between Audio Unit A (17P) Connector Terminal And Gauge

Control Module (Tach) 36P Connector Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Go to step 9.

NO -Repair open in the wire between the gauge control module and the audio unit.

9. Turn the ignition switch to ON (II).
10. With the headlight switch still on, measure the voltage between audio unit connector A (17P) No. 10 terminal and body ground.

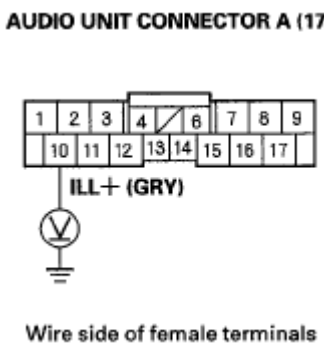

Fig. 120: Measuring Voltage Between Audio Unit A (17P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES -Check the connections at audio unit connector A (17P). If all the connections are OK, replace the audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).

NO -Repair open in the wire between the under-dash fuse/relay box and the audio unit.

RADIO PRESET MEMORY IS LOST

NOTE: If only the XM stations are lost, go to XM RADIO PRESET MEMORY IS LOST .

1. Set each of the radio station preset buttons.

Do each of the buttons set properly?

YES -Go to step 2.

NO -

- With navigation: Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).
- Without navigation: Replace the audio unit (see **AUDIO UNIT**

REMOVAL/INSTALLATION).

2. Turn the ignition switch to LOCK (0) for 1 minute, then turn it back to ON (II).
3. Test the preset buttons for proper recall operation.

   Do the preset buttons recall the set radio stations?

   YES -System is normal at this time. Check the connections at the navigation unit or audio unit.

   NO -

   - With navigation: Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).
   - Without navigation: Replace the audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).

XM RADIO PRESET MEMORY IS LOST (WITH NAVIGATION)

NOTE: If you can only tune to channels 000,001,174, and 247, make sure the audio unit is set to the channel mode (see owner's manual), if it is set to channel mode, call XM satellite radio customer support and check the account activation status.

1. Turn the ignition switch to ON (II).
2. Set each of the XM radio channel preset buttons.

   Do each of the XM radio channel preset buttons set properly?

   YES -Go to step 3.

   NO -Replace the navigation unit.

3. Turn the ignition switch to LOCK (0) for 1 minute, then turn it back to ON (II).
4. Test all of the XM radio channel preset buttons for proper recall operation.

   Do the preset buttons recall the set radio stations?

   YES -System is normal at this time. Check the connections at the navigation unit.

   NO -Go to step 5.

5. Turn the ignition switch to LOCK (0).
6. Measure the voltage between XM receiver connector A (14P) No. 1 terminal and body ground.

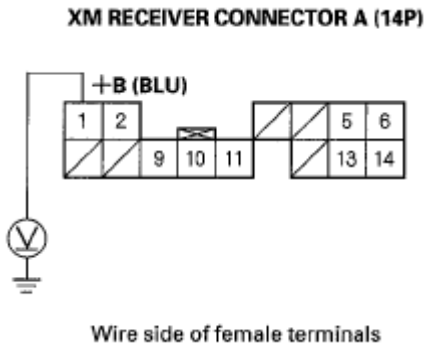

Fig. 121: Measuring Voltage Between XM Receiver A (14P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES -Go to step 7.

NO -Repair open in the wire between the under-dash fuse/relay box and XM receiver connector A (14P) No. 1 terminal.

7. Turn the ignition switch to ON (II).
8. Measure the voltage between XM receiver connector A (14P) No. 11 terminal and body ground.

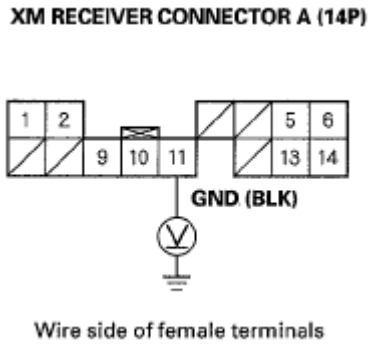

Fig. 122: Measuring Voltage Between XM Receiver A (14P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.1 V?

YES -Replace the XM receiver (see **SPEAKER REPLACEMENT**).

NO -Repair open in the wire between XM receiver connector A (14P) No. 11 terminal and body ground (G505) .

ERROR CODE: XM NO SIGNAL OR XM ANTENNA IS DISPLAYED

NOTE:

- **Check the vehicle battery condition first.**
- **Check the connectors for poor connections or loose terminals.**

- **Check XM radio reception in an open area. Poor reception/interference can be caused by tall buildings, mountains, or high-voltage power lines.**

1. Park vehicle outside with a clear view of the southern horizon.

   Does XM radio receive a signal?

   YES -Reception interference operation is normal.

   NO -Go to step 2.

2. Check XM antenna connector B (2P) at XM receiver.

   Is XM antenna connector B connected?

   YES -Go to step 3.

   NO -Reconnect XM connector B, recheck XM radio operation. If the signal restored, operation is normal. If signal not restored go to step 3.

3. Measure the voltage between XM receiver connector A (14P) No. 1 terminal and body ground.

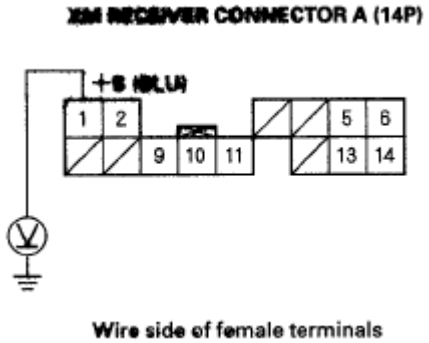

Fig. 123: Measuring Voltage Between XM Receiver A (14P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   Is there battery voltage?

   YES -Go to step 4.

   NO -Repair open in the wire between navigation unit and XM receiver connector A (14P) No. 1 terminal.

4. Turn the ignition switch to ON (II).
5. Measure the voltage between XM receiver connector A (14P) No. 11 terminal and body ground.

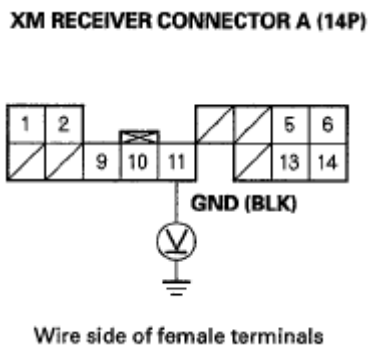

Fig. 124: Measuring Voltage Between XM Receiver A (14P) Connector Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.1 V?

YES -Go to step 6.

NO -Repair open in the wire between XM receiver connector A (14P) No. 11 terminal and body ground (G505) .

6. Substitute known-good XM antenna.

   Does the XM radio receiver a signal?

   YES -Replace XM antenna (see **XM ANTENNA REPLACEMENT**).

   NO -Substitute known-good XM antenna subharness. If XM radio receives signal, replace original XM antenna subharness. If the XM radio does not receive a signal, substitute a known-good XM receiver.

AUDIO DISC DOES NOT EJECT

NOTE:

- **Check the vehicle battery condition first.**
- **Check the connectors for poor connections or loose terminals.**
- **Disc labels should not be used in the navigation unit or audio unit. They may damage the player mechanism.**

1. Turn on the audio system.

   Does the system turn on?

   YES -Go to step 2.

   NO -Go to **POWER SWITCH WILL NOT TURN ON** .

2. Check to see if the disc ejects correctly with no binding by pushing the EJECT button.

   Does the disc eject normally?

YES -Operation is normal.

NO -

- With navigation: Replace navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).
- Without navigation: Replace audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).

AUDIO DISC DOES NOT LOAD

NOTE:

- **Check the vehicle battery condition first.**
- **Check the connectors for poor connections or loose terminals.**
- **Disc labels should not be used in the navigation unit or audio unit. They may damage the player mechanism.**
- **Make sure the disc is compatible with the system (see the owner's manual for more information).**

1. Insert a known-good disc to see if the symptom can be duplicated.

   Does the disc load?

   YES -Operation is normal. If the disc loads normally, lower case but will not play, go to **AUDIO DISC DOES NOT PLAY** .

   NO -Go to step 2.

2. Insert another disc-Does the disc load?

   YES -The original disc is faulty.

   NO -

   - With navigation: Replace navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).
   - Without navigation: Replace audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).

RADIO TUNER DOES NOT CHANGE STATIONS

1. Check the audio information on the display panel.

   Does the audio information display properly?

   YES -Go to step 2.

   NO -Go to **POWER SWITCH WILL NOT TURN ON** .

2. Operate the tuning knob to see if the radio station changes.

Does the radio station change?

YES -Intermittent failure: the tuning knob is OK at this time.

NO -

- With navigation: Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).
- Without navigation: Replace the audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).

VOLUME DOES NOT CHANGE

NOTE:

- **Check the vehicle battery condition first.**
- **Check the connectors for poor connections or loose terminals.**
- **Set the fader and balance positions to the center.**

1. Listen for sound from the speakers.

   Is the sound normal?

   YES -Go to step 2.

   NO -Go to **AUDIO SYSTEM SOUND IS WEAK OR DISTORTED**, or **NO SOUND IS HEARD FROM SPEAKER(S)** .

2. Operate the volume knob to see if the volume changes.

   Does the volume change?

   YES -Operation is normal.

   NO -

   - With navigation: Replace navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).
   - Without navigation: Replace audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).

VOLUME DOES NOT INCREASE WITH SPEED

NOTE:

- **Check the vehicle battery condition first.**
- **Check the connectors for poor connections or loose terminals.**

1. Verify the SVC mode setting in the navigation or audio unit sound set-up.

   Is the SVC set to off?

   YES -Change the setting to Mid and retest (see **SYSTEM DESCRIPTION**).

NO -Go to step 2.

2. Do the self-diagnostic function for the vehicle speed pulse indication (see **SELF-DIAGNOSTIC FUNCTION**).

   Does the self-diagnostic function indicate a VSP signal?

   YES -Substitute a known-good navigation or audio unit and retest. If the symptom/indication goes away, replace the original navigation or audio unit.

   NO -Go to step 3.

3. Test-drive the vehicle at highway speeds, and monitor if the volume increases.

   Do the volume increase?

   YES -Intermittent failure, the system is OK at this time.

   NO -Go to step 4.

4. Remove the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**), or audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**), and disconnect the navigation, or audio unit connector A (17P).

   NOTE: Eject all the discs before removing the audio unit or navigation unit to prevent damaging the CD player's load mechanism.

5. Drive the vehicle, and have an assistant measure voltage at navigation or audio unit connector A (17P) terminal No. 13.

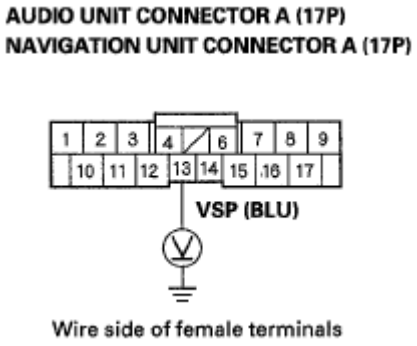

Fig. 125: Measuring Voltage At Navigation Or Audio Unit A (17P) Connector Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there a 0- 5 V Pulse?

YES -

- With navigation: Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

- Without navigation: Replace the audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).

NO -Repair open or shorts in the wire between the navigation, or audio unit connector A (17P) No. 13 terminal and the ECM/PCM connector A (44P) No. 29 terminal. If no opens or shorts are found, substitute a known-good ECM/PCM and recheck. If the symptom/indication goes away, replace the original ECM/PCM . See **ECM/PCM REPLACEMENT** .

VOLUME IS TOO HIGH OR TOO LOW WHEN DRIVING AT FREEWAY SPEEDS

NOTE:

- **Check the vehicle battery condition first.**
- **Check the connectors for poor connections or loose terminals.**

1. Test-drive the vehicle at highway speeds and monitor volume level.

   Is the volume level too high, or too low?

   YES -Go to step 2.

   NO -Intermittent failure, the system is OK at this time.

2. Change the SVC mode setting in sound set-up to Mid (see **SYSTEM DESCRIPTION**).

   Is the volume level still too high, or too low?

   YES -

   - With navigation: Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).
   - Without navigation: Replace the audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).

   NO -Improper SVC setting for customers sound taste.

DISPLAY DOES NOT DIM OR BRIGHTEN WITH DIMMER (WITHOUT NAVIGATION)

NOTE:

- **Check the vehicle battery condition first.**
- **Check the connectors for poor connections or loose terminals.**
- **If the vehicle is equipped with navigation, refer to DISPLAY DAY/NIGHT MODE DOES NOT WORK .**

1. Turn the ignition switch to ON (II).
2. Turn the combination light switch ON and LOCK (0) to see if the symptom can be duplicated.

   Is it duplicated?

   YES -Go to step 3.

NO -Operation is normal.

3. Turn the combination light switch OFF.
4. Operated the illumination control dial.

   Is it normal?

   YES -Operation is normal.

   NO -Go to step 5.

5. Disconnect and check audio unit connector A (17P) for loose or a poor connection.

   NOTE: Eject all the discs before removing the audio unit to prevent the CD player's load mechanism.

   Reconnect audio unit connector A (20P) and recheck the symptom; does it still appear?

   YES -Go to step 6.

   NO -Operation is normal.

6. Turn the ignition switch to LOCK (0).
7. Remove the audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).
8. Turn the ignition switch to ON (II).
9. Measure the voltage between audio unit connector A (17P) No. 1 and No. 10 terminals. Operate the dash brightness controller buttons to see if the voltage changes.

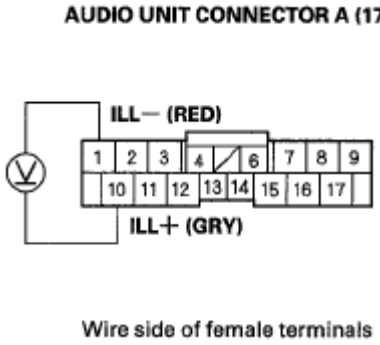

Fig. 126: Measuring Voltage Between Audio Unit A (17P) Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the voltage change?

YES -Substitute a known-good audio unit, and recheck. If the symptom/indication goes away, replace the original audio unit. If symptom is still present, substitute a known-good center panel display and recheck. If the symptom/indication goes away, replace the original center panel display (see **AUDIO UNIT REMOVAL/INSTALLATION**).

NO -Repair open in the wire between the under-dash fuse/relay box and the gauge control module.

Special Tools Required

Diagnostics CD 07AAZ-SDBA100

AUDIO DISC DOES NOT PLAY

NOTE:

- **Check the vehicle battery condition first.**
- **Check the connectors for poor connections or loose terminals.**

1. Try loading a known-good disc.

   Does the disc load?

   YES -Go to step 2.

   NO -Go to **AUDIO DISC DOES NOT LOAD** .

2. Insert another known-good disc to see if the symptom can be duplicated.

   Does the disc play?

   YES -Operation is normal.

   NO -Go to step 3.

3. Insert the audio diagnostic CD (T/N: 07AAZ-SDBA100) in the navigation unit or audio unit.

   Does the disc play?

   YES -The original disc is faulty, or has an unreadable format.

   NO -

   - With navigation: Replace navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).
   - Without navigation: Replace audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).

   Special Tools Required

   Diagnostics CD 07AAZ-SDBA100

AUDIO DISC SKIPS

1. Confirm the vehicles tires are properly inflated.
2. Check the customers CD for scratches, fingerprints, and marks.

NOTE: **The following test should be performed with audio unit bass and treble set to customers listening performance. When comparing to known-**

good vehicles, comparison should be performed on same model and trim level.

3. Test drive to identify when the CD skips. The audio diagnostic CD (T/N: 07AAZ-SDBA100) can be used if customers CD is not available. Use tracks 10 to 12.

   Does the CD skip?

   YES -Go to step 4.

   NO -Operation is normal.

4. Compare the customers CD that is skips in a known-good vehicle under the same conditions.

   Does the CD skip in the known-good vehicle under the same conditions?

   YES -Operation is normal.

   NO -Go to step 5.

   NOTE: The following test should be performed with vehicle parked and engine running.

5. Insert the diagnostic skip test CD (T/N: 07AAZ-SDBA300) (ABEX TCD 721). Play tracks 2 to 11 and note the track number(s) where the CD starts skipping. Do the same test on a known-good vehicle.

   Does the CD skip on the same track number(s) as the known-good vehicle?

   YES -Operation is normal.

   NO -Go to step 6.

6. Insert the diagnostic skip test CD (T/N: 07AAZ-SDBA200) (ABEX TCD 725B) play tracks 7 to 11 and tracks 13 to 15 and note the track number(s) where the CD starts skipping. Perform the same test on a known-good vehicle.

   Does the CD skip on same track number (s) as the known-good vehicle?

   YES -Operation is normal.

   NO -

   - With navigation: Replace navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).
   - Without navigation: Replace audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).

AUDIO REMOTE SWITCH DOES NOT WORK PROPERLY

NOTE:

- **Check the vehicle battery condition first.**
- **Check the connectors for poor connections or loose terminals.**

1. Check the audio unit operation.

   Is the audio unit operation OK?

   YES -Go to step 2.

   NO -

   - With navigation: Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).
   - Without navigation: Replace the audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).
2. Test the audio remote switch (see **AUXILIARY JACK ASSEMBLY REPLACEMENT**).

   Is the audio remote switch OK?

   YES -

   - With navigation: Go to step 3.
   - Without navigation: Go to step 6.

   NO -Replace the audio remote switch.

3. Remove the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).
4. Measure the resistance between navigation unit connector B (22P) No. 6 and No. 7 terminals as specified in the table.

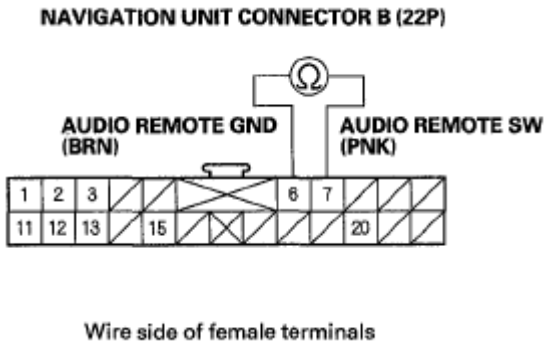

Fig. 127: Measuring Resistance Between Navigation Unit B (22P) Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO REMOTE SWITCH TABLE

AUDIO REMOTE SWITCH REFERENCE

Button held down	VOL DOWN	VOL UP	CH (-)	CH (+)	MODE	No button pressed

Resistance	about 100 ohms	about 370 ohms	about 840 ohms	about 2.0 K ohms	about 6.0 K ohms	about 10 k ohms

Is the resistance OK?

YES -Go to step 5.

NO -Repair open or high resistance in the circuit between the navigation unit and the audio remote switch. If the wires are OK, replace the cable reel (see **CABLE REEL REPLACEMENT**).

5. Check for continuity between the No. 6 and No. 7 terminals of navigation unit connector B (22P) and body ground.

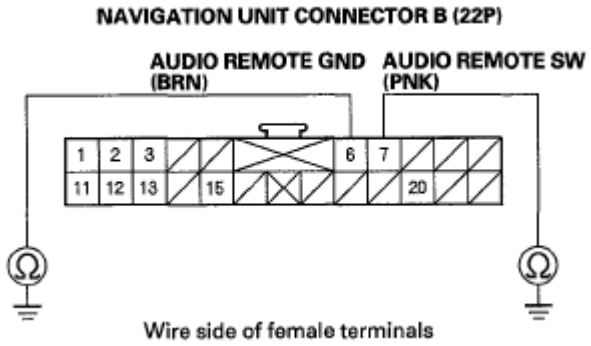

Fig. 128: Checking Continuity Between Navigation Unit B (22P) Connector Terminals And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short to body ground in the circuit between the navigation unit and the audio remote switch. If the wires are OK, replace the cable reel (see **CABLE REEL REPLACEMENT**).

NO -Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

6. Remove the audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).
7. Measure the resistance between audio unit connector B (20P) No. 6 and No. 7 terminals as specified in/the table.

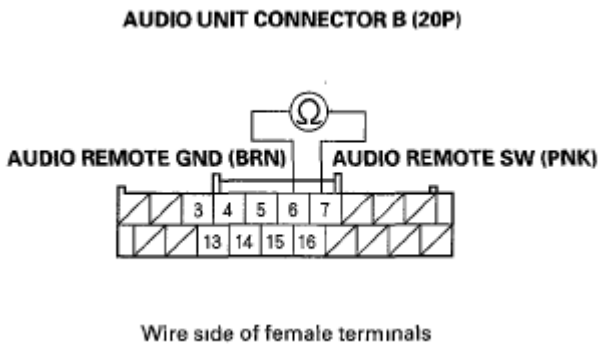

Fig. 129: Measuring Resistance Between Audio Unit B (20P) Connector Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

AUDIO REMOTE SWITCH TABLE

AUDIO REMOTE SWITCH REFERENCE

Button held down	VOL DOWN	VOL UP	CH (-)	CH (+)	MODE	No button pressed
Resistance	about 100 ohms	about 370 ohms	about 840 ohms	about 2.0 K ohms	about 6.0 K ohms	about 10 k ohms

Is the resistance OK?

YES -Go to step 8.

NO -Repair open or high resistance in the circuit between the audio unit and the audio remote switch. If the wires are OK, replace the cable reel (see **CABLE REEL REPLACEMENT**).

8. Check for continuity between the No. 6 and No. 7 terminals of the audio unit connector B (20P) and body ground.

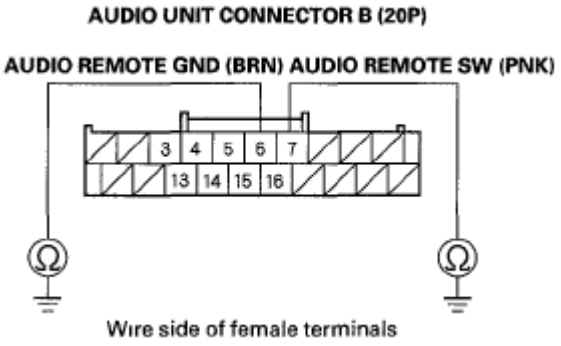

Fig. 130: Checking Continuity Between Audio Unit B (20P) Connector Terminals And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short to body ground in the circuit between audio unit and the audio remote switch. If the wires are OK, replace the cable reel (see **CABLE REEL REPLACEMENT**).

NO -Remove the audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).

AUDIO DISC CANNOT BE INSERTED AND/OR EJECTED (WITH NAVIGATION)

NOTE:

- **Check the vehicle battery condition first.**
- **Check the connectors for poor connections or loose terminals.**
- **Disc labels should not be used in the navigation unit or audio unit. They may damage the player mechanism.**
- **Make sure the disc is compatible with the system (see the owner's**

manual for more information).

1. Press the OPEN/CLOSE button to open the navigation display.
2. Try inserting an audio CD.

   Does the player accept the CD?

   YES -The system is OK at this time.

   NO -Go to step 3.

3. Press the CD eject button.

   Does the player eject the CD?

   YES -The system is OK at this time.

   NO -Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

PC CARD WILL NOT PLAY/CARD ICON ON AUDIO SCREEN CANNOT BE SELECTED (WITH NAVIGATION)

Unfortunately, there are no error messages and no diagnostics for the PC card. There are many reasons why a card won't play audio files in the audio unit.

- The card may not be fully inserted into the slot. Eject the card, and inspect for warping or damage to the edge connector. Never use excessive force to insert a card. This can result in damage to the pins in the rear of the slot.
- The customer's card may contain audio files that are not recognized by the system. Only MP3 and WMA music files are played.
- The flash card type may not be accepted by the system. Only Compact Flash and ATA cards have been tested.
- The card's PCMCIA adapter may be preventing a known-good card from playing. New PCMCIA adapters are constantly being released and have not been tested.
- The card's capacity may exceed 1 GB. Only cards with capacities of up to 1 GB (1000 MB) have been tested.
- There may not be any files on the card. Some cards have write protection. Make sure it is turned off before putting files on the card.
- Although flash memory chips are reliable, occasionally they develop bad sectors or other formatting errors that prevent them from playing. The customer should reformat the card using the FAT or FAT32 format.
- The card may have been damaged by heat. Suggest that the customer remove the card when exiting the vehicle.
- The customer may have formatted the card using the format NTFS. Only the formats FAT and FAT32 are accepted by the system.
- Hard Disc Drive (HDD) cards may not work properly in the system and can overheat and quit functioning, particularly in a hot vehicle. They are not recommended.

- The filing structure of the card may exceed the specification of 8 folder levels deep, 99 folders maximum, and 999 total tracks maximum. If any of these limitations are exceeded, the system may not properly display or play the tracks.

NOTE: A delay when first inserting a card is normal. The system is reading the File Tag information for album names, artists, and song titles, and there is no hourglass. The delay length depends on the number of tracks and the complexity of the folder structure. See the audio article for an explanation of the terms used above.

SOUND QUALITY DIAGNOSIS

Special Tools Required

Diagnostics CD 07AAZ-SDBA100

Use the following tests to check sound quality.

NOTE: Before beginning the following tests, write down the customer's bass, treble, fader and balance settings, and then set them to their center positions for testing.

LEFT/RIGHT CHANNEL ID

Do this test to confirm proper channel routing.

1. Insert the audio diagnostic CD (T/N: 07AAZ-SDBA100) into the navigation unit or audio unit.
2. Play track No. 1 (left, both, right channel ID) at a normal, or slightly higher than normal, volume level.
3. The voice should be audible only from the channel or channels when indicated.
   - If the channel ID is correct for each side, go to the **PHASE TEST**.
   - If the channel ID is not correct, check for;
     - Shorted speaker wire
     - Faulty amplifier (with premium sound system)
     - Faulty navigation unit
     - Faulty audio unit

Special Tools Required

Diagnostics CD 07AAZ-SDBA100

PHASE TEST

Do this test to confirm proper speaker phasing.

1. Insert the audio diagnostic CD (T/N: 07AAZ-SDBA100) into the navigation unit or audio unit.
2. Play track No. 2 (phase) at a normal, or slightly higher than normal, volume level.

3. The voice should sound centered and focused when it is in-phase.
4. The voice should sound diffused, and have less bass when it is out of phase.
    - If the voice changes from in-phase to out of phase as indicated by the prompt, the phasing is correct. Go to **ELECTRICAL NOISE TEST**.
    - If the voice always sounds out of phase, phasing is not correct. Check for;
        - Crossed speaker wires
        - Faulty amplifier (with premium sound system)
        - Faulty navigation unit - Faulty audio unit

Special Tools Required

Diagnostics CD 07AAZ-SDBA100

ELECTRICAL NOISE TEST

Do this test to check for electrical noise being induced into the audio system.

NOTE: Electrical noise may be caused by outside sources that cannot be handled by the audio system. Make sure you remove any cell phones and/or turn off any aftermarket device before beginning this test.

1. Insert the audio diagnostic CD (T/N: 07AAZ-SDBA100) into the navigation unit or audio unit.
2. Play track No. 4 (digital zero) at a normal, or slightly higher than normal, volume level.
3. Operate any electrical device that may create electrical noise in the audio system, including starting the engine.
4. Play track No. 5 (near digital zero) at a normal, or slightly higher than normal, volume level.
5. Operate any electrical device that may create electrical noise in the audio system, including starting the engine.
6. Play track No. 6 (SNR) at a normal, or slightly higher than normal, volume level.
7. Operate any electrical device that may create electrical noise in the audio system, including starting the engine.
    - If no abnormal noise is heard, go to **INDIVIDUAL SPEAKER TEST**.
    - If the noise is present only during the SNR track, replace the navigation unit or audio unit.
    - If the noise is heard during the digital zero or near digital zero track, check for;
        - Poor ground for the audio unit, amplifier, engine or battery cable
        - Pinched or shorted speaker or amplifier wire
        - Faulty amplifier (with premium sound system)
        - Faulty navigation unit
        - Faulty audio unit
        - Other faulty components causing excessive electrical noise (ignition coils, alternator, door lock actuators, etc.). Disconnect any suspect components, and then replay the tracks that were originally noisy. If the noise is gone, check the component's circuit and the component.

Special Tools Required

Diagnostics CD 07AAZ-SDBA100

INDIVIDUAL SPEAKER TEST

Do this test to identify a faulty speaker.

1. Insert the audio diagnostic CD (T/N: 07AAZ-SDBA100) into the navigation unit or audio unit.
2. Play track No. 30 (steady 300 Hz tone) at a normal, or slightly higher than normal, volume level.
3. Listen to each speaker for poor sound compared to the other speakers. Use the audio unit's fader and balance settings to help isolate the channel with the problem.
   - If the sound quality produced by a specific speaker is poor, substitute it with a known-good speaker. If the poor sound quality continues, go to the **SOUND BALANCE TEST**.
   - If the sound quality is OK, go to the **SOUND BALANCE TEST**.

Special Tools Required

Diagnostics CD 07AAZ-SDBA100

SOUND BALANCE TEST

Perform this test to identify a faulty channel or speaker.

1. Insert the audio diagnostic CD (T/N: 07AAZ-SDBA100) into the navigation unit or audio unit.
2. Confirm the bass and treble are set to the center positions.
3. Play track No. 3 (pink noise) at a normal, or slightly higher then normal, volume level.
4. A static type sound should be heard through all speakers.
5. Insert the audio diagnostic CD (T/N: 07AAZ-SDBA100) into the navigation unit or audio unit of a known-good vehicle.
6. Set the bass and treble to the center position.
7. Play track No. 3 (pink noise) all the same level as was played in step 3.
8. Compare the sounds made by the two vehicles.
   - If the noise sounds made by the two vehicles are very similar, go to the **FREQUENCY SWEEP TEST** .
   - If the sound does not have as much bass, check the subwoofer and circuit.
   - If the sound does not have enough hiss, check the tweeters and their circuits.

Special Tools Required

Diagnostics CD 07AAZ-SDBA100

FREQUENCY SWEEP

Do this test to find rattles or reverberation that may cause a perception of poor sound quality.

1. Insert the audio diagnostic CD (T/N: 07AAZ-SDBA100) into the navigation unit or audio unit.
2. Play track No. 13 (sweep from 500 Hz to 35 Hz) at a normal, or slightly higher than normal, volume level.

3. Listen to each speaker for poor sound quality or reverberations caused by specific frequencies. Use the voice-over to estimate the frequency that causes the vibration. Use the audio unit's fader and balance settings to help isolate the channel with the problem.
    - If vibrations or poor sound quality are heard, go to step 4.
    - If no vibrations or poor sound quality are heard, go to sound judging.
4. Choose the appropriate track from No. 14 to 25 (small range frequency sweep) or 26 to 53 (single frequencies) to recreate the frequency that caused the poor sound quality or vibration located in step 3: this aids in diagnosis of the cause.

    NOTE: When you get to the track that recreates the problem, select the repeat function on the navigation unit or audio unit, this will help you isolate the cause.

5. Replace or insulate the source of the vibrations or, if the speaker is the source of the poor sound quality, replace it.

    Special Tools Required

    Diagnostics CD 07AAZ-SDBA100

SOUND JUDGING

- Do this test to compare overall sound quality, imaging, and dynamics between the customer's vehicle and a known-good vehicle. Only use a vehicle of the same model and trim level for this test.
- Make sure the vehicle is using only OEM speakers.

1. In the customer's vehicle, set the bass, treble, fader, and balance settings to the customer's normal settings that were written down before beginning testing.
2. Insert the audio diagnostic CD (T/N: 07AAZ-SDBA100) into the navigation unit or audio unit.
3. Play tracks No. 7 to 12 (sound quality, midland, dynamics, and imaging demonstration tracks) at a normal, or slightly higher than normal, volume level. Write down the volume setting being used.
4. Listen to areas of the track that stand out as being either very clear, or poorer than other areas of the track.
5. Insert the audio diagnostic CD (T/N: 07AAZ-SDBA100) into the navigation unit or audio unit of a known-good vehicle.
6. Play the tracks at the same volume level and the same bass, treble, balance, and fader settings as used in step 3 in the customer's vehicle.
7. Listen to the same area of the track that stood out as being either very clear or poorer than other areas of the track.
8. Compare the customer's vehicle's sound quality results to the known-good vehicle's results.
    - If the sound quality in the customer's vehicle is comparable to the sound quality in the known-good vehicle, then the customer's vehicle is operating as designed.
    - If the sound quality is not comparable, check these items in order.
        - Loose or improperly installed speakers or other hardware that may become excited by the vibrations generated by the speakers
        - Poor power or ground to the stereo amplifier (with premium sound system)

- Damaged speaker(s)
- Faulty amplifier (with premium sound system)
- Faulty navigation unit - Faulty audio unit

SEEK STOP TEST

Do this test to check the performance of the audio unit's AM and FM reception. Refer to **AUDIO UNIT POWER SWITCH WILL NOT TURN OFF (WITHOUT NAVIGATION)** symptom troubleshooting: audio sound weak or distorted, or no sound is heard from speakers (display is normal) before continuing with this test.

NOTE:

- **Window tint, aftermarket theft-recovery devices and other aftermarket accessories may reduce radio reception.**
- **Changes in cloud cover and other atmosphere conditions will affect the ability of the navigation unit or audio unit to receive radio signals.**

1. Park the customer's vehicle in an open area away from buildings or other obstructions.
2. Park a known-good vehicle (same year, model, and trim level) next to the customer's vehicle, facing the same direction.
3. Start the engine in the customer's vehicle, and turn on the radio.
4. Set the FM receiver to 87.7 MHz.
5. Press the Seek + button and record the first station that the navigation unit or audio unit locks onto.
6. Press the Seek + button repeatedly, and write down each station that the navigation unit or audio unit locks onto until the station recorded in step 5 is reached again.
7. Set the AM receiver to 530 kHz.
8. Press the Seek + button, and record the first station that the navigation unit or audio unit locks onto.
9. Press the Seek + button repeatedly, and write down each station that the navigation unit or audio unit locks onto until the station recorded in step 8 is reached again.
10. Turn the ignition switch to LOCK (0).
11. Start the engine in the known-good vehicle, and then perform steps 4 thru 10 on the known-good vehicle.
12. Compare the number of stations received in steps 6 and 9 in the customer's vehicle with the number of stations received in the known-good vehicle.
    - If the number of stations received is the same, or within 10%, the audio unit's tuner performance is OK. The problem may be atmospheric conditions, multi path interference, or other obstructions to the radio signal.
    - If the customer's vehicle receives fewer stations by at least 10%, go to step 2 of poor AM or FM radio reception of interference (see **POOR AM OR FM RADIO RECEPTION OR INTERFERENCE (WITH NAVIGATION)**).

AUDIO UNIT REMOVAL/INSTALLATION

WITHOUT NAVIGATION

SRS components are located in this area. Review the SRS component location, 4-door (see **COMPONENT**

LOCATION INDEX), 2-door (see **COMPONENT LOCATION INDEX**).

Also review the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) in the SRS article before doing repairs or service.

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the dashboard and related parts.**
- **Lay a workshop towel under the parts when working on them to protect the face panel from scratches or other damage.**
- **Do not work in a dusty or dirty place.**
- **Discharge static electricity from your body before and during the work.**
- **Do not touch the circuit board(s) with your bare hands.**
- **Do not work with dirty hands.**
- **Be careful not to fold the flat plate cable.**
- **Do not touch the terminal connector of the flat plate cable with your bare hands. (If you have touched it, wipe it off thoroughly.)**
- **Eject all the discs before removing the audio unit to prevent damaging the CD player's load mechanism.**
- **If you are replacing the audio unit, write down the audio presets (if possible), and enter them into the new audio unit.**

1. Make sure you have the anti-theft code for the audio system, then write down the audio presets.
2. Remove the subdisplay visor (see **SUBDISPLAY VISOR REMOVAL/INSTALLATION**).
3. Remove the center pocket hole lid and bolts, then pull out the center panel (A).

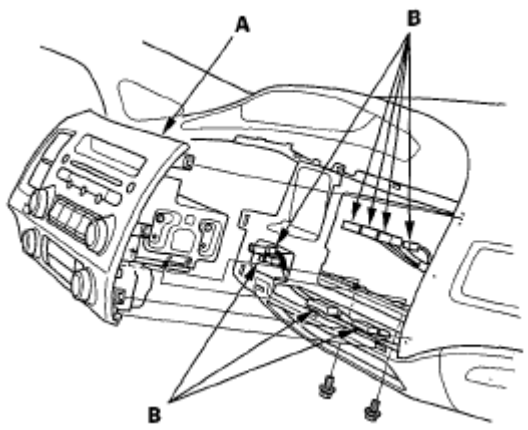

Fig. 131: Identifying Center Pocket Hole Lid And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connectors (B), then remove the center panel.
5. Remove the bolts, screws and the brackets (A).

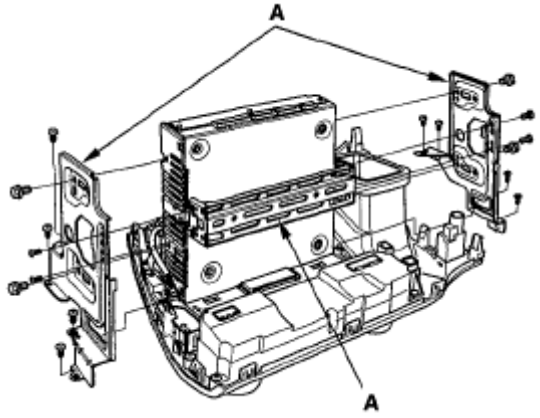

Fig. 132: Identifying Brackets And Bolts, Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the screws, rear covers (A) and the audio unit (B) from the center panel display (C).

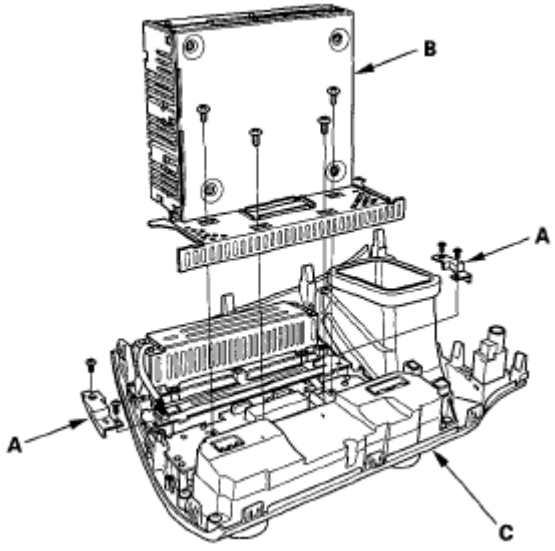

Fig. 133: Identifying Rear Covers And Audio Unit From Center Panel Display
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the audio unit in the reverse order of removal, and note these items:
   - Make sure all connectors and antenna lead are secure.
   - Enter the anti-theft code for the audio system, then enter the audio presets. Set the clock.

STEREO AMPLIFIER REMOVAL/INSTALLATION

2-DOOR

1. Remove the center console (see **CENTER CONSOLE REMOVAL/INSTALLATION**).
2. Remove the stereo amplifier connectors (A) from the stereo amplifier (B).

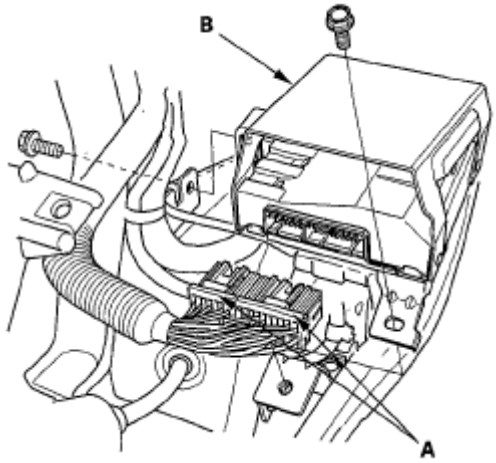

Fig. 134: Identifying Stereo Amplifier Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Loosen the mounting bolt, and remove the mounting bolt, then remove the stereo amplifier.
4. Install the stereo amplifier in the reverse order of removal.

4-DOOR

1. Slide the driver's front seat forward fully.
2. Remove the amplifier cover (A), and connectors (B).

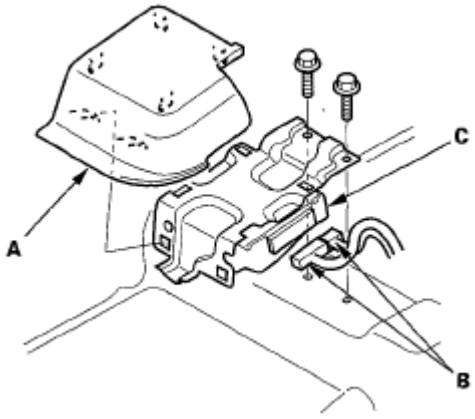

Fig. 135: Identifying Amplifier Cover And Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bolts and stereo amplifier (C).
4. Install the stereo amplifier in the reverse order of removal.

XM RECEIVER REMOVAL/INSTALLATION

1. Open the trunk lid and remove the right trunk side trim panel (see **TRIM REMOVAL/INSTALLATION - TRUNK AREA**).
2. Disconnect the antenna 1P connector (A) and 14P connector (B) from the XM receiver (C).

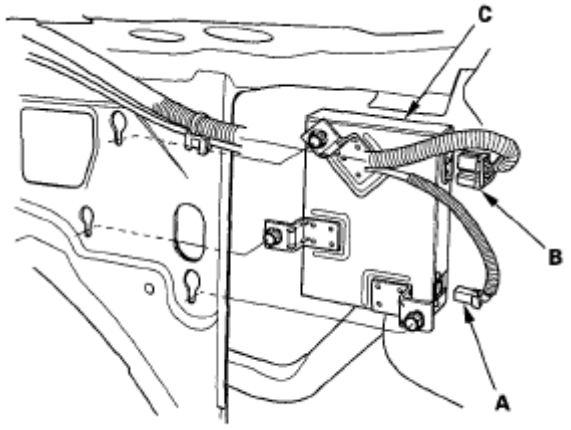

Fig. 136: Identifying Antenna 1P Connector And 14P Connector From XM Receiver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Loosen the three bolts, and remove the XM receiver.
4. Install in the reverse order of removal.

SPEAKER REPLACEMENT

FRONT DOOR SPEAKER

1. Remove the front door panel (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
2. Remove the screw. Then lift the speaker (A) straight up to release the lower clips (B).

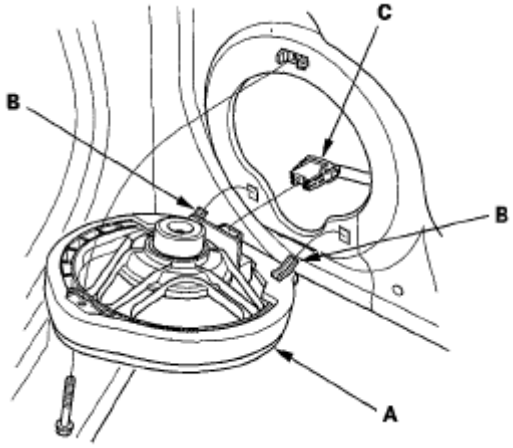

Fig. 137: Identifying Speaker And Lower Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the 2P connector (C), and remove the speaker.
4. Install the speaker in the reverse order of removal.

TWEETER

1. Carefully pry the tweeter grille (A) out of the dashboard. Be careful not to damage the tweeter grille

and the dashboard.

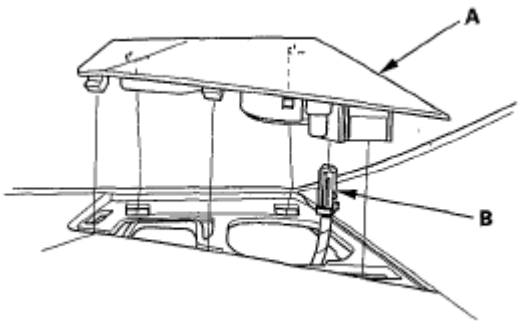

Fig. 138: Identifying Tweeter Grille And Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the 2P connector (B) from the tweeter.
3. Remove the tweeter speaker from the speaker grille.

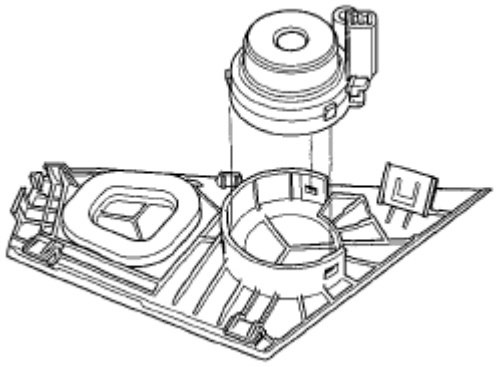

Fig. 139: Identifying Tweeter Speaker From Speaker Grille
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the speaker in the reverse order of removal.

REAR SPEAKER (4-DOOR)

1. Remove the rear speaker grille (A).

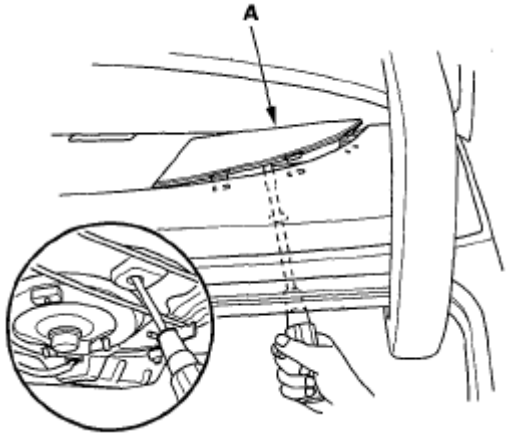

Fig. 140: Identifying Rear Speaker Grille
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the screw. Then lift the speaker (A) straight up to release the clips (B).

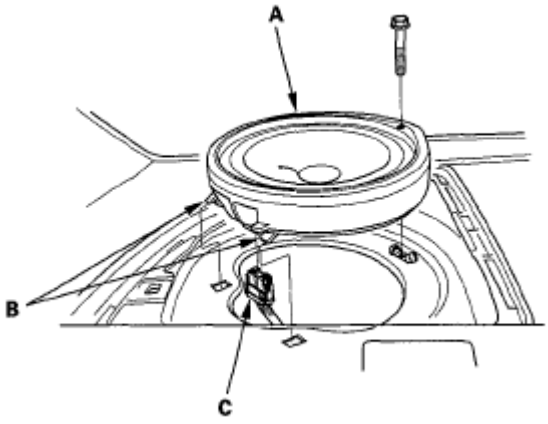

Fig. 141: Identifying Speaker And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the 2P connector (C), and remove the speaker.
4. Install in the reverse order of removal.

REAR SPEAKER (2-DOOR)

1. Remove the rear shelf (see **TRIM REMOVAL/INSTALLATION - REAR SHELF AREA**).
2. Remove the screw. Then lift the speaker (A) straight up to release the clips (B).

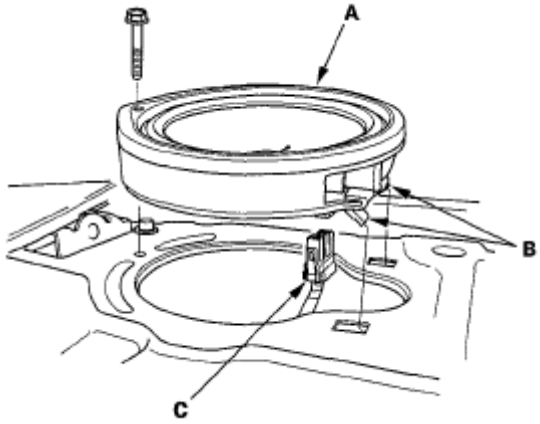

Fig. 142: Identifying Speaker And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the 2P connector (C), and remove the speaker.
4. Install in the reverse order of removal.

SUBWOOFER

1. Remove the rear shelf (see **TRIM REMOVAL/INSTALLATION - REAR SHELF AREA**).
2. Remove the four mounting bolts from the subwoofer (A).

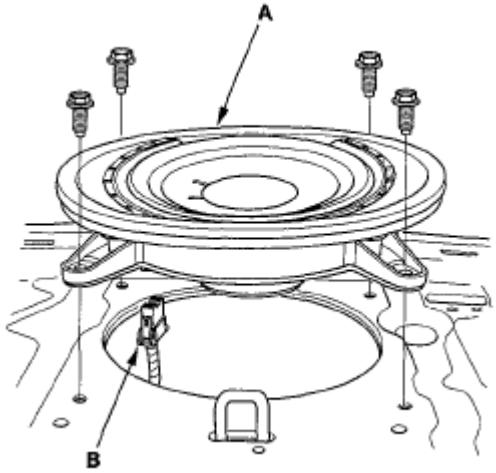

Fig. 143: Identifying Four Mounting Bolts From Subwoofer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the 2P connector (B), and remove the subwoofer.
4. Install in the reverse order of removal.

AUXILIARY JACK ASSEMBLY REPLACEMENT

1. With navigation: Remove the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

   Without navigation: Remove the audio unit (see **AUDIO UNIT REMOVAL/INSTALLATION**).

2. Carefully pull out the auxiliary jack assembly (A), then disconnect the 5P connector (B).

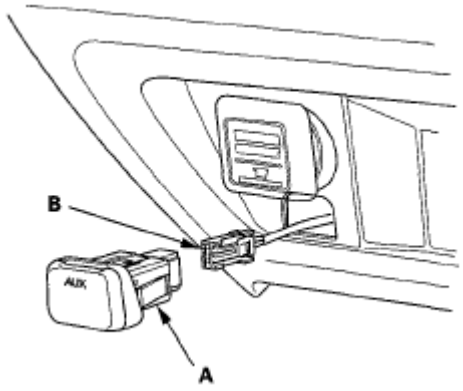

Fig. 144: Identifying Auxiliary Jack Assembly And 5P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install in the reverse order of removal.

AUDIO REMOTE SWITCH TEST

1. Remove the driver's airbag assembly (see **DRIVER'S AIRBAG REPLACEMENT**).
2. Remove the 20P connector (A) from the cable reel (B).

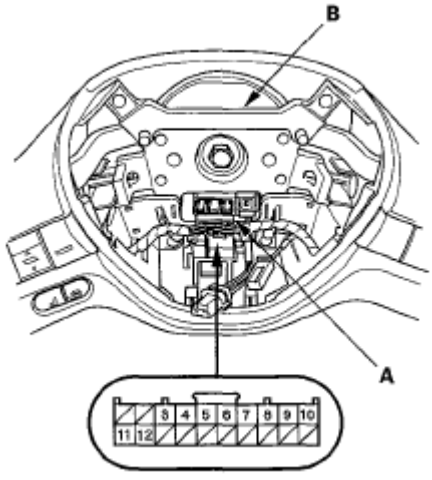

Fig. 145: Identifying 20P Connector From Cable Reel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Measure the resistance between the No. 9 and No. 10 terminals in each switch position according to the table.

RESISTANCE SPECIFICATION

Position	Resistance
No button pressed	About 10 k ohms
MODE	About 6.0 k ohms
CH (+)	About 2.0 k ohms

CH (-)	About 840 ohms
<!-- [utrif] --> (VOL.UP)	About 370 ohms
<!-- [dtrif] --> (VOL.DOWN)	About 100 ohms

4. If the resistance is not as specified, replace the audio remote switch (see **AM/FM ANTENNA AMPLIFIER REPLACEMENT**).

AUDIO REMOTE SWITCH REPLACEMENT

1. Remove the steering wheel (see **STEERING WHEEL REMOVAL**).
2. Remove the audio remote switch (see **STEERING WHEEL DISASSEMBLY/REASSEMBLY**).
3. Install the audio remote switch in the reverse order of removal.

AM/FM ANTENNA AMPLIFIER REPLACEMENT

1. Remove the right side C-pillar trim (see **C-PILLAR TRIM - 4-DOOR**).
2. 2-door: Remove the terminal cover (A).

2-door

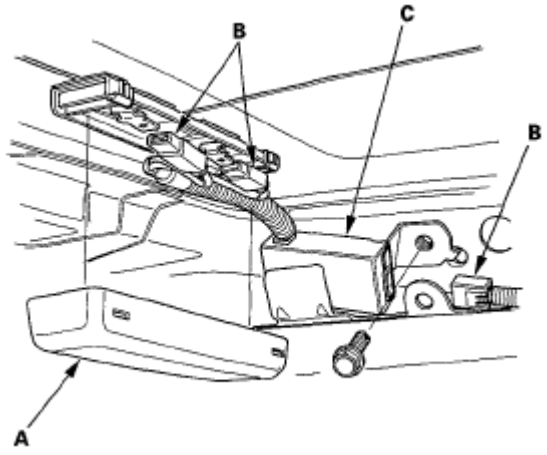

Fig. 146: Identifying AM/FM Antenna Amplifier And Terminal Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the connectors (B) from the AM/FM antenna amplifier (C).

4-door

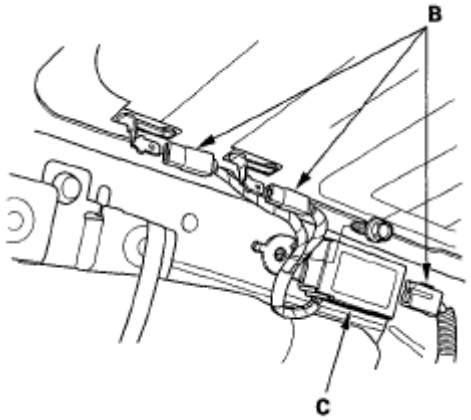

Fig. 147: Identifying AM/FM Antenna Amplifier And Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the bolt and AM/FM antenna amplifier.
5. Install the unit in the reverse order of removal.

XM ANTENNA REPLACEMENT

1. Remove the headliner (see **HEADLINER REMOVAL/INSTALLATION**).
2. Remove the nut (A) from the XM antenna (B).

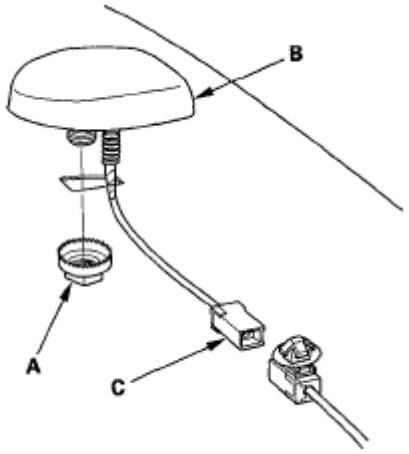

Fig. 148: Identifying XM Antenna And Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the connector (C) and remove the XM antenna.
4. Install in the reverse order of removal.

AM/FM ANTENNA REPAIR

NOTE: To make an effective repair, the broken section must not be longer than one inch.

1. Lightly rub the area around the broken section (A) with fine steel wool, then clean it with alcohol.

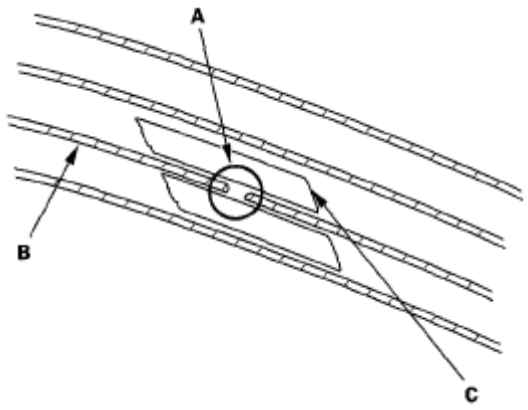

Fig. 149: Identifying Broken Section Around Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Carefully mask above and below the broken portion of the window antenna wire (B) with cellophane tape (C).
3. Mix the silver conductive paint thoroughly. Using a small brush, apply a heavy coat of paint (A) extending about 1/8" on both sides of the break. Allow 30 minutes to dry.

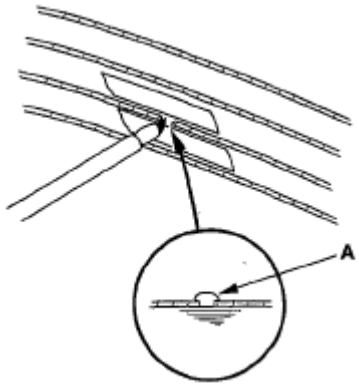

Fig. 150: Applying Heavy Coat Of Paint On Both Sides
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Check for continuity in the repaired wire.
5. Apply a second coat of paint in the same way. Let it dry 3 hours before removing the tape.

2006-08 ACCESSORIES & EQUIPMENT

Gauges - Civic (All Except Hybrid)

COMPONENT LOCATION INDEX

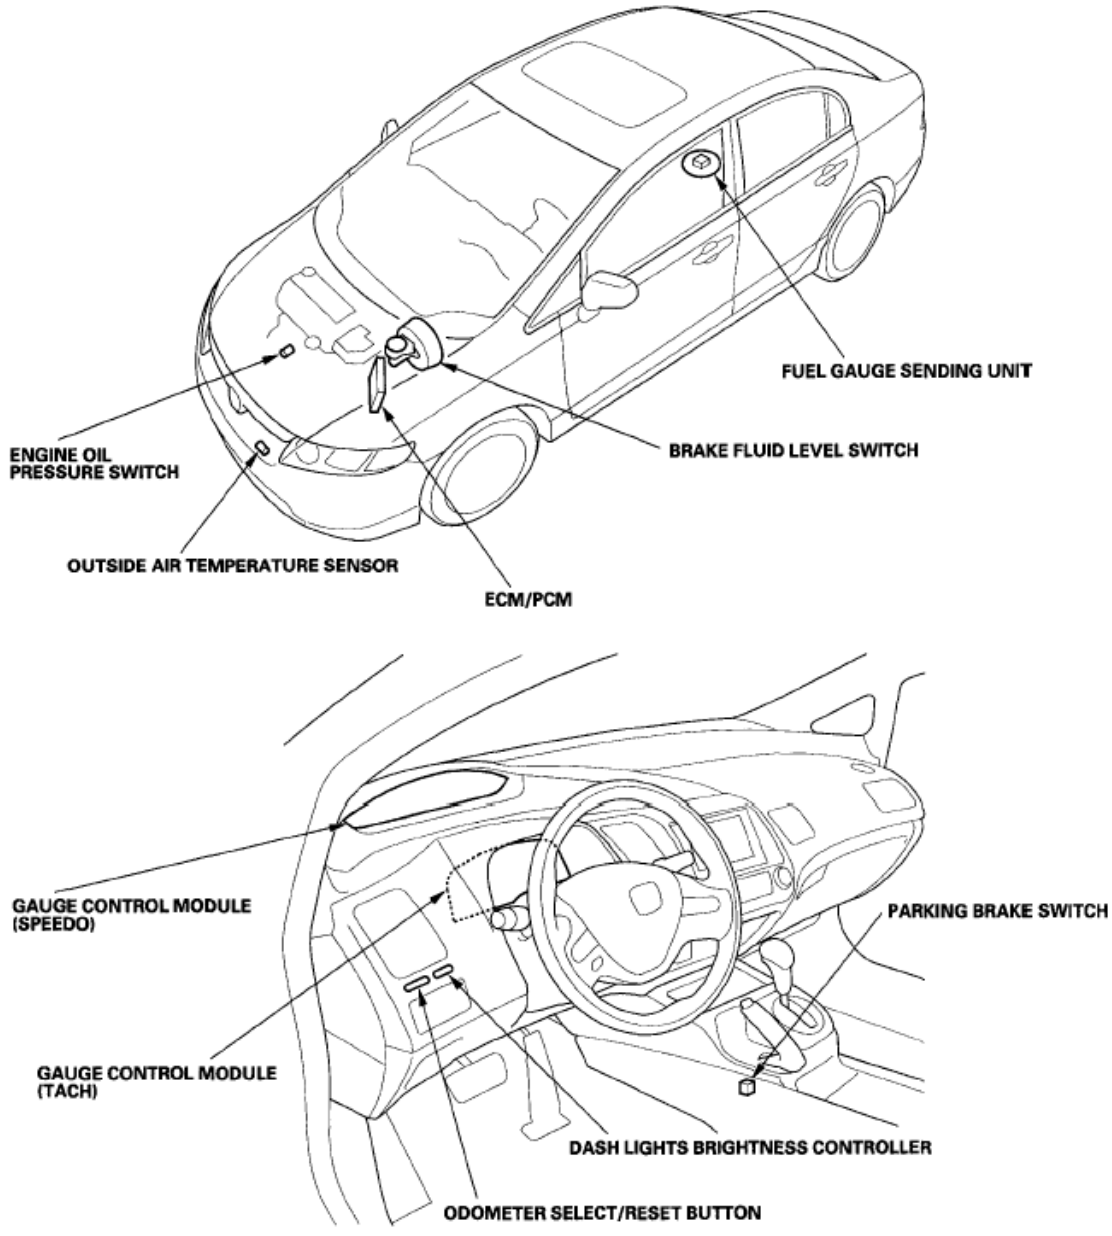

Fig. 1: Locating Gauges Components

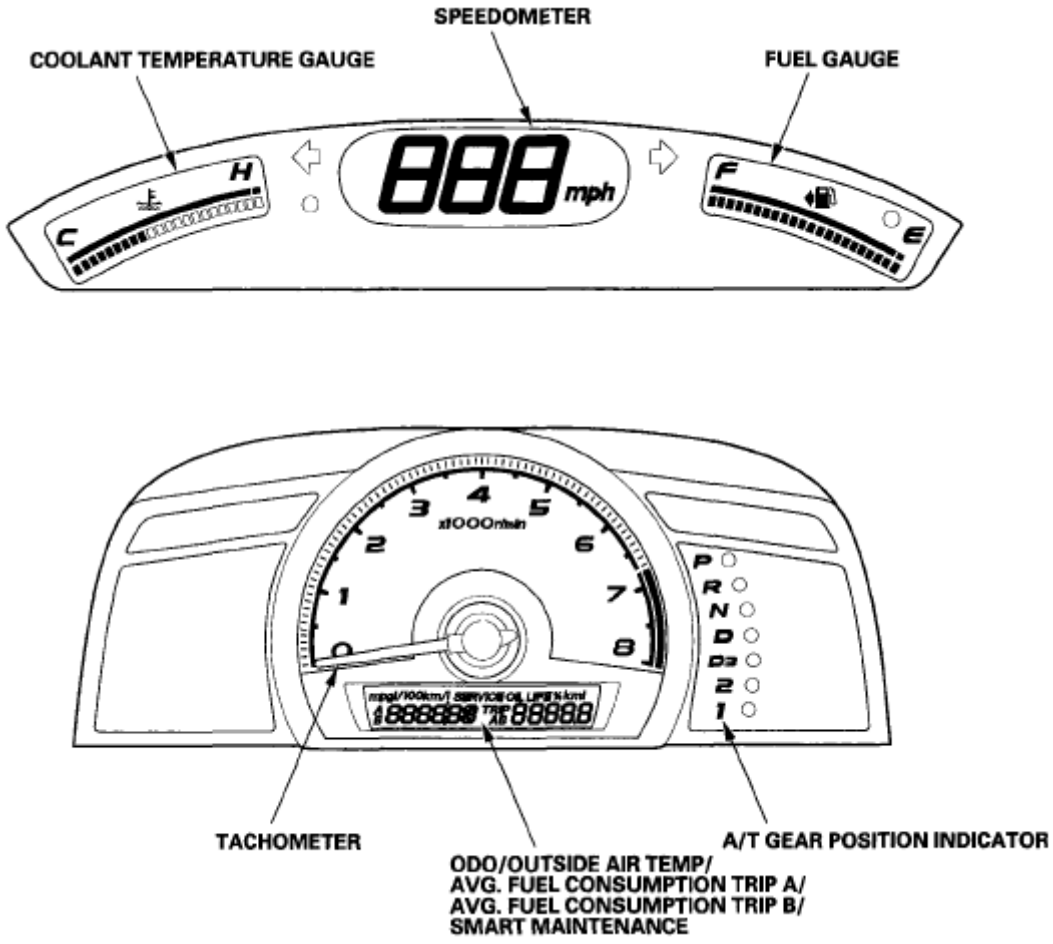

Fig. 2: Identifying Speedometer And Tachometer Components

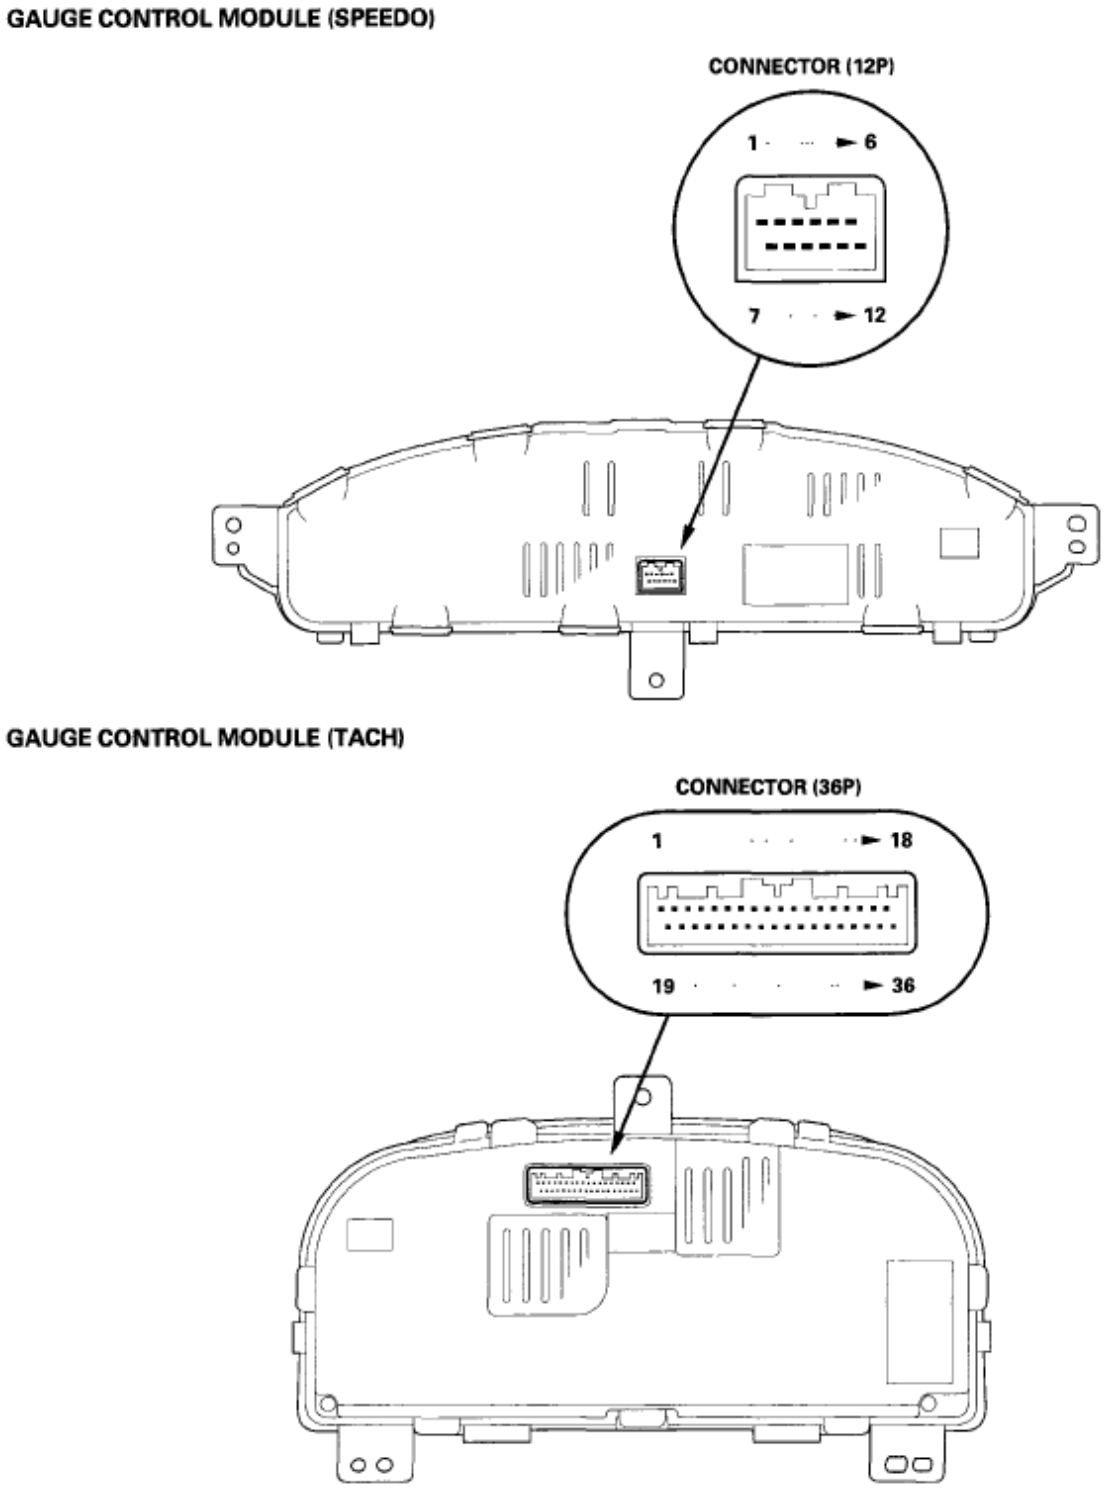

Fig. 3: Identifying Gauge Control Modules

SELF-DIAGNOSTIC FUNCTION

Before troubleshooting the gauge system, refer to multiplex integrated control system B-CAN System Diagnosis Test Mode A (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

The gauge control module (tach) has a self-diagnostic function shown, and also has a customizable reset function.

- The beeper drive circuit check.
- The indicator drive circuit check.
- The switch input test.
- The LCD segments check.
- 4-door: The gauges drive circuit check (Tachometer, Fuel gauge, Coolant temperature gauge).
- 2-door: The self-diagnostic function does not operate the Fuel gauge and Coolant temperature gauge.
- The communication line check (of the body-controller area network (B-CAN) communication line and the fast-controller area network (F-CAN) communication line between the gauges).

NOTE: Indicators are also controlled via the communication line.

ENTERING THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS

4-door: Using the HDS, select Body Electrical, Gauges, then Function Test and do the self-diagnostic Function.

2-door: Use the manual method.

ENTERING THE SELF-DIAGNOSTIC FUNCTION (MANUAL METHOD)

Before doing the self-diagnostic function, check the No. 10 (7.5 A) fuse in the under-dash fuse/relay box and the No. 23 (10 A) fuse in the under-hood fuse/relay box.

1. Push and hold the SEL/RESET switch button.
2. Turn the headlights ON.
3. Turn the ignition switch ON (II).
4. Within 5 sec, turn the headlights OFF, then ON and OFF again.
5. Within 5 sec, release the SEL/RESET switch button, and then push and release the button three times repeatedly.

NOTE:

- **While in the self-diagnostic mode, the dash lights brightness controller operates normally.**
- **While in the self-diagnostic mode, the SEL/RESET button is used to start the Beeper Drive Circuit Test and the Gauge Drive Circuit Check.**
- **If the vehicle speed exceeds 1.2 mph (2 km/h) or the ignition switch is turned OFF, the self-diagnostic mode ends.**

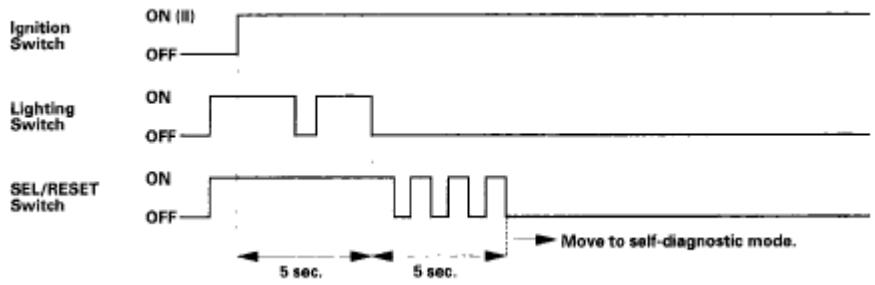

Fig. 4: Self-Diagnostic Function Blinking Pattern

THE INDICATOR DRIVE CIRCUIT CHECK

When entering the self-diagnostic mode, the following indicators blink:

ABS indicator, A/T gear position indicator, brake system indicator, charging system indicator, cruise control indicator, cruise indicator, door indicator, DRL indicator, high beam indicator, immobilizer indicator, lights-on indicator, low fuel indicator, malfunction indicator lamp (MIL), oil pressure indicator, Seat belt indicator, security indicator, side airbag off indicator, smart maintenance indicator, SRS indicator, trunk indicator, and washer fluid level indicator (Canada models).

SWITCH INPUT CHECK

At the initial stage of the self-diagnostic function, the beep sounds intermittently, the beeper sounds continuously when any of the following switch inputs are switched from OFF to ON:

Cruise control master, SET, RESUME, CANCEL switches, SEL/RESET switch, mph-km/h switch, illumination volume (+), (-) switch, parking brake switch, and VSA OFF switch.

THE BEEPER DRIVE CIRCUIT CHECK

When entering the self-diagnostic mode, the beeper sounds five times.

THE LCD SEGMENT CHECK

4-door: When entering the self-diagnostic mode, all the segments blink five times.

2-door: Self-diagnostic function does not operate the Fuel gauge and Coolant temperature gauge.

THE GAUGE DRIVE CIRCUIT CHECK

When entering the self-diagnostic mode, the tachometer, needle sweeps from the minimum position to maximum position, then returns to the minimum position.

NOTE: After the beeper stops sounding and the gauge needle returns to the minimum position, pushing the SEL/RESET switch starts the Beeper Drive Circuit Check (one beep) and the Gauge Drive Circuit Check again.

The check cannot be started again until the gauge needle returns to the minimum position.

The needle sweeps from the minimum position to the maximum position, then return to the minimum position.

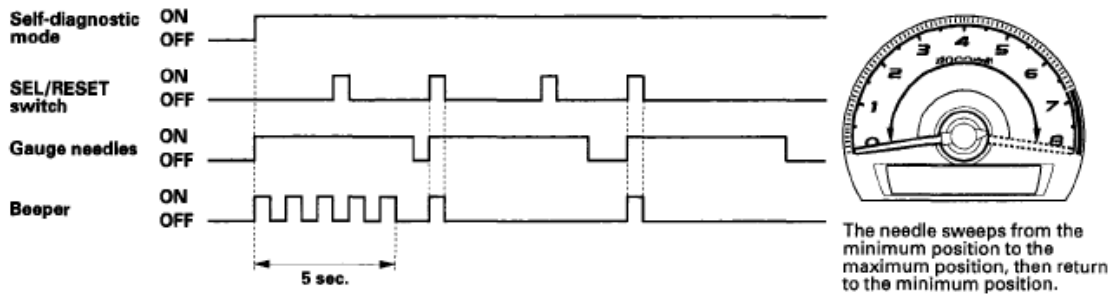

Fig. 5: Checking Gauge Drive Circuit Blinking Pattern

If the needle fails to sweep, or the beeper does not sound, replace the gauge control module (tach).

THE COMMUNICATION LINE CHECK

While in the self-diagnostic mode, the Communication Line Check starts after the LCD Segments Check.

If all segments come on, the communication line is OK. If faulty, the word "Error" will be indicated on the odometer display followed by number(s).

4-DOOR ERROR CODE LIST

Error code	Type of communication line(s) error
Error 1	F-CAN communication
Error 2	B-CAN communication
Error 3	UART communication
Error 12	F-CAN and B-CAN communication
Error 13	F-CAN and UART communication
Error 23	B-CAN and UART communication
Error 123	F-CAN, B-CAN and UART communication

2-DOOR ERROR CODE LIST

Error code	Type of communication line(s) error
Error 1	F-CAN communication
Error 2	B-CAN communication
Error 3	F-CAN and B-CAN communication
Error 12	F-CAN and B-CAN communication
Error 13	F-CAN and B-CAN communication
Error 23	F-CAN and B-CAN communication
Error 123	F-CAN and B-CAN communication

Example Indication

Fig. 6: Example Of Indication

- If the word "Error 1" is indicated, there is a malfunction in the communication line between the gauge control module (tach) and the fast-controller area network (F-CAN). Check for DTCs in the ECM/PCM and troubleshoot any DTCs found. If no DTCs are found, go to indicated troubleshooting.
- If the word "Error 2" is indicated, there is a malfunction in the communication line between the gauge control module (tach) and the body-controller area network (B-CAN). Go to troubleshooting **DTC B1155** to **DTC B1160** .
- 4-door: the word "Error 3" is indicated, there is a malfunction in the UART communication line between the gauge control module (tach) and the gauge control module (speedo). Go to **GAUGE CONTROL MODULE (TACH) INPUT TEST** and check the No. 20 terminal . If the wire harness is OK, substitute a known-good gauge control module (speedo) and recheck.

If any F-CAN or B-CAN communication line errors are found, go to DTC check using HDS .

ENDING THE SELF-DIAGNOSTIC FUNCTION

Turn the ignition switch OFF.

NOTE: If the vehicle speed exceeds 1.2 mph (2 km/h), the self-diagnostic function ends.

DTC TROUBLESHOOTING

DTC B1152: GAUGE CONTROL MODULE (EEPROM) ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch OFF, and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1152 indicated?

YES - Replace the gauge control module (tach).

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections. If the connections are good, check the battery condition (see **BATTERY TEST**), and the charging system.

DTC B1155: GAUGE CONTROL MODULE LOST COMMUNICATION WITH THE MICU (HEADLIGHT SWITCH MESSAGE); DTC B1156: GAUGE CONTROL MODULE LOST COMMUNICATION WITH THE MICU (WIPER SWITCH MESSAGE); DTC B1159: GAUGE CONTROL MODULE LOST COMMUNICATION WITH THE MICU (DOOR SW MESSAGE); DTC B1188: GAUGE CONTROL MODULE LOST COMMUNICATION WITH THE MICU (RM MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch OFF, and then back ON (II).
3. Check for DTCs with the HDS.

   Are DTCs B1155, B1156, B1157, B1159, B1160, and/or B1188 indicated?

   YES - Go to step 4.

   NO - Intermittent failure. The gauge control module is OK at this time. Check for loose or poor connections. If the connections are good, check the battery condition (see **BATTERY TEST**), and the charging system.

4. Check for DTCs with the HDS.

   Are DTCs B1155, B1156, B1157, B1159, B1160, and/or B1188 indicated?

   YES - Faulty MICU; replace the under-dash fuse/relay box (see **UNDER-DASH FUSE/RELAY BOX**).

   NO - Replace the gauge control module (tach) (see **REPLACEMENT**).

DTC B1157: GAUGE CONTROL MODULE LOST COMMUNICATION WITH THE MICU (MICU MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch OFF, and then back ON (II).
3. Check for DTCs with the HDS.

   Is DTC B1157 indicated?

YES - Go to step 5.

NO - Intermittent failure. The gauge control module is OK at this time. Check for loose or poor connections. If the connections are good, check the battery condition (see **BATTERY TEST**), and the charging system.

4. Check for DTCs with the HDS.

   Are DTCs B1905 or B1211 also indicated?

   YES - Faulty MICU; replace the under-dash fuse/relay box.

   NO - Replace the gauge control module (tach).

DTC B1160: GAUGE CONTROL MODULE LOST COMMUNICATION WITH THE MICU (DRLOCKSW MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch OFF, and then back ON (II).
3. Check for DTCs with the HDS.

   Is DTC B1160 indicated?

   YES - Go to step 5.

   NO - Intermittent failure. The gauge control module is OK at this time. Check for loose or poor connections. If the connections are good, check the battery condition (see **BATTERY TEST**), and the charging system.

4. Check for DTCs with the HDS.

   Are DTCs B1160 or B1905 also indicated?

   YES - Faulty MICU; replace the under-dash fuse/relay box.

   NO - Replace the gauge control module (tach).

DTC B1168: GAUGE CONTROL MODULE LOST COMMUNICATION WITH ECM/PCM (ENGINE MESSAGES); DTC B1169: GAUGE CONTROL MODULE LOST COMMUNICATION WITH THE PCM (A/T MESSAGES); DTC B1170: GAUGE CONTROL MODULE LOST COMMUNICATION WITH THE ABS/VSA MODULATOR-CONTROL UNIT (ABS/VSA MESSAGE); DTC B1178: F-CAN COMMUNICATION LINE ERROR; DTC B1187: GAUGE CONTROL MODULE LOST COMMUNICATION WITH THE SRS UNIT (SRS MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions

in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs using the HDS.
2. Turn the ignition switch OFF, and then back ON (II).
3. Start and run the engine for at least 5 seconds then turn the engine off.
4. Check for DTCs with the HDS.

   Is DTC B1168, B1169, B1170, B1178, and/or B1187 indicated?

   YES - Go to step 5.

   NO - Intermittent failure, the F-CAN communication line is OK at this time. Check for loose or poor connections. If the connections are good, check the battery condition (see **BATTERY TEST**), and the charging system.

5. Check for DTCs in the ECM/PCM or ABS/VSA.

   Are any DTCs indicated?

   YES - Troubleshoot the ECM/PCM or ABS/VSA.

   NO - Go to step 6.

6. Do the Gauge Control Module Input Test (see **GAUGE CONTROL MODULE (TACH) INPUT TEST**).

   Are all inputs OK?

   YES - Go to step 7.

   NO - Repair the faulty input then recheck for DTCs.

7. Substitute a known-good gauge control module (tach).
8. Clear the DTCs with the HDS.
9. Turn the ignition switch OFF, and then back ON (II).
10. Start and run the engine for at least 5 seconds then turn the engine off.
11. Check for DTCs with the HDS.

    Is DTC B1168, B1169, B1170, B1178, and/or B1187 indicated?

    YES - Substitute a known-good ECM/PCM and retest. If the system/indication goes away, replace the original ECM/PCM.

    NO - The original gauge control module (tach) is faulty; replace the gauge control module (tach) (see **TACHOMETER**).

DTC B1173: GAUGE CONTROL MODULE LOST COMMUNICATION WITH THE TPMS

CONTROL UNIT (TPMS MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs using the HDS.
2. Turn the ignition switch OFF, and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

   Is DTC B1173 indicated?

   YES - Go to step 5.

   NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections.

5. Turn the ignition switch OFF.
6. Disconnect the gauge control module (tach) 36P connector.
7. Disconnect the TPMS control unit 20P connector.
8. Check for continuity between the gauge control module (tach) 36P connector No. 1 and No. 19 and TPMS control unit 20P connector No. 2 and No. 11 terminals individually.

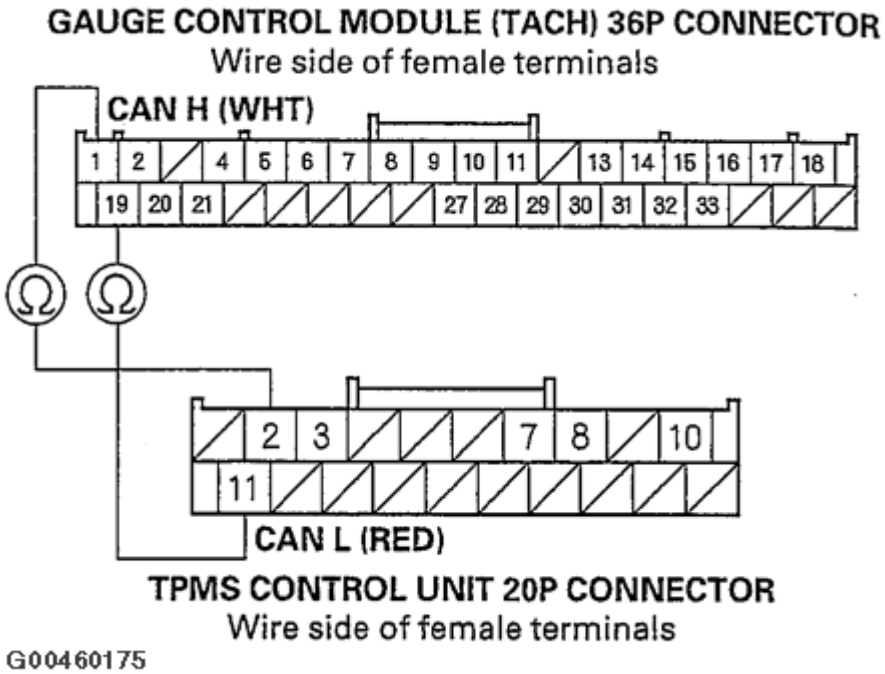

Fig. 15: Checking Continuity Between Gauge Control Module & TPMS Control Module
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Substitute a known-good TPMS control unit and recheck. If DTC B1183 is still indicated, replace the gauge control module (tach).

NO - Repair an open in the wire.

DTC B1175: FUEL LEVEL SENSOR (FUEL GAUGE SENDING UNIT) CIRCUIT OPEN

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch OFF, and then back ON (II).
3. Wait for 30 seconds.
4. Check for DTCs with the HDS.

Is DTC B1175 indicated ?

YES - Go to step 5.

NO - Intermittent failure, the fuel level sensor circuit is OK at this time. Check for loose or poor connections.

5. Turn the ignition switch OFF.
6. Disconnect the fuel tank unit 5P connector and the gauge control module (tach) 36P connector.
7. Connect the fuel tank unit 4P connector No. 1 and No. 3 terminals and body ground with jumper wires.

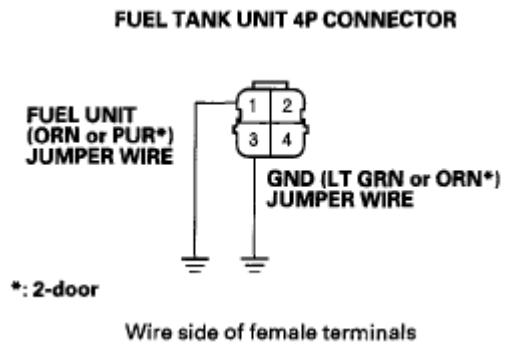

Fig. 16: Connecting Fuel Tank Unit 4P Connector No. 1 And No. 3 Terminals And Body Ground With Jumper Wires

8. Check for continuity between gauge control module (tach) 36P connector No. 32 and No. 33 terminals and body ground individually.

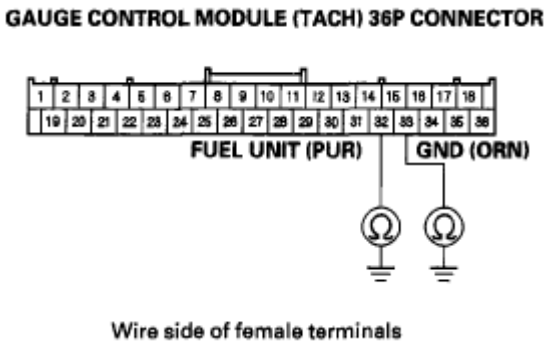

Fig. 17: Checking Continuity Between Gauge Control Module (Tach) 36P Connector No. 32 And No. 33 Terminals And Body Ground

Is there continuity?

YES - Go to step 9.

NO - Repair an open in the wire between the gauge control module (tach) and the fuel tank unit.

9. Do the fuel gauge sending unit test (see **FUEL GAUGE SENDING UNIT TEST** for R18A1 engine or **FUEL GAUGE SENDING UNIT TEST** for R20Z3 engine) .

   Is the fuel gauge sending unit OK?

   YES - Replace the gauge control module (tach).

   NO - Replace the fuel tank unit.

DTC B1176: FUEL LEVEL SENSOR (FUEL GAUGE SENDING UNIT) CIRCUIT SHORT

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch OFF, and then back ON (II).
3. Wait for 30 seconds.
4. Check for DTCs with the HDS.

   Is DTC B1176 indicated?

   YES - Go to step 5.

   NO - Intermittent failure, the fuel level sensor circuit is OK at this time. Check for loose or poor connections.

5. Turn the ignition switch OFF.
6. Disconnect the fuel tank unit 4P connector.

7. Clear the DTCs with the HDS.
8. Turn the ignition switch OFF, and then back ON (II).
9. Wait for 30 seconds.
10. Check for DTCs with the HDS.

    Is DTC B1176 indicated?

    YES - Go to step 11.

    NO - Replace the fuel gauge sending unit (see **FUEL PUMP/FUEL GAUGE SENDING UNIT REPLACEMENT** for R18A1 engine or **FUEL PUMP/FUEL GAUGE SENDING UNIT REPLACEMENT** for R20Z3 engine).

11. Disconnect the gauge control module (tach) 36P connector.
12. Check for continuity between the gauge control module (tach) 36P connector No. 32 terminal and body ground.

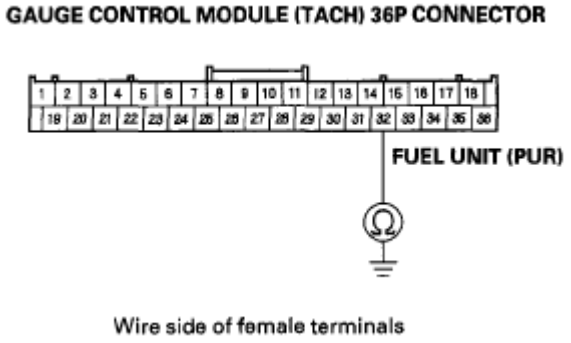

Fig. 18: Checking Continuity Between Gauge Control Module (Tach) 36P Connector No. 32 Terminal And Body Ground

Are there continuity?

YES - Repair a short in the wire between the gauge control module (tach) and the fuel tank unit.

NO - Replace the gauge control module (tach).

DTC B1177: BATTERY VOLTAGE ABNORMAL

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch OFF, and then back ON (II).
3. Check for DTCs with the HDS.

    Is DTC B1177 indicated?

YES - Go to step 8.

NO - Go to step 4.

4. Clear the DTCs with the HDS.
5. Turn the ignition switch OFF, and then back ON (II).
6. Crank the engine.
7. Check for DTCs with the HDS.

   Is DTC B1177 indicated?

   YES - Go to step 8.

   NO - Intermittent failure. The gauge control module (tach) and power supply voltage (IG1) that is supplied to the gauge control module (tach) are OK at this time. The battery may have been discharged, and recovered.

8. Check the battery (see **BATTERY TEST**) and the charging system.

   Is the battery condition normal and the charging system OK?

   YES - Go to step 9.

   NO - The battery needs a recharge or replacement, or the charging system needs to repaired.

9. Turn the ignition switch ON (II).
10. With the gauge control module (tach) 36P connector still connected, check for voltage between the body ground and the gauge control module (tach) 36P connector No. 17 terminal.

    Is the voltage above 7.5 V?

    YES - Replace the gauge control module (tach).

    NO - Repair an open or high resistance in the BRN wire between the ignition switch and the gauge control module (tach).

DTC B1183: GAUGE CONTROL MODULE LOST COMMUNICATION WITH THE EPS CONTROL UNIT (EPS MESSAGE)

1. Clear the DTCs with the HDS.
2. Turn the ignition switch OFF, and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

   Is DTC B1183 indicated?

   YES - Go to step 5.

   NO - Intermittent failure. The gauge control module (tach) is OK at this time. Check for loose or poor

connections.

5. Check for DTCs with the HDS.

   Are DTCs B1168, B1169, B1178, and B1187 and indicated at the same time?

   YES - Troubleshoot DTC B1178.

   NO - Go to step 6.

6. Check for EPS DTCs with the HDS.

   Are any DTCs indicated?

   YES - Go to the indicated DTC troubleshooting , then recheck.

   NO - Go to step 7.

7. Turn the ignition switch OFF.
8. Disconnect the gauge control module (tach) 36P connector.
9. Disconnect the EPS control unit 20P connector.
10. Check for continuity between the gauge control module (tach) 36P connector No. 1 and No. 19 and EPS control unit 28P connector No. 1 and No. 15 terminals individually.

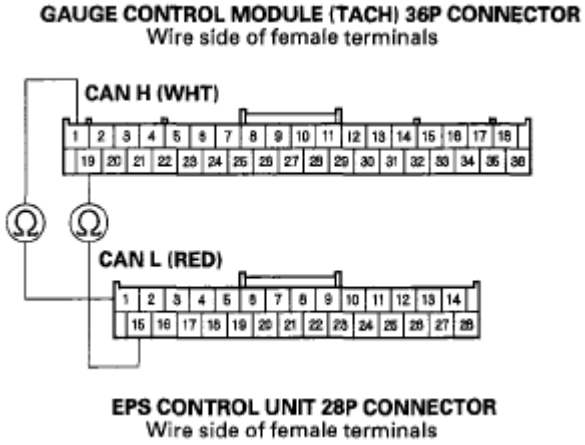

Fig. 19: Checking Continuity Between Gauge Control Module (Tach) 36P Connector No. 1 And No. 19 And EPS Control Unit 28P Connector No. 1 And No. 15 Terminals

Are there continuity?

YES - Substitute a known-good EPS control unit and recheck. If DTC B1183 is still indicated, replace the gauge control module (tach).

NO - Repair an open in the wire.

GAUGE CONTROL MODULE (TACH) INPUT TEST

NOTE: Before testing, do the gauge control module self-diagnosis procedure, and make sure the B-CAN communication line is OK.

1. Turn the ignition switch OFF.
2. Remove the gauge control module (tach) and disconnect the 36P connector from it (see **TACHOMETER**).

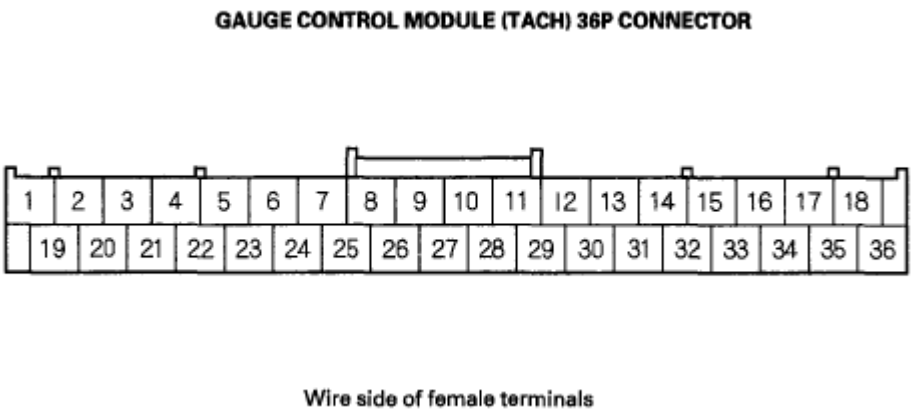

Fig. 20: Identifying Gauge Control Module (Tach) 36P Connector

3. Inspect the connector and socket terminals to be sure they are all making good contact.
   - If the terminals are bent, loose or corroded, repair them as necessary, and recheck the system.
   - If the terminals are OK, go to step 4.
4. With the connector still disconnected, make these input tests at the connector.
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, go to step 5.

GAUGE CONTROL MODULE (TACH) INPUT TEST (CONNECTOR DISCONNECTED)

Cavity	Wire	Test condition	Test: Desired result	Possible cause if result is not obtained
20 [2]	LT GRN [GRY]	Under all conditions (disconnect the gauge control module (speedo) 12P connector)	Check for continuity between the No. 20 terminal and gauge control module (speedo) 12P connector No. 7 terminal: There should be continuity.	An open in the wire
			Check for continuity: There should be no continuity.	A short to ground in the wire
13	RED [BLU]	Combination light switch ON	Attach to ground: The illuminations of the steering wheel switches come on full bright.	• Faulty LEDs • An open in the wire
		Combination light	Attach to ground: The illuminations of the dash lights, the	• Faulty LEDs

14	RED	switch ON	audio unit, and the heater control panel/HVAC control unit lights come on full bright.	• An open in the wire
[ ] :2-door				

5. Reconnect the connector to the gauge control module (tach), and make these input tests at the connector.
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, the gauge control module (tach) must be faulty; replace it.

GAUGE CONTROL MODULE (TACH) INPUT TEST (CONNECTOR RECONNECTED)

Cavity	Wire	Test condition	Test: Desired result	Possible cause if result is not obtained
15	BLK	Under all conditions	Check for voltage to ground: There should be less than 0.5 V.	• Poor ground(G503) • An open in the wire
16	BLK	Under all conditions	Check for voltage to ground: There should be less than 0.5 V.	• Poor ground (G504) • An open in the wire
17	BRN	Ignition switch ON (ID	Check for voltage to ground: There should be battery voltage.	• Blown No. 10 (7.5 A) fuse in the under-dash fuse/relay box • An open in the wire
18	WHT	Under all conditions	Check for voltage to ground: There should be battery voltage.	• Blown No. 23 (10 A) fuse in the under-hood fuse/relay box • An open in the wire
4	BRN	Ignition switch ON (II), ILLUMI (+) switch pressed	Check for voltage to ground: There should be less than 1 V.	• Poor ground(G501) • Faulty dash light brightness controller • An open in the wire
		Ignition switch ON (II), ILLUMI (+) switch released	Check for voltage to ground: There should be 5 V or more.	• Faulty dash light brightness controller • A short to ground in the wire
5	YEL	Ignition switch ON (II), ILLUMI (-) switch pressed	Check for voltage to ground: There should be less than 1 V.	• Poor ground (G501) • Faulty dash light brightness controller • An open in the wire
			Check for voltage	• Faulty dash light

		Ignition switch ON (II), ILLUMI (-) switch released	to ground: There should be 5 V or more.	brightness controller • A short to ground in the wire
6	BLU	Ignition switch ON (II), SELECT/RESET switch pressed	Check for voltage to ground: There should be less than 1 V.	• Poor ground(G501) • Faulty dash light brightness controller • An open in the wire
		Ignition switch ON (II), SELECT/RESET switch released	Check for voltage to ground: There should be 5 V or more.	• Faulty dash light brightness controller • A short to ground in the wire
7	PUR	Ignition switch ON (II), mph, km/h switch pressed	Check for voltage to ground: There should be less than 1 V.	• Poor ground(G501) • Faulty dash light brightness controller • An open in the wire
		Ignition switch ON (II), mph, km/h switch released	Check for voltage to ground: There should be 5 V or more.	• Faulty dash light brightness controller • A short to ground in the wire
8 (Canada models)	BLU	Ignition switch ON (II), washer fluid is half or more in the washer reservoir	Check for voltage to ground: There should be less than 1 V.	• Poor ground(G401) • Faulty washer fluid level switch • An open in the wire
		Ignition switch ON (II), washer fluid is empty in the washer reservoir	Check for voltage to ground: There should be 5 V or more.	• Faulty washer fluid level switch • A short to ground in the wire
27	GRN	Ignition switch ON (II), brake fluid is full level in the reservoir	Check for voltage to ground: There should be 5 V or more.	• Faulty brake fluid level switch • A short to ground in the wire
		Ignition switch ON (II), brake fluid is lower level in the reservoir	Check for voltage to ground: There should be less than 1 V.	• Poor ground(G401) • Faulty brake fluid level switch • An open in the wire
28	LT GRN	Ignition switch ON (II), parking brake lever pulled	Check for voltage to ground: There should be less than 1 V.	• Faulty parking brake switch • An open in the wire
		Ignition switch ON (II), parking brake lever released	Check for voltage to ground: There should be 5 V or more.	• Faulty parking brake switch • A short to ground in the wire

GAUGE CONTROL MODULE (SPEEDO) INPUT TEST

NOTE: Before testing, do the gauge control module self-diagnosis procedure, and make sure the B-CAN communication line is OK.

1. Turn the ignition switch OFF.
2. Remove the gauge control module (SPEEDO) and disconnect the 12P connector from it (see **SPEEDOMETER**).

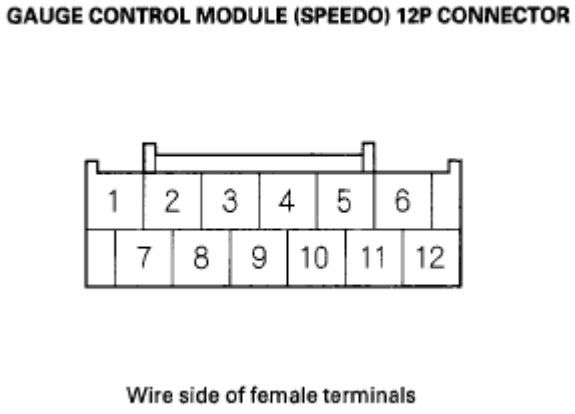

Fig. 21: Identifying Gauge Control Module (Speedo) 12P Connector

3. Inspect the connector and socket terminals to be sure they are all making good contact.
   - If the terminals are bent, loose or corroded, repair them as necessary, and recheck the system.
   - If the terminals are OK, go to step 4.
4. With the connector still disconnected, make these input tests at the connector.
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, go to step 5.

GAUGE CONTROL MODULE (SPEEDO) INPUT TEST (CONNECTOR DISCONNECTED)

Cavity	Wire	Test condition	Test: Desired result	Possible cause if result is not obtained
11	BLU	Ignition switch ON, turn signal switch in LEFT	Check for voltage to ground: There should be battery voltage when the lights are flashing.	• Faulty MICU • Faulty combination light switch • An open in the wire
12	GRN	Ignition switch ON, turn signal switch in RIGHT	Check for voltage to ground: There should be battery voltage when the lights are flashing.	• Faulty MICU • Faulty combination light switch • An open in the

				wire
7	LT GRN	Under all conditions (disconnect the gauge control module (tach) 36P connector)	Check for continuity between the No. 7 terminal and gauge control module (tach) 36P connector No. 20 terminal: There should be continuity.	An open in the wire
			Check for continuity between the No. 7 terminal and body ground (gauge control module (tach) 36P connector disconnected): There should be no continuity.	A short ground in the wire

5. Reconnect the connector to the gauge control module (speedo), and make the input test at the connector.
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If the input test proves OK, the gauge control module (speedo) must be faulty; replace it.

GAUGE CONTROL MODULE (SPEEDO) INPUT TEST (CONNECTOR RECONNECTED)

Cavity	Wire	Test condition	Test: Desired result	Possible cause if result is not obtained
6	WHT	Under all conditions	Check for voltage to ground: There should be battery voltage.	• Blown No. 23 (10 A) fuse in the under-hood fuse/relay box • An open in the wire
5	BRN	Ignition switch ON (ID	Check for voltage to ground: There should be battery voltage.	• Blown No. 10 (7.5 A) fuse in the under-dash fuse/relay box • An open in the wire
4	BLK	Under all conditions	Check for voltage to ground: There should be less than 0.5 V.	• Poor ground(G504) • An open in the wire

REPLACEMENT

TACHOMETER

1. Remove the subdisplay visor assembly (see **SUBDISPLAY VISOR REMOVAL/INSTALLATION**).
2. Remove the three screws from the gauge control module (tach) (A).

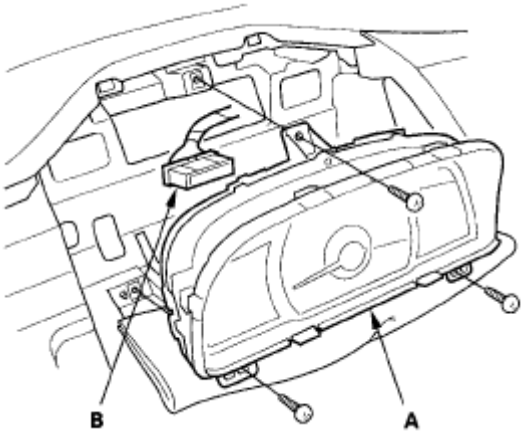

Fig. 22: Removing Gauge Control Module Screws (Tach)

3. Disconnect the 36P connector (B) from the gauge control module (tach).
4. Install the gauge in the reverse order of removal.

SPEEDOMETER

1. Remove the instrument panel (see **INSTRUMENT PANEL REMOVAL/INSTALLATION** .
2. Remove the three screws from the gauge control module (speedo) (A).

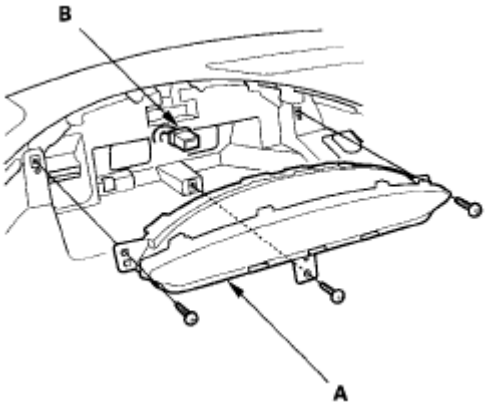

Fig. 23: Removing Gauge Control Module Screws (Speedo)

3. Disconnect the 12P connector (B) from the gauge control module (speedo).
4. Install the gauge in the reverse order of removal.

REWRITING THE ODO DATA AND TRANSFERRING SMART MAINTENANCE ON A NEW GAUGE CONTROL MODULE

NOTE:

- **Obtain a new gauge control module before starting the rewriting process.**
- **Rewriting is not possible on a gauge control module that will not communicate with the HDS.**
- **Make sure that the HDS shows the correct VIN for the car you are**

working on.

- **One you have started this procedure, you must complete it before removing the HDS from the DLC.**
- **Connect a battery jump box (not a Battery charger) to insure that correct battery voltage will be maintained.**

1. Before replacing the gauge control module, connect the HDS.
2. Select GAUGES from the BODY ELECTRICAL menu display.
3. Select "Gauge Control Module Replacement (ODO rewrite)" from the ADJUSTMENT menu, and follow the instructions on the display to retrieve the ODO value and the Smart Maintenance information.
4. Replace the gauge control module.
5. Follow the instructions on the display to write the new ODO value and Smart maintenance to the new gauge control module. If the data transfer fails, refer to the instructions to release the locked ODO value .

RELEASE LOCKED ODOMETER MILEAGE TO THE ORIGINAL GAUGE CONTROL MODULE

If after you attempt to transfer mileage the odometer has dashes (- - -), garbled, or incorrect value display, do the following Start over. The original gauge control module is going to be unlocked and restored to its original state.

1. Confirm that you have the latest HDS version of software.
2. Make sure that the HDS shows the correct VIN for the car you are working on.
3. With the ignition switch OFF, reconnect the original gauge assembly.
4. Completely re-boot the HDS.
5. Clear any stored DTCs.
6. Navigate to Body Electric/Gauges/Adjustment/Instrument Panel Replacement.
7. Select "3. Releasing Locked ODO Valve".
8. Follow the prompts and the Odometer mileage will be restored.
9. Start over and make sure the screen prompts are followed.

DASH LIGHTS BRIGHTNESS CONTROLLER AND ODOMETER SELECT/RESET BUTTON TEST/REPLACEMENT

1. Remove the subdisplay visor (see **SUBDISPLAY VISOR REMOVAL/INSTALLATION**) and disconnect the connectors.
2. Remove the two screws and the dash lights brightness controller-odometer select/reset button (A).

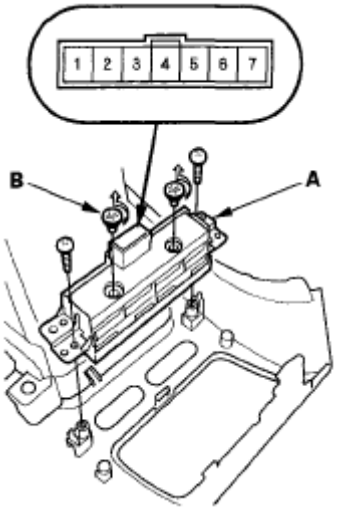

Fig. 24: Removing Dash Lights Brightness Controller-Odometer Select/Reset Button

3. Check for continuity between the terminals in each switch position according **Fig. 25** .

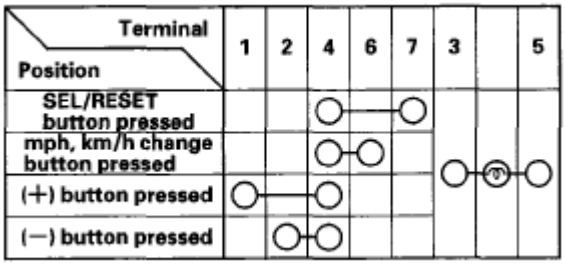

Fig. 25: Checking Continuity Between Dash Light Brightness Controller And Odometer Select/Reset Button Terminals Chart

4. If the continuity is not as specified, replace the bulbs (B) or the dash lights brightness controller-odometer select/reset button.

OUTSIDE AIR TEMPERATURE INDICATOR CALIBRATION

DESCRIPTION

The outside temperature sensor is located behind the center of the front bumper. The gauge control module (tach) uses measurements from this sensor to display the outside air temperature.

Because of the location of the sensor, it may be affected by heat reflection from the road, engine and radiator heat or hot exhaust from surrounding traffic. These conditions can heat soak the outside air temperature sensor and cause inaccurate readings. Logic has been written into the gauge control module (tach) to help prevent abnormal or fluctuating outside air temperature indicator readings.

OUTSIDE AIR TEMPERATURE INDICATOR LOGIC

Initial outside air temperature indication after the ignition switch is turned ON (II).

- If the engine coolant temperature is 140°F (60°C) or higher when the ignition switch is turned ON

(II), the outside air temperature indicated the last time the key was turned off will be displayed regardless of the current temperature measured by the outside air temperature sensor.

- If the engine coolant temperature is 139°F (59°C) or lower when the ignition switch is turned ON (II), the current temperature measured by the outside air temperature sensor will be indicated.

UPDATE TO THE OUTSIDE AIR TEMPERATURE INDICATOR WHILE DRIVING

If the temperature measured by the outside air temperature sensor is greater than the temperature on the outside air temperature indicator, the outside temperature indicator will increase by 1.8°F (1°C) per minute after the vehicle speed is greater than 19 mph (30 km/h) for more than 1 minute and 30 seconds. It will continue to increase until the current outside air temperature is indicated. So, the first change to the outside air temperature indicator is 1 minute and 30 seconds after the vehicle speed is greater than 19 mph (30 km/h). If the vehicle speed drops below 19 mph (30 km/h), the indicator will not update again until the vehicle speed is increased to 19 mph (30 km/h) or more for more than 1 minute and 30 seconds again. If the outside air temperature is less than the indicated temperature, the temperature will decrease 1°F every 1.1 seconds (1°C every 2 seconds) until the current outside air temperature is indicated regardless of vehicle speed.

TROUBLESHOOTING

If the indicator displays "- - -" for more than 2 seconds after selecting the outside air temperature display mode, check the outside air temperature sensor, or gauge control module self-diagnosis (see **SELF-DIAGNOSTIC FUNCTION**).

CALIBRATION

The outside air temperature indicator's displayed temperature can be recalibrated ±5°F (or ±3°C) to meet the customer's expectations.

1. Turn the ignition switch ON (II).
2. Select the outside air temperature display.
3. Press and hold the SEL/RESET switch until the trip meter resets, then release it. Press, and continue to hold, the switch again, and the display will scroll through temperature settings from +5°F to -5°F (or +3°C to -3°C) as shown.

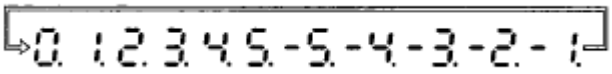

Fig. 26: Resetting Trip Meter

4. When the desired correction value appears on the display, release the button, and the recalibrated outside air temperature will be displayed.

   Example:

   Incorrect value = 68°F (20 °C)
   Desired correction value = +2°F (+1°C)
   Correct valve = 70°F (21°C)
   Desired correction value = -2°F (-1°C)

Correct valve = 66°F (19°C)

NOTE: The recalibration temperature is not the value the sensor sees. Therefore the temperature can only be adjusted ±5 degrees from the sensor.

NOTE: To recalibrate the display to the true temperature, remove the outside air temperature sensor (A), but leave it connected. Submerge the sensor and a thermometer (B) in a container of ice water (C). Select the calibration mode as described above, then recalibrate the display to the true temperature.

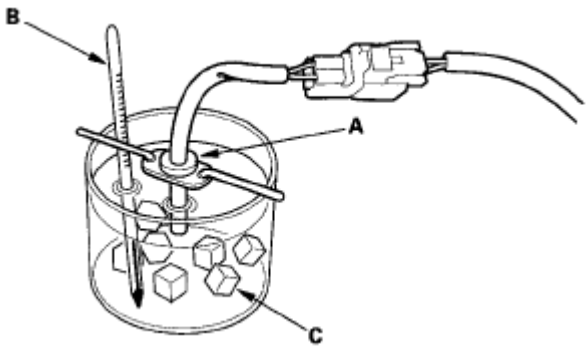

Fig. 27: Submerging Sensor And Thermometer In Container Of Ice Water

OUTSIDE AIR TEMPERATURE SENSOR TEST

1. Remove the outside air temperature sensor (see **OUTSIDE AIR TEMPERATURE SENSOR REPLACEMENT**).
2. Dip the sensor in ice water, and measure the resistance. Then pour warm water on the sensor, and check for a change in resistance.
3. Compare the resistance reading between the No. 1 and No. 2 terminals of the outside air temperature sensor with the specifications shown in **Fig. 28** ; the resistance should be within the specifications.

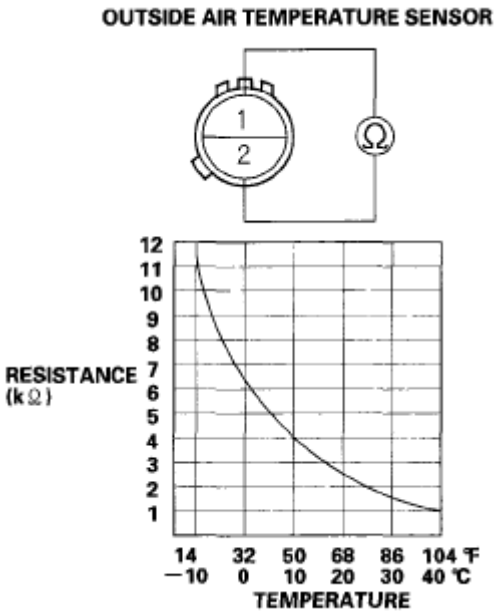

Fig. 28: Outside Air Temperature Sensor Graph

4. If the resistance is not as specified, replace the outside air temperature sensor (see **OUTSIDE AIR TEMPERATURE SENSOR REPLACEMENT**).

OUTSIDE AIR TEMPERATURE SENSOR REPLACEMENT

1. Remove the front bumper (see **FRONT BUMPER REMOVAL/INSTALLATION**).
2. Lift the tab (A) to release the lock, then remove the outside air temperature sensor (B) from the receiver/dryer desiccant bracket [from the A/C condenser].

   [ ] :2-door

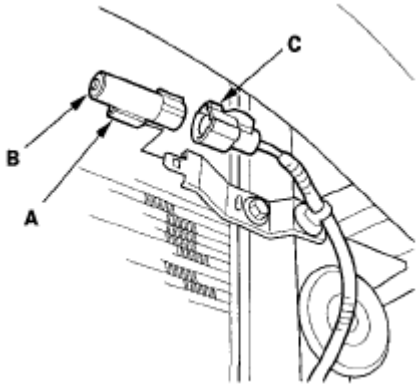

Fig. 29: Removing Outside Air Temperature Sensor

3. Install the sensor in the reverse order of removal.

2006-09 ACCESSORIES AND EQUIPMENT

Reminder Systems - Civic (Except Hybrid)

COMPONENT LOCATION INDEX

NOTE: Refer to the REMINDER SYSTEMS (GX) (SUPPLEMENT) article for additional information for the GX model.

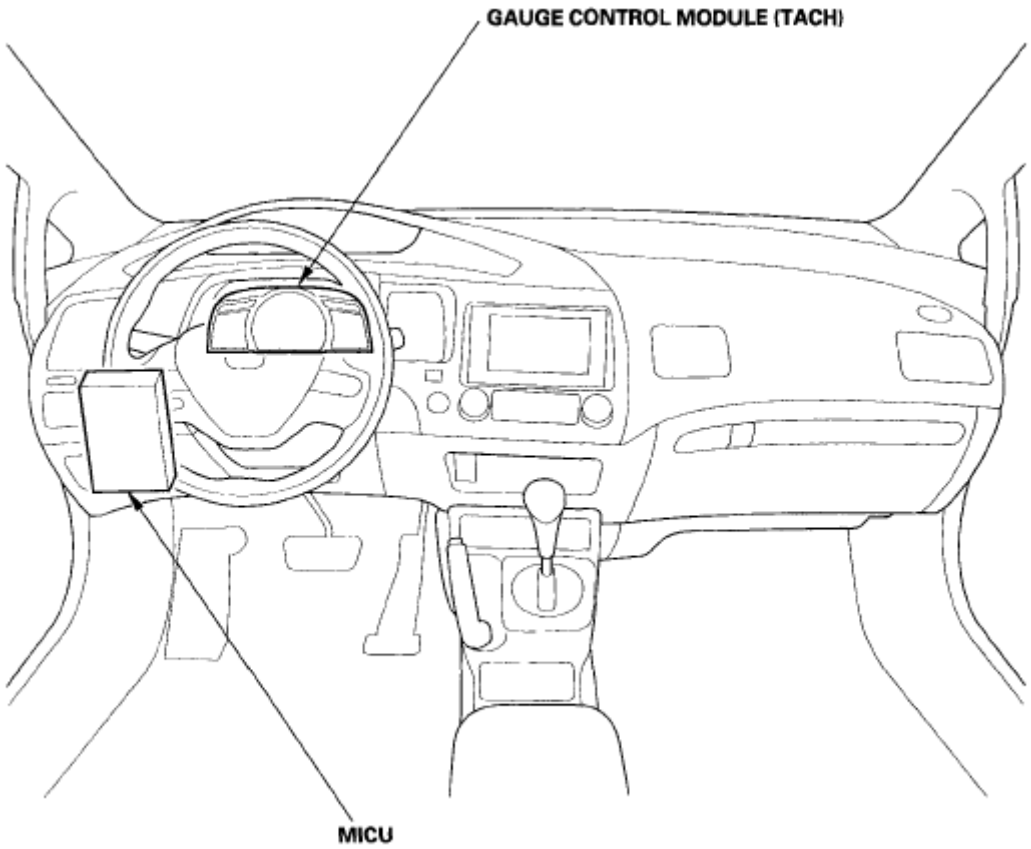

Fig. 1: Identifying Reminder Systems Component Location

Rear Window Defogger - Civic (All Except Hybrid)

COMPONENT LOCATION INDEX

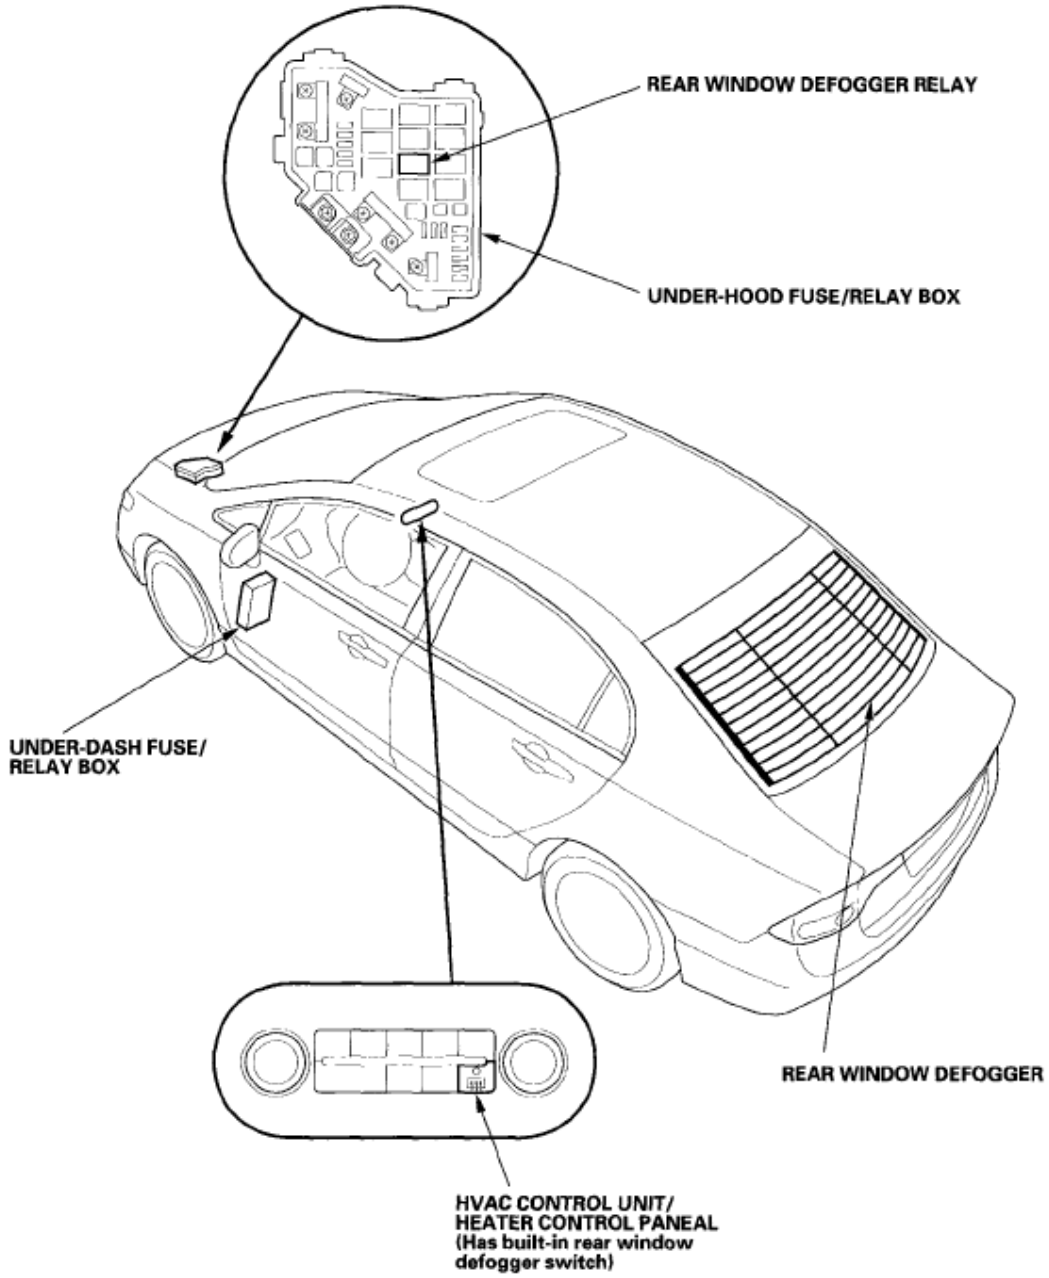

Fig. 1: Identifying Rear Window Defogger Component Locations

CIRCUIT DIAGRAM

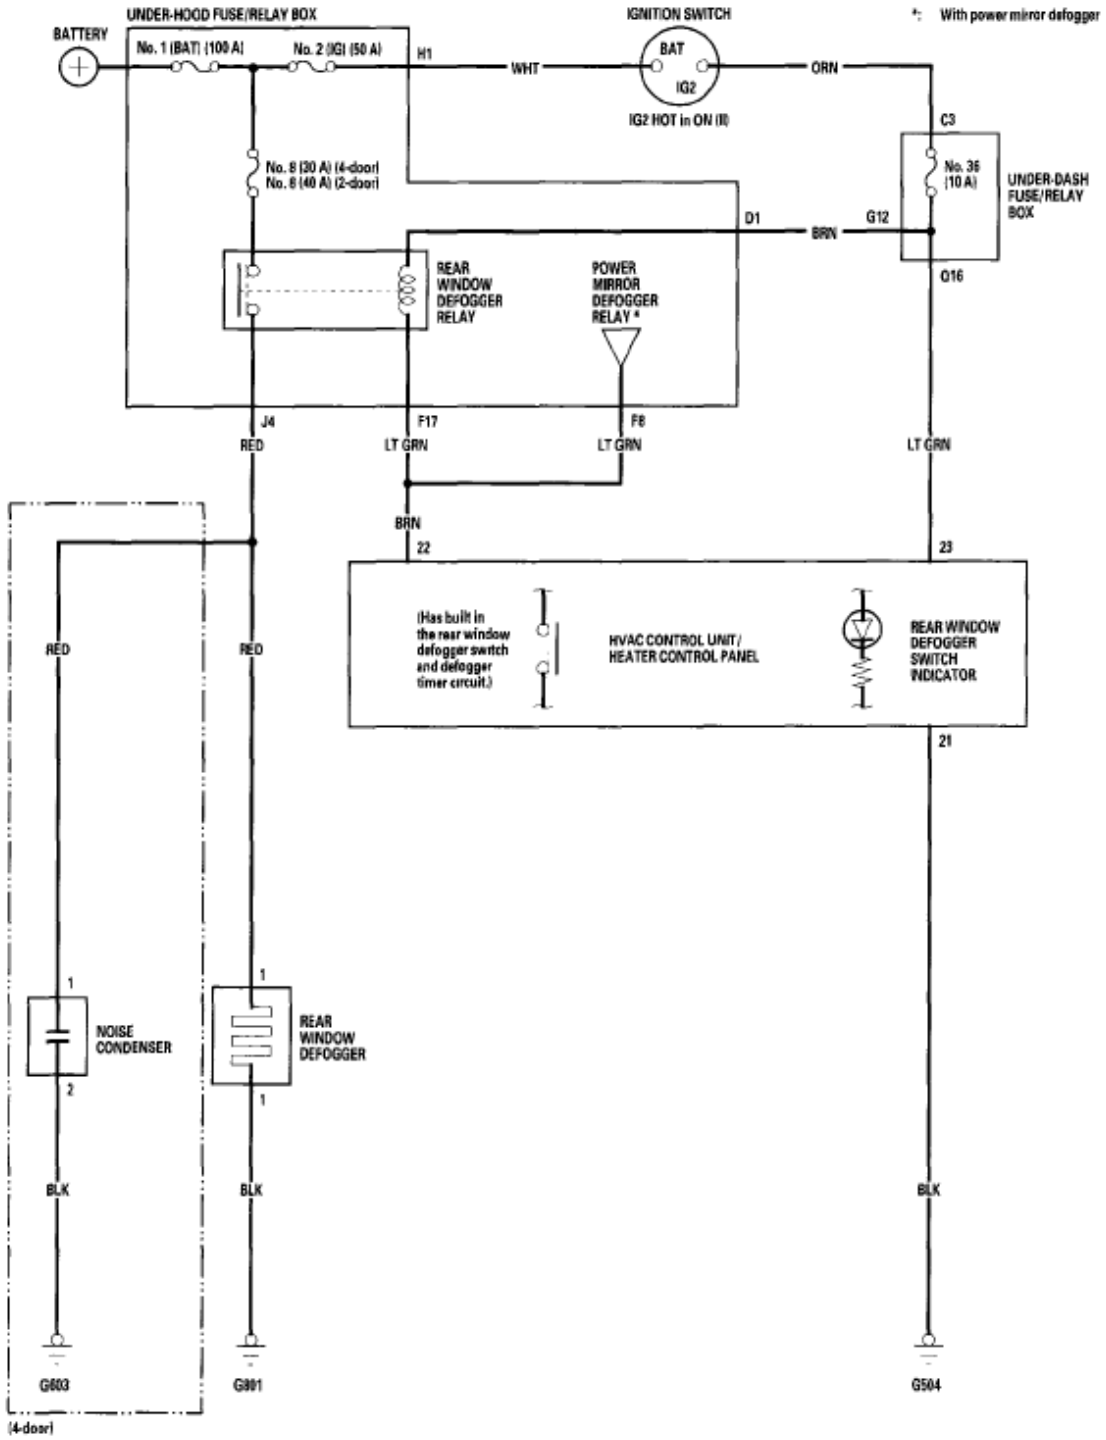

Fig. 2: Rear Window Defogger Circuit Diagram

FUNCTION TEST

NOTE:

- **Be careful not to scratch or damage the defogger wires with the tester probe.**
- **Before testing, check the No. 8 (30 A) [No. 8 (40 A)] fuse in the under-hood fuse/relay box and the No. 36 (10 A) fuse in the under-dash fuse/relay box.**

[ ] : 2-door

1. Check for voltage between the positive terminal (A) and body ground with the ignition switch and the defogger switch ON.

   There should be battery voltage.

   - If there is no voltage, check for:
     - Faulty rear window defogger relay.
     - Faulty HVAC control unit/heater control panel.
     - An open in the RED wire to the positive terminal.
   - If there is voltage, go to step 2.

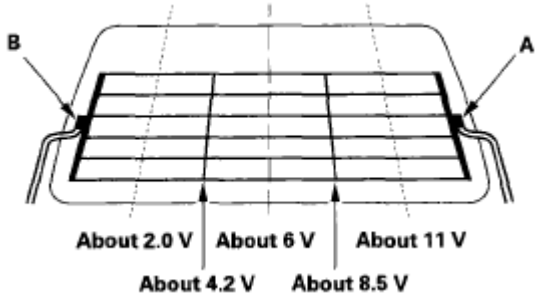

Fig. 3: Function Test Defogger Wires With Tester Probe

2. Disconnect the negative terminal (B) from the rear window defogger.
3. Check for continuity between the negative terminal (B) and body ground.

   If there is no continuity, check for an open in the wire or poor ground (G801). If there is continuity, go to step 4.

4. Reconnect the negative terminal to the rear window defogger.
5. Turn the ignition switch ON (II) and the rear window defogger switch ON.
6. Touch the voltmeter positive probe to each point on each defogger wire, and the negative probe to the negative terminal.
   - If the voltage is as specified, the defogger wire up to that point is OK.
   - If the voltage is not as specified, repair the defogger wire.
     - If it is more than specified at one of the points, there is a break in the negative half of the wire.
     - If it is less than specified at one of the points, there is a break in the positive half of the wire.

DEFOGGER WIRE REPAIR

NOTE: To make an effective repair, the broken section must be no longer than 1 inch (2.5 mm).

1. Lightly rub the area around the broken section (A) with fine steel wool, then clean it with isopropyl

alcohol.

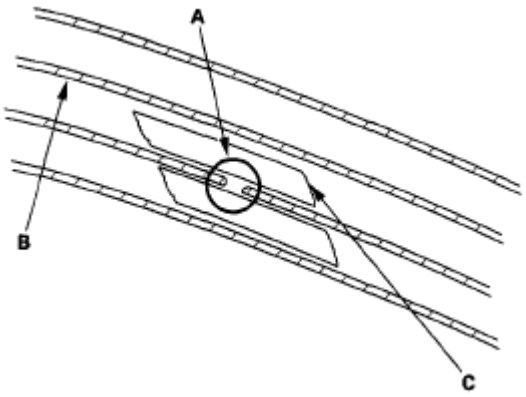

Fig. 4: Identifying Defogger Wire Broken Section

2. Carefully mask above and below the broken portion of the defogger wire (B) with cellophane tape (C).
3. Using a small brush, apply a heavy coat of silver conductive paint (commercially available) (A) extending about 1/8 " on both sides of the break. Allow 25 minutes to dry.

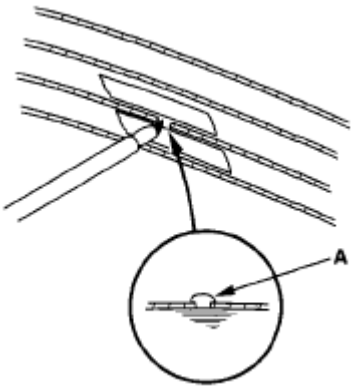

Fig. 5: Applying Heavy Coat Of Silver Conductive Paint On Both Sides Of Defogger Wire Break

4. Do the function test to confirm that the wire is repaired (see **FUNCTION TEST**).
5. Apply a second coat of paint in the same way. Let it dry 3 hours before removing the tape.

2006-09 ACCESSORIES & EQUIPMENT

Horn - Civic (Except Hybrid)

COMPONENT LOCATION INDEX

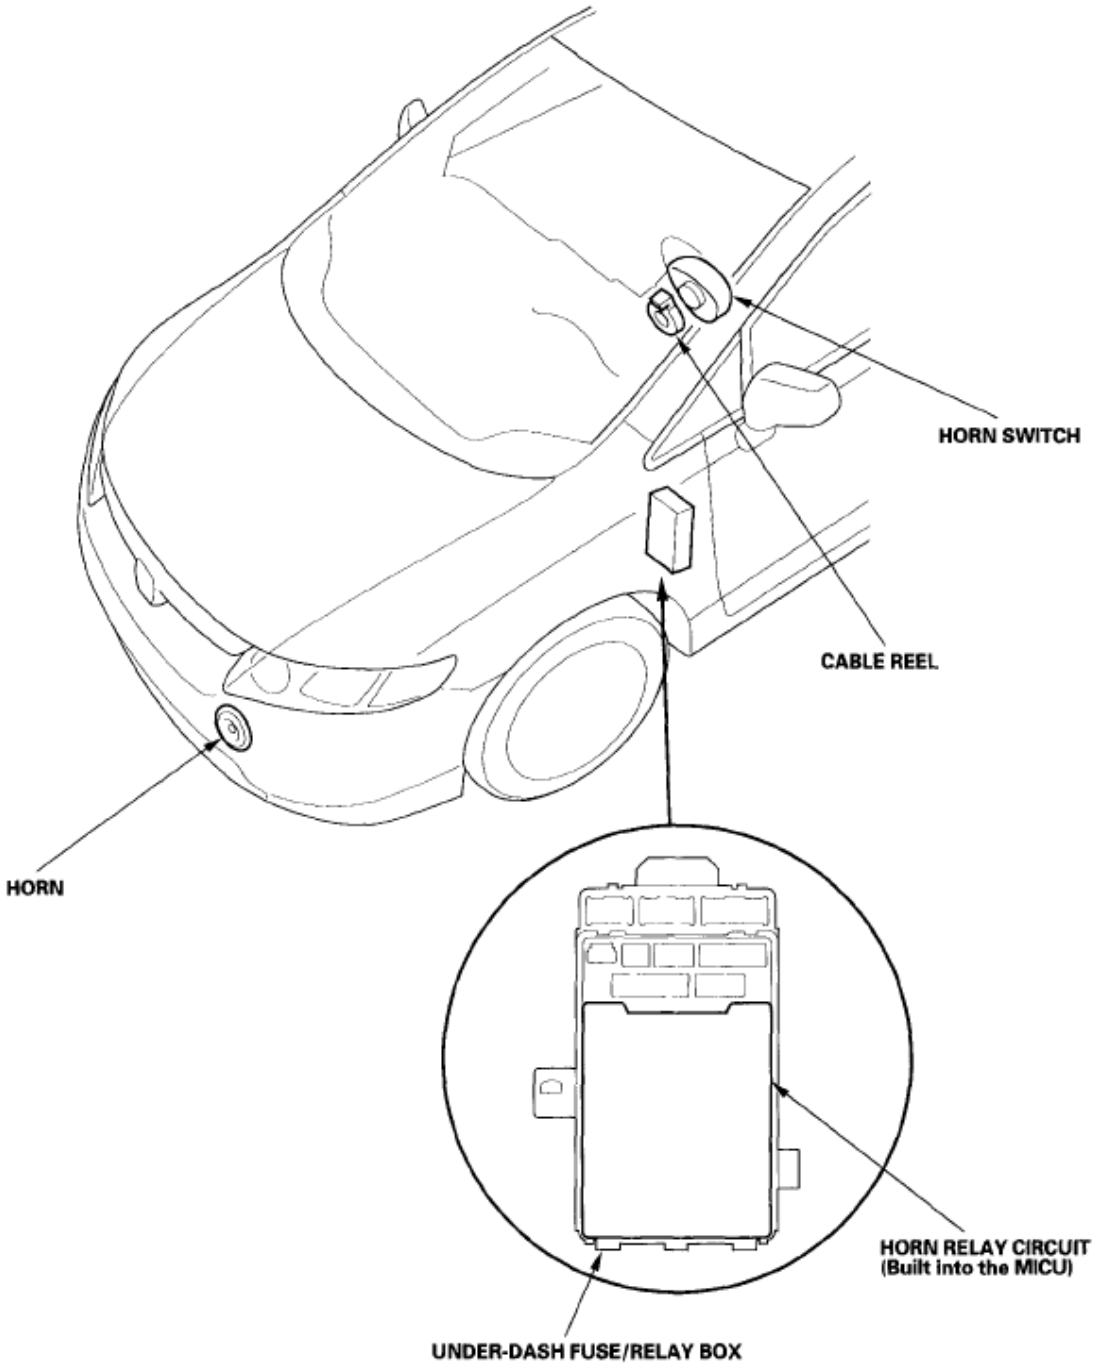

Fig. 1: Identifying Horns Component Location

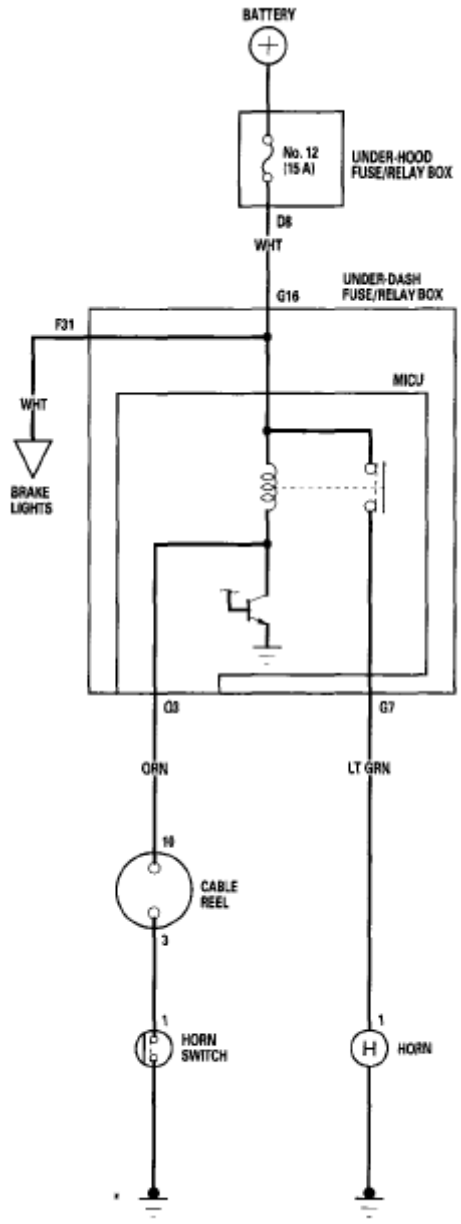
CIRCUIT DIAGRAM



*. Ground through steering column.

Fig. 2: Horns - Circuit Diagram

HORN TEST/REPLACEMENT

1. Remove the front bumper (see **FRONT BUMPER REMOVAL/INSTALLATION**).
2. Disconnect the 1P connector (A) from the horn (B).

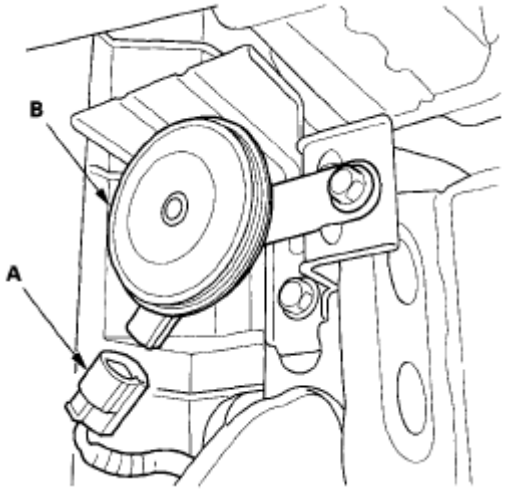


Fig. 3: Identifying 1P Connector And Horn

3. Test the horn by connecting battery power to the terminal (A) and grounding the bracket (B). The horn should sound.

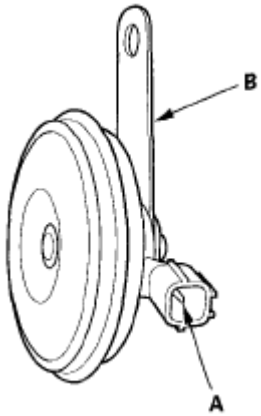

Fig. 4: Identifying Terminal And Bracket

4. If it fails to sound, replace it.

HORN SWITCH TEST

1. Remove the steering column covers (see **STEERING COLUMN REMOVAL AND INSTALLATION**).
2. Disconnect the cable reel 20P connector (A) from the dashboard wire harness.

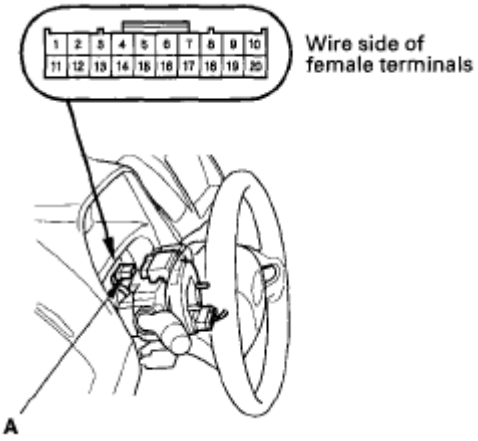

Fig. 5: Identifying Cable Reel 20P Connector

3. Using a jumper wire, connect the No. 10 terminal of the dashboard wire harness 20P connector to body ground. The horn should sound.
    - If the horn sounds, go to step 4.
    - If the horn does not sound, check these items:
        - No. 12 (15 A) fuse in the under-hood fuse/relay box.
        - MICU.
        - Horn.
        - An open in the wire.
4. Reconnect the cable reel 20P connector (A) to the dashboard wire harness.

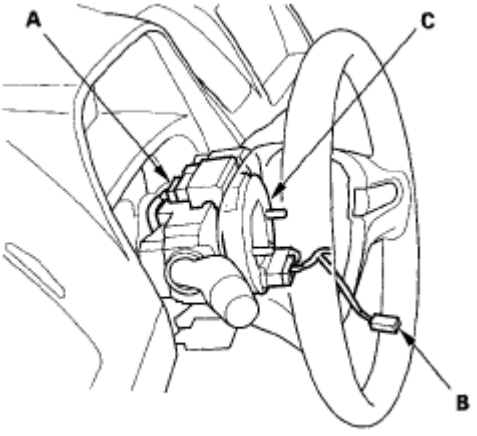

Fig. 6: Identifying Cable Reel 20P Connector, Horn Switch 1P Positive Terminal And Cable Reel

5. Remove the driver's airbag assembly (see **DRIVER'S AIRBAG REPLACEMENT**), and disconnect the horn switch 1P positive terminal (B) from the cable reel (C).
6. Using a jumper wire, connect the 1P connector to body ground.
    - If the horn sounds, replace the driver's airbag assembly.
    - If the horn does not sound, check these items:
        - Cable reel.

- An open in the wire.

2006-09 ACCESSORIES AND EQUIPMENT

Ignition Switch - Civic

TEST

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) in the SRS before doing repairs or service.

1. Make sure you have the anti-theft code for the audio or the navigation system, then write down the audio presets. Make sure the ignition switch is OFF.
2. Disconnect the negative battery cable.
3. Remove the driver's dashboard lower cover (see **DRIVER'S DASHBOARD LOWER COVER REMOVAL/INSTALLATION**), and the steering column covers (see **COLUMN COVER REMOVAL AND INSTALLATION**).
4. Disconnect the 7P connector (A) from the ignition switch (B).

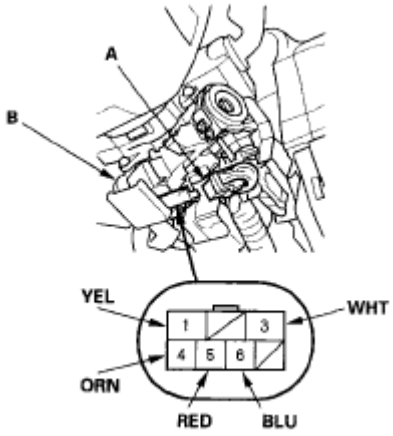

Fig. 1: Identifying Ignition Switch And 7P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Check for continuity between the terminals in each switch position according to the table.

Terminal / Position	RED (ACC)	WHT (BAT)	BLU (IG1)	ORN (IG2)	YEL (ST)
O (LOCK)					
I (ACC)	○—○				
II (ON)	○—○	○—○	○—○		
III (START)		○—○	○—○	○—○	

Fig. 2: Continuity Reference Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If the continuity checks do not agree with the table, replace the ignition switch (see **REPLACEMENT**).

7. After reconnecting the battery, enter the anti-theft code for the audio or the navigation system, then enter the customer's audio presets, and set the clock.

REPLACEMENT

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) in the SRS before doing repairs or service.

1. Make sure you have the anti-theft code for the audio or the navigation system, then write down the audio presets. Make sure the ignition switch is OFF.
2. Disconnect the negative battery cable.
3. Remove the driver's dashboard lower cover (see **DRIVER'S DASHBOARD LOWER COVER REMOVAL/INSTALLATION**), and the steering column covers (see **COLUMN COVER REMOVAL AND INSTALLATION**).
4. Disconnect the 7P connector (A) from the ignition switch (B).

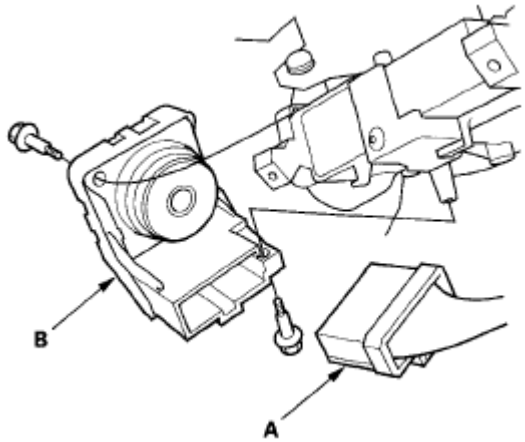

Fig. 3: Identifying 7P Connector And Ignition Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the two screws and the ignition switch.
6. Install in the reverse order of removal.
7. After reconnecting the battery, enter the anti-theft code for the audio or the navigation system, then enter the customer's audio presets, and set the clock.

2006-09 ACCESSORIES AND EQUIPMENT

Mirrors - Civic

COMPONENT LOCATION INDEX

2-door

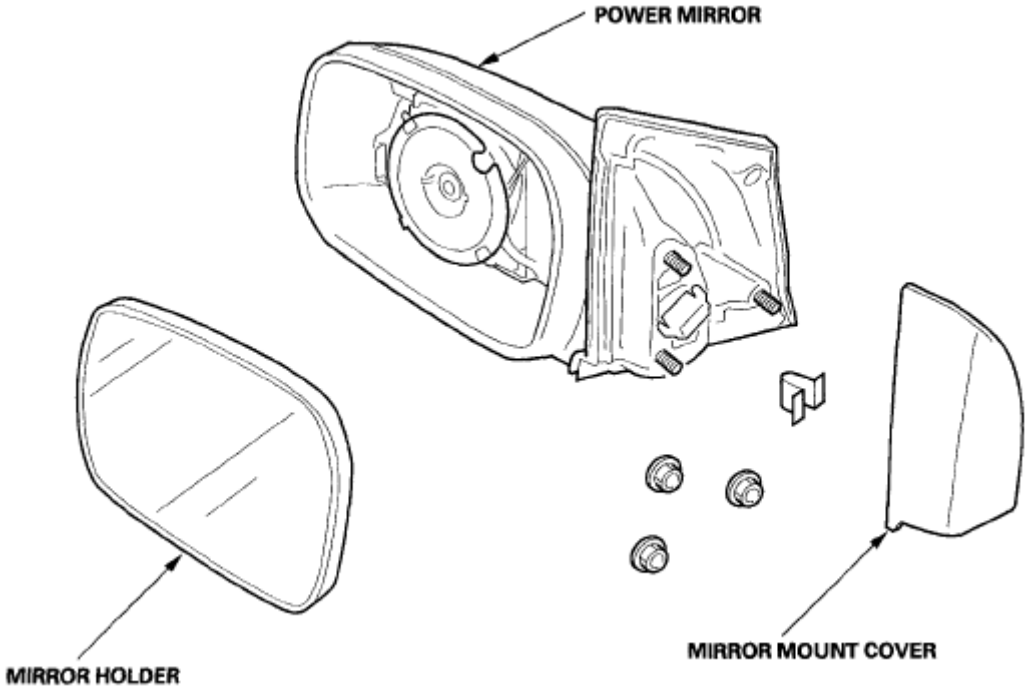

Fig. 1: Identifying Mirrors Component Locations (2-Door)
Courtesy of HONDA

4-door

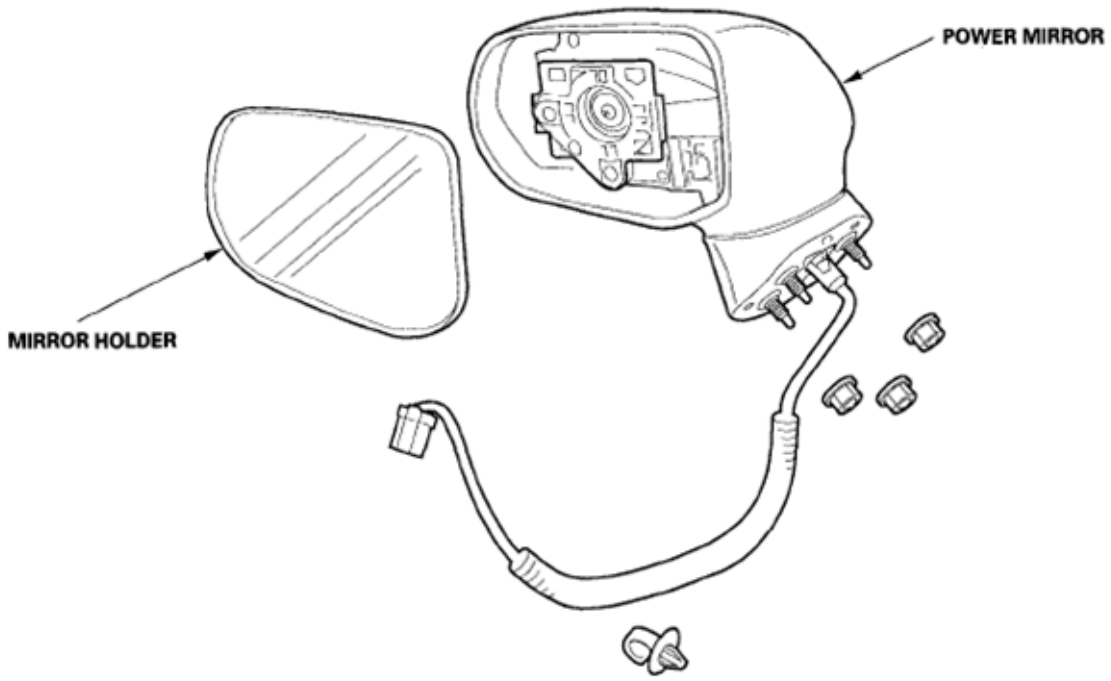

Fig. 2: Identifying Mirrors Component Locations (4-Door) (1 Of 2)
Courtesy of HONDA

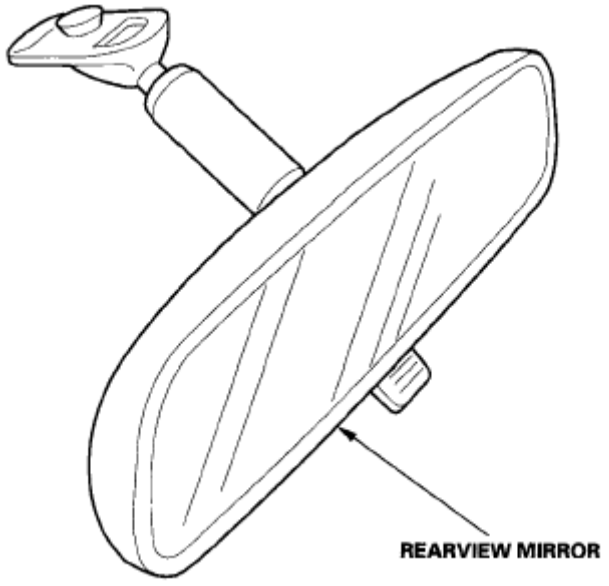

Fig. 3: Identifying Mirrors Component Locations (4-Door) (2 Of 2)
Courtesy of HONDA

POWER MIRROR REPLACEMENT

2-DOOR

1. Lower the door glass fully.
2. Carefully pull out the mirror mount cover (A) to detach the clip, then lift the cover to release the hook (B). Remove the cover.

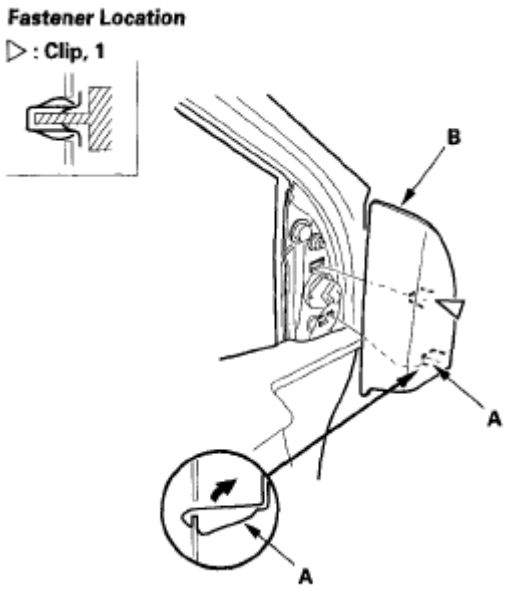

Fig. 4: Identifying Mirror Mount Cover And Hook
Courtesy of HONDA

3. Disconnect the power mirror connector (A), and remove the cap (B).

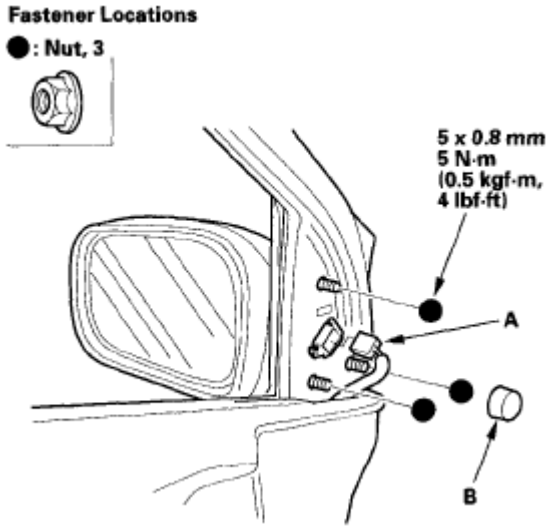

Fig. 5: Identifying Connector And Cap (With Torque Specifications)
Courtesy of HONDA

4. While holding the power mirror, remove the nuts securing the mirror.
5. While holding the power mirror (A), squeeze the retaining tabs (B), then push out to remove the mirror.

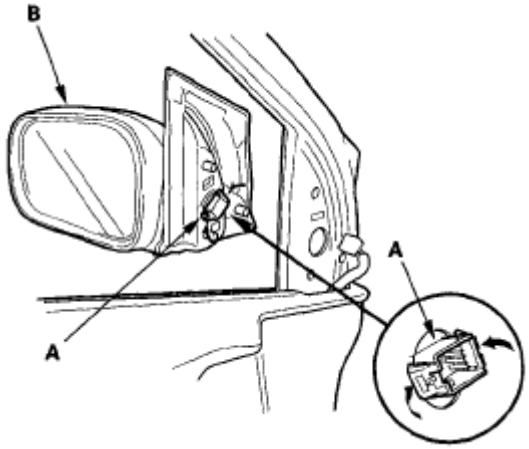

Fig. 6: Identifying Connector Clip And Mirror
Courtesy of HONDA

6. Install the power mirror in the reverse order of removal, and note these items:
   - Make sure the connector is plugged in properly.
   - Push the clip and the hook into place securely.
   - Make sure the power mirror operate properly.

4-DOOR

NOTE: Take care not to scratch the door.

1. Remove these items:
   - Door panel (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**)
   - Plastic cover, as needed **FRONT DOOR OUTER HANDLE REPLACEMENT**
2. Disconnect the power mirror connector (A), and detach the harness clip (B).

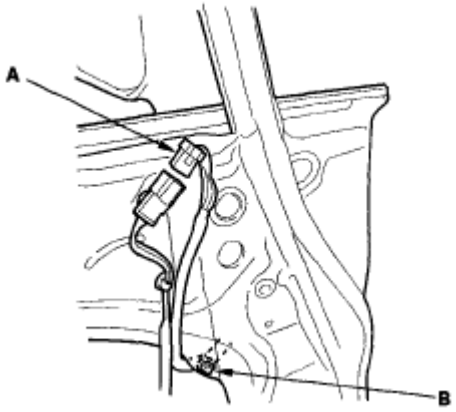

Fig. 7: Identifying Connector And Clip
Courtesy of HONDA

3. Remove the plug caps (A) and the nuts.

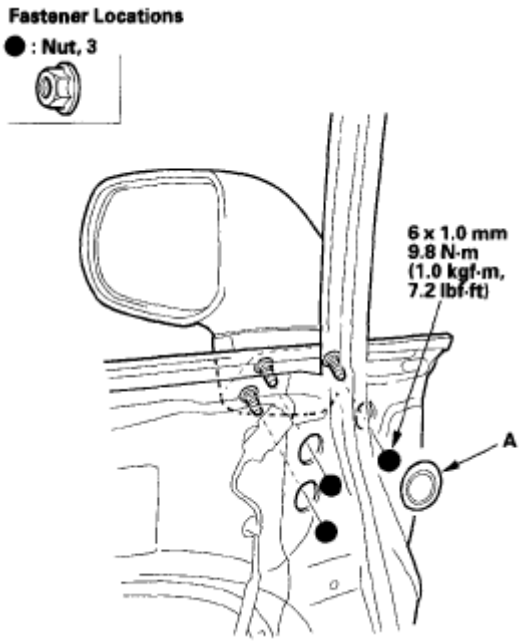

Fig. 8: Identifying Maintenance Caps And Nuts (With Torque Specifications)
Courtesy of HONDA

4. While holding the power mirror (A), release the hook (B), then remove the mirror, and pull out the harness (C) through the hole in the door.

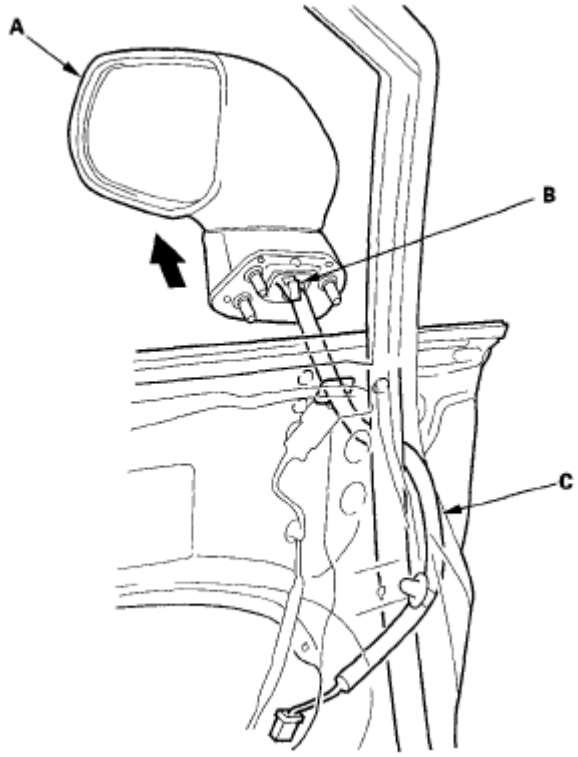

Fig. 9: Identifying Mirror, Clip And Door
Courtesy of HONDA

5. Install the power mirror in the reverse order of removal, and note these items:

- If the clip is damaged or stress-whitened, replace it with a new one.
- Make sure the connector is plugged in properly.
- Make sure the power mirror operate properly.

MIRROR HOLDER REPLACEMENT

2-DOOR

- Put on gloves to protect your hands.
- When prying with a flat-tipped screwdriver, wrap it with protective tape to prevent damage.

1. Adjust the mirror fully to the inward position.
2. Insert a long, thin flat-tipped screwdriver along the notch (A) on the mirror holder (B). Slide the tip of the screwdriver between the mirror holder and the actuator (C).

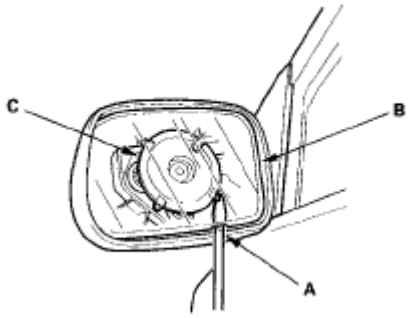

Fig. 10: Identifying Mirror Holder And Actuator
Courtesy of HONDA

3. Quickly twist the screwdriver to separate the mirror holder from the mirror actuator.
4. Insert the screwdriver further under the mirror holder and twist it again.

NOTE: Do not pry up on the mirror holder to separate the two parts, as this can cause either the mirror glass or actuator to break.

5. Separate the mirror holder (A) from the actuator (B) by slowly pulling the mirror apart while separating the adhesive (C), and release the hooks (D). If equipped, disconnect the mirror defogger connectors from the heater pad terminals.

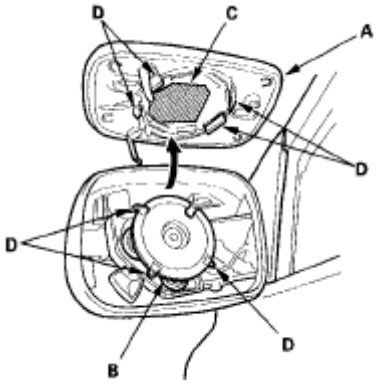

Fig. 11: Identifying Mirror Holder From Actuator
Courtesy of HONDA

6. Before reinstalling the mirror holder to the inner holder (A) of the actuator, check the actuator rods (B) and the actuator boots (C):
    - Make sure each actuator rod is inserted into the actuator securely, and each actuator boot is fully seated on the actuator.

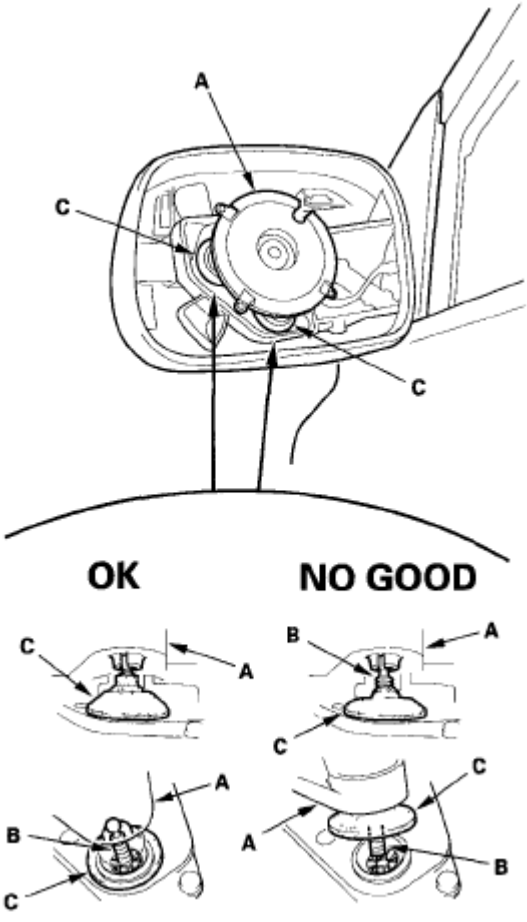

Fig. 12: Identifying Actuator Rods And Actuator Boots
Courtesy of HONDA

7. If equipped, reconnect the mirror defogger connectors.

8. Reattach the hooks of the mirror holder to the actuator, then position the mirror holder on the actuator. Carefully push on the clip portions of the mirror holder until the mirror holder locks into place.
9. Check the actuator operation.

4-DOOR

Note:

- Put on gloves to protect your hands.
- When prying with a flat-tipped screwdriver, wrap it with protective tape to prevent damage.

1. Carefully push on the top edge of the mirror holder (A) by hand.

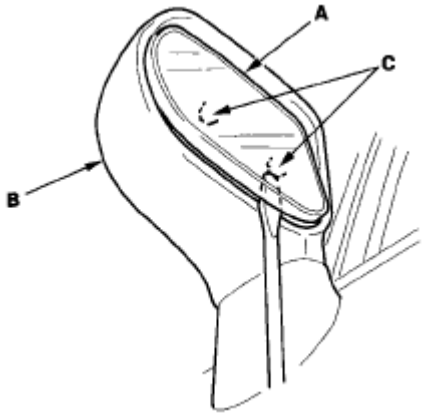

Fig. 13: Identifying Top Edge Of Mirror Holder
Courtesy of HONDA

2. Put a shop towel in the opening between the bottom edge of the mirror holder and the mirror housing (B) to prevent scratches. Insert a flat-tip screwdriver to the mirror holder, and detach the bottom hooks (C).
3. Apply heat with a heat gun to the gap between the mirror holder (A) and the mirror housing (B). Carefully pull out the bottom edge of the mirror holder to separate the adhesive (C), and then release the side hooks (D).

NOTE: Do not heat the plastic parts too much or you may damage them.

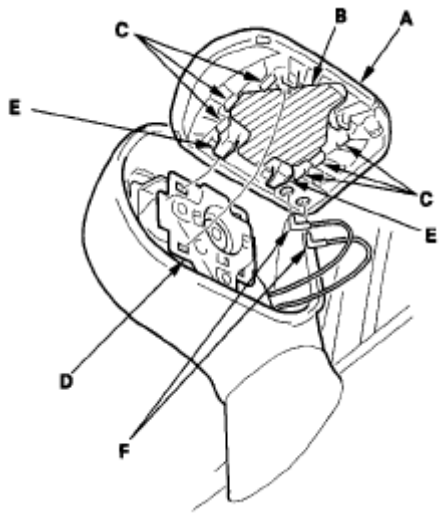

Fig. 14: Identifying Mirror Holder And Adhesive
Courtesy of HONDA

4. Separate the mirror holder from the actuator (E) by releasing the hooks (F). If equipped, disconnect the mirror defogger connectors (G).
5. Before reinstalling the mirror holder to the actuator (A), check the actuator rods (B) and the actuator boots (C).

NOTE: Make sure each actuator rod is inserted into the actuator securely, and each actuator boot is fully seated on the actuator.

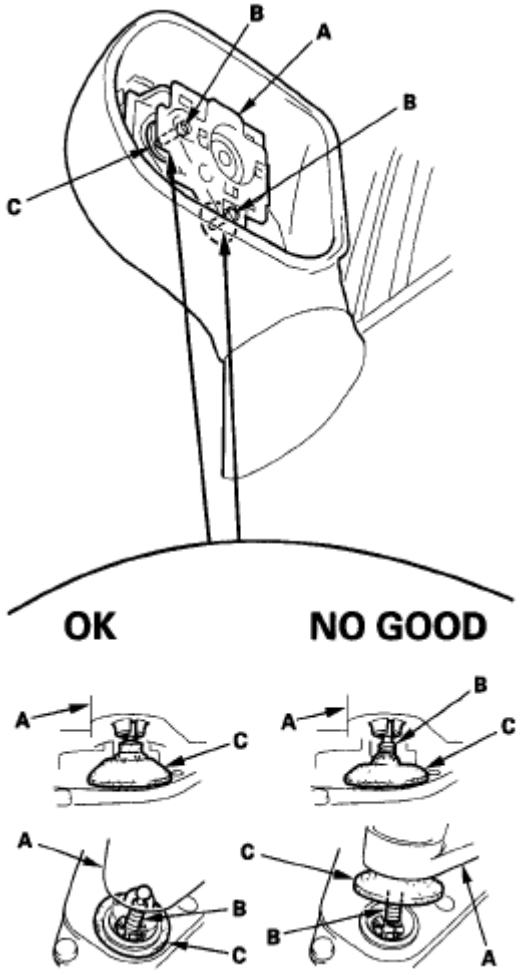

Fig. 15: Identifying Actuator Rods And Actuator Boots
Courtesy of HONDA

6. If equipped, reconnect the mirror defogger connectors.
7. Reattach the hooks of the mirror holder to the actuator, then position the mirror holder on the actuator. Carefully push on the side hooks of the mirror holder until the mirror holder locks into place.
8. Check the actuator operation.

REARVIEW MIRROR REPLACEMENT

1. Turn the rearview mirror base (A) 90 °.

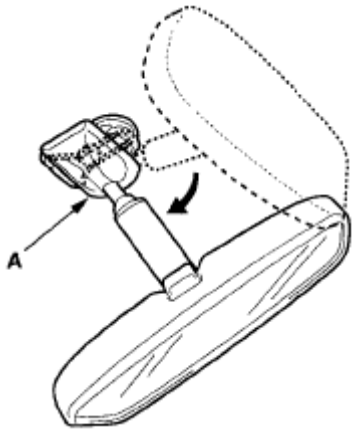

Fig. 16: Identifying Rearview Mirror Base
Courtesy of HONDA

2. Slide the rearview mirror (A) down toward the bottom of the windshield to detach it from the spring (B) in the mount (C).

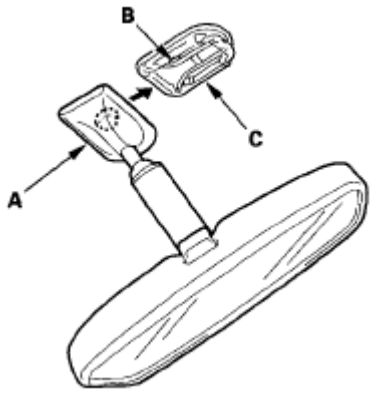

Fig. 17: Identifying Rearview Mirror Down Toward Bottom Of Windshield
Courtesy of HONDA

3. Install the rearview mirror in the reverse order of removal.
4. Install the rearview mirror in the reverse order of removal.

2006-08 ACCESSORIES & EQUIPMENT

Power Mirrors - Civic (All Except Hybrid)

COMPONENT LOCATION INDEX

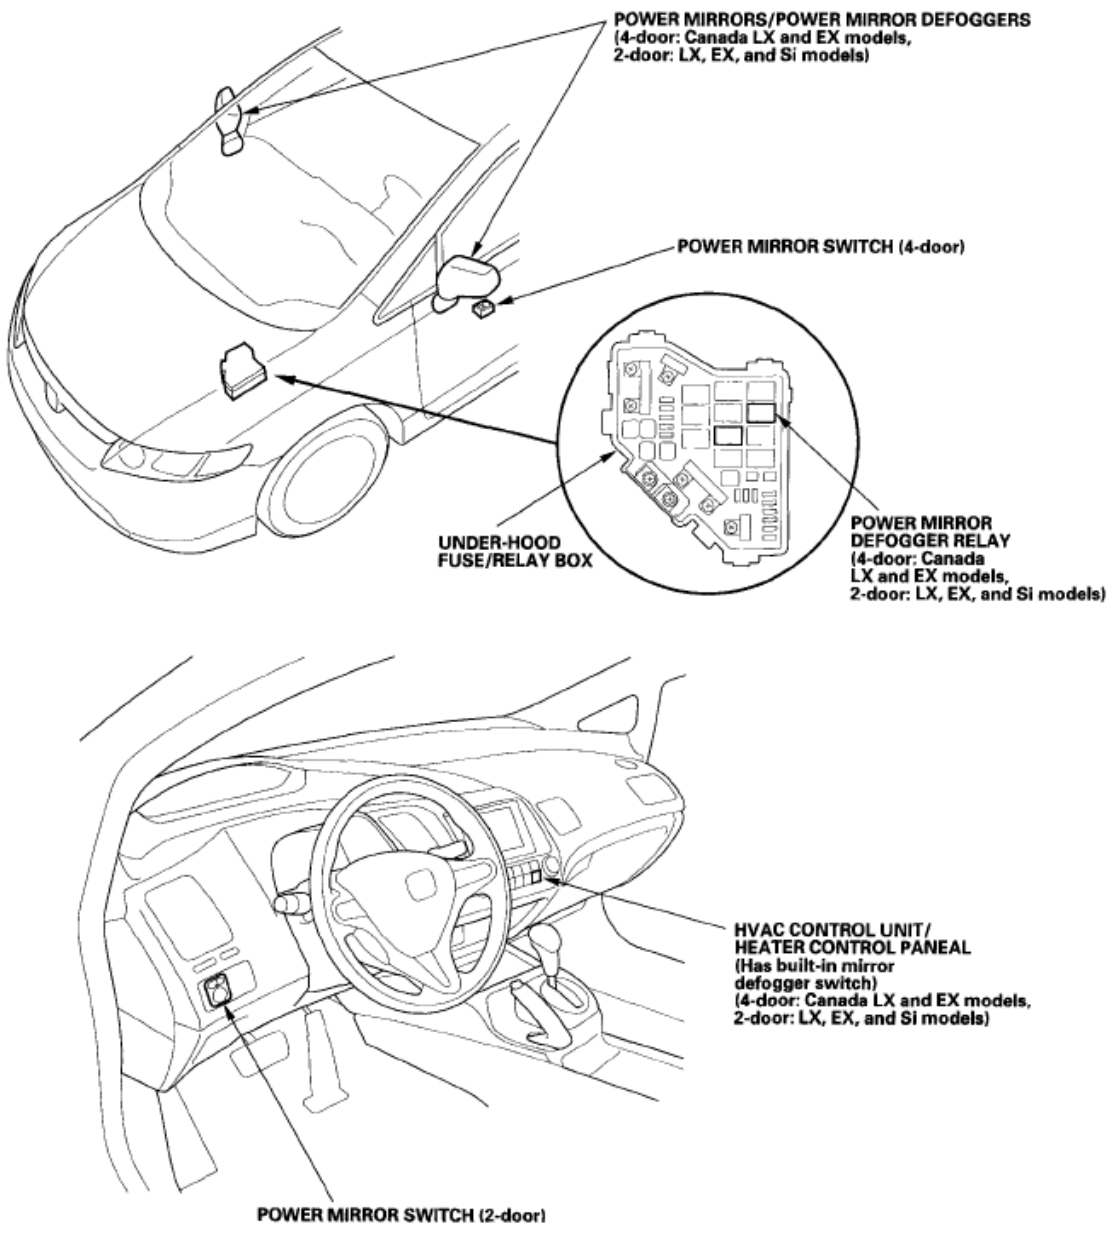

Fig. 1: Locating Power Mirrors Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CIRCUIT DIAGRAM

4-door

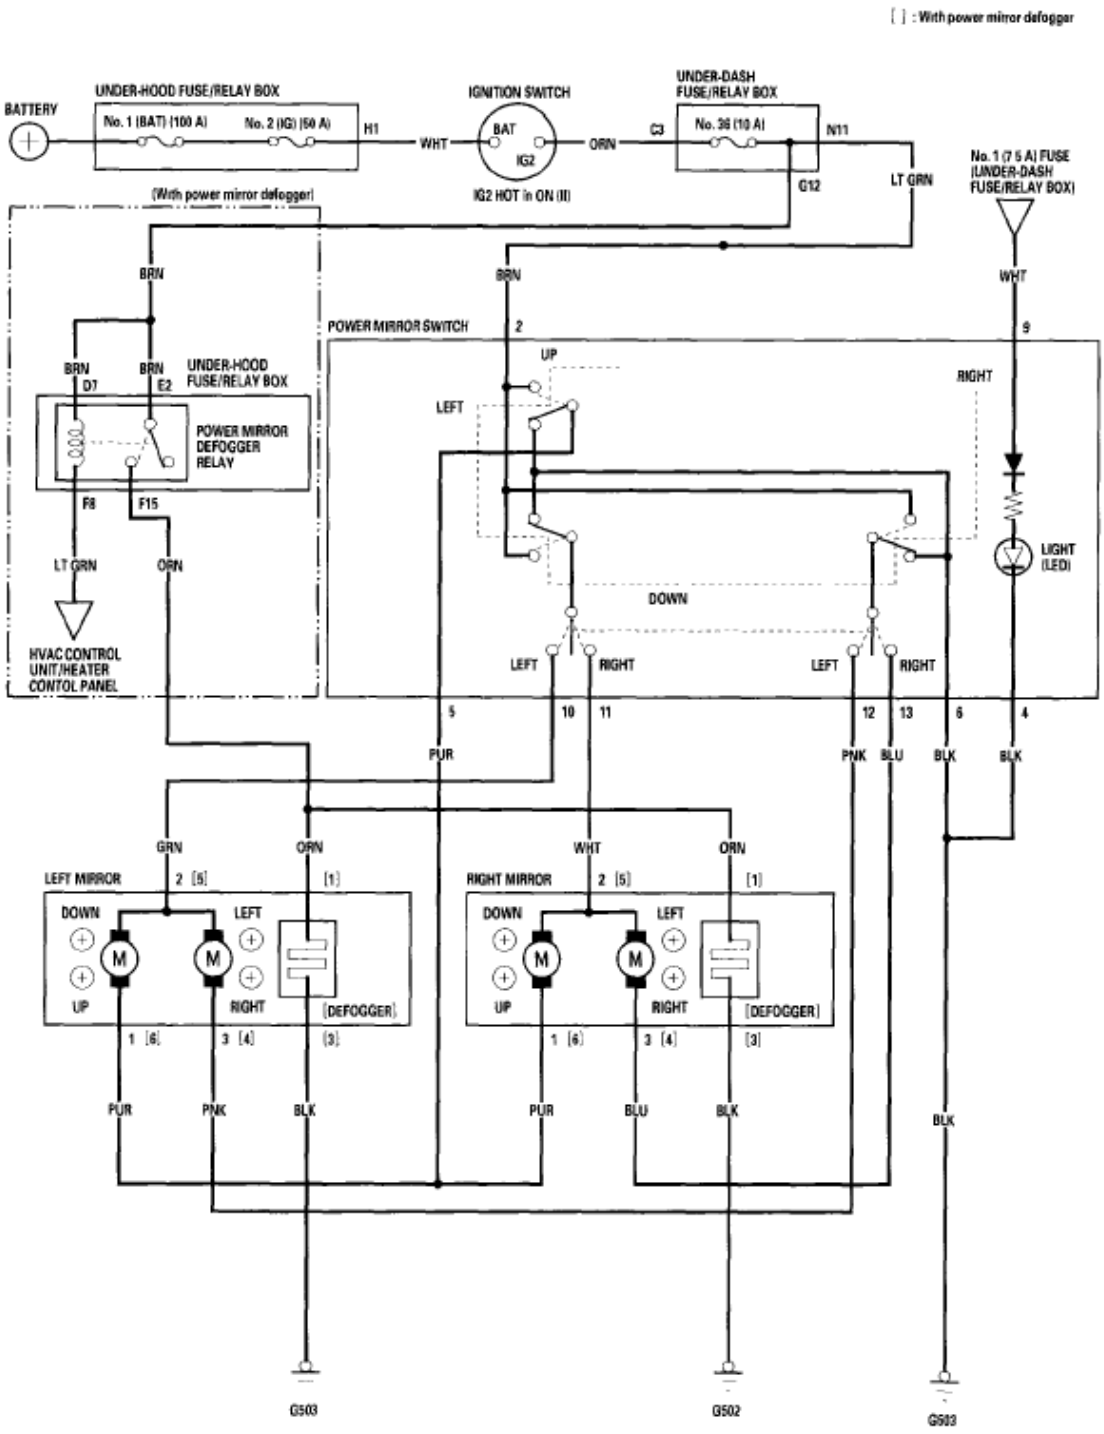

Fig. 2: Power Mirrors Circuit Diagram (4-Door)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2-door

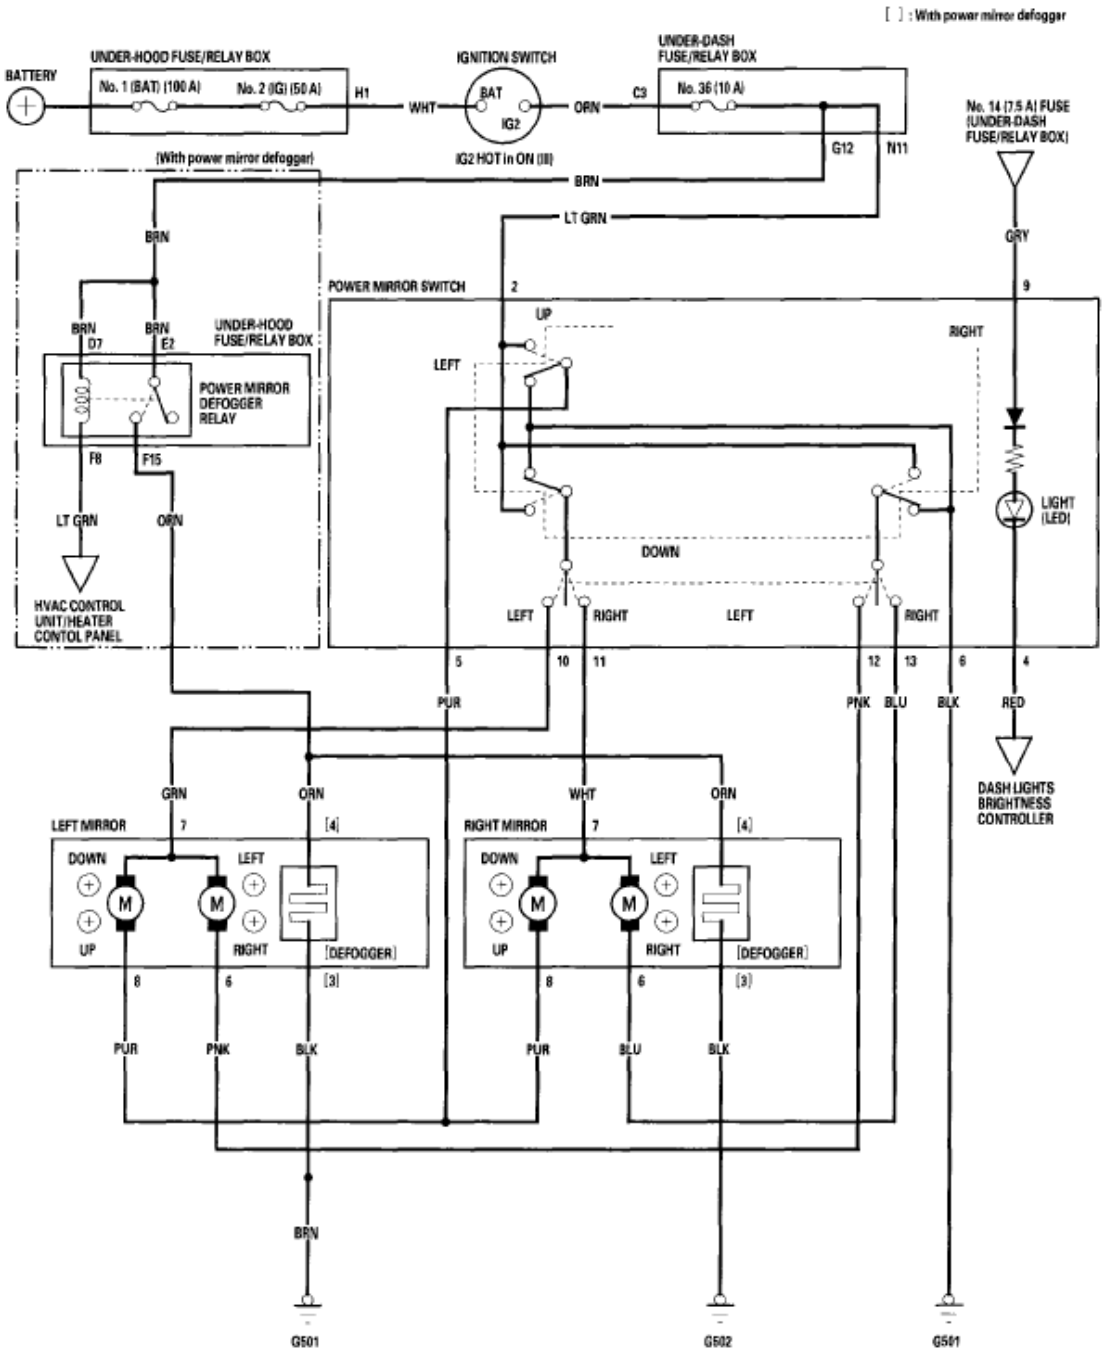

Fig. 3: Power Mirrors Circuit Diagram (2-Door)
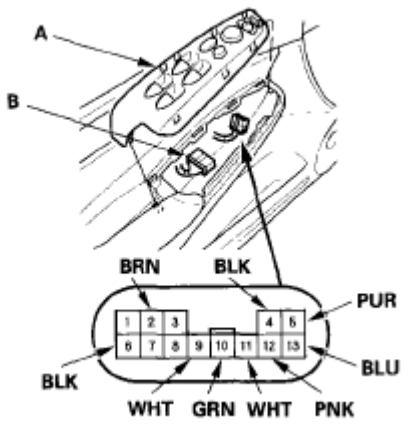
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FUNCTION TEST

1. 4-door: Remove the power window master switch (A).

   2-door: Remove the driver's dashboard lower cover (see **DRIVER'S DASHBOARD LOWER COVER REMOVAL/INSTALLATION**).

4-door



2-door

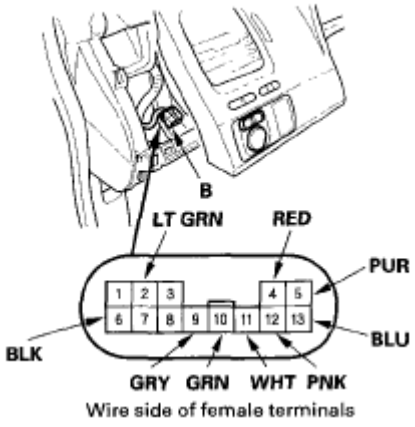


Fig. 4: Removing Power Window Master Switch (4-Door) And Driver's Dashboard Lower Cover (2-Door)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the 13P connector (B) from the power mirror switch.
3. Choose the appropriate test based on the symptom:
   - Both mirrors don't work, go to step 4.
   - Left mirror doesn't work, go to step 6.
   - Right mirror doesn't work, go to step 7.

Both mirrors

4. Check for voltage between the No. 2 terminal and body ground with the ignition switch ON (II). There should be battery voltage.
   - If there is no battery voltage, check for:
     - Blown No. 36 (10 A) fuse in the under-dash fuse/relay box.
     - An open in the BRN (or PUR *) wire.
   - If there is battery voltage, go to step 5.

*: 2-door

5. Check for continuity between the No. 6 terminal and body ground.

   There should be continuity.

   - If there is no continuity, check for:
     - An open in the BLK wire.
     - Poor ground (G 503, G501 *).
   - If there is continuity, check both mirrors individually as described in the next steps.

     * : 2-door

   Left mirror

6. Connect the No. 2 and No. 10 terminals, and the No. 5 (or No. 12) and No. 6 terminals with jumper wires.

   The left mirror should tilt down (or swing left) with the ignition switch ON (II).

   - If the left mirror does not tilt down (or does not swing left), check for an open in the PUR (or PNK) wire between the left mirror and the 13P connector.

     If the wire is OK, check the left mirror actuator.

   - If the mirror neither tilts down nor swings left, repair the GRN wire.
   - If the mirror works properly, check the mirror switch.

   Right mirror

7. Connect the No. 2 and No. 11 terminals, and the No. 5 (or No. 13) and No. 6 terminals with jumper wires. The right mirror should tilt down (or swing left) with the ignition switch ON (II).
   - If the mirror does not tilt down (or does not swing left), check for an open in the PUR (or BLU) wire between the right mirror and the 13P connector. If the wire is OK, check the right mirror actuator.
   - If the mirror neither tilts down nor swings left, repair the WHT wire.
   - If the mirror works properly, check the mirror switch.

POWER MIRROR SWITCH TEST/REPLACEMENT

4-DOOR

1. Remove the driver's door power switch panel (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
2. Disconnect the 13P connector from the power mirror switch (A).

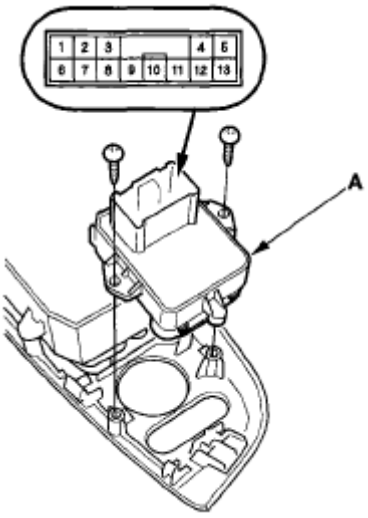

Fig. 5: Disconnecting 13P Connector From Power Mirror Switch (4-Door)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check for continuity between the terminals in each switch position according to **Fig. 6** .

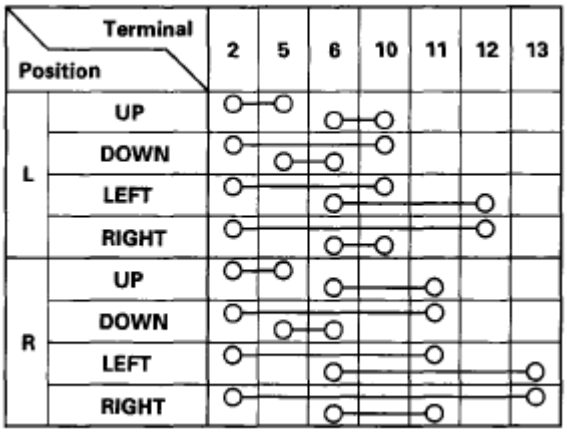

Fig. 6: Checking Continuity Between Power Mirror Switch (4-Door)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the continuity is not as specified, remove the screws and replace the switch.

2-DOOR

1. Remove the driver's dashboard lower cover (see **DRIVER's DASHBOARD LOWER COVER REMOVAL/INSTALLATION**).
2. Disconnect the 13P connector from the power mirror switch (A).

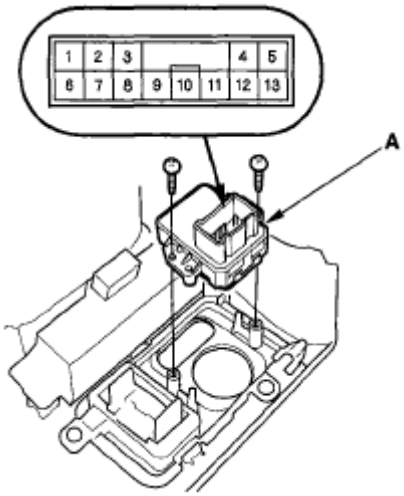

Fig. 7: Disconnecting 13P Connector From Power Mirror Switch (2-Door)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check for continuity between the terminals in each switch position according to **Fig. 8** .

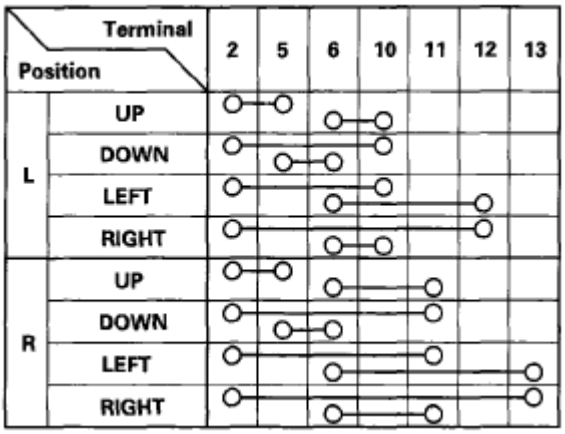

Fig. 8: Checking Continuity Between Power Mirror Switch (2-Door)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the continuity is not as specified, remove the screws and replace the power mirror switch.

POWER MIRROR ACTUATOR TEST

4-DOOR

1. Remove the door panel (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
2. Disconnect the 3P (or 6P)* connector (A) from the power mirror actuator (B).

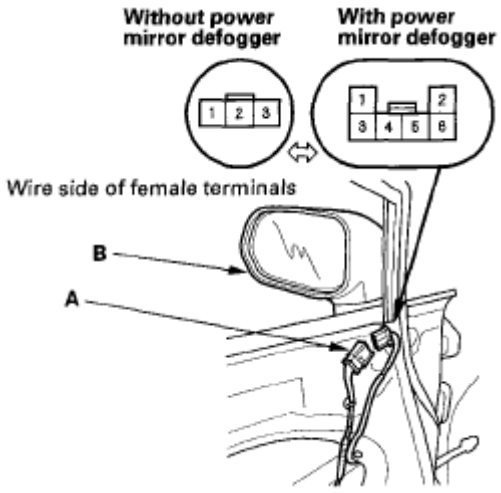

Fig. 9: Disconnecting 3P (or 6P)* Connector From Power Mirror Actuator (4-Door)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check actuator operation by connecting power and ground according to **Fig. 10** .

Position \ Terminal	1 [6]	2 [5]	3 [4]
TILT UP	⊕	⊖	
TILT DOWN	⊖	⊕	
SWING LEFT		⊕	⊖
SWING RIGHT		⊖	⊕

[ ] : With power mirror defogger

Fig. 10: Checking Actuator Operation By Connecting Power And Ground (4-Door)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the mirror fails to work properly, replace the mirror actuator.

Defogger Test

5. Check for continuity between the No. 1 and No. 3 terminals of the 6P connector. These should be continuity.
6. If the continuity is not as specified, check for:
   - An open in the wire.
   - A faulty mirror holder.

2-DOOR

1. Remove the mirror mount cover (see **POWER MIRROR REPLACEMENT**).
2. Disconnect the 8P connector (A) from the power mirror actuator (B).

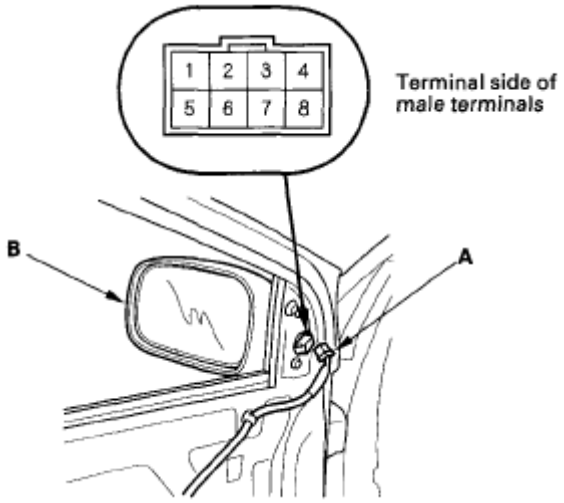

Fig. 11: Disconnecting 8P Connector From Power Mirror Actuator (2-Door)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check actuator operation by connecting power and ground according to **Fig. 12** .

Position \ Terminal	6	7	8
TILT UP		⊖	⊕
TILT DOWN		⊕	⊖
SWING LEFT	⊖	⊕	
SWING RIGHT	⊕	⊖	

Fig. 12: Checking Actuator Operation By Connecting Power And Ground (2-Door)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the mirror fails to work properly, replace the mirror actuator.

Defogger Test

5. Check for continuity between the No. 3 and No. 4 terminals of the 6P connector. These should be continuity.
6. If the continuity is not as specified, check for:
   - An open in the wire.
   - A faulty mirror holder.

POWER MIRROR ACTUATOR REPLACEMENT

4-DOOR

1. Remove the mirror holder (see **4-DOOR**).
2. Remove the power mirror (see **4-DOOR**).
3. Disconnect the 3P (without power mirror defogger) or 6P (with power mirror defogger) connector from the mirror.

4. With power mirror defogger:

   Disassemble the power mirror 6P connector (A), and remove the No. 1 and No. 3 terminals from it.

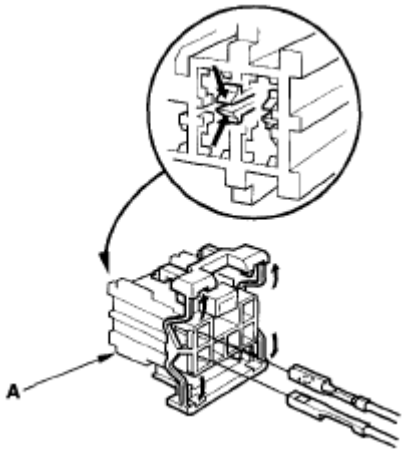

Fig. 13: Removing No. 1 And No. 3 Terminals (With Power Mirror Defogger)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the screw from the gasket (A).

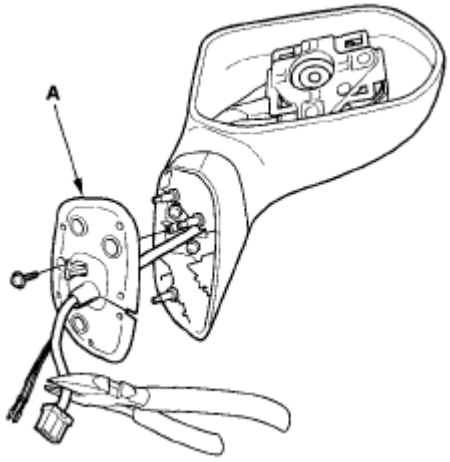

Fig. 14: Removing Screw From Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Record the terminal locations and wire colors.
7. Cut the wire harness with wire cutters, and remove the gasket.
8. Remove the three screws, and separate the mirror housing (A) from the bracket (B).

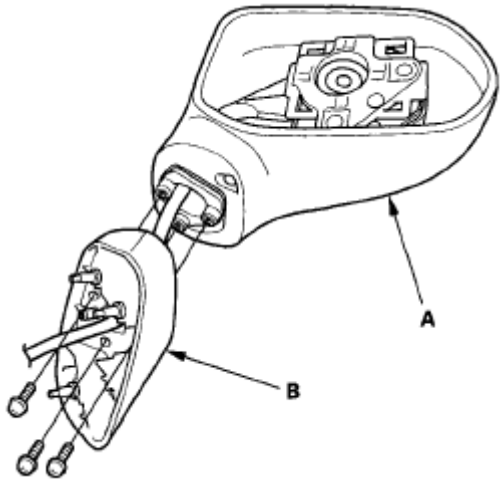

Fig. 15: Separating Mirror Housing From Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the six screws, and the actuator (A).

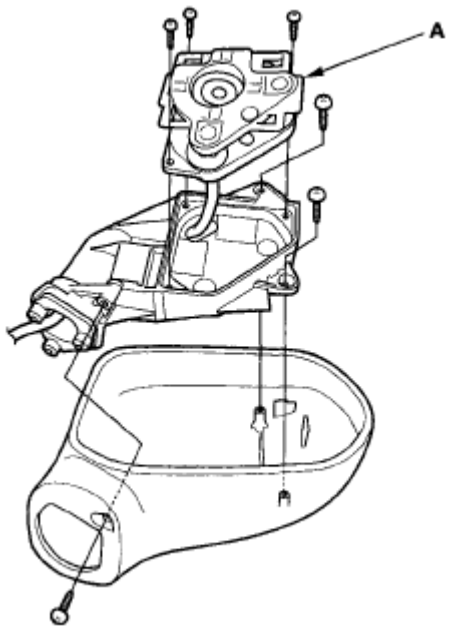

Fig. 16: Removing Actuator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Route the wire harness (A) of the new actuator through the hole in the bracket (B) and gasket (C).

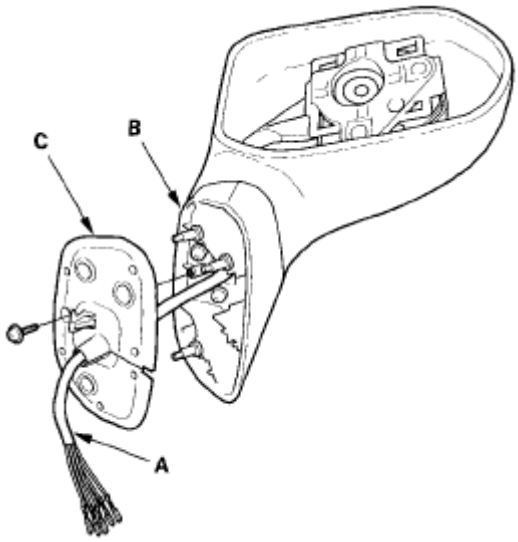

Fig. 17: Routing Wire Harness Of Actuator Through Hole In Bracket And Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the actuator, bracket, harness clip, and gasket in the reverse order of removal.
12. Insert the new actuator terminals into the connector in the original arrangement.

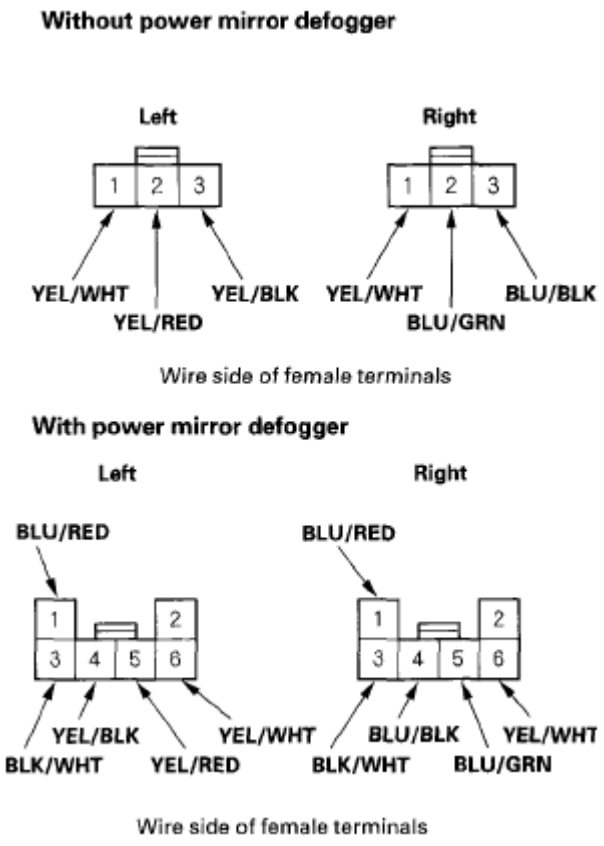

Fig. 18: Inserting New Actuator Terminals Into Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Apply tape to seal the intersection of the wire harness and the gasket.

14. Reassemble in the reverse order of disassembly. Be careful not to break the mirror when reinstalling it to the actuator.
15. Reinstall the mirror assembly on the door.
16. Operate the power mirror to ensure smooth operation.

2-DOOR

1. Remove the mirror holder (see **MIRROR HOLDER REPLACEMENT**).
2. Remove the power mirror (see **POWER MIRROR REPLACEMENT**).
3. Disconnect the 8P connector from the power mirror.
4. Remove the gasket (A).

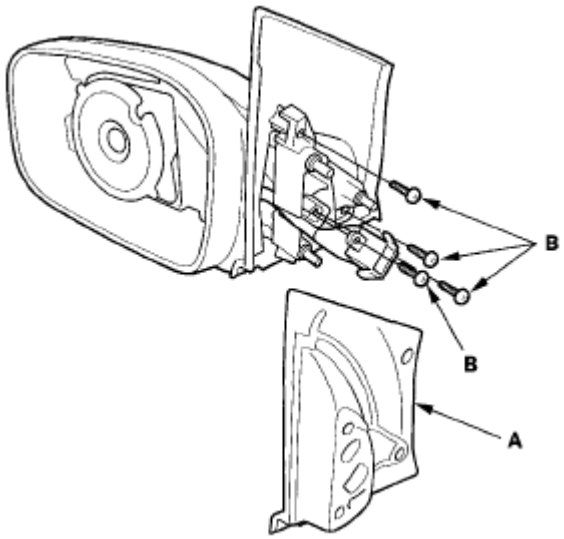

Fig. 19: Removing Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the T10 TORX screws (B).
6. Remove the T10 TORX screws (A) and the mirror actuator (B).

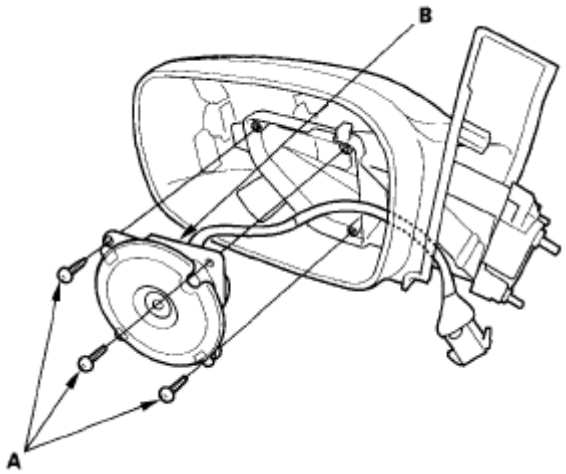

Fig. 20: Removing Mirror Actuator

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the power mirror actuator in the reverse order of removal.

2006-08 ACCESSORIES & EQUIPMENT

Navigation System - Civic (Except Hybrid)

COMPONENT LOCATION INDEX

4-door

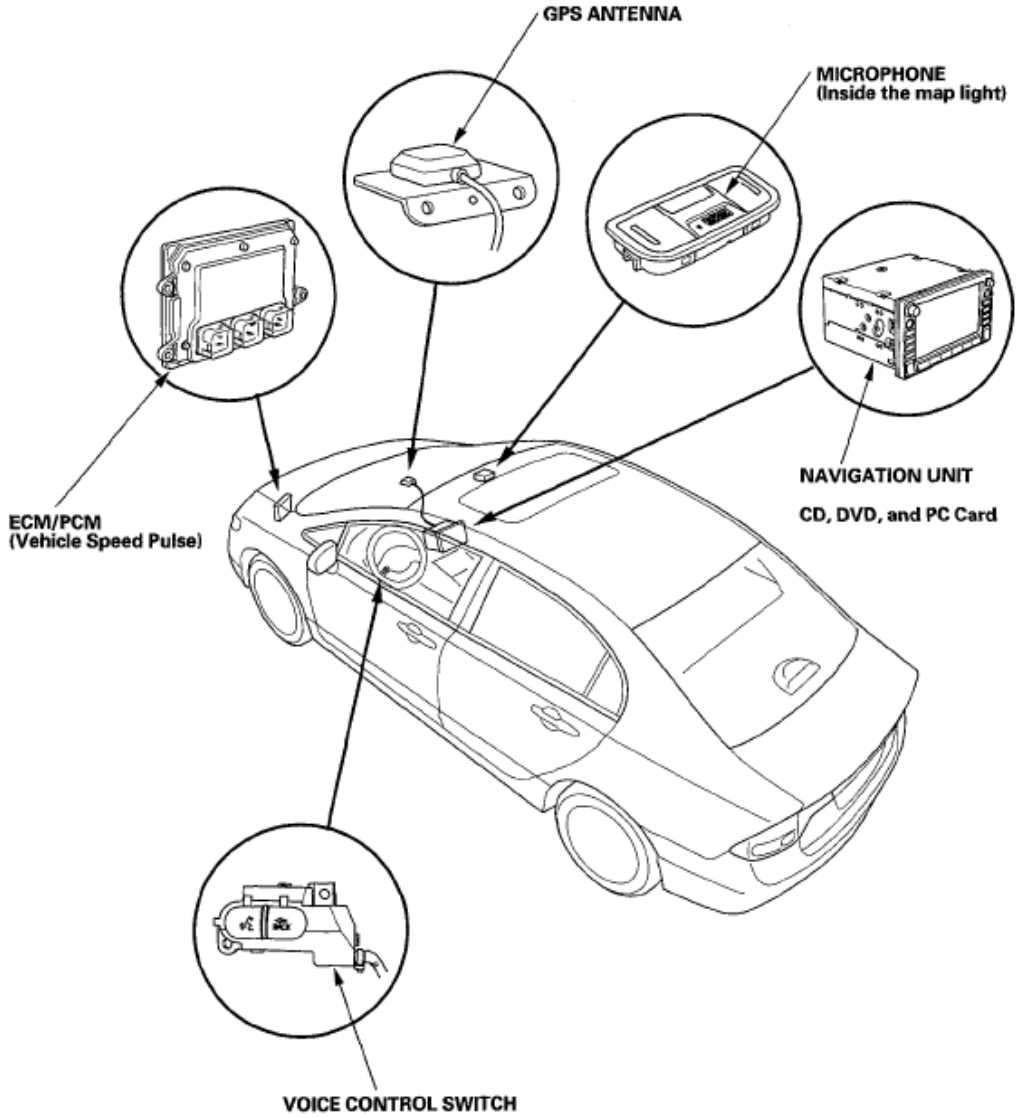

Fig. 1: Identifying Navigation System Component Location - 4-Door
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2-door

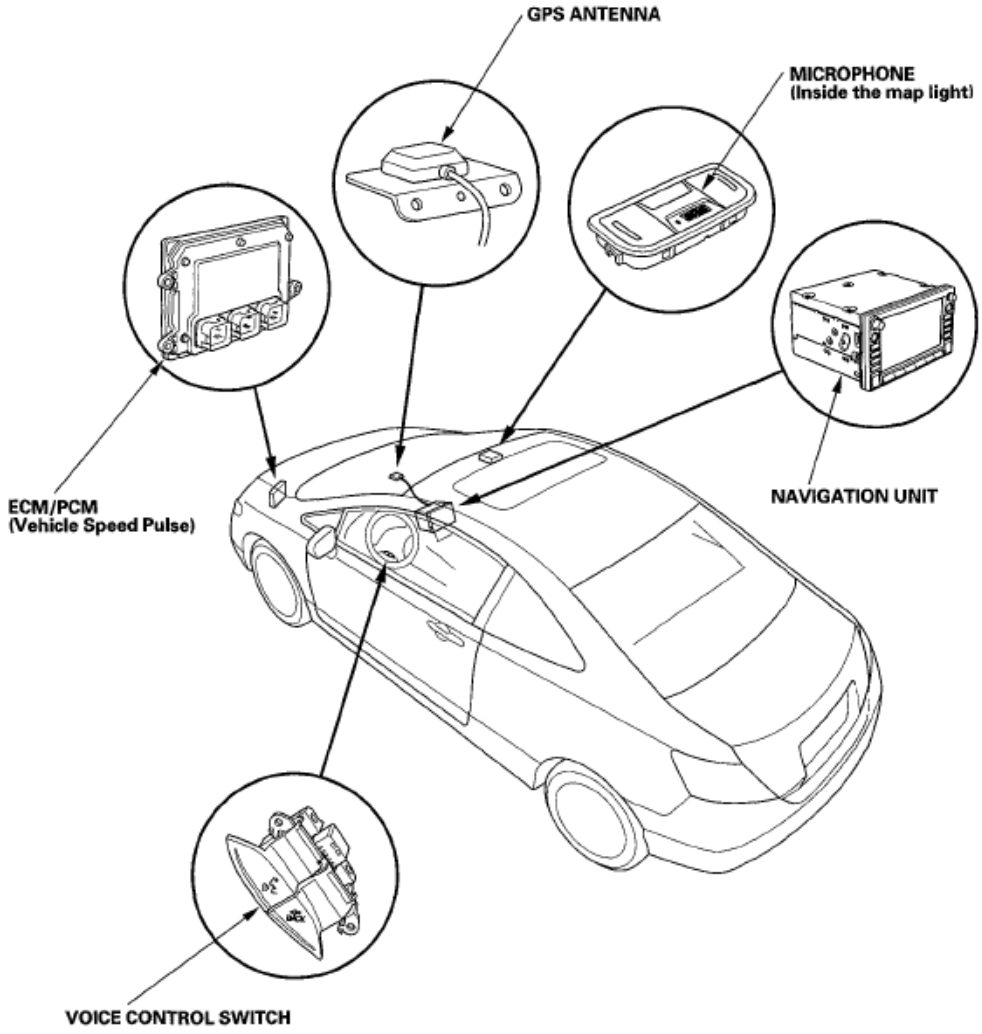

Fig. 2: Identifying Navigation System Component Location - 2-Door
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GENERAL TROUBLESHOOTING INFORMATION

GENERAL OPERATION

Refer to the Navigation System manual, for the navigation system operating procedures.

ANTI-THEFT FEATURE

The navigation system has a coded theft protection circuit. Be sure you have the customer's anti-theft security code before;

- Disconnecting the battery
- Disconnecting the navigation unit 12P and 17P connector
- Removing the No. 23 (10 A) fuse from the under-hood fuse/relay box

After service, reconnect power to the navigation unit, and turn the ignition switch ON (II). Enter the 4-digit

anti-theft security codes, then select Done.

If the code cannot be found, use the interactive Network (*i* N) to look it up. You can view the serial number in one of the Navi ECU diagnostic screen (see **TOUCH PANEL CALIBRATION**). Alternatively, you will need the serial number from the navigation unit in the dash.

When replacing the navigation unit, be sure to give the customer the new anti-theft security code.

SYMPTOM DIAGNOSIS

Certain circumstances and system limitations will result in occasional vehicle positioning errors. Some customers may think this indicates a problem with the navigation system when, in fact, the system is normal. Keep the following items in mind when interviewing customers about symptoms of the navigation system.

SELF-INERTIAL NAVIGATION LIMITATIONS

The limitations of the self-inertial portion of the navigation system (the yaw rate sensor and the vehicle speed signal) can cause some discrepancies between the vehicle's actual position and the indicated vehicle position (GPS vehicle position).

The following circumstances may cause vehicle positioning errors:

- Moving the vehicle with the engine stopped and the vehicle stopped, such as by ferry or tow truck, or if the vehicle is spun on a turn table.
- Tire slippage, changes in tire rolling diameters, and some driving situations may cause discrepancies in travel distances. Examples of this include:
  - Continuous tire slippage on a slippery surface.
  - Driving with snow chains mounted.
  - Abnormal tire pressure.
  - Incorrect tire size.
  - Frequent lane changes across a wide highway.
  - Continuous driving on a straight or gently curving highway.
- Tolerances in the system and map inaccuracies will sometimes limit how precisely the vehicle position is indicated. Examples of this include:
  - Driving on roads not shown on the map (map matching is not possible).
  - Driving on a road that winds in one direction, such as a loop bridge, an interchange, or a spiral parking garage.
  - Driving on a road with a series of sharp hair-pin turns.
  - Driving near a gradual highway exit or transition.
  - Driving on one of two close parallel roads.
  - Making many 90 degree turns.
  - The direction to destination icon or the destination icon shown or the map may be up to several hundred feet away from the actual location.

GLOBAL POSITIONING SYSTEM (GPS) LIMITATIONS

The GPS cannot detect the vehicle's position during the following conditions:

- Metallic window tinting above the GPS antenna,
- When only three satellite signals can be received (Four satellite signals are required for accurate positioning).
- When driving near high tension power lines.
- When the satellite signals are blocked by the operation of some electronic after market accessories including, but not limited to non-OEM in-dash entertainment units (radio, CD players/changers, radar detectors and theft recovery systems) and cell phones placed near the navigation system.
- When the satellite control centers are experiencing problems.

The accuracy of GPS is reduced during these instances:

- Metallic window tinting above the GPS antenna.
- When only three satellite signals can be received (Four satellite signals are required for accurate positioning).
- When driving near high tension power lines.
- When the satellite signals are blocked by the operation of some electronic after market accessories including, but not limited to non-OEM in-dash entertainment units (radio, CD players/changers, radar detectors and theft recovery systems) and cell phones placed near the navigation system.
- When the satellite control centers are experiencing problems.

MUTING LOGIC

Whenever the navigation system is giving guidance, the front speakers are muted. When the voice control system is being used, all of the speakers are muted.

LCD UNIT LIMITATIONS

- In cold temperatures, the display may stay dark for the first 2 or 3 minutes until it warms up.
- When the display is too hot because of direct summer sunlight, it will remain dark until the temperature drops.
- When the humidity is high and the interior temperature is low, the display may appear cloudy. The display will clear up after some use.
- Fingerprints on the touch panel may sometimes be noticeable because of the panel's low-reflection coating. Clean the screen with a soft damp cloth. You may use a mild cleaner intended for eye glasses or computer screens. To avoid scratching the panel, do not rub too hard, or use abrasive cleaners, or shop towels.
- The touch panel consists of a touch sensitive resistive membrane covering the display. Unlike previous systems, you must actually touch the display to activate it. Never use hard or sharp implements to operate the screen because you risk damaging the sensing membrane. If a touch switch does not function immediately, shift your finger slightly, and touch it again.

SYMPTOM DUPLICATION

- If you can duplicate the symptom, compare it to a known-good vehicle. Only use a vehicle of the same model, year, trim, and software version. If you can duplicate the symptom in the known-good vehicle, then it is a characteristic of the system.
- When the symptom can be duplicated, follow the self-diagnostic procedures and the appropriate

troubleshooting procedures.

- When the symptom does not reappear or only reappears intermittently, ask the customer about the conditions when the symptom occurred.
  - Try to establish if outside interference may be the cause.
  - Try to duplicate the symptom under the same conditions the customer experienced.
  - Vibration, temperature extremes, and moisture (dew, humidity) are factors that are difficult to duplicate.
  - Inspect the vehicle for after market electronic devices (vehicle locators, radar detector amps, etc.) that may be hidden.

NOTE: When troubleshooting navigation system problems, ensure that the known-good vehicle is the same software version year and model as the vehicle being serviced. Mixing incompatible navigation DVDs or other system components can delay the troubleshooting process by causing effects unrelated to the original problem.

SERVICE PRECAUTIONS

- If the navigation unit needs to be replaced, inform the client that personal information in the navigation system may be lost. If possible, have the customer record any personal information before the unit is replaced. On '07-08 models, you can back up the navigation data and transfer it to a new navigation unit. See **SAVE USER'S MEMORY** .
- Before disconnecting the battery, make sure you have the anti-theft codes for the audio and navigation systems, and write down the audio presets.

  Also obtain any PGM-FI or transmission DTCs and freeze frame date (which will be lost when the ECM/PCM loses power).

- When the battery is disconnected, the internal GPS clock is reset to 0:00. The clock will reset to the correct time after the system finishes GPS initialization.
- After reconnecting the battery, you have to wait to get the initial signal from the satellite. It will take 10 to 45 minutes.
- Before returning the vehicle to the client, enter the audio and navigation anti-theft security codes, then enter the audio presets.
- Adjust the setup clock settings (time zone and daylight savings) in the navigation system.

SYSTEM INITIALIZATION

If for any reason you lose power to the navigation system (the battery was disconnected), the navigation system will require initialization. Once completed, your system will be ready to use.

Initialization requires the following:

- Entering the 4-digit anti-theft security code to unlock the system.
- GPS initialization (may not be needed depending of the length of time the system was without power).
- Map-matching to align the GPS to a location on the map.

ENTERING SECURITY CODE

Anytime power is disconnected from the navigation unit, the 4-digit anti-theft code must be entered on the navigation system display. This 4-digit code can be found on a small code card that was given to the customer. Enter the 4-digit code, then select Done.

If the navigation system anti-theft code cannot be found, use the interactive Network (*i* N) to look it up. You will need the serial number from the navigation unit to do this. You can view the serial number in the diagnostic mode. Select Unit Check from the main menu, then the Navi ECU diagnostic screen. This allows you go get the serial number without removing the navigation unit.

The *i* N may display more than one code for a given serial number. This is because serial numbers are not unique. You may have to try more than one 4-digit code. If no code is shown, or if the code(s) given do not work in the navigation unit, contact the Automobile Warranty department. If the code 0000 works, then replace the navigation unit.

When replacing the navigation unit or audio unit, be sure to give the customer the new anti-theft security code.

GPS INITIALIZATION

Depending on the length of time the battery was disconnected, your system may require GPS initialization. If it does, the following screen appears:

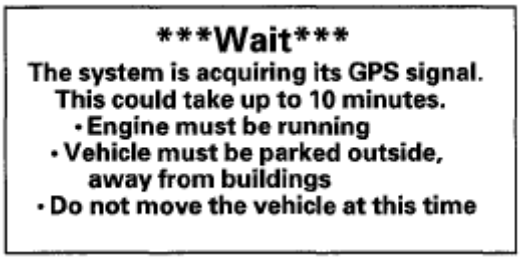

Fig. 3: Identifying GPS Initialization Label
Courtesy of AMERICAN HONDA MOTOR CO., INC.

If this procedure is not necessary, the system proceeds directly to the Disclaimer screen. During initialization, the system searches for all available GPS satellites and obtains their orbital information. During this procedure, the vehicle should be out in the open with a clear view of the sky.

If the navigation system finds the satellites properly, this box clears and changes to the Disclaimer screen. If within 10 minutes the system fails to locate a sufficient number of satellites to locate your position, the following screen appears:

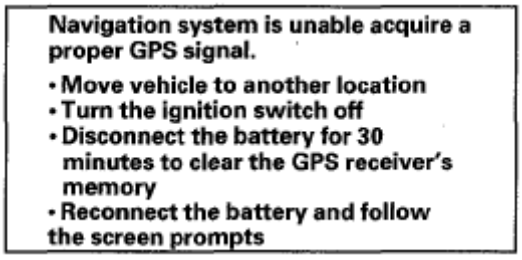

Fig. 4: Identifying GPS Initialization Label
Courtesy of AMERICAN HONDA MOTOR CO., INC.

After 30 minutes with this screen displayed, turn off the engine, then restart the vehicle. If you now see the Disclaimer screen, the GPS initialization is complete.

NOTE:

- **The average acquiring time is less than 10 minutes, but it can take as long as 45 minutes.**
- **If the system is still unable to acquire a signal, follow the instructions on the screen. If this screen appears again, go to troubleshooting for the GPS icon is white or not shown (see GPS ICON IS WHITE OR NOT SHOWN).**
- **To bypass the GPS acquire screens, press and hold the Menu and Zoom Out keys at the same time. Touch the Return button on the screen to exit the diagnostic mode. This allows you to continue troubleshooting while in the shop.**

AFTER SERVICING PROCEDURES-MAP MATCHING

- Park the vehicle in an area where the GPS satellite signals are unobstructed, and check the satellite mark on the display.
- Drive the vehicle 1 mile before entering a destination and confirm the road being used is displayed at the bottom of the screen (map-matched).
- Enter the dealer address and confirm the system routes and performs normally.
- Clear any previous destinations and address entries that may have been entered for testing purposes.

OBTAINING A NAVIGATION DVD

If the navigation DVD is lost or damaged, or you need a yearly updated DVD, you have two ways to purchase one. You can either call (888) 291-4675, or order online at www.honda.com.

Both methods require a credit card. The DVD for this model has a turquoise (blue/green) label and cannot be ordered through the parts system. The following DVDs will not work in this navigation system:

- Earlier model navigation DVDs (black, orange, or white label)
- Map software programs manufactured by other companies
- DVD movies or DVDs containing audio recordings
- Copies of an original navigation DVD

Updated DVDs are available for purchase usually in the fall of each year. They may contain the following:

- Enhanced maps and points of interest (POI) coverage
- Fixes for minor software bugs
- Additional features

NOTE:

- **Map-matching must be done any time the DVD is removed or replaced.**

- **Always order navigation DVDs on an as-needed basis. During a typical model year, each color DVD may undergo a half a dozen software-only version upgrades to fix minor issues on some or all models the DVD supports. This is normal. Usually only the letter at the end of the version number changes, while the database (maps and POIs) remain unchanged.**
- **Never promise your clients future free updates. There are no free programs for updating the navigation DVD. Update DVDs are generally available for purchase each fall. The online DVD order site provides information when an update for a particular color DVD is available. Damaged discs are not warrantable.**

DVD HANDING AND CLEANING

To avoid damaging or leaving fingerprints on the DVD, always handle it by the edges and place it in a jewel case whenever it is outside the navigation unit. Deep scratches or fingerprints on the back of the DVD can cause intermittent rebooting or other system errors.

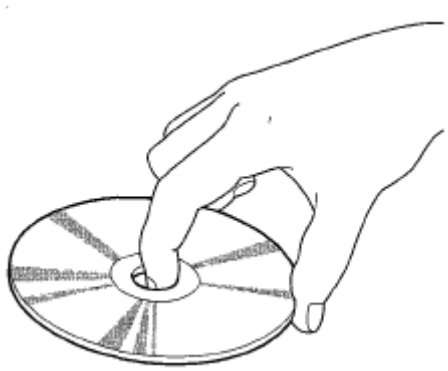

Fig. 5: Precaution For - DVD Handing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Smudges and fingerprints can be carefully removed using a mild cleaner and tissues designed to clean eyeglasses. To clean a DVD, use a clean soft cloth. Very gently wipe across the DVD from the center to the outside edge, never in a circular motion.

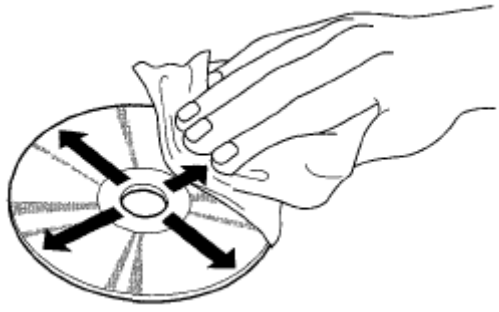

Fig. 6: Precaution For - DVD Cleaning
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Do not place stabilizer rings or labels on the DVD.

EARLIEST DVD VERSION APPLICATION FOR EACH MODEL

Each navigation system DVD contains a map/POI (point of interest) database and the navigation system software for each model that it supports. Inserting an older DVD can cause problems since it lacks the software to provide the specific features needed for that model. Unfortunately, the navigation software does not detect or warn you that the version is outdated, and it may even appear to operate.

NOTE: Replacing a DVD just because the version number is higher is not always warranted. A higher software version does not necessarily mean it contains newer software for your model. The DVD contains software for all models that use the same color DVD, and a revised number may or may not have software fixes or upgrades for the model in question.

Typical warning symptoms that an outdated DVD is being used include:

- The Honda model navigation screen may display a Acura logo while booting up.
- A newly introduced model future or accessory may not display properly, and Extension will display instead.

NOTE: Extension may be displayed when using Music Link, but should never be displayed when XM is selected.

- The current street (the street being driven on) may not appear properly at the bottom of the map screen display when the vehicle is driven on a main road.

NOTE: If necessary, compare the operation to the navigation system of the same model and year vehicle that has a current DVD.

HOW TO IDENTIFY NAVIGATION DVD VERSIONS, AND HOW TO INSPECT A DVD FOR DAMAGE

To determine the navigation version on a particular model, start the engine, then locate the navigation unit. Open the DVD door, and push the eject button to eject the DVD. Hold the DVD by the edges, and check for these items:

- The label color.
- Read the DVD version on the label, and note it on the repair order. The version number is near the bottom of the label text (for example, ver: 4.23A). You will need this version number:
  - To verify that the DVD version is appropriate for the vehicle.
  - Any time you call Tech Line regarding a navigation system issue.
  - To answer customer inquires concerning update or coverage issue.

    NOTE: Customers may obtain DVDs from sources outside the normal ordering process. If you determine this is the case, recommend that your customer purchase the appropriate DVD from the Honda Disc Fulfillment Center (see ORDERING A DVD).

  - Check the underside of the DVD for signs of mishandling. Deep scratches, swirl marks, or

fingerprints can cause random lock-ups, reboots, and DVD read or format errors.

NOTE: A damaged DVD is not covered under warranty unless the disc is damaged by the navigation unit. Damage by the navigation unit typically appears as circular scratches caused by something rubbing against the DVD as it spins. The damage may appear as arcs or complete circles on the DVD reading surface.

  - Verify that the underside of the DVD is silver, and not a copy with a blue color. Copies will not work properly and can cause other symptoms that mimic hardware problems.
- Incorrectly colored DVDs being put into navigation vehicles. This causes the system to either display error messages, or it causes system malfunctions that mimic a hardware problem. This result in the customer driving away with a malfunctioning navigation system.
- The DVD version provided to the customer is out-of date or incompatible with a particular model. This inconveniences your customer by delaying the repair, or by causing additional (and unnecessary) returns to your dealership.
- The customer experiences bugs or other issues that have already been resolved in later versions currently available at the fulfillment desk.

If the DVD is defective, or has any of the issues mentioned above, return the vehicle to your customer and recommend that they order the proper DVD from the Honda Disc Fulfillment Center (see ORDERING A DVD).

NOTE: If it is determined that the navigation unit is defective (through the appropriate service manual troubleshooting procedures) and the DVD will not eject, order a replacement navigation unit, and also order a DVD from the Honda Disc Fulfillment Center.

HOW TO ANSWER CUSTOMER QUESTIONS ABOUT NAVIGATION COVERAGE

Some customers may ask questions regarding a city, address or POI (point of interest) covered by the navigation system. It is better to verify a coverage question on an actual vehicle than to disappoint your customer by promising coverage that may be incomplete or missing in their area. The following suggestions can be used to answer coverage inquiries from your customer.

Is my address covered by the navigation system?

Using a current production vehicle (of the same model), try entering the customer's address (street first) to see if their area is covered. Always enter the street first, because sometimes their city may be included in a neighboring township, or under some lager metropolitan city name. If the address is shown in a later year vehicle, but not your customer's vehicle, you might want to recommend that your customer purchase an update.

Is my city covered by the navigation system?

For general questions about whether a city is covered, view the map coverage link on the DVD order site. On the site, you enter a year and model, and then click on the Coverage link. You then select a state or province, and the cities are listed. Of course, this does not guarantee that the customer's road or address is in the system. Verifying on an actual production vehicle is always the best guarantee that your information is

accurate.

The gas station on my corner is now a restaurant. Why is it still incorrect in the navigation system?

For POI-related customer questions, explain that businesses are constantly moving, and there can be a considerable lag in updating the millions of POIs in the system. The database is updated annually, and the best way to the verify whether the POI is accurate is verify the inquiry on a current production vehicle.

Answers to these and other questions regarding coverage can be found in these locations:

- In the Frequently Asked Questions section of the navigation system manual.
- At the on-line DVD order site, by clicking on the **FAQs** link (see ORDERING A DVD).

PRECAUTION ON CUSTOMER SNEAK PREVIEWS

Your customer might request a look (or sneak preview) at features in the latest navigation software. You should never preview a navigation DVD in a customer's vehicle. Inserting a new DVD installs the latest software from the DVD into the memory of the customer's navigation system. When the original DVD is reinstalled, the newer software remains in memory and is often incompatible with the customer's original DVD Map and POI database.

If your customer wishes to see the latest navigation coverage or software features, demonstrate it on an in-stock vehicle that already has the latest DVD version.

If, by chance, a newer version is located accidentally, either by the dealer or the customer, the only remedy is to enter the navigation diagnostic mode's Version screen and do a forced download. Refer to the *i* N for applicable patches that may need reinstalling.

SYMPTOM TROUBLESHOOTING INDEX

SYMPTOM TROUBLESHOOTING CHART

Symptom	Diagnostic procedure	Also check for
No picture is displayed	Symptom Troubleshooting (see **NO PICTURE IS DISPLAYED**)	• Navigation unit • Open/short between the navigation unit, or the XM receiver or the GA-Net bus • Harness/fuses/switches
Picture has lines/rolls/other issues or is an odd color	Symptom Troubleshooting (see **PICTURE HAS LINES/ROLLS/OTHER ISSUES OR IS AN ODD COLOR**)	• Navigation unit • Harness/fuses/switches
Navigation display buttons do not work or respond properly	Symptom Troubleshooting (see **NAVIGATION DISPLAY BUTTONS DO NOT WORK OR RESPOND PROPERLY**)	• Navigation unit • Open/short between the XM receiver or the GA-Net bus • Harness/fuses/switches
GPS icon is white or not shown	Symptom Troubleshooting (see **GPS ICON IS WHITE OR NOT**	• Navigation unit • GPS antenna/cable

	SHOWN)	• Harness/fuses/switches
Voice guidance cannot be heard, is broken up, or there is static	Symptom Troubleshooting (see **GPS ICON IS WHITE OR NOT SHOWN**)	• Navigation unit • Harness/fuses/switches
Voice control does not work/respond	Symptom Troubleshooting (see **VOICE CONTROL DOES NOT WORK/RESPOND**)	• Navigation unit • Microphone/steering buttons • Harness/fuses/switches

DVD screen error messages	Symptom Troubleshooting (see **DVD SCREEN ERROR MESSAGES**)	• Navigation unit • DVD
System always comes up in in-line diagnostic mode	Symptom Troubleshooting (see **DVD SCREEN ERROR MESSAGES**)	Software remedy, do not replace hardware
Display day/night mode does not work	Symptom Troubleshooting (see **DISPLAY DAY/NIGHT MODE DOES NOT WORK**)	• Navigation unit • Gauge control module (CAN) • Harness/fuses/switches
System locks up or freezes constantly	Symptom Troubleshooting (see **DISPLAY DAY/NIGHT MODE DOES NOT WORK**)	• Navigation unit • Harness/fuses/switches • DVD
Vehicle icon wanders across the map when driving (does not follow a displayed road) or map or vehicle ICON spins	Symptom Troubleshooting (see **VEHICLE ICON WANDERS ACROSS THE MAP WHEN DRIVING (DOES NOT FOLLOW A DISPLAYED ROAD) OR MAP OR VEHICLE ICON SPINS**)	Navigation unit (Yaw rate sensor)
Vehicle icon moves by itself or spins when parked	Symptom Troubleshooting (see **VEHICLE ICON WANDERS ACROSS THE MAP WHEN DRIVING (DOES NOT FOLLOW A DISPLAYED ROAD) OR MAP OR VEHICLE ICON SPINS**)	Navigation unit
Navigation display stays on with ignition switch OFF	Symptom Troubleshooting (see **NAVIGATION DISPLAY STAYS ON WITH IGNITION SWITCH OFF**)	• Harness/fuses/switches • Aftermarket accessory or cell phone installed
Navigation cannot control audio system	Symptom Troubleshooting (see **NAVIGATION DISPLAY STAYS ON WITH IGNITION SWITCH OFF**)	• Navigation unit • Open/short between the Navigation unit, or the XM receiver or the GA-Net bus
		• Navigation unit

Navigation cannot control XM radio	Symptom Troubleshooting (see **NAVIGATION CANNOT CONTROL XM RADIO**)	• Open/short between the Navigation unit, or the XM receiver or the GA-Net bus • Harness
Navigation frequently asks for anti-theft code and needs GPS initialization	Symptom Troubleshooting (see **NAVIGATION CANNOT CONTROL XM RADIO**)	• Navigation unit • Harness/fuses/switches/unit grounds
OPEN/CLOSE function of the display does not work	Symptom Troubleshooting (see **OPEN/CLOSE FUNCTION OF THE DISPLAY DOES NOT WORK**)	• Navigation unit • Harness
Navigation display will not close	Symptom Troubleshooting (see **NAVIGATION DISPLAY WILL NOT CLOSE**)	• Navigation unit • Harness
Navigation display does not open or opens part way	Symptom Troubleshooting (see **NAVIGATION DISPLAY WILL NOT CLOSE**)	• Navigation unit • Harness
PC card will not play/card icon on audio screen cannot be selected	Symptom Troubleshooting (see **AUDIO DISC CANNOT BE INSERTED AND/OR EJECTED (WITH NAVIGATION)**)	Navigation unit
The vehicle icon lags behind when the vehicle turns	See **SELF-INERTIAL NAVIGATION LIMITATIONS**	• Aftermarket accessories connected to the system • GPS antenna/cable
Navigation screen is darker than normal or takes time to start up when it is cold	See **LCD UNIT LIMITATIONS**	
A new navigation DVD is needed	See **OBTAINING A NAVIGATION DVD**	
The DVD is scratched or dirty	See **DVD HANDING AND CLEANING**	Navigation unit
The wrong DVD was installed and now the system does not function properly	See **PRECAUTION ON CUSTOMER SNEAK PREVIEWS**	• Install the correct version DVD • Check on-line for service bulletins or other service information for the navigation system
A specific city cannot be found	See **PRECAUTION ON CUSTOMER SNEAK PREVIEWS**	The DVD is scratched or dirty

SYSTEM DESCRIPTION

OVERVIEW

The navigation system is a highly sophisticated, hybrid locating system.

The navigation unit uses global positioning system (GPS) satellite signals, internal yaw and vehicle speed inputs, and a map database to show where the vehicle is and to help guide you to a desired destination.

The navigation unit's GPS receiver receives signals from the GPS, a network of 24 satellites in orbit around the earth. By receiving signals from several of these satellites, the navigation system can determine the latitude, longitude, and elevation of the vehicle.

Signals from the system's yaw rate sensor (inside the navigation unit) detects turns, and the ECM/PCM vehicle speed pulse (VSP) and reverse signal enable the system to keep track of the vehicle's speed and direction of travel. The advantage of this hybrid system is that the system can track your position if either the GPS signal or the vehicle speed signal is missing. For instance, when in a tunnel (no GPS), the speed signal is used to update your position on the map. Alternately, while the vehicle is being transported on a ferry, GPS signals can show the vehicle position on the map as it crosses the water.

The navigation system uses the location, direction, and speed information to display the appropriate map and calculate a route to the destination entered. As you drive to a destination, the system provides both visual and audio guidance. Audio guidance is sent to the audio unit, and an RGB graphics color signal is sent to the navigation display.

This navigation system also has voice recognition that allows voice control of most of the navigation, and audio functions. The voice control switches (TALK and BACK buttons on the steering wheel) activate the voice control system. The microphone on the ceiling receives your voice commands. For more information on this feature, consult the navigation owner's guide.

The illumination signal is used by the navigation unit to automatically switch the display mode between the Night and Day display modes. When the headlights are on, the dash brightness control setting full brightness overrides the Night display mode, and allows a daytime navigation display with the lights on.

When the navigation system is giving voice guidance commands, the front speakers are muted. When the voice control system is being used (TALK button pressed), all of the speakers are muted.

The internal GA-Net II bus passes information back and forth between the navigation display, the navigation unit, and the audio system components. The information passed on this bus are touch button commands, audio muting signal, audio (radio and XM), and any open in these bus lines can affect the navigation system or other audio accessory operation.

The clock on the navigation display is set and maintained by the navigation unit. The time is automatically adjusted for daylight savings, and time zone changes while driving. The time can be adjusted in setup.

Additional information is available about the navigation components following the System Diagram. A glossary of terms that are used throughout this article follows the detailed information.

The Navigation System Manual in the glove box covers all of the system functions and settings. Use this as a resource when evaluating a customer concern.

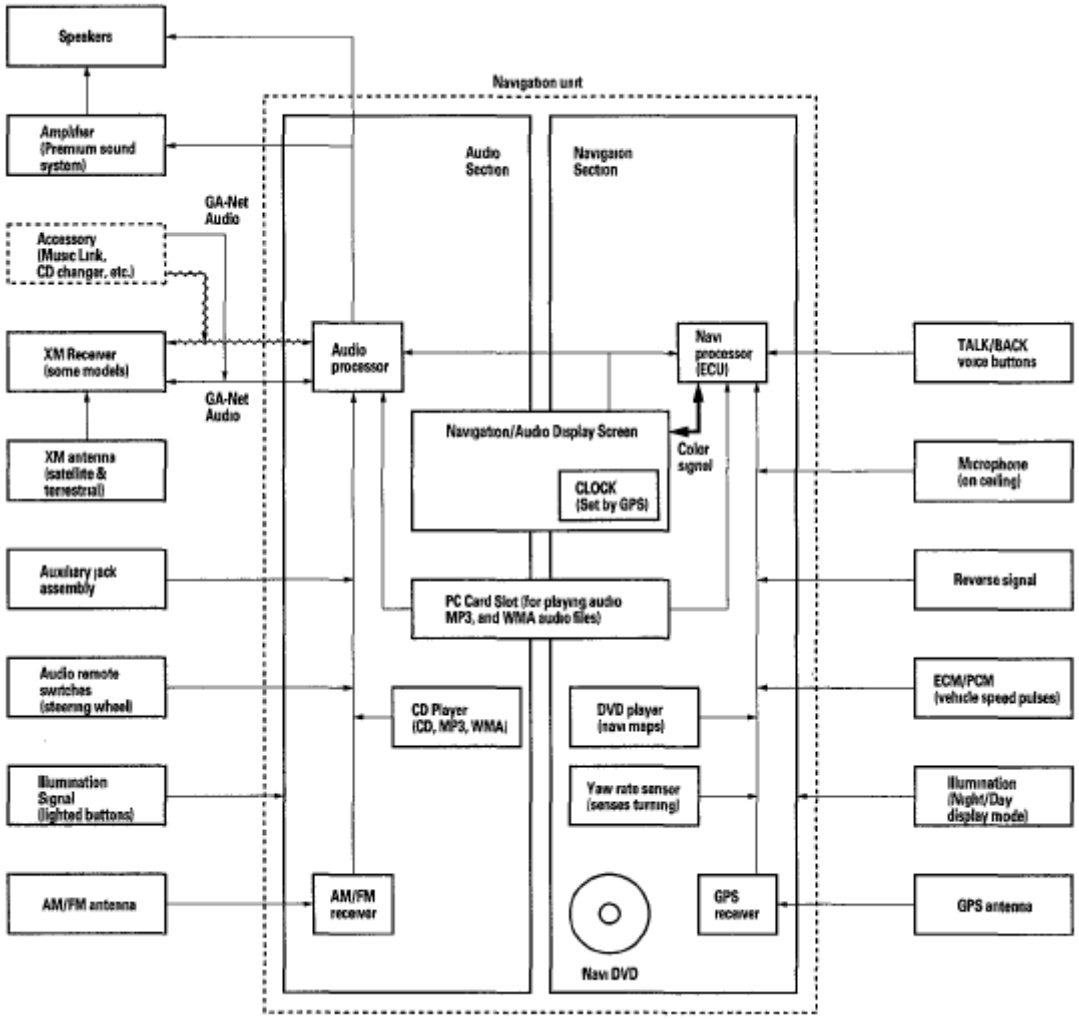

Fig. 7: Navigation System Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NAVIGATION FUNCTION

The navigation system is composed of the navigation unit, the ECM/PCM (vehicle speed signal), the GPS antenna, microphone, voice control switch, XM receiver, and the climate control unit.

These units communicate with each other on the GA-Net bus.

Function Diagram

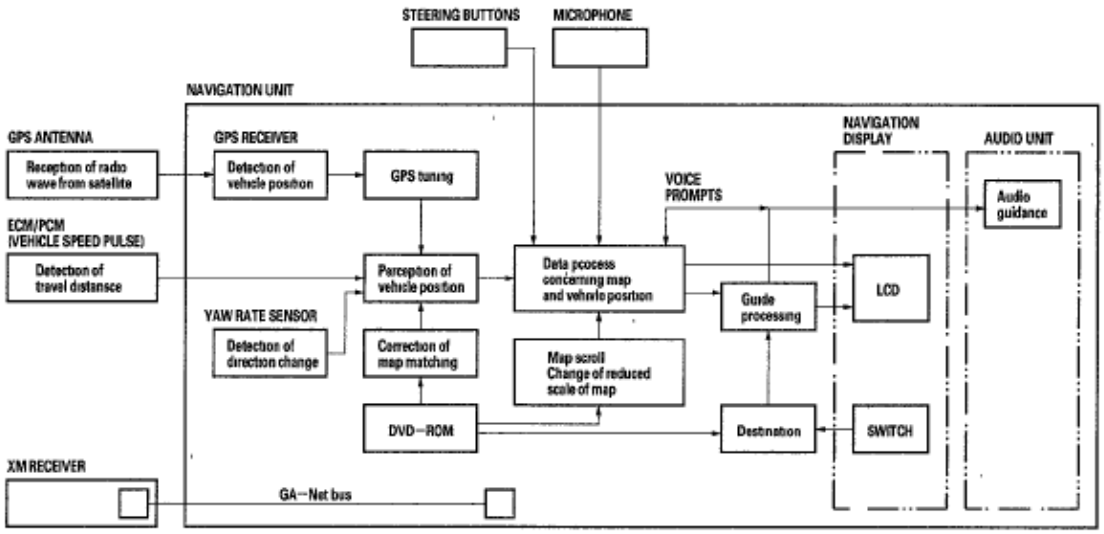

Fig. 8: Navigation System Function Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Vehicle Speed Pulse

The vehicle speed pulse is sent by the ECM/PCM. The ECM/PCM receives a signal from the countershaft speed sensor, then it processes the signal and transmits it to the speedometer and other systems.

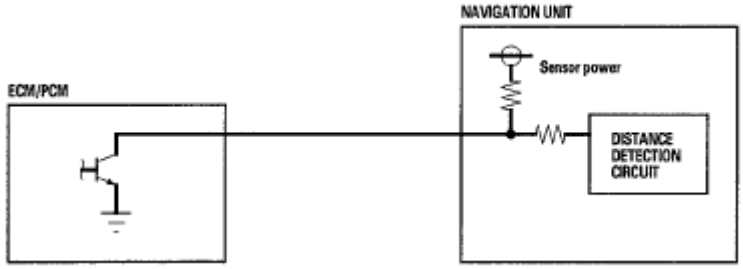

Fig. 9: Vehicle Speed Pulse Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GA-Net Bus Configuration

The GA-Net bus passes audio and navigation commands throughout the navigation and audio components.

These commands include audio/XM selections by voice, and XM station and music title names. Because the entire bus is daisy chained between components (see diagram below), any open or short in the GA-Net bus harness will cause any or all of these functions to become inoperative. The addition of any factory audio accessory must maintain the continuity of the GA-Net bus by installing the Y cable included with the accessory kit.

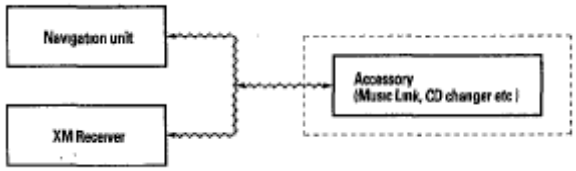

Fig. 10: GA-NET Bus Configuration - Communication Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Yaw Rate Sensor

The yaw rate sensor (located in the navigation unit) detects the direction change (angular speed) of the vehicle. The sensor is an oscillation gyro built into the navigation unit.

Sensor Element Structure

The sensor element is shaped like a tuning fork, and it consists of the piezoelectric parts, the metal block, and the support pin. There are four piezoelectric parts: one to drive the oscillators, one to monitor and maintain the oscillation at a regular frequency, and two to detect angular velocity. The two oscillators, which have a 90-degree twist in the center, are connected at the bottom by the metal block and supported by the support pin. A detection piezoelectric part is attached to the top of each oscillator. The driving piezoelectric part is attached to the bottom of one oscillator, and the monitoring piezoelectric part is attached to the bottom of the other oscillator.

Oscillation Gyro Principles

The piezoelectric parts have electric/mechanical transfer characteristics. They bend vertically when voltage is applied to both sides of the parts, and voltage is generated between both sides of the piezoelectric parts when they are bent by an external force. The oscillation gyro functions by utilizing this characteristic of the piezoelectric parts and Coriolis force. (Coriolis force deflects moving objects as a result of the earth's rotation.) In the oscillation gyro, this force moves the sensor element when angular velocity is applied.

Operation

1. The driving piezoelectric part oscillates the oscillator by repeatedly bending and returning when an AC voltage of 6 kHz is applied to the part, The monitoring-side oscillator resonates because it is connected to the driving-side oscillator by the metal block.
2. The monitoring piezoelectric part bends in proportion to the oscillation and outputs voltage (the monitor signal). The navigation unit control circuit controls the drive signal to stabilize the monitor signal.
3. When the vehicle is stopped, the detecting piezoelectric parts oscillate right and left with the oscillators, but no signal is output because the parts are not bent (no angular force).
4. When the vehicle turns to the right, the sensor element moves in a circular motion with the right oscillator bending forward and the left oscillator bending rearward. The amount of forward/rearward bend varies according to the angular velocity of the vehicle.
5. The detecting piezoelectric parts output voltage (the yaw rate signal) according to the amount of bend. The amount of vehicle direction change is determined by measuring this voltage.

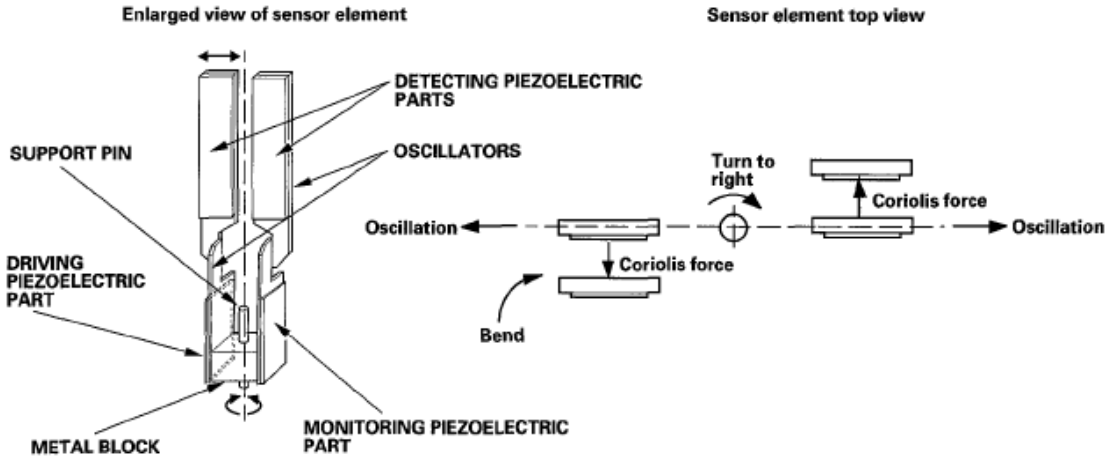

Fig. 11: Enlarged View Of Sensor Element
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Global Positioning System (GPS)

The global positioning system (GPS) enables the navigation system to determine the current position of the vehicle by using the signals transmitted from the satellites in orbit around the earth. The satellites transmit the satellite identification signal, orbit information, transmission time signal, and other information. When the GPS receiver receives a signal from four or more satellites simultaneously, it calculates the current position of the vehicle based on the distance to each satellite and the satellite's positions in its respective orbit.

Position Detection Image with GPS Satellite

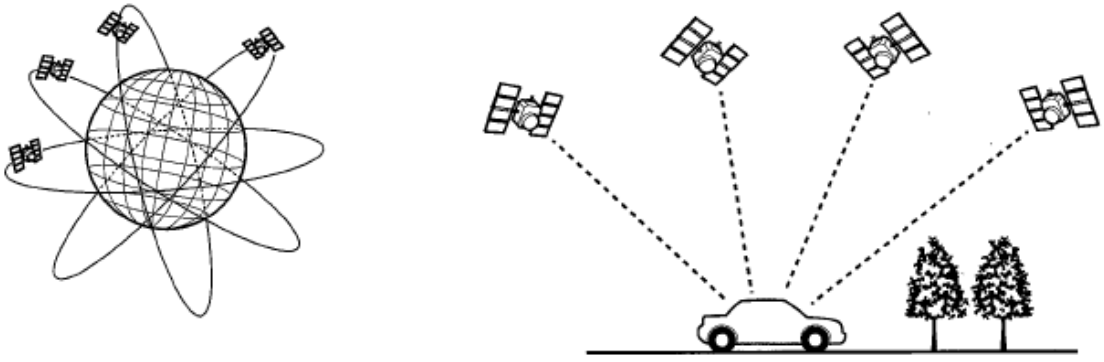

Fig. 12: Identifying Position Detection Image With GPS Satellite
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Precision of GPS

The precision of the GPS varies according to the number of satellites from which signals are received and the view of the sky. The precision is indicated by the color and shape of the GPS icon shown on the display.

PRECISION GPS

GPS ICON COLOR	NUMBER OF SATELLITES	CONDITION	DESCRIPTION
			The GPS can't be utilized due to a faulty

White GPS icon	None	Faulty	GPS receiver, open in the wire, or other fault or interference.
	2 or less	Impossible to detect vehicle position	GPS function is normal. The satellite signals received by the GPS are too few to detect the vehicle position.
Green GPS icon	3	Vehicle position detectable in 2 dimensions	The longitude and latitude of the vehicle position can be detected. (Less precise than detection in three dimensions)
	4 or more	Vehicle position detectable in 3 dimensions (elevation displayed)	The longitude, latitude and the altitude of the vehicle position can be detected. (More precise than detection in two dimensions)

GPS Antenna

The GPS antenna amplifies and transmits the signals received from the satellites to the GPS receiver.

GPS Receiver and Clock

The GPS receiver is built into the navigation unit. It calculates the vehicle position by receiving the signal from the GPS antenna. The current time vehicle position and signal reception condition is transmitted from the GPS receiver to the navigation unit to adjust vehicle position.

Navigation Unit

The navigation unit calculates the vehicle position and guides you to the destination. The unit performs map matching correction, GPS correction, and distance tuning. It also controls the menu functions and the DVD-ROM drive, and interprets voice commands. With control of all these items, the navigation unit makes the navigation picture signal, then it transmits the signal to the navigation display and audio driving instructions to the audio unit.

Calculation of Vehicle Position

The navigation unit calculates the vehicle position (the driving direction and the current position) by receiving the directional change signals from the yaw rate sensor and the travel distance signals from the PCMs vehicle speed pulse (VSP) signal.

Map Matching Tuning

The map matching tuning is accomplished by indicating the vehicle position on the roads on the map. The map data transmitted from the DVD-ROM is checked against the vehicle position data, and the vehicle position is indicate on the nearest road. Map matching tuning does not occur when the vehicle travels on a road not shown on the map, or when the vehicle position is far away from a road on the map.

GPS Tuning

The GPS tuning is accomplished by indicating the vehicle position as the GPS's vehicle position. The navigation unit compares its calculated vehicle position data with the GPS vehicle position data. If there is large difference between the two, the indicated vehicle position is adjusted to the GPS vehicle position.

Distance Tuning

The distance tuning reduces the difference between the travel distance signal from the VSP and the distance data on the map. The navigation unit compares its calculated vehicle position data with the GPS vehicle position data. The navigation unit then decreases the tuning value when the vehicle position is always ahead of the GPS vehicle position, and it increases the tuning value when the vehicle position is always behind the GPS vehicle position.

Route Guidance

The navigation unit can calculate different routes to a selected destination. You have five options:

- Direct Route - Calculate a route that is the most direct.
- Easy Route - Calculate a route that minimizes the number of turns needed.
- Minimize Freeways - Calculate a route that avoids freeway travel. If that is not possible, keep the amount of freeway travel to a minimum.
- Minimize Toll Roads - Calculate a route that avoids, or minimizes travel on toll roads.
- Maximize Freeways - Calculate a route that uses freeways as much as possible.

Audio Guidance

The navigation unit transmits audio driving instructions before entering an intersection or passing a junction.

The audio instructions come through the audio unit to the front speakers.

NOTE: The front speakers are muted whenever the navigation system is giving guidance commands, and all of the speakers are muted when the voice control system is being used.

DVD-ROM

The map data (including all scale rates) is stored in the DVD-ROM. The map data includes:

- Road distances, road widths, speed limits, traffic regulations, passing time at junction, distances to junctions, and the driving instructions for audio guidance.
- Latitude and longitude GPS.

Audio Unit (Built in the navigation unit)

The audio unit receives the audio driving instructions from the navigation unit, and transmits the instructions through the front speakers even when the audio system is in use.

Navigation Display

The navigation display uses liquid crystal display (LCD). The LCD is a 6.5-inch-diagonal, thin film transistor (TFT), stripe type with 65,536 color, The color film and fluorescent light are laid out on the back of the liquid crystal film. The touch sensor on the front of the LCD consists of a touch sensitive resistive membrane with an infinite number of possible touch locations.

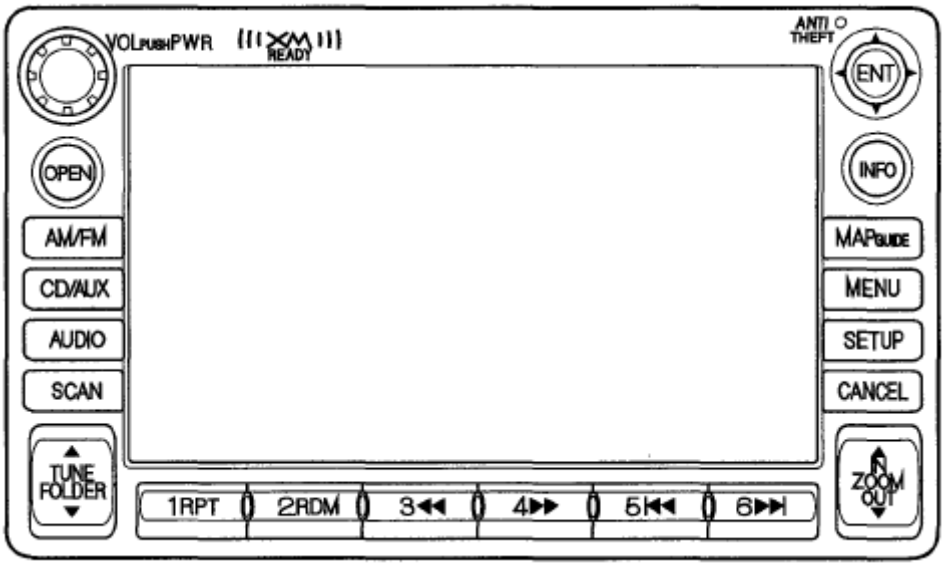

Fig. 13: Identifying Audio Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Microphone

The microphone (on the ceiling, near the front map light) receives voice commands and transmits them to the navigation unit for interpretation.

TALK Button

Activates the voice control system in the navigation unit to accept voice commands.

BACK Button

Returns the display to the previous screen (similar function as the CANCEL button).

Glossary

The following is a glossary of terms pertaining to the Voice Recognition Navigation System.

GLOSSARY ITEM AND DESCRIPTION CHART

Item	Definition
Breadcrumbs	Off road tracking dots that can be followed on the map to retrace your route back to a mapped (digitized) road. This function can be turned on/off in Setup screen 1.
CPU	Central Processing Unit. The main device within the navigation unit that coordinates the rest of the electronic functions.
Database	This consists of the Map data, and the POI (Points Of Interest) data stored on the DVD.
DBW	Drive By Wire. Allows electrical control of the throttle without the need of a mechanical linkage.
DCA	Detailed coverage area, an area that is covered in the database digital mapping. For example, the 48 continuous United States are within the DCA. Hawaii and Alaska are outside of the DCA.

DTC	Diagnostic Trouble Codes. Use the HDS tablet to obtain, and troubleshoot the cause of these codes.
Dead Reckoning	The use of the speed signal, and yaw rate sensor to position the vehicle on the map even when tall buildings, or driving in a tunnel obscures the GPS signal.
Digitized Road	A road that appears on the navigation screen. The road name will appear at the bottom of the navigation screen. If the user drives off road, the navigation system will display Not on a digitized road. The breadcrumbs will appear after driving for 1/2 mile.
Disclaimer Screen	Screen containing cautionary information. It is meant to be read carefully and acknowledged by the customer when using the navigation system.
DVD or DVD-ROM	Digital Versatile Disk. The navigation program and database resides on this disk. See the Navigation Owner's Manual for information on how to order a replacement or an update DVD.
ECM	Engine Control Module. Typically referred to as the ECM.
FAQ	Frequently Asked Question. See the Navigation Owner's Manual for a list of the customer FAQs, and troubleshooting information.
GA-Net bus	Units communication line.
GPS	Global Positioning System. A network of 24 satellites in orbit around the earth. The navigation system can simultaneously receive signals from up to 12 satellites to accurately position the vehicle on the map.
HDS	Honda Diagnostic System. A hand held tablet PC used for diagnosing vehicle problems.
H/U	Head Unit. The navigation system display unit assembly in the dash.
Initialization	This refers to the period needed to re-acquire the GPS satellite orbital information whenever the navigation system power has been disconnected. This can take from 10 to 45 minutes.
LCD	Liquid Crystal Display (the navigation screen)
Map Matching	The received GPS information allows the navigation system to position the vehicle on the map. Map matching has occurred if the map screen is displaying the current street name in the bottom-shaded area.
Mic	Abbreviation for the microphone used for receiving voice commands. It is located near the map light in the ceiling.
MW	Maneuver Window. While on-route to a destination, this window displays information about the next maneuver.
Navi	Abbreviation for the Navigation System
Off Route	This occurs when the user leaves mapped roads. Off road tracking dots (breadcrumbs) are displayed if the option is enabled in Setup. The user can use them to return to a mapped road. The bottom of the navigation screen will say "Not on a digitized road". Breadcrumbs will appear after driving for 1/2 mile.
Outlying Areas	These are rural areas that typically have only their main roads mapped. All other roads are shown in light brown for reference only, since they have not been verified.
PC Card Slot	The PC card (PCMCIA, type II) slot is for playing MP3 and WMA audio files.
PCM	Powertrain Control Module. This unit supplies the navigation system speed signal.
PCMCIA	A computer industry defined term referring to the PC card slot standard.
PIN	Personal Identification Number. A random 4 digit number created by the customer to protect personal information.

POI	Point Of Interest. These are the businesses, schools etc. found under the places option on the main menu.
Polygon	Colored areas on the map screen denoting parks, schools etc. See the Navigation System Manual "Traveling to Your Destination" for a list of the assigned colors.
QWERTY	Keyboard layout resembling the typewriter keys. The keyboard layout can be changed to an alphabetical layout in the Setup mode.
Security Code	Code needed to activate the navigation system. You can obtain the security code from the iN by entering the navigation system control serial number. You can find the serial number on the diagnostic screens (Unit Check, Navi ECU) or on the underside of the navigation unit.
Touch Screen Buttons or Touch Sensor	The display panel has 2 layers of clear film on the screen panel. If you touch the screen panel, the layers engage and the navigation display detects the touch point.
Tuning	A continual update of internal navigation system scaling factors. See the individual sensor tuning discussions under either System Description, or System Diagnostic Mode (see **SYSTEM DIAGNOSTIC MODE**) in this article.
Unverified Streets	These streets have not been verified for turn restrictions, one-way, etc. They are shown in light brown on the map. You can enter address destinations in these areas, but depending on your Unverified Routing choice in setup, voice guidance may end at the last verified street closest to your destination.
Verified Streets	These streets consist of the detailed metropolitan coverage areas, and all other inter-town connection roads. These roads are shown in black on the map.
VP	Vehicle Position. When in map mode, this circular icon shows the vehicle position on the map. Touch this icon to show the latitude, longitude, and elevation of your current position.
VR	Voice Recognition. This allows voice control of many of the navigation functions. The hardware consists of the microphone, steering wheel (TALK/BACK) buttons, and the front speakers. See the overview for more information.
VSP	Vehicle Speed Pulse. This pulse signal coming from the ECM/PCM is used to update the Vehicle position on the map. These pulses do not indicate direction (forward or backward). When in reverse, the navigation receives a signal from the MICU and directs the VP to move backwards on the map.
VSS	Vehicle Speed Signal. The counter shaft speed sensor reads the output shaft speed at the transmission and provides a speed pulse to the ECM/PCM. The ECM/PCM sends this pulse to the navigation system.
XM Satellite Radio	A satellite band radio system where signals are received from either a satellite or land based transmitters.
Yaw Sensor	This device is located in the navigation system control unit and senses the side-to-side twisting force generated when the vehicle turns. See a detailed description of how this sensor works in this article.

Diagnostic System Diagram

This diagram below shows an overview of the navigation diagnostic features starting at the center and working outward in layers. The diagram starts with "Key On." Next the diagram shows two ways to get the diagnostic main menu:

From any of the navigation Map or Menu screens, press and simultaneously hold the keys Menu Map Cancel.

Finally, the diagram shows the available diagnostic menu choices, starting at the bottom left, and moving clockwise. In most cases, do not clear or change settings in any diagnostic screen unless instructed to do so in the explanation, or by the factory. If the factory asks you to insert a PCMCIA memory card into the PC card slot, then the features specified on the diagram with PC card are available.

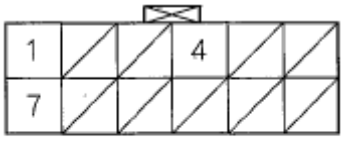
TERMINALS REFERENCE CHART

Terminal Number	Wire Color	Terminal Name	Description	Voltage (about)	Symptom
1	RED	ILL (-)	Ground for illumination light	With full dash lights brightness, 0 V	If open: When brightness = Auto, night mode for the display is inoperative when lights on. If short to ground: No

					change to display
9	BLK	RADIO GND (Ground)	Ground for display unit	0 V	If open: No change to display. If short to ground: No change to display.
10	GRY	ILL (+) (Illumination positive)	Parking light on signal from dash and console lights	Light on = battery voltage, Lights off = 0 V	If open: When brightness = Auto, night mode for the display is inoperative when lights on If short to ground: Blows fuse No. 14 (7 5 A) in under-dash fuse/relay box.
13	BLU	VSP (Vehicle speed pulse)	Vehicle speed pulse signal from ECM/PCM	Pulses 0-5 V: Average 2.5 V, when moving	If open: No vehicle speed pulses. Diagnostic screen Car Status, VSP Navi = 0. If short to ground: No vehicle speed pulses. Diagnostic screen Car Status, VSP Navi = 0.
17	WHT	+B (+B power source)	Continuous power source	Battery voltage	If open: Screen completely off (no backlight visible). If short to ground: Blows fuse No. 23 (10 A) in the under-hood fuse/relay box.

NAVIGATION UNIT INPUTS AND OUTPUTS FOR CONNECTOR C (12P)



Wire side of female terminals

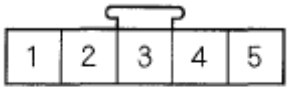
Fig. 17: Identifying Navigation Unit Connector C (12P) Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TERMINALS REFERENCE CHART

Terminal Number	Wire Color	Terminal Name	Description	Voltage (about)	Symptom
1	WHT	+B BACK UP	Continuous power source	Battery voltage	If open: Display picture goes out (display back light still on). NOTE: System will reboot to enter code screen. If short to ground: Blows fuse No 23 (10 A) in the under-

					dash fuse/relay box.
4	BLK	GND	Ground for navigation unit	0 V	If open: No effect on system. If short to ground: No effect on system.
7	BRN	BACK LT-	Reverse signal of select laver from Multiplex integrated Control unit (A/T) or backup light switch (M/T)	In reverse, battery voltage Otherwise 0 V	If open: Navigation never sees the reverse signal and back-up camera does not come on when in reverse. Diagnostic screen Car Status, Back = 0. If short to ground' Blows fuse No. 10 (7 5 A) in the under-dash fuse/relay box.

NAVIGATION UNIT INPUTS AND OUTPUTS FOR CONNECTOR D (5P)



Wire side of female terminals

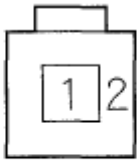
Fig. 18: Identifying Navigation Unit Connector D (5P) Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TERMINALS REFERENCE CHART

Terminal Number	Wire Color	Terminal Name	Description	Voltage (about)	Symptom
1	BRN	MIC GND	Ground for microphone signal	0 V	If open: No microphone signal shown in diagnostics: Navi System Link and Functional Set up Mic Level. If short to ground: No effect on voice recognition.
2	YEL	MIC SIG+	Microphone output signal positive	4-5 V (with TALK button pressed)	If open: No microphone signal shown in diagnostic screens: Navi System Link and Functional Setup Mic Level. If short to ground: No microphone signal shown in diagnostic screens: Navi System Link and Functional Setup Mic Level.
3	GRV (1)	MIC SHIELD	Shield for terminal No. 1, 2, 5	0 V	If open: No effect on voice recognition. If short to ground: No effect on voice recognition.
				4-5 V (TALK	If open: Steering wheel TALK, and BACK switch/ buttons do not

4	GRN	NAVI GUIDE	Steering wheel switch output	button pressed) 2.5-3 V (BACK button pressed)	work. If short to ground: Steering wheel TALK, and BACK switch/buttons do not work.
5	ORN	MIC ADPT	Control signal for microphone	0 V	If open: No effect on voice recognition. If short to around: No effect on voice recognition.
(1) The shielded wires have a heat-shrunk tube insulating the outside of the wire. The color of the insulating tube, typically black or dark gray, may not match the color of the wire listed on the schematic.					

NAVIGATION UNIT INPUTS AND OUTPUTS FOR CONNECTOR H (2P)



Wire side of female terminals

Fig. 19: Identifying Navigation Unit Connector H (2P) Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TERMINALS REFERENCE CHART

Terminal Number	Wire Color	Terminal Name	Description	Voltage (about)	Symptom
1	-	GPS	GPS signal (5 V in, GPS signal out)	5 V	If open: GPS icon on screen is white, system links screen ANT shows NG. If short to ground: GPS icon on screen is white, system links screen ANT shows NG.
2	-	GPS SH	Shield for terminal No. 1	0 V	If open: GPS icon on screen is white, system links screen ANT shows NG. If short to around: No effect on system.

CIRCUIT DIAGRAM

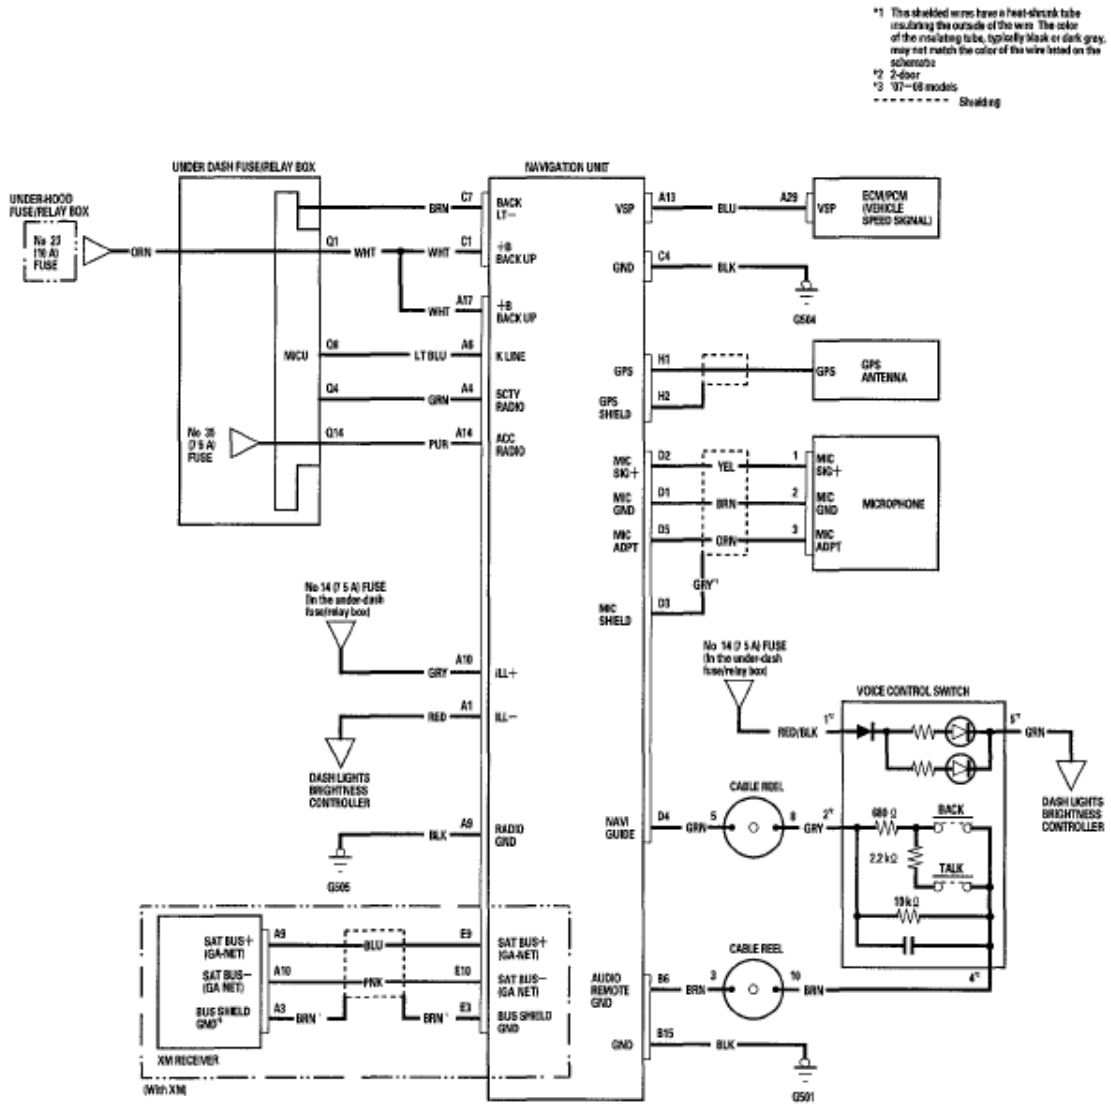


Fig. 20: Navigation System - Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYMPTOM TROUBLESHOOTING

NO PICTURE IS DISPLAYED

NOTE:

- **Make sure that the correct DVD color and version are installed.**
- **Check any official Honda service website for more service information about the navigation system.**
- **For problems with the rearview camera, do the rearview camera does not come on or work properly troubleshooting.**
- **Check the connectors for poor connections or loose terminals.**
- **Before troubleshooting, make sure you have the navigation system anti-theft code.**

1. Check the No. 23(10 A) fuse in the under-hood fuse/relay box and No. 35 (7.5 A) fuse in the under-

dash fuse/relay box, and reinstall the fuse if it is OK.

Is the fuse OK?

YES -Go to step 2.

NO -Replace the fuse and recheck.

2. Turn the ignition switch to ON (II).
3. Operate the radio and listen to the audio.

Can you hear the audio?

YES -Go to step 4.

NO -Refer to audio system troubleshooting.

4. Turn the ignition switch to LOCK (0).
5. Remove the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).
6. Measure the voltage between navigation unit connector A (17P) terminal No. 17 and body ground.

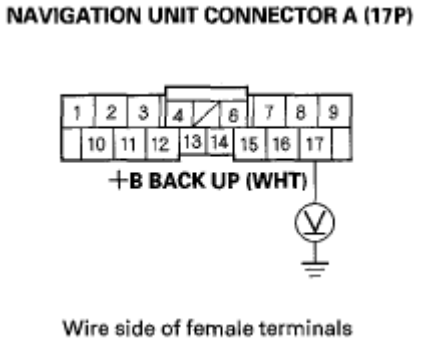

Fig. 21: Measuring Voltage Between Navigation Unit Connector A (17P) Terminal No. 17 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES -Go to step 7.

NO -Repair open in the wire between the under-dash fuse/relay box and the navigation unit.

7. Turn the ignition switch to ON (II).
8. Measure the voltage between navigation unit connector A (17P) terminal No. 14 and body ground.

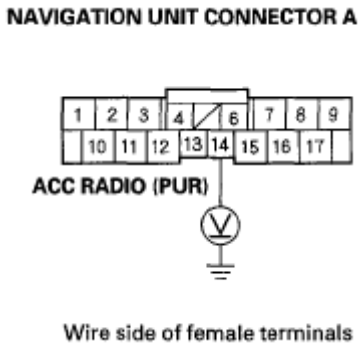

Fig. 22: Measuring Voltage Between Navigation Unit Connector A (17P) Terminal No. 14 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES -Go to step 9.

NO -Repair open in the wire between the under-dash fuse/relay box and the navigation unit.

9. Measure the voltage between the navigation unit connector A (17P) terminal No. 9 and body ground, and between navigation unit connector C (12P) terminal No. 4 and body ground.

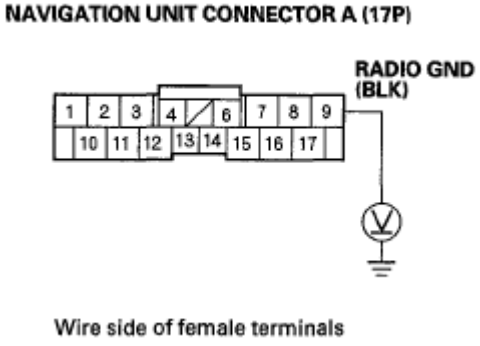

Fig. 23: Measuring Voltage Between Navigation Unit Connector A (17P) Terminal No. 9 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

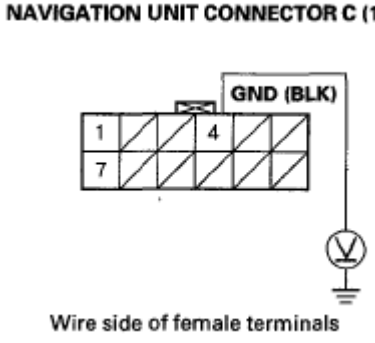

Fig. 24: Measuring Voltage Between Navigation Unit Connector C (12P) Terminal No. 4 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.1 V?

YES -Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

NO -Repair open in the wire between the navigation unit and body ground (G504) (see **CONNECTOR TO HARNESS INDEX**), (G505) (see **CONNECTOR TO HARNESS INDEX**).

PICTURE HAS LINES/ROLLS/OTHER ISSUES OR IS AN ODD COLOR

NOTE:

- **Make sure that the correct DVD color and version are installed.**
- **Check any official Honda service website for more service information about the navigation system.**
- **Check the navigation screen settings for brightness, contrast, black level and the color screen for map color and menu color.**
- **Check the connectors for poor connections or loose terminals.**
- **Before troubleshooting, make sure you have the navigation and audio system anti-theft codes.**

1. Check for electronic aftermarket accessories (possibly hidden) mounted near the navigation unit.

   Are there any electronic accessories?

   YES -Disable the accessories, and recheck.

   NO -Go to step 2.

2. Turn the ignition switch to ON (II).
3. Start up the navigation picture.

   Is the picture scrolling horizontally (left to right or right to left)?

   YES -Go to step 5.

   NO -Go to step 4.

4. Go into the Diagnostic mode and use RGB Color diagnostic under Monitor Check (see **MONITOR CHECK**).

   Are the red, green, and blue colored circle shown?

   YES -Go to step 5.

   NO -Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

5. Turn the ignition switch to LOCK (0), then turn to ON (II) and observe the navigation picture.

Did the image improve?

YES -Check for sources of electrical noise, such as poor battery connection, alternator, defective battery, aftermarket accessories or cell phone, and poor pin fits at the display or control unit.

NO -Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

NAVIGATION DISPLAY BUTTONS DO NOT WORK OR RESPOND PROPERLY

NOTE:

- **Always make sure that the correct DVD color and version are installed.**
- **Check any official Honda service website for more service information about the navigation system.**
- **Always check the connectors for poor connections or loose terminals.**
- **Before troubleshooting, make sure you have the navigation and audio system anti-theft codes.**

1. Turn the ignition switch to ON (II).

   Does the navigation display turn on?

   YES -Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

   NO -Refer to troubleshooting for **NO PICTURE IS DISPLAYED** .

GPS ICON IS WHITE OR NOT SHOWN

NOTE:

- **Make sure the vehicle is parked outside and away from buildings.**
- **Refer to GPS INFORMATION for realtime satellite reception display.**
- **Check for window tinting above the GPS antenna and any non-OEM accessories mounted near the navigation unit or GPS antenna.**

1. Check for metallic window tint on the windshield and electronic aftermarket accessories (possibly hidden) mounted near the GPS antenna or the navigation unit.

   Is there metallic window tint or electronic accessories?

   YES -Remove tint or the accessories and recheck.

   NO -Go to step 2.

2. Go into the Diagnostic Menu and use the Navi System Link test (see **SYSTEM DIAGNOSTIC MODE**) to check the GPS antenna.

   Is the GPS Ant icon red?

   YES -Use the Navi ECU test under Unit Check (see **UNIT CHECK**) to check for a kinked, crushed, or disconnected GPS antenna wire. If necessary, try a known-good GPS antenna. If icon is still red, replace the navigation unit.

NO -Check that nothing is blocking the GPS antenna located behind the gauge assembly and recheck. Substitute a known-good navigation unit, and recheck.

VOICE GUIDANCE CANNOT BE HEARD, IS BROKEN UP, OR THERE IS STATIC

NOTE:

- **Make sure that the correct DVD color and version are installed.**
- **Check any official Honda service website for more service information about the navigation system.**
- **Check that the volume setting and voice feedback are turned ON.**
- **Check the connectors for poor connection or loose terminals.**
- **Before troubleshooting, make sure you have the navigation system 4-digit anti-theft code, then write down the audio presets.**
- **After troubleshooting, enter the navigation system anti-theft code, then enter the audio presets.**

1. Press the display unit SET-UP button.
2. Check the volume setting for the navigation system.

   Is it set to OFF?

   YES -Set the volume to an audible level.

   NO -Go to step 3.

3. Check the radio operation.

   Can you hear the radio?

   YES -Go to step 4.

   NO -Troubleshoot the audio system.

4. Go into the Diagnostic Menu and use the Navi System Link test (see **SYSTEM DIAGNOSTIC MODE**) to check the radio.

   Is the Radio icon red?

   YES -Troubleshoot the audio system.

   NO -Go to step 5.

5. Test the voice control switch (see **VOICE CONTROL SWITCH TEST**).

   Is voice control switch OK?

   YES -Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

   NO -Replace the voice control switch (see **VOICE CONTROL SWITCH REPLACEMENT**).

VOICE CONTROL DOES NOT WORK/RESPOND

NOTE:

- **Make sure that the correct DVD color and version are installed.**
- **Check any official Honda service website for more service information about the navigation system.**
- **Check the connector for poor connection or loose terminals.**
- **Before troubleshooting, make sure you have the navigation system 4-digit anti-theft code, then write down the audio presets.**
- **After troubleshooting, enter the anti-theft code then enter the audio presets.**

Before assuming that a voice complaint is hardware related, ensure that the voice control system is being operated correctly.

- Make sure you are on the correct screen when trying to issue a voice command. For instance, the command "Find the nearest Italian Restaurant" only works on a Map screen.

  (See the Navigation System Manual for a complete list of allowed voice commands for the information being displayed.)

- Close the windows, moonroof, and doors.
- Set the fan speed to low (1 or 2).
- Adjust the air flow from the air conditioning vents so that they do not blow against the microphone on the ceiling.
- Pause after pressing the TALK button, then give a voice command clearly in a natural speaking voice. If the system cannot recognize your command, speak louder.
- If the microphone picks up voices other than yours, the system may not interpret your voice commands correctly.
- If you speak a command with something in your mouth, or your voice is too husky, the system may misunderstand your command.
- Compare the system operation with a known-good vehicle. Have more than one person test the system operation. If the like known-good vehicle performs the same, if is a characteristic of the system.

1. Turn the ignition switch to ON (II).
2. Go into the Diagnostic Menu and use the Mic Level test under Functional Setup (see **FUNCTIONAL SETUP**) to check the operation of the TALK and BACK buttons.

   Are the TALK and BACK buttons operational?

   YES -Go to step 15.

   NO -Go to step 3.

3. Turn the ignition switch to LOCK (0).
4. Do the voice control switch test (see **VOICE CONTROL SWITCH TEST**).

   Is the voice control switch OK?

YES -

- 2-door model: Go to step 5.
- 4-door model: Go to step 10.

NO -Replace the voice control switch.

5. Disconnect the voice control switch 5P connector and navigation unit connector D (5P).
6. Check for continuity between body ground and navigation unit connector D (5P) terminals No. 4.

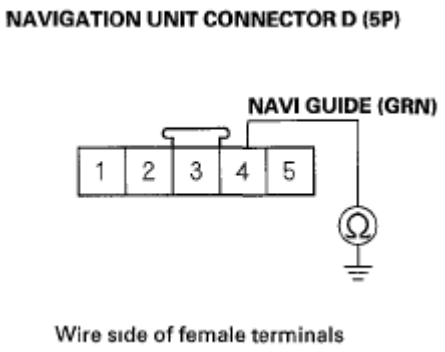

Fig. 25: Checking Continuity Between Body Ground And Navigation Unit Connector D (5P) Terminals No. 4
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Replace short to body ground in the wire between navigation unit and voice control switch, or replace the cable reel.

NO -Go to step 7.

7. Check for continuity between navigation unit connector D (5P) terminal No. 4 and voice control switch 5P connector terminal No. 2.

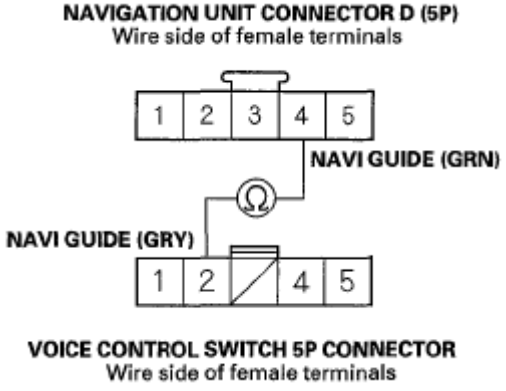

Fig. 26: Checking Continuity Between Navigation Unit Terminal No. 4 And Voice Control Switch 5P Connector Terminal No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Go to step 8.

NO -Repair open in the wire between navigation unit and voice control switch, or replace the cable reel.

8. Disconnect navigation unit connector D (22P).
9. Check for continuity between navigation unit connector B (22P) terminal No. 6 and voice control switch 5P connector terminal No. 4.

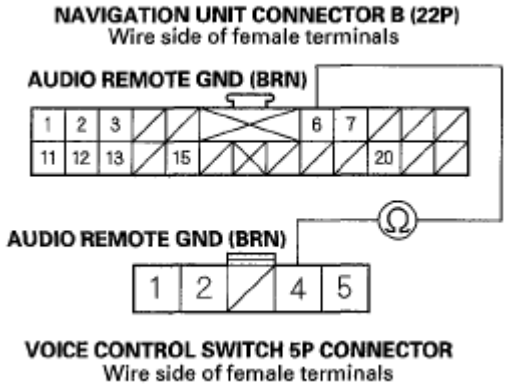

Fig. 27: Checking Continuity Between Navigation Unit Terminal No. 6 And Voice Control Switch 5P Connector Terminal No. 4
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

NO -Repair open in the wire between navigation unit and voice control switch, or replace the cable reel.

10. Disconnect the cable reel 20P connector and navigation unit connector D (5P).
11. Check for continuity between body ground and navigation unit connector D (5P) terminals No. 4.

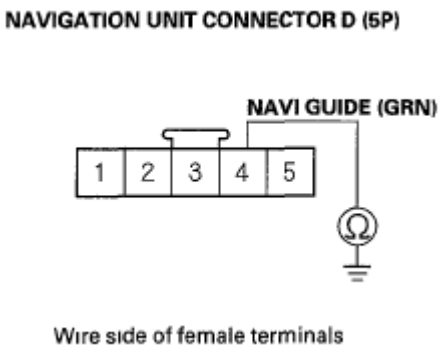

Fig. 28: Checking Continuity Between Body Ground And Navigation Unit Connector D (5P) Terminals No. 4
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short to body ground in the wire between navigation unit and voice control switch, or replace the cable reel.

NO -Go to step 12.

12. Check for continuity between navigation unit connector D (5P) terminal No. 4 and cable reel 20P connector terminal No. 8.

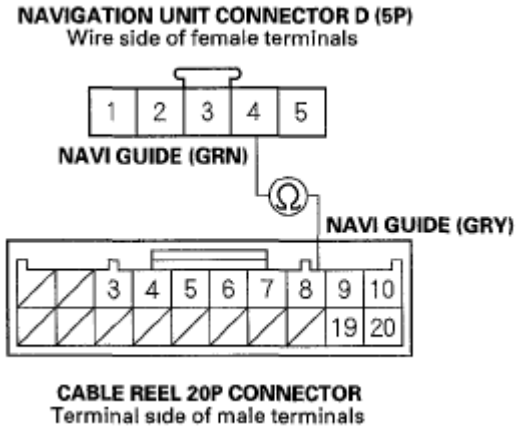

Fig. 29: Checking Continuity Between Navigation Unit Terminal No. 4 And Cable Reel 20P Connector Terminal No. 8
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Go to step 13.

NO -Repair open in the wire between navigation unit and voice control switch, or replace the cable reel.

13. Disconnect navigation unit connector B (22P).
14. Check for continuity between navigation unit connector B (22P) terminal No. 6 and cable reel 20P connector terminal No. 10.

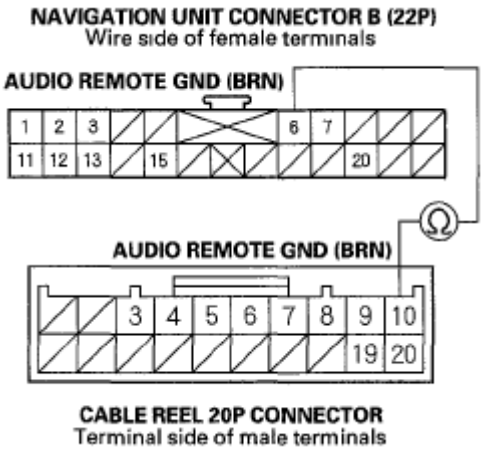

Fig. 30: Checking Continuity Between Navigation Unit Terminal No. 6 And Cable Reel 20P Connector Terminal No. 10
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

NO -Repair open in the wire between navigation unit and voice control switch, or replace the cable reel.

15. Use the Mic Level diagnostic under Functional Setup (see **FUNCTIONAL SETUP**) to check the operation of the microphone.

    Is the microphone operational?

    YES -Check the operation of the voice control system (see the Navigation System Manual).

    NO -Go to step 16.

16. Turn the ignition switch to LOCK (0).
17. Remove the moonroof switch and disconnect the microphone 3P connector (see **MICROPHONE REPLACEMENT**).
18. Disconnect navigation unit connector D (5P).
19. Check for continuity between body ground and navigation unit connector D (5P) terminal No. 2 and No. 5 individually.

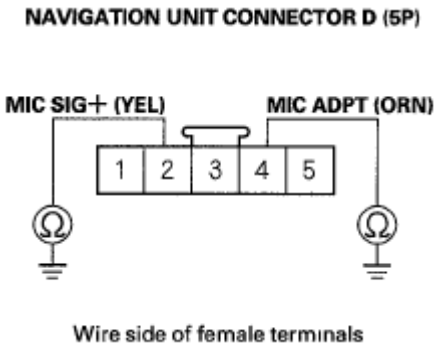

Fig. 31: Checking Continuity Between Body Ground And Navigation Unit Connector D (5P) Terminal No. 2 And No. 5
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short to body ground in the wire(s) between navigation unit and microphone.

NO -Go to step 20.

20. Check for continuity between navigation unit connector D (5P) according to the table.

TERMINALS CONTINUITY CHART

From terminal	To terminals
D2	D3, D5
D3	D5

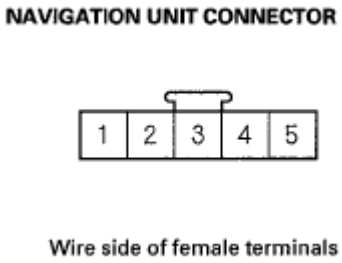

Fig. 32: Identifying Navigation Unit Connector D (5P) Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity between any of the terminals?

YES -Short in the wire(s) between the navigation unit and microphone. Replace the affected shielded harness.

NO -Go to step 21.

21. Check for continuity between navigation unit connector D (5P) and microphone 3P connector according to the table.

TERMINALS CONTINUITY CHART

Navigation unit connector	Microphone connector	Wire color
D1	2	BRN
D2	1	YEL
D5	3	ORN

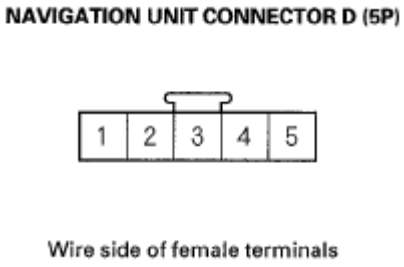

Fig. 33: Identifying Navigation Unit Connector D (5P) Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

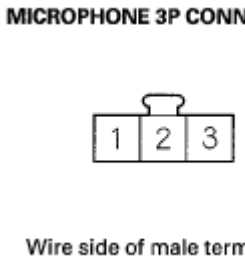

Fig. 34: Identifying Microphone 3P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Substitute a known-good microphone, then reconnect all of the connectors and recheck. If the symptom/indication goes away, replace the original microphone. If the symptom/indication is still present, replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

NO -Repair open in the wire(s) between the navigation unit and microphone. Replace the affected shielded harness.

VEHICLE POSITION ICON CONSTANTLY LEAVES ROAD, MOVES ERRATICALLY, OR IS VERY FAR FROM ACTUAL POSITION

NOTE:

- **Make sure that the correct DVD color and version are installed.**
- **Check any official Honda service website for more service information about the navigation system.**
- **Check for aftermarket accessories.**

1. Check the GPS icon on the navigation picture.

   Is the GPS icon on the map screen?

YES -Do the troubleshooting for GPS icon is white or not shown (see **GPS ICON IS WHITE OR NOT SHOWN**).

NO -Go to step 2.

2. Go into the Diagnostic Menu, and use the Yaw Rate test (see **YAW RATE**) to check the yaw rate sensor.
3. Go into the Diagnostic Menu and use the Car Status test (see **CAR STATUS**) to check the vehicle speed pulse.

Are the yaw rate sensor and vehicle speed pulse OK?

YES -The problem may be a normal characteristic. Check to see if the problem occurs in the same place. If it does, the problem could be in the database. Compare to a known-good vehicle under the same conditions. If you can duplicate the problem, report it. Refer to the Customer Assistance section of the Navigation User's Guide, "Reporting Errors".

NO -If the problem is the yaw rate sensor, replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**). If the problem is the vehicle speed pulse, troubleshoot the vehicle speed signal circuit.

DVD SCREEN ERROR MESSAGES

NOTE:

- **Make sure that the correct DVD color and version are installed.**
- **Check any official Honda service website for more service information about the navigation system.**
- **Check the Navigation System Manual for a list of common DVD screen error messages and the probable cause.**
- **Go into the Diagnostic Menu and use the Car Status test (see CAR STATUS) to check the status of the display.**

1. Check the DVD-ROM reading surface for scratches.

Are there scratches?

YES -Replace the DVD-ROM.

NO -If the problem occurs occasionally when the system is cold, this is normal. If the problem occurs frequently when driving, replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

SYSTEM ALWAYS COMES UP IN IN-LINE DIAGNOSTIC MODE

1. When a navigation unit is powered up for the first time at the factory, the factory diagnosis screen (In Line Diag) appears. Normally the factory performs the steps necessary to verify proper operation and terminate the factory diagnostic. Until the proper confirmation sequence is performed, the screen will appear every time the vehicle is started.

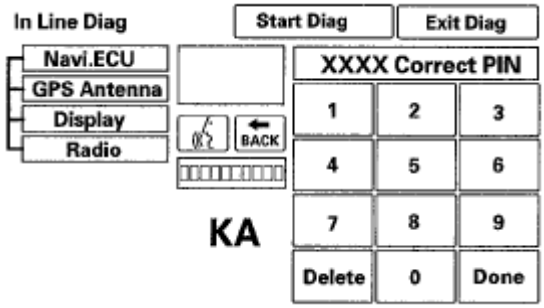

Fig. 35: Display Screen - In-Line Diagnostic Mode
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Follow the steps to prevent the screen from showing up in the future:
   - Hold down the buttons (Menu+Map/Guide+Cancel) for about 5 seconds (the Select Diagnosis Items screen will appear).
   - Hold down the Map/Guide button for 5-10 seconds (A screen with a Complete button, will appear).
   - Touch Complete, and then the Return button (the system may re-boot).
   - Restart the vehicle, and confirm normal operation by completing the "PDI of the navigation system" Service Bulletin.

DISPLAY DAY/NIGHT MODE DOES NOT WORK

NOTE:

- **Check the connectors for poor connection or loose terminals.**
- **Before troubleshooting, get the navigation system anti-theft code.**
- **After troubleshooting, enter the navigation system anti-theft code.**
- **Full brightness on the instrument panel brightness control with the head lights turned on causes the system to stay in the day mode, even when the lights are on.**

1. Make sure the instrument panel brightness control is not on full brightness. Turn the headlights on and adjust the dash brightness to the middle range.
2. Change the day/night mode under Set-up to AUTO and recheck.

   Does the display change to day and night modes when turning the headlights on and off?

   YES -The system is OK at this time.

   NO -Go to step 3.

3. Go into the Diagnostic Menu and use the Car Status test to check for an ILL signal (see **CAR STATUS**).

   Is the ILL signal OK?

   YES -Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

NO -Check the ILL+ circuit between the navigation unit and No. 14 (7.5 A) fuse in the under-dash fuse/relay box.

SYSTEM LOCKS UP OR FREEZES CONSTANTLY

NOTE:

- **Make sure that the correct DVD color and version are installed.**
- **Check any official Honda service website for more service information about the navigation system.**

1. Start the engine and turn the ignition switch to LOCK (0), then turn the ignition switch to ON (II).

   Does the system reboot?

   YES -The system is OK at this time.

   NO -Check the DVD for scratches or damage, and the navigation unit for water damage. If OK, go into the Diagnostic Menu and do all of the Unit Check tests (see **UNIT CHECK**). Also check for low battery charge or poor charging system performance.

VEHICLE ICON WANDERS ACROSS THE MAP WHEN DRIVING (DOES NOT FOLLOW A DISPLAYED ROAD) OR MAP OR VEHICLE ICON SPINS

NOTE:

- **This symptom is usually caused by a defective yaw rate sensor. Perform this diagnostic when the vehicle is cold and warm.**
- **Also refer to symptom troubleshooting for GPS ICON IS WHITE OR NOT SHOWN .**

1. Go into the Diagnostic Menu and use the Yaw Rate test (see **YAW RATE**).

   Are the values correct?

   YES -The system is OK.

   NO -Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

VEHICLE ICON MOVES BY ITSELF OR SPINS WHEN PARKED

NOTE:

- **Check the connectors for poor connection or loose terminals.**
- **Before troubleshooting, get the navigation system anti-theft code, then write down the audio presets.**
- **After troubleshooting, re-enter the anti-theft code, and re-initialize the navigation system, then enter the audio presets.**

1. Start the engine.
2. From the main menu, select places, then select any destination, and begin the trip.
3. With the vehicle parked, watch the vehicle icon on the display.

Does the vehicle position icon move by itself?

YES -Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

NO -The system is OK at this time.

NAVIGATION DISPLAY STAYS ON WITH IGNITION SWITCH OFF

NOTE:

- **Check the connectors for poor connections or loose terminals.**
- **Before troubleshooting, get the navigation system anti-theft code, then write down the audio presets.**
- **After troubleshooting, re-enter the anti-theft code, and re-initialize the navigation system, then enter the audio presets.**
- **Check for aftermarket accessories that use the same power circuit. A feedback can cause this problem.**

1. Remove the key from the ignition.

   Does the navigation screen stay on?

   YES -Go to step 2.

   NO -The system is OK at this time.

2. The vehicle may have been used as a demonstration vehicle at an event like an auto show. In these events, power is often jumpered to the navigation system so that the ignition key is not needed in the vehicle. At the end of the show, the jumper wire may not have been removed. Check the navigation unit connector A (17P) for a non-factory jumper wire in series with the factory cable.

   Is there a jumper wire?

   YES -Remove the jumper wire, and re-test. Return the jumper wire to Tech Line.

   NO -Go to step 3.

3. Check if the audio unit works.

   Does the audio unit work with the ignition switch off?

   YES -Troubleshoot the ACC circuit for a short to power with another circuit.

   NO -Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

NAVIGATION CANNOT CONTROL AUDIO SYSTEM

1. Make sure the anti-theft code for the navigation system is entered.
2. Go into the Diagnostic Menu and use the Navi System Link test (see **SYSTEM DIAGNOSTIC MODE**).

Is the Radio icon red?

YES -Do the troubleshooting for the voice guidance cannot be heard (see **GPS ICON IS WHITE OR NOT SHOWN**).

NO -Go to step 3.

3. Substitute a known-good navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**), and recheck.

   Can the navigation control audio?

   YES -Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

   NO -Do the audio system troubleshooting.

NAVIGATION CANNOT CONTROL XM RADIO

- Review the audio system diagnostic article.
- If you can only tune to channels 000, 001, 174, and 247, make sure the audio unit is set to the channel mode (see owner's manual), if is set to channel mode, call XM satellite radio customer support and check the account activation status.

1. Substitute a known-good navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**), and recheck.

   Can the navigation control the XM radio?

   YES -Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

   NO -Do the audio system troubleshooting.

NAVIGATION FREQUENTLY ASKS FOR ANTI-THEFT CODE AND NEEDS GPS INITIALIZATION

1. Measure the voltage between navigation unit connector A (17P) terminal No. 17 and body ground.

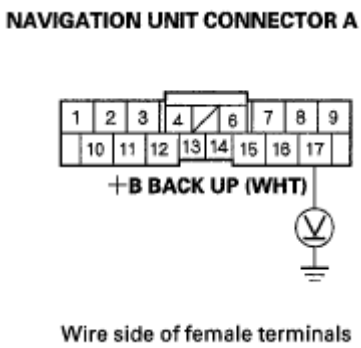

Fig. 36: Measuring Voltage Between Navigation Unit Connector A (17P) Terminal No. 17 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES -Go to step 2.

NO -Repair open in the wire between the under-dash fuse/relay box and the navigation unit.

2. Turn the ignition switch to ON (II).
3. Measure the voltage between navigation unit connector A (17P) terminal No. 14 and body ground.

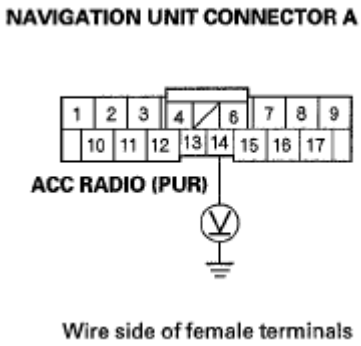

Fig. 37: Measuring Voltage Between Navigation Unit Connector A (17P) Terminal No. 14 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES -Go to step 4.

NO -Repair open in the wire between the under-dash fuse/relay box and the navigation unit.

4. Measure the voltage between navigation unit connector A (17P) terminal No. 9 and body ground, and between navigation unit connector C (12P) terminal No. 4 and body ground.

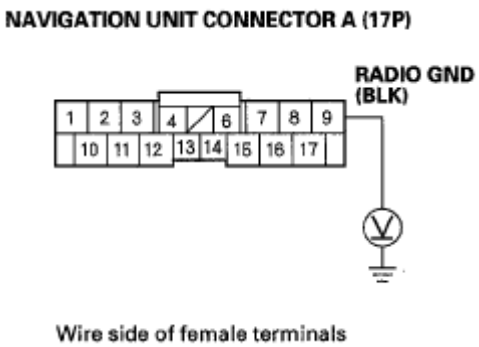

Fig. 38: Measuring Voltage Between Navigation Unit Connector A (17P) Terminal No. 9 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

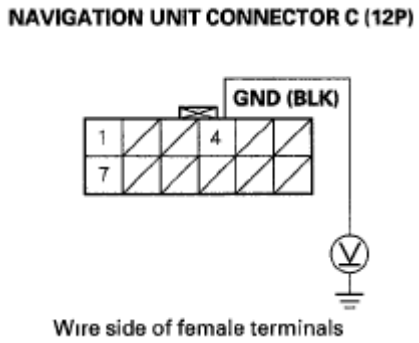

Fig. 39: Measuring Voltage Between Navigation Unit Connector C (12P) Terminal No. 4 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.1 V?

YES -Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

NO -Repair open in the wire between the navigation unit and body ground (G504, G505).

OPEN/CLOSE FUNCTION OF THE DISPLAY DOES NOT WORK

NOTE: If the display's Open/Close button does not work, you must manually open the display to obtain the customer's navigation DVD, audio CD, and PC card (see CD, DVD, AND PC CARD REMOVAL/INSTALLATION).

1. Press the OPEN/CLOSE button.

   Does the display open and/or close normally?

   YES -The system is OK at this time.

   NO -Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

NAVIGATION DISPLAY WILL NOT CLOSE

1. Check the CD slot. Look for foreign objects, stuck CD, broken or sticking slot.

   Is the CD slot OK?

   YES -Go to step 2.

   NO -Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

2. Check the PC card.

   Is the PC card fully seated?

   YES -Go to step 3.

NO -Reseat the card or remove it. If it still won't close, replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

3. Press the OPEN/CLOSE button.

   Does the display open and/or close normally?

   YES -The system is OK at this time.

   NO -Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

NAVIGATION DISPLAY DOES NOT OPEN OR OPENS PART WAY

1. Press the OPEN/CLOSE button.

   Does the unit beep?

   YES -Go to step 2.

   NO -Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

2. Press the OPEN/CLOSE button.

   Does the display open normally?

   YES -The system is OK at this time.

   NO -Replace the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).

SYSTEM DIAGNOSTIC MODE

START-UP PROCEDURE AND DIAGNOSIS MENU

1. Turn the ignition switch to ON (II).

   Press and hold the Menu, the Map/Guide, and the Cancel buttons. Keep them pressed for approximately 3 seconds. The display screen then goes directly to the Diagnostic Menu.

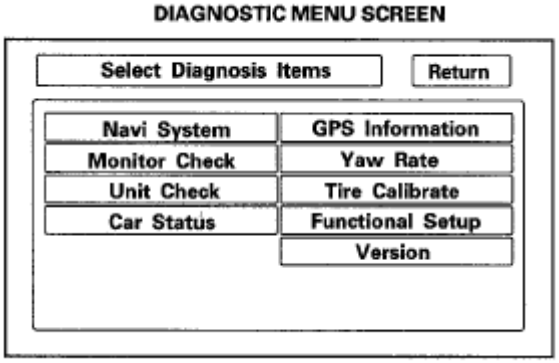

Fig. 40: Diagnostic Menu Screen Display

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. After the display changes to the Diagnostic Menu, select the item you want to check, and the test will begin. To return to the previous screen, select Return.
    - Navi System (Link)
    - Monitor Check
    - Unit Check
    - Car Status
    - GPS Information
    - Yaw Rate
    - Tire Calibrate
    - Functional Setup
    - Version

NAVI SYSTEM LINK

- This diagnostic step tests the cables connecting the navigation components. Ensure that the ignition switch is in the ON (II) position. When the diagnosis begins, you hear a bong sound. The system is in a Detecting mode, and is waiting for all the items in white to be tested. This includes the voice control switch (TALK/BACK buttons), and the microphone. Press the TALK button on the steering wheel, and in a normal voice, say "testing". The Talk indicator on the screen should turn green, and the voice level indicator should move to at least the 6th bar to pass. Next, press the BACK button. The Cancel indicator should turn green.
- If all of the communication lines connecting the system components, and the TALK/BACK buttons/ microphone check out OK (all block diagram items green), then the OK indicator turns green.
- If there is a problem with the system, the faulty system component item turns red, and the screen will show NG in red. Use the troubleshooting index, and other diagnostic screens to help locate the problem.
- The indicator on the screen may not change until you cycle the ignition switch. After repairing the affected cable or system, repeat this diagnostic.

NOTE: Green boxes and green OK indicate that the communications lines (cables) are intact. This diagnostic does not necessarily imply that the individual components are functioning properly. For instance, the GPS antenna wire may be crushed, but still show as green. A road test, or other diagnostic may be necessary to find the problem.

- Select Return to return to the Diagnostic Menu, or the Exit Diag button to exit.

NOTE: The Mic Level indicator must reach the 6th bar or greater to pass the test.

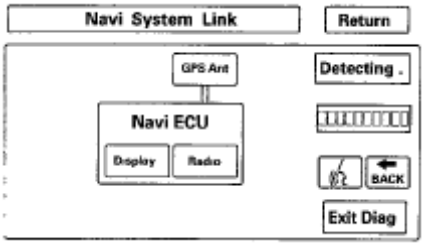

Fig. 41: Diagnostic Menu Screen Display - Navi System Link
Courtesy of AMERICAN HONDA MOTOR CO., INC.

MONITOR CHECK

Overview of navigation display

The illumination input from the gauge brightness control provides back lighting for the buttons surrounding the screen.

These screens allow troubleshooting of the navigation display. Select the item you want to troubleshoot, and follow the diagnostic instructions.

- RGB Color
- Gray Tone
- White Raster
- Black Raster
- Color Pattern
- Monitor Adjustment
- Touch Panel Check
- Touch Panel Calibration

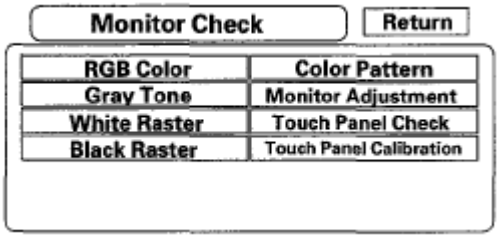

Fig. 42: Diagnostic Menu Screen Display - Monitor Check
Courtesy of AMERICAN HONDA MOTOR CO., INC.

RGB Color

This screen verifies that the navigation display is receiving the video (R, G, B and Composite sync) signals properly. The three primary colors should all be shown without distortion. The combination of all three should produce a central white section. If the picture has lines in it, or scrolls horizontally or vertically, and any of the colors are missing, troubleshoot for a Composite sync and color signal problem (see **PICTURE HAS LINES/ROLLS/OTHER ISSUES OR IS AN ODD COLOR**).

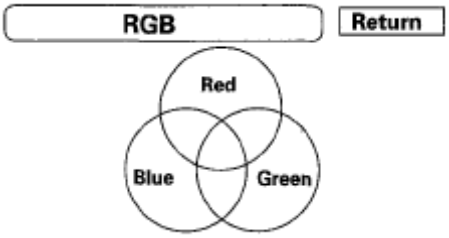

Fig. 43: Diagnostic Menu Screen Display - RGB Color
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Gray Tone

This screen looks for problems with contrast. You should be able to see the changes from bar to bar across the scale. If you can't see the shade changes from bar to bar, replace the navigation unit.

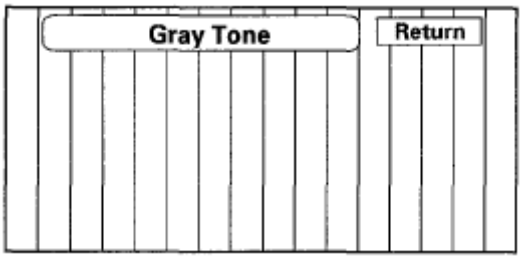

Fig. 44: Diagnostic Menu Screen Display - Gray Tone
Courtesy of AMERICAN HONDA MOTOR CO., INC.

White Raster

This diagnostic screen checks for pixels that may be dead (off). The entire display must be white. If pixels are dead, replace the navigation unit.

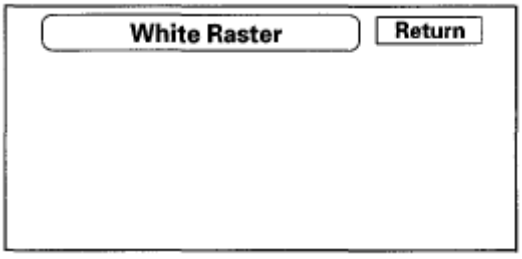

Fig. 45: Diagnostic Menu Screen Display - White Raster
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Black Raster

The entire display must be black. This diagnostic screen checks for pixels that may be stuck (on). If pixels are stuck on, replace the navigation unit.

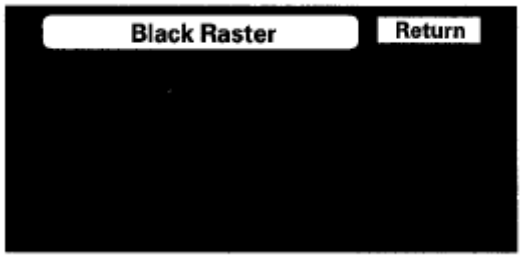

Fig. 46: Diagnostic Menu Screen Display - Black Raster
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Color Pattern

The chart below shows the colors being used for the Map and Menu screens. This is for factory use only. To check the color signal use the RGB test.

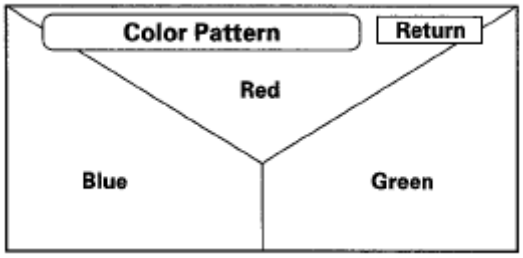

Fig. 47: Diagnostic Menu Screen Display - Color Pattern
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Monitor Adjustment

This allows you to center the navigation display. Use the joystick to move the picture up/down or left/right. It is unlikely that you will ever need to adjust the monitor position. The Default button will reset the display position to factory specifications. The factory default is 0, 0. The H-POS button is for factory use only.

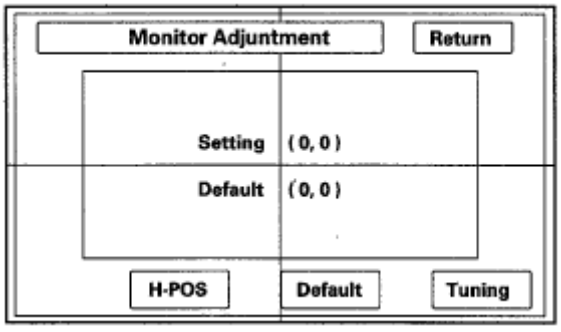

Fig. 48: Diagnostic Menu Screen Display - Monitor Adjustment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Touch Panel Check

The panel touch sensing system consists of a touch sensitive resistive membrane covering the display. Contrary to other systems using infrared beams, the screen has to be physically touched to make it work. The display has the capability of 479 touch locations (left to right), and 233 touch locations (top to bottom).

The upper left hand corner is position (0, 0) and the lower right hand corner is (479, 233) as displayed. Touching anywhere on the screen will display the coordinate of the location, and cause the place you touch to display a + icon. If any area of the screen either doesn't respond, or responds at some other location when touched, then replace the navigation unit.

NOTE: Unlike earlier screens that used infrared sensors, direct sunlight will not affect this test.

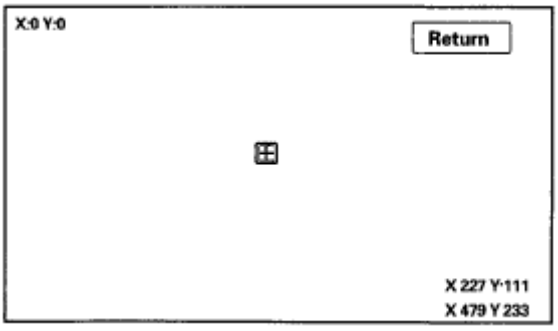

Fig. 49: Diagnostic Menu Screen Display - Touch Panel Check
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Touch Panel Calibration

The display screen uses a touch sensitive membrane. This means that every location of the entire surface of the display is touch sensitive. This diagnostic allows alignment of these touch locations with the location of the buttons images on the screen.

Normally this should never need adjustment, and is used only to adjust the touch locations for parallax (the touch locations appear different when viewed at an angle). However, if an adjustment is necessary, follow this procedure:

- The screen consists of the + button icons. Touch the center of the five + buttons on order 1-5.
- To store any change you make, touch the Set button.
- Use the Return key to exit the diagnostic.

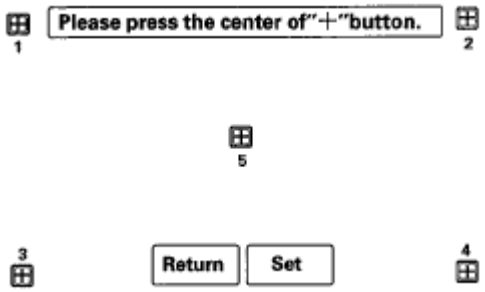

Fig. 50: Diagnostic Menu Screen Display - Touch Panel Calibration
Courtesy of AMERICAN HONDA MOTOR CO., INC.

UNIT CHECK

Select the item you want to check, and the test starts.

- Display
- Radio
- Navi ECU
- PC Card Info
- Hard Key

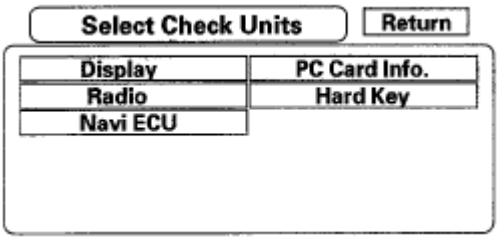

Fig. 51: Diagnostic Menu Screen Display - Unit Check
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Display

This performs additional checks on the communication bus between the navi CPU and the display. In addition, the internal electronics and touch screen functionality are confirmed.

If the connection is NG, replace the navigation unit.

- Connection verifies internal communications.
- Version represents the software version for the display.

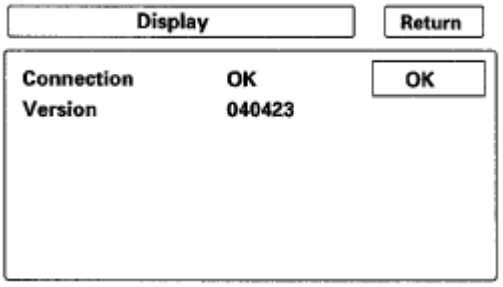

Fig. 52: Diagnostic Menu Screen Display
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Radio

This diagnostic screen checks the internals of the radio (AM and FM) and CD player. If NG, replace the navigation unit.

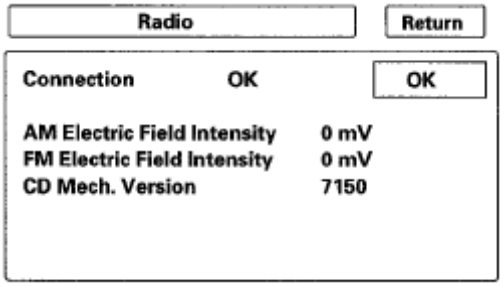

Fig. 53: Diagnostic Menu Screen Display - Radio
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Navi ECU

This screen looks for problems with the navigation unit. When you initiate this diagnostic, the navigation unit may delay up to a minute while the diagnostic runs.

- If V-RAM or D-RAM is NG, then replace the navigation unit.
- If GPS indicates NG (ANT), then check the entire GPS antenna wire from the navigation unit to the antenna. If the wire is crushed or damaged, try a known-good antenna. If this diagnostic reads OK, then order a new GPS antenna. If the diagnostic still reads NG (ANT), then replace the navigation unit.
- DVD ROM represents the database version on the DVD. You can also find this information in setup by selecting System Information.
- Serial No. should be the same as the serial number found on the underside of the navigation unit. You need this number to obtain the security code from the Interactive Network system.
- Mem Clear is for factory use, and should never be used unless instructed by the factory. Accidental selection will erase the customer's personal data, PINS, and settings. If selected, a popup box appears asking if you want to clear the memory. If so, select Yes.

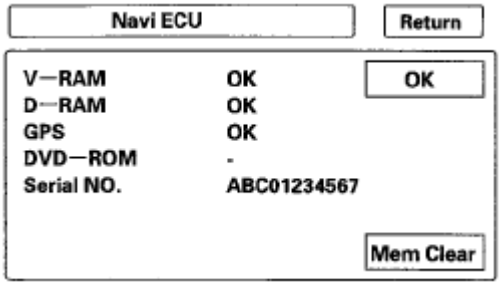

Fig. 54: Diagnostic Menu Screen Display - Navi ECU
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PC Card info

There is no PC card in the PC slot, and the screen should say, "PC card is not inserted".

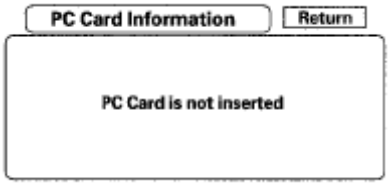

Fig. 55: Diagnostic Menu Screen Display - PC Card Info
Courtesy of AMERICAN HONDA MOTOR CO., INC.

If the factory provides a PC card and instructs you to insert a card, then the screen displays the Manufacturer, and Product Name as shown in the following screen. Touch the FILES button to see the contents of the card.

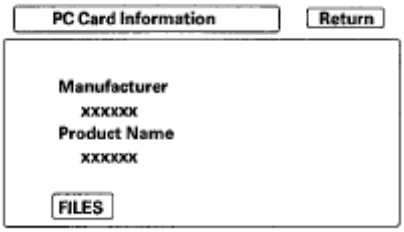

Fig. 56: Diagnostic Menu Screen Display - FILES Button
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Hard Key

This diagnostic screen checks the status of each of the hard buttons surrounding the navigation display. When you press each hard button, the corresponding item on the screen should flash blue. Touch the return key, or press and hold the joystick to exit.

NOTE: It is normal for the VOL (+, -) CH (+, -) and MODE button to be inactive.

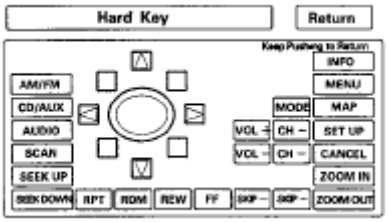

Fig. 57: Diagnostic Menu Screen Display - Hard Key
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CAR STATUS

Use this screen to confirm that navigation unit is properly receiving input signals. Signals equal to (0) are OFF, and signals equal to (1) are ON. If the value on the display does not match the actual vehicle status, then check the wire carrying the signal.

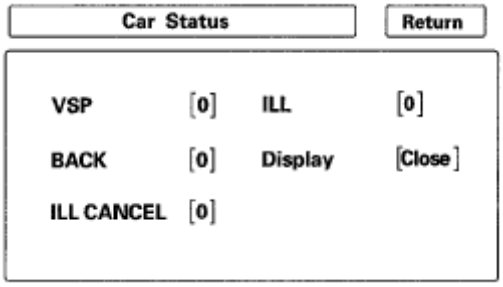

Fig. 58: Diagnostic Menu Screen Display - Car Status
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- VSP-Vehicle Speed Pulse from ECM/PCM connector A (Navigation unit connector A (17P) terminal No. 13)
    a. OFF (0) when vehicle is not moving
    b. ON (1) when vehicle is moving

The VSP comes from the ECM/PCM as a dedicated signal. Internally, the navigation unit compares the actual VP on the map against street data to adjust the pulse to speed scaling factor.

- BACK-Reverse indication from taillight relay (Navigation unit connector C (12P) terminal No. 7)
    a. OFF (0) when shift lever is in any position other than reverse
    b. ON (1) when shift lever is in reverse

The Back signal is used by the navigation unit to allow the map screen to show the VP moving backwards when in reverse and to trigger the optional rear view camera. This signal is needed because the Speed Pulse does not provide any directional information to the system.

- ILL CANCEL
    a. OFF (0) when the dash lights brightness control button is less than 90 % brightness with the headlights turned on.
    b. ON (1) when the dash lights brightness control button is more than 90 % brightness with the headlights turned on.
- ILL-Illumination Indication (Navigation unit connector A (17P) terminal No. 10)
    a. OFF (0) when parking lights, or headlights are off
    b. ON (1) when parking lights, or headlights are on

The navigation unit uses the signal to determine whether to put the navigation screen into the Day or Night brightness mode. (Setup screen 1)

- Display-this displays the current position of the display
    a. (Close) when the display is closed
    b. (Open) when the display is open

The navigation unit has a microswitch to detect this. If open is indicated when the display is closed, replace the navigation unit.

GPS INFORMATION

This screen shows the current status of GPS reception. The circular diagram shows the current location of the GPS satellites (yellow balls) as they would appear in the sky. The outer circle represents the horizon (0 degrees elevation). The middle and inner circles represents 30 and 60 degrees respectively. The very center of the diagram (90 degrees elevation) is directly overhead. Nearby obstructions, like tall buildings, will block satellites in that direction. That is why it is necessary to be in an open area to effectively troubleshoot GPS reception issues. The satellites shown on the diagram correspond to the PRN number in the GPS Details screen. There are always 24 active GPS satellites in orbit. Because satellites fail, and have to be removed from service, spares are always parked in orbit, ready to be activated. This is why the PRN (satellite ID number) can be greater than 24.

NOTE:

- **To use this screen for troubleshooting, the vehicle should be outside, away from buildings, tall trees, and high-tension wires for at least 10 minutes with the engine running.**
- **Metallic window tinting on the front or side window or after-market electronic accessories mounted near the navigation unit, GPS antenna, or navigation display can interfere with GPS acquisition.**
- **The Number of Satellites box shows the number of acquired satellites (maximum of 12). It should contain 4 or more icons. If not, troubleshoot for GPS icon is white or not shown (see GPS ICON IS WHITE OR NOT SHOWN).**
- **The Current Position shows latitude, longitude, and elevation (in meters). If there are less than 4 satellites, the elevation can be grossly inaccurate.**
- **The Date/Time field shows the current date, and also a time that includes daylight savings and other offsets entered by the customer in Setup function Adjust Time Zone/Clock.**

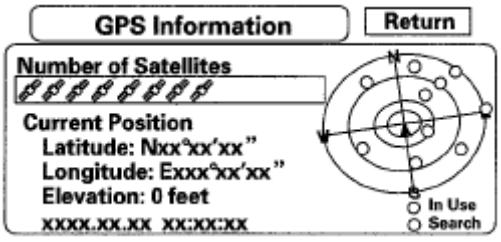

Fig. 59: Diagnostic Menu Screen Display - GPS Information
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Push and hold the Map/Guide button, and the dots on the diagram are replaced with the PRN # (satellite numbers). These numbers correspond to the numbers in the PRN column on the GPS details screen.**

GPS DETAIL

By pressing and holding the MENU button for 10 seconds, a GPS Detail screen appears. This screen displays real time incoming satellite positional data. Most of the information shown on this screen is for factory use, however some of the data can indicate partial GPS signal interference.

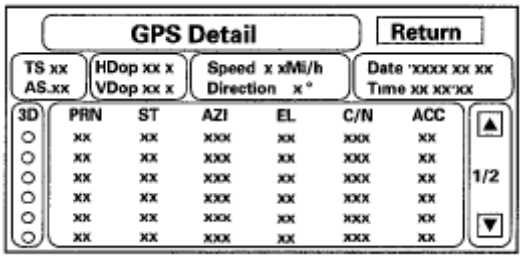

Fig. 60: Diagnostic Menu Screen Display - GPS Detail
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- The box TS/AS and HDop/VDop is for factory use.
- The Speed and Direction information is updated in real time when driving, and can be used to detect intermittent speed sensor problems.
- The Date/Time Information is the same as in Setup screen 2 Adjust Time Zone/Clock.
- If the 3D icon is shown above the yellow dots, this implies that at least 4 satellites are available for map positioning, and the GPS indicator on the map screen will be green. See the **GLOBAL POSITIONING SYSTEM** detailed explanation in the System Description .
- If the row of data in the table below begins with a yellow dot, the AZI and EL fields can be used to locate each satellite PRN # on the circular GPS diagram (see prior screen).

NOTE: The data shown in the GPS Detail screen is an example only.

GPS DATA CHART

Column	Description	Problem indication
3D	Active satellites (Yellow Dot)	If 3D is missing follow GPS icon is white or not shown (see **GPS ICON IS WHITE OR NOT SHOWN**).
PRN	The satellite ID number	
ST	The status: 0 = cannot view or searching, 2 = acquiring	If all 0, then, follow GPS icon is white or not shown troubleshooting (see **GPS ICON IS WHITE OR NOT SHOWN**).
AZI	Azimuth, the angle (0-360) clockwise from north	
EL	Elevation from the horizon (90 deg is overhead)	
C/N	N/A	Healthy signal is 49-52, no signal: 27-33
ACC	N/A	

YAW RATE

This diagnostic checks the yaw rate sensor in the control unit. This device detects when the vehicle turns, and repositions the vehicle position icon on the map screen. For more detailed information, see **YAW RATE SENSOR** theory of operation under System Description.

- Sensor indicates the voltage output from the yaw rate sensor. It should indicate about 2.500 V when stopped.
- Offset is the reference voltage or standard within the yaw rate sensor. It also should indicate about 2.500 V when stopped.

- A sensor output voltage LOWER than the Offset voltage indicates that the vehicle is turning to the right.

  A sensor output voltage HIGHER than the Offset voltage indicates that the vehicle is turning to the left.

- The yaw rate offset and sensor should both indicate about 2.500 V when stopped. If either reads zero or 5.000 V, replace the navigation unit.
- The yaw rate offset and sensor should be within +/- 0.01 V of each other when stopped. The sensor value should change relative to the offset as the car is turned while driving. If not, replace the navigation unit.

Example: Vehicle stopped

VEHICLE STOPPED SPECIFICATION

Normal		**Abnormal**	
Offset	2.526 V	Offset	2.526 V
Sensor	2.516-2.536 V	Sensor	2.623 V

Example: Vehicle turning

VEHICLE TURNING SPECIFICATION

Normal		**Abnormal**	
Offset	2.526 V	Offset	2.526 V
Sensor	2.678 V (right turn) 2.478 V (left turn)	Sensor	2.623 V (no change on turns)

The settings CCW Cal Factor, CW Cal Factor, and Set are for factory use only. THIS SHOULD NEVER BE USED.

NOTE: Do not try to adjust the yaw rate sensor without instructions from the factory. See next paragraph for tuning.

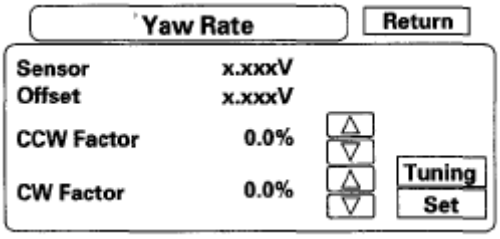

Fig. 61: Diagnostic Menu Screen Display - Yaw Rate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

YAW RATE TUNING

This diagnostic allows you to graphically display problems with the yaw rate sensor.

- The ANG-Disp value accumulates any differences between the offset, and sensor voltages (see Yaw

Rate diagnostic). When the sensor is healthy, the random changes in these two voltages generally cancels out, so the value is 0. However if one voltage is consistently higher than the other, then the ANG-Disp value accumulates the constant change.

- The Reset button temporarily clears the angular accumulation (ANG-Disp), and clears the display dots.
- Do not touch the CCW or CW, or Set buttons. These are used for factory setup only.

For serious problems with the sensor, the stationary test usually confirms whether the sensor is defective. For yaw rate issues related to driving, perform the road test described below.

1. Stationary test: If the-VP icon spins in place and the ANG-Disp value slowly increases or decreases in value, the yaw rate sensor is defective. Replace the Navigation unit.
2. Road test: Drive the vehicle on a very straight road. Enter the diagnostic mode, select Yaw rate, and touch the Tuning button. While driving down a straight road, the white dots should trace a straight line across the screen. However, if you are driving on a straight road, and you notice the dots constantly dropping down or heading up as you drive, the navigation unit's yaw sensor is defective. You can touch Reset to clear ANG-Disp, and dotted line.
3. If either test fails, please enter "Yaw rate sensor defective" for the problem description, on the "Navigation core return form".

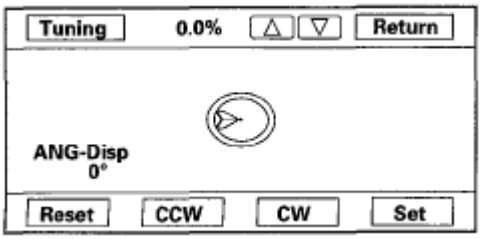

Fig. 62: Diagnostic Menu Screen Display - Yaw Rate Tuning
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TIRE CALIBRATION

As the vehicle moves, the navigation system receives speed pulses from the ECM/PCM. These pulses are converted using a conversion factor to a mph speed that moves the vehicle position (VP) on the map. The navigation system has an internal tuning function that generates and refines this factor based on actual driving. The Level indicates the status of the tuning. At navigation initialization, it begins at 0, and increases to 10 as the navigation system is used.

- The Auto Tuning is factory set to ON, and should remain on.
- The Study indicates the tuning status. If it is less than 10, the unit is still calibrating.
- The Tire-Cal. Tuning and Set should not be used. It is for factory use only.

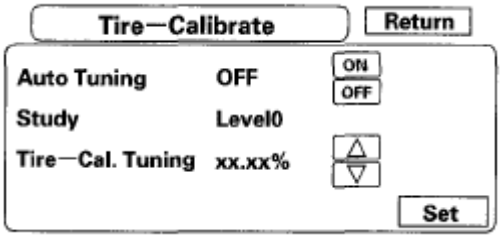

Fig. 63: Diagnostic Menu Screen Display - Tire Calibration
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FUNCTIONAL SETUP

Select the item you want to check.

- Log Data
- GPS Send Time
- Demo Mode
- Mic Level
- Solar Angle
- Save Users Memory ('07-08 models)

'06 model

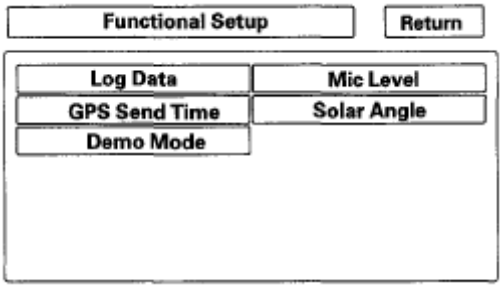

Fig. 64: Diagnostic Menu Screen Display - Functional Setup (06 Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

'07-08 models

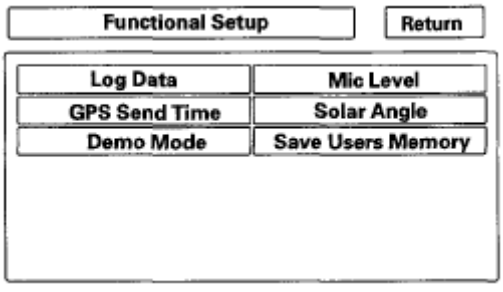

Fig. 65: Diagnostic Menu Screen Display - Functional Setup (07 Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Log Data

This screen allows the factory to collect log data to troubleshoot navigation system issues.

- There is no card in the PC card Slot, the screen appears as:

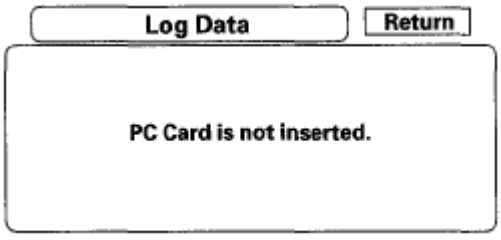

Fig. 66: Diagnostic Menu Screen Display - Log Data
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- However, if the factory provides a PC card, insert it into the card slot (label side up). Follow the factory logging VD data procedure for gathering test data and properly ending the test.

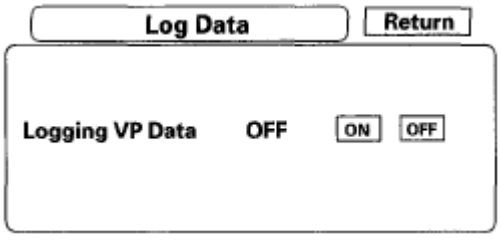

Fig. 67: Diagnostic Menu Screen Display - Log Data
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GPS Send Time

This screen is for factory use only. It allows adjustment of the GPS time. This display updates in realtime.

- GPS Time is the time as received from the GPS satellites. It is in Greenwich Mean Time (GMT).
- Date, Hour, Minute, and Set should not be used.

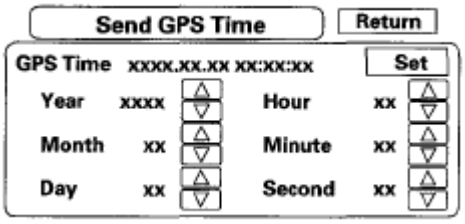

Fig. 68: Diagnostic Menu Screen Display - GPS Send Time
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Demo Mode

This screen allows the navigation system to drive a route, when the vehicle is stationary. Typical

applications include auto shows, and other events. This feature allows a visitor to enter a destination, and see the system drive to the destination. No speed signal is needed.

- To initiate the mode select ON.
- Changing the speed rate in ms (milliseconds) is optional, and represents the time between updates of the VP (vehicle position) movement.
  - When you increase the rate, the VP slows down because it is updated (moved) at a slower rate.
  - When you decrease the rate, VP is faster because it is updated (moved) more frequently.
  - 1500 ms is VP at its slowest in demo mode.
  - 150 ms is VP at its fastest in demo mode (Default).
- At key off, the setting automatically returns to the default of Off.

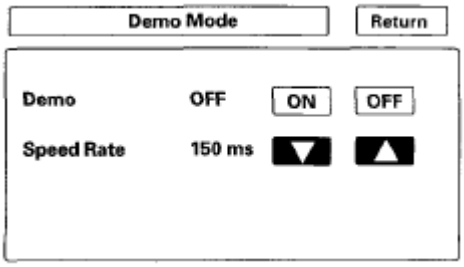

Fig. 69: Diagnostic Menu Screen Display - Demo Mode
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Mic Level

This diagnostic screen allows you to independently test the microphone and the TALK and BACK buttons. They are used to activate the voice control system. The microphone is located near the map light in the ceiling. It is directional, and works best if the voice is coming from the drivers seat.

- Press the TALK button on the steering wheel, and in a normal voice say "testing". The TALK indicator on the screen should momentarily turn green, and the text "Now Recording..." should appear in yellow. If the Mic Level indicator on the screen does not briefly turn green, then check the wiring from the TALK button to the navigation unit.
- If there is no Mic Level movement when you speak, then you should check the wire running from the microphone to the navigation unit.
- If the mic level bar is full or almost full without you speaking or other back ground noise, replace the microphone and recheck.
- Press the BACK button on the steering wheel. The Cancel indicator on the screen should momentarily turn green. If it does not briefly turn green, then check the wiring from the steering wheel BACK button to the navigation unit.

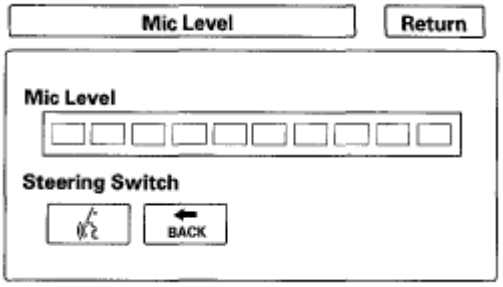

Fig. 70: Diagnostic Menu Screen Display - Mic Level
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: If the radio is off, and there is movement in the indicator-even without speaking, ensure that the vents are not blowing on the microphone. This should resolve voice control complaints such as:

- **Sometimes the system does not understand my commands.**
- **I have to shout at the navi for a command to be recognized.**
- **The system just says "pardon".**

SOLAR ANGLE

This screen graphically displays the sun's position as determined by GPS.

This screen is for factory use only, and allows simulation of this feature for development purposes.

- The manual tuning button should always be OFF
- The Angle is the angle that the sun (shown with the red dot) is above the horizon.
- The vehicle value represents the angle, clockwise from North, to the direction that the vehicle position (VP) icon is pointing (always points straight up).
- The direction value is the angle, measured clockwise from the VP (straight up) to the suns position.
- The reliability ranges from 1 to 3, and represents the accuracy of the Vehicle Position relative to the sun.

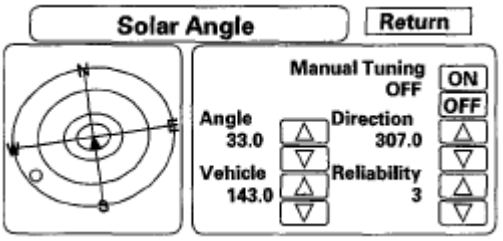

Fig. 71: Diagnostic Menu Screen Display - Solar Angle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

VERSION

This screen displays the current version of the program, and allows the loading of a new version of the program either from a CD/DVD or from a PC card.

The Program Flash version should always be greater than or equal to the Program Disc version. IPL, APL, DBOOT, and system ucomare for factory use only.

The Model code is SNA for the 4-door and SVA for the 2-door, and is for factory use only. This code is stored on a chip in the navigation unit. Therefore, every model has a unique part number for the navigation unit.

NOTE: If any model number other than SNA or SVA is displayed, replace the navigation unit with the correct part. The model code tells the navigation unit what software to load off the DVD.

Do not use Download, unless instructed to do so by the factory.

4-door

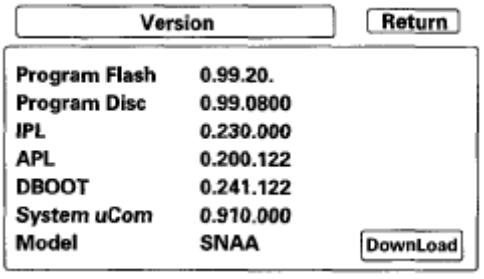

Fig. 72: Diagnostic Menu Screen Display - Version (4-Door)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2-door

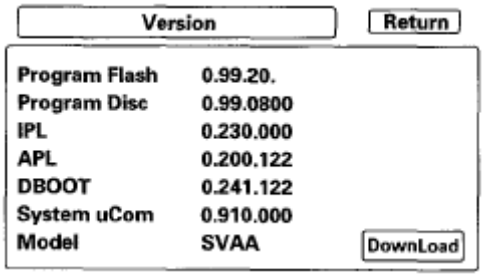

Fig. 73: Diagnostic Menu Screen Display - Version (2-Door)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SAVE USERS MEMORY

When replacing the navigation unit, this function allows the dealer to transfer the customer's personal data td the new navigation unit. The transferred information includes their Setup settings, and personal addresses. The dealer inserts a PC card to the navigation unit, and then selects the Save Users Memory function. The two functions in this diagnostic screen are EXPORT and IMPORT. EXPORT saves the customer's data to the PC card, and IMPORT moves the PC card files to the new navigation unit.

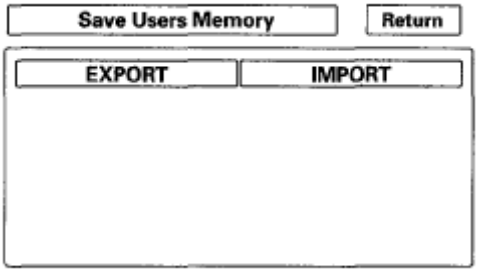

Fig. 74: Diagnostic Menu Screen Display - Save Users Memory
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Before starting this function, see the **PC CARD FAQS** for information regarding PC cards, and the use of this function.

1. Select EXPORT button to move the customer's data from the original navigation unit to the PC card. Select YES on the Export User Data Confirmation screen. The process takes only a couple of seconds. The system stores two files on the card.

NOTE: If the EXPORT button is grayed out, check the PC card's edge connector, and the pins inside the navigation unit (with a flashlight) for damage.

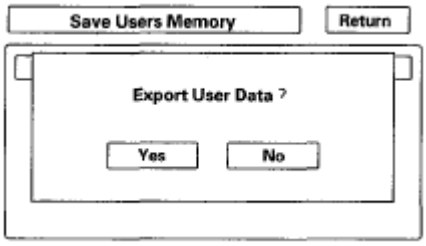

Fig. 75: Diagnostic Menu Screen Display - Save Users Memory
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. After installing the customer's original DVD in the new navigation unit, allow the system to boot up. Insert the PC card in the new navigation unit and enter the Save Users Memory in the navigation system diagnostic mode.
3. Select IMPORT button to move the two files stored by the Export process from the PC card to the new navigation unit. Select YES on the Import User Data Confirmation screen. When the transfer is finished (a few seconds) the system will automatically reboot. After the system reboots, remove the PC card from the PC card slot.

NOTE: If the IMPORT button is grayed out, check if the Model and the Program Flash shown on the Version screen are the same.

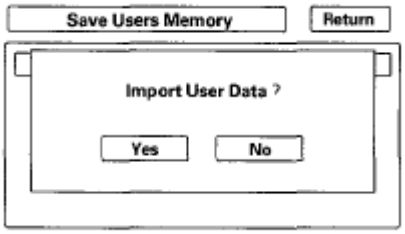

Fig. 76: Diagnostic Menu Screen Display - Save Users Memory
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PC CARD FAQS

PC CARD FAQs REFERENCE

Question	Answer
Where do we buy the flash memory or adaptors, and what do we ask for?	You need a PCMCIA type II adaptor and a flash memory chip. You can purchase them at a computer, or office supply store. The card will have the same size and shape as the PC card in the HDS. Adaptors that accept multiple flash types are not recommended.
What memory flash chips will work with what adaptors?	The flash memory devices that have been tested include Compact Flash (CF), and ATA style (like the card in the HDS). Other card types and flash memory chips may work, but have not been tested.
What capacity card do I need for this function?	A memory chip with capacity of 64 MB to 2 GB will work. The two files moved to the PC card during export are less than a Megabyte in size.
Should the dealer have a dedicated PC card for the Export and Import navigation function?	Yes, treat the PC card as a dedicated special tool that should be used anytime the owner of an '07 or later vehicle needs their navigation personal files transferred to a new navigation unit.
What device can I use to maintain the PC card, and delete files	Any computer store sells USB style card readers that accept the PC card, and allow you to perform file maintenance on your PC card. Most laptops will also accept the PC card.
Can we move the customer's data to different models?	No, the files are model specific and will only load into a navigation unit with the same part number.
Can we move the customer's data to the same vehicle with a different software version?	The customer's files can only be transferred to a new navigation unit, if the Model and the Program Flash shown on the Version screen are the same. Files cannot be transferred to the different model and different versions.
Will other files on the PC card like images or music files prevent the Export/Import function from working?	No, the system simply adds two small files that are recognized by the new navigation unit when performing the import function. However, it the PC card is full, the Export function won't work correctly.
Do I have to delete the files on the PC card after each transfer of the customer's data?	After the transfer of customer data to the new navigation unit, the files remain on the PC card. Since this is confidential information, we recommend that you delete these files after each use. Please note that each time you export navigation files of the same model and version, the files are overwritten. Over time the PC card will accumulate two files for each version of the 8 or so Honda navigation models.
What format should be used	

if the PC card needs reformatting?	It is unlikely that the PC card will ever need formatting, however the FAT file system should be used.
I can't enter the navigation diagnostic mode to do the Export/Import function. How can I transfer the customer's data?	Some internal navigation unit ECU failures may make it impossible to use the Export/Import function.
Why wont the Export or Import functions work? What do I check as part of troubleshooting?	• The card may not be fully inserted into the slot. Eject the PC card, and inspect for warping or damage to the edge connector. Never use excessive force to insert a PC card. This can result in damage to the pins in the rear of the slot. • The PC card may not contain files that are recognized by the new navigation unit. Navigation data can only be transferred between navigation units with the same Model code, and with the same navi Program flash version. • The flash memory chip type may not be accepted by the system. Only Compact Flash and ATA cards have been tested. • The card's PCMCIA adaptor may be preventing a known-good PC card from playing. Avoid multi-slot type PCMCIA adaptors that accept several different flash memory types. • The card may be full and as a result the files are stored, but without any data. Export and import appear to function, but move nothing. Delete unused files from the PC card. • There may not be any files on the PC card. If the PC card has a write protection switch, make sure it is turned off before attempting to use the Export function. • Although flash memory chips are reliable, occasionally they develop bad sectors or other formatting errors that prevents them from accepting files. The PC card should be reformatted using the FAT format. • The PC card may have been formatted using the format NTFS. Only the FAT format is accepted by the system. • Hard Disc Drive (HDD) cards may not work properly in the system and can overheat or quit functioning, particularly in a hot vehicle. They are not recommended. • Before performing the Import function, ensure that the customer's original DVD is loaded into the new navigation unit and working properly.

ERROR MESSAGE TABLE

ERROR MESSAGE CHART

Screen Error Message	Solution
Navigation system is unable to acquire a proper GPS signal.	Make sure there is nothing on the dashboard blocking the GPS antenna. If not, move the vehicle to an open space away from tall buildings, trees, etc. After-market devices can affect the GPS reception.
Navigation is open or No	Make sure the correct white-labeled navigation DVD is installed with the

DVD disc installed. Please check system.	label side up and the navigation display is closed.
DVD reading error (incorrect DVD disc) place consult your dealer.	Verify correct color (white) DVD installed.
Display temp is too high. System will shut down until display cools down.	This message will appear briefly when the display temperature is too high, and the display will turn off until the temperature cools down. The system will turn back on when the display cools down.
Outside temperature is low, system will take a while to start up.	The temperature is below -30 °C and the navigation ECU has difficulties reading the DVD. The system will start up when the temperature warms up.
DVD disc reading error (unformatted), please consult your dealer.	Check the DVD source for deep scratches or other damage. Make sure you are using an official Honda navigation DVD (white in color). The system cannot read other mapping databases or video DVDs. Check online for any service publications to update the navigation system.
Route has not been completed. Please try again from a different location.	Routing to or from a place (new area) that is not in the database. Try planning a different route to or from a different location.
No alternate route found. Original route will be guided.	No alternate route method was found. The original route will be used.
This destination cannot be found in database.	The destination was not found in the database. Try another destination nearby, or select the destination with the joystick.

CD, DVD, AND PC CARD REMOVAL/INSTALLATION

If the display will not open, use this procedure to manually open the display and remove the CD, DVD, and or the PC card.

1. Remove the navigation unit from the vehicle (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).
2. On the bench, carefully pull the display (A) straight out (about 1/2 inch).

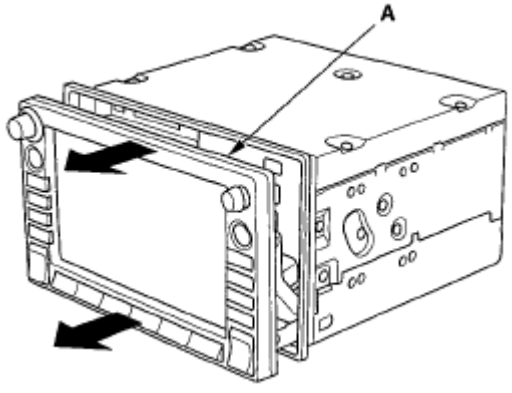

Fig. 77: Identifying Display
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Fold down the display as shown in the diagram below.

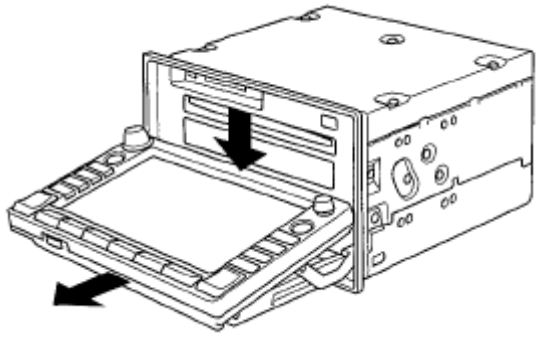

Fig. 78: Folding Down Display
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Push the PC card eject button (A) to eject the customer's PC card (if installed). Power is not required for this function.

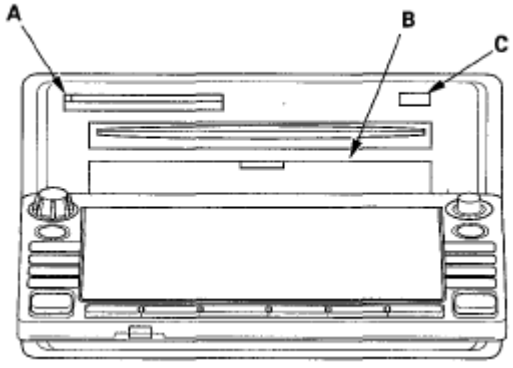

Fig. 79: Identifying PC Card Eject Button And Plastic Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Open the plastic cover (B) for the navigation DVD slot. Do not remove the plastic cover.
6. With the display open, temporarily reconnect the unit in the dash (to power it up).
7. Push the CD eject button (C), and navigation DVD eject button and remove the discs (holding the discs by their edges to avoid fingerprints). To avoid scratches, place the navigation DVD, and customer's CD in a jewel case if available.
8. Close the plastic cover that hides the navigation DVD slot.
9. Close the display by first returning the display to the upward position, and then pushing the entire display straight back into the unit.
10. After installing the new navigation unit, re-insert the navigation DVD, the customer's CD, and PC card.

NAVIGATION UNIT REMOVAL/INSTALLATION

SRS components are located in this area. Review the SRS component location, 4-door (see **COMPONENT LOCATION INDEX**), 2-door (see **COMPONENT LOCATION INDEX**).

Also review the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) in the SRS article before doing repairs or service.

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the dashboard and related parts.**
- **Lay a workshop towel under the parts when working on them to protect the face panel from scratches or other damage.**
- **Do not work in a dusty or dirty place.**
- **Discharge static electricity from your body before and during the work.**
- **Do not touch the circuit board(s) with your bare hands.**
- **Do not work with dirty hands.**
- **Be careful not to fold the flat plate cable.**
- **Do not touch the terminal connector of the flat plate cable with your bare hands. (If you have touched it, wipe it off thoroughly.)**
- **Before replacing the navigation unit, make sure to remove the customer's navigation DVD, and their audio CD, or PC card. Remanufactured navigation units do not come with a navigation DVD. Re-install the customer's navigation DVD, audio CD, and audio PC card into the new Remanufactured unit. If the navigation display won't open, manually remove the navigation DVD, audio CD, and PC card (see CD, DVD, AND PC CARD REMOVAL/INSTALLATION).**

1. Make sure you have the 4-digit anti-theft code for the navigation system, then write down the audio presets.
2. Eject the DVD from the original navigation unit (see **CD, DVD, AND PC CARD REMOVAL/INSTALLATION**). To avoid scratching or damaging the DVD, temporarily place the DVD in a jewel case.
3. Remove the subdisplay visor (see **SUBDISPLAY VISOR REMOVAL/INSTALLATION**).
4. Remove the center pocket hole lid and bolts, then pull out the center panel (A).

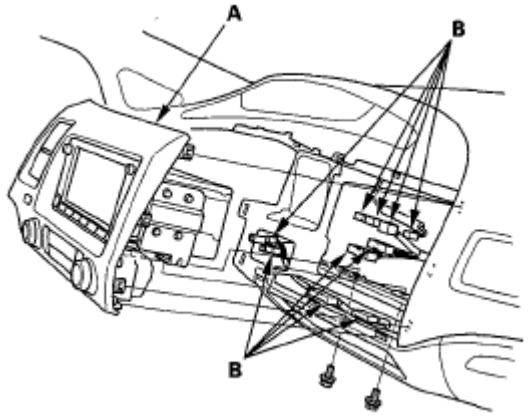

Fig. 80: Identifying Center Panel And Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the connectors (B), then remove the center panel.
6. Remove the screws, brackets (A), and the navigation unit (B) from the center panel (C).

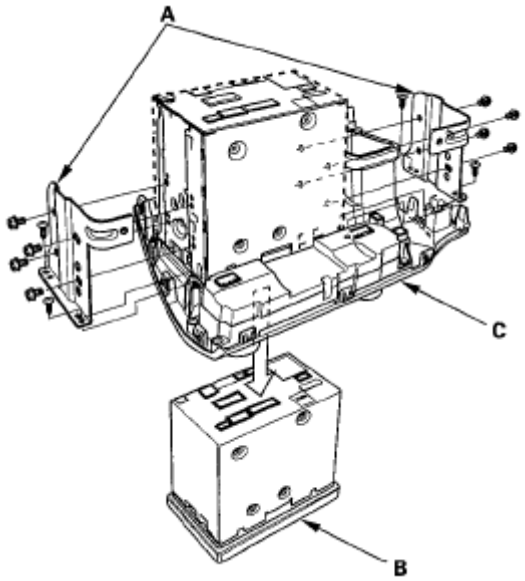

Fig. 81: Identifying Screws, Brackets And Navigation Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the navigation unit in the reverse order of removal, and make sure all connectors are secure.
8. Turn the ignition switch to ON (II), then reinstall the customer's original DVD, verifying that the DVD is free of scratches or smudges.
9. Check any official Honda service website for more service information about the navigation system.

NOTE: Simply transferring the DVD from the original navigation unit to the new navigation unit does not assure the correct software for the vehicle will be loaded into the new navigation unit. Doing the DVD transfer without doing software patches may cause the new navigation unit to appear to be malfunctioning.

10. Enter the new navigation anti-theft code, then enter the audio presets.
11. Park the vehicle outside, and do the GPS initialization (see **GPS INITIALIZATION**).
12. Give the new navigation anti-theft code to the customer.

VOICE CONTROL SWITCH TEST

4-DOOR

1. Remove the driver's airbag assembly (see **DRIVER'S AIRBAG REPLACEMENT**).
2. Remove the 20P connector (A) from the cable reel (B).

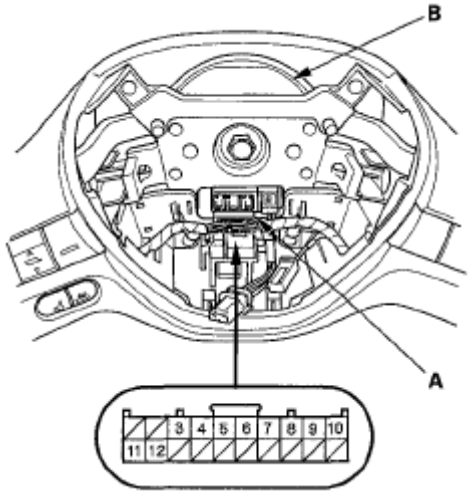

Fig. 82: Identifying Voice Control Switch 20P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Measure the resistance between the No. 8 and No. 10 terminals in each switch position according to the table.

TERMINALS RESISTANCE REFERENCE

Position	Resistance
No button pressed	About 10 kohms
TALK	About 2.9 kohms
BACK	About 680 ohms

4. If the resistance is not as specified, replace the voice control switch (see **VOICE CONTROL SWITCH REPLACEMENT**).

2-DOOR

1. Remove the voice control switch (see **VOICE CONTROL SWITCH REPLACEMENT**).

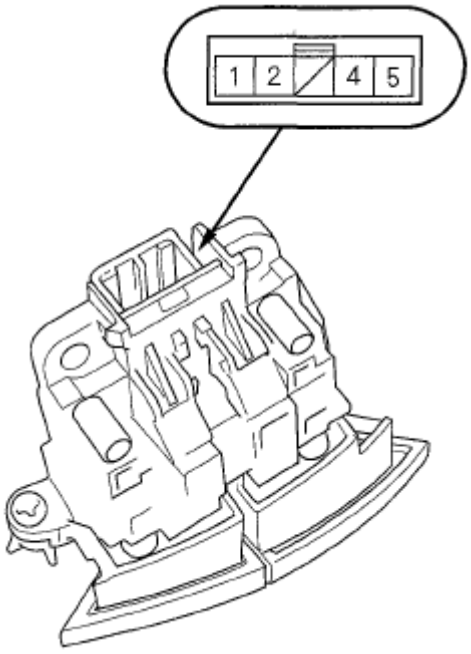

Fig. 83: Identifying Voice Control Switch Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Measure the resistance between the No. 2 and No. 4 terminals in each switch position according to the table.

TERMINALS RESISTANCE REFERENCE

Position	Resistance
No button pressed	About 10 kohms
TALK	About 2.9 kohms
BACK	About 680 ohms

3. If the resistance is not as specified, replace the voice control switch (see **VOICE CONTROL SWITCH REPLACEMENT**).
4. Use a diode tester between the terminals in each switch position according to the table.

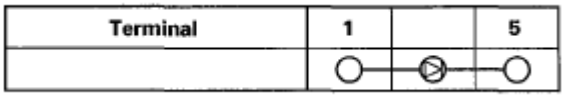

Fig. 84: Terminals Diode Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the diode test is not as specified, replace the switch (see **VOICE CONTROL SWITCH REPLACEMENT**).

VOICE CONTROL SWITCH REPLACEMENT

1. Remove the steering wheel (see **STEERING WHEEL REMOVAL**).
2. Remove the voice control switch.

- Si model (see **STEERING WHEEL DISASSEMBLY/REASSEMBLY**)
- Except Si model (see **STEERING WHEEL DISASSEMBLY/REASSEMBLY**)

3. Install the voice control switch in the reverse order of removal.

MICROPHONE REPLACEMENT

1. Remove the navigation unit (see **NAVIGATION UNIT REMOVAL/INSTALLATION**).
2. Remove the meter upper visor (see **INSTRUMENT PANEL REMOVAL/INSTALLATION**).
3. Remove the wire harness clip (A), screws and GPS antenna (B).

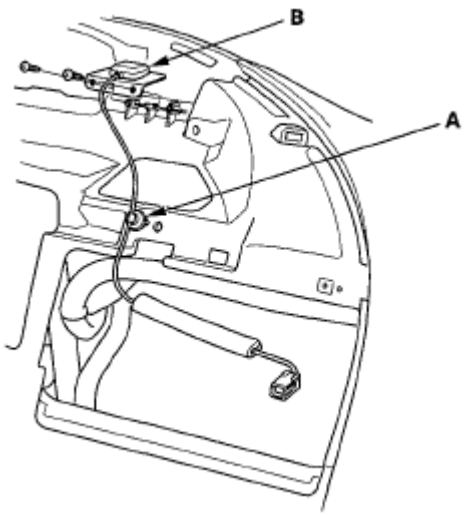

Fig. 85: Identifying Wire Harness Clip, Screws And GPS Antenna
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the antenna in the reverse order of removal.

GPS ANTENNA REMOVAL/INSTALLATION

1. Remove the front individual map light lens (A).

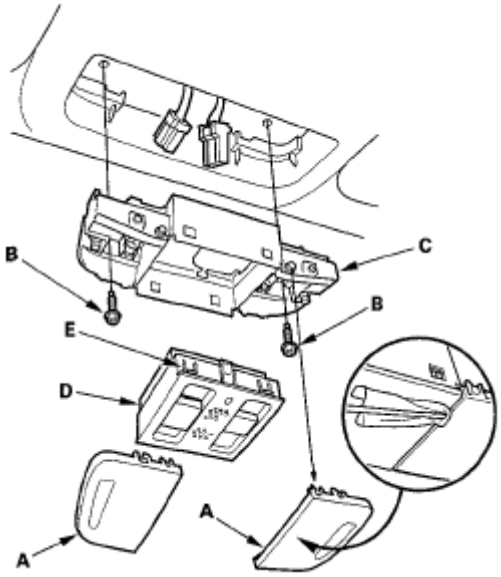

Fig. 86: Identifying Front Individual Map Light Lens
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the bolts (B), then disconnect the connectors and remove the map lights housing (C).
3. Carefully pry off the moonroof switch (D) from the map light housing while pressing the retaining tabs (E).
4. From the moonroof switch (A), remove the screw and microphone (B).

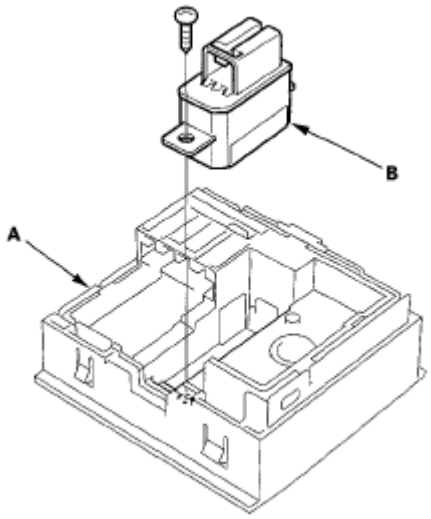

Fig. 87: Identifying Moonroof Switch And Microphone
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the microphone in the reverse order of removal.

2006-08 ACCESSORIES & EQUIPMENT

Seats - Civic (Except Hybrid)

COMPONENT LOCATION INDEX

NOTE: **Refer to the SEATS (GX) (SUPPLEMENT) article for additional information for the GX model.**

2-door

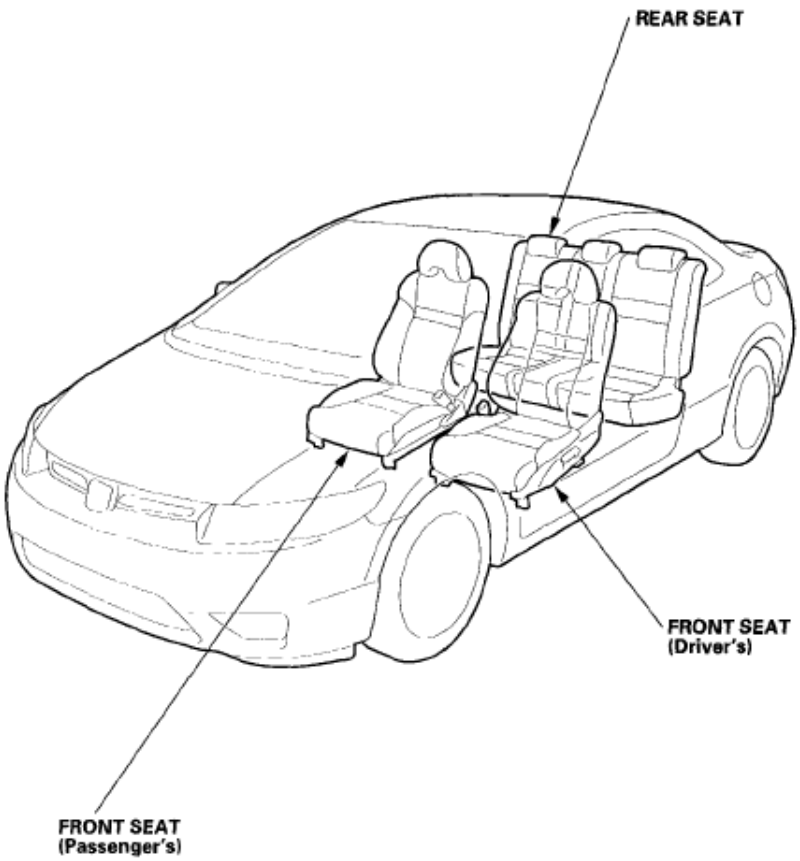

Fig. 1: Locating Seats Component (2-Door)

4-door

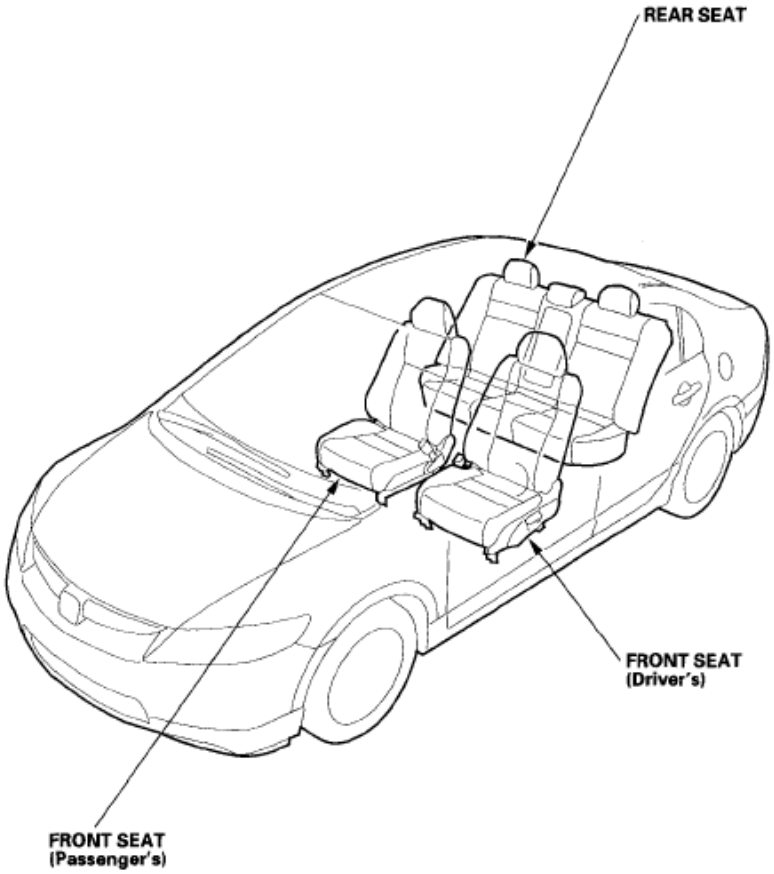

Fig. 2: Locating Seats Component (4-Door)

FRONT SEAT ACTIVE HEADREST INSPECTION

NOTE: If the vehicle has been in a collision, always inspect the active headrests, even if they appear reusable, by doing the following procedure.

RESETTING HEAD RESTRAINT POSITION.

1. Push the head restraint (A) forward fully from the locked position to return the inside inertia lock (B).

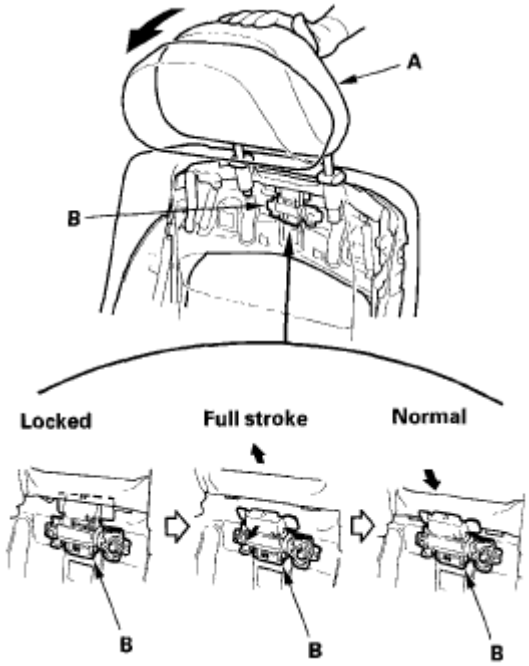

Fig. 3: Pushing Head Restraints Forward Fully From Locked Position To Return Inside Inertia Lock

2. Slowly raise the head restraint into the normal position.

Inspection

3. Fold the seat-back forward, then recline the seat-back to the first lock position, and adjust the head restraint to the highest position.
4. Apply masking tape on the top of the head restraint.
5. Make marks (A) on both sides at 250 mm (9.84 in.) upward from the roots of the head restraint frame (B) along the back of the head restraint (C) surface. Make a center of these points as a datum point (D).

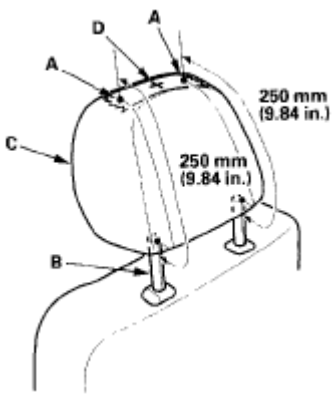

Fig. 4: Making Center Of Points As Datum Point (With Specifications)

6. Push the head restraint (A) forward, and check: With a scale, measure the level amount of the head restraint movement. The head restraint should move more than 50 mm (2.0 in.) without resistance. If it is less than 50 mm (2.0 in.), or the head restraint doesn't move smoothly, replace the seat-back

frame assembly:

- 2-door passenger's seat (see **PASSENGER'S SEAT - 2-DOOR**)
- 4-door passenger's seat (see **PASSENGER'S SEAT - 4-DOOR**)
- Driver's seat (see **DRIVER'S SEAT**)

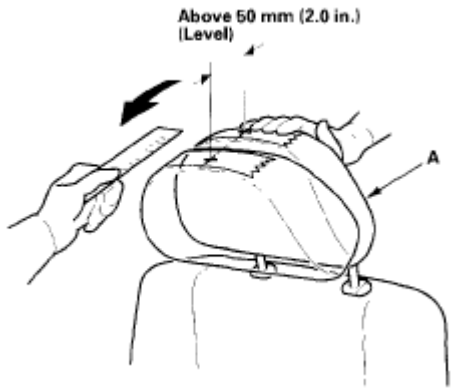

Fig. 5: Pushing Head Restraint Forward (With Specifications)

FRONT SEAT REMOVAL/INSTALLATION

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) in the SRS before doing repairs or service.

NOTE:

- **Put on gloves to protect your hands.**
- **When prying with a flat-tip screwdriver, wrap it with protective tape to prevent damage.**
- **Take care not to scratch the body or tear the seat covers.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when prying components.**

1. Make sure you have the anti-theft code for the audio or the navigation system, then write down the audio presets.
2. Disconnect the negative cable from the battery, and wait at lease 3 minutes before beginning work.
3. Tilt the steering wheel all the way up, and telescope it all the way in.
4. 2-door passenger's seat: Carefully insert the tip of a small screwdriver (A) through the hole in the back of the front seat belt lower anchor cover (B) and into the hole in the front seat belt lower anchor (C). Unlock the lower anchor by pushing in on the screwdriver. Remove the screwdriver, and then detach the front seat belt anchor plate (D) and anchor cover from the lower anchor.

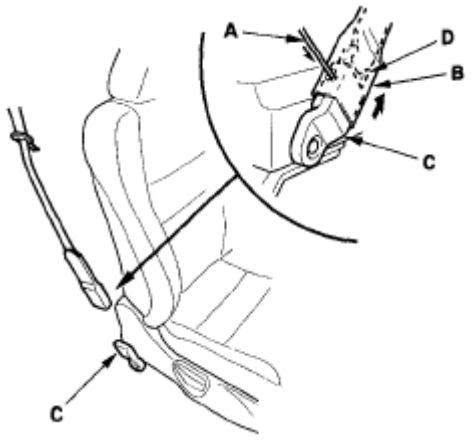

Fig. 6: Detaching Front Seat Anchor Plate And Anchor Cover From Lower Anchor

5. Except 2-door passenger's seat: Slide the front seat forward fully, carefully pry up on the bottom edge of the anchor cover (A) to release the hooks, and remove the cover.

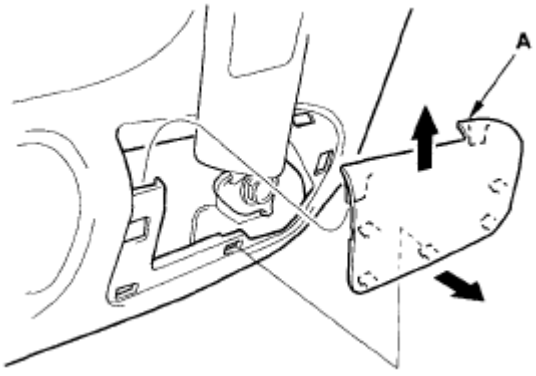

Fig. 7: Prying Up On Bottom Edge Of Anchor Cover To Release Hooks

6. Except 2-door passenger's seat: Remove the lower anchor bolt (A).

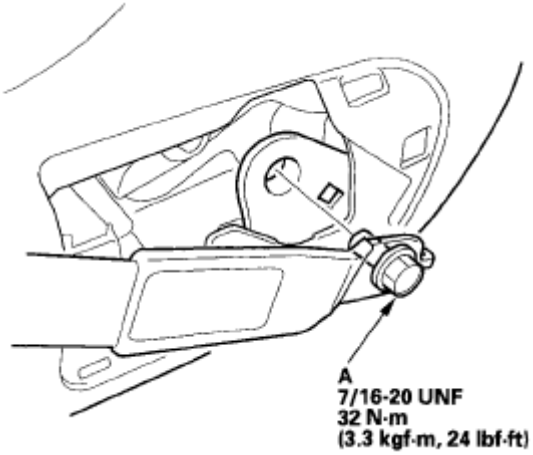

Fig. 8: Removing Lower Anchor Bolt (With Specifications)

7. Remove the seat track outer end covers (A) and seat track center end covers (B) from the back of both seat tracks.

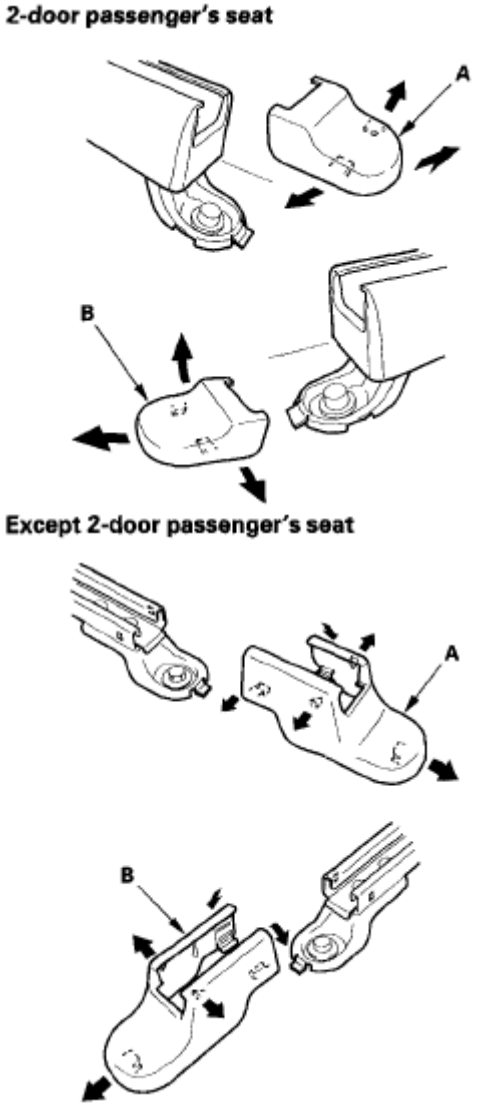

Fig. 9: Removing Seat Track Outer End Covers And Seat Track Center End Covers

8. Remove the bolts.

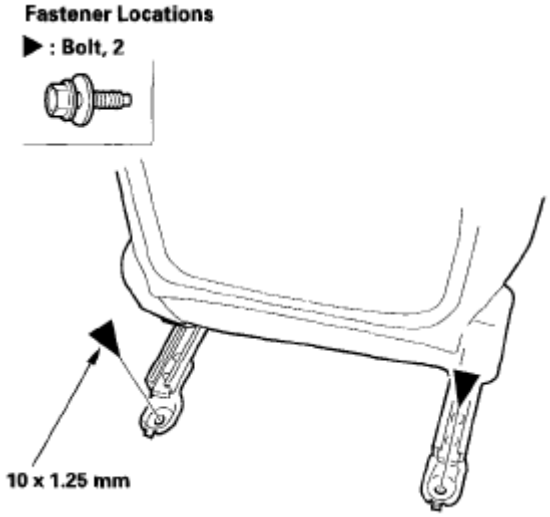

Fig. 10: Removing Seat Tracker Bolts

9. Slide the front seat rearward fully, and remove the bolts.

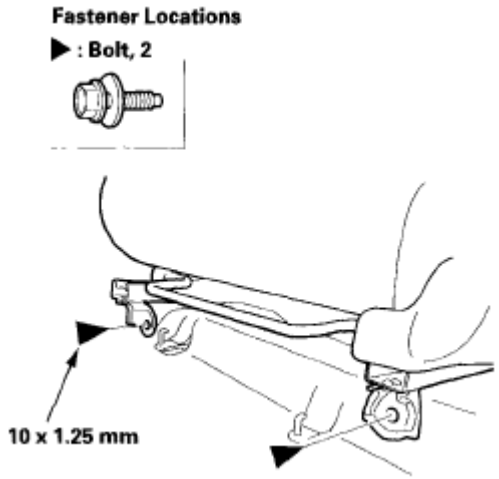

Fig. 11: Removing Seat Tracker Bolts Sliding Front Seat Rearward Fully

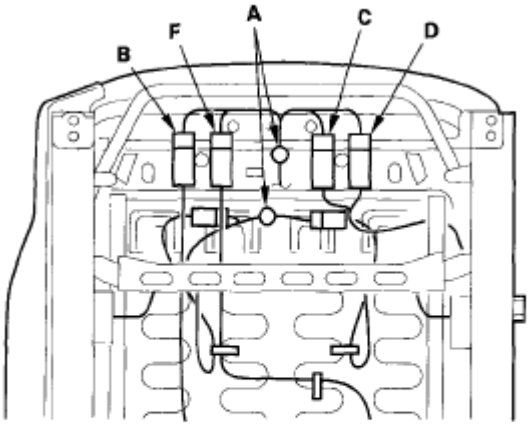
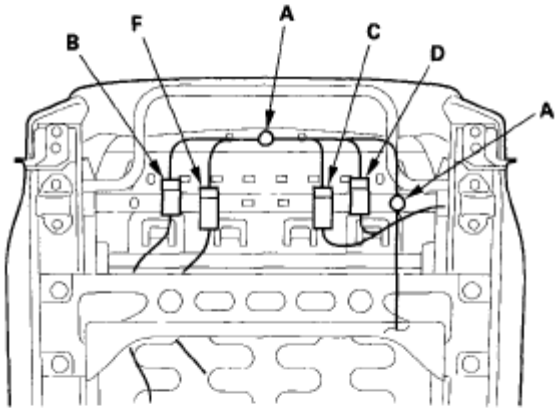
10. Lift up the front seat, then detach the harness clips (A), and disconnect the side airbag connector (B), the seat belt switch connector (C), the seat belt buckle tensioner connector (D), and the seat position sensor connector (E) on the driver's seat. On passenger's seat, disconnect the ODS subharness connector (F).

2-door passenger's seat



4-door passenger's seat



Driver's seat

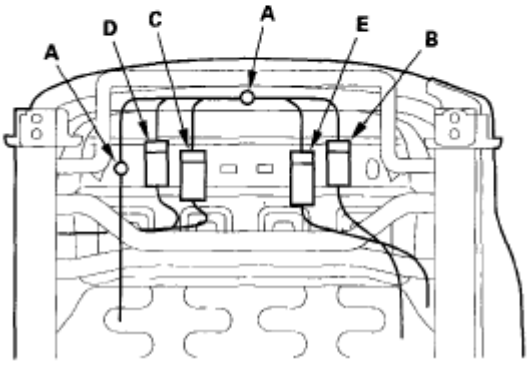


Fig. 12: Detaching Harness Clips And Connectors

11. With the help of an assistant, carefully remove the front seat through the front door opening.
12. Install the seat in the reverse order of removal, and note these items:
    - Apply medium strength type liquid thread lock to the seat mounting bolts before reinstallation.
    - Tighten the seat mounting bolts to the specified torque in the sequence shown. Slide the seat all the way back and tighten (1) and (2), then slide it forward and tighten (3) and (4). The driver's seat is shown; the passenger's seat is similar.

- Tighten the bolts by hand first, then tighten them to specification with a torque wrench.
- Make sure each connector is plugged in properly.
- Reconnect the negative cable to the battery.
- Enter the anti-theft code for the audio or the navigation system, then enter the audio presets.
- Set the clock.
- Check for any DTCs that may have been set during repairs, and clear them.

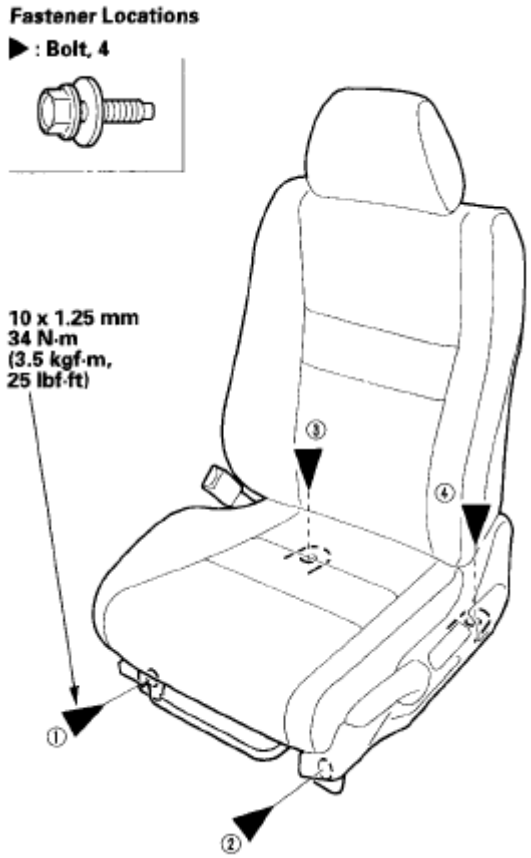

Fig. 13: Tightening Seat Mounting Bolts In Sequence (With Specifications)

FRONT SEAT FRAME REPLACEMENT

PASSENGER'S SEAT - 2-DOOR

Calibrate the ODS unit after any of the these actions (see **ODS UNIT CALIBRATION**):

- Front passenger's seat replacement (including any seat components)
- Replacement of the seat weight sensors
- After a vehicle collision

NOTE:

- **Put on gloves to protect your hands.**
- **Apply oil to the pivot portions of the slide locks.**
- **Apply multipurpose grease to the sliding portions of the seat tracks.**

- **Make sure the ODS unit connectors are plugged in properly.**
- **Make sure the ODS wires are routed properly so they are not pinched and do not interfere with other parts.**
- **If the side airbag has deployed, replace the seat frame and related parts with new ones (see COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT).**

1. Remove the front seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
2. Slide the front seat frame rearward fully, detach the clips, then remove the front rail covers (A) from the front of both seat tracks.

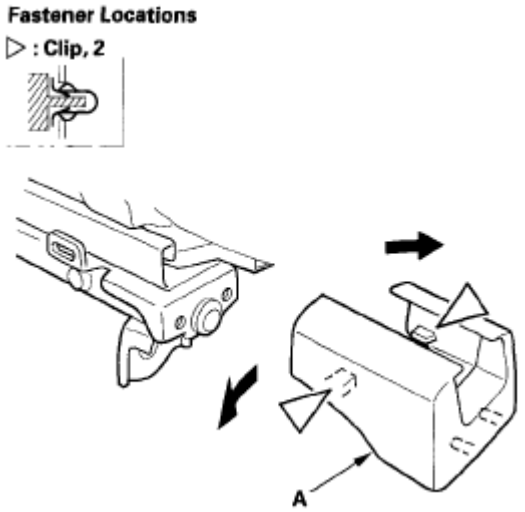

Fig. 14: Removing Front Rail Covers From Front Of Seat Tracks

3. Slide the front seat frame forward fully, detach the clips, then remove the left rear rail cover (A) and the right rear rail cover (B) from the back of both seat tracks.

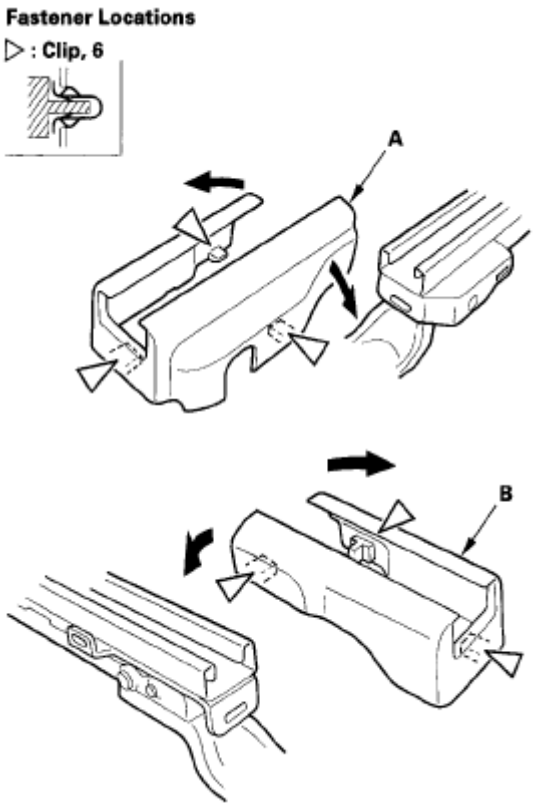

Fig. 15: Removing Left And Right Rear Rail Cover

4. Remove these items:
   - Front seat-back cover (see **FRONT SEAT-BACK COVER REPLACEMENT**)
   - Front seat cushion cover (see **FRONT SEAT CUSHION COVER REPLACEMENT**)
   - Seat weight sensor, both sides:
     - 2-door (see **SEAT-BACK - SPLIT FOLD DOWN - 2-DOOR**)
     - 4-door (see **SEAT-BACK - FOLD DOWN - 4-DOOR**)
   - ODS unit (see **ODS UNIT REPLACEMENT**)
5. Remove the clips, then remove the recline inner covers (A), and the side airbag module holder (B) from the seat frame (C).

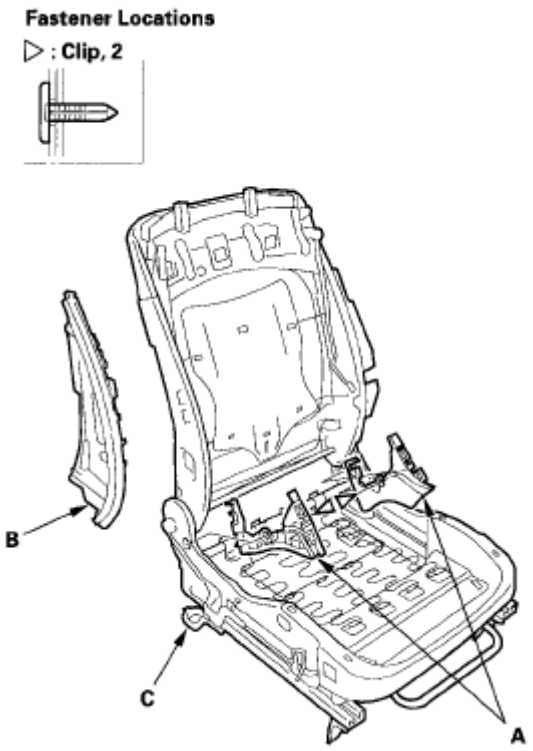

Fig. 16: Removing Recline Inner Covers And Side Airbag Module Holder

6. Install the new seat frame in the reverse order of removal, and note these items:
   - Check if the clips are damaged or stress-whitened, and if necessary, replace them with new ones.
   - Push the clips into place securely.

PASSENGER'S SEAT - 4-DOOR

Calibrate the ODS unit after any of the these actions (see **ODS UNIT CALIBRATION**):

- Front passenger's seat replacement (including any seat components)
- Replacement of the seat weight sensors
- After a vehicle collision

NOTE:

- **Put on gloves to protect your hands.**
- **Apply oil to the pivot portions of the slide locks.**
- **Apply multipurpose grease to the sliding portions of the seat tracks.**
- **If the side airbag has deployed, replace the seat frame and related parts with new ones (see COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT).**

1. Remove the front seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
2. Remove these items:
   - Front seat-back cover (see **FRONT SEAT-BACK COVER REPLACEMENT**)
   - Front seat cushion cover (see **FRONT SEAT CUSHION COVER REPLACEMENT**)

- ODS unit (see **ODS UNIT REPLACEMENT**)

3. Remove the clips, then remove the recline inner covers (A) from the seat frame (B), with side airbag remove the module holder (C).

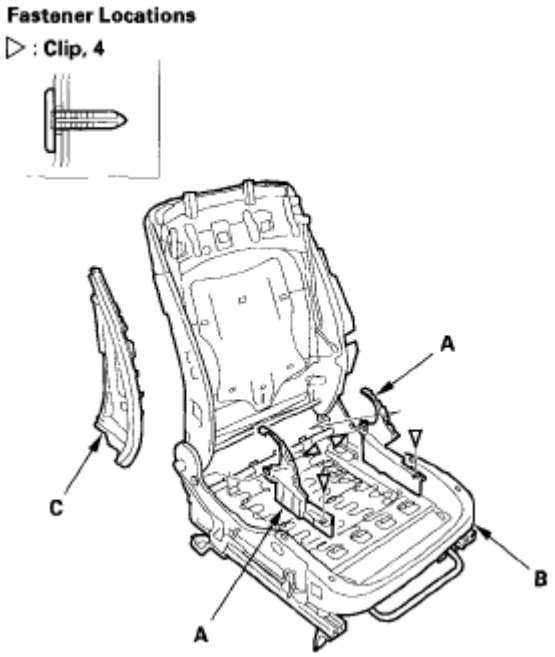

Fig. 17: Removing Recline Inner Covers From Seat Frame

4. Remove the bolts, and release the seat cushion springs (A) from the hooks (B), then remove the seat cushion frame (C).

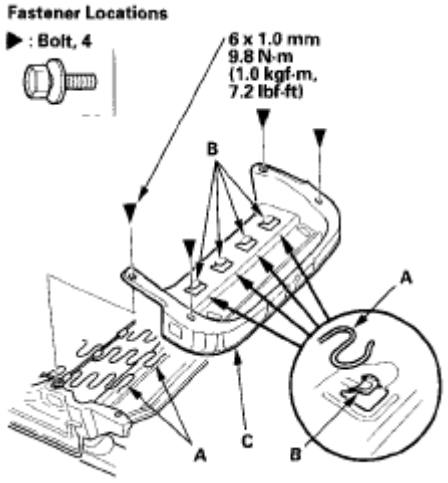

Fig. 18: Releasing Seat Cushion Springs (With Specifications)

5. Remove the seat weight sensors:
   - 2-door (see **2-DOOR**)
   - 4-door (see **4-DOOR**)
6. If necessary, remove the bushing (A, B) from the seat cushion frame (C).

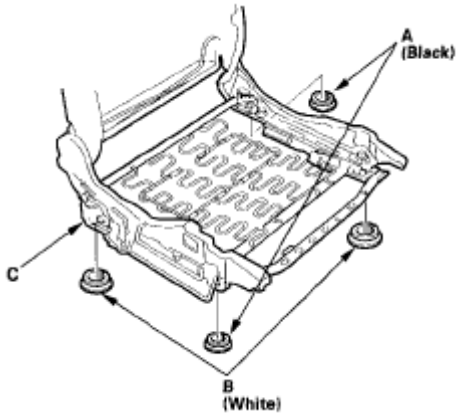

Fig. 19: Removing Bushing From Seat Cushion Frame

7. Install the new seat frame in the reverse order of removal, and note these items:
   - Make sure the ODS unit connector is plugged in properly.
   - Check if the clips are damaged or stress-whitened, and if necessary, replace them with new ones.
   - Push the clips into place securely.

DRIVER'S SEAT

Check the operation of the driver's seat position sensor after any of these actions (see **DRIVER'S SEAT POSITION SENSOR OPERATION CHECK**):

- Driver's seat position sensor replacement
- Cover plate (front side of driver's seat slide rail) replacement

NOTE:

- **Put on gloves to protect your hands.**
- **Apply oil to the pivot portions of the slide lock.**
- **Apply multipurpose grease to the sliding portions and pivot portions of the seat tracks.**
- **If the side airbag has deployed, replace the seat frame and related parts with new ones (see COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT).**

1. Remove the front seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
2. Remove these items:
   - Front seat back cover/pad:
     - 2-door (see **FRONT SEAT-BACK COVER REPLACEMENT**)
     - 4-door (see **FRONT SEAT-BACK COVER REPLACEMENT**)
   - Front seat cushion cover/pad:
     - 2-door (see **FRONT SEAT CUSHION COVER REPLACEMENT**)
     - 4-door (see **FRONT SEAT CUSHION COVER REPLACEMENT**)
   - Seat position sensor (see **DRIVER'S SEAT POSITION SENSOR REPLACEMENT**)

3. Remove the clips, then remove the recline inner covers (A), outer upper rail cover (B), inner upper rail cover (C) and the module holder (D) from the seat frame (E).

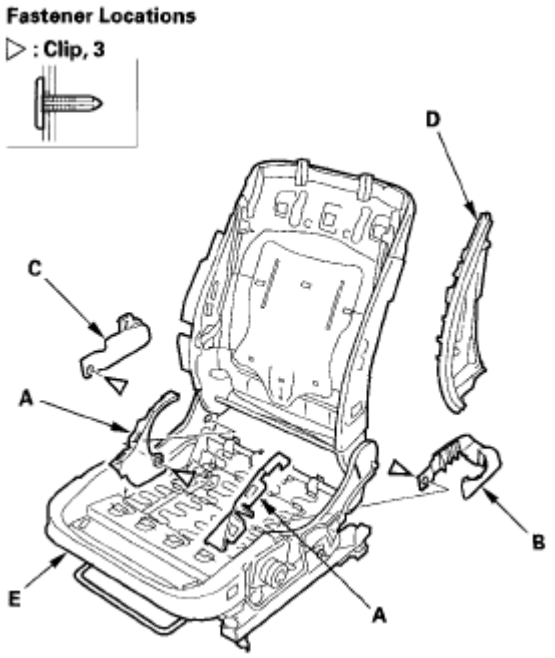

Fig. 20: Removing Clips, Recline Inner Covers, Outer Upper Rail Cover, Inner Upper Rail Cover And Module Holder

4. Install the new seat frame in the reverse order of removal, and note these items:
   - Make sure seat position sensor connector is plugged in properly.
   - Check if the clips are damaged or stress-whitened, and if necessary, replace them with new ones.
   - Push the clips into place securely.

FRONT SEAT-BACK COVER REPLACEMENT

2-DOOR

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) in the SRS before doing repairs or service.

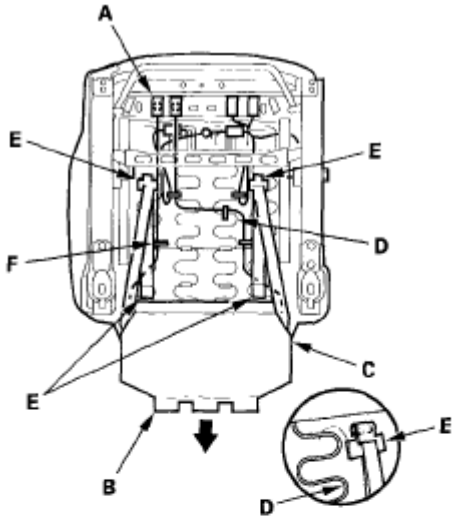
- Check the operation of the driver's seat position sensor after any of these actions (see **DRIVER'S SEAT POSITION SENSOR OPERATION CHECK**):
  - Driver's seat position sensor replacement
  - Cover plate (front side of driver's seat slide rail) replacement
- Calibrate the ODS unit after any of the these actions (see **ODS UNIT CALIBRATION**):
  - Front passenger's seat replacement (including any seat components)
  - Replacement of the seat weight sensors
  - After a vehicle collision

NOTE:

- **Take care not to tear the seams of damage the seat covers.**
- **On the passenger's seat, do not touch the ODS sensor in the seat-back pad, and keep it away from oil. Oil can corrode the sensor causing it to fail.**
- **Put on gloves to protect your hands.**

1. Remove the front seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
2. Remove the head restraint.
3. From under the seat cushion, disconnect and detach the side airbag connector (A).

Passenger's seat A



Driver's seat

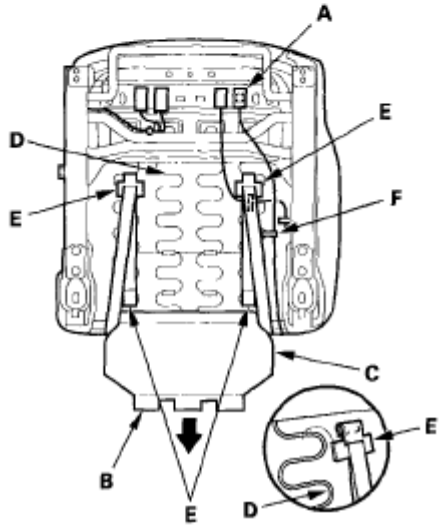


Fig. 21: Disconnecting And Detaching Side Airbag Connector

4. Release the hook (B) and seat cushion cover (C) from the seat cushion frame spring (D), then pull the cover back and release the hooks (E). Remove the wire ties (F).

5. Detach the clips and hooks (A) by pulling the bottom of the back cover (B) back, then gently pull down the cover to release the hooks (C) from the seat frame, and remove the panel.

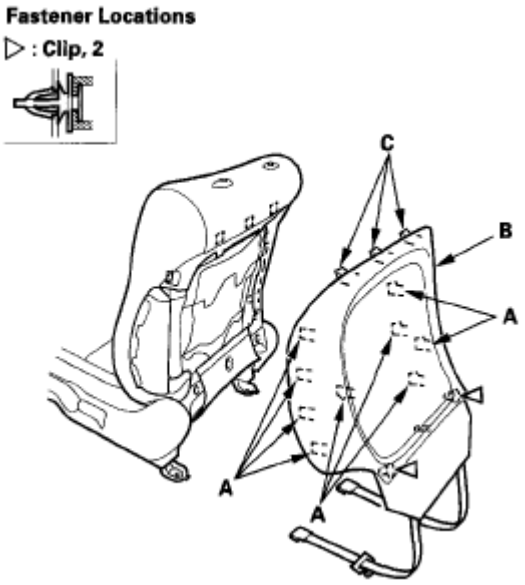

Fig. 22: Detaching Clips And Hooks By Pulling Bottom Of Back Cover

6. Release the hook strips (A), then loosen the seat-back cover (B). Pull the side airbag harness (C) with harness guides (D) out through holes in the seat cushion cover (E). Passenger's seat is shown; driver's seat is similar.

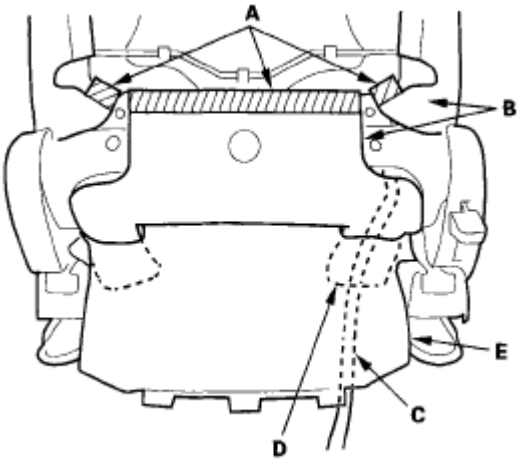

Fig. 23: Releasing Hook Strips And Loosening Seat-Back Cover

7. Detach the harness clip (A), and pull the side airbag harness (B) out through the harness hole (C) in the seat-back cover and seat frame. Passenger's seat is shown; driver's seat is similar.

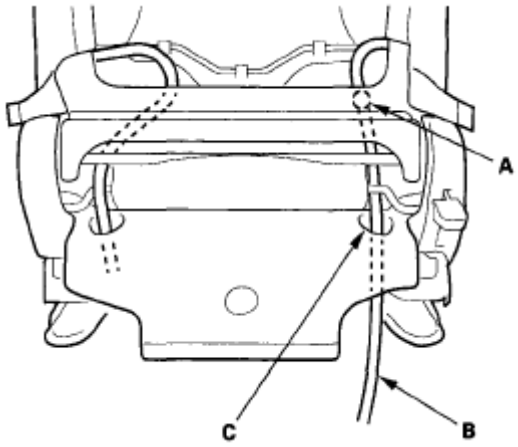

Fig. 24: Detaching Harness Clip And Pulling Side Airbag Harness Out Through Harness Hole In Seat-Back Cover And Seat Frame

8. Remove the side airbag (see **SIDE AIRBAG REPLACEMENT**).
9. Release the hook strips (A), then loosen the seat-back cover (B). Driver's seat is shown; passenger's seat is similar.

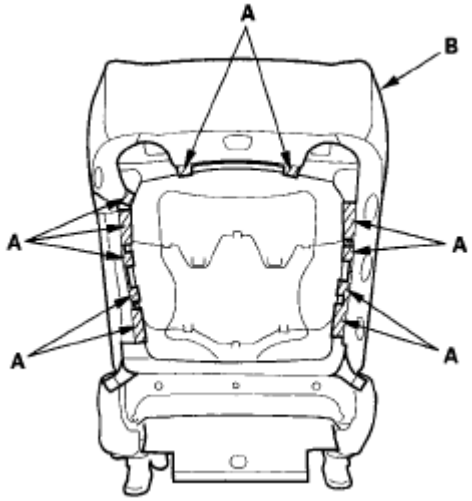

Fig. 25: Releasing Hook Strips And Loosening Seat-Back Cover

10. Turn over the reinforcing cloth (A), then release the hooks (B) from the side airbag module holder (C). Passenger's seat is shown; driver's seat is similar.

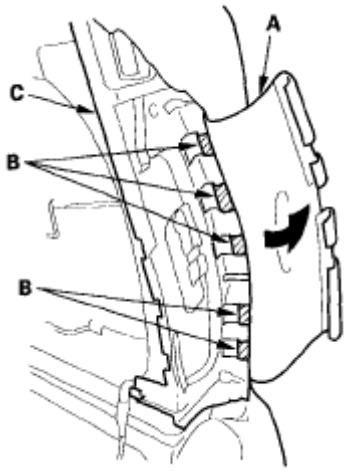

Fig. 26: Releasing Hooks From Side Airbag Module Holder

11. Passenger's seat: Disconnect the ODS sensor connectors (A) and ODS subharness connector (B) from the ODS unit (C), and pull them out through the hole in the seat frame. Pull the ODS subharness (D) out through the harness hole (E) in the seat-back cover (F). Detach the harness clips (G) and remove the wire tie (H).

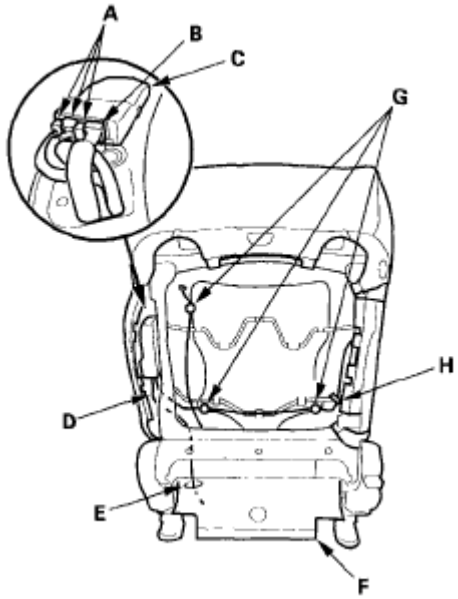

Fig. 27: Disconnecting ODS Sensor Connector And ODS Subharness Connector From ODS Unit

12. Pinch the tabs on the ends of the head restraint guides (A), and remove them from the seat-back.

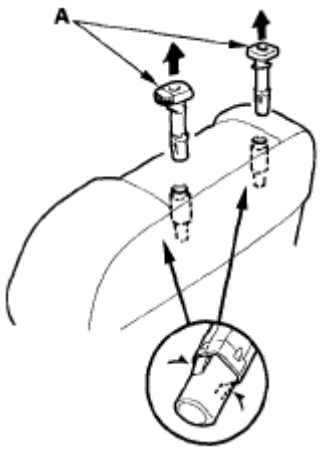

Fig. 28: Pinching Tabs On Ends Of Head Restraint Guides

13. Remove the seat-back cover/pad (A) from the seat (B).

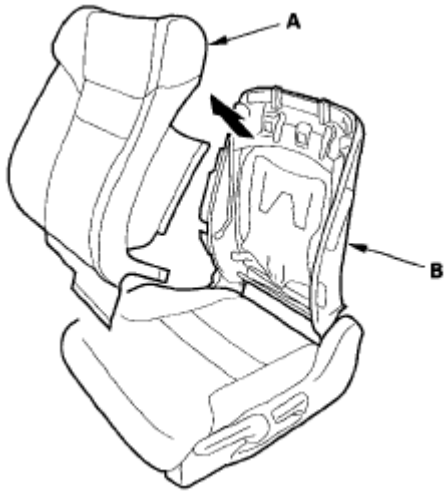

Fig. 29: Removing Seat-Back Cover/Pad From Seat

14. Pull back the edge of the seat-back cover all the way around, and release the clips (A), then remove the seat-back cover.

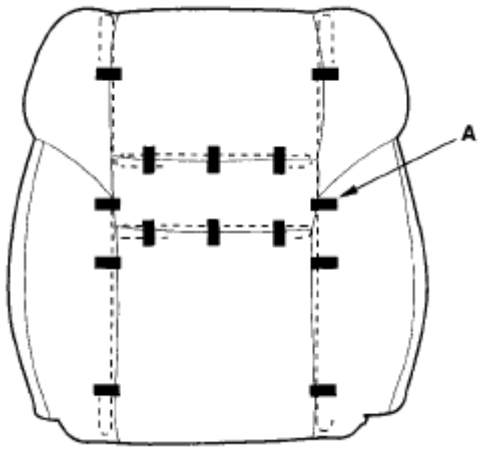

Fig. 30: Releasing Clips

15. Install the cover in the reverse order of removal, and note these items:
    - Reinitialize the ODS unit (see **ODS UNIT INITIALIZATION**).
    - To prevent wrinkles when installing a seat-back cover, make sure the material is stretched evenly over the pad before securing the clips, hooks, and hook strips.
    - Replace any clips you removed with new ones (A). Install them with commercially available upholstery ring pliers (B).
    - Before installing the side airbag (C), make sure the reinforcing cloth (D) is fixed on the seat-back frame (E) securely.
    - Make sure the side airbag harness and ODS subharness (passenger's seat) are routed properly.

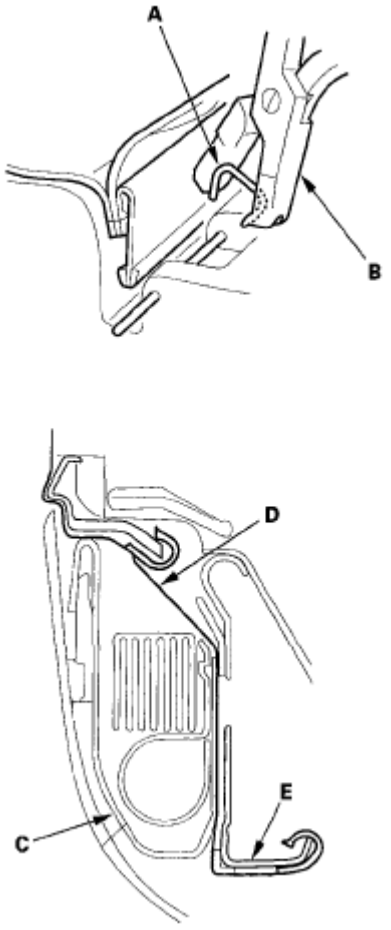

Fig. 31: Installing Front Seat-Back Cover (2-Door)

4-DOOR

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) in the SRS before doing repairs or service.

- Check the operation of the driver's seat position sensor after any of these actions (see **DRIVER'S SEAT POSITION SENSOR OPERATION CHECK**):

- Driver's seat position sensor replacement
- Cover plate (front side of driver's seat slide rail) replacement

- Calibrate the ODS unit after any of the these actions (see **ODS UNIT CALIBRATION**):
  - Front passenger's seat replacement (including any seat components)
  - Replacement of the seat weight sensors
  - After a vehicle collision

NOTE:

- **Take care not to tear the seams or damage the seat covers.**
- **On the passenger's seat, do not touch the ODS sensor in the seat-back pad, and keep it away from oil. Oil can corrode the sensor caution it to fail.**
- **Put on gloves to protect your hands.**

1. Remove the front seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
2. Remove the head restraint.
3. From under the seat cushion, detach the side airbag connector clip (A).

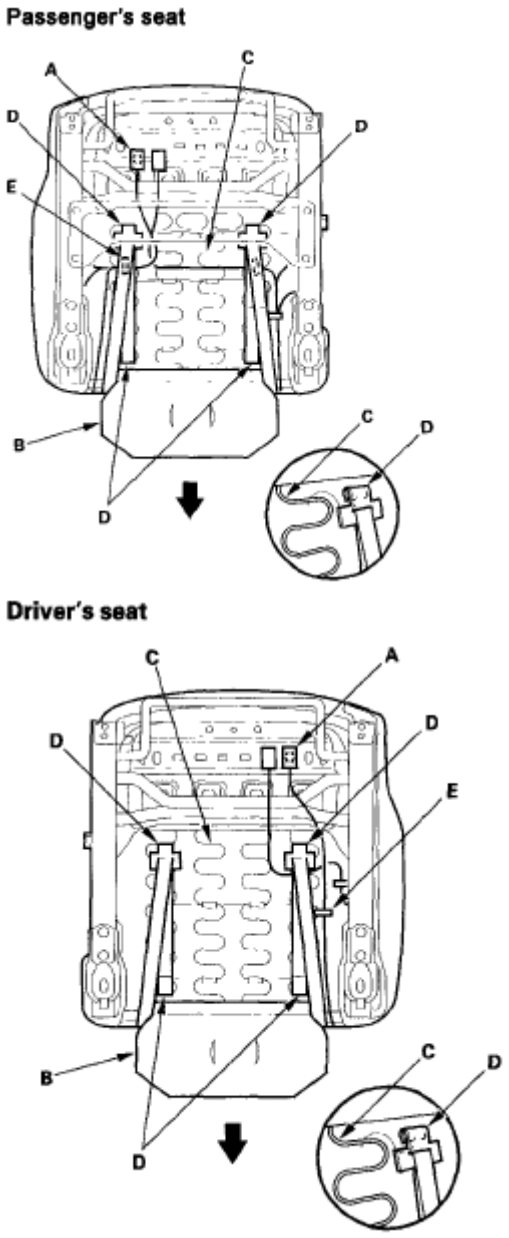

Fig. 32: Detaching Side Airbag Connector Clip

4. Release the slit in the seat cushion cover (B) from the seat cushion frame spring (C), then pull the cover back. Release the hooks (D) and remove the wire ties (E).
5. Detach the clips and hooks (A) by pulling the bottom of the back cover (B) back, then gently pull down the cover to release the hooks (C) from the seat frame, and remove the panel.

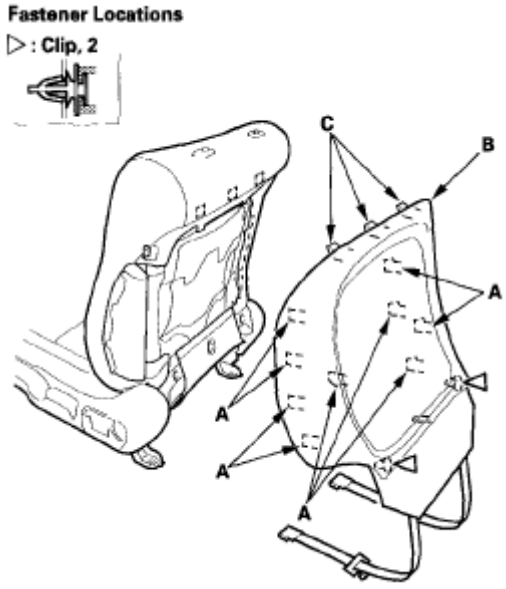

Fig. 33: Detaching Clips And Hooks Pulling Bottom Of Back Cover Back

6. Pull the side airbag harness (A) out through the loop (B), and release the hook (C), then pull the seat-back cover (D) back.

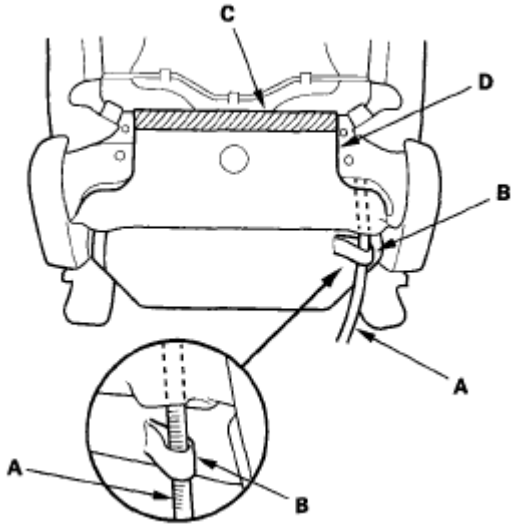

Fig. 34: Pulling Side Airbag Harness Out Through Loop

7. Detach the harness clip (A), and pull the side airbag harness (B) out through the harness hole (C) in the seat-back cover and seat frame. Passenger's seat is shown; driver's seat is similar.

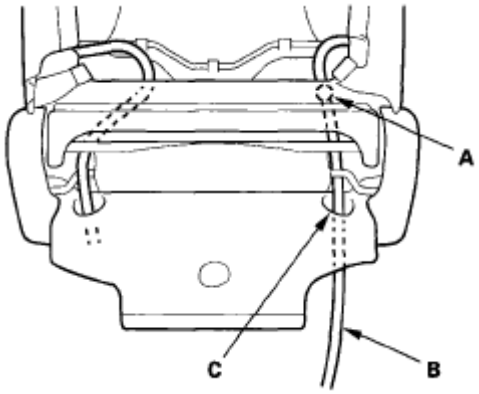

Fig. 35: Detaching Harness Clip And Pulling Side Airbag Harness Out Through Harness Hole In Seat-Back Cover And Seat Frame

8. Remove the side airbag (see **SIDE AIRBAG REPLACEMENT**).
9. Release the hook strips (A), then loosen the seat-back cover (B). Driver's seat is shown; passenger's seat is similar.

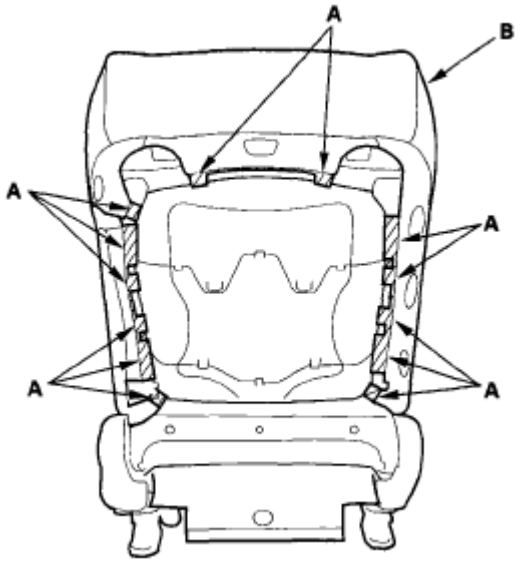

Fig. 36: Releasing Hook Strips

10. Turn over the reinforcing cloth (A), then release the hooks (B) from the module holder (C).

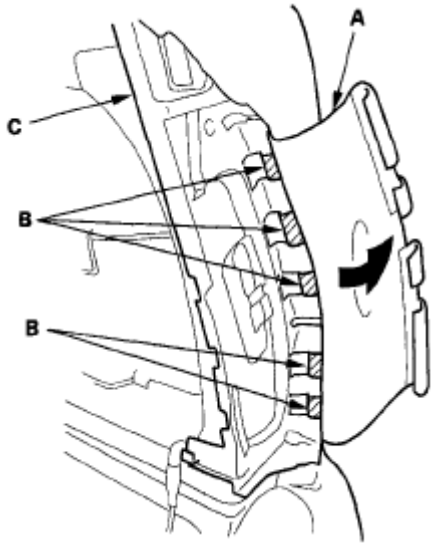

Fig. 37: Releasing Hooks From Module Holder

11. Passenger's seat: Disconnect the ODS sensor connectors (A) and ODS subharness connector (B) from the ODS unit (C), and pull them in through the hole in the seat frame. Pull the ODS subharness (D) out through the harness hole (E) in the seat-back cover (F). Detach the harness clips (G), and remove the wire tie (H).

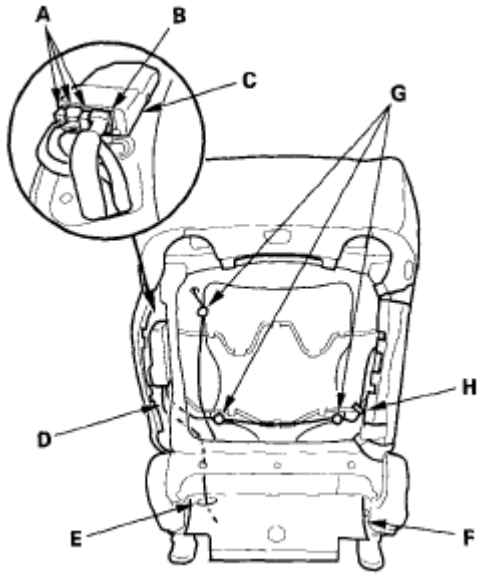

Fig. 38: Disconnecting ODS Sensor Connectors And ODS Subharness Connector From ODS Unit

12. Pinch the tabs on the ends of the head restraint guides (A), and remove them from the seat-back.

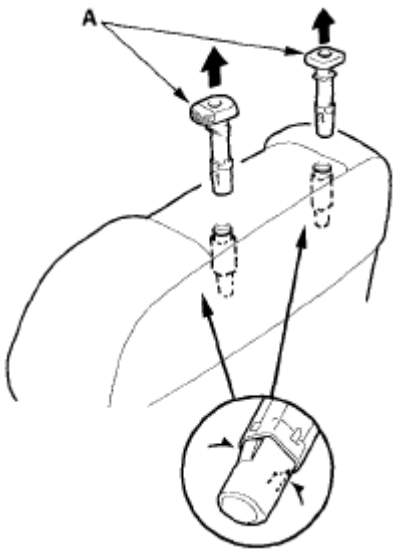

Fig. 39: Pinching Tabs On Ends Of Head Restraint Guides

13. Remove the seat-back cover/pad (A) from the seat (B).

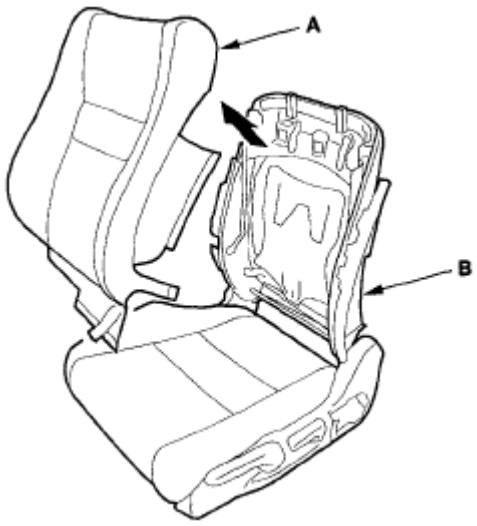

Fig. 40: Removing Seat-Back Cover/Pad From Seat

14. Except Si model: Pull back the edge of the seat-back cover all the way around, and release the clips (A), then remove the seat-back cover.

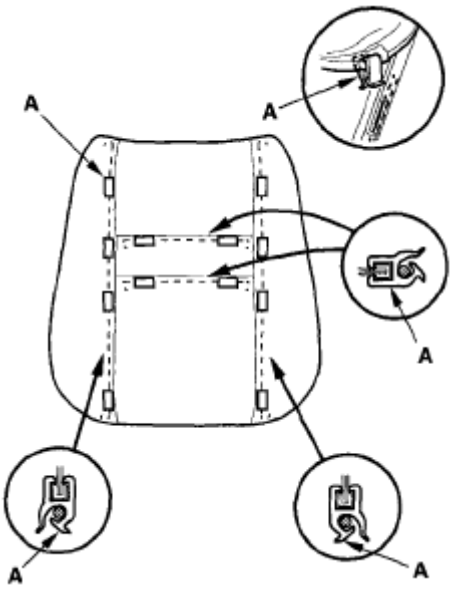

Fig. 41: Removing Seat-Back Cover

15. Except Si model: Install the cover in the reverse order of removal, and note these items:
    - Reinitialize the ODS unit (see **ODS UNIT INITIALIZATION**).
    - To prevent wrinkles when installing a seat-back cover, make sure the material is stretched evenly over the pad before securing the clips, hooks, and hook strips.
    - Replace any clips (A) you removed with new ones.
    - Before installing the side airbag (B), make sure the reinforcing cloth (C) is fixed on the seat-back frame (D) securely.
    - Make sure the side airbag harness and ODS subharness (passenger's seat) are routed properly.

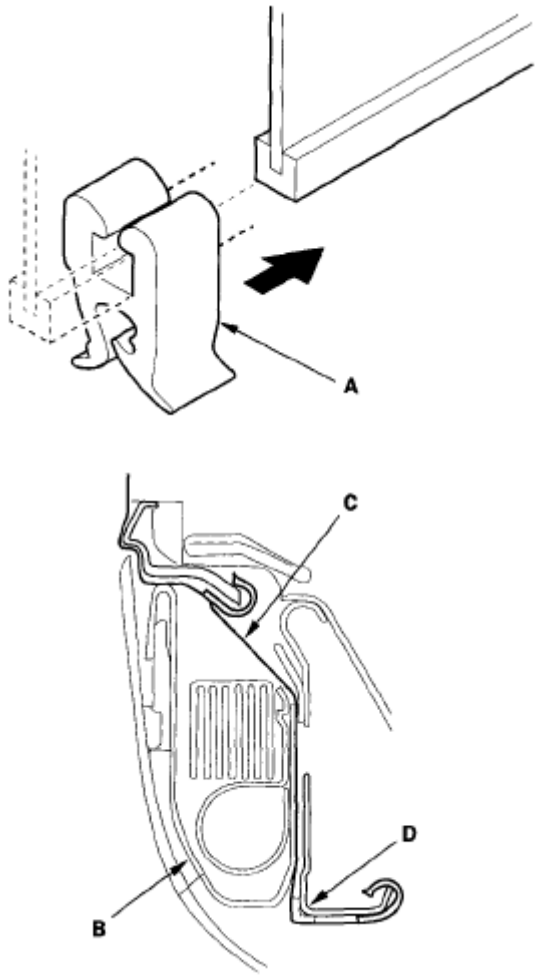

Fig. 42: Installing Cover (Except Si Model)

16. Si model: Pull back the edge of the seat-back cover all the way around, and release the clips (A), then remove the seat-back cover.

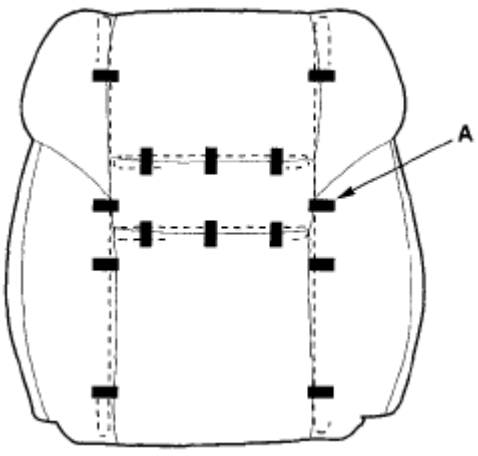

Fig. 43: Removing Seat-Back Cover (Si Model)

17. Si model: Install the cover in the reverse order of removal, and note these items:
    - Reinitialize the ODS unit (see **ODS UNIT INITIALIZATION**).

- To prevent wrinkles when installing a seat-back cover, make sure the material is stretched evenly over the pad before securing the clips, hooks, and hook strips.
- Replace any clips you removed with new ones (A). Install them with commercially available upholstery ring pliers (B).
- Before installing the side airbag (C), make sure the reinforcing cloth (D) is fixed on the seat-back frame (E) securely.
- Make sure the side airbag harness and ODS subharness (passenger's seat) are routed properly.

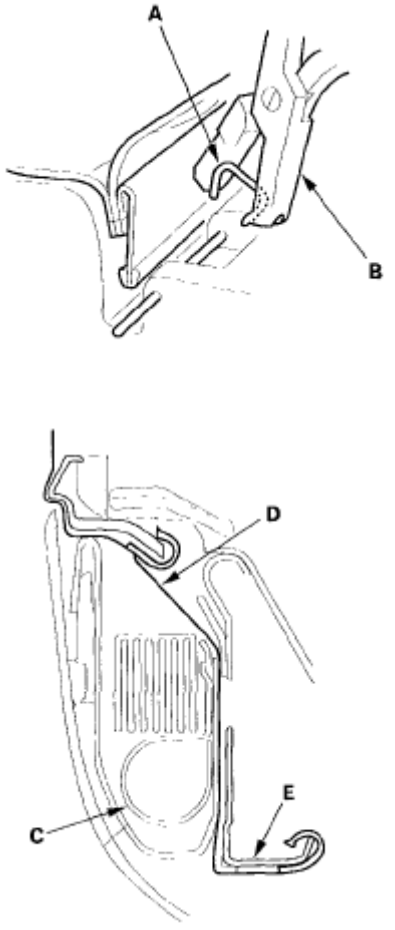

Fig. 44: Installing Front Seat-Back Cover (Si Model)

FRONT SEAT CUSHION COVER REPLACEMENT

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

2-DOOR

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**)

in the SRS before doing repairs or service.

- Check the operation of the driver's seat position sensor after any of these actions (see **DRIVER'S SEAT POSITION SENSOR OPERATION CHECK**):
  - Driver's seat position sensor replacement
  - Cover plate (front side of driver's seat slide rail) replacement
- Calibrate the ODS unit after any of the these actions (see **ODS UNIT CALIBRATION**):
  - Front passenger's seat replacement (including any seat components)
  - Replacement of the seat weight sensors
  - After a vehicle collision

NOTE:

- **Use the appropriate tool from the KTC trim tool set to avoid damage when prying components.**
- **Take care not to tear the seams of damage the seat covers.**
- **Put on gloves to protect your hands.**

1. Remove the front seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
2. Remove the front seat belt buckle (see **FRONT SEAT BELT BUCKLE**).
3. Passenger's seat: Remove the screws, then remove the rear seat access knob (A).

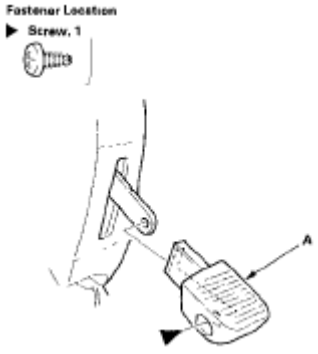

Fig. 45: Removing Rear Seat Access Knob

4. Pull back the cap (A) to release the hooks (B), and remove the screws, then remove the height handle (C).

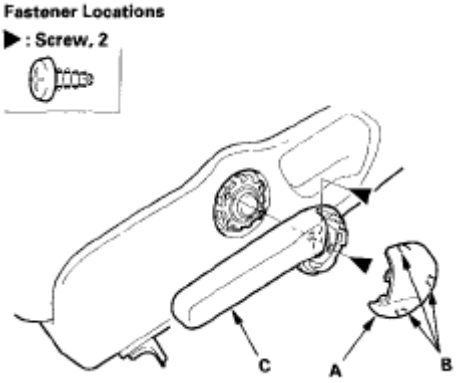

Fig. 46: Removing Height Handle

5. Remove the recline outer cover (A).
   - 1 Remove the recline knob (B) and screw (C).
   - 2 Gently pull out the cover, then detach the clips (D), and release the hooks (E).
   - 3 Release the rear seat access lever (F).

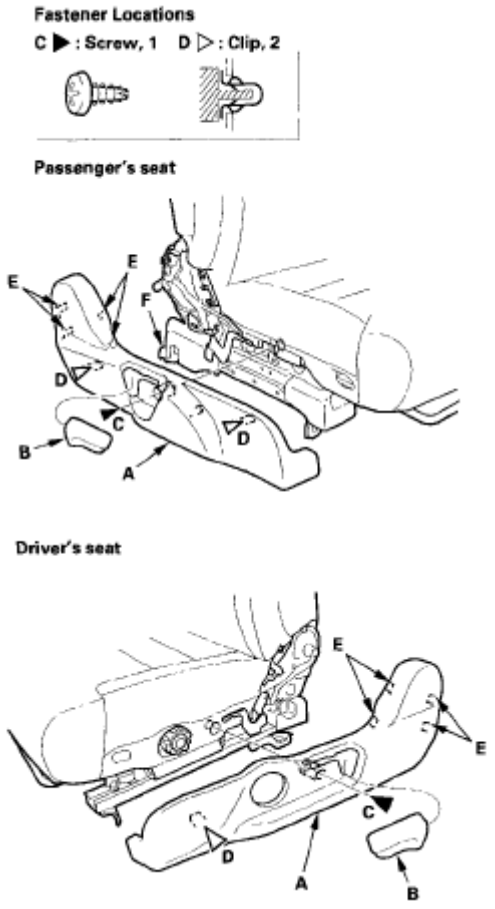

Fig. 47: Removing Recline Outer Cover

6. Gently pull out the center cover (A), then detach the clips, and release the hooks (B). Driver's seat is shown; passenger's seat is similar.

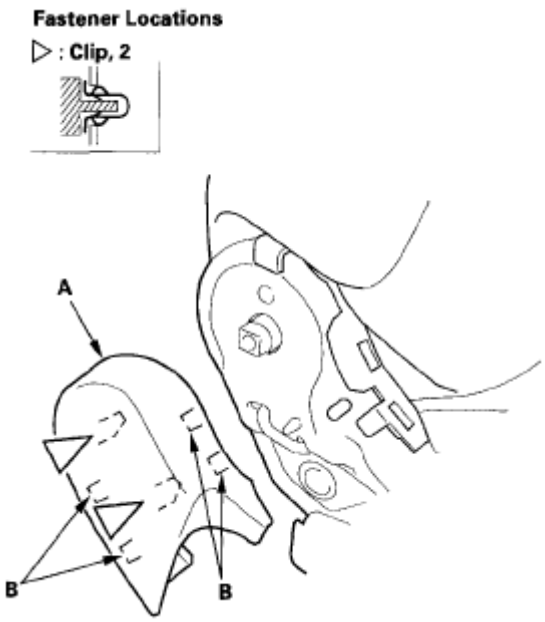

Fig. 48: Pulling Out Center Cover And Detaching Clips Releasing Hooks

7. From under the seat cushion, disconnect and detach the connectors:
    - Passenger's seat:
        - Seat weight sensor connectors (A)
        - Side airbag connector (B)
        - ODS subharness connector (C)
    - Driver's seat:
        - Side airbag connector (B)

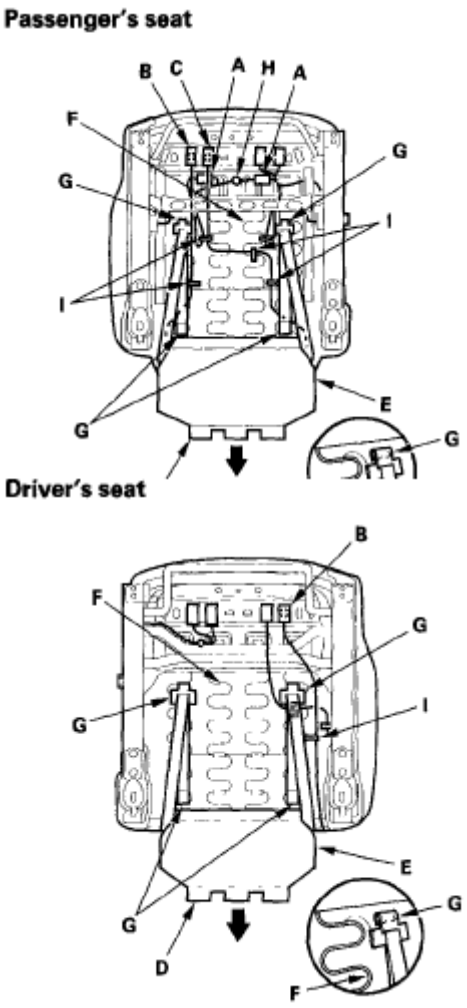

Fig. 49: Disconnecting And Detaching Connectors

8. Release the hook (D) and seat cushion cover (E) from the seat cushion frame spring (F), then pull the cover back and release the hooks (G). Detach the harness clip (H), and remove the wire ties (I).
9. Pull the side airbag harness (A), ODS subharness (B) (passenger's seat), and harness guides (C) out through the holes (D) in the seat cushion cover.

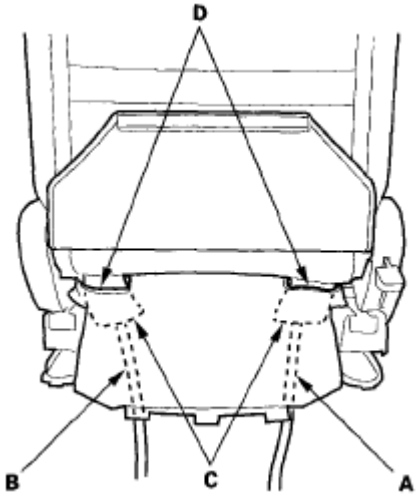

Fig. 50: Pulling Side Airbag Harness, ODS Subharness (Passenger's Seat) And Harness Guides

10. Release the hook strips (A, B) from the seat frame (C).

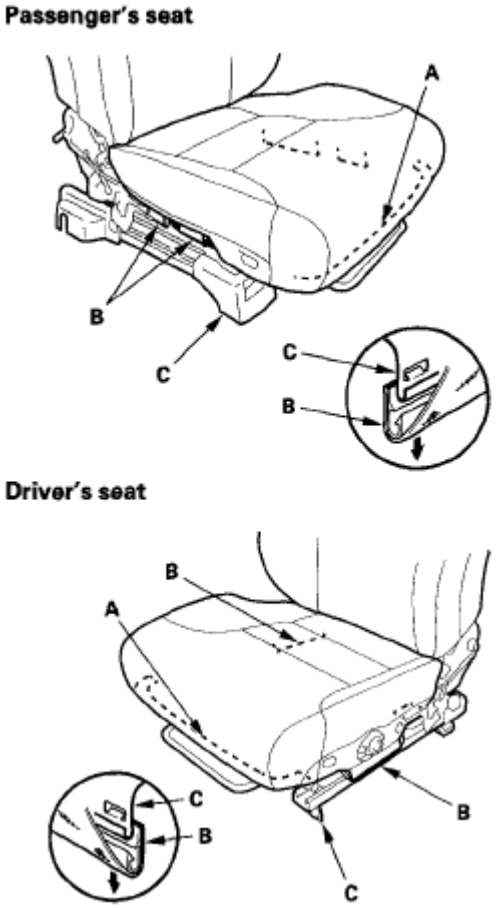

Fig. 51: Releasing Hook Strips From Seat Frame

11. Release the hook (A) from under the seat cushion.

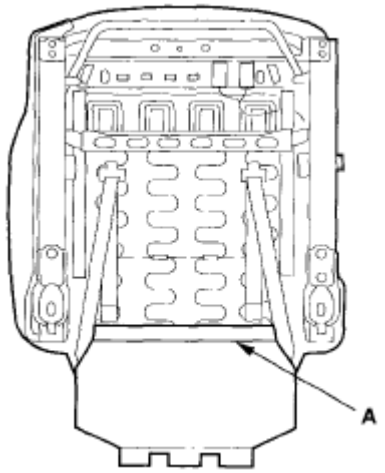

Fig. 52: Releasing Hook From Under Seat Cushion

12. Remove the seat cushion cover/pad (A) from the seat frame (B).

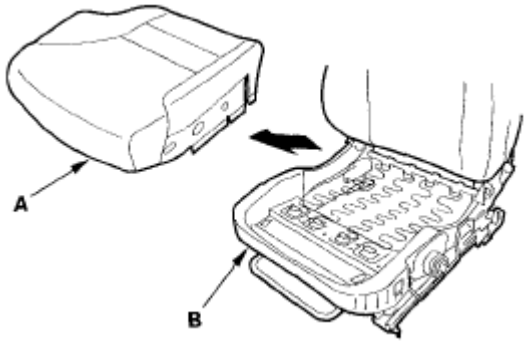

Fig. 53: Removing Seat Cushion Cover/Pad From Seat Frame

13. Release the clips (A) from under the seat cushion (B).

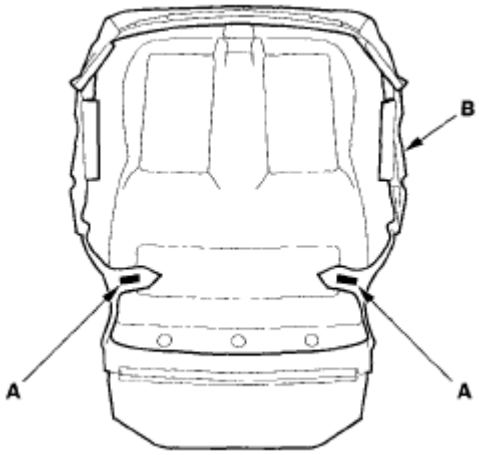

Fig. 54: Releasing Clips From Under Seat Cushion

14. Pull back the edge of the seat cushion coverall the way around, and release the clips (A), then remove the seat cushion cover.

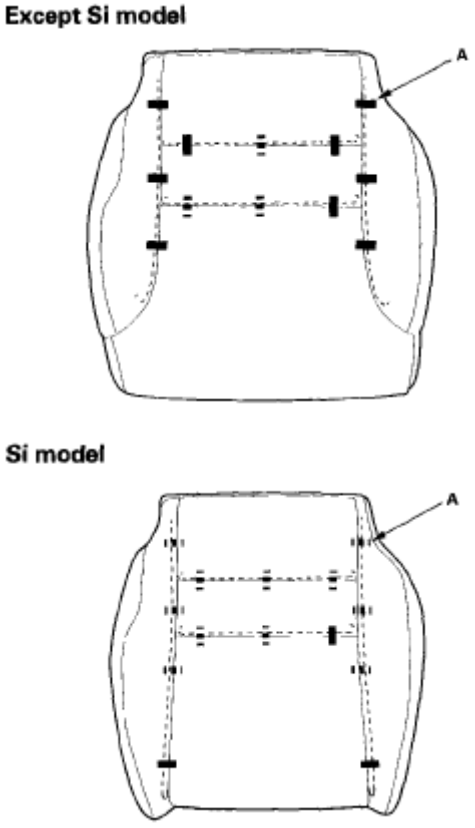

Fig. 55: Removing Seat Cushion Cover

15. Install the cover in the reverse order of removal, and note these items:
    - To prevent wrinkles when installing a seat cushion cover, make sure the material is stretched evenly over the pad before securing the clips and hook strips.
    - Replace any clips you removed with new ones (A). Install them with commercially available upholstery ring pliers (B).

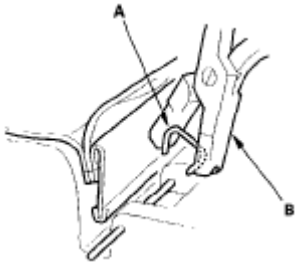

Fig. 56: Installing Front Seat Cushion Cover (2-Door)

4-DOOR

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) in the SRS before doing repairs or service.

- Check the operation of the driver's seat position sensor after any of these actions (see **DRIVER'S SEAT POSITION SENSOR OPERATION CHECK**):
  - Driver's seat position sensor replacement
  - Cover plate (front side of driver's seat slide rail) replacement
- Calibrate the ODS unit after any of the these actions (see **ODS UNIT CALIBRATION**):
  - Front passenger's seat replacement (including any seat components)
  - Replacement of the seat weight sensors
  - After a vehicle collision

NOTE:

- **Use the appropriate tool from the KTC trim tool set to avoid damage when prying components.**
- **Take care not to tear the seams of damage the seat covers.**
- **Put on gloves to protect your hands.**

1. Remove the front seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
2. Remove the front seat belt buckle (see **FRONT SEAT BELT BUCKLE**).
3. Pull back the cap (A) to release the hooks (B), and remove the screws, then remove the height adjuster handle (C).

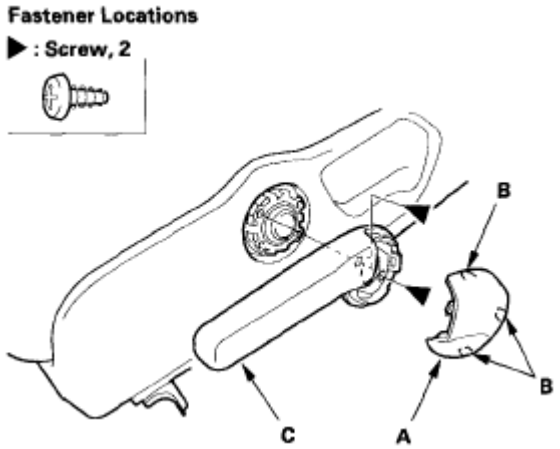

Fig. 57: Removing Height Adjuster Handle

4. Remove the recline cover (A).
   - 1 Remove the recline knob (B) and screw (C).
   - 2 Gently pull out the cover, then detach the clip (D), and release the hooks (E).

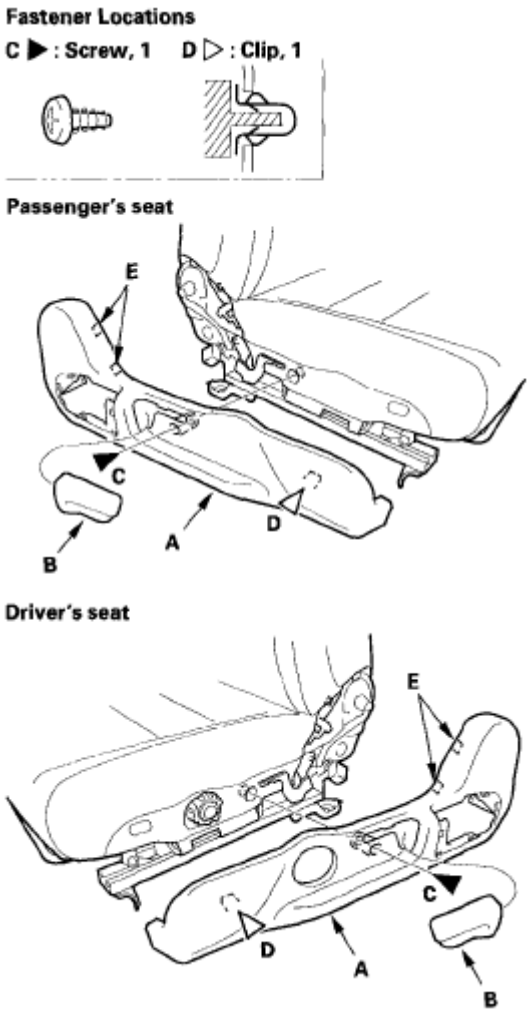

Fig. 58: Removing Recline Cover

5. Gently pull out the center cover (A), then detach the clip, and release the hooks (B). Driver's seat is shown; passenger's seat is similar.

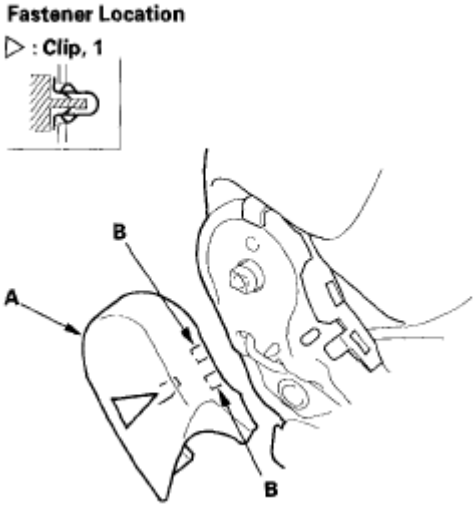

Fig. 59: Releasing Hooks Pulling Center Cover

6. From under the seat cushion, detach the side airbag connector clip (A).

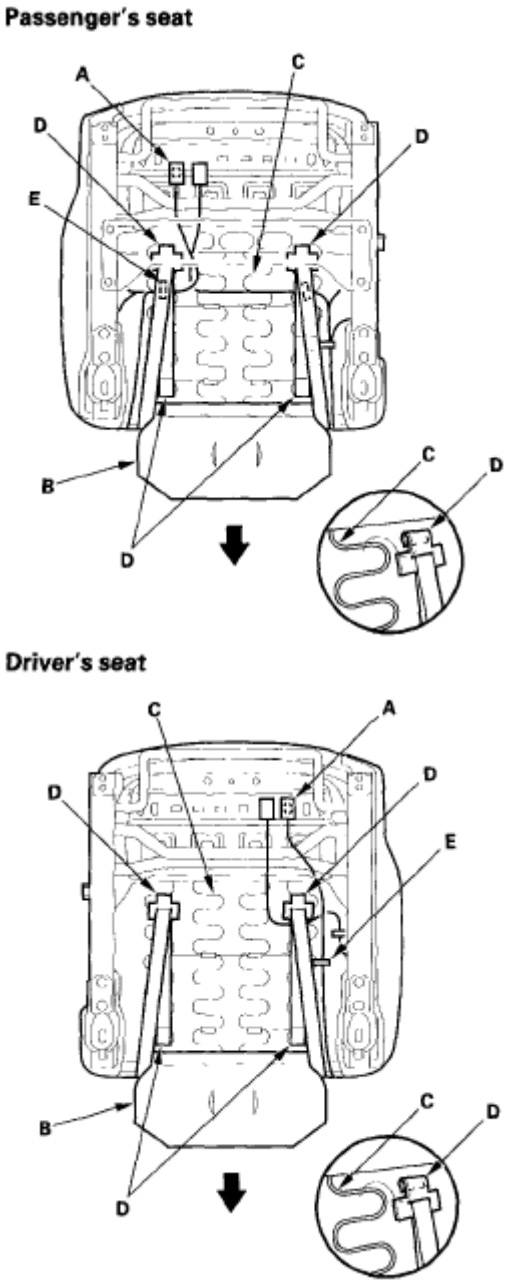

Fig. 60: Detaching Side Airbag Connector Clip

7. Release slits in the seat cushion cover (B) from the seat cushion frame spring (C), then pull the cover back. Release the hooks (D) and remove the wire ties (E).
8. Pull the side airbag harness (A) out through the loop (B).

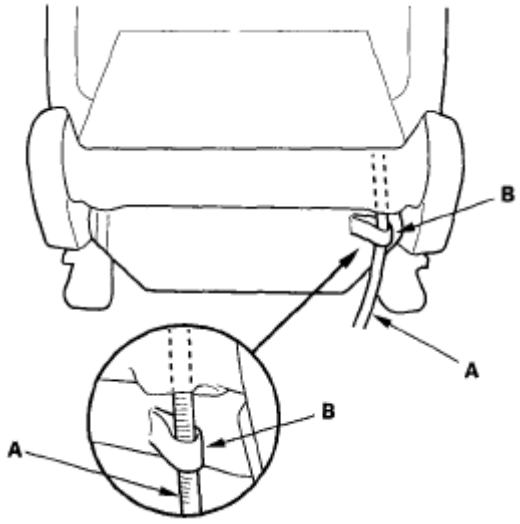

Fig. 61: Pulling Side Airbag Harness Out Through Loop

9. Release the hook strips (A, B) from the seat frame (C).

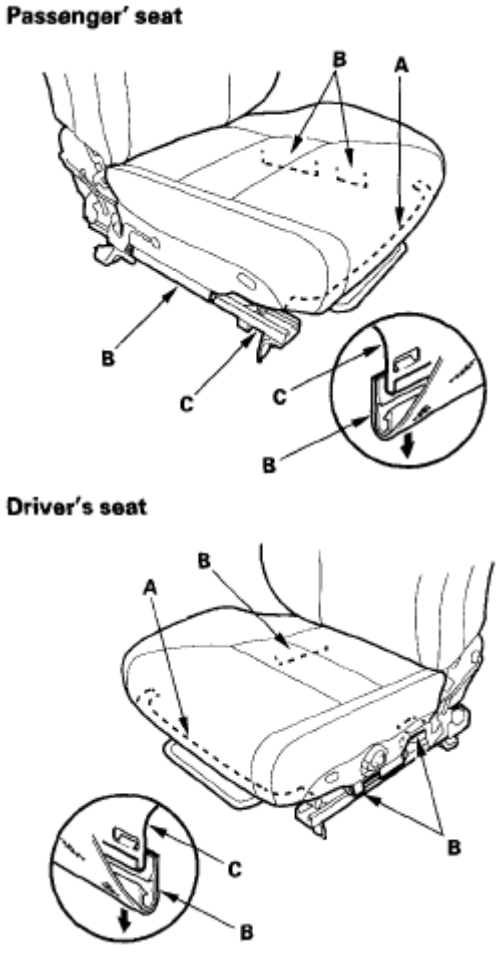

Fig. 62: Releasing Hook Strips From Seat Frame

10. Release the hook (A) from under the seat cushion.

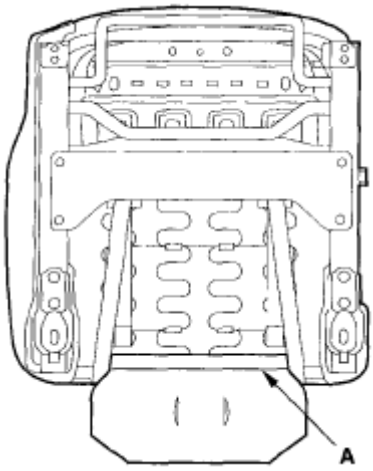

Fig. 63: Releasing Hook From Under Seat Cushion

11. Remove the seat cushion cover/pad (A) from the seat frame (B).

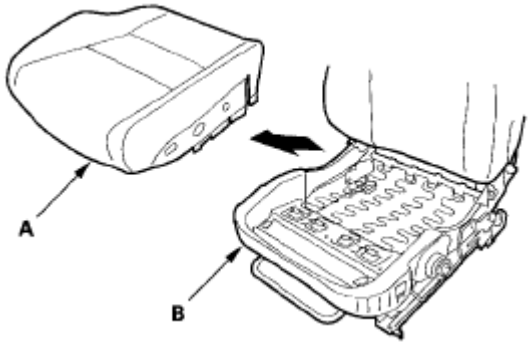

Fig. 64: Removing Seat Cushion Cover/Pad From Seat Frame

12. Except Si model: Release the hooks (A) from under the seat cushion (B).

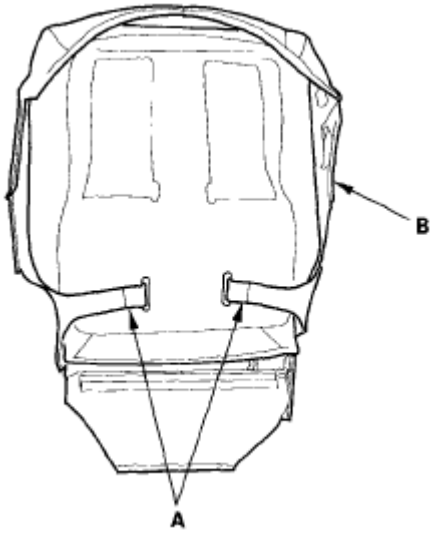

Fig. 65: Releasing Hooks From Under Seat Cushion (Except Si Model)

13. Except Si model: Pull back the edge of the seat-back cover all the way around, and release the clips (A), then remove the seat-back cover.

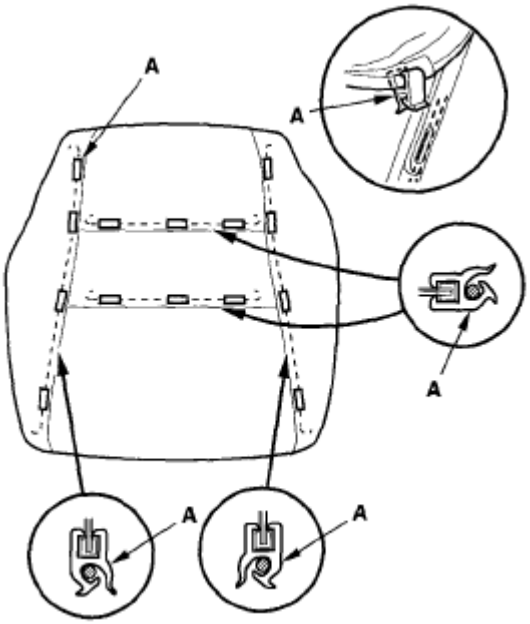

Fig. 66: Removing Seat-Back Cover (Except Si Model)

14. Except Si model: Install the cover in the reverse order of removal, and note these items:
    - To prevent wrinkles when installing a seat-back cover, make sure the material is stretched evenly over the pad before securing the clips, hooks, and hook strips.
    - Replace any clips (A) you removed with new ones.

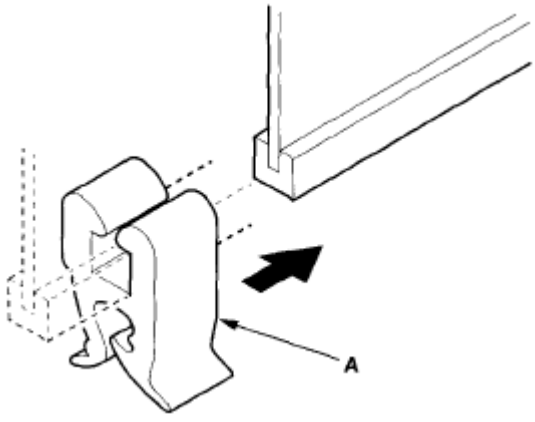

Fig. 67: Installing Cover (Except Si Model)

15. Si model: Release the clips (A) from under the seat cushion (B).

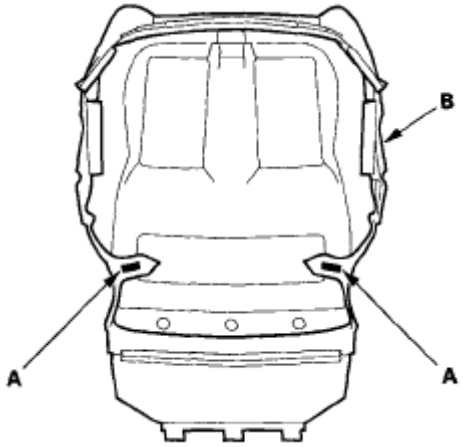

Fig. 68: Releasing Clips From Under Seat Cushion (Si Model)

16. Si model: Pull back the edge of the seat cushion cover all the way around, and release the clips (A), then remove the seat cushion cover.

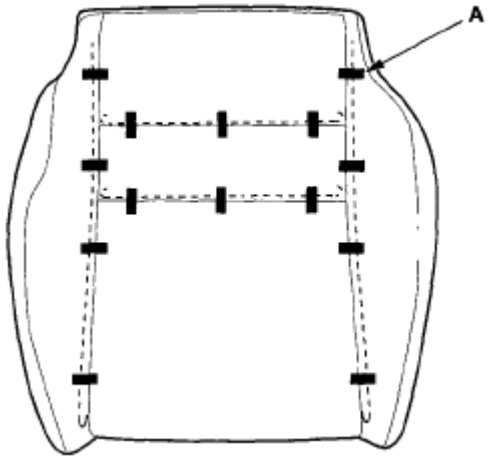

Fig. 69: Removing Seat Cushion Cover (Si Model)

17. Si model: Install the cover in the reverse order of removal, and note these items:
    - To prevent wrinkles when installing a seat cushion cover, make sure the material is stretched evenly over the pad before securing the clips and hook strips.
    - Replace any clips (A) you removed with new ones. Install them with commercially available upholstery ring pliers (B).

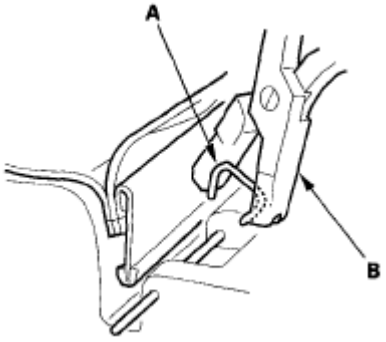

Fig. 70: Installing Front Seat Cushion Cover (Si Model)

REAR SEAT REMOVAL/INSTALLATION

SEAT-BACK - FOLD DOWN

NOTE: Take care not to scratch the body or tear the seat covers.

1. Remove the seat-back (A).
   - 1 Fold the seat-back forward.
   - 2 Pull the rear center seat belt (B) out through the slit (C) in the seat belt guide (D).
   - 3 Release the velcro fasteners (E), and pull back the seat-back cover (F), then remove the bolts.
   - 4 Release the hooks (G) of the pivot brackets (H).

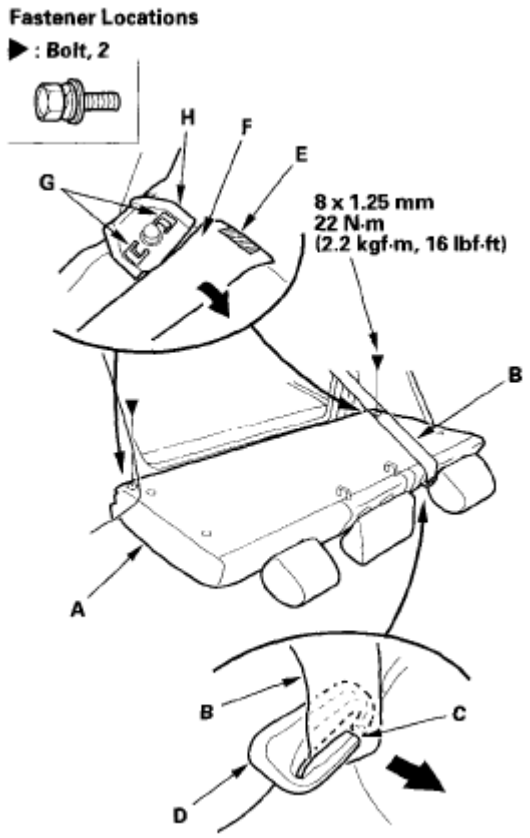

Fig. 71: Removing Seat-Back (With Specifications)

2. 2-door: Remove the rear side trim panel (see **2-DOOR**).
3. Remove the bolt, then remove the pivot bracket (A).

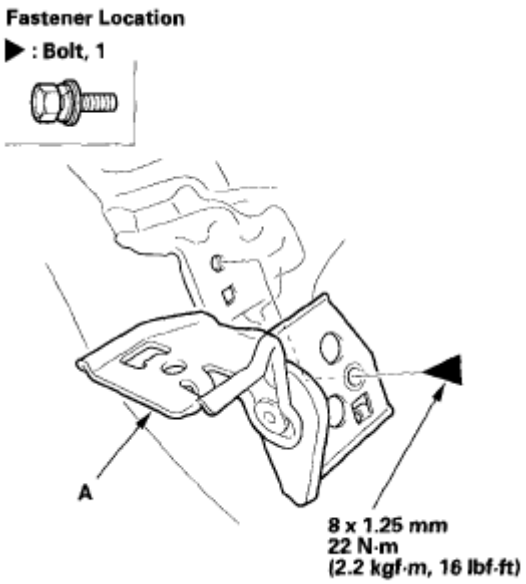

Fig. 72: Removing Pivot Bracket (With Specifications)

4. Install the seat-back in the reverse order of removal, and note these items:

- Guide the belt over the front of the seat-back as you install the seat-back.
- Before attaching the rear seat-back, make sure there are no twists or kinks in the rear center seat belt.

SEAT-BACK - SPLIT FOLD DOWN

NOTE: Take care not to scratch the body or tear the seat covers.

1. Remove the right seat-back (A).
    - 1 Fold the right seat-back forward.
    - 2 Release the velcro fasteners (B), and pull back the seat-back cover (C), then remove the bolts.
    - 3 Release the hooks (D) of the pivot bracket (E).

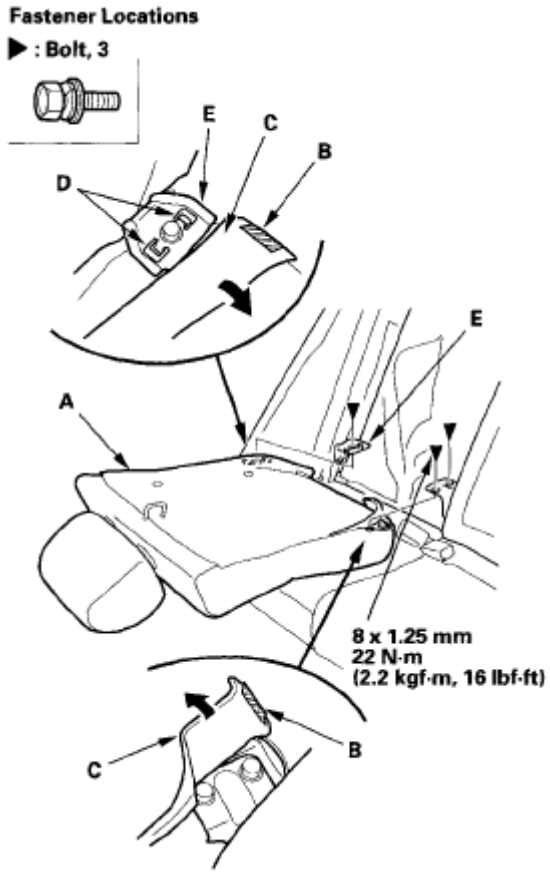

Fig. 73: Removing Right Seat-Back (With Specifications)

2. Remove the bolt, then remove the center pivot bracket (A).

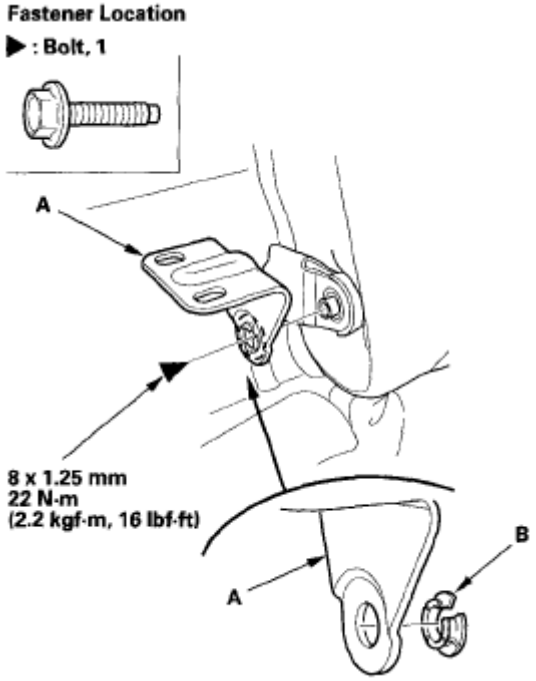

Fig. 74: Removing Center Pivot Bracket (With Specifications)

3. If necessary, remove the bushing (B).
4. Remove the left seat-back (A).
    - 1 Fold the left seat-back forward.
    - 2 Pull the rear center seat belt (B) out through the slit (C) in the seat belt guide (D).
    - 3 Release the velcro fastener (E), and pull back the seat-back cover (F), then remove the bolt.
    - 4 Release the hooks (G) of the pivot bracket (H).

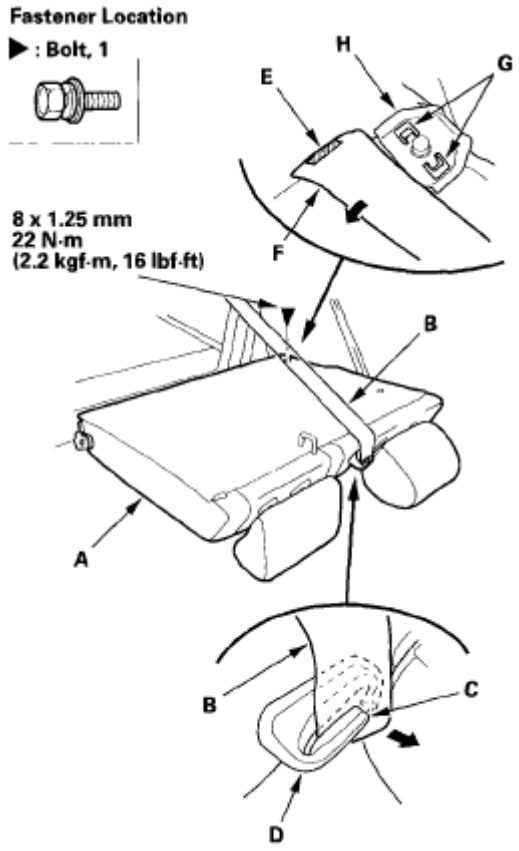

Fig. 75: Removing Left Seat-Back (With Specifications)

5. Extend the rear center seat belt (A) to remove the left seat-back (B), then release the pivot shaft (C) from the center pivot bracket (D).

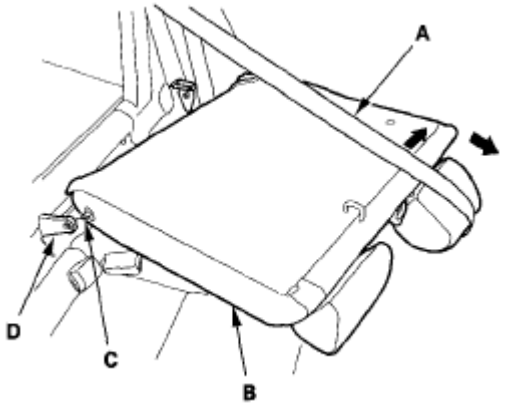

Fig. 76: Removing Left Seat-Back Extending Rear Center Seat Belt

6. If necessary, remove the bushing (A), from the center pivot bracket (B).

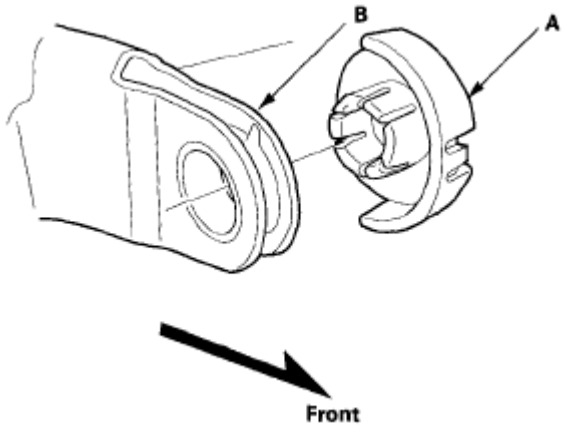

Fig. 77: Removing Bushing From Center Pivot Bracket

7. 2-door: Remove the rear side trim panel (see **2-DOOR**).
8. Remove the bolt, then remove the pivot bracket (A).

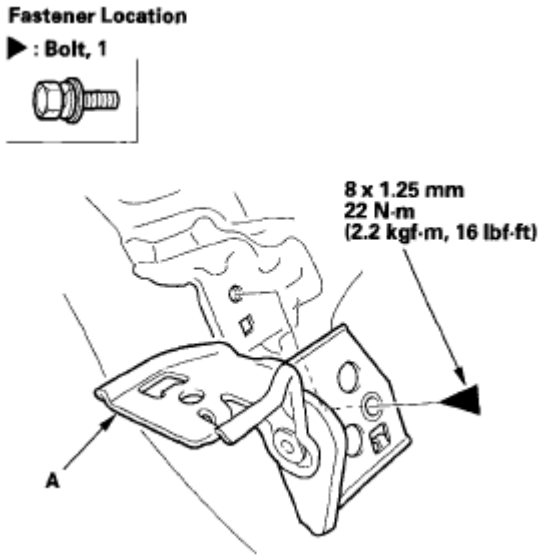

Fig. 78: Removing Pivot Bracket (With Specifications)

9. Install the seat-back in the reverse order of removal, and note these items:

- Guide the belt over the front of the seat-back as you install the seat-back.
- Before attaching the rear seat-back, make sure there are no twists or kinks in the rear center seat belt.

SEAT CUSHION

NOTE: Take care not to scratch the body or tear the seat covers.

1. Remove the bolt between the seat-back (A) and the seat cushion (B).

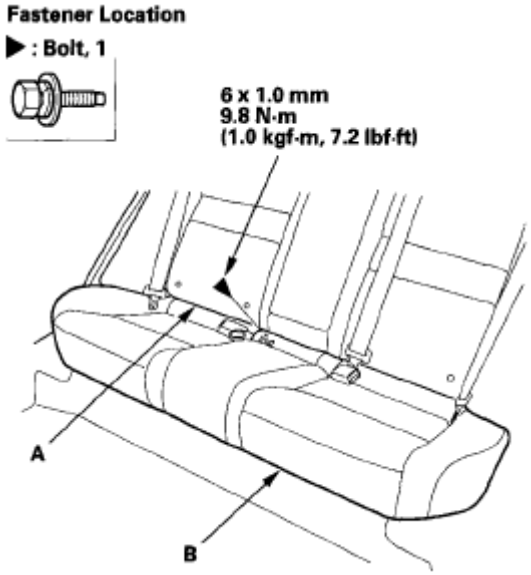

Fig. 79: Removing Bolt Betwen Seat-Back And Seat Cushion (With Specifications)

2. Pull each front edge of the seat cushion (A) up to release the hooks (B), then pull back the seat cushion, and remove it.

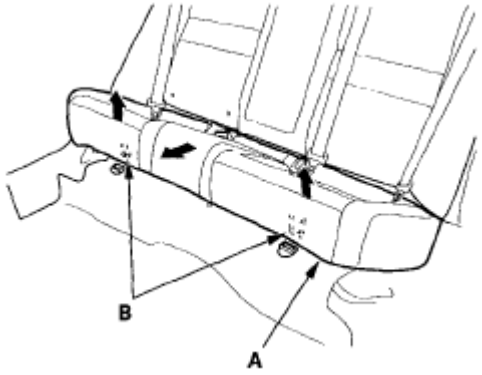

Fig. 80: Removing Seat Cushion

3. Install the seat cushion in the reverse order of removal, and note these items:

- Before attaching the seat cushion, make sure there are no twists or kinks in the seat belts.
- When installing the seat cushion, slip the seat belt buckles through the slits in the seat cushion.

SEAT SIDE BOLSTER - 4-DOOR

NOTE: Take care not to scratch the body or tear the seat covers.

1. Remove the seat cushion.
2. Remove the bolt.

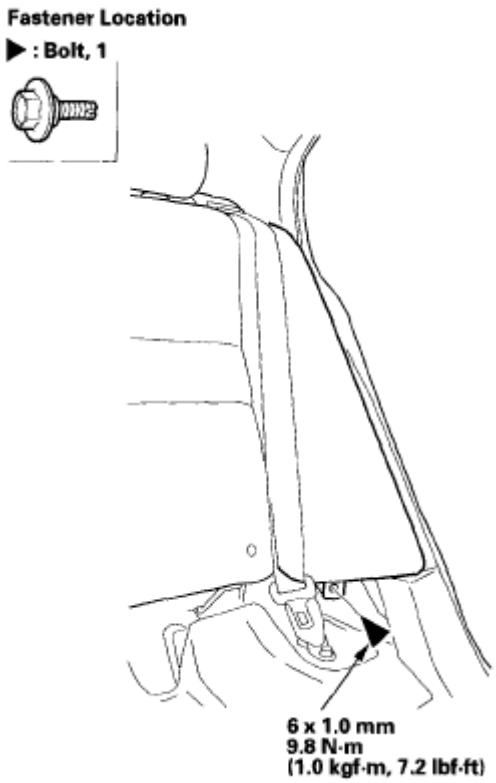

Fig. 81: Removing Seat Side Bolster Bolt - 4-Door (With Specifications)

3. Fold the seat-back forward.
4. Lift the seat side bolster (A) up to release the hook (B), then remove the seat side bolster.

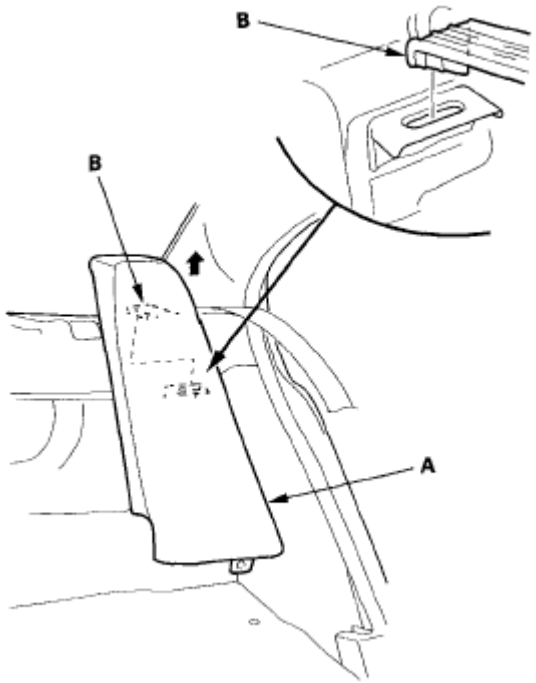

Fig. 82: Removing Seat Side Bolster

5. Install the seat in the reverse order of removal, and note these items:

- Guide the belts over the front of the seat side bolster as you install the bolster.
- Before attaching the seat side bolster, make sure there are no twists or kinks in the seat belts.

REAR SEAT-BACK LATCH REPLACEMENT

FOLD DOWN REAR SEAT/SPLIT FOLD DOWN REAR SEAT

NOTE: Take care not to bend or scratch the interior trim.

1. Remove the rear shelf:
   - 2-door (see **TRIM REMOVAL/INSTALLATION - REAR SHELF AREA**)
   - 4-door (see **REAR SHELF EXTENSION - 2-DOOR**)
2. From the trunk, disconnect the seat-back release cable (A) from the seat-back latch (B).

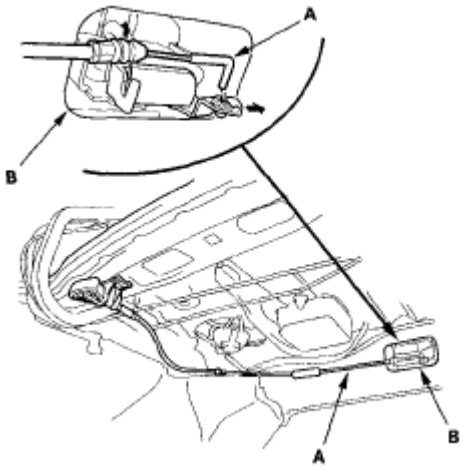

Fig. 83: Disconnecting Seat-Back Release Cable (From Trunk)

3. Remove the bolts, then remove the seat-back latch (A).

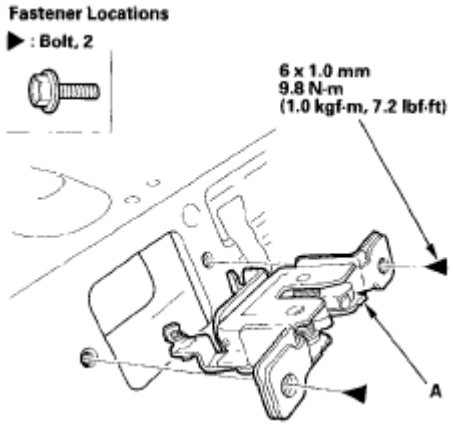

Fig. 84: Removing Seat-Back Latch (With Specifications)

4. Install the latch in the reverse order of removal, and note these items:
   - Make sure the release cable is connected securely.

- Make sure the seat-back locks securely and unlocks properly.

REAR SEAT-BACK RELEASE LEVER/CABLE REMOVAL/INSTALLATION

FOLD DOWN REAR SEAT/SPLIT FOLD DOWN REAR SEAT

NOTE: Take care not to bend or scratch the interior trim.

1. Open the trunk lid.
2. From the trunk room, detach the cable clip.

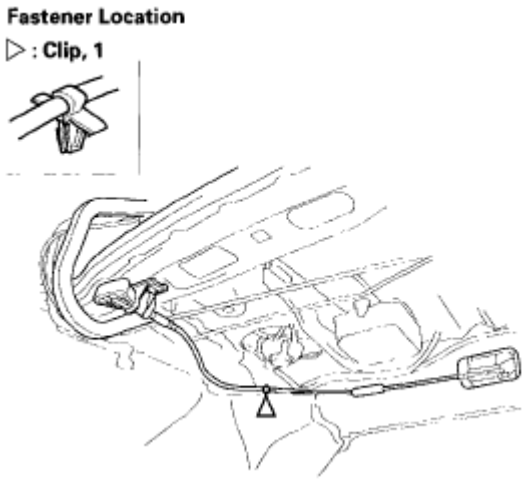

Fig. 85: Detaching Cable Clip From Trunk Room

3. 2-door: Remove the rear seat-back release cable (A) out through the slit (B) in the trim panel.

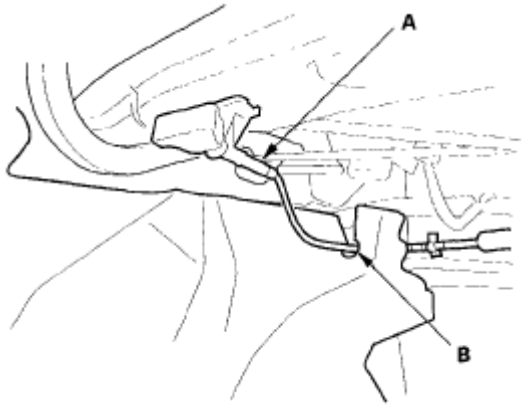

Fig. 86: Removing Rear Seat-Back Release Cable (2-Door)

4. Disconnect the seat-back release cable (A) from the seat-back latch (B).

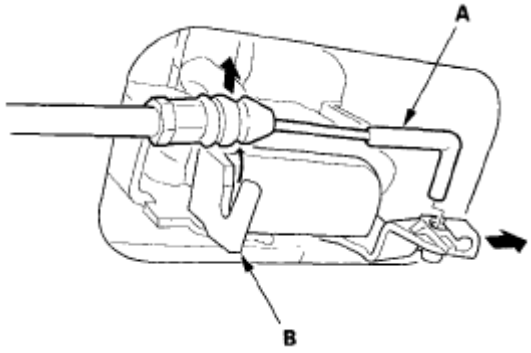

Fig. 87: Disconnecting Seat-Back Release Cable From Seat-Back Latch

5. Push the tab (A) to release the hook (B), and rotate the seat-back release lever (C) clockwise to release the hook (D).

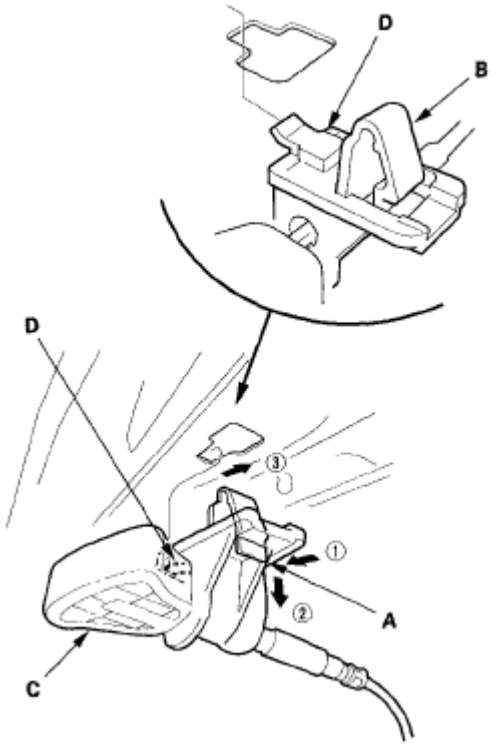

Fig. 88: Rotating Seat-Back Lever Clockwise To Release Hook

6. Install the release lever/cable in the reverse order of removal, and note these items:

- Make sure the release cable is connected securely.
- Make sure the seat-back locks securely and unlocks properly.

REAR SEAT ARMREST BEVERAGE HOLDER REPLACEMENT

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

FOR SOME MODELS - 4-DOOR

NOTE:

- **Use the appropriate tool from the KTC trim tool set to avoid damage when prying components.**
- **Take care not to tear the seams or damage the seat covers.**

1. Using a trim tool, push on the bottom ribs (A) of the rear hooks (B) to pull up the beverage holder (C), then release the hooks from the wire (D).

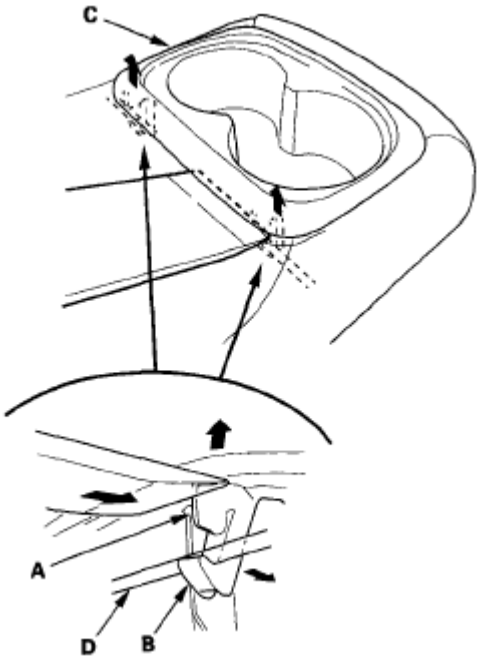

Fig. 89: Pushing Bottom Ribs Of Rear Hooks To Pull Up Beverage Holder

2. Release the front hooks (A) from the wire (B), then remove the beverage holder (C).

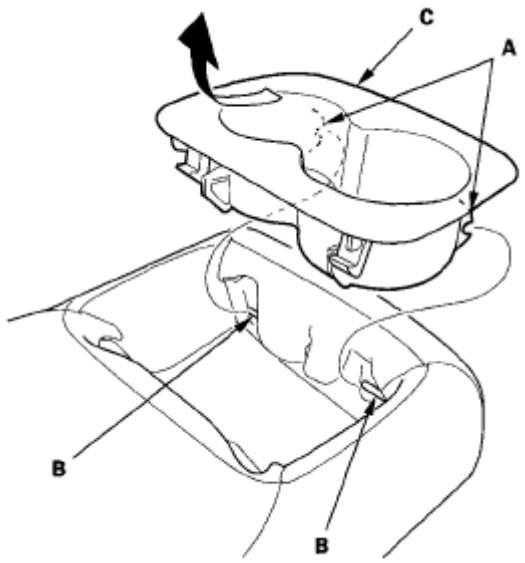

Fig. 90: Removing Beverage Holder

3. Install the beverage holder in the reverse order of removal. Make sure the front hooks are installed securely to the wire, then push down on the beverage holder and install the rear hooks into the wire securely.

REAR SEAT ARMREST REPLACEMENT

FOR SOME MODELS - 4-DOOR

NOTE: Take care not to tear the seams or damage the seat covers.

1. Remove the clip (A) from the left portion of the armrest pivot (B).

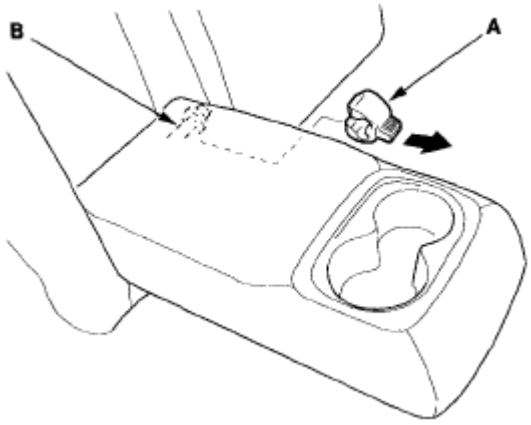

Fig. 91: Removing Clip From Left Portion Of Armrest Pivot

2. Slide the armrest (A) toward the driver's side of the vehicle, and remove the pivot shaft (B) from the collar (C) on the right side of the vehicle by pulling back on the armrest.

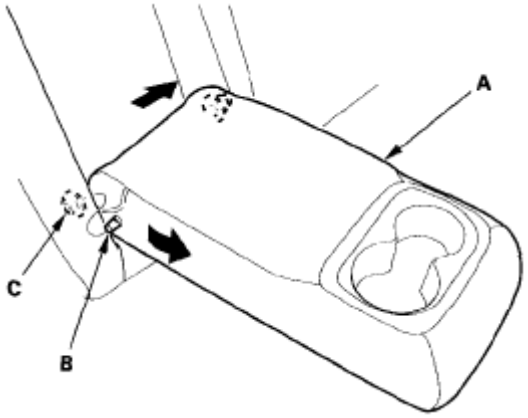

Fig. 92: Removing Pivot Shaft Form Collar On Side Of Vehicle

3. Remove the pivot shaft (A) from the collar (B) on the left, then remove the armrest (C).

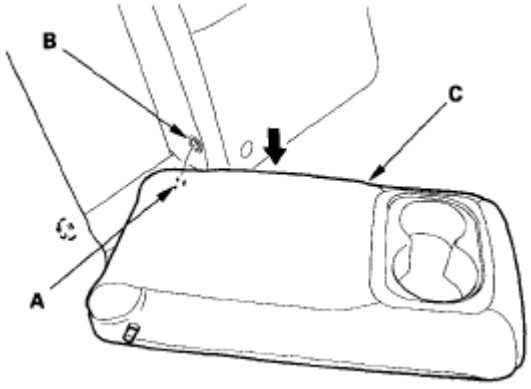

Fig. 93: Removing Armrest

4. Remove the collars (A) from the seat-back (B). A

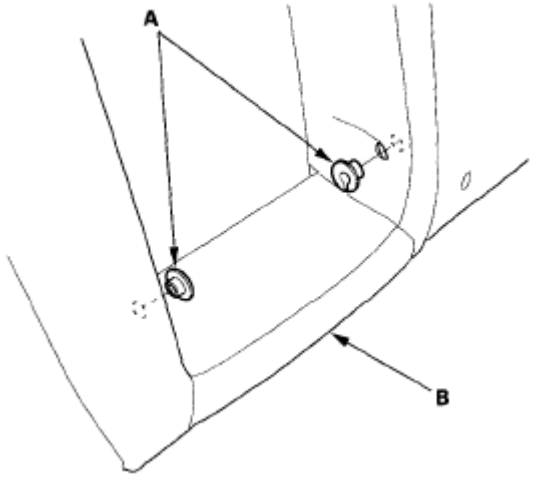

Fig. 94: Removing Collars From Seat-Back

5. Install the armrest in the reverse order of removal.

REAR SEAT-BACK COVER REPLACEMENT

SEAT-BACK - FOLD DOWN - 2-DOOR

NOTE:

- **Take care not to tear the seams or damage the seat covers.**
- **Put on gloves to protect your hands.**

1. Remove the seat-back (see **REAR SEAT REMOVAL/INSTALLATION**).
2. Remove these head restraint.
3. Remove the screw, then remove the center belt guide (A).

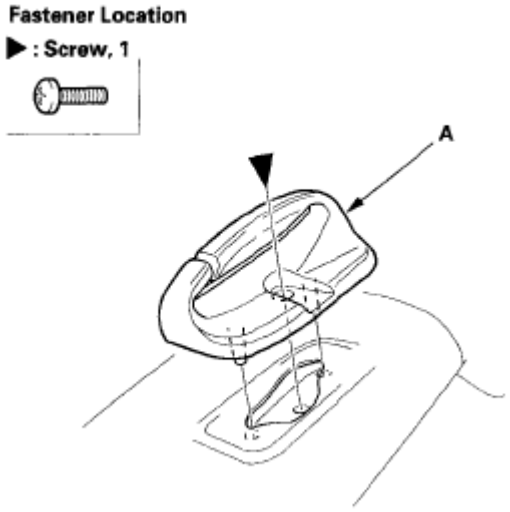

Fig. 95: Removing Center Belt Guide

4. Release the lower hook (A), and clips.

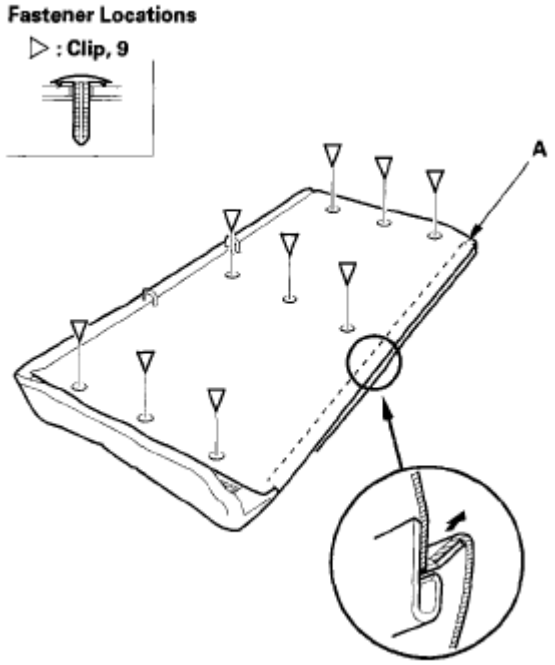

Fig. 96: Releasing Lower Hook And Clips

5. Pull back the seat-back cover (A), then release the hook strips (B).

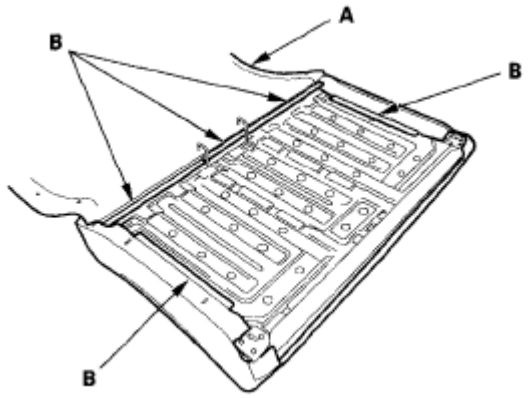

Fig. 97: Releasing Hook Strips Pulling Back Seat-Back Cover

6. Pull out the seat-back frame (A) from the pad (B), then pull out the head restraint guides (C) while pinching the end of the guides, and remove them.

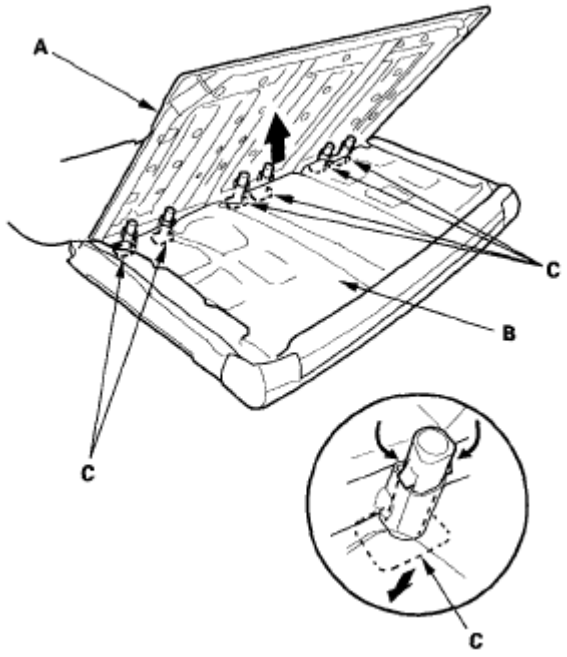

Fig. 98: Removing Head Restraint Guides

7. Remove the seat-back cover and pad from the seat-back frame.
8. Pull back the edge of the seat-back cover (A) all the way around, and release the hooks (B) of the horizontal wires (C) from the vertical wires (D) on the pad, and remove the clips (E), then remove the seat-back cover.

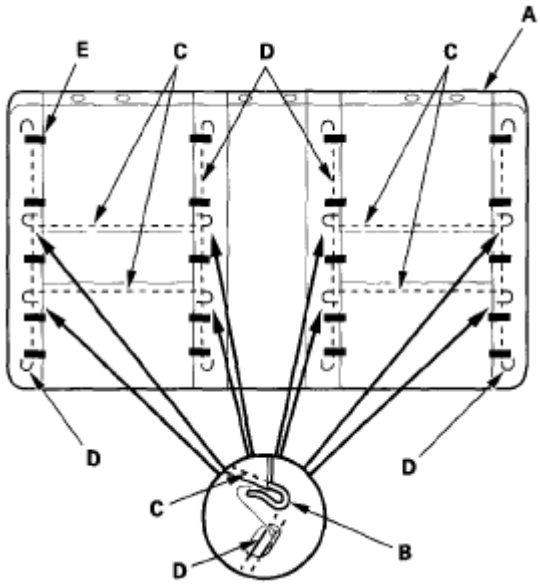

Fig. 99: Removing Seat-Back Cover

9. Install the cover in the reverse order of removal, and note these items:

- To prevent wrinkles when installing a seat-back cover, make sure the material is stretched evenly over the pad before securing the clips and hook strips.
- Replace any clips (A) you removed with new ones. Install them with commercially available upholstery ring pliers (B).

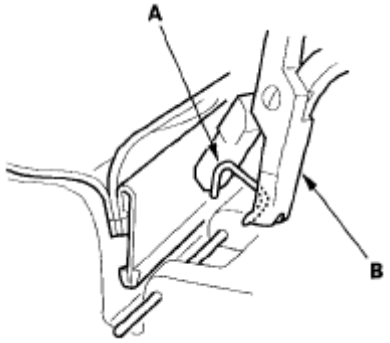

Fig. 100: Installing Rear Seat-Back Cover Of Seat-Back - Fold Down - 2-Door

SEAT-BACK - FOLD DOWN - 4-DOOR

NOTE:

- **Take care not to tear the seams or damage the seat covers.**
- **Put on gloves to protect your hands.**

1. Remove the seat-back (see **REAR SEAT REMOVAL/INSTALLATION**).
2. Remove the head restraint.
3. Remove the screw, then remove the center belt guide (A).

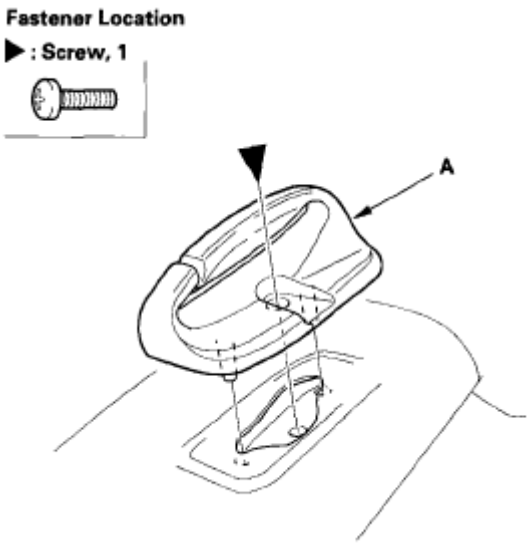

Fig. 101: Removing Center Belt Guide

4. Release the lower hook (A), and clips.

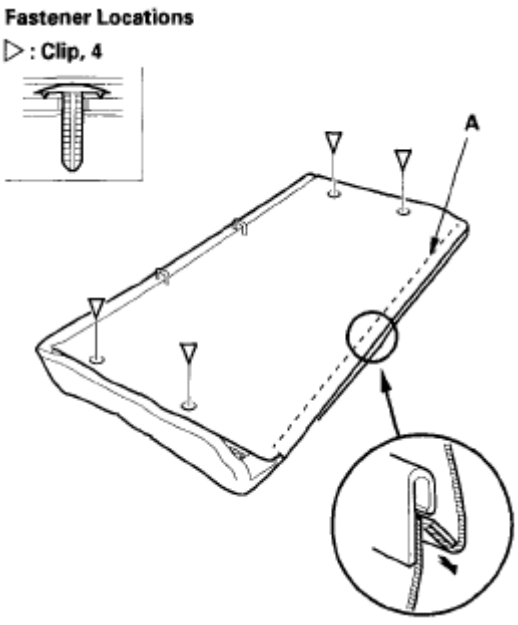

Fig. 102: Releasing Lower Hook And Clips

5. Pull back the seat-back cover (A), then release the hook strips (B).

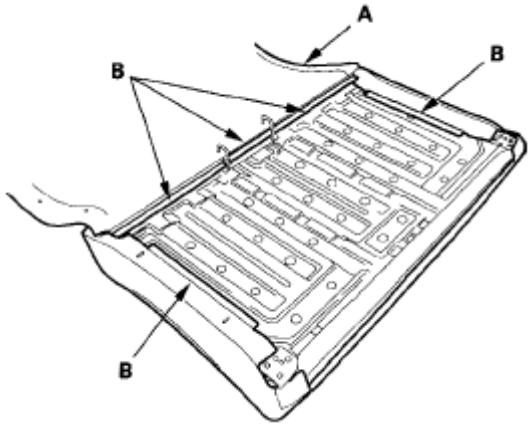

Fig. 103: Releasing Hook Strips Pulling Back Seat-Back Cover

6. Pull out the seat-back frame (A) from the pad (B), then pull out the head restraint guides (C) while pinching the end of the guides, and remove them.

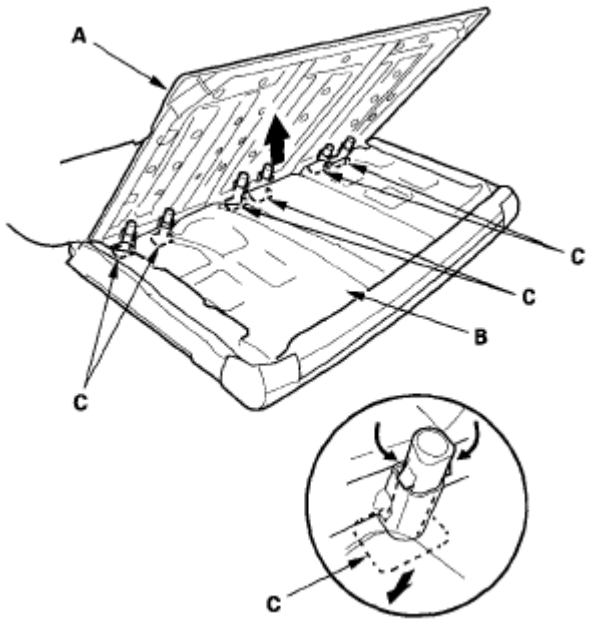

Fig. 104: Removing Head Restraint Guides Pinching End Of Guides

7. Remove the seat-back cover and pad from the seat-back frame.
8. Pull back the edge of the seat-back cover (A) all the way around, and release the clips (B), then remove the seat-back cover.

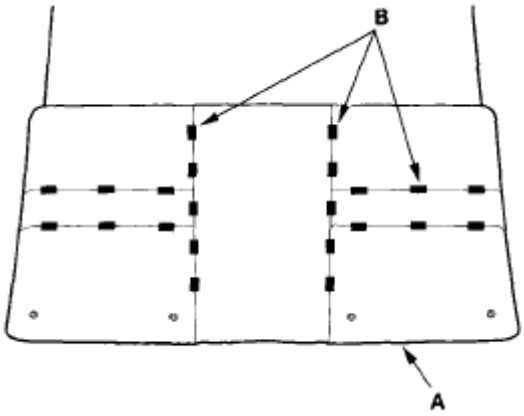

Fig. 105: Removing Seat-Back Cover

9. Install the cover in the reverse order of removal, and note these items:

- To prevent wrinkles when installing a seat-back cover, make sure the material is stretched evenly over the pad before securing the clips and hook strips.
- Replace any clips (A) you removed with new ones. Install them with commercially available upholstery ring pliers (B).

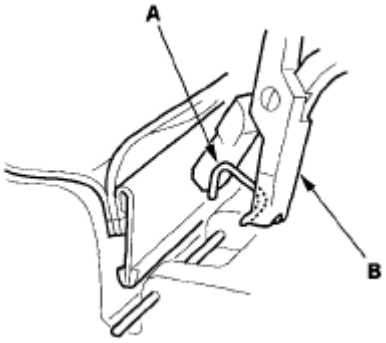

Fig. 106: Installing Rear Seat-Back Cover Of Seat-Back - Fold Down - 4-Door

SEAT-BACK - SPLIT FOLD DOWN - 2-DOOR

NOTE:

- **Take care not to tear the seams or damage the seat covers.**
- **Put on gloves to protect your hands.**

1. Remove the seat-back (see **SEAT-BACK - SPLIT FOLD DOWN**).
2. Remove these head restraint.
3. Left seat-back: Remove the screw, then remove the center belt guide (A).

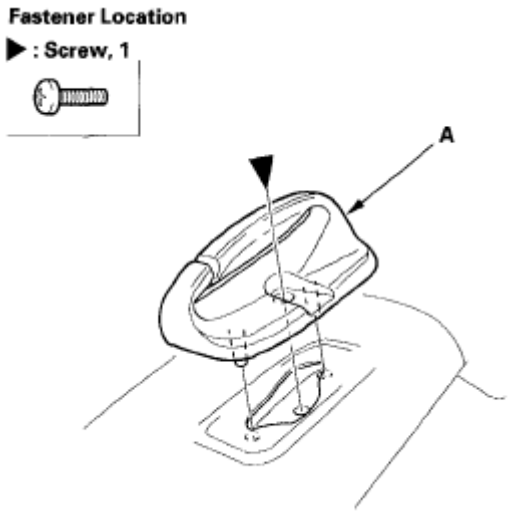

Fig. 107: Removing Center Belt Guide

4. Release the velcro fastener (A), the lower hook (B), and clips.

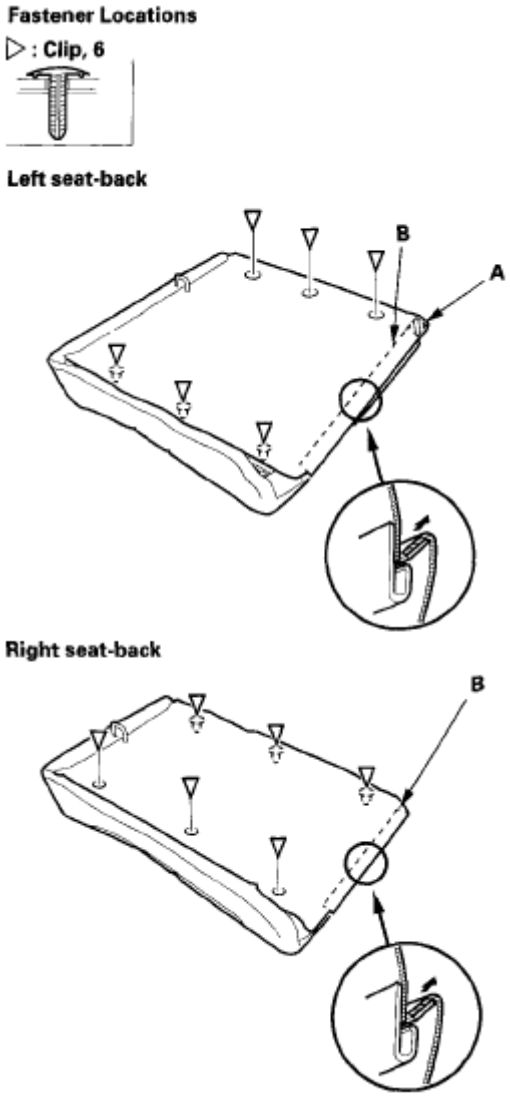

Fig. 108: Releasing Velcro Fastener, Lower Hook And Clips

5. Pull back the seat-back cover (A), then release the hook strips (B).

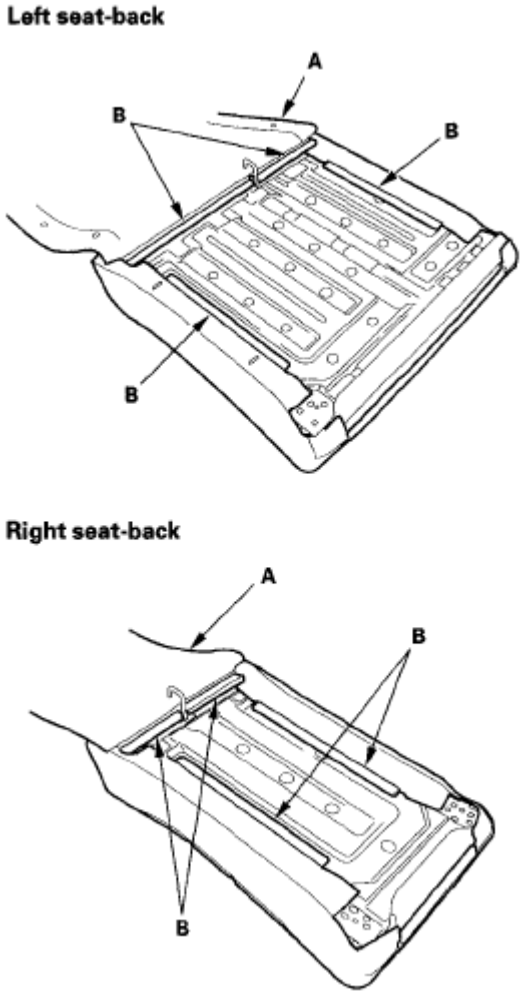

Fig. 109: Releasing Hook Strips Pulling Back Seat-Back Cover

6. Pull out the seat-back frame (A) from the pad (B), then pull out the head restraint guides (C) while pinching the end of the guides, and remove them. The left seat-back is shown; the right seat-back is similar.

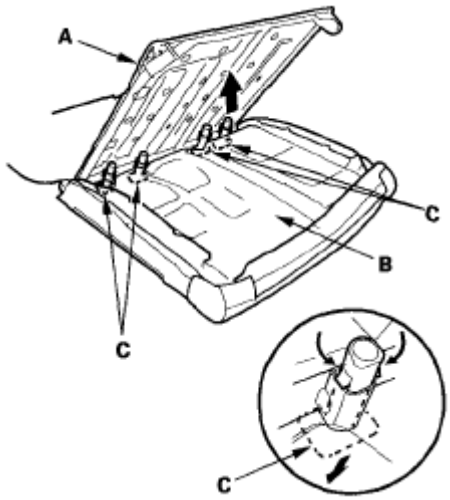

Fig. 110: Removing Head Restraint Guides Pinching End Of Guides

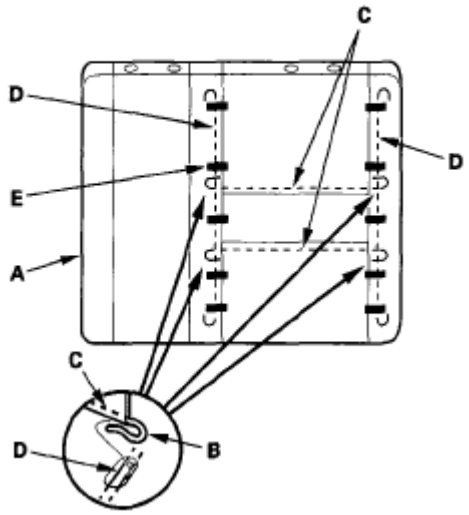
7. Remove the seat-back cover and pad from the seat-back frame.
8. Pull back the edge of the seat-back cover (A) all the way around, and release the hooks (B) of the horizontal wires (C) from the vertical wires (D) on the pad, and remove the clips (E), then remove the seat-back cover.

Left seat-back



Right seat-back

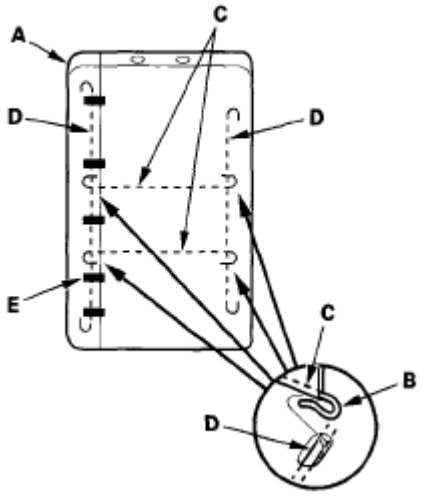


Fig. 111: Removing Seat-Back Cover

9. Install the cover in the reverse order of removal, and note these items:

- To prevent wrinkles when installing a seat-back cover, make sure the material is stretched evenly over the pad before securing the clips and hook strips.
- Replace any clips (A) you removed with new ones. Install them with commercially available upholstery ring pliers (B).

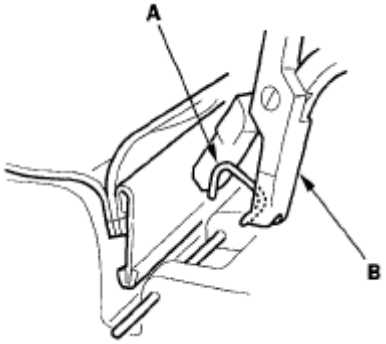

Fig. 112: Installing Rear Seat-Back Cover Of Seat-Back - Split Fold Down - 2-Door

SEAT-BACK - SPLIT FOLD DOWN - 4-DOOR

NOTE:

- **Take care not to tear the seams or damage the seat covers.**
- **Put on gloves to protect your hands.**

1. Remove the seat-back (see **SEAT-BACK - SPLIT FOLD DOWN**).
2. Remove these items:
   - Armrest (see **REAR SEAT ARMREST REPLACEMENT**)
   - Head restraint
3. Left seat-back: Remove the screws, then remove the center belt guide (A).

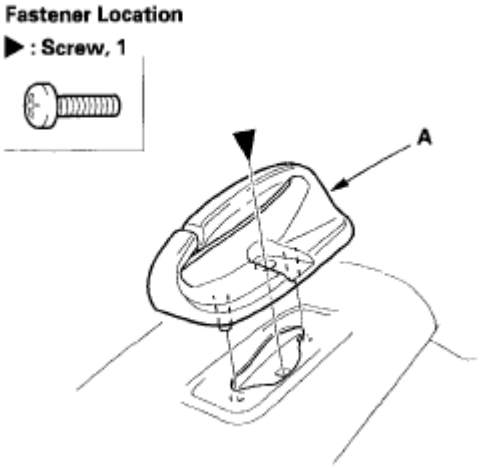

Fig. 113: Removing Center Belt Guide

4. Left seat-back: Pull out the center portion of the armrest back panel (A) to release upper edge of the armrest back panel.

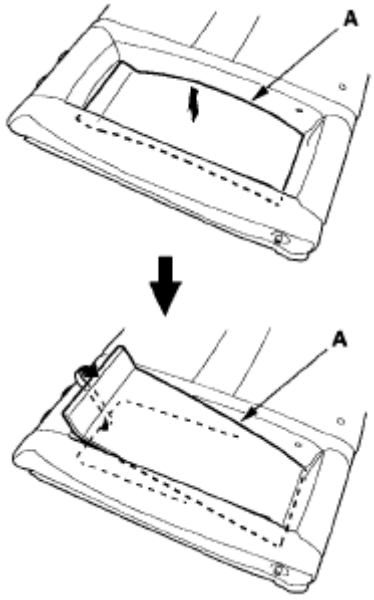

Fig. 114: Releasing Upper Edge Of Armrest Back Panel Pulling Out Center Portion Of Armrest Back Panel

5. Left seat-back: Pull out the armrest back panel (A) to release the hook (B) from the seat-back frame and hook (C) from the seat-back cover.

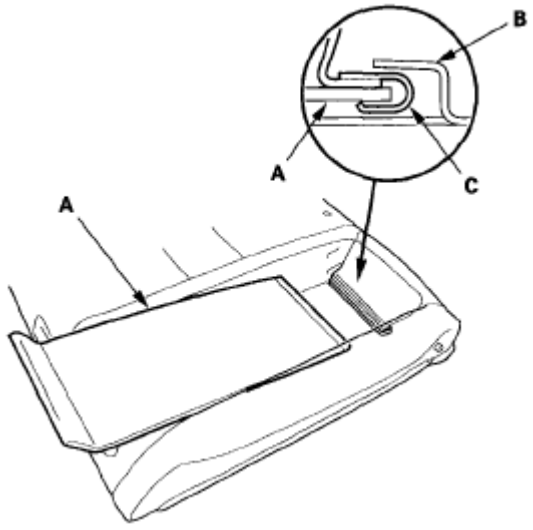

Fig. 115: Releasing Hook From Seat-Back Frame And Hook From Seat-Back Cover

6. Release the lower hook (A), and clips (B, C).

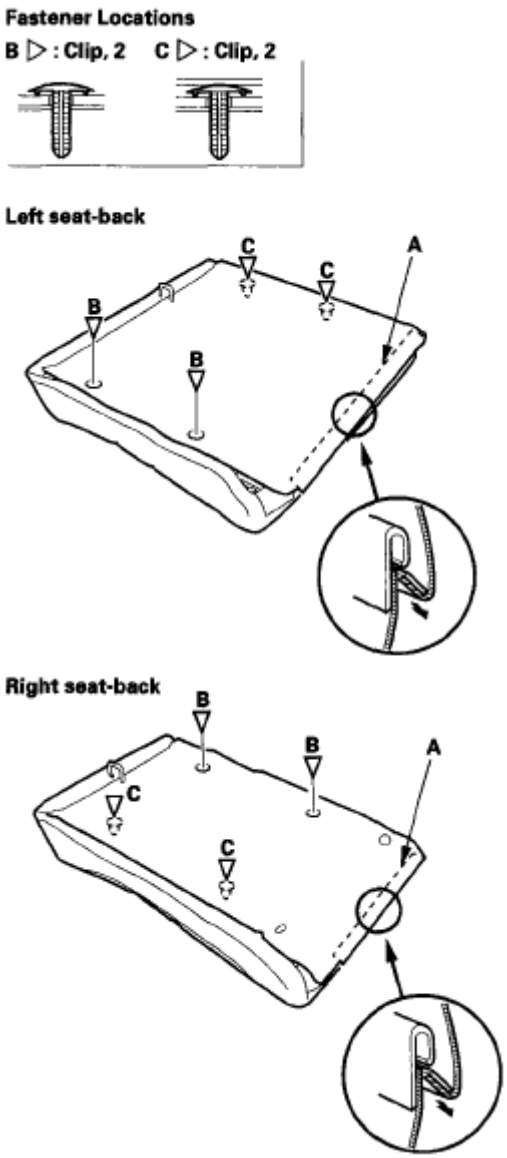

Fig. 116: Releasing Lower Hook And Clips

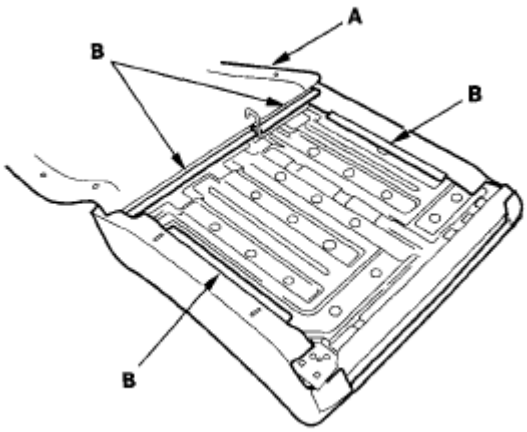
7. Pull back the seat-back cover (A), then release the hook strips (B).

Left seat-back



Right seat-back

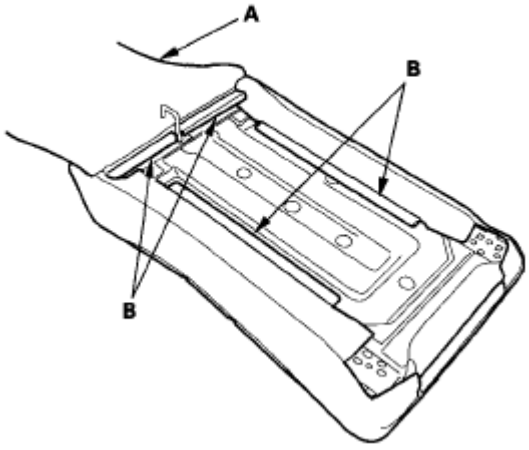


Fig. 117: Releasing Hook Strips Pulling Back Seat-Back Cover

8. Pull out the seat-back frame (A) from the pad (B), then pull out the head restraint guides (C) while pinching the end of the guides, and remove them. The left seat-back is shown; the right seat-back is similar.

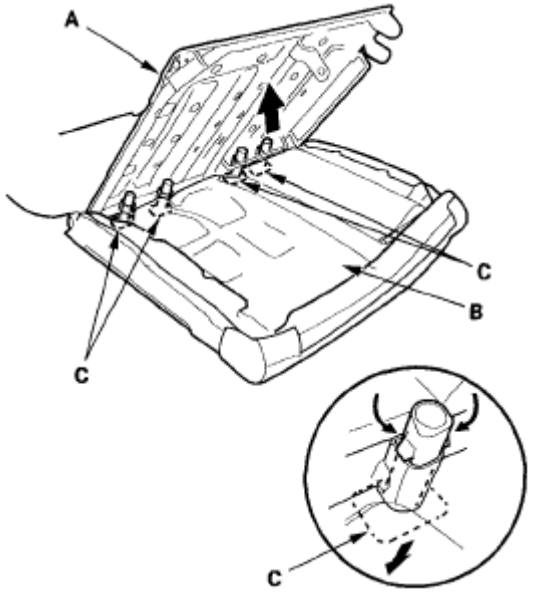

Fig. 118: Removing Head Restraint Guides Pinching End Of Guides

9. Remove the seat-back cover and pad from the seat-back frame.
10. Pull back the edge of the seat-back cover (A) all the way around, and release the clips (B), then remove the seat-back cover.

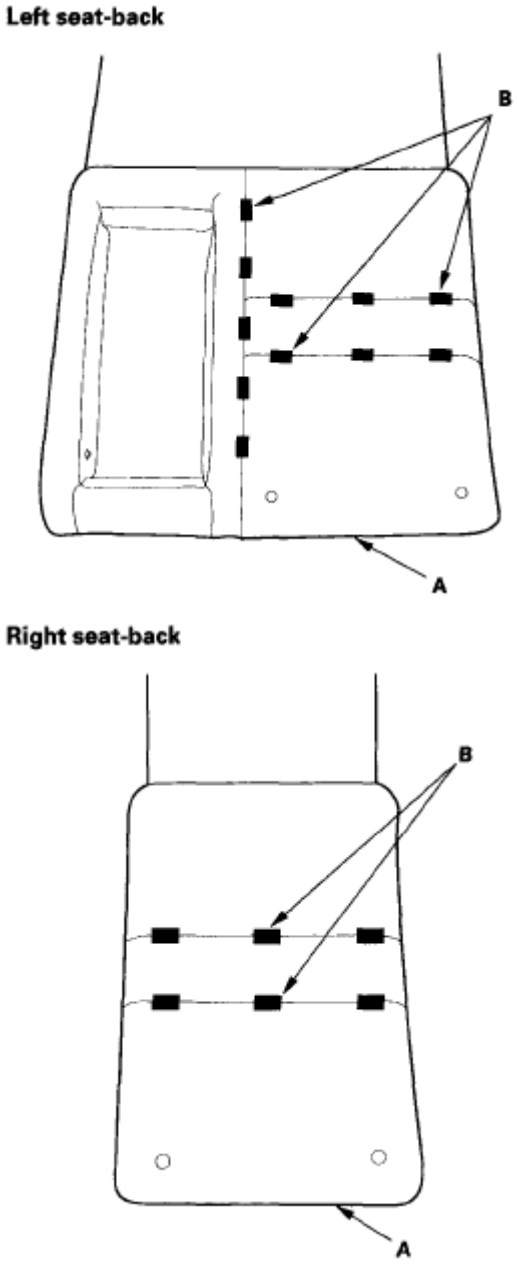

Fig. 119: Removing Seat-Back Cover

11. Install the cover in the reverse order of removal, and note these items:
    - To prevent wrinkles when installing a seat-back cover, make sure the material is stretched evenly over the pad before securing the clips.
    - Replace any clips (A) you removed with new ones. Install them with commercially available upholstery ring pliers (B).

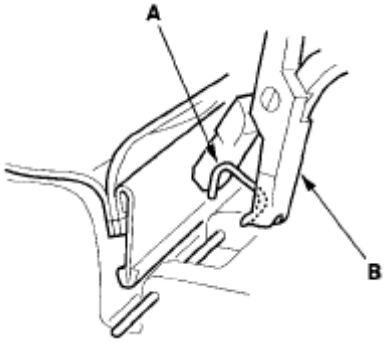

Fig. 120: Installing Rear Seat-Back Cover Of Seat-Back - Split Fold Down - 4-door

REAR SEAT SIDE BOLSTER COVER REPLACEMENT

NOTE: Take care not to tear the seams or damage the seat covers.

1. Remove the seat side bolster (see **SEAT SIDE BOLSTER - 4-DOOR**).
2. Release all the hook strips (A), and fold back the seat side bolster cover (B), and release the cover from the hooks (C).

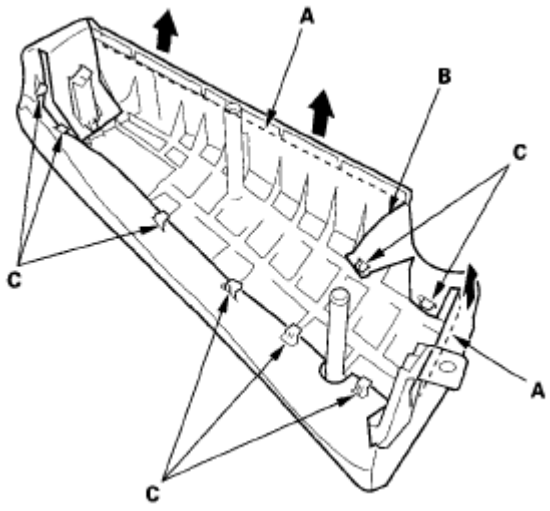

Fig. 121: Releasing Rear Seat Side Bolster Cover From Hooks

3. Install the cover in the reverse order of removal, and to prevent wrinkles when installing a side bolster cover, make sure the material is stretched evenly over the pad before securing the hook strips and staples.

REAR SEAT CUSHION COVER REPLACEMENT

2-DOOR

NOTE:

- **Take care not to tear the seams or damage the seat covers.**
- **Put on gloves to protect your hands.**

1. Remove the seat cushion (see **SEAT CUSHION**).
2. From the back of the seat-back, release the clips (A), then remove the insulator (B).

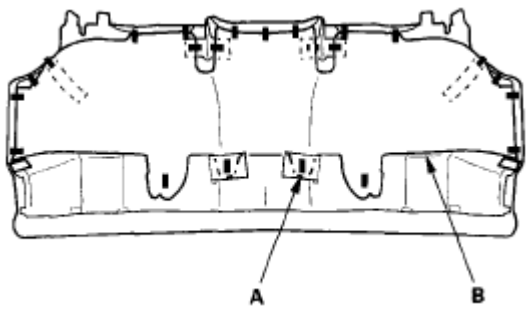

Fig. 122: Removing Insulator

3. Release all the clips (A), in the seat cushion cover (B) through the holes in the seat cushion pad, and fold back the seat cushion cover.

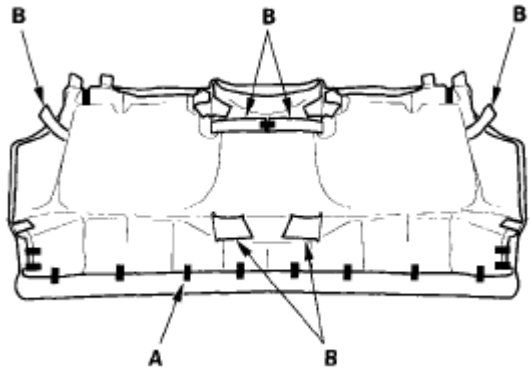

Fig. 123: Releasing All Clips In Seat Cushion Cover

4. Pull back the edge of the seat cushion cover all the way around, and release the clips (A), then remove the seat cushion cover (B).

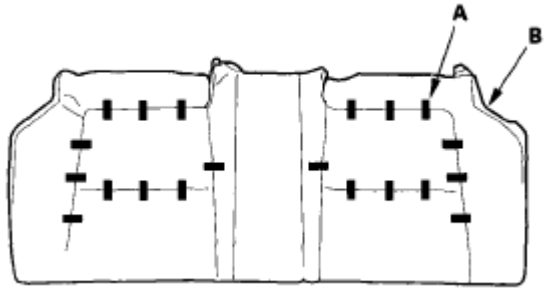

Fig. 124: Removing Seat Cushion Cover

5. Install the cover in the reverse order of removal, and note these items:
   - To prevent wrinkles when installing a seat cushion cover, make sure the material is stretched evenly over the pad before securing the clips.
   - Replace any clips (A) you removed with new ones. Install them with commercially available upholstery ring pliers (B).

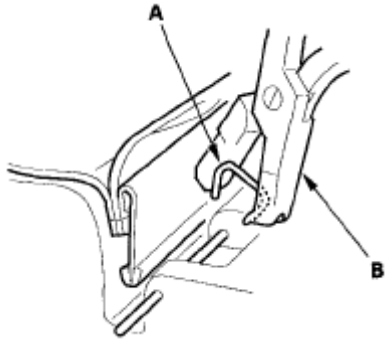

Fig. 125: Installing Rear Seat Cushion Cover (2-Door)

4-DOOR

NOTE:

- **Take care not to tear the seams or damage the seat covers.**
- **Put on gloves to protect your hands.**

1. Remove the seat cushion (see **SEAT CUSHION**).
2. From the back of the seat-back, pass both lower retainers (A) through the slots in the seat cushion pad, and release all the clips (B), and fold back the seat cushion cover.

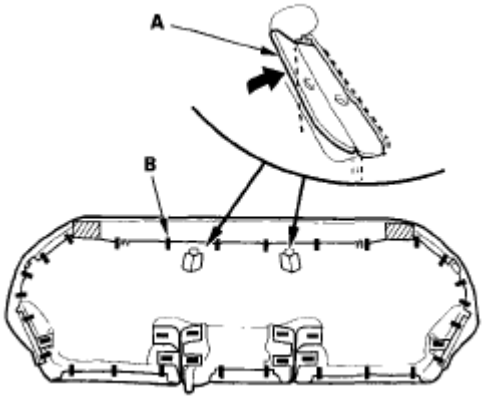

Fig. 126: Folding Back Seat Cushion Cover

3. Pull back the edge of the seat cushion cover all the way around, and release the clips (A), from the seat cushion cover (B) through the hole in the seat cushion pad, then remove the seat cushion cover.

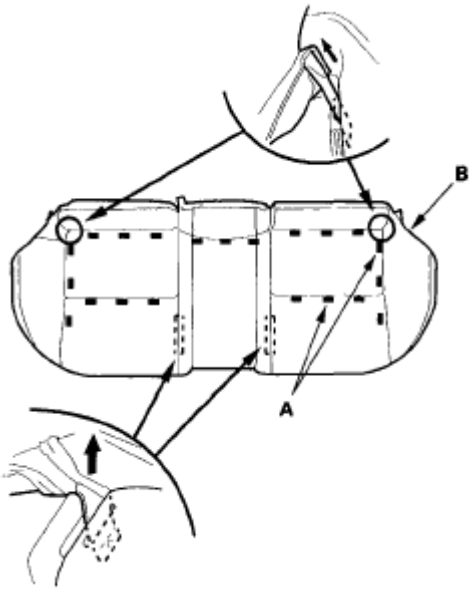

Fig. 127: Removing Seat Cushion Cover

4. Install the cover in the reverse order of removal, and note these items:

- To prevent wrinkles when installing a seat cushion cover, make sure the material is stretched evenly over the pad before securing the clips.
- Replace any clips (A) you removed with new ones. Install them with commercially available upholstery ring pliers (B).

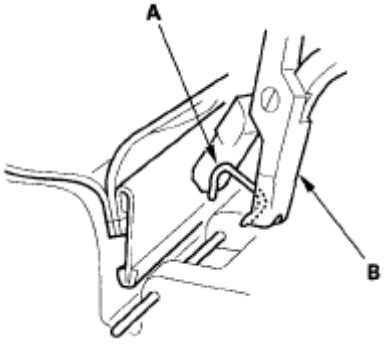

Fig. 128: Installing Rear Seat Cushion Cover (4-Door)

REAR SEAT ARMREST COVER REPLACEMENT

FOR SOME MODELS - 4-DOOR

NOTE: Take care not to tear the seams or damage the seat covers.

1. Remove the armrest from the seat-back (see **REAR SEAT ARMREST REPLACEMENT**).
2. Remove the armrest beverage holder from the armrest (see **REAR SEAT ARMREST BEVERAGE HOLDER REPLACEMENT**).
3. Release the clips (A) and hook strip (B), and pull back the armrest cover (C) all the way around.

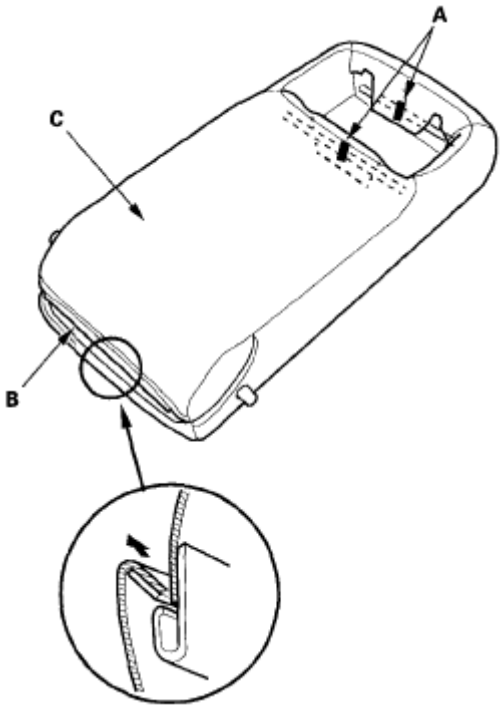

Fig. 129: Releasing Clips & Hooks And Pulling Back Armrest Cover

4. Release the armrest cover from the armrest pivot portions (A), then remove it from the pad (B).

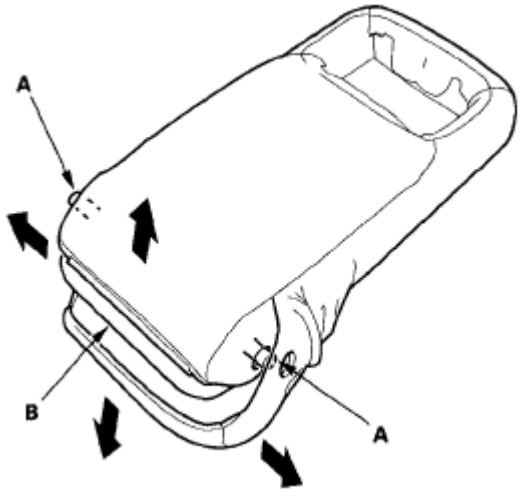

Fig. 130: Removing Rear Seat Armrest Cover

5. Install the cover in the reverse order of removal. To prevent wrinkles when installing an armrest cover, make sure the material is stretched evenly over the pad before securing the hooks and hook strips.

WINDSHIELD REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Wear eye protection while cutting the glass adhesive with a piano wire.**
- **Use seat covers to avoid damaging the seat.**
- **When replacing a broken windshield a commercially available windshield cutter can be efficiently used for cutting the adhesive. For details, follow the instructions of the tool manufacturer.**

1. Remove these items:
   - Windshield wiper arms:
     - 2-door (see **2-DOOR**)
     - 4-door (see **4-DOOR**)
   - Cowl covers (see **COWL COVER REPLACEMENT**)
   - Rearview mirror (see **REARVIEW MIRROR REPLACEMENT**)
   - A-pillar trim, both sides (see **TRIM REMOVAL/INSTALLATION - PILLAR AREAS**)
   - Roof moldings (see **ROOF MOLDING REPLACEMENT**)
2. Remove the molding (A) from the upper edge of the windshield (B). If necessary, cut the molding with a utility knife.

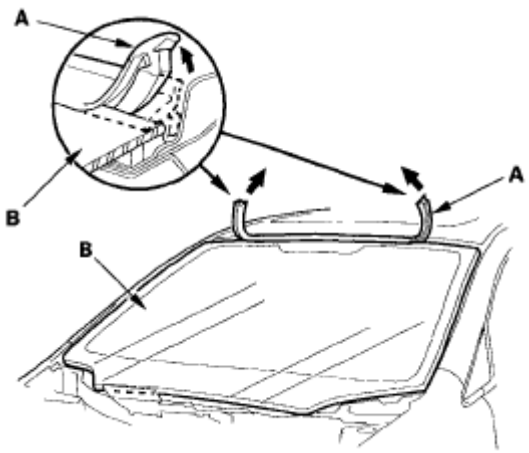

Fig. 5: Removing Molding From Upper Edge Of Windshield

3. If the old windshield will be reinstalled, make alignment marks across the glass and body with a grease pencil.
4. Pull down the front portion of the headliner (see **HEADLINER REMOVAL/INSTALLATION**). Take care not to bend the headliner excessively, or you may crease or break it.
5. Apply protective tape along the edge of the dashboard and body. Using an awl, make a hole through the rubber dam and adhesive from inside the vehicle at the corner portion of the windshield. Push a piece of piano wire through the hole, and wrap each end around a piece of wood.
6. With a helper on the outside, pull the piano wire (A) back and forth in a sawing motion. Hold the piano wire as close to the windshield (B) as possible to prevent damage to the body and dashboard. Carefully cut through the rubber dam and adhesive (C) around the entire windshield.

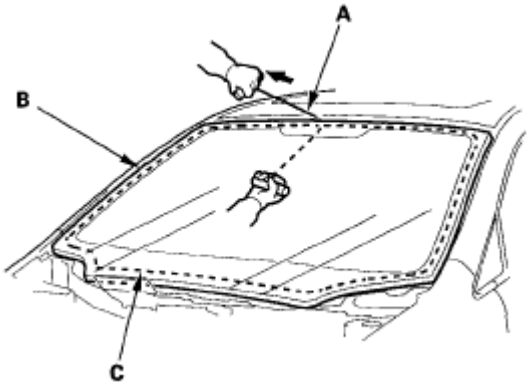

Fig. 6: Cutting Through Rubber Dam And Adhesive Around Windshield

Cutting positions

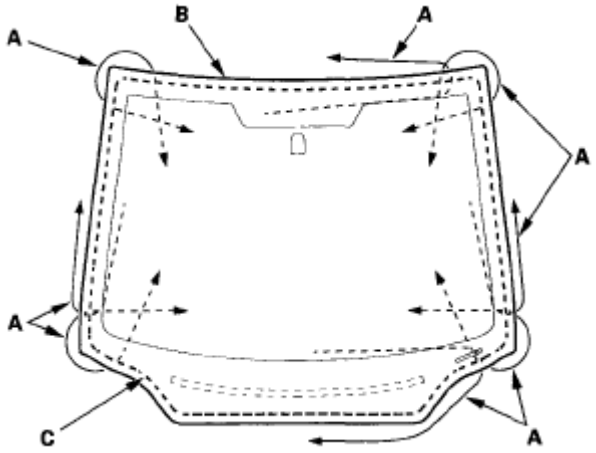

Fig. 7: Identifying Cutting Positions

7. Carefully remove the windshield.
8. With a knife, scrape the old adhesive smooth to a thickness of about 2 mm (0.08 in.) on the bonding surface around the entire windshield opening flange:
    - Do not scrape down to the painted surface of the body; damaged paint will interfere with proper bonding.
    - Remove the rubber dam and fasteners from the body.
    - Replace the dashboard seal with a new one.
9. Clean the body bonding surface with a sponge dampened in alcohol. After cleaning, keep oil, grease and water from getting on the clean surface.
10. If the old windshield will be reinstalled, use a putty knife to scrape off the old adhesive, the fasteners and the rubber dam from the windshield. Clean the inside face and the edge of the windshield with alcohol where new adhesive will be applied. Make sure the bonding surface is kept free of water, oil, and grease.
11. Attach the upper rubber dam (A), side rubber dam (B), and clips (C) with adhesive tape to the inside face of the windshield (D) as shown in **Fig. 8**:
    - Be sure the rubber dam and clips line up with the alignment marks (E).
    - Be sure the convex portion (F) of the left and right clips toward left.
    - Be careful not to touch the windshield where adhesive will be applied.

Rubber dams adhesive tape:

Thickness 0.16 mm (0.006 in.)
Width 3.5 mm (0.14 in.)

Clips adhesive tape:

Thickness 0.4 mm (0.016 in.)
Width 10 mm (0.39 in.)

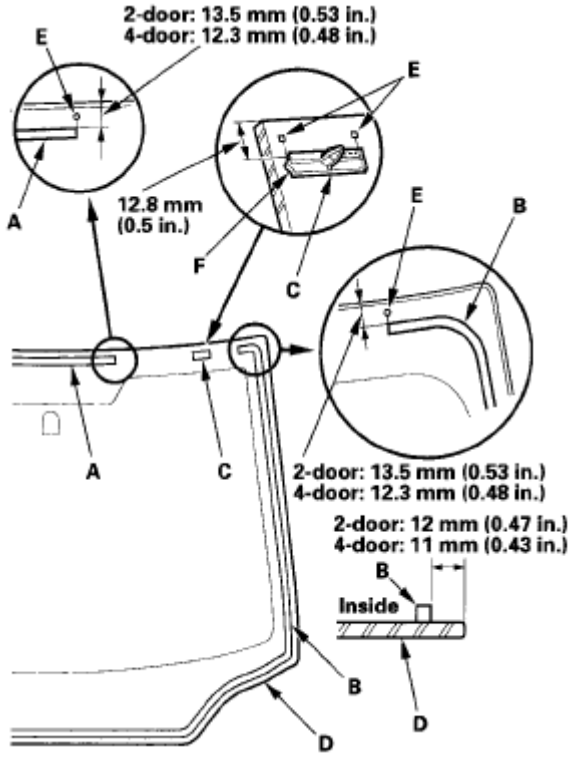

Fig. 8: Attaching Upper Rubber Dam, Side Rubber Dam And Clips With Adhesive Tape To Inside Face Of Windshield (With Specifications)

12. Attach the molding (A) with adhesive tape (B) to the upper edge of the windshield (C). Be careful not to touch the windshield where adhesive will be applied.

    Molding adhesive tape: Thickness 0.8 mm (0.03 in.) Width 4 mm (0.16 in.)

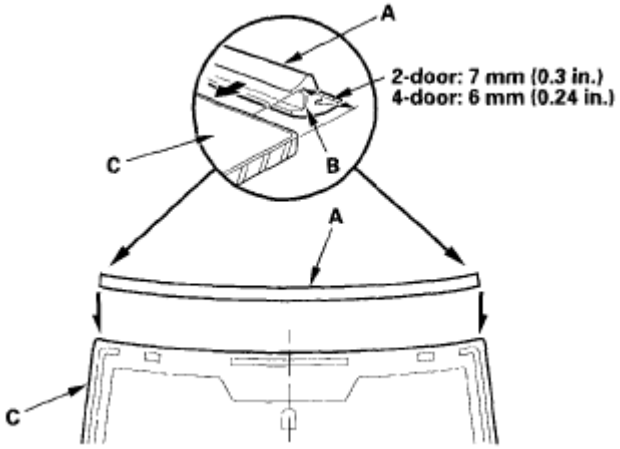

Fig. 9: Attaching Molding With Adhesive Tape To Upper Edge Of Windshield (With Specifications)

13. Apply primer to the molding (A), then attach the molding upper seal (B) with adhesive tape to the inside surface of the molding as shown.

    Seals adhesive tape: Thickness 0.16 mm (0.006 in.) Width 7 mm (0.28 in.)

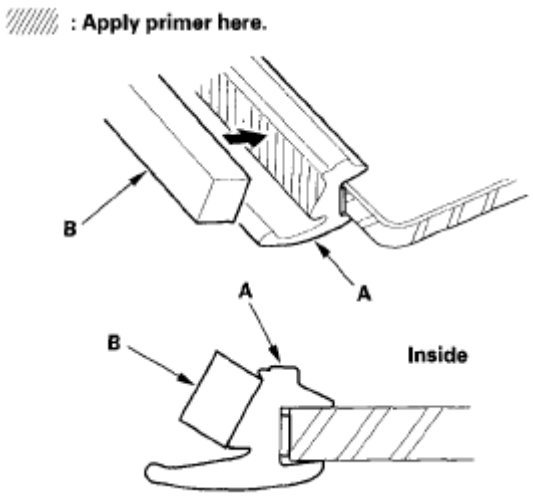

Fig. 10: Applying Primer To Molding

14. Attach the lower rubber dam (A) with body side adhesive tape to the body as shown. Do not peel the glass side adhesive backing.

    Rubber dam adhesive tape:

    Thickness 0.16 mm (0.006 in.)
    Width 5 mm (0.2 in.)

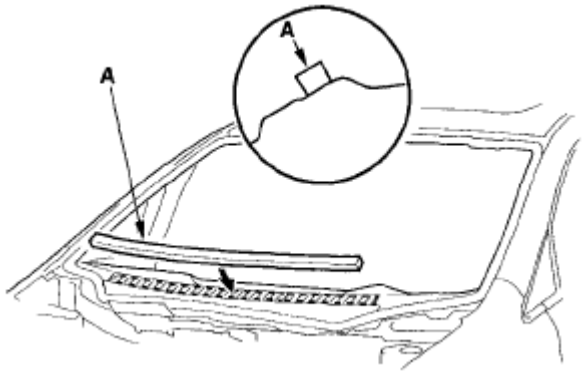

Fig. 11: Attaching Lower Rubber Dam With Body Side Adhesive Tape To Body

15. Set the windshield in the opening, and center it. Make alignment marks (A) across the windshield and body with a grease pencil at the four points shown. Make sure both clips (B) contact with the edge of the body holes. Be careful not to touch the windshield where adhesive will be applied.

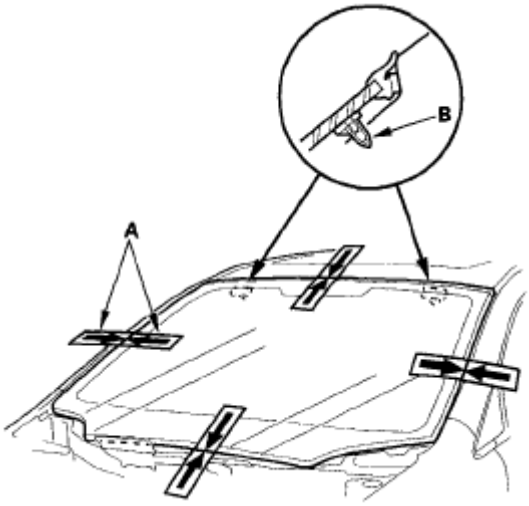

Fig. 12: Making Alignment Marks Across Windshield And Body With Grease Pencil

16. Remove the windshield.
17. With a sponge, apply a light coat of glass primer around the edge of the windshield (A) between the dams (B) and molding (C) as shown, then lightly wipe it off with gauze or cheesecloth:
    - Apply glass primer to the molding.
    - Do not apply body primer to the windshield, and do not get body and glass primer sponges mixed up.
    - Never touch the primed surfaces with your hands. If you do, the adhesive may not bond to the windshield properly, causing a leak after the windshield is installed.
    - Keep water, dust, and abrasive materials away from primed surfaces.

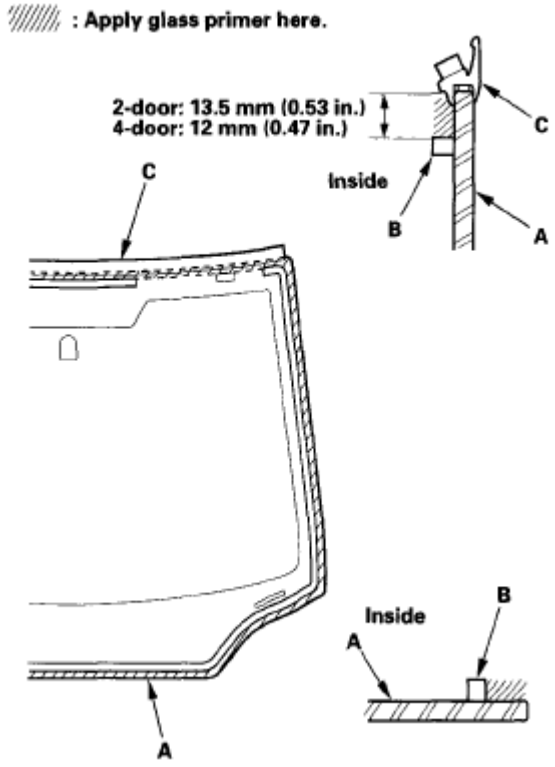

Fig. 13: Applying Glass Primer Around Edge Of Windshield Between Dams And Molding (With Specifications)

18. With a sponge, carefully apply a light coat of body primer to any exposed paint or metal around the flange where new adhesive will be applied. Let the primer dry for at least 10 minutes:
    - Do not apply body primer to any remaining original adhesive on the flange.
    - Be careful not to mix up the body and glass primer sponges.
    - Never touch the primed surfaces with your hands.

Apply body primer to shaded area shown in illustrations.

2-door

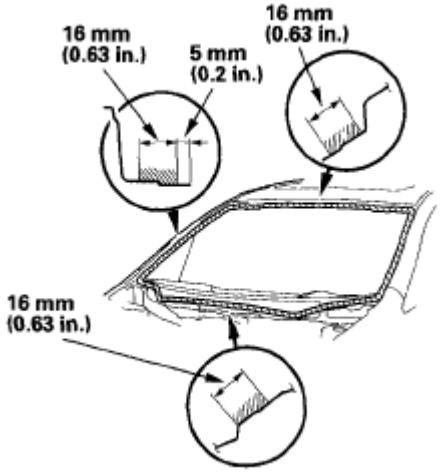

Fig. 14: Applying Body Primer To Exposed Paint (2-Door) (With Specifications)

4-door

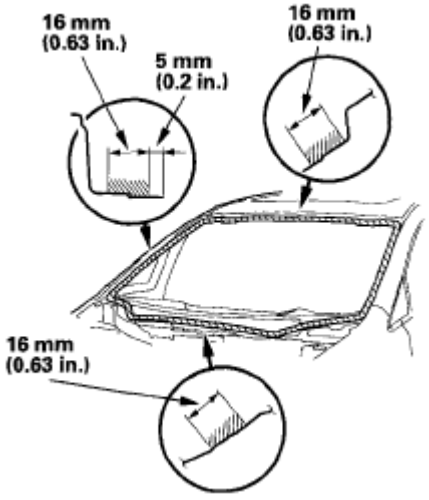

Fig. 15: Applying Body Primer To Exposed Paint (4-Door) (With Specifications)

19. Cut a "V" in the end of the nozzle (A) on the adhesive cartridge as shown.

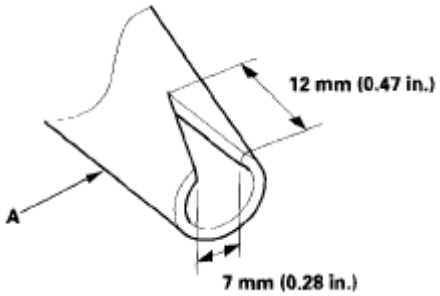

Fig. 16: Cutting "V" In End Of Nozzle (With Specifications)

20. Pack adhesive into the cartridge without air pockets to ensure continuous delivery. Put the cartridge in a caulking gun, and run a bead of adhesive (A) around the edge of the windshield (B) between the dams (C) and molding (D) as shown. Apply the adhesive within 30 minutes after applying the glass primer. Make a slightly thicker bead at each corner.

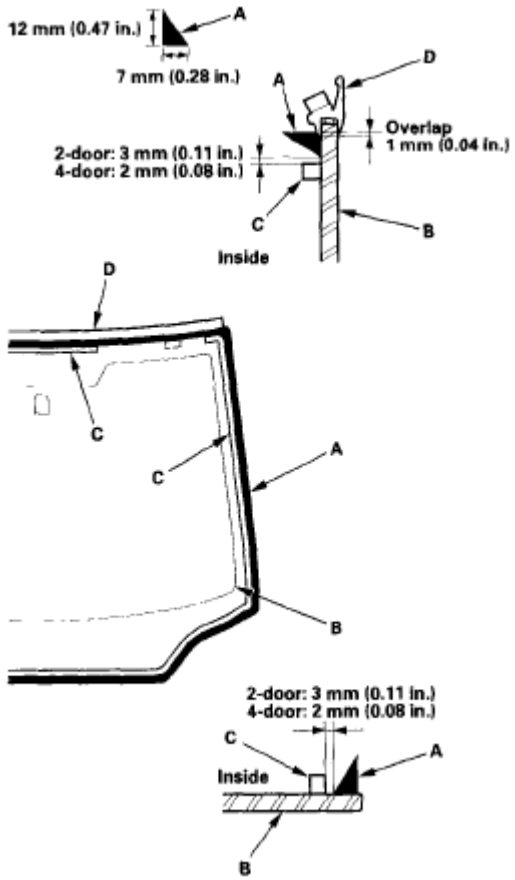

Fig. 17: Running Bead Of Adhesive Around Edge Of Windshield Between Dams And Molding (With Specifications)

21. Pull out the glass side adhesive backing away from the lower rubber dam.
22. Use suction cups to hold the windshield over the opening, align it with the alignment marks made in step 15, and set it down on the adhesive. Lightly push on the windshield until its edges are fully seated on the adhesive all the way around.

NOTE: Do not open or close any of the doors for about an hour until the

adhesive is dry.

23. Scrape or wipe the excess adhesive off with a putty knife or towel. To remove adhesive from a painted surface or the windshield, wipe with a soft shop towel dampened with alcohol.
24. After the adhesive has dried, spray water over the windshield and check for leaks. Mark the leaking areas, let the windshield dry, then seal with sealant:
    - Let the vehicle stand for at least 4 hours after windshield installation. If the vehicle has to be used within the first 4 hours, it must be driven slowly.
    - Keep the windshield dry for the first hour after installation.
25. Reinstall all remaining removed parts.

NOTE: Advise the customer not to do the following things for 2 to 3 days:

- **Slam the doors with all the windows rolled up.**
- **Twist the body excessively (such as when going in and out of driveways at an angle or driving over rough, uneven roads).**

FRONT CORNER GLASS REPLACEMENT

4-DOOR

NOTE:

- **Put on gloves to protect your hands.**
- **Wear eye protection while cutting the glass adhesive.**
- **Use seat covers to avoid damaging any surface.**

1. Remove the A-pillar trim (see **TRIM REMOVAL/INSTALLATION - PILLAR AREAS**).
2. From inside the vehicle, use a knife (A) to cut through the front corner glass adhesive (B) all the way around. Apply protective tape along the edge of the entire front corner glass opening flange.

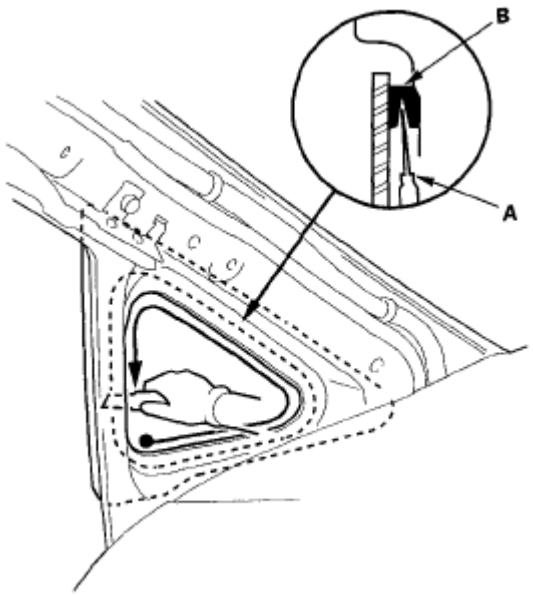

Fig. 18: Cutting Through Front Corner Glass Adhesive Using Knife

3. From outside the vehicle, pry the front corner glass clips (A) and the front corner trim clips (B), then carefully remove the glass (C) and trim (D) together. The trim has not be attached to the glass.

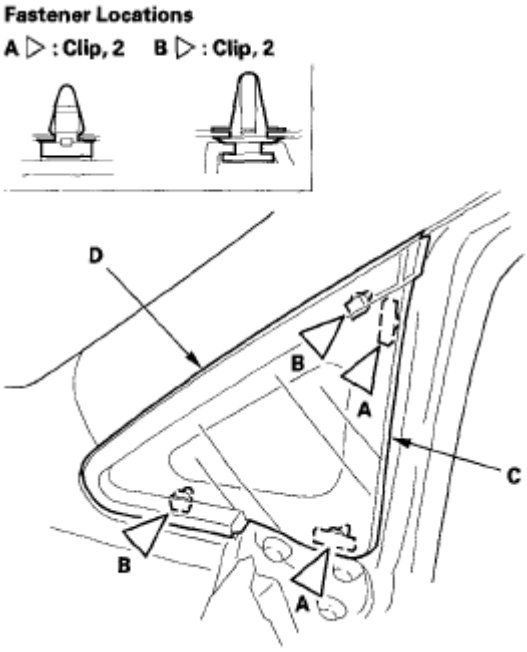

Fig. 19: Prying Front Corner Glass Clips And Trim Clips

4. With a putty knife, scrape the old adhesive smooth to a thickness of about 2 mm (0.08 in.) on the bonding surface around the entire front corner glass opening flange:
   - Do not scrape down to the painted surface of the body; damaged paint will interfere with proper bonding.
   - If any of the clips are broken, remove them from the body.
5. Clean the body bonding surface with a sponge dampened in alcohol. After cleaning, keep oil, grease, and water from getting on the surface.
6. If the old front corner glass will be reinstalled, use a putty knife to scrape off the old adhesive from the front corner glass. Clean the inside face of the front corner glass and the edge of the glass with alcohol where new adhesive will be applied. Make sure the bonding surface is kept free of water, oil, and grease.
7. Attach the rubber dam (A) and clips (B) with adhesive tape to the inside face of the front corner glass (C) as shown in **Fig. 20**.

   Be careful not to touch the front corner glass where adhesive will be applied.

   Rubber dam adhesive tape:

   Thickness 0.16 mm (0.006 in.)
   Width 3 mm (0.12 in.)

   Clip adhesive tape:

Thickness 1.2 mm (0.047 in.)
Width 9 mm (0.35 in.)

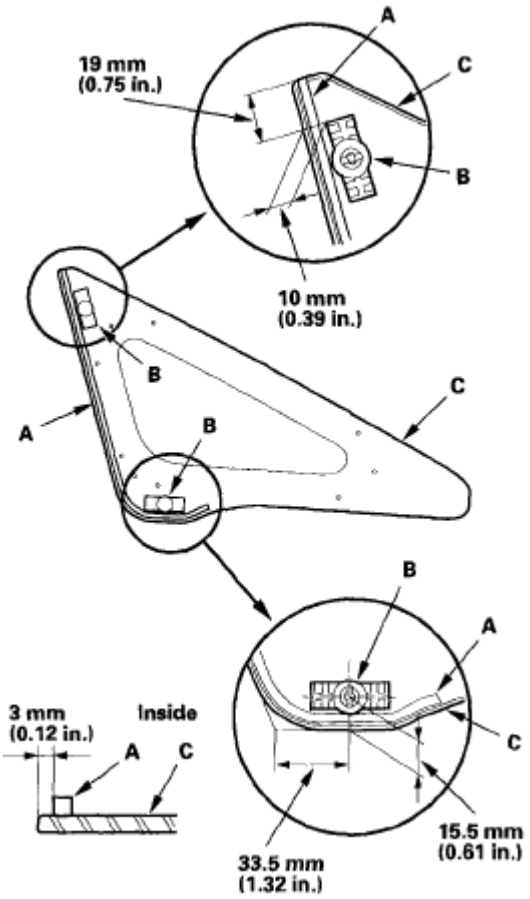

Fig. 20: Attaching Rubber Dam And Clips With Adhesive Tape To Inside Face Of Front Corner Glass (With Specifications)

8. With a sponge, apply a light coat of glass primer to the inside face of the front corner glass (A) as shown in **Fig. 21**, then lightly wipe it off with gauze or cheesecloth:
    - With the printed dots (B) on the front corner glass as a guide, apply the glass primer to both lower corner portions of the front corner glass.
    - Do not apply body primer to the front corner glass, and do not get body and glass primer sponges mixed up.
    - Never touch the primed surfaces with your hands. If you do the adhesive may not bond to the front corner glass properly, causing a leak after the front corner glass is installed.
    - Keep water, dust, and abrasive materials away from primed surface.

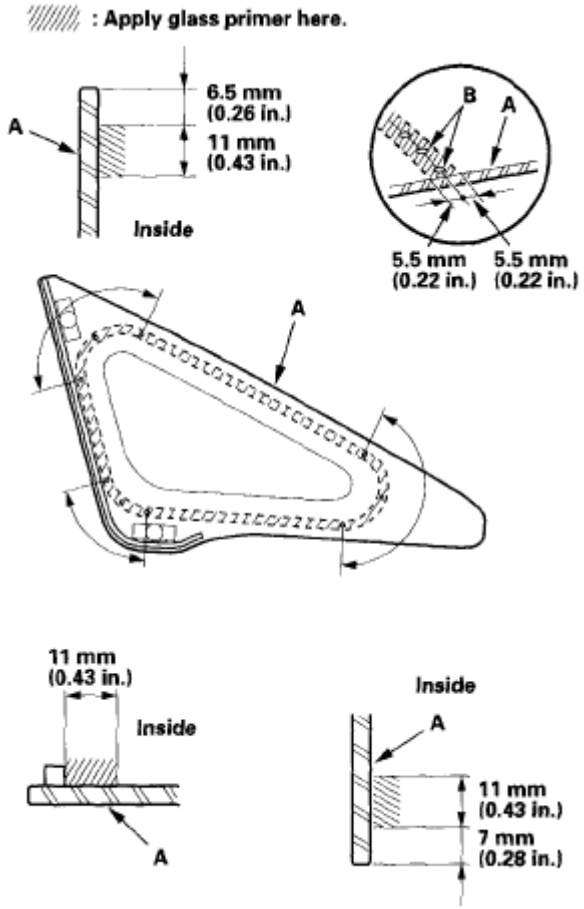

Fig. 21: Applying Glass Primer To Inside Face Of Front Corner Glass (With Specifications)

9. With a sponge, apply a light coat of body primer to the original adhesive remaining around the front corner glass opening flange. Let the body primer dry for at least 10 minutes:
    - Do not apply glass primer to the body, and be careful not to mix up glass and body primer sponges.
    - Never touch the primed surfaces with your hands.
    - Mask off the dashboard before painting the flange.

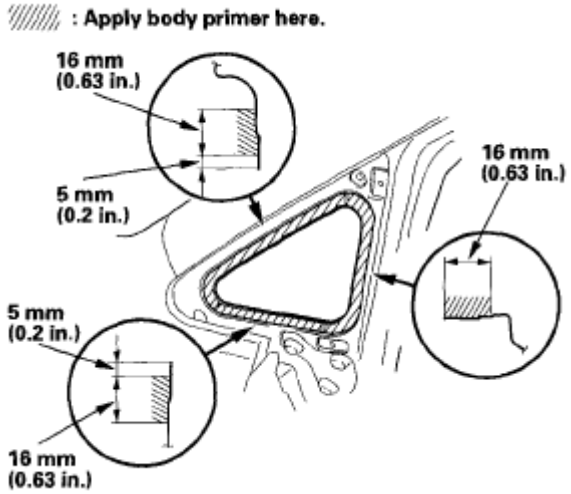

Fig. 22: Applying Body Primer To Original Adhesive Around Front Corner Glass Opening Flange (With Specifications)

10. Before filling a cartridge, cut a "V" in the end of the nozzle (A) as shown.

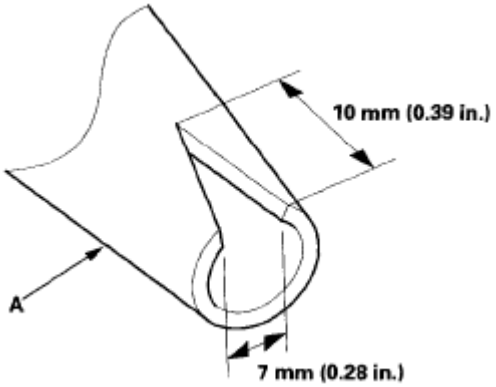

Fig. 23: Cutting "V" In End Of Nozzle (With Specifications)

11. Pack adhesive into the cartridge without air pockets to ensure continuous delivery. Put the cartridge in a caulking gun, and run a bead of adhesive (A) around the front corner glass (B) as shown:
    - With the printed dots (C) on the front corner glass as a guide, apply the adhesive to both side portions of the front corner glass.
    - Apply the adhesive within 30 minutes after applying the glass primer. Make a slightly thicker bead at each corner.

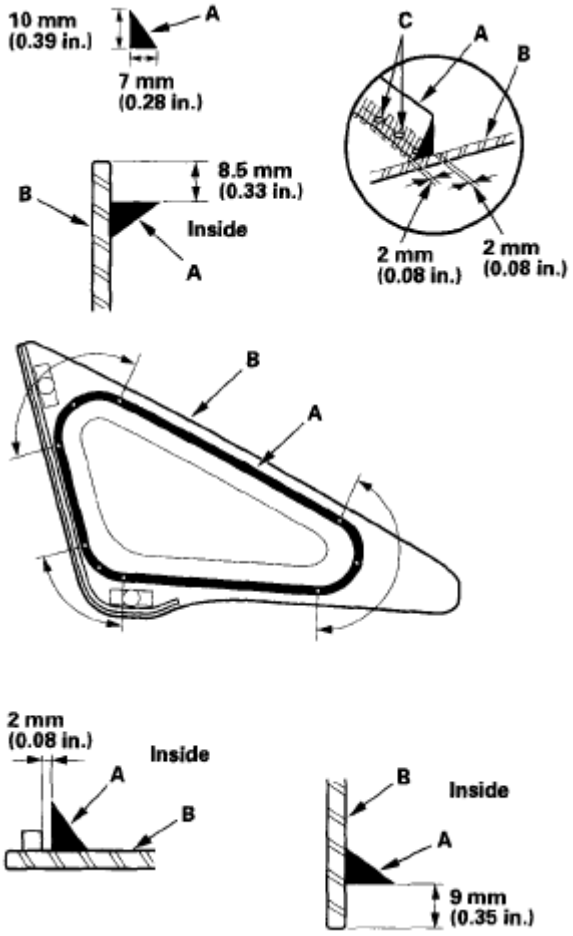

Fig. 24: Running Bead Of Adhesive Around Front Corner Glass (With Specifications)

12. Set the front corner glass (A) to the front corner trim (B) quickly. Be careful not to touch the front corner glass where adhesive will be spread.

NOTE: Make sure that there is no clearance between the sash and front lower sash.

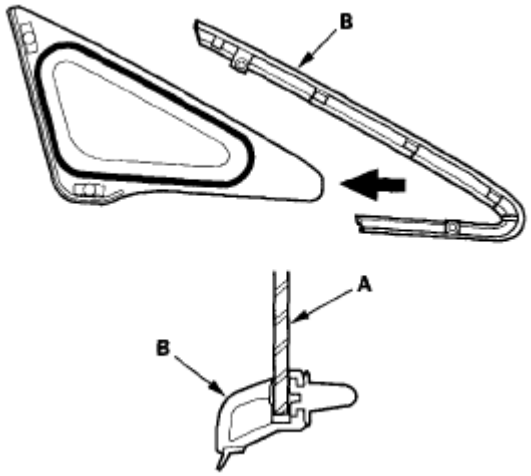

Fig. 25: Setting Front Corner Glass To Front Corner Trim

13. Use a suction cup to hold the front corner glass (A) over the opening while holding the front corner trim (B) by the other hand, align the clips, and set it down on the adhesive. Lightly push on the front corner glass until its edges are fully seated on the adhesive all the way around.

NOTE: Do not open or close any of the doors for about an hour until the adhesive is dry.

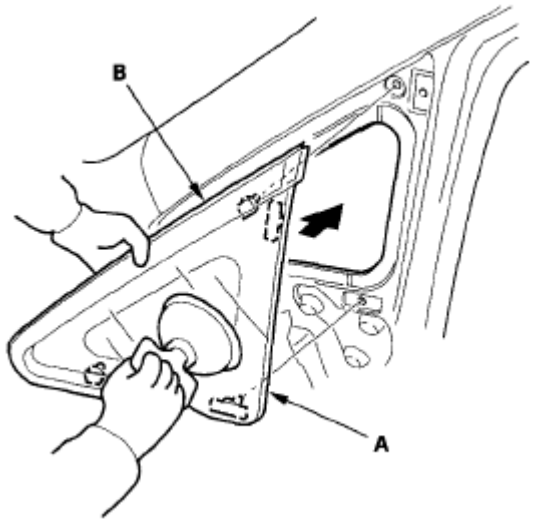

Fig. 26: Using Suction Cup To Hold Front Corner Glass Over Opening

14. Scrape or wipe the excess adhesive off with a putty knife or towel. To remove adhesive from a painted surface or the front corner glass, wipe with a soft shop towel dampened with alcohol.
15. After the adhesive has dried, spray water over the front corner glass and check for leaks. Mark the leaking areas, let the front corner glass dry, then seal with sealant. Let the vehicle stand for at least 4 hours after front corner glass installation. If the vehicle has to be used within the first 4 hours, it must be driven slowly.
16. Reinstall all remaining removed parts.

NOTE: Advise the customer not to do the following things for 2 to 3 days:

- **Slam the doors with all the windows rolled up.**
- **Twist the body excessively (such as when going in and out of driveways at an angle or driving over rough, uneven roads).**

REAR WINDOW REPLACEMENT

2-DOOR

NOTE:

- **Put on gloves to protect your hands.**
- **Wear eye protection while cutting the glass adhesive with a piano wire.**
- **Use seat covers to avoid damaging any surfaces.**
- **Do not damage the rear window defogger grid lines, window antenna grid lines, and terminals.**

1. Remove these items:
   - Trunk lid
   - Rear shelf (see **TRIM REMOVAL/INSTALLATION - REAR SHELF AREA**)
   - Rear shelf extension (see **REAR SHELF EXTENSION - 2-DOOR**)
   - Quarter pillar trim (see **QUARTER PILLAR TRIM - 2-DOOR**)
2. Remove the window antenna terminal cover (A) from the window antenna terminal cover base (B), and disconnect the window antenna connector (C).

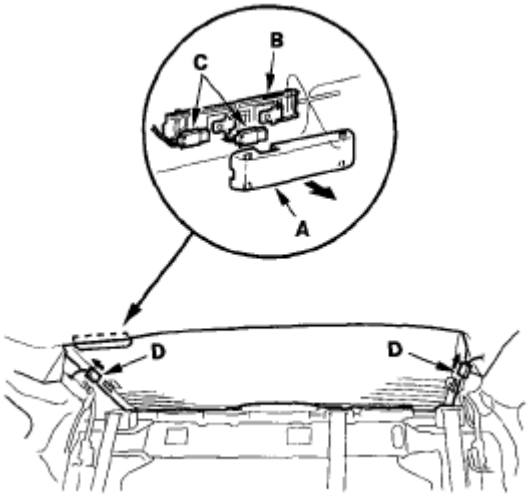

Fig. 27: Removing Terminal Cover From Window Antenna Terminal Cover Base

3. Disconnect the rear window defogger connectors (D).
4. If the old rear window will be reinstalled, make alignment marks across the glass and body with a grease pencil.
5. Pull down the rear portion of the headliner (A) by detaching the clips (B). Take care not to bend the headliner excessively, or you may crease or break it.

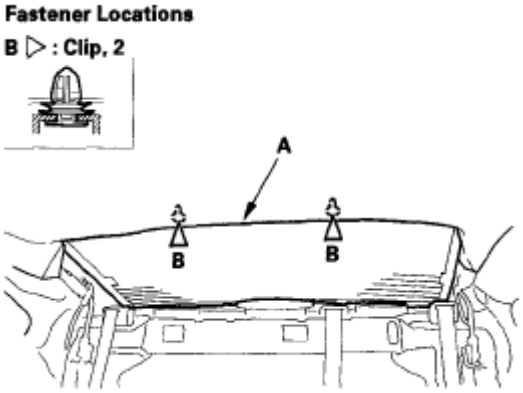

Fig. 28: Detaching Clips To Remove Rear Portion Of Headliner

6. Apply protective tape along the inside and outside edges of the body. Using an awl, make a hole through the adhesive from inside the vehicle at the corner portion of the rear window. Push a piece of piano wire through the hole, and wrap each end around a piece of wood.
7. Remove the lower rubber dam (A) from the lower edge of the rear window (B). If necessary, cut the

molding with a utility knife.

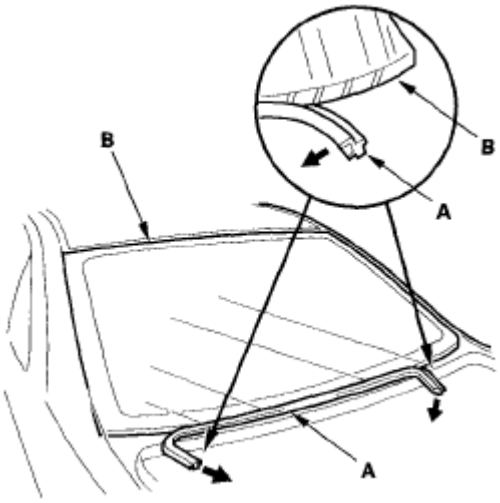

Fig. 29: Removing Lower Rubber Dam From Lower Edge Of Rear Window

8. With a helper on the outside, pull the piano wire (A) back and forth in a sawing motion. Hold the piano wire as close to the rear window (B) as possible to prevent damage to the body, and carefully cut through the adhesive (C) around the entire rear window.

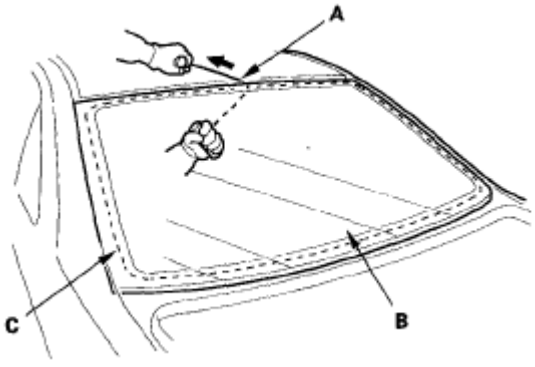

Fig. 30: Pulling Piano Wire Back And Forth In Sawing Motion

Cutting positions

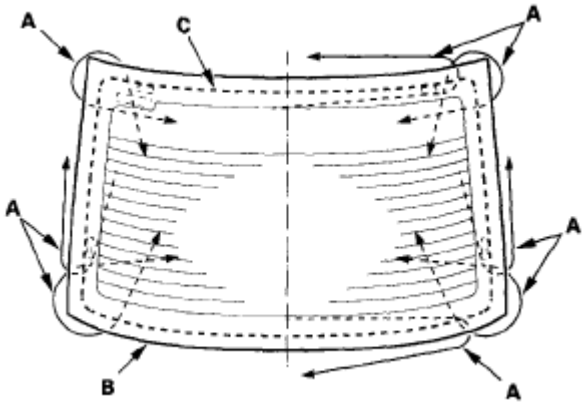

Fig. 31: Identifying Cutting Positions

9. Carefully remove the rear window.
10. With a putty knife, scrape the old adhesive smooth to a thickness of about 2 mm (0.08 in.) on the bonding surface around the entire rear window opening flange:
    - Do not scrape down to the painted surface of the body; damaged paint will interfere with proper bonding.
    - Remove the fasteners from the body.
11. Clean the body bonding surface with a sponge dampened in alcohol. After cleaning, keep oil, grease, and water from getting on the surface.
12. If the old rear window will be reinstalled, use a putty knife to scrape off the old adhesive, the moldings and the fasteners from the rear window. Clean the inside face and the edge of the rear window with alcohol where new adhesive will be applied. Make sure the bonding surface is kept free of water, oil, and grease.
13. Attach the window antenna terminal cover base (A) with adhesive tape to the inside face of the rear window (B) as shown. Apply primer to the inside face of the rear window as shown. Be careful not to touch the rear window where adhesive will be applied.

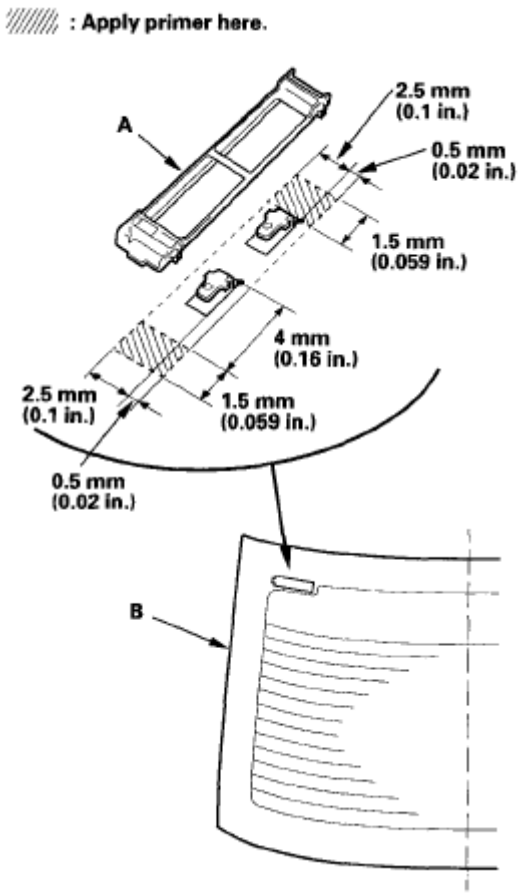

Fig. 32: Identifying Antenna Terminal Cover Base With Adhesive Tape To Inside Face Of Rear Window (With Specifications)

14. Apply primer to the edge of the rear window (A) where the lower rubber dam adhesive tape will be attached as shown. Attach the lower rubber dam (B) with adhesive tape (C) to the lower edge of the

rear window:

- After installing the rubber dam, cut the ends (D) of the rubber dam as shown.
- Be careful not to touch the windshield where adhesive will be applied.

Rubber dams adhesive tape:

Thickness 0.2 mm (0.008 in.)
Width 4 mm (0.16 in.)

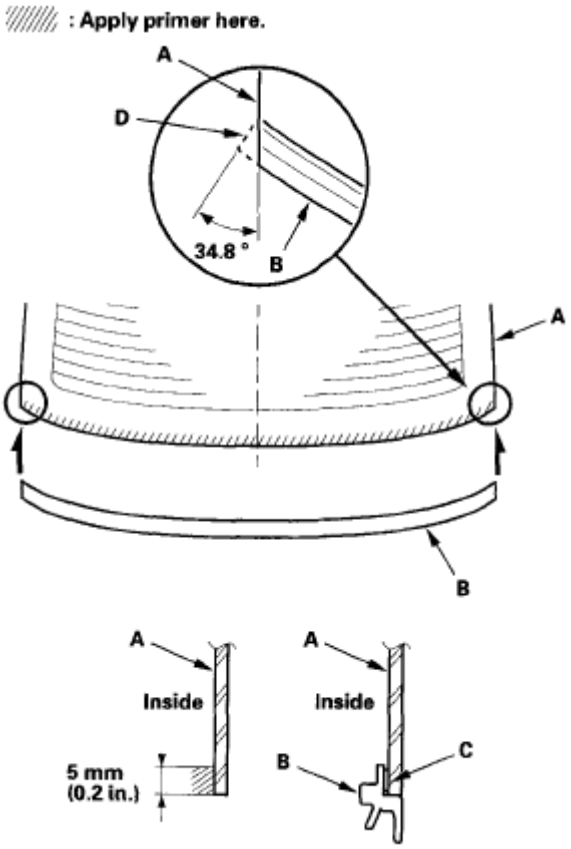

Fig. 33: Applying Primer To Edge Of Rear Window (With Specifications)

15. Attach the upper rubber dams (A), side rubber dam (B), clips (C), and fasteners (D) with adhesive tape to the inside face of the rear window (E) as shown in **Fig. 34**:
    - First attach the upper rubber dam, then attach the side rubber dams around the edge of the rear window. Be sure the top of the side rubber dam contacts with the bottom of the upper rubber dam. If necessary, cut the rubber dam.
    - Be sure the clips, and fasteners line up with the alignment marks (F).
    - Be careful not to touch the rear window where adhesive will be applied.

Rubber dams adhesive tape:

Thickness 0.16 mm (0.006 in.)
Width 4 mm (0.16 in.)

Clips adhesive tape:

Thickness 0.4 mm (0.016 in.)
Width 10 mm (0.39 in.)

Fasteners adhesive tape:

Thickness 0.8 mm (0.03 in.)
Width 7 mm (0.28 in.)

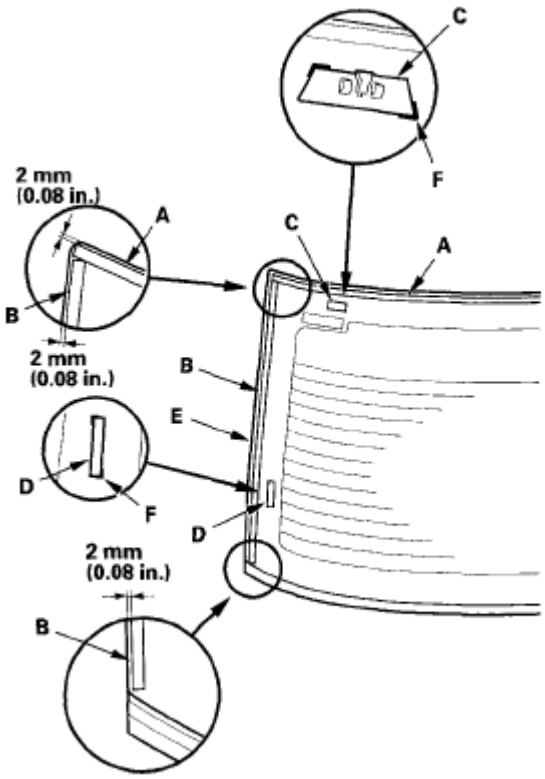

Fig. 34: Attaching Upper Rubber Dams, Side Rubber Dam, Clips And Fasteners With Adhesive Tape To Inside Face Of Rear Window (With Specifications)

16. Attach the fasteners (A) with adhesive tape to the rear window opening flange of the body on both sides.

Fasteners adhesive tape:

Thickness 0.8 mm (0.031 in.)
Width 9 mm (0.35 in.)

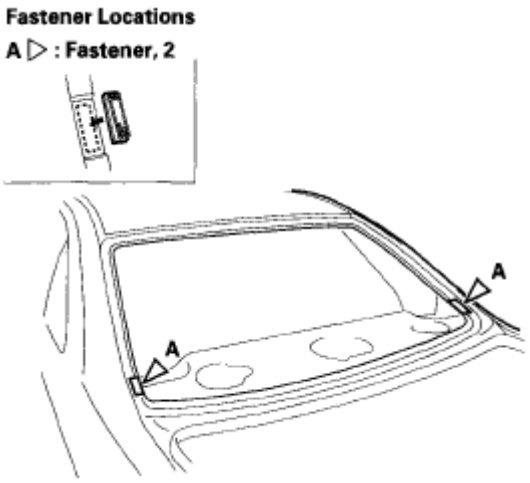

Fig. 35: Attaching Fasteners With Adhesive Tape To Rear Window Opening Flange

17. Set the rear window in the opening, and center it. Make alignment marks (A) across the rear window and body with a grease pencil at the four points shown. Make sure both upper clips (B) are in the body holes. Be careful not to touch the rear window where adhesive will be applied.

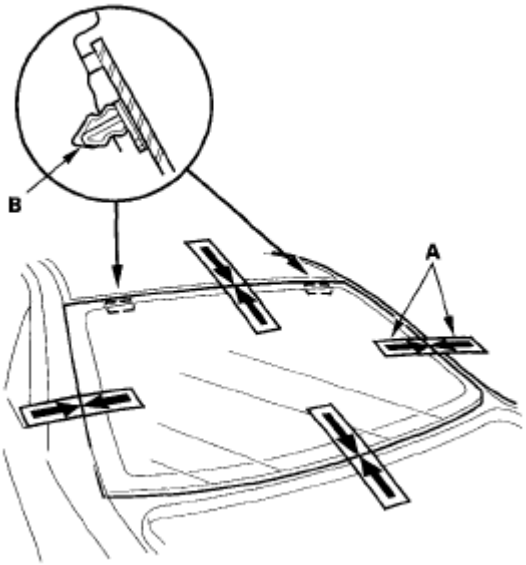

Fig. 36: Making Alignment Marks Across Rear Window And Body

18. Remove the rear window.
19. With a sponge, apply a light coat of glass primer along the edge of the rear window (A) between the dams (B) as shown, then lightly wipe it off with gauze or cheesecloth:
    - Do not apply body primer to the rear window, and do not get body and glass primer sponges mixed up.
    - Never touch the primed surfaces with your hands. If you do, the adhesive may not bond to the rear window properly, causing a leak after the rear window is installed.
    - Keep water, dust, and abrasive materials away from primed surfaces.

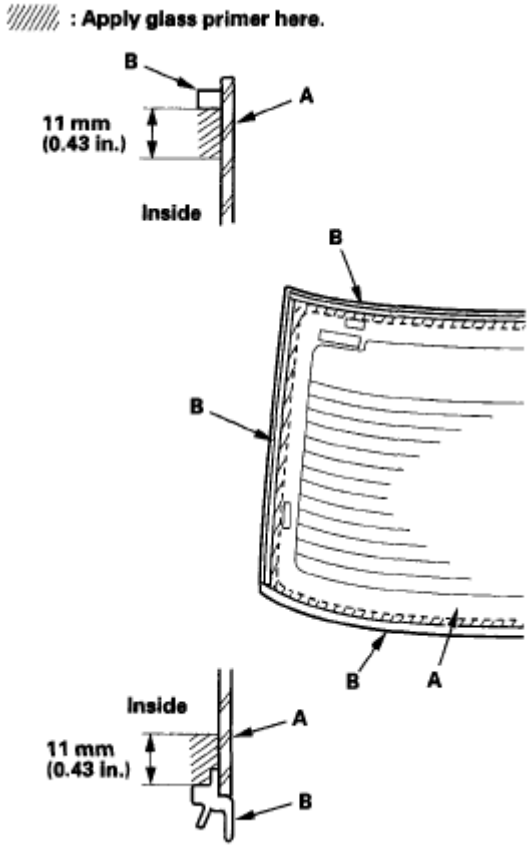

Fig. 37: Applying Glass Primer Along Edge Of Rear Window Between Dams (With Specifications)

20. With a sponge, carefully apply a light coat of body primer to any exposed paint or metal around the flange where new adhesive will be applied. Let the primer dry for at least 10 minutes:
    - Do not apply body primer to any remaining original adhesive on the flange.
    - Be careful not to mix up the body and glass primer sponges.
    - Never touch the primed surfaces with your hands.

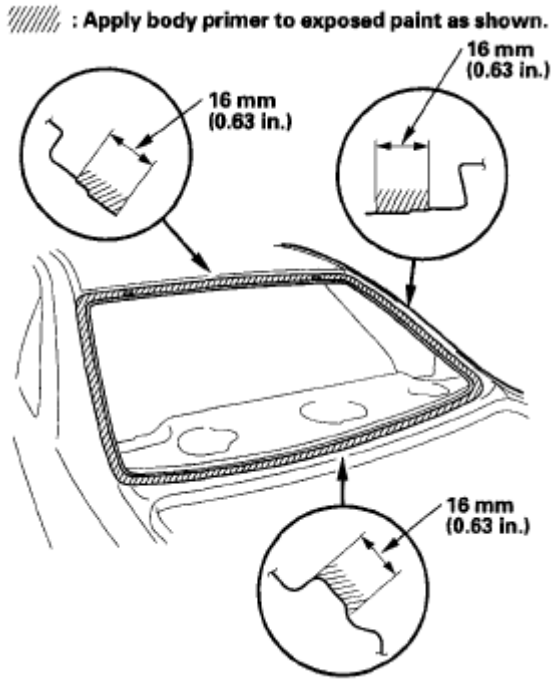

Fig. 38: Applying Body Primer To Any Exposed Paint (With Specifications)

21. Cut a "V" in the end of the nozzle (A) on the adhesive cartridge as shown.

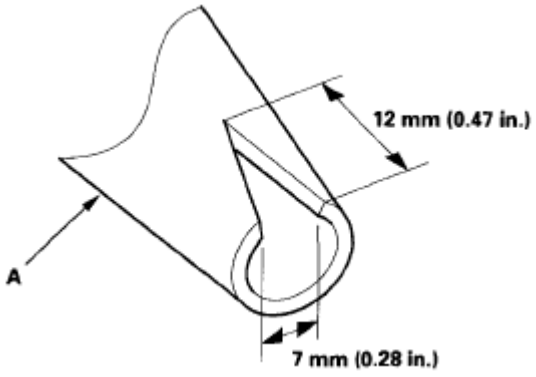

Fig. 39: Cutting "V" In End Of Nozzle (With Specifications)

22. Pack adhesive into the cartridge without air pockets to ensure continuous delivery. Put the cartridge in a caulking gun, and run a bead of adhesive (A) around the edge of the rear window (B) between the dams (C) as shown.

    Apply the adhesive within 30 minutes after applying the glass primer. Make a slightly thicker bead at each corner.

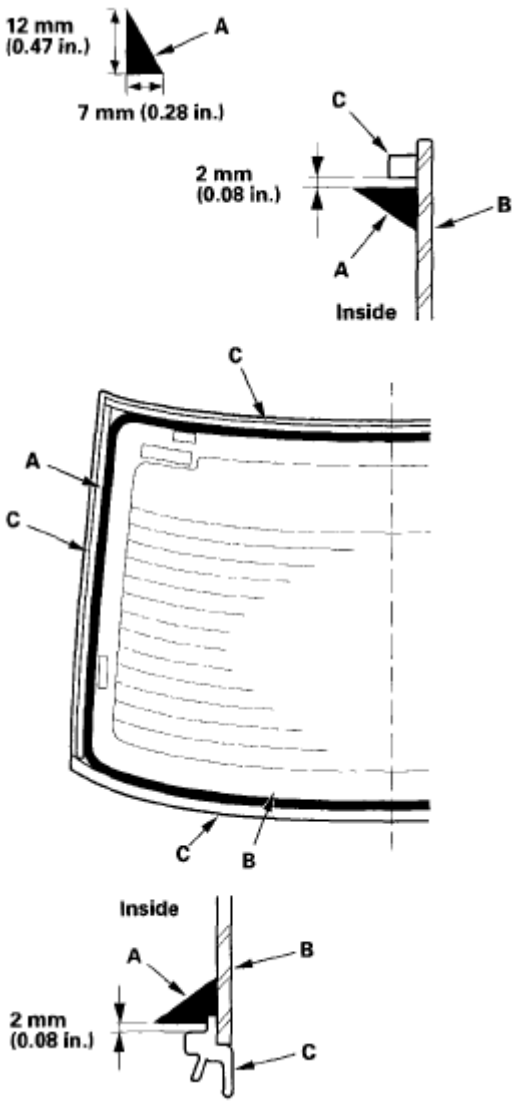

Fig. 40: Running Bead Of Adhesive Around Edge Of Rear Window Between Dams (With Specifications)

23. Use suction cups to hold the rear window over the opening, align it with the alignment marks you made in step 17, and set it down on the adhesive. Lightly push on the rear window until its edges are fully seated on the adhesive all the way around.

NOTE: Do not open or close any of the doors for about an hour until the adhesive is dry.

24. Scrape or wipe the excess adhesive off with a putty knife or towel. To remove adhesive from a painted surface or the rear window, use a soft shop towel dampened with alcohol.
25. After the adhesive has dried, spray water over the rear window and check for leaks. Mark the leaking areas, let the rear window dry, then seal with sealant. Let the vehicle stand for at least 4 hours after rear window installation. If the vehicle has to be used within the first 4 hours, it must be driven slowly.
26. Reinstall all remaining removed parts.

NOTE: **Advise the customer not to do the following things for 2 to 3 days:**

- **Slam the doors with all the windows rolled up.**
- **Twist the body excessively (such as when going in and out of driveways at an angle or driving over rough, uneven roads).**

4-DOOR

NOTE:

- **Put on gloves to protect your hands.**
- **Wear eye protection while cutting the glass adhesive with a piano wire.**
- **Use seat covers to avoid damaging any surfaces.**
- **Do not damage the rear window defogger grid lines, window antenna grid lines, and terminals.**

1. Remove these items:
   - Trunk lid
   - C-pillar trim (see **C-PILLAR TRIM - 4-DOOR**)
   - Rear shelf (see **REAR SHELF EXTENSION - 2-DOOR**)
2. Disconnect the window antenna connectors (A) and rear window defogger connectors (B).

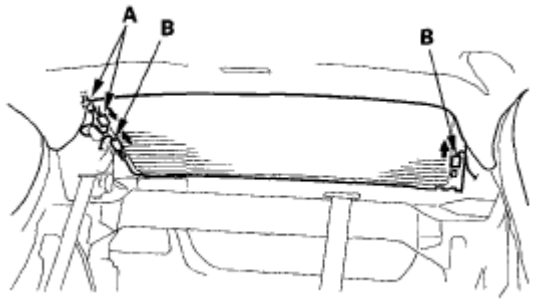

Fig. 41: Disconnecting Window Antenna Connectors And Rear Window Defogger Connectors

3. If the old rear window will be reinstalled, make alignment marks across the glass and body with a grease pencil.
4. Pull down the rear portion of the headliner (A) by detaching the clips (B). Take care not to bend the headliner excessively, or you may crease or break it.

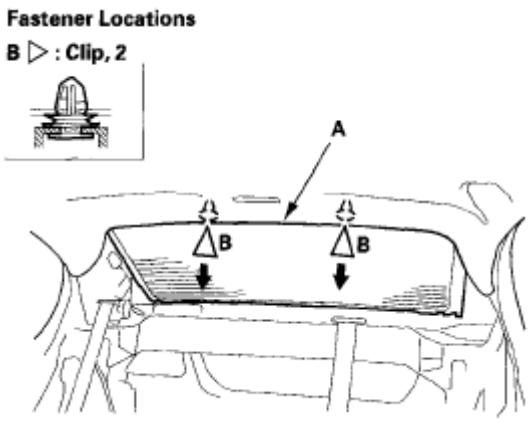

Fig. 42: Detaching Clips To Remove Rear Portion Of Headliner

5. Apply protective tape along the inside and outside edges of the body. Using an awl, make a hole through the adhesive from inside the vehicle at the corner portion of the rear window. Push a piece of piano wire through the hole, and wrap each end around a piece of wood.
6. Remove the lower rubber dam (A) from the lower edge of the rear window (B). If necessary, cut the molding with a utility knife.

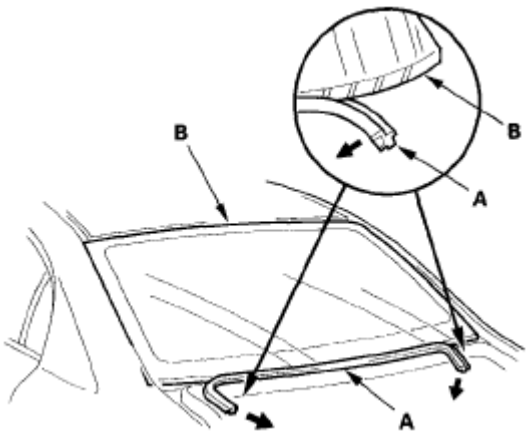

Fig. 43: Removing Lower Rubber Dam From Lower Edge Of Rear Window

7. With a helper on the outside, pull the piano wire (A) back and forth in a sawing motion. Hold the piano wire as close to the rear window (B) as possible to prevent damage to the body, and carefully cut through the adhesive (C) around the entire rear window.

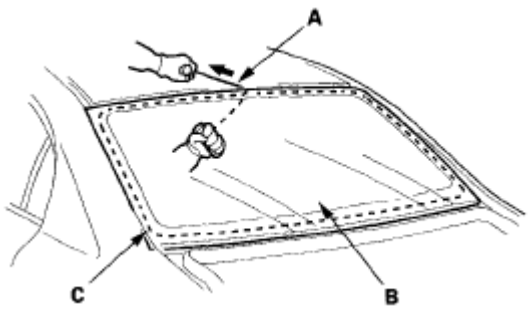

Fig. 44: Pulling Piano Wire Back And Forth In Sawing Motion

Cutting positions

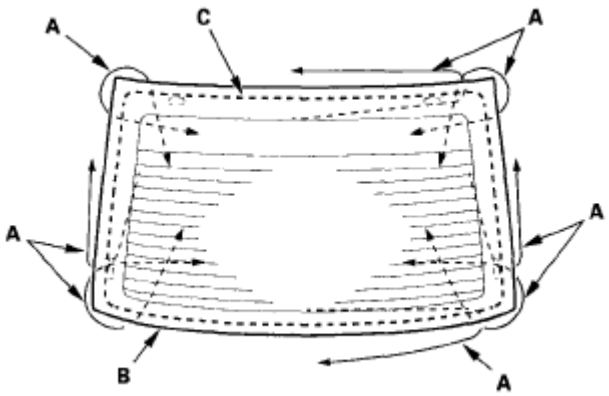

Fig. 45: Identifying Cutting Positions

8. Carefully remove the rear window.
9. With a putty knife, scrape the old adhesive smooth to a thickness of about 2 mm (0.08 in.) on the bonding surface around the entire rear window opening flange:
    - Do not scrape down to the painted surface of the body; damaged paint will interfere with proper bonding.
    - Remove the fasteners from the body.
10. Clean the body bonding surface with a sponge dampened in alcohol. After cleaning, keep oil, grease, and water from getting on the surface.
11. If the old rear window will be reinstalled, use a putty knife to scrape off the old adhesive, the moldings and the fasteners from the rear window. Clean the inside face and the edge of the rear window with alcohol where new adhesive will be applied. Make sure the bonding surface is kept free of water, oil, and grease.
12. Apply primer to the edge of the rear window (A) where the lower rubber dam adhesive tape will be attached as shown. Attach the lower rubber dam (B) with adhesive tape (C) to the lower edge of the rear window:
    - After installing the rubber dam, cut the ends (D) of the rubber dam as shown.
    - Be careful not to touch the windshield where adhesive will be applied.

Molding adhesive tape:

Thickness 0.2 mm (0.008 in.)
Width 4 mm (0.16 in.)

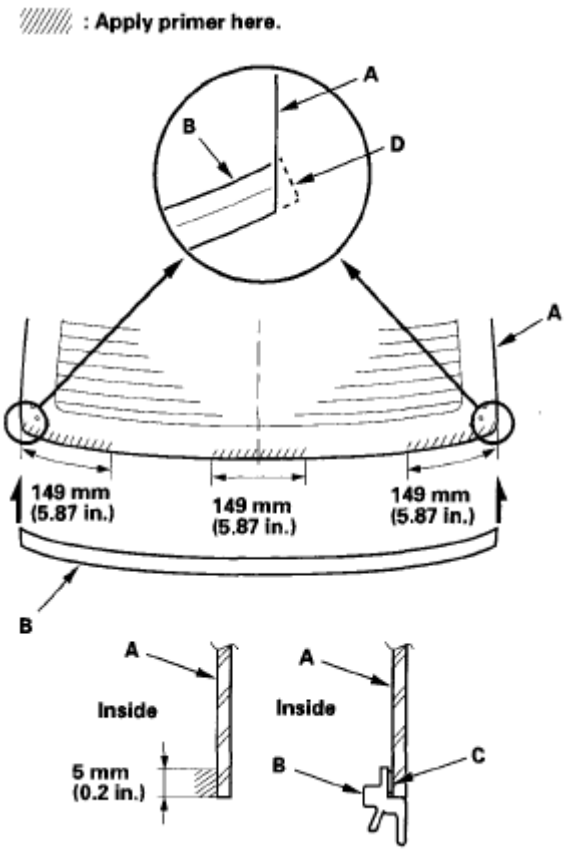

Fig. 46: Applying Primer To Edge Of Rear Window (With Specifications)

13. Attach the upper rubber dams (A), side rubber dams (B), clips (C) (except USA produced models), upper fasteners (D) (USA produced models), and side fasteners (E) with adhesive tape to the inside face of the rear window (F) as shown in **Fig. 47**:
    - First attach the upper rubber dam, then attach the side rubber dams around the edge of the rear window. Be sure the top of the side rubber dam contacts with the bottom of the upper rubber dam. If necessary, cut the rubber dam.
    - Be sure the clips, and fasteners line up with the alignment marks (G).
    - Be careful not to touch the rear window where adhesive will be applied.

    Rubber dams adhesive tape:

    Thickness 0.16 mm (0.006 in.)
    Width 5 mm (0.2 in.)

    Clips adhesive tape:

    Thickness 0.4 mm (0.016 in.)
    Width 13 mm (0.51 in.)

    Upper fasteners adhesive tape:

    Thickness 0.4 mm (0.016 in.)
    Width 11.4 mm (0.45 in.)

Side fasteners adhesive tape:

Thickness 0.8 mm (0.03 in.)
Width 7 mm (0.28 in.)

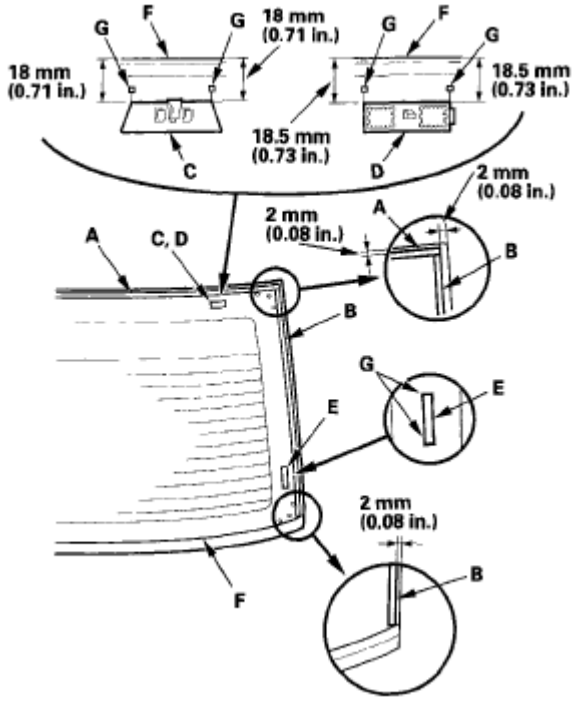

Fig. 47: Attaching Upper Rubber Dams, Side Rubber Dams And Clips (With Specifications)

14. Attach the fasteners (A) with adhesive tape to the rear window opening flange of the body on both sides.

Fasteners adhesive tape:

Thickness 0.8 mm (0.031 in.)
Width 9 mm (0.35 in.)

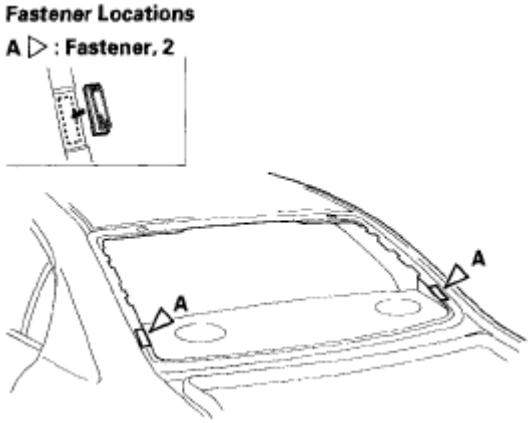

Fig. 48: Attaching Fasteners With Adhesive Tape To Rear Window Opening Flange

15. Set the rear window in the opening, and center it. Make alignment marks (A) across the rear window and body with a grease pencil at the four points shown. Make sure both clips (B) are in the body holes (except USA produced models).

    Make sure both pins (C) from the upper fasteners (D) contact with the edge of the body holes (USA produced models). Be careful not to touch the rear window where adhesive will be applied.

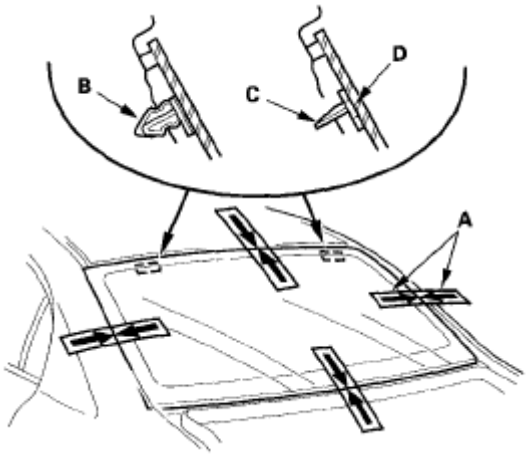

Fig. 49: Making Alignment Marks Across Rear Window And Body

16. Remove the rear window.
17. With a sponge, apply a light coat of glass primer along the edge of the rear window (A) between the dams (B) as shown, then lightly wipe it off with gauze or cheesecloth:
    - With the printed dots (D) on the rear window as a guide, apply the glass primer to both lower corner portions of the rear window.
    - Do not apply body primer to the rear window, and do not get body and glass primer sponges mixed up.
    - Never touch the primed surfaces with your hands. If you do, the adhesive may not bond to the rear window properly, causing a leak after the rear window is installed.
    - Keep water, dust, and abrasive materials away from primed surfaces.

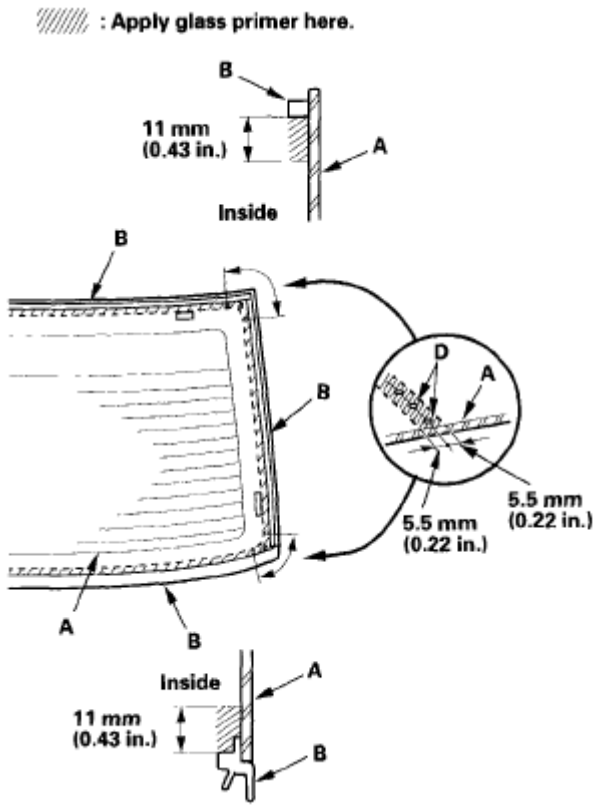

Fig. 50: Applying Glass Primer Along Edge Of Rear Window Between Dams (With Specifications)

18. With a sponge, carefully apply a light coat of body primer to any exposed paint or metal around the flange where new adhesive will be applied. Let the primer dry for at least 10 minutes:
    - Do not apply body primer to any remaining original adhesive on the flange.
    - Be careful not to mix up the body and glass primer sponges.
    - Never touch the primed surfaces with your hands.

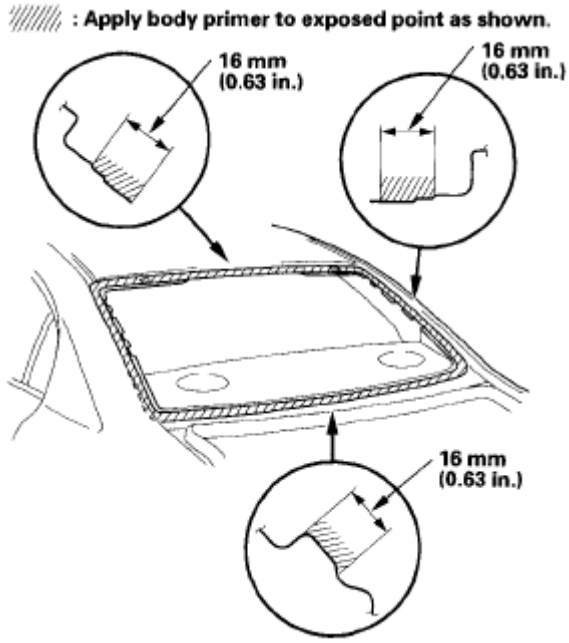

Fig. 51: Applying Body Primer To Any Exposed Paint (With Specifications)

19. Cut a "V" in the end of the nozzle (A) on the adhesive cartridge as shown.

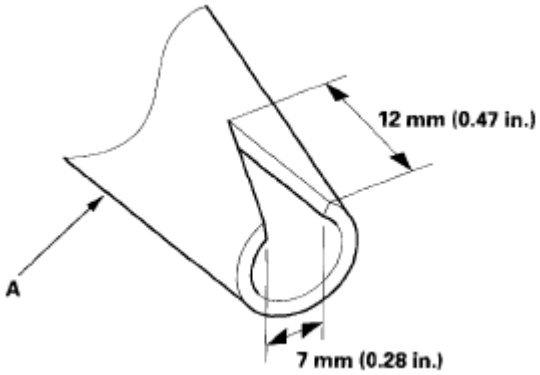

Fig. 52: Cutting "V" In End Of Nozzle (With Specifications)

20. Pack adhesive into the cartridge without air pockets to ensure continuous delivery. Put the cartridge in a caulking gun, and run a bead of adhesive (A) around the edge of the rear window (B) between the dams (C) as shown:
    - With the printed dots (D) on the rear window as a guide, apply the adhesive to both side portions of the rear window.
    - Apply the adhesive within 30 minutes after applying the glass primer. Make a slightly thicker bead at each corner.

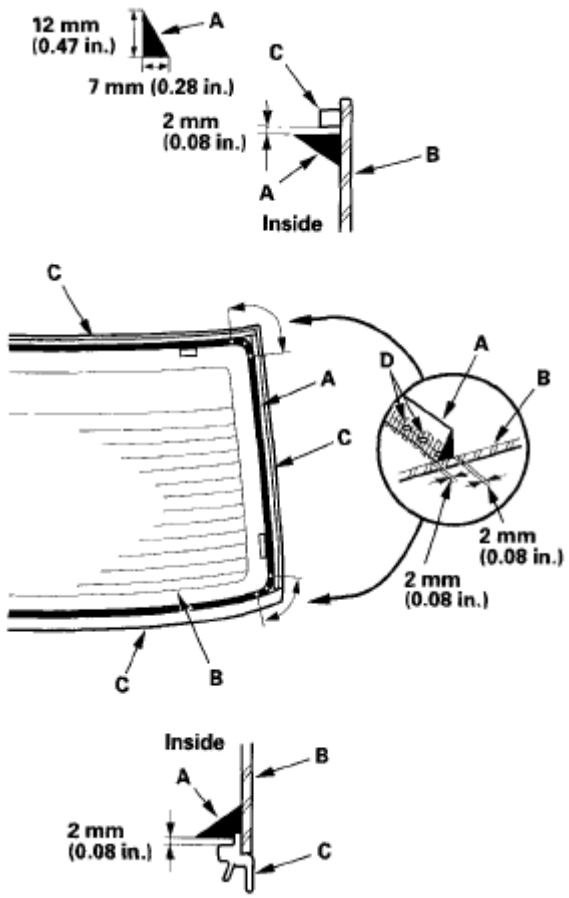

Fig. 53: Running Bead Of Adhesive Around Edge Of Rear Window Between Dams (With Specifications)

21. Use suction cups to hold the rear window over the opening, align it with the alignment marks you made in step 15, and set it down on the adhesive. Lightly push on the rear window until its edges are fully seated on the adhesive all the way around.

NOTE: Do not open or close any of the doors for about an hour until the adhesive is dry.

22. Scrape or wipe the excess adhesive off with a putty knife or towel. To remove adhesive from a painted surface or the rear window, use a soft shop towel dampened with alcohol.
23. After the adhesive has dried, spray water over the rear window and check for leaks. Mark the leaking areas, let the rear window dry, then seal with sealant. Let the vehicle stand for at least 4 hours after rear window installation. If the vehicle has to be used within the first 4 hours, it must be driven slowly.
24. Reinstall all remaining removed parts.

NOTE: Advise the customer not to do the following things for 2 to 3 days:

- **Slam the doors with all the windows rolled up.**
- **Twist the body excessively (such as when going in and out of driveways at an angle or driving over rough, uneven roads).**

QUARTER GLASS REPLACEMENT

2-DOOR

NOTE:

- **Put on gloves to protect your hands.**
- **Use seat covers to avoid damaging any surface.**

1. Remove these items:
   - Rear seat cushion (see **SEAT CUSHION**)
   - Rear shelf (see **TRIM REMOVAL/INSTALLATION - REAR SHELF AREA**)
   - Rear shelf extension (see **REAR SHELF EXTENSION - 2-DOOR**)
   - Rear side trim panel, as needed (see **2-DOOR**)
   - Front seat belt upper anchor (see step 7 in **FRONT SEAT BELT - 2-DOOR**)
   - Quarter pillar trim (see **QUARTER PILLAR TRIM - 2-DOOR**)
2. Apply protective tape along the inside and outside edges of the body, and along the edge of the headliner. Using an awl, make a hole through the adhesive from inside the vehicle. Push a piece of piano wire through the hole, and wrap each end around a piece of wood.
3. Remove the front seal (A) from the front edge of the quarter glass (B). If necessary, cut the front seal with a utility knife.

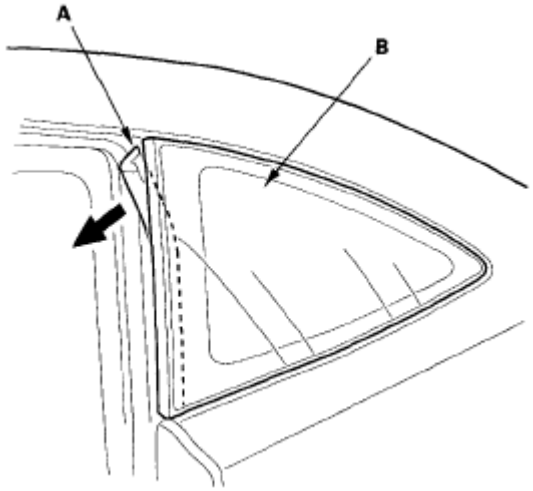

Fig. 54: Removing Front Seal From Front Edge Of Quarter Glass

4. Carefully cut through the adhesive (A) at the rear corner portion of the quarter glass (B) with a utility knife. With a helper on the outside, pull the piano wire (C) back and forth in a sawing motion. Hold the piano wire as close to the quarter glass as possible to prevent damage to the body, and carefully cut through the adhesive around the entire quarter glass:
   - If the quarter glass is to be reinstalled, take care not to damage the molding (D).
   - If the molding is damaged, replace the quarter glass, molding, and clips (E) as an assembly.
   - If any of the clips are broken, the quarter glass can be reinstalled using butyl tape (refer to step 11).

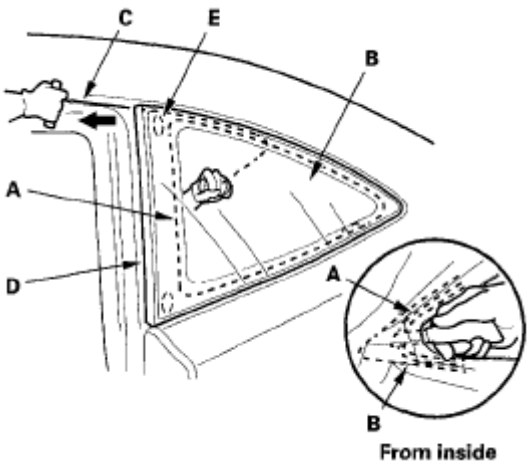

Fig. 55: Pulling Piano Wire Back And Forth In Sawing Motion

Cutting positions

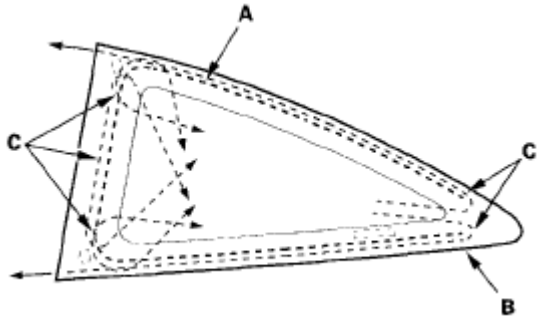

Fig. 56: Identifying Cutting Positions

5. Carefully remove the quarter glass.
6. With a putty knife, scrape the old adhesive smooth to a thickness of about 2 mm (0.08 in.) on the bonding surface around the entire quarter glass opening flange:
    - Do not scrape down to the painted surface of the body; damaged paint will interfere with proper bonding.
    - Remove the clips and fastener from the body.
7. Clean the body bonding surface with a sponge dampened in alcohol. After cleaning, keep oil, grease, and water from getting on the surface.
8. If the old quarter glass will be reinstalled, use a putty knife to scrape off the old adhesive, any broken clips, and the fastener from the glass. Clean the inside face and the edge of the glass with alcohol where new adhesive will be applied. Make sure the bonding surface is kept free of water, oil, and grease.
9. Set the quarter glass in the opening. Make an alignment mark (A) to the quarter glass with a grease pencil as shown where the clip will be installed.

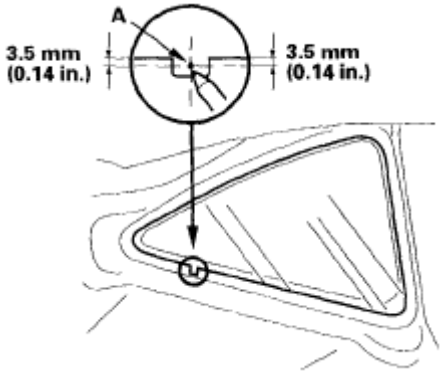

Fig. 57: Making Alignment Mark To Quarter Glass (With Specifications)

10. Remove the quarter glass.
11. If the old quarter glass will be reinstalled (and either clip is broken off the molding), apply a light coat of primer, then apply butyl tape (A) to the molding (B) as shown. Attach the clip (C) with adhesive tape to the inside face of the quarter glass (D):
    - Be sure the clip line up with alignment mark (E) you made in step 9.
    - Be careful not to touch the quarter glass where adhesive will be applied.
    - Do not peel the separator off the butyl tape.

    Clip adhesive tape:

    Thickness 0.4 mm (0.016 in.)
    Width 7.5 mm (0.3 in.)

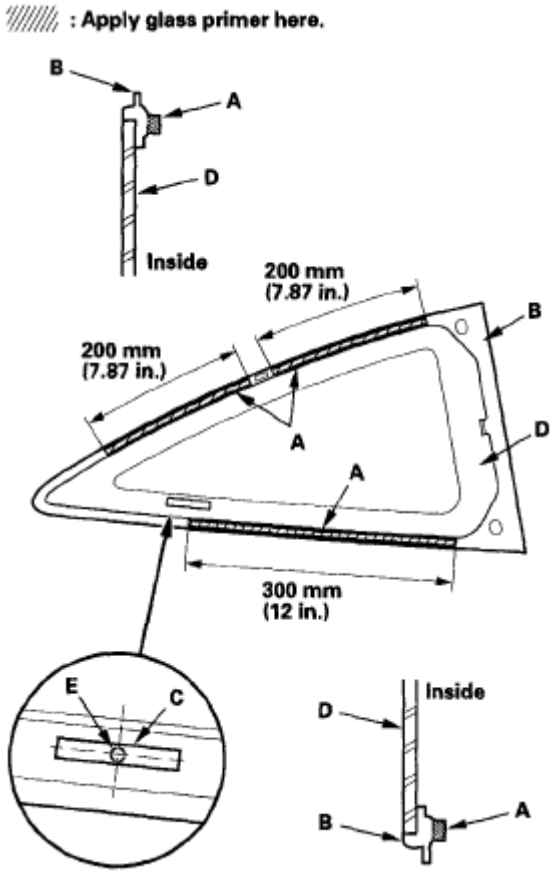

Fig. 58: Applying Butyl Tape To Molding (With Specifications)

12. Attach the front seal (A) with adhesive tape (B) onto the molding (C).

Seal adhesive tape:

Thickness 0.8 mm (0.031 in.)
Width 7 mm (0.28 in.)

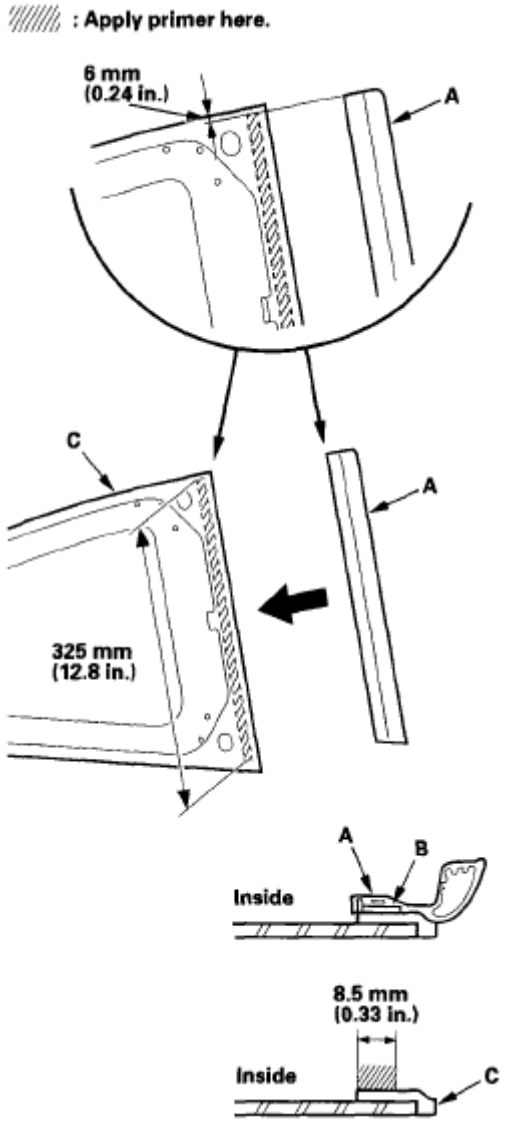

Fig. 59: Attaching Front Seal With Adhesive Tape Onto Molding (With Specifications)

13. If the old quarter glass will be reinstalled (and either clip is broken off the molding), seal the body holes with pieces of urethane tape (A). Then set the quarter glass upright in the opening, and make alignment marks (B) across the quarter glass and body with a grease pencil at the three points shown. Be careful not to touch the quarter glass where adhesive will be applied.

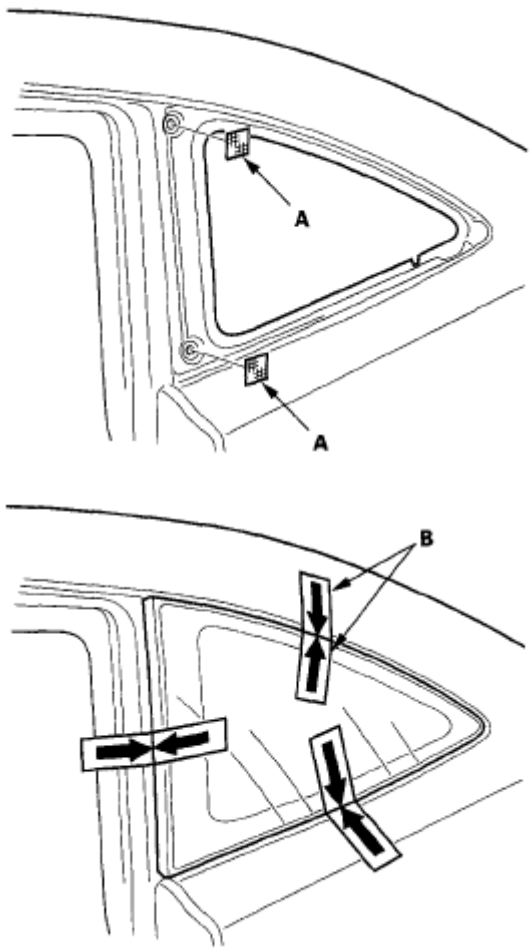

Fig. 60: Sealing Body Holes With Pieces Of Urethane Tape

14. Remove the quarter glass.
15. With a sponge, apply a light coat of glass primer along the edge of the front seal (A) and molding (B) as shown, then lightly wipe it off with gauze or cheesecloth:
    - With the printed dots (C) on the quarter glass (D) as a guide, apply the glass primer to the front portion of the quarter glass.
    - Do not apply body primer to the quarter glass, and do not get body and glass primer sponges mixed up.
    - Never touch the primed surfaces with your hands. If you do, the adhesive may not bond to the quarter glass properly, causing a leak after the quarter glass is installed.
    - Keep water, dust, and abrasive materials away from primed surfaces.

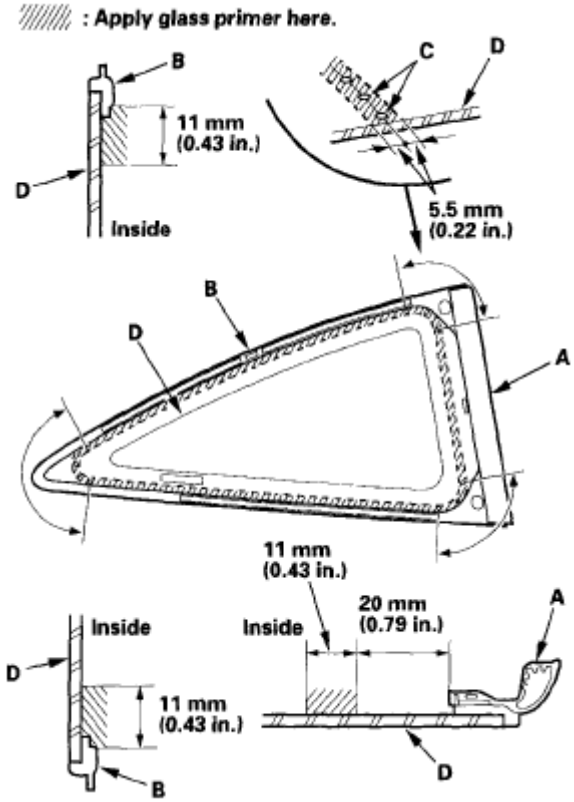

Fig. 61: Applying Glass Primer Along Edge Of Front Seal And Molding (With Specifications)

16. With a sponge, carefully apply a light coat of body primer to any exposed paint or metal around the flange where new adhesive will be applied. Let the primer dry for at least 10 minutes:
    - Do not apply body primer to any remaining original adhesive on the flange.
    - Be careful not to mix up the body and glass primer sponges.
    - Never touch the primed surfaces with your hands.

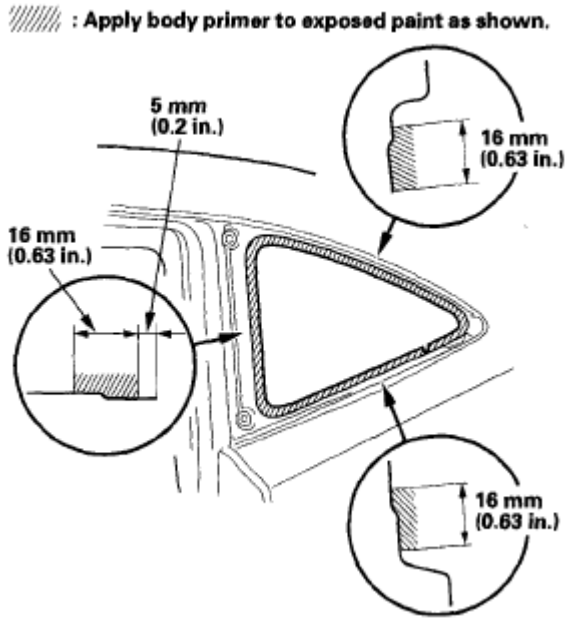

Fig. 62: Applying Body Primer To Any Exposed Paint (With Specifications)

17. Cut a "V" in the end of the nozzle (A) on the adhesive cartridge as shown.

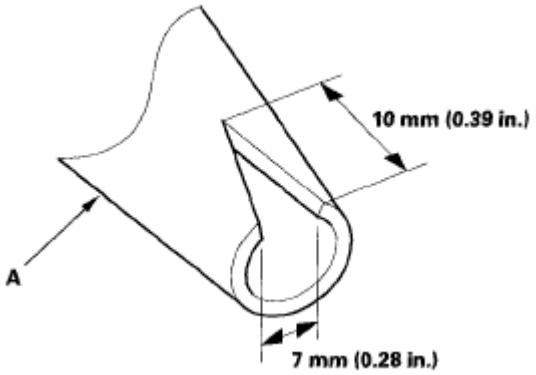

Fig. 63: Cutting "V" In End Of Nozzle (With Specifications)

18. Pack adhesive into the cartridge without air pockets to ensure continuous delivery. Put the cartridge in a caulking gun, and run a bead of adhesive (A) around the edge of the front seal (B) and molding (C) as shown. With the glass primer (D) you applied in step 15 on the quarter glass (E) as a guide, apply the adhesive to the upper and lower corner portions of the quarter glass. Apply the adhesive within 30 minutes after applying the glass primer. Make a slightly thicker bead at each corner.

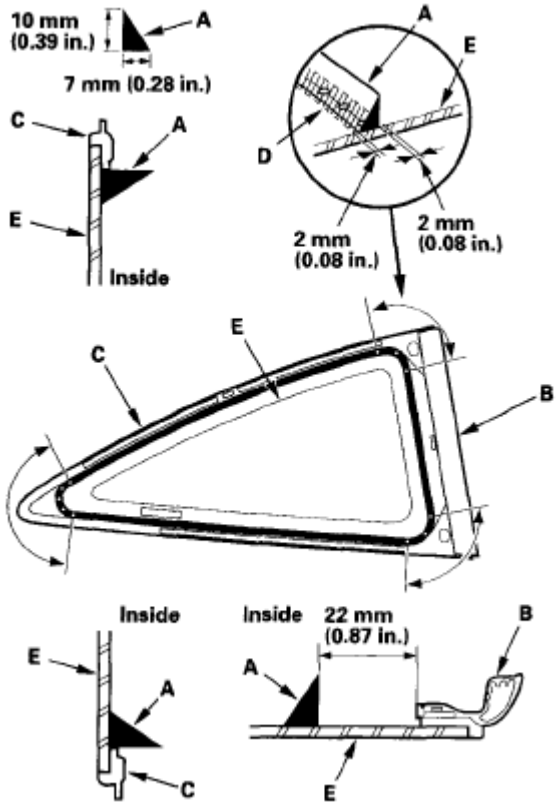

Fig. 64: Running Bead Of Adhesive Around Edge Of Front Seal And Molding (With Specifications)

19. Using suction cups (A) to hold the quarter glass (B) over the opening, align the clips or the alignment

marks (C) made in step 13, and set it down on the adhesive. Lightly push on the quarter glass until its edges are fully seated on the adhesive all the way around.

NOTE: Do not open or close any of the doors for about an hour until the adhesive is dry.

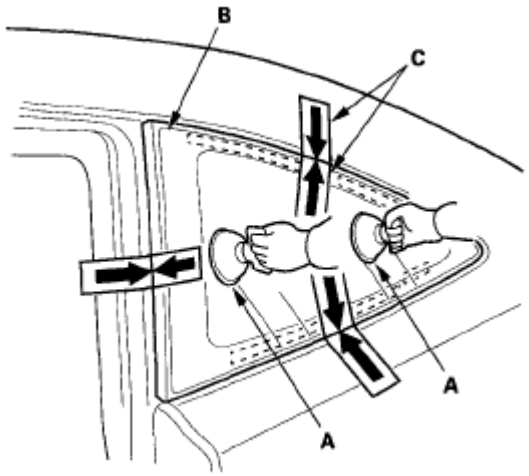

Fig. 65: Holding Quarter Glass Using Suction Cups

20. Scrape or wipe the excess adhesive off with a putty knife or towel. To remove adhesive from a painted surface or the quarter glass, wipe with a soft shop towel dampened with alcohol.
21. After the adhesive has dried, spray water over the quarter glass window and check for leaks. Mark the leaking areas, let the quarter glass window dry, then seal with sealant. Let the vehicle stand for at least 4 hours after quarter glass window installation. If the vehicle has to be used within the first 4 hours, it must be driven slowly.
22. Reinstall all remaining removed parts.

NOTE: Advise the customer not to do the following things for 2 to 3 days:

- **Slam the doors with all the windows rolled up.**
- **Twist the body excessively (such as when going in and out of driveways at an angle or driving over rough, uneven roads).**

SYSTEM DESCRIPTION

AUTO REVERSE OPERATION (EXCEPT DX AND DX-G MODELS)

The system is composed of the power window master switch and the driver's power window motor.

The driver's power window motor incorporates a pulser which generates pulses during the motor's operation and sends the pulses to the driver's power window control unit. As soon as the power window control unit detects no pulses from the pulser, the driver's power window control unit makes the power window motor

stop and reverse. If the window is more than halfway closed, it will reverse to half open position. If the window is less than halfway closed, it will stop and reverse about 2 inches. This is to prevent pinching an obstacle during auto-up operation. The auto reverse operation is not active when the switch is held in the up position.

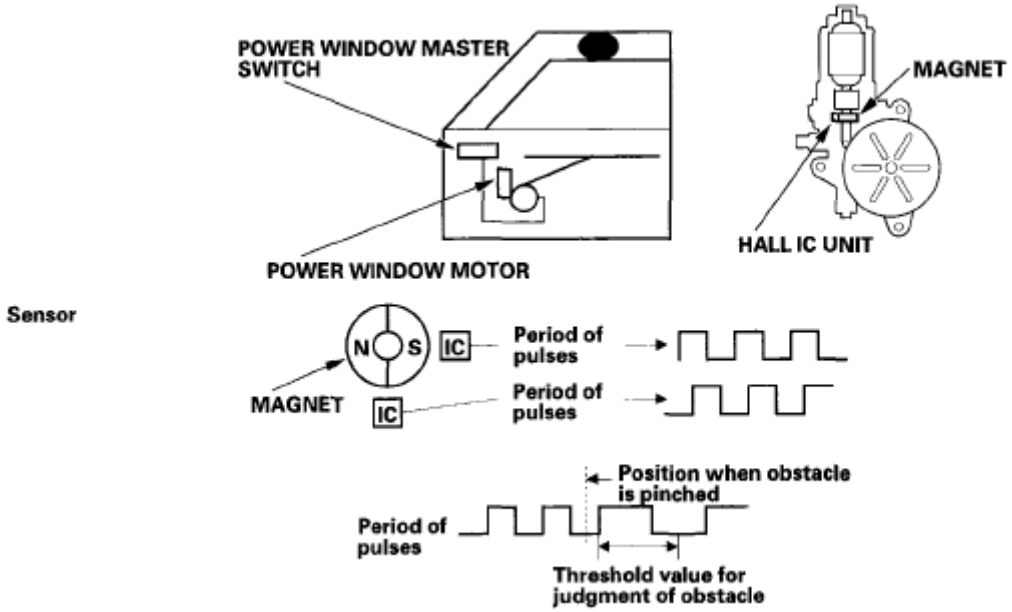

Fig. 3: Auto Reverse Operation System Description (Except DX And DX-G Models)

MASTER SWITCH INPUT TEST

4-DOOR WITH AUTO UP/AUTO DOWN FUNCTION

NOTE: **The power window control unit is built into the power window master switch, and it only controls the driver's window operations.**

1. Remove the master switch (A) (see **MASTER SWITCH TEST/REPLACEMENT**).

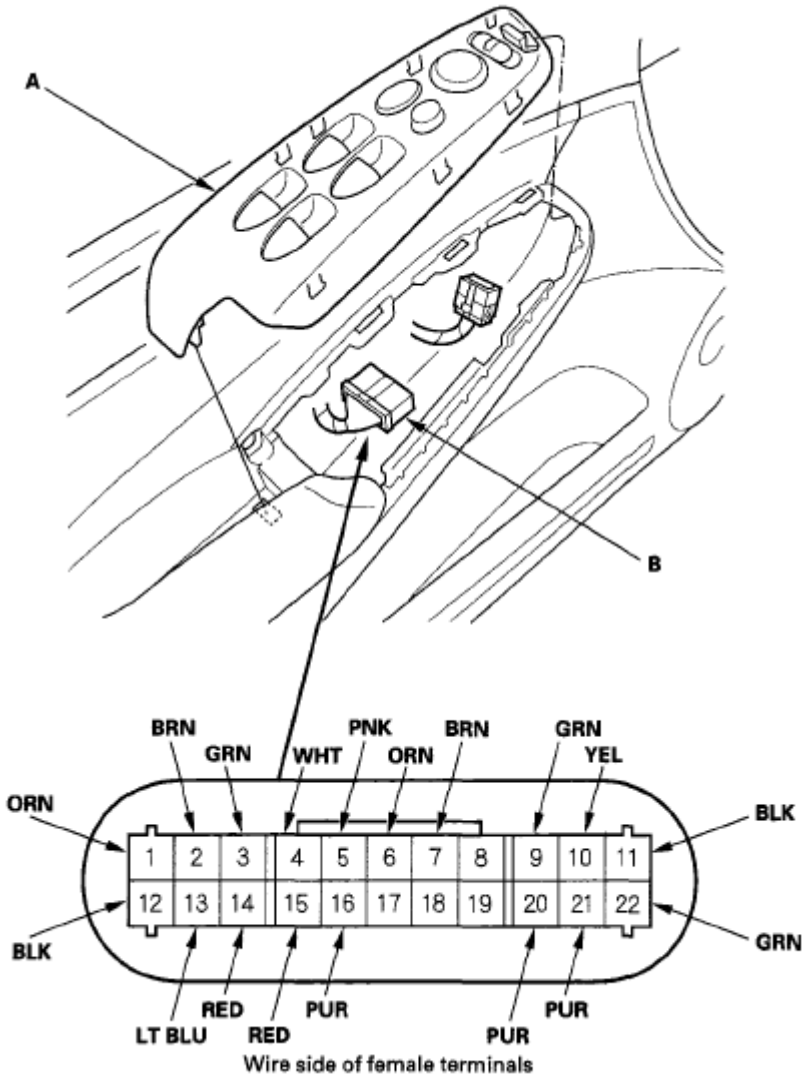

Fig. 10: Removing Master Switch
Courtesy of HONDA

2. Disconnect the 22P connector (B) from the master switch.
3. Inspect the connector and socket terminals to be sure they are all making good contact.
   - If the terminals are bent, loose or corroded, repair them as necessary, and recheck the system.
   - If the terminals look OK, make the following input tests at the connector.
     - If a test indicates a problem, find and correct the cause, then recheck the system.
     - If all the input tests prove OK, the power window master switch must be faulty; replace it.
4. With the master switch still disconnected, make these input tests at the connector.
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, go to step 5.

MASTER SWITCH INPUT TEST (DISCONNECTED)

Cavity	Wire	Test condition	Test: Desired result	Possible cause if result is not obtained
9	GRN	Connect the No. 4 and the No. 9 terminals and No. 10 and No. 11 terminals momentarily with jumper wires	Check driver's power window motor operation: The window should go down.	• Faulty driver's power window motor • An open in the wire
10	YEL	Connect the No. 4 and the No. 10 terminals and No. 9 and No. 11 terminals momentarily with jumper wires	Check driver's power window motor operation: The window should go up.	
1	ORN	Connect the No. 3 and the No. 2 terminals and No. 1 and No. 12 terminals momentarily with jumper wires	Check front passenger's power window motor operation: The window should go down.	• Faulty front passenger's power window motor • Faulty front passenger's power window switch • An open in the wire
2	BRN	Connect the No. 3 and the No. 1 terminals and No. 2 and No. 12 terminals momentarily with jumper wires	Check front passenger's power window motor operation: The window should go down.	
13	LT BLU	Connect the No. 20 and the No. 14 terminals and No. 13 and No. 12 terminals momentarily with jumper wires	Check front passenger's power window motor operation: The window should go down.	• Faulty right rear power window motor • Faulty right rear power window switch • An open in the wire
14	RED	Connect the No. 20 and the No. 13 terminals and No. 14 and No. 12 terminals momentarily with jumper wires	Check right rear power window motor operation: The window should go down.	
21	PUR	Connect the No. 15 and the No. 21 terminals and No. 22 and No. 12 terminals momentarily with jumper wires	Check left rear power window motor operation: The window should go down.	• Faulty left rear power window motor • Faulty left rear power window switch • An open in the wire
22	GRN	Connect the No. 15 and the No. 22 terminals and No. 21 and No. 12 terminals momentarily with jumper wires	Check left rear power window motor operation: The window should go down.	

5. Reconnect the 22P connector to the power window master switch. Turn the ignition switch ON (II), and make these input tests at the connector.
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, the control unit must be faulty; replace the power window master switch.

MASTER SWITCH INPUT TEST (RECONNECTED)

Cavity	Wire	Test condition	Test: Desired result	Possible cause if result is not obtained
				• Blown No. 30 (20 A) fuse in the

				under-dash fuse/relay box • Faulty power window relay • Faulty MICU • An open in the wire
3	GRN	Ignition switch ON (II)	Check for voltage to ground: There should be battery voltage.	
4	WHT	Under all conditions	Check for voltage to ground: There should be battery voltage.	• Blown No. 26 (20 A) fuse in the under-hood fuse/relay box • An open in the wire
15 [20]	RED	Ignition switch ON (II)	Check for voltage to ground: There should be battery voltage.	• Blown No. 32 (20 A) fuse in the under-dash fuse/relay box • Faulty power window relay • Faulty MICU • An open in the wire
20 [15]	PUR	Ignition switch ON (II)	Check for voltage to ground: There should be battery voltage.	• Blown No. 33 (20 A) fuse in the under-dash fuse/relay box • Faulty power window relay • Faulty MICU • An open in the wire
7	BRN	Under all conditions	Check for voltage to ground: There should be less than 0.5 V.	• Poor ground (G503) • An open in the wire
11	BLK	Ignition switch ON (II), and driver's window moving up and down	Check for voltage to ground: There should be less than 0.5 V.	• Poor ground (G503) • An open in the wire
12	BLK	Ignition switch ON (II), main switch ON, and a passenger's window moving up and down	Check for voltage to ground: There should be less than 0.5 V.	• Poor ground (G503) • An open in the wire
				• Faulty power

16	PUR	Ignition switch ON (II)	Check for voltage to ground: There should be battery voltage.	window master switch • Short to ground in the wire
5	PNK	Ignition switch ON (II), and driver's power window switch moving up or down	Check for voltage between the No. 5 and No. 7 terminals: There should be 0 V-about 5 V -0 V-about 5 V repeatedly (a digital voltmeter should reads about 2.5 V while the window moves).	• Faulty power window master switch • Faulty driver's power window motor • An open in the wire • Short to ground in the wire
6	ORN	Ignition switch ON (II), and driver's power window switch moving up or down	Check for voltage between the No. 6 and No. 7 terminals: There should be 0 V-about 5 V -0 V- about 5 V repeatedly (a digital voltmeter should reads about 2.5 V while the window moves).	
[ ] : early production				

6. Reset the power window control unit (see **RESETTING THE POWER WINDOW CONTROL UNIT**).

2-DOOR WITH AUTO UP/AUTO DOWN FUNCTION

NOTE: The power window control unit is built into the power window master switch, and it only controls the driver's window operations.

1. Remove the door panel (see **DOOR PANEL REMOVAL/INSTALLATION**).
2. Disconnect the 16P connector (A) from the master switch (B).

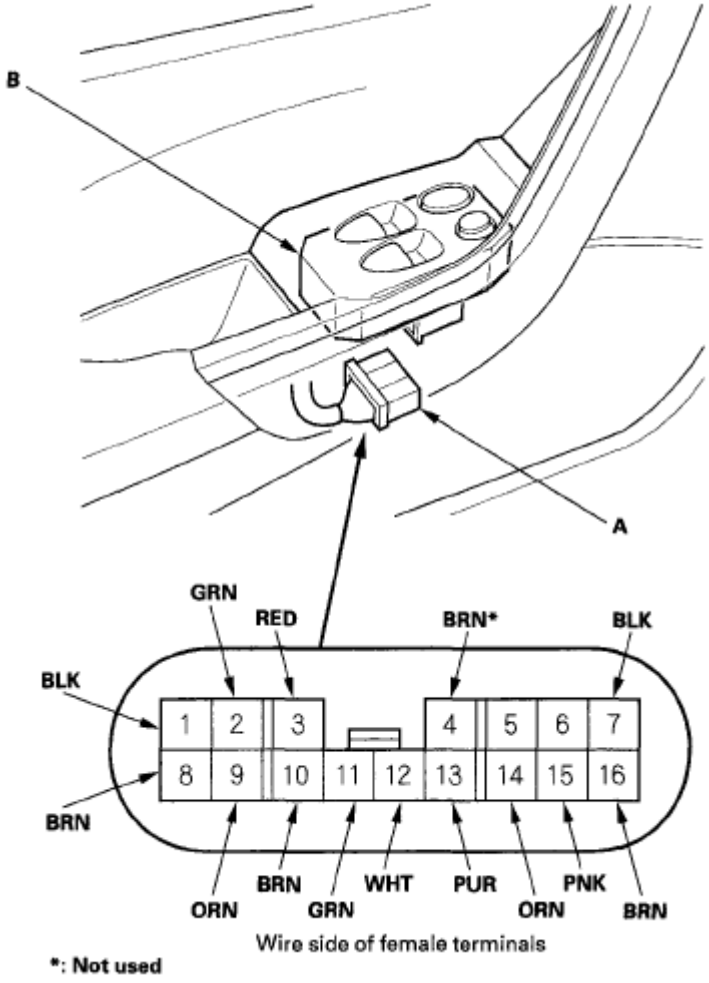

Fig. 11: Disconnecting 16P Connector
Courtesy of HONDA

3. Inspect the connector and socket terminals to be sure they are all making good contact.
   - If the terminals are bent, loose or corroded, repair them as necessary, and recheck the system.
   - If the terminals look OK, make the following input tests at the connector.
     - If a test indicates a problem, find and correct the cause, then recheck the system.
     - If all the input tests prove OK, the power window master switch must be faulty; replace it.
4. With the master switch still disconnected, make these input tests at the connector.
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, go to step 5.

MASTER SWITCH INPUT TEST (DISCONNECTED)

Cavity	Wire	Test condition	Test: Desired result	Possible cause if result is not obtained
2	GRN	Connect the No. 12 and the No. 2 terminals and No. 3 and No. 7 terminals momentarily with jumper wires.	Check driver's window motor operation: The window should go down.	• Faulty driver's power window motor

3	YEL	Connect the No. 12 and the No. 3 terminals and No. 2 and No. 7 terminals momentarily with jumper wires.	Check driver's window motor operation: The window should go up.	• An open in the wire
8	BRN	Connect the No. 12 and the No. 8 terminals and No. 9 and No. 1 terminals momentarily with jumper wires.	Check passenger's window motor operation: The window should go down.	• Faulty passenger's power window motor • Faulty passenger's power window switch • An open in the wire
9	ORN	Connect the No. 12 and the No. 9 terminals and No. 8 and No. 1 terminals momentarily with jumper wires.	Check passenger's window motor operation: The window should go down.	

5. Reconnect the 16P connector to the power window master switch. Turn the ignition switch ON (II), and make these input tests at the connector.
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, the control unit must be faulty; replace the power window master switch.

MASTER SWITCH INPUT TEST (RECONNECTED)

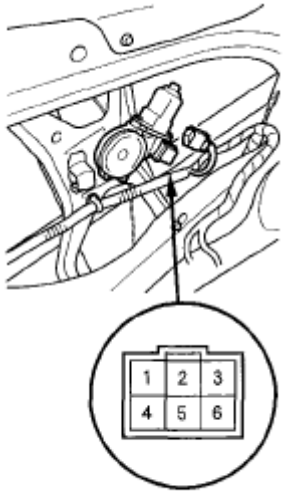
Cavity	Wire	Test condition	Test: Desired result	Possible cause H result is not obtained
10	BRN	Ignition switch ON (II)	Check for voltage to ground: There should be battery voltage.	• Blown No. 10 (7.5 A) fuse in the under-dash fuse/relay box • An open in the wire
11	GRN	Ignition switch ON (II)	Check for voltage to ground: There should be battery voltage.	• Blown No. 30 (20 A) fuse in the under-dash fuse/relay box • Faulty power window relay • Faulty MICU • An open in the wire
12	WHT	Under all conditions	Check for voltage to ground: There should be battery voltage.	• Blown No. 26 (20 A) fuse in the under-hood fuse/relay box • An open in the wire
1	BLK	Ignition switch ON (II), main switch ON, and passenger's	Check for voltage to ground: There should be less than 0.5 V.	• Poor ground (G503)

		window moving, up and down		• An open in the wire
7	BLK	Ignition switch ON (II), and driver's window moving up and down	Check for voltage to ground: There should be less than 0.5 V.	• Poor ground (G503) • An open in the wire
16	BRN	Under all conditions	Check for voltage to ground: There should be less than 0.5 V.	• Poor ground (G503) • An open in the wire
13	PUR	Ignition switch ON (II)	Check for voltage to ground: There should be battery voltage.	• Faulty power window master switch • Short to ground in the wire
14	ORN	Ignition switch ON (II), and driver's power window switch moving up or down	Check for voltage between the No. 14 and No. 16 terminals: There should be 0 V-about 5 V -0 V-about 5 V repeatedly (a digital voltmeter should reads about 2.5 V while the window moves).	• Faulty power window master switch • Faulty driver's power window motor • An open in the wire • Short to ground in the wire
15	PNK	Ignition switch ON (II), and driver's power window switch moving up or down	Check for voltage between the No. 15 and No. 16 terminals: There should be 0 V-about 5 V -0 V-about 5 V repeatedly (a digital voltmeter should reads about 2.5 V while the window moves).	

6. Reset the power window control unit (see **RESETTING THE POWER WINDOW CONTROL UNIT**).

DRIVER'S POWER WINDOW MOTOR TEST

1. Remove the door panel.
   - 4-door (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
   - 2-door (see **DOOR PANEL REMOVAL/INSTALLATION**).
2. Disconnect the 6P connector from the driver's power window motor.



Terminal side of male terminals

Fig. 12: Disconnecting 6P Connector
Courtesy of HONDA

Motor Test

3. Test the motor in each direction by connecting battery power and ground according to **Fig. 13** . When the motor stops running, disconnect one lead immediately.

Direction \ Terminal	1 [6]	4 [3]
UP	⊕	⊖
DOWN	⊖	⊕

[ ] : 2-door

Fig. 13: Testing Motor In Each Direction Table
Courtesy of HONDA

4. If the motor does not run or fails to run smoothly, replace it.

Pulser Test (With AUTO UP/AUTO DOWN)

5. Reconnect the 6P connector to the driver's power window motor.
6. Turn the ignition switch ON (II).
7. Check for voltage between the terminals.
   - There should be battery voltage between the No. 6 [No. 1] (+) and No. 5 [No. 2] (-) terminals.

     [ ] : 2-door

   - Connect an analog voltmeter between the No. 3 [No. 4] (+) and No. 5 [No. 2] (-) terminals, and run the window motor down or up. The voltmeter needle should move back and forth alternately (a digital voltmeter reads about 2.5 V).

     [ ] : 2-door

- Connect an analog voltmeter between the No. 2 [No. 5] (+) and No. 5 [No. 2] (-) terminals, and run the power window motor down or up. The voltmeter needle should move back and forth alternately (a digital voltmeter reads about 2.5 V).

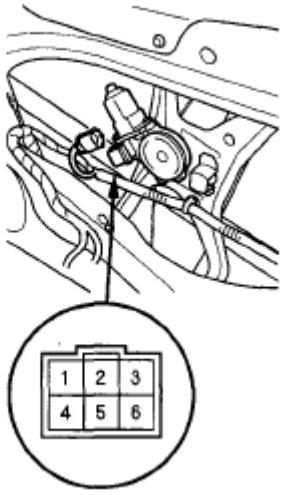
  [ ] : 2-door

8. If the voltage is not as specified, do the power window switch input test:
   - 4-door: terminals No. 5, 6,7, and 16 (see **4-DOOR WITH AUTO UP/AUTO DOWN FUNCTION**).
   - 2-door: terminals No. 13,14,15, and 16 (see **2-DOOR WITH AUTO UP/AUTO DOWN FUNCTION**).
9. If the switch is OK, replace the power window motor.
10. Reset the power window control unit (see **RESETTING THE POWER WINDOW CONTROL UNIT**).

PASSENGER'S POWER WINDOW MOTOR TEST

1. Remove the door panel.
   - 4-door (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
   - 2-door (see **DOOR PANEL REMOVAL/INSTALLATION**).
2. Disconnect the 6P connector from the power window motor.

Front passenger's



Rear (4-door)

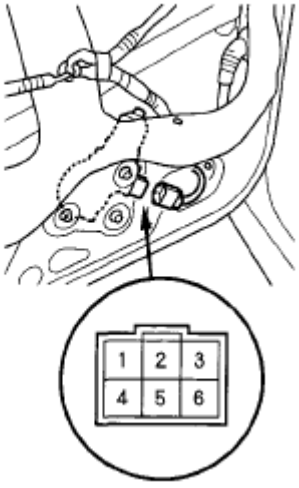


Fig. 14: Disconnecting 6P Connector
Courtesy of HONDA

3. Test the motor by connecting battery power and ground according to **Fig. 15** . When the motor stops running, disconnect one lead immediately.

Terminal / Direction	1 [6]	4 [3]
UP	⊕	⊖
DOWN	⊖	⊕

[ ] : Left rear power window motor

Fig. 15: Testing Motor Connecting Battery Power And Ground Table

4. If the motor does not run or fails to run smoothly, replace it.

MASTER SWITCH TEST/REPLACEMENT

4-DOOR

1. Carefully pry out the master switch (A).

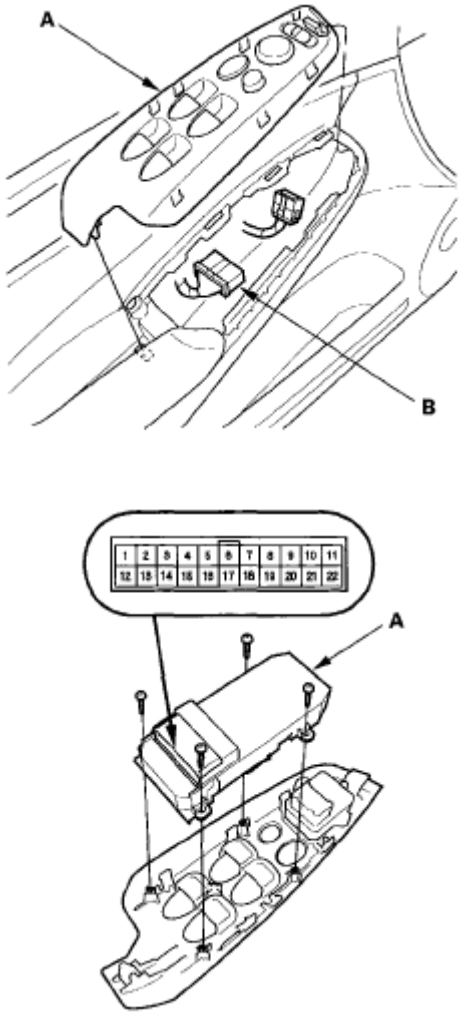

Fig. 16: Prying Master Switch
Courtesy of HONDA

2. Disconnect the 22P connector (B) from the power window master switch.
3. Check for continuity between the terminals in each switch position according to **Fig. 17**, **Fig. 18**, **Fig. 19** and **Fig. 20** .

Driver's Switch (With AUTO UP/AUTO DOWN)

The driver's switch is combined with the control unit, so you cannot isolate the switch to test it. Instead, run the master switch input test procedures (see **4-DOOR WITH AUTO UP/AUTO DOWN FUNCTION**). If the tests are normal, the driver's switch must be faulty. Replace the switch.

Driver's Switch (Without AUTO UP/AUTO DOWN)

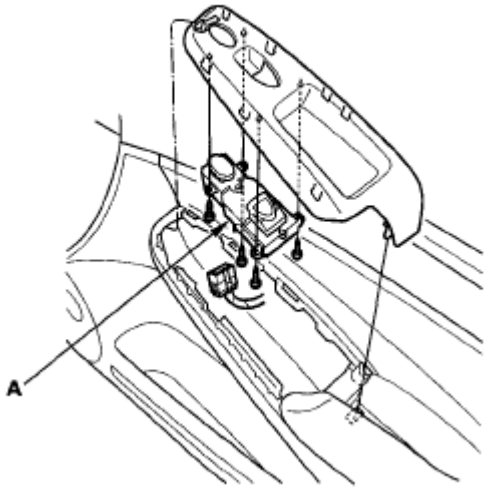
3. If the continuity is not as specified, remove the screws and replace the switch.
4. Install the switch in the reverse order of removal.

PASSENGER'S POWER WINDOW SWITCH TEST/REPLACEMENT

1. 4-door: Remove the passenger's switch (A).

   2-door: Remove the passenger's switch (see **DOOR PANEL REMOVAL/INSTALLATION**).

Front passenger's



Rear

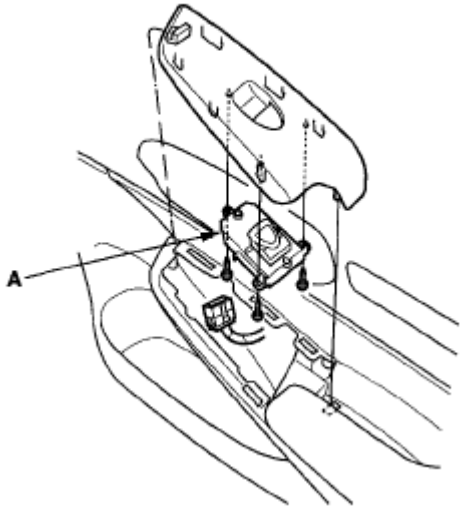


Fig. 24: Removing Passenger's Switch
Courtesy of HONDA

NOTE: 4-door front passenger's door shown.

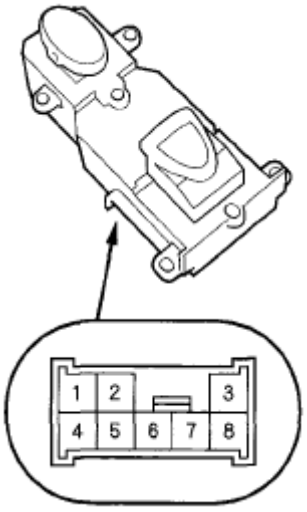

Fig. 25: Identifying 4-Door Front Passenger Door Connector
Courtesy of HONDA

2. Check for continuity between the terminals in each switch position according to **Fig. 26** .

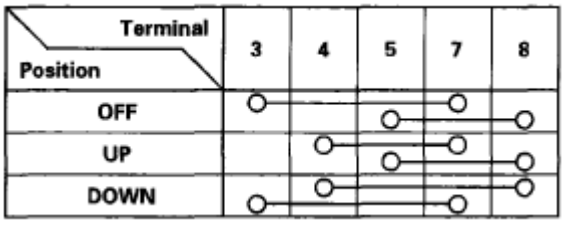

Fig. 26: Checking Continuity Between Passenger's Power Window Switch Table
Courtesy of HONDA

3. Connect battery power to the No. 4 terminal and ground the No. 7 (or No. 8) terminal. The switch light should come on.
4. If the continuity or switch light tests is not as specified, remove the screws and replace the switch.
5. Install the switch in the reverse order of removal.

RESETTING THE POWER WINDOW CONTROL UNIT

WITH AUTO UP/AUTO DOWN FUNCTION

Resetting the driver's power window is required when any of the following have occurred:

- Power window regulator replacement or repair
- Power window motor replacement or repair
- Driver's door glass replacement or repair
- Window run channel replacement or repair
- Power is removed from the power window control unit while the power window timer is ON.

1. Turn the ignition switch ON (II).

2. Move the driver's window all the way down by using the driver's window DOWN switch.
3. Open the driver's door.

NOTE: Steps 4 - 7 must be done within 5 seconds of each other.

4. Turn the ignition switch OFF.
5. Push and hold the driver's window DOWN switch.
6. Turn the ignition switch ON (II).
7. Release the driver's window DOWN switch.
8. Repeat step 4 - 7 three more times.
9. Wait 1 second.
10. Check if the AUTO UP and AUTO DOWN functions still work. If they do, the auto function has not been cleared; go back to step 1. If they do not, go to step 11.
11. Move the driver's window all the way down by using the driver's window DOWN switch.
12. Pull up and hold the driver's window UP switch until the window reaches the fully closed position, then continue to hold the switch for 1 second.
13. Confirm that the power window control unit is reset by using the driver's window AUTO UP and AUTO DOWN functions.

    If the window still does not work in AUTO, repeat the procedure several times, paying close attention to the 5 second time limit between steps. If it still does not work, refer to **MASTER SWITCH INPUT TEST** :

    - 4-door (see **4-DOOR WITH AUTO UP/AUTO DOWN FUNCTION**)
    - 2-door (see **2-DOOR WITH AUTO UP/AUTO DOWN FUNCTION**)

DTC TROUBLESHOOTING

DTC B1077: WINDSHIELD WIPER (AS) SIGNAL ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.

2. Turn the ignition switch OFF, and then back ON (II).
3. Turn the wiper switch to LOW or HIGH for at least 15 seconds, then turn the switch OFF.

   Does the windshield wiper motor run normally?

   YES - Go to step 4.

   NO - Go to step 12.

4. Check for DTCs with the HDS.

   Is DTC B1077 indicated?

   YES - Go to step 5.

   NO - Intermittent failure. The windshield wiper system is OK at this time. Check for loose or poor connections.

5. Turn the ignition switch OFF.
6. Do the wiper motor test (see **WIPER/WASHER SWITCH TEST**).

   Does the wiper motor run normally?

   YES - Go to step 7.

   NO - Replace the windshield wiper motor and recheck.

7. Disconnect the under-dash fuse/relay box connector F (34P) and windshield wiper motor 5P connector.
8. Check for continuity between the No. 5 terminal of the windshield wiper motor 5P connector and No. 32 terminal of the under-dash fuse/relay box connector F (34P).

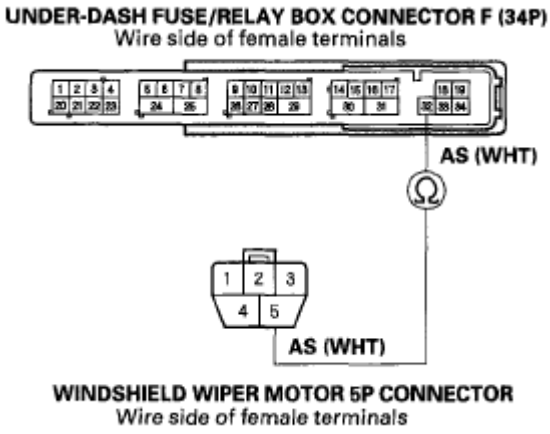

Fig. 4: Checking Continuity Between No. 5 Terminal Of Windshield Wiper Motor 5P Connector And No. 32 Terminal Of Under-Dash Fuse/Relay Box Connector F (34P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 9.

NO - Repair an open in the WHT wire.

9. Check for continuity between the No. 5 terminal of the windshield wiper motor 5P connector and body ground.

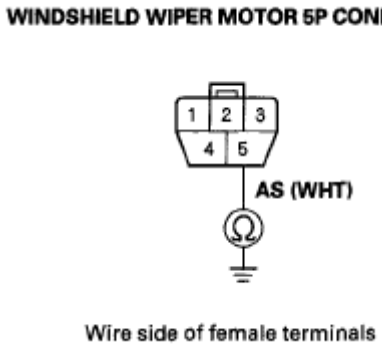

Fig. 5: Checking Continuity Between No. 5 Terminal Of Windshield Wiper Motor 5P Connector And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short in the WHT wire.

NO - Go to step 10.

10. Turn the ignition switch ON (II).
11. Check for voltage between the No. 5 terminal of the windshield wiper motor 5P connector and body ground.

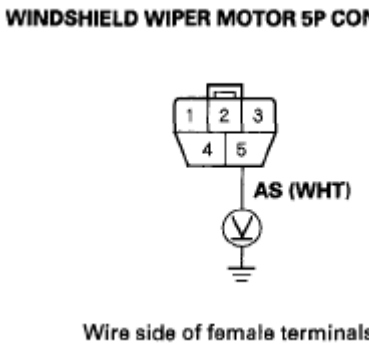

Fig. 6: Checking Voltage Between No. 5 Terminal Of Windshield Wiper Motor 5P Connector And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there voltage?

YES - Repair a short to power in the WHT wire.

NO - Faulty MICU; replace the under-dash fuse/relay box.

12. Turn the ignition switch OFF.
13. Check the No. 38 (30 A) fuse in the under-dash fuse/relay box.

    Is the fuse OK?

    YES - Go to step 14.

    NO - Replace the fuse and recheck the system.

14. Do the wiper motor test (see **WIPER/WASHER SWITCH TEST**).

    Does the wiper motor run normally?

    YES - Go to step 15.

    NO - Replace the windshield wiper motor and recheck.

15. Reconnect the windshield wiper motor 5P connector.
16. Check the voltage between the No. 18 (LO) and No. 19 (HI) terminals of the under-dash fuse/relay box connector F (34P) and body ground with the wiper switch in the corresponding position individually.

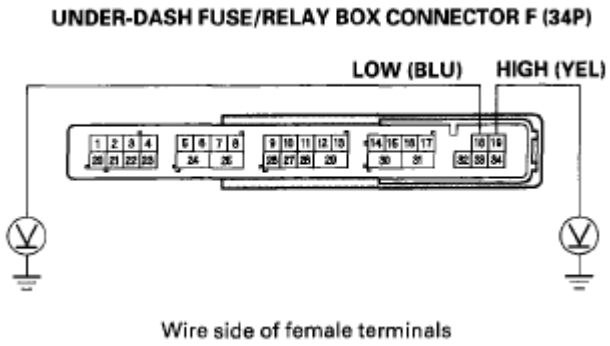

Fig. 7: Checking Voltage Between No. 18 (LO) And No. 19 (HI) Terminals Of Under-Dash Fuse/Relay Box Connector F (34P) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 17.

NO - Faulty MICU; replace the under-dash fuse/relay box.

17. Check the voltage between the No. 2 terminal of the windshield wiper motor 5P connector and body ground.

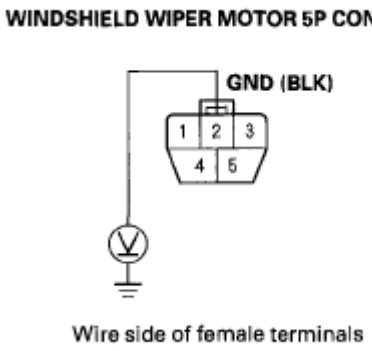

Fig. 8: Checking Voltage Between No. 2 Terminal Of Windshield Wiper Motor 5P Connector And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 1 V?

YES - Repair an open in the BLU (LO) or YEL (HI) wire.

NO - Repair an open in the BLK wire or poor ground (G201).

MICU INPUT TEST

1. Before troubleshooting the wiper/washer system, troubleshoot the B-CAN System Diagnosis Test Mode A (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**), and check the No. 10 (7.5 A) and No. 38 (30 A) fuses in the under-dash fuse/relay box.
2. Disconnect the under-dash fuse/relay box connectors E, F, S, and T.

NOTE: All connector views are shown from wire side of female terminals.

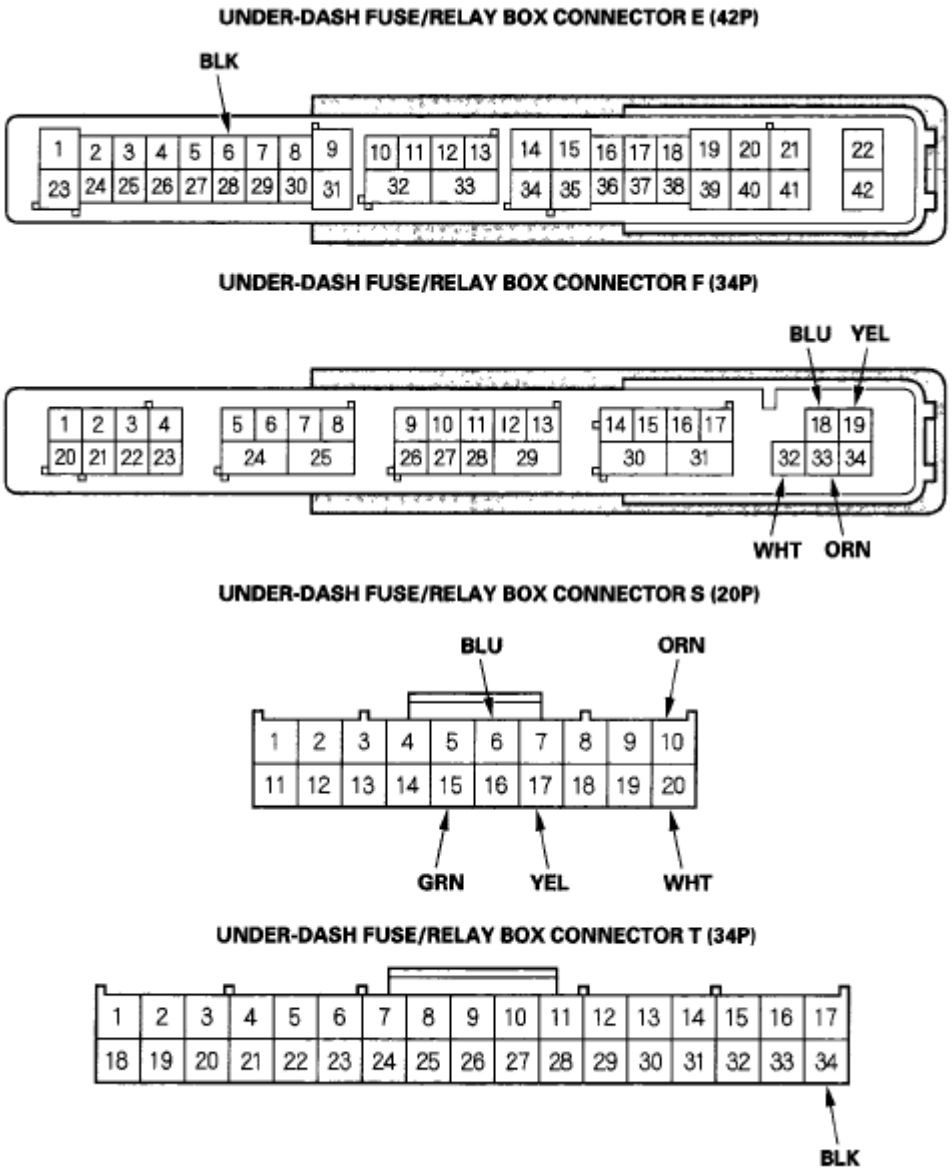

Fig. 9: Identifying Under-Dash Fuse/Relay Box Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Inspect the connector and socket terminals to be sure they are all making good contact.
   - If the terminals are bent, loose or corroded, repair them as necessary and recheck the system.
   - If the terminals look OK, go to step 4.
4. With the connectors still disconnected, make these input tests at the appropriate connector.
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, go to step 5.

MICU INPUT TEST (CONNECTORS DISCONNECTED)

Cavity	Wire	Test condition	Test: Desired result	Possible cause if result is not obtained
			Connect battery power to the F18	• Poor ground (G201)

F18	BLU	Under all conditions	terminal: The wiper motor should run at low speed.	• Faulty windshield wiper motor • An open in the wire
F19	YEL	Under all conditions	Connect battery power to the F19 terminal: The wiper motor should run at high speed.	• Poor ground (G201) • Faulty windshield wiper motor • An open in the wire
F32	WHT	Under all conditions (disconnect the wiper motor 5P connector)	Check for continuity between the F32 terminal and wiper motor 5P connector No. 5 terminal: There should be continuity.	An open in the wire
F33	ORN	Under all conditions	Connect battery power to the F33 terminal: The windshield washer motor should run.	• Poor ground (G201) • Faulty windshield washer motor • An open in the wire
S6(1)	BLU	Wiper/washer switch (intermittent dwell timer) turned	Check resistance between S6 and S4 terminals: There resistance should vary from about 0 to 1 kohms.	• Faulty wiper/washer switch • An open in the wire • Short to ground in the wire
(1) USA EX model and Canada models				

5. Reconnect the connectors to the under-dash fuse/relay box, and make these input tests at the connectors.
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, the MICU must be faulty; replace the under-dash fuse/relay box.

MICU INPUT TEST (CONNECTORS RECONNECTED)

Cavity	Wire	Test condition	Test: Desired result	Possible cause if result is not obtained
E6	BLK	Under all conditions	Check for voltage to ground: There should be less than 0.5 V.	• Poor ground (G602) • An open in the wire
T34	BLK	Under all conditions	Check for voltage to ground: There should be less than 0.5 V.	• Poor ground (G501) • An open in the

				wire
S10	ORN	Ignition switch ON (II), wiper/washer switch (INT) ON	Check for voltage between S10 and S4 terminals, and S20 and S4 terminals: There should be less than 1 V.	• Faulty wiper/washer switch • An open in the wire
		Ignition switch ON (II), wiper/washer switch OFF	Check for voltage between S10 and S4 terminals, and S20 and S4 terminals: There should be 5 V or more.	• Faulty wiper/washer switch • Short to ground in the wire
S15	GRN	Ignition switch ON (II), wiper/washer switch (MIST) ON	Check for voltage between S15 and S4 terminals: There should be less than 1 V.	• Faulty wiper/washer switch • An open in the wire in the wire
		Ignition switch ON (II), wiper/washer switch (MIST) OFF	Check for voltage between S15 and S4 terminals: There should be 5 V or more.	• Faulty wiper/washer switch • Short to ground in the wire
S17	YEL	Ignition switch ON (II), washer switch ON	Check for voltage between S17 and S4 terminals: There should be less than 1 V.	• Faulty wiper/washer switch • An open in the wire
		Ignition switch ON (II), washer switch OFF	Check for voltage between S17 and S4 terminals: There should be 5 V or more.	• Faulty wiper/washer switch • Short to ground in the wire
S20	WHT	Ignition switch ON (II), wiper/washer switch (LOW) ON	Check for voltage between S20 and S4 terminals: There should be less than 1 V.	• Faulty wiper/washer switch • An open in the wire
		Ignition switch ON (II), wiper/washer switch OFF	Check for voltage between S20 and S4 terminals: There should be 5 V or more.	• Faulty wiper/washer switch • Short to ground in the wire
		Ignition switch ON (II), wiper/washer switch (HIGH) ON	Check for voltage between S20 and S4 terminals: There should be less than 1 V.	• Faulty wiper/washer switch • An open in the

				wire
	WHT	Ignition switch ON (II), wiper/washer switch OFF	Check for voltage between S20 and S4 terminals: There should be 5 V or more.	• Faulty wiper/washer switch • Short to ground in the wire

WIPER/WASHER SWITCH TEST

1. Remove the wiper/washer switch (see **WIPER/WASHER SWITCH REPLACEMENT**).
2. Disconnect the dashboard wire harness 8P connector (A) from the wiper/washer switch (B).

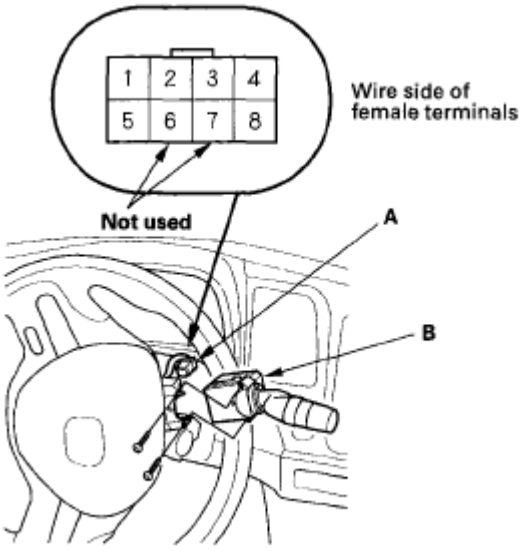

Fig. 10: Disconnecting Dashboard Wire Harness 8P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check for continuity between the terminals in each switch position according to **Fig. 11** .

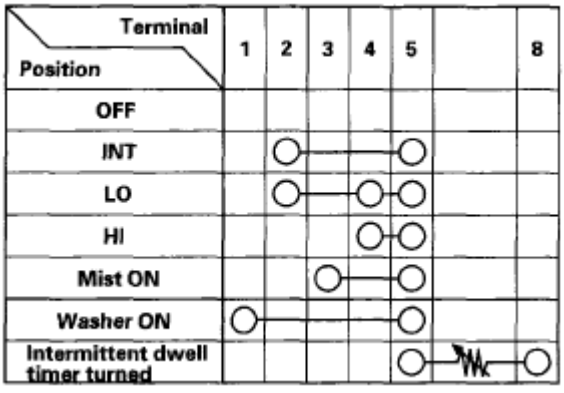

Fig. 11: Checking Continuity Between Wiper/Washer Switch Terminals Table
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the continuity is not as specified, replace the switch.

WIPER MOTOR TEST

1. Remove the wiper arms.
   - 4-door (see **4-DOOR**)
   - 2-door (see **2-DOOR**)

   NOTE: Carefully remove the wiper arms so that they do not touch the hood.

2. Remove the hood seal and cowl cover.
3. Disconnect the 5P connector (A) from the wiper motor (B).

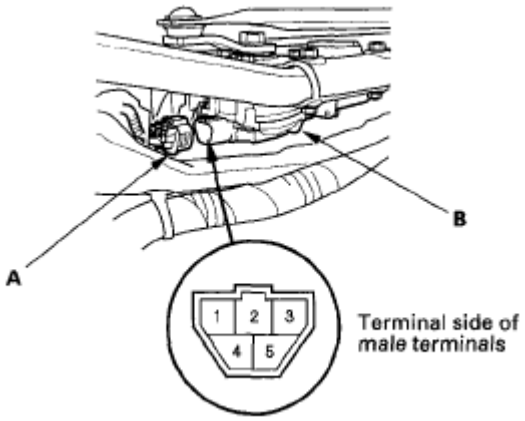

Fig. 12: Disconnecting 5P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Test the motor by connecting battery power to the No. 1 terminal and ground to the No. 2 terminal of the wiper motor 5P connector.

   The motor should run at low speed. If the motor does not run or fails to run smoothly, replace the motor.

5. Test the motor by connecting battery power to the No. 4 terminal and ground to the No. 2 terminal of the wiper motor 5P connector.

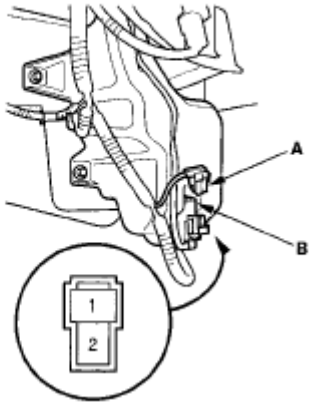
   The motor should run at high speed. If the motor does not run, or fails to run smoothly, replace the motor.

6. Connect an analog ohmmeter to the No. 5 and No. 2 terminals, and run the motor at low or high speed. The needle of the ohmmeter should pulse. If it dose not, replace the motor.

WASHER MOTOR TEST

1. Remove the right inner fender.
   - 2-door (see **FRONT INNER FENDER REPLACEMENT**)
   - 4-door (see **4-DOOR**)
2. Disconnect the 2P connector (A) from the washer motor (B).

4-door



2-door

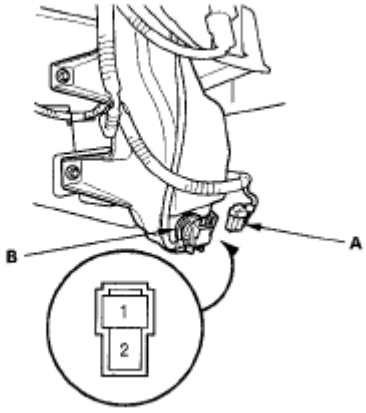


Fig. 13: Disconnecting 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Test the motor by connecting battery power to the No. 1 terminal and ground the No. 2 terminal of the washer motor. The motor should run.
    - If the motor does not run, or fails to run smoothly, replace it.
    - If the motor runs smoothly, but little or no washer fluid is pumped, check for a disconnected or blocked washer hose, or a clogged washer motor outlet.

WASHER FLUID LEVEL SWITCH TEST

CANADA MODELS

1. Remove the right inner fender.
    - 2-door (see **FRONT INNER FENDER REPLACEMENT**)
    - 4-door (see **4-DOOR**)
2. Disconnect the 2P connector (A) from the washer fluid level switch (B).

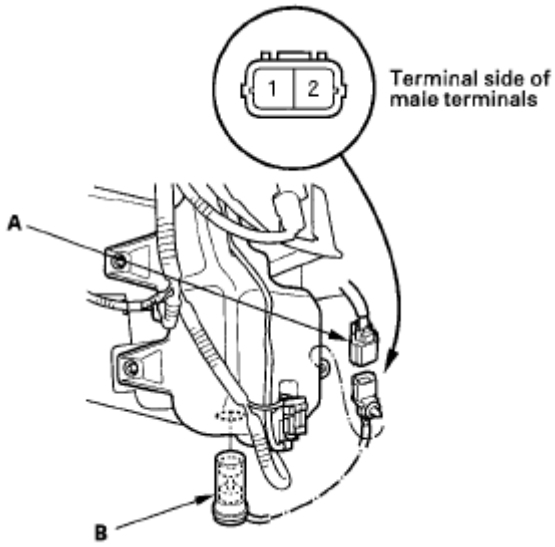

Fig. 14: Disconnecting 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the washer fluid level switch from the washer reservoir.

NOTE: Fluid may flow out of the opening.

4. Check for continuity between the No. 1 and No. 2 terminals in each float position.
   - There should be continuity when the float is down.
   - There should be no continuity when the float is up.
5. If the continuity is not as specified, replace the switch.

WIPER MOTOR REPLACEMENT

4-DOOR

1. Open the hood. Remove the caps, nuts (A), and the windshield wiper arms (B).

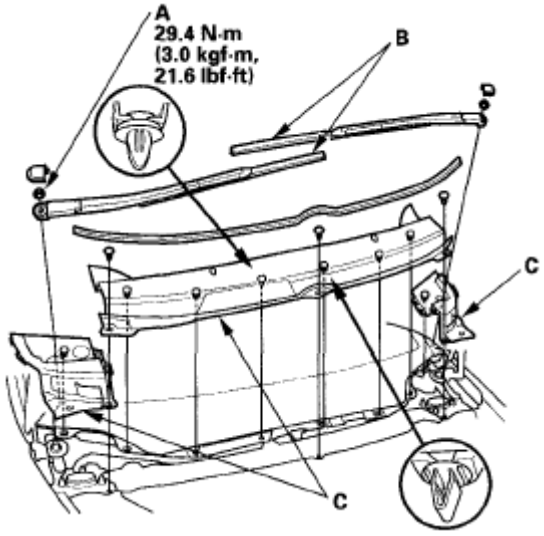

Fig. 15: Removing Windshield Wiper Arms (With Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the cowl covers (C).
3. Remove the bolts and the under-cowl panel (A).

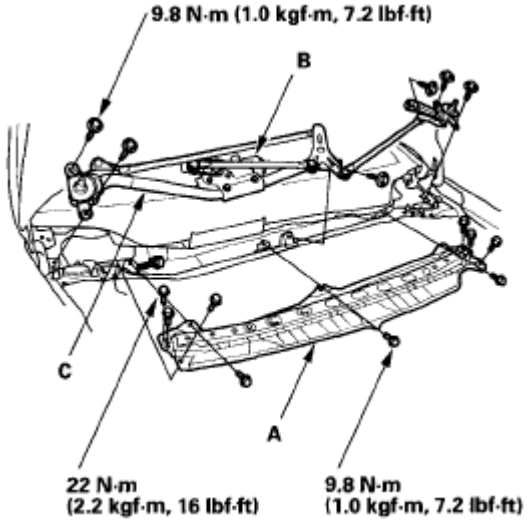

Fig. 16: Removing Under-Cowl Panel (With Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the 5P connector from the wiper motor (B), then remove the six bolts and wiper linkage assembly (C).
5. Make sure the mark (A) on the link (B) is aligned with the mark (C) on the windshield wiper linkage (D).

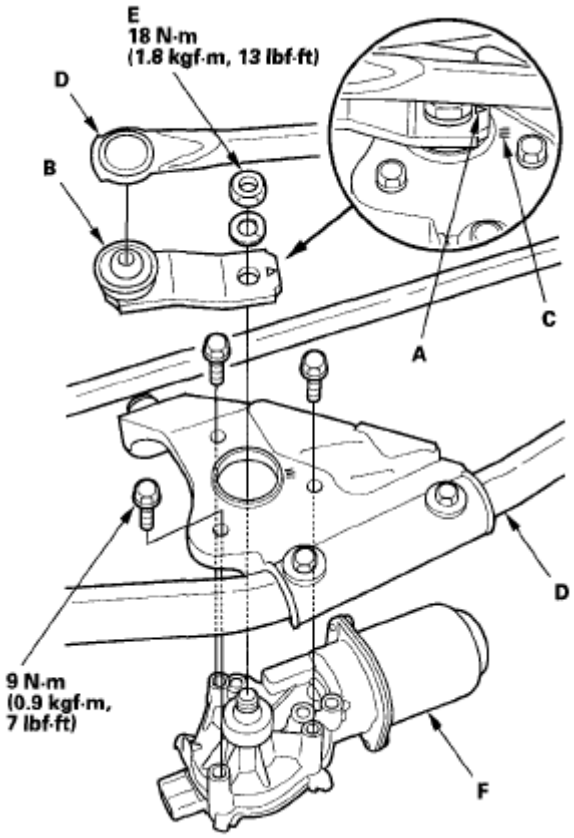

Fig. 17: Aligning Mark On Windshield Wiper Linkage (With Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the nut (E), and separate the link and windshield wiper linkage.
7. Remove the three bolts, and separate the windshield wiper linkage from the wiper motor (F).
8. Install in the reverse order of removal, and note these items:
   - Align the marks of the link and the linkage to install the linkage with the original adjustment.
   - Apply multipurpose grease to the moving parts.
   - Before installing the wiper arms, turn the wiper switch ON, then OFF to return the wiper shafts to the park position.
   - If necessary, replace any damaged clips.
9. After installation, adjust the wiper arms (see **WIPER ARM/NOZZLE ADJUSTMENT**).

2-DOOR

1. Open the hood. Remove the caps, nuts (A), and the windshield wiper arms (B).

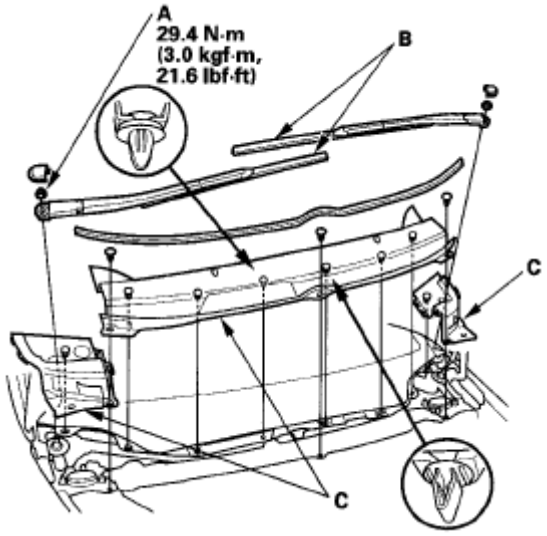

Fig. 18: Removing Windshield Arms (With Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the cowl covers (C).
3. Remove the bolts and the under-cowl panel (A).

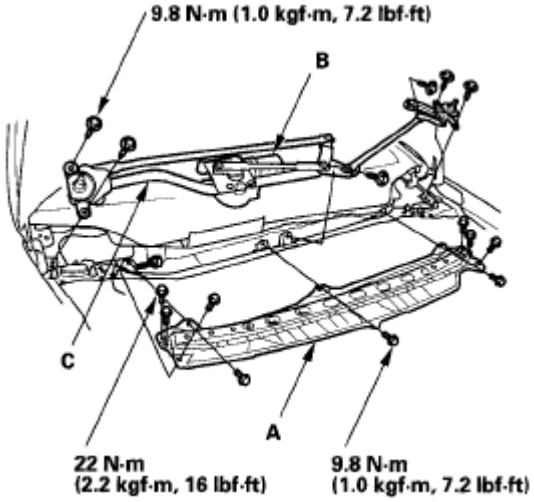

Fig. 19: Removing Under-Cowl Panel (With Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the 5P connector from the wiper motor (B), then remove the six bolts and wiper linkage assembly (C).
5. Make sure the mark (A) on the link (B) is aligned with the mark (C) on the windshield wiper linkage (D).

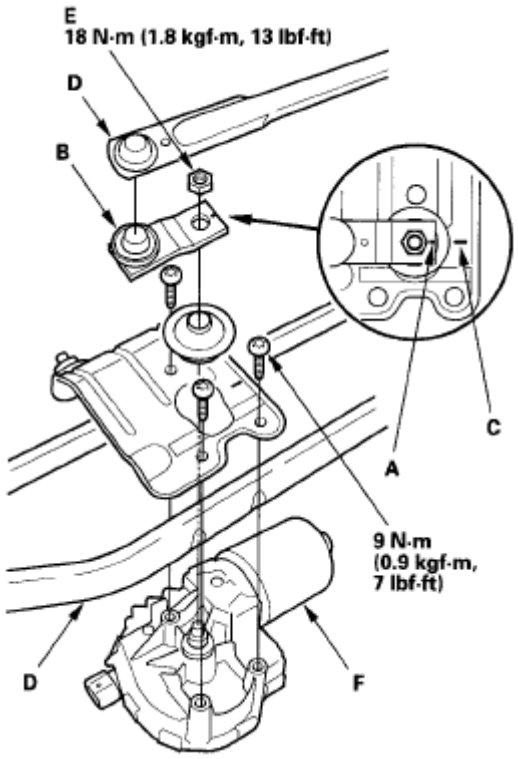

Fig. 20: Aligning Mark On Windshield Wiper Linkage (With Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the nut (E), and separate the link and windshield wiper linkage.
7. Remove the three bolts, and separate the windshield wiper linkage from the wiper motor (F).
8. Install in the reverse order of removal, and note these items:
   - Align the marks of the link and the linkage to install the linkage with the original adjustment.
   - Apply multipurpose grease to the moving parts.
   - Before installing the wiper arms, turn the wiper switch ON, then OFF to return the wiper shafts to the park position.
   - If necessary, replace any damaged clips.
9. After installation, adjust the wiper arms (see **WIPER ARM/NOZZLE ADJUSTMENT**).

WIPER/WASHER SWITCH REPLACEMENT

1. Remove the dashboard lower cover (see **DRIVER'S DASHBOARD LOWER COVER REMOVAL/INSTALLATION**).
2. Remove the steering column covers (see **STEERING COLUMN REMOVAL AND INSTALLATION**).
3. Disconnect the dashboard wire harness 8P connector (A) from the wiper/washer switch (B).

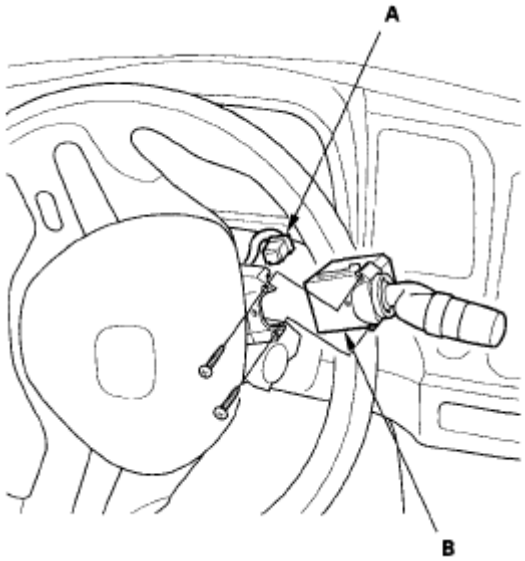

Fig. 21: Disconnecting Dashboard Wire Harness 8P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

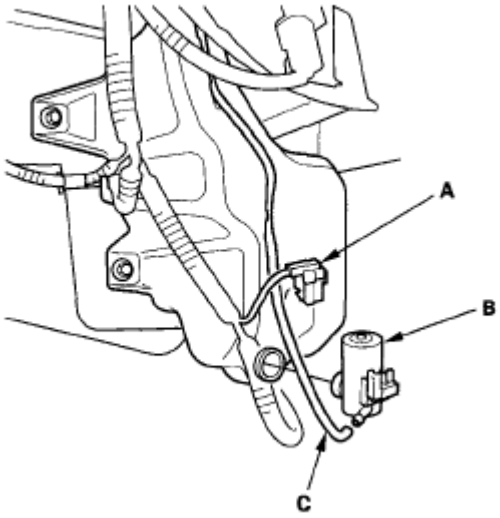
4. Remove the two screws, then slide out the wiper/washer switch.
5. Install the switch in the reverse order of removal.

WASHER RESERVOIR REPLACEMENT

1. Remove the right inner fender.
   - 2-door (see **FRONT INNER FENDER REPLACEMENT**)
   - 4-door (see **4-DOOR**)
2. Disconnect the 2P connector(s) (A) from the windshield washer motor (B) and the washer fluid level switch*.

   *: Canada models

4-door



2-door

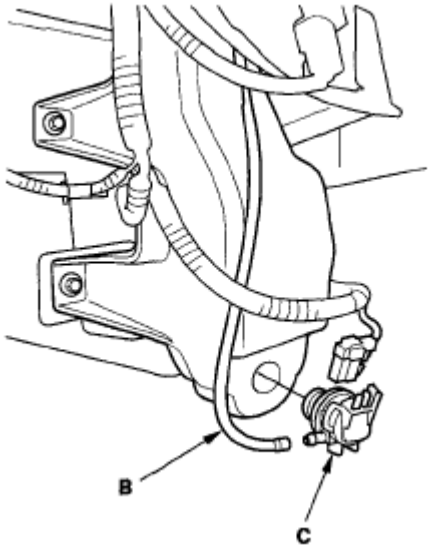


Fig. 22: Disconnecting 2P Connector(s)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the windshield washer tube (C).
4. Remove the bolts (A) and the clip (B), then remove the washer reservoir.

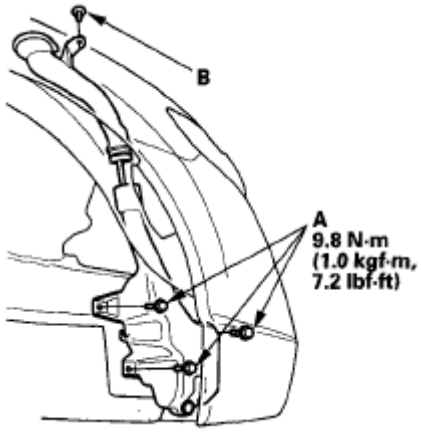

Fig. 23: Removing Washer Reservoir (With Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install in the reverse order of removal.

WIPER BLADE REPLACEMENT

4-DOOR

1. Lift the wiper arm off the windshield, raising the driver's side first, then the passenger's side.
2. Remove the cover (A), by squeezing the two tabs and pulling it straight out.

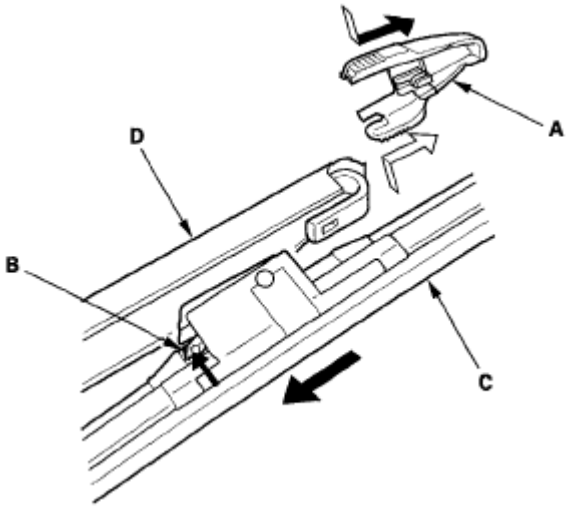

Fig. 24: Removing Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Press and hold the tab (B) and slide the wiper blade (C) toward the tabs until it releases from the wiper arm (D).
4. Find the side of the blade labeled "LOCK" (A), then pull back the end of the blade and slide out the old rubber (B).

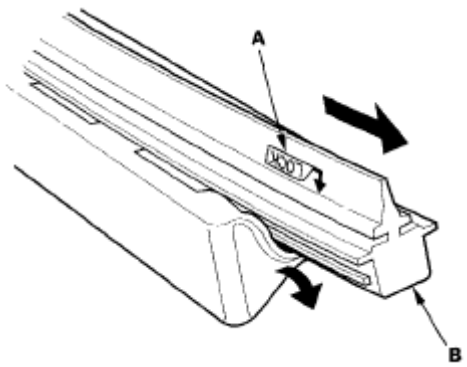

Fig. 25: Identifying "LOCK" Blade Label
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install a new rubber in the reverse order of removal.
6. Install the wiper blades onto the windshield wiper arms in the reverse order of removal.
7. Test by turning on the wipers. If the blades slip, turn off the wipers and seat the attachments more firmly.

2-DOOR

1. Pull up the wiper arms from the windshield.
2. Push the tab (A) and remove the wiper blade (B) from the wiper arm (C).

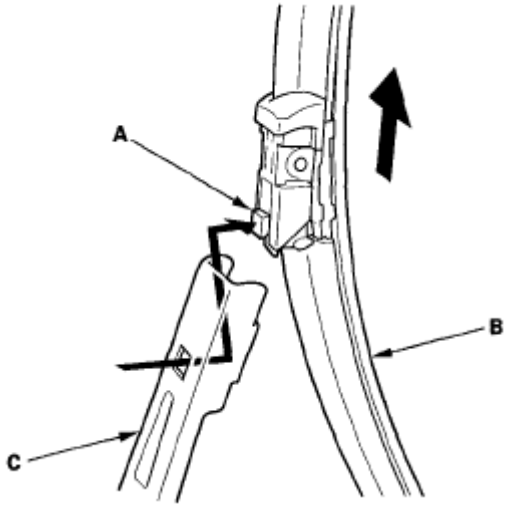

Fig. 26: Removing Wiper Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the stopper (A), then pull and remove the old rubber (B).

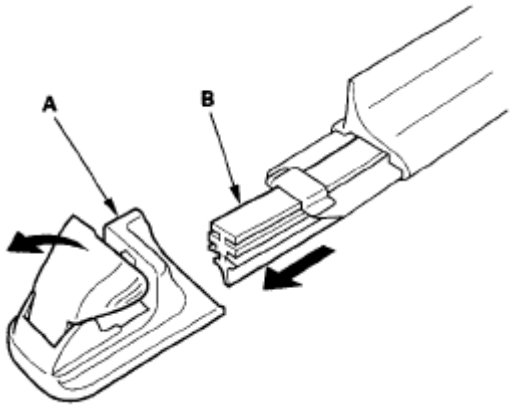

Fig. 27: Removing Stopper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install a new rubber in the reverse order of removal.
5. Install the wiper blades onto the windshield wiper arms in the reverse order of removal.
6. Test by turning on the wipers. If the blades slip, turn off the wipers and seat the attachments more firmly.

WIPER ARM/NOZZLE ADJUSTMENT

Wiper arms stop position

1. When the wiper arms stop at the automatic stop position, confirm that they are at the standard position.

2-door

a: Position at about 1.1 in. (29 mm) from the top of cowl cover (A)
b: Position at about 4.1 in. (106 mm) from the top of cowl cover (A)

4-door

a: Position at about 0.9 in. (23 mm) from the top of cowl cover (A)
b: Position at about 3.8 in. (96 mm) from the top of cowl cover (A)

Washer nozzle position

2. When you turn on the washers, confirm 50% or more of the washer fluid lands within the spray area. If the spray area is not within the standard positions, adjust the nozzles.

2-door

c: Position at about 11.8 in. (302 mm) from the top of the black ceramic area (B) at the lower windshield
d: Position at about 11.8 in. (302 mm) from the top of the black ceramic area (B) at the lower windshield

e: Position at about 9.8 in. (250 mm) from the windshield center line (C)

4-door

c: Position at about 7.6 in. (192 mm) from the top of the black ceramic area (B) at the lower windshield

d: Position at about 7.6 in. (192 mm) from the top of the black ceramic area (B) at the lower windshield

e: Position at about 9.8 in. (250 mm) from the windshield center line (C)

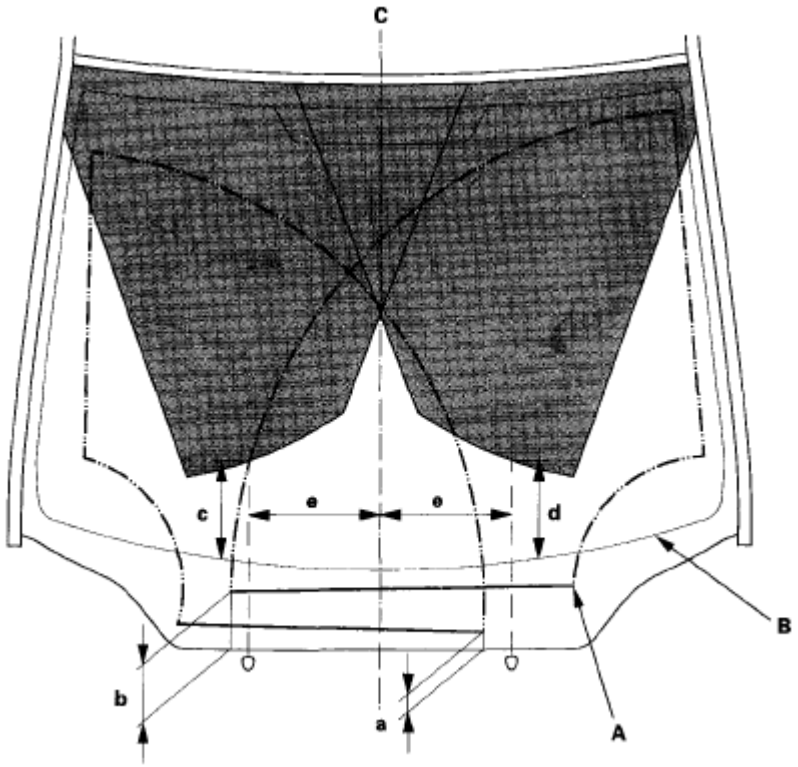

Fig. 28: Adjusting Wiper Arm/Nozzle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

WASHER TUBE REPLACEMENT

1. Remove the right inner fender.
   - 2-door (see **FRONT INNER FENDER REPLACEMENT**)
   - 4-door (see **4-DOOR**)
2. Remove the washer nozzles and clips, then remove the tubes.

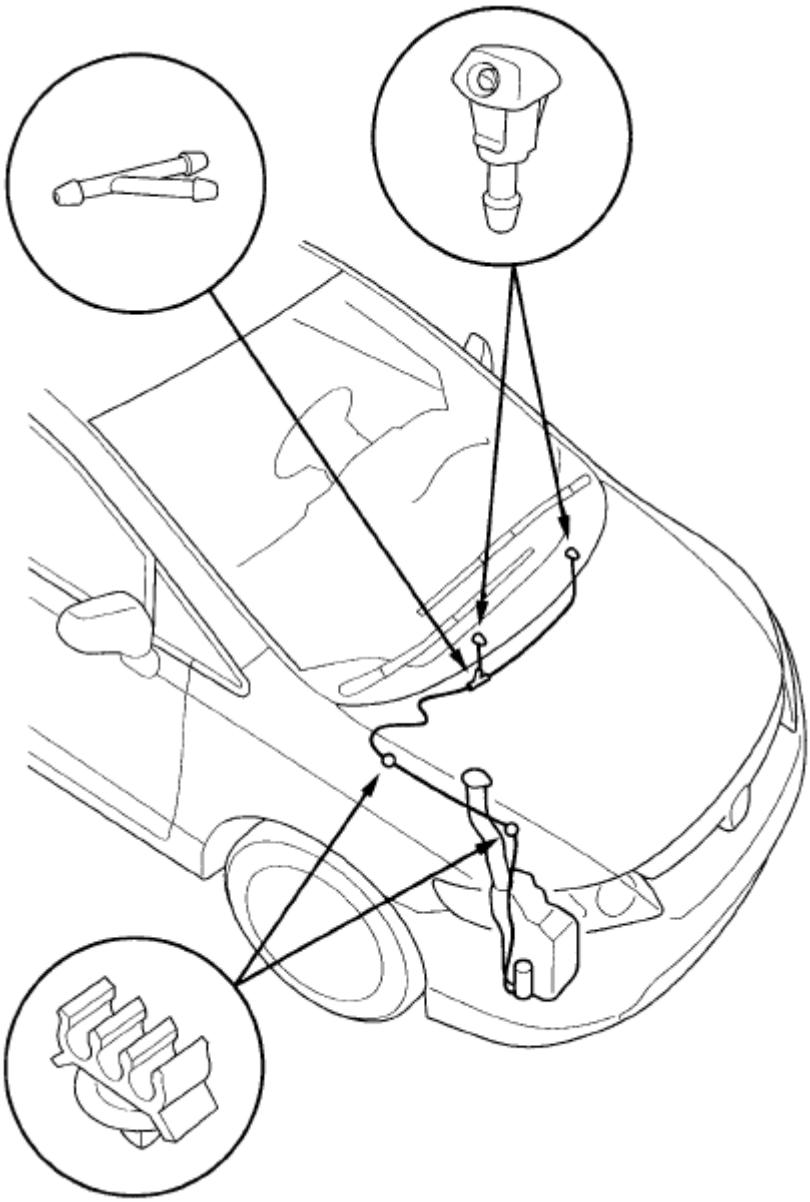

Fig. 29: Removing Washer Nozzles And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install in the reverse order of removal. Take care not to pinch the washer tube. Check the windshield washer operation.

2006-08 BRAKES

ABS System - Civic (All Except Hybrid)

COMPONENT LOCATION INDEX

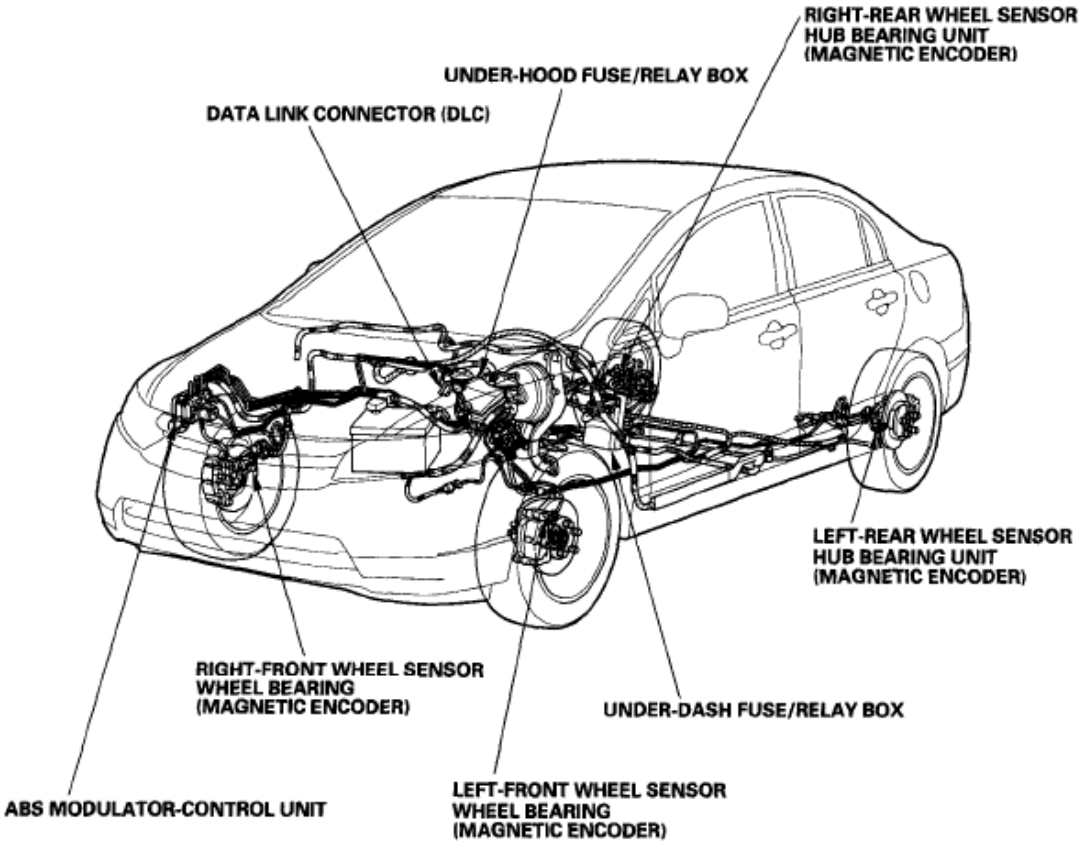

Fig. 1: Locating ABS Components

GENERAL TROUBLESHOOTING INFORMATION

SYSTEM INDICATOR

This system has two indicators:

- ABS indicator (A)
- Brake system indicator (B)

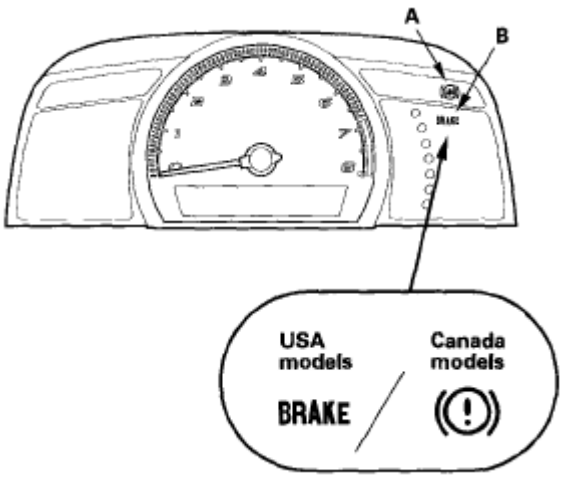

Fig. 2: Identifying ABS And Brake System Indicators

When the system is OK, each indicator comes on for about 2 seconds after turning the ignition switch ON (II), then goes off.

When the system detects a problem, a DTC will be set and, depending upon the failure, the ABS modulator-control unit will determine which indicator(s) will be turned on. If the problem goes away (system returns to normal), the indicator(s) will be controlled in the following way depending upon the DTC that was set:

- The indicator(s) will come on and stay on when the ignition switch is ON (II).
- The indicator(s) will automatically go off.
- The indicator(s) will go off after the vehicle is driven.

ABS Indicator

The ABS indicator comes on when the ABS function is lost. The brakes still work like a conventional system.

Brake System Indicator

The brake system indicator comes on when the EBD function is lost, the parking brake is applied, and/or the brake fluid level is low.

NOTE: If two or more wheel sensors fail, the brake system indicator will come on.

DIAGNOSTIC TROUBLE CODE (DTC)

- The memory can hold all DTCs. However, when the same DTC is detected more than once, the more recent DTC is written over the earlier one. Therefore, when the same problem is detected repeatedly, it is memorized as a single DTC.
- The DTCs are indicated in the order they occur.
- The DTCs are memorized in the EEPROM. Therefore, the memorized DTCs cannot be canceled by disconnecting the battery. Do the specified procedures to clear the DTCs.

SELF-DIAGNOSIS

- Self-diagnosis can be classified into two categories:
  - Initial diagnosis: Done right after the ignition switch is turned ON (II) and until the ABS indicator goes off.
  - Regular diagnosis: Done right after the initial diagnosis until the ignition switch is turned OFF.
- When the system detects a problem, the ABS modulator-control unit shifts to fail-safe mode.

KICKBACK

The pump motor operates when the ABS modulator-control unit is functioning, and the fluid in the reservoir is forced out to the master cylinder, causing kickback at the brake pedal.

PUMP MOTOR

- The pump motor operates when the ABS modulator-control unit is functioning.
- The ABS modulator-control unit checks the pump motor operation during regular diagnosis when the vehicle is driven over 10 mph (15 km/h) the first time after the ignition switch is turned ON (II). You may hear the motor operate at this time, but it is normal.

BRAKE FLUID REPLACEMENT/AIR BLEEDING

Brake fluid replacement and air bleeding procedures are identical to the procedures used on vehicles without ABS (see **BRAKE SYSTEM BLEEDING**).

HOW TO TROUBLESHOOT DTCS

The troubleshooting procedures assume that the cause of the problem is still present and the ABS indicator is still on. Following a troubleshooting procedure for a code that has been cleared and does not reset can result in incorrect diagnosis.

1. Question the customer about the conditions when the problem occurred, and try to reproduce the same conditions for troubleshooting. Find out when the ABS indicator came on, such as during ABS operation, after ABS operation, when vehicle was traveling at a certain speed, etc.
2. When the ABS indicator does not come on during the test-drive, but troubleshooting is done based on the DTC, check for loose connectors, poor contact of the terminals, etc. before you start troubleshooting.
3. After troubleshooting, or repairs are done, clear the DTCs, and test-drive the vehicle under the same conditions that originally set the DTCs. Make sure the ABS indicator does not come on.
4. Check for other unit DTCs which are connected via F-CAN, if there are DTCs that are related to F-CAN, the most likely cause was that the ignition switch was turned ON (II) with the ABS modulator-control unit connector disconnected. Clear the DTCs. Check for PGM-FI and ABS codes, and troubleshoot those first.

INTERMITTENT FAILURES

The term "intermittent failure" means a system may have had a failure, but it checks OK now. If the indicator(s) of the system does not come on, check for poor connections or loose pins at all connectors related to the circuit that you are troubleshooting. If the indicators were on but then went out, the original problem may have been intermittent.

HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)

1. If the system indicators stay on, connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

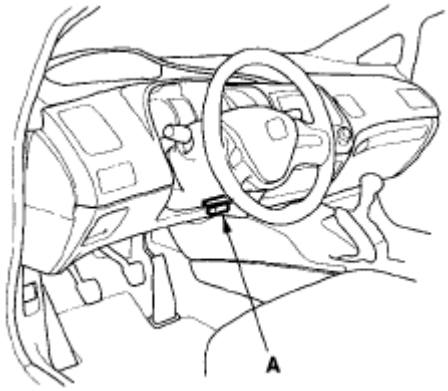

Fig. 3: Connecting HDS To DLC

2. Turn the ignition switch ON (II).
3. Make sure the HDS communicates with the vehicle and the ABS modulator-control unit. If it doesn't, troubleshoot the DLC circuit: Except Si model (see **DLC CIRCUIT TROUBLESHOOTING**), Si model (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Check the diagnostic trouble code (DTC) and note it. Also check the on board snapshot data, and download any data found. Then refer to the indicated DTC's troubleshooting, and begin the appropriate troubleshooting procedure.

NOTE:

- **The HDS communication will be stopped when the vehicle speed is at 31 mph (50 km/h) or more.**
- **The HDS can read the DTC, current data, and other system data.**
- **For specific operations, refer to the Help menu that came with the HDS.**

HOW TO RETRIEVE DTCS

1. With the ignition switch to LOCK (0), connect the HDS to the data link connector (DLC) under the driver's side of the dashboard.
2. Turn the ignition switch ON (II).
3. Make sure the HDS communicates with the vehicle and the ABS modulator-control unit. If it doesn't, troubleshoot the DLC circuit: Except Si model (see **DLC CIRCUIT TROUBLESHOOTING**), Si model (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Follow the prompts on the HDS to display the DTC(s) on the screen. After determining the DTC, refer to the **DTC TROUBLESHOOTING**.
5. Turn the ignition switch to LOCK (0).

HOW TO CLEAR DTCS

1. With the ignition switch to LOCK (0), connect the HDS to the data link connector (DLC) under the

driver's side of the dashboard.

2. Turn the ignition switch ON (II).
3. Make sure the HDS communicates with the vehicle and the ABS modulator-control unit. If it doesn't, troubleshoot the DLC circuit: Except Si model (see **DLC CIRCUIT TROUBLESHOOTING**), Si model (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Clear the DTC(s) by following the screen prompts on the HDS.
5. Turn the ignition switch to LOCK (0).

DTC TROUBLESHOOTING INDEX

DTC TROUBLESHOOTING INDEX

DTC		Detection Item	ABS Indicator	Brake System Indicator
11	-13	Right-front wheel sensor circuit malfunction	ON	ON/OFF(1)
12	-11	Right-front wheel sensor electrical noise or intermittent interruption	ON	ON/OFF(1)
	-12	Right-front wheel sensor short to the other sensor circuit	ON	ON/OFF(1)
	-21	Right-front wheel sensor installation error	ON	ON/OFF(1)
	-22	Right-front wheel sensor installation error (19 mph (30 km/h) or more)	ON	ON/OFF(1)
	-23	Right-front wheel sensor installation error (0 to 9 mph (0 to 15 km/h))	ON	ON/OFF(1)

SYMPTOM TROUBLESHOOTING INDEX

When the vehicle has one of these symptoms, check for a diagnostic trouble code (DTC) with the HDS. If there is no DTC, do the diagnostic procedure for the symptom, in the sequence listed, until you find the cause.

SYMPTOM TROUBLESHOOTING INDEX

Symptom	Diagnostic procedure
HDS does not communicate with the ABS modulator-control unit or the vehicle	Troubleshoot the DLC circuit: Except Si model (see **DLC CIRCUIT TROUBLESHOOTING**), Si model (see **DLC CIRCUIT TROUBLESHOOTING**).
ABS indicator does not come on	1. Do the gauge control module troubleshooting (see **SELF-DIAGNOSTIC FUNCTION**). 2. Substitute a known-good ABS modulator-control unit, then recheck. If it is OK, replace the original ABS modulator-control unit: Except Si model (see **REMOVAL - EXCEPT SI MODEL**), Si model (see **REMOVAL - SI MODEL**).
ABS indicator does not go off, and no DTCs are stored	1. Symptom Troubleshooting (see **SYMPTOM TROUBLESHOOTING**). 2. Do the gauge control module troubleshooting (see **SELF-DIAGNOSTIC FUNCTION**).
Brake system indicator does not come on	1. Do the gauge control module troubleshooting (see **SELF-DIAGNOSTIC FUNCTION**). 2. Substitute a known-good ABS modulator-control unit, then recheck. If it is OK, replace the original ABS modulator-control unit; Except Si model (see **REMOVAL - EXCEPT SI MODEL**), Si model (see **REMOVAL - SI MODEL**).
Brake system indicator does not go off, and no DTCs are stored	1. Symptom Troubleshooting (see **SYMPTOM TROUBLESHOOTING**). 2. Do the gauge control module troubleshooting (see **SELF-DIAGNOSTIC FUNCTION**).
ABS indicator and brake system indicator do not go off at the same time	1. Symptom Troubleshooting (see **SYMPTOM TROUBLESHOOTING**). 2. Do the gauge control module troubleshooting (see **SELF-DIAGNOSTIC FUNCTION**).

SYSTEM OUTLINE

This system is composed of the ABS modulator-control unit, the wheel sensors, and the system indicators in the gauge control module. The ABS modulator-control unit controls the anti-lock brake and the brakes distribution functions.

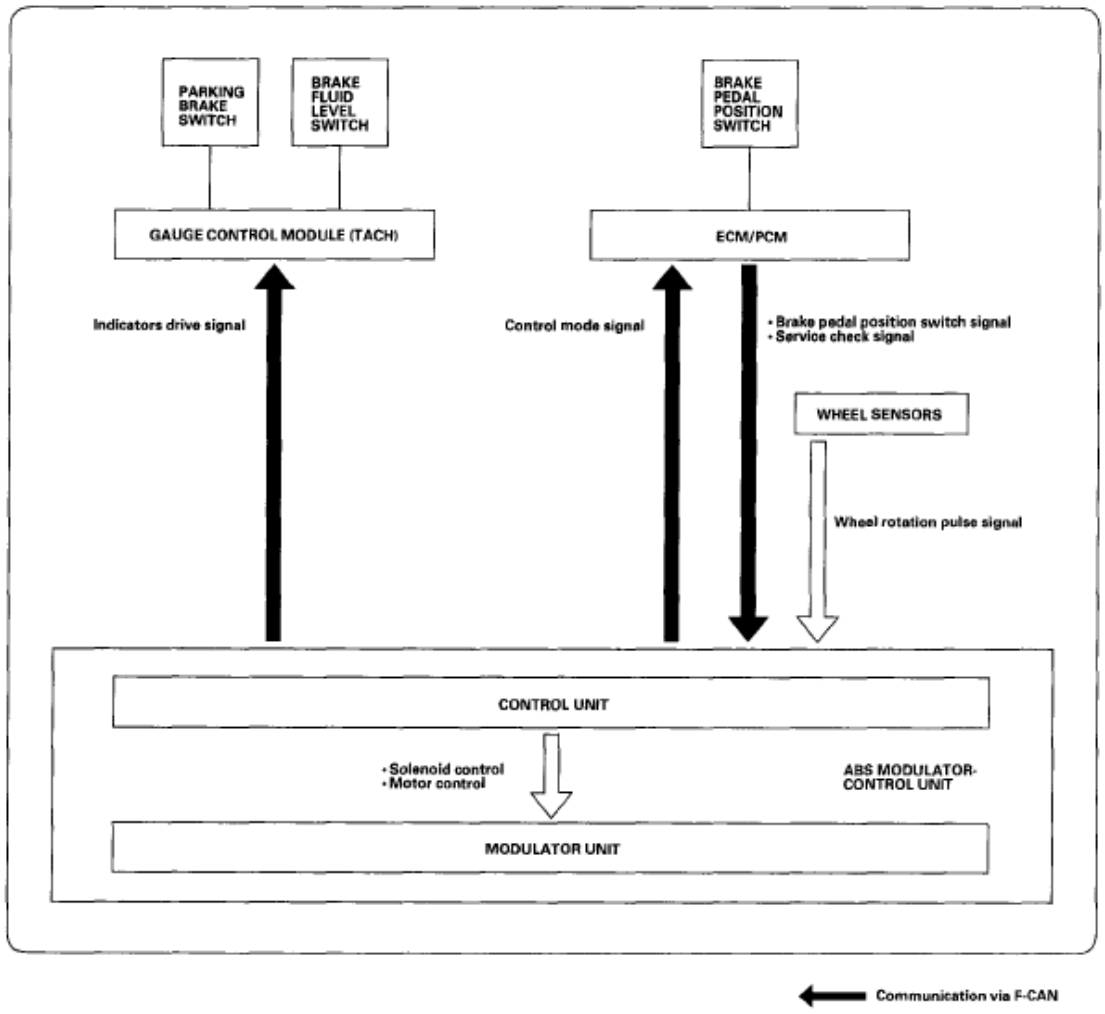

Fig. 5: Identifying ABS Modulator-Control Unit System Outline

ABS FEATURES

Without ABS, when the brake pedal is pressed while driving, the wheels sometimes lock before the vehicle comes to a stop. In such an event, the maneuverability of the vehicle is reduced if the front wheels are locked, and the stability of the vehicle is reduced if the rear wheels are locked, creating an extremely unstable condition. With ABS, the system precisely controls the slip rate of the wheels to ensure maximum grip force from the tires, and it thereby ensures maneuverability and stability of the vehicle. The ABS calculates the slip rate of the wheels based on the four wheel speeds, then it controls the brake fluid pressure to reach the target slip rate.

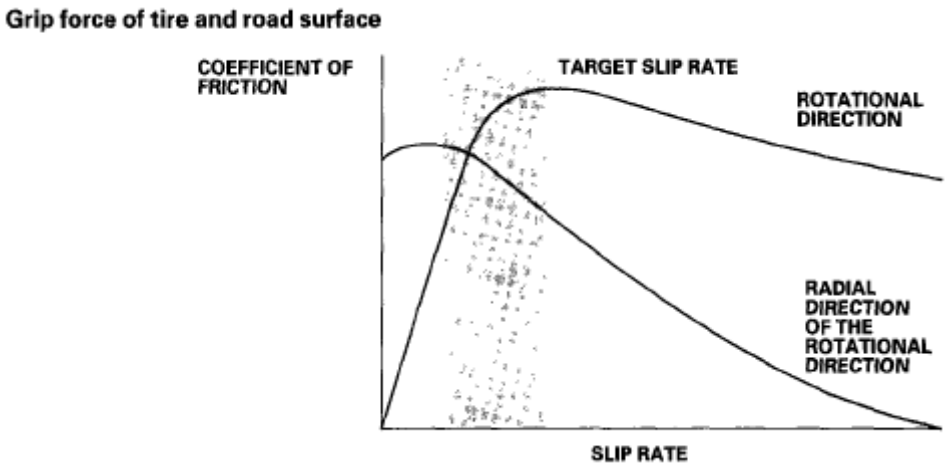

Fig. 6: Identifying Grip Force Of Tire And Road Surface

The control unit detects the wheel speed based on the wheel sensor signals it received, then it calculates the vehicle speed based on the detected wheel speed. The control unit detects the vehicle speed during deceleration based on the rate of deceleration.

The control unit calculates the slip rate of each wheel, and transmits the control signal to the modulator unit solenoid valve when the slip rate is high.

The hydraulic control has three modes: Pressure intensifying, pressure reducing, and pressure retaining.

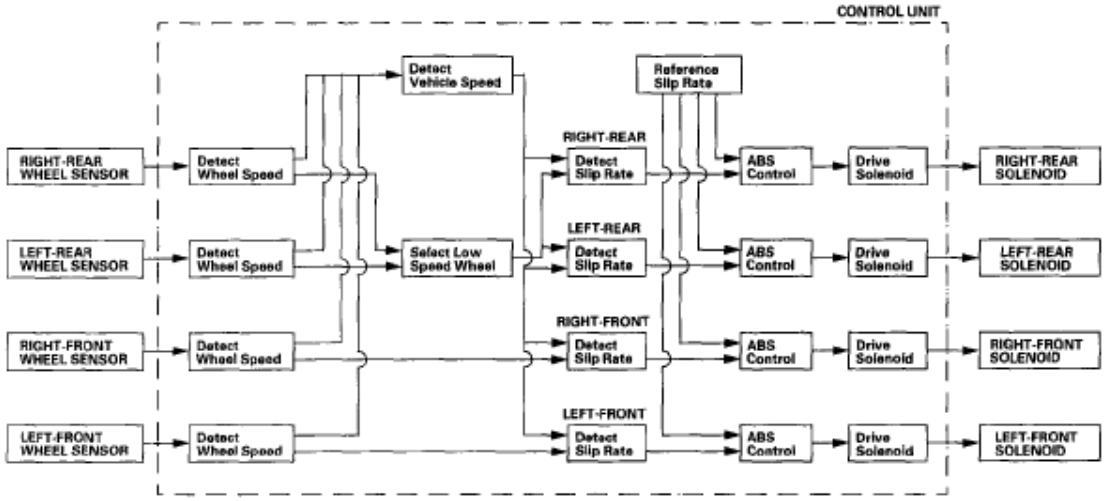

Fig. 7: Identifying Hydraulic Control Unit Flow Diagram

EBD FEATURES

The electronic brake distribution (EBD) feature helps control vehicle braking by adjusting the rear brake force in accordance with the rear wheel load before the ABS operates. Based on the wheel sensor signals, the control unit uses the modulator to control the rear brakes individually. When the rear wheel speed is less than the front wheel speed, the ABS modulator-control unit retains the current rear brake fluid pressure by closing the inlet valve in the modulator. As the rear wheel speed increases and approaches the front wheel speed, the ABS modulator-control unit increases the rear brake fluid pressure by momentarily opening the inlet valve. This whole process is repeated very rapidly. While this is happening, there is kickback at the

brake pedal.

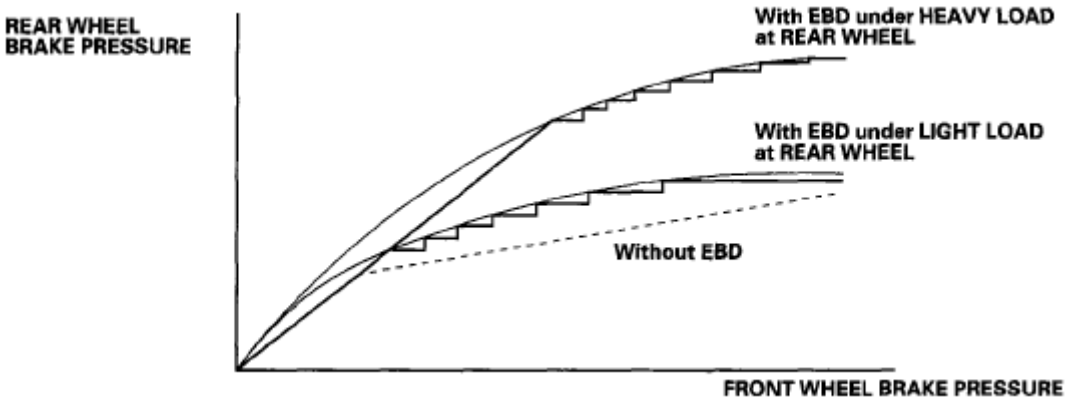

Fig. 8: Identifying Rear Wheel Brake Pressure

MODULATOR UNIT

The ABS modulator consists of the inlet solenoid valve, the outlet solenoid valve, the reservoir, the pump, the pump motor, and the damping chamber. The modulator reduces the caliper fluid pressure directly. It is a circulating-type modulator because the brake fluid circulates through the caliper, the reservoir, and the master cylinder. The hydraulic control has three modes; pressure intensifying, pressure retaining, and pressure reducing. The hydraulic circuit is an independent four channel type; one channel for each wheel.

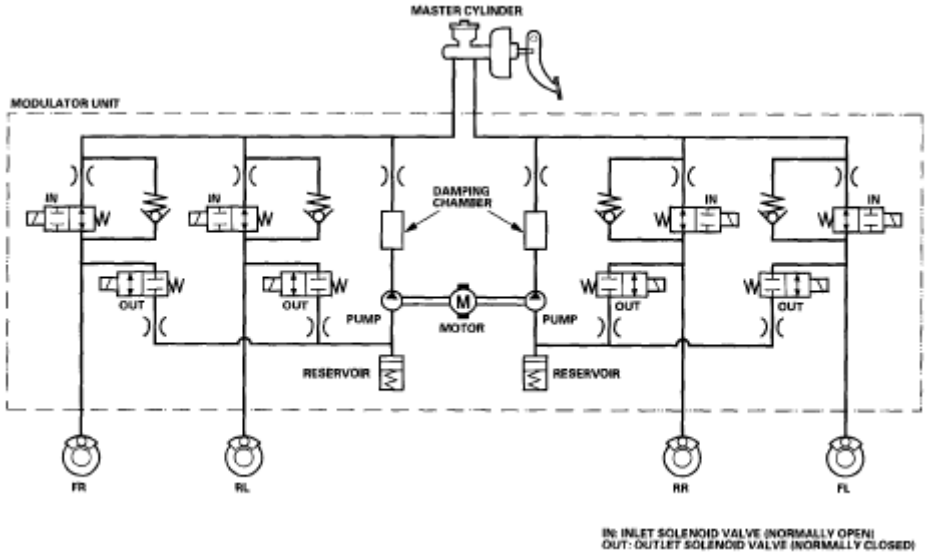

Fig. 9: Identifying Modulator Unit Circuit Diagram

MODES AND INLET/OUTLET SOLENOID VALVE POSITION

Mode	Inlet Solenoid Valve	Outlet Solenoid Valve	Brake Fluid
Pressure intensifying mode	open	closed	Master cylinder fluid is pumped out to the caliper.
Pressure retaining mode	closed	closed	Caliper fluid is retained by the inlet and outlet valves.

Pressure reducing mode	closed	open	• Caliper fluid flows through the outlet valve to the reservoir. • The motor pumps the reservoir fluid through the damping chamber to the master cylinder (1).
(1) The motor will keep running until the operation of the one anti-lock brake control is finished with the first pressure reducing mode.			

CIRCUIT DIAGRAM

DTC TROUBLESHOOTING

DTC 11-13: RIGHT-FRONT WHEEL SENSOR CIRCUIT MALFUNCTION; DTC 13-13: LEFT-FRONT WHEEL SENSOR CIRCUIT MALFUNCTION; DTC 15-13: RIGHT-REAR WHEEL SENSOR CIRCUIT MALFUNCTION; DTC 17-13: LEFT-REAR WHEEL SENSOR CIRCUIT MALFUNCTION

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.

3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Check for DTCs with the HDS.

   Is DTC 11-13, 13-13, 15-13, and/or 17-13 indicated?

   YES - Go to step 5.

   NO - Intermittent failure, the system is OK at this time. Check for loose terminals between the wheel sensor 2P connector and the ABS modulator-control unit 25P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** .

5. Turn the ignition switch to LOCK (0).
6. Disconnect the ABS modulator-control unit 25P connector.
7. Check for continuity between the appropriate ABS modulator-control unit 25P connector wheel sensor +B and GND terminals (see **ABS MODULATOR-CONTROL UNIT 25P CONNECTOR WHEEL SENSOR +B AND GND**), then check for continuity between the same terminals and reverse the positive and negative tester probes.

ABS MODULATOR-CONTROL UNIT 25P CONNECTOR WHEEL SENSOR +B AND GND

DTC	ABS Modulator-control Unit 25P Connector Terminal No.	
11-13	No. 2	No. 18
13-13	No. 12	No. 3
15-13	No. 6	No. 15
17-13	No. 14	No. 5

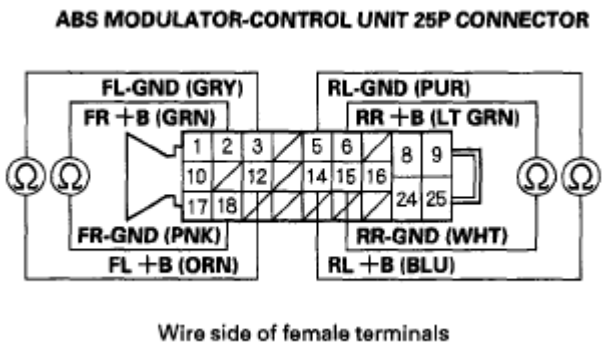

Fig. 13: Checking Continuity Between Appropriate ABS Modulator-Control Unit 25P Connector Wheel Sensor +B And GND Terminals

Is there continuity in both directions?

YES - Go to step 8.

NO - If there is no continuity in either direction, go to step 10. If there is continuity in only one direction, go to step 12.

8. Disconnect the appropriate wheel sensor 2P connector.
9. On the sensor side, check for continuity between appropriate wheel sensor 2P connector terminals No. 1 and No. 2, then check for continuity between the same terminals and reverse the positive and

negative tester probes.

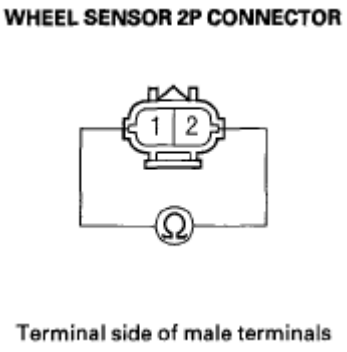

Fig. 14: Checking Continuity Between Appropriate Wheel Sensor 2P Connector Terminals No. 1 And No. 2

Is there continuity in both directions?

YES - Replace the appropriate wheel sensor (see **WHEEL SENSOR REPLACEMENT**).

NO - Repair short in the wire between the appropriate wheel sensor and the ABS modulator-control unit.

10. Disconnect the appropriate wheel sensor 2P connector.
11. On the sensor side, check for continuity between appropriate wheel sensor 2P connector terminals No. 1 and No. 2, then check for continuity between the same terminals and reverse the positive and negative tester probes.

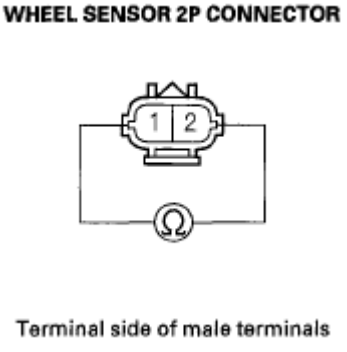

Fig. 15: Checking Continuity Between Appropriate Wheel Sensor 2P Connector Terminals No. 1 And No. 2

Is there continuity in only one direction?

YES - Repair open in the wire between the appropriate wheel sensor and the ABS modulator-control unit.

NO - Replace the appropriate wheel sensor (see **WHEEL SENSOR REPLACEMENT**).

12. Check for continuity between body ground and the appropriate ABS modulator-control unit 25P connector terminal (see table).

BODY GROUND AND APPROPRIATE ABS MODULATOR-CONTROL UNIT 25P CONNECTOR TERMINAL

DTC	ABS Modulator-control Unit 25P Connector Terminal No.	
11-13	No. 2	No. 18
13-13	No. 12	No. 3
15-13	No. 6	No. 15
17-13	No. 14	No. 5

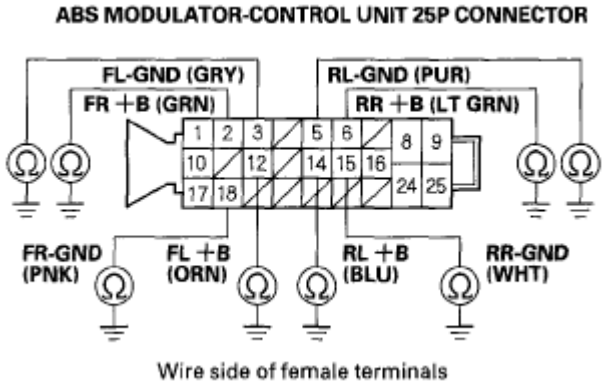

Fig. 16: Checking Continuity Between Body Ground And Appropriate ABS Modulator-Control Unit 25P Connector Terminal

Is there continuity?

YES - Go to step 13.

NO - Go to step 15.

13. Disconnect the appropriate wheel sensor 2P connector.
14. On the sensor side, check for continuity between body ground and appropriate wheel sensor 2P connector terminal No. 1 and No. 2 individually.

NOTE: Check the wheel sensor while mounted on the vehicle.

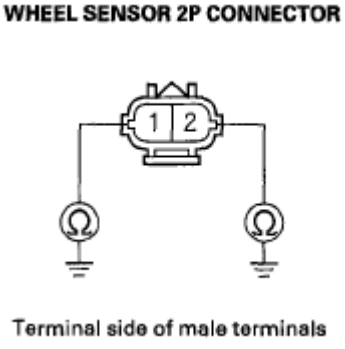

Fig. 17: Checking Continuity Between Body Ground And Appropriate Wheel Sensor 2P Connector Terminal No. 1 And No. 2

Is there continuity?

YES - Replace the appropriate wheel sensor (see **WHEEL SENSOR REPLACEMENT**).

NO - Repair short to body ground in the wire between the appropriate wheel sensor and the ABS modulator-control unit.

15. Turn the ignition switch ON (II).
16. Measure voltage between body ground and the appropriate ABS modulator-control unit 25P connector terminal (see **BODY GROUND AND APPROPRIATE ABS MODULATOR-CONTROL UNIT 25P CONNECTOR TERMINAL**).

BODY GROUND AND APPROPRIATE ABS MODULATOR-CONTROL UNIT 25P CONNECTOR TERMINAL

DTC	ABS Modulator-control Unit 25P Connector Terminal No.	
11-13	No. 2	No. 18
13-13	No. 12	No. 3
15-13	No. 6	No. 15
17-13	No. 14	No. 5

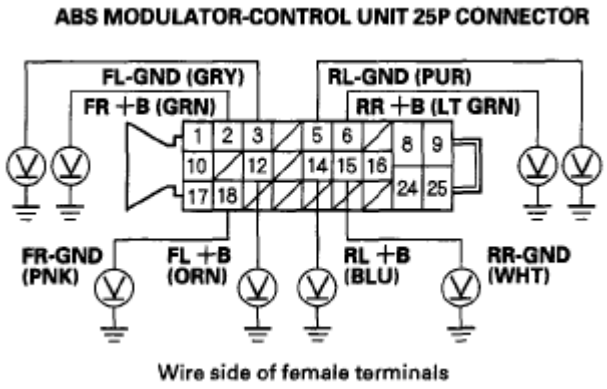

Fig. 18: Measuring Voltage Between Body Ground And Appropriate ABS Modulator-Control Unit 25P Connector Terminal

Is there 0.1 V or more?

YES - Repair short to power in the wire between the appropriate wheel sensor and the ABS modulator-control unit.

NO - Check for loose terminals in the ABS modulator-control unit 25P connector. If necessary, substitute a known-good ABS modulator-control unit: Except Si model (see **REMOVAL - EXCEPT SI MODEL**), Si model (see **REMOVAL - SI MODEL**), and retest.

DTC 12-11: RIGHT-FRONT WHEEL SENSOR ELECTRICAL NOISE OR INTERMITTENT INTERRUPTION; DTC 14-11: LEFT-FRONT WHEEL SENSOR ELECTRICAL NOISE OR INTERMITTENT INTERRUPTION; DTC 16-11: RIGHT-REAR WHEEL SENSOR ELECTRICAL NOISE OR INTERMITTENT INTERRUPTION; DTC 18-11: LEFT-REAR WHEEL SENSOR ELECTRICAL NOISE OR INTERMITTENT INTERRUPTION

NOTE: These DTCs may be caused by electrical interference. Check for aftermarket

devices installed in the vehicle when these DTCs are indicated.

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Test-drive the vehicle.
4. Check for DTCs with the HDS.

   Is DTC 12-11, 14-11, 16-11, and/or 18-11 indicated?

   YES - If the DTC 12-12,14-12,16-12 or 18-12 is indicated at same time, do the DTC 12-12,14-12, 16-12 or 18-12 troubleshooting (see **DTC 12-12: RIGHT-FRONT WHEEL SENSOR SHORT TO THE OTHER SENSOR CIRCUIT; DTC 14-12: LEFT-FRONT WHEEL SENSOR SHORT TO THE OTHER SENSOR CIRCUIT; DTC 16-12: RIGHT-REAR WHEEL SENSOR SHORT TO THE OTHER SENSOR CIRCUIT; DTC 18-12: LEFT-REAR WHEEL SENSOR SHORT TO THE OTHER SENSOR CIRCUIT**). If DTC 12-12,14-12,16-12 or 18-12 is not indicated, go to step 5.

   NO - Troubleshoot the indicated DTC. If there are no DTCs indicated, there may be an intermittent failure, the system is OK at this time. Check for loose terminals between the wheel sensor 2P connector and the ABS modulator-control unit 25P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** .

5. Turn the ignition switch to LOCK (0).
6. Check that the appropriate wheel sensor is properly mounted (see **WHEEL SENSOR REPLACEMENT**).

   WHEEL SENSOR

DTC	Appropriate Wheel Sensor
12-11	Right-front
14-11	Left-front
16-11	Right-rear
18-11	Left-rear

   Is the wheel sensor installation OK?

   YES - Check for loose terminals in the ABS modulator-control unit 25P connector. If necessary, substitute a known-good ABS modulator-control unit: Except Si model (see **REMOVAL - EXCEPT SI MODEL**), Si model (see **REMOVAL - SI MODEL**), and retest.

   NO - Reinstall the wheel sensor, and check the mounting position (see **WHEEL SENSOR REPLACEMENT**).

DTC 12-12: RIGHT-FRONT WHEEL SENSOR SHORT TO THE OTHER SENSOR CIRCUIT; DTC 14-12: LEFT-FRONT WHEEL SENSOR SHORT TO THE OTHER SENSOR CIRCUIT; DTC 16-12: RIGHT-REAR WHEEL SENSOR SHORT TO THE OTHER SENSOR CIRCUIT; DTC 18-12: LEFT-REAR WHEEL SENSOR SHORT TO THE OTHER SENSOR CIRCUIT

1. Turn the ignition switch ON (II).

2. Clear the DTC with the HDS.
3. Test-drive the vehicle. Drive the vehicle at 13 mph (20 km/h) or more, and go a distance of 328 ft (100 m) or more.

NOTE: Drive the vehicle on the road, not on the lift.

4. Check for DTCs with the HDS.

   Is DTC 12-12, 14-12, 16-12, and/or 18-12 indicated?

   YES - Go to step 5.

   NO - Intermittent failure, the system is OK at this time. Check for loose terminals between the wheel sensor 2P connector and the ABS modulator-control unit 25P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** .

5. Turn the ignition switch to LOCK (0).
6. Disconnect the ABS modulator-control unit 25P connector.
7. Check for continuity between the appropriate ABS modulator-control unit 25P connector wheel sensor +B terminals (see **ABS MODULATOR-CONTROL UNIT 25P CONNECTOR WHEEL SENSOR +B TERMINALS**).

ABS MODULATOR-CONTROL UNIT 25P CONNECTOR WHEEL SENSOR +B TERMINALS

DTC	ABS Modulator-control Unit 25P Connector Terminal No.			
	Appropriate Terminal	Other Terminals		
12-12	No. 2	No. 12	No. 6	No. 14
14-12	No. 12	No. 2	No. 6	No. 14
16-12	No. 6	No. 2	No. 12	No. 14
18-12	No. 14	No. 2	No. 12	No. 6

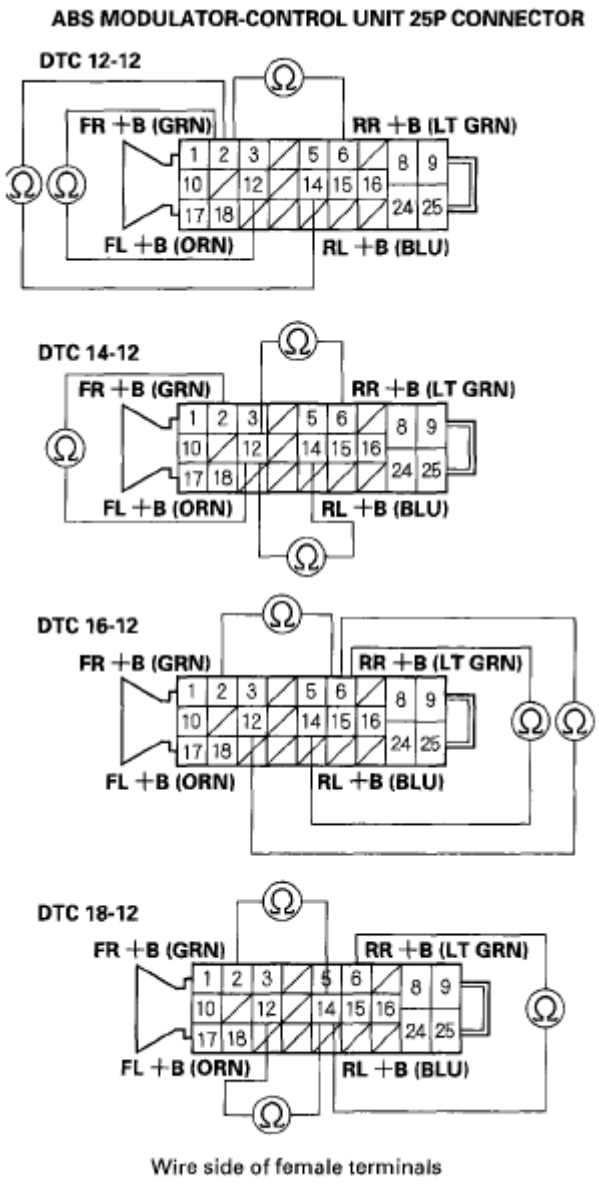

Fig. 19: Checking Continuity Between Appropriate ABS Modulator-Control Unit 25P Connector Wheel Sensor +B Terminals

Is there continuity?

YES - Repair short in the wires between the appropriate wheel sensor and the ABS modulator-control unit.

NO - Check for loose terminals in the ABS modulator-control unit 25P connector. If necessary, substitute a known-good ABS modulator-control unit: Except Si model (see **REMOVAL - EXCEPT SI MODEL**), Si model (see **REMOVAL - SI MODEL**), and retest.

DTC 12-21: RIGHT-FRONT WHEEL SENSOR INSTALLATION ERROR; DTC 14-21: LEFT-FRONT WHEEL SENSOR INSTALLATION ERROR; DTC 16-21: RIGHT-REAR WHEEL SENSOR INSTALLATION ERROR; DTC 18-21: LEFT-REAR WHEEL SENSOR INSTALLATION ERROR

1. Test-drive the vehicle. Drive the vehicle at 7 mph (10 km/h).

   NOTE: Drive the vehicle on the road, not on the lift.

2. Check the RF, LF, RR, LR WHEEL SPD in the ABS DATA LIST with the HDS.

   Are all four the same indicated value?

   YES - Intermittent failure, the system is OK at this time. Check for loose terminals between the wheel sensor 2P connector and the ABS modulator-control unit 25P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** .

   NO - Go to step 3.

3. Turn the ignition switch to LOCK (0).
4. Check that the appropriate wheel sensor is properly mounted (see **WHEEL SENSOR REPLACEMENT**).

   WHEEL SENSOR

DTC	Appropriate Wheel Sensor
12-21	Right-front
14-21	Left-front
16-21	Right-rear
18-21	Left-rear

   Is the wheel sensor installation OK?

   YES - Replace the appropriate wheel sensor (see **WHEEL SENSOR REPLACEMENT**).

   NO - Reinstall the wheel sensor, and check the mounting position (see **WHEEL SENSOR REPLACEMENT**).

DTC 12-22: RIGHT-FRONT WHEEL SENSOR INSTALLATION ERROR (19 MPH (30 KM/H) OR MORE); DTC 14-22: LEFT-FRONT WHEEL SENSOR INSTALLATION ERROR (19 MPH (30 KM/H) OR MORE); DTC 16-22: RIGHT-REAR WHEEL SENSOR INSTALLATION ERROR (19 MPH (30 KM/H) OR MORE); DTC 18-22: LEFT-REAR WHEEL SENSOR INSTALLATION ERROR (19 MPH (30 KM/H) OR MORE)

1. Test-drive the vehicle. Drive the vehicle between 19 mph (30 km/h) and 31 mph (50 km/h) for 70 seconds or more.

   NOTE: Drive the vehicle on the road, not on the lift.

2. Check the RF, LF, RR, LR WHEEL SPD in the ABS DATA LIST with the HDS.

   Are all four the same indicated value?

   YES - Intermittent failure, the system is OK at this time. Check for loose terminals between the wheel

sensor 2P connector and the ABS modulator-control unit 25P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** .

NO - Go to step 3.

3. Turn the ignition switch to LOCK (0).
4. Check that the appropriate wheel sensor is properly mounted (see **WHEEL SENSOR REPLACEMENT**).

WHEEL SENSOR

DTC	Appropriate Wheel Sensor
12-22	Right-front
14-22	Left-front
16-22	Right-rear
18-22	Left-rear

Is the wheel sensor installation OK?

YES - Replace the appropriate wheel sensor (see **WHEEL SENSOR REPLACEMENT**).

NO - Reinstall the wheel sensor, and check the mounting position (see **WHEEL SENSOR REPLACEMENT**).

DTC 12-23: RIGHT-FRONT WHEEL SENSOR INSTALLATION ERROR (0 TO 9 MPH (0 TO 15 KM/H)); DTC 14-23: LEFT-FRONT WHEEL SENSOR INSTALLATION ERROR (0 TO 9 MPH (0 TO 15 KM/H)); DTC 16-23: RIGHT-REAR WHEEL SENSOR INSTALLATION ERROR (0 TO 9 MPH (0 TO 15 KM/H)); DTC 18-23: LEFT-REAR WHEEL SENSOR INSTALLATION ERROR (0 TO 9 MPH (0 TO 15 KM/H))

1. Test-drive the vehicle. Drive the vehicle between 1 mph (1 km/h) and 9 mph (15 km/h) in a straight line.

NOTE: Drive the vehicle on the road, not on the lift.

2. Check the RF, LF, RR, LR WHEEL SPD in the ABS DATA LIST with the HDS.

Are all four the same indicated value?

YES - Intermittent failure, the system is OK at this time. Check for loose terminals between the wheel sensor 2P connector and the ABS modulator-control unit 25P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** .

NO - Go to step 3.

3. Turn the ignition switch to LOCK (0).
4. Check that the appropriate wheel sensor is properly mounted (see **WHEEL SENSOR REPLACEMENT**).

WHEEL SENSOR

DTC	Appropriate Wheel Sensor
12-23	Right-front
14-23	Left-front
16-23	Right-rear
18-23	Left-rear

Is the wheel sensor installation OK?

YES - Replace the appropriate wheel sensor (see **WHEEL SENSOR REPLACEMENT**).

NO - Reinstall the wheel sensor, and check the mounting position (see **WHEEL SENSOR REPLACEMENT**).

DTC 21-11: RIGHT-FRONT MAGNETIC ENCODER MALFUNCTION (PULSE MISSING); DTC 22-11: LEFT-FRONT MAGNETIC ENCODER MALFUNCTION (PULSE MISSING); DTC 23-11: RIGHT-REAR MAGNETIC ENCODER MALFUNCTION (PULSE MISSING); DTC 24-11: LEFT-REAR MAGNETIC ENCODER MALFUNCTION (PULSE MISSING)

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Test-drive the vehicle. Drive the vehicle at 13 mph (20 km/h) or more, and go a distance of 328 ft (100 m) or more.

NOTE: Drive the vehicle on the road, not on the lift.

4. Check for DTCs with the HDS.

Is DTC 21-11,22-11,23-11, and/or 24-11 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose terminals between the wheel sensor 2P connector and the ABS modulator-control unit 25P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** .

5. Turn the ignition switch to LOCK (0).
6. Inspect the appropriate magnetic encoder for debris or cracks.

MAGNETIC ENCODER

DTC	Appropriate Magnetic Encoder	Note
21-11	Right-front	Remove the driveshaft outboard joint from the appropriate wheel hub (see **KNUCKLE/HUB REPLACEMENT**).
22-11	Left-front	
23-11	Right-rear	Remove the hub bearing unit: Disc brake type (see **HUB BEARING UNIT**

24-11	Left-rear	**REPLACEMENT-DISC BRAKE TYPE**), drum brake type (see **HUB BEARING UNIT REPLACEMENT-DRUM BRAKE TYPE**).

Is the magnetic encoder surface OK?

YES - Replace the wheel bearing (front) or the hub bearing unit (rear):

- Front: Replace the front wheel bearing (see **KNUCKLE/HUB REPLACEMENT**).
- Rear (disc brake type): Replace the rear hub bearing unit (see **HUB BEARING UNIT REPLACEMENT-DISC BRAKE TYPE**).
- Rear (drum brake type): Replace the hub bearing unit (see **HUB BEARING UNIT REPLACEMENT-DRUM BRAKE TYPE**).

NO - Clean off dust or dirt from the appropriate magnetic encoder surface on the wheel bearing or the hub bearing unit, then go to step 1 and recheck. If the DTC is still present, replace the appropriate wheel bearing or hub bearing unit.

DTC 31-XX*: ABS RIGHT-FRONT INLET SOLENOID VALVE MALFUNCTION; DTC 32-XX*: ABS RIGHT-FRONT OUTLET SOLENOID VALVE MALFUNCTION; DTC 33-XX*: ABS LEFT-FRONT INLET SOLENOID VALVE MALFUNCTION; DTC 34-XX*: ABS LEFT-FRONT OUTLET SOLENOID VALVE MALFUNCTION; DTC 35-XX*: ABS RIGHT-REAR INLET SOLENOID VALVE MALFUNCTION; DTC 36-XX*: ABS RIGHT-REAR OUTLET SOLENOID VALVE MALFUNCTION; DTC 37-XX*: ABS LEFT-REAR INLET SOLENOID VALVE MALFUNCTION; DTC 38-XX*: ABS LEFT-REAR OUTLET SOLENOID VALVE MALFUNCTION

*:Subcode

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Check for DTCs with the HDS.

SOLENOID VALVE MALFUNCTION

Subcode	Malfunction	Note (DTC)
01	Solenoid Initial Pulse	31-01,32-01,33-01, 34-01,35-01,36-01, 37-01,38-01
21	Solenoid Pulse	31-21,32-21,33-21, 34-21,35-21,36-21, 37-21,38-21
22	Solenoid Speculative	31-22,32-22, 33-22, 34-22,35-22,36-22, 37-22, 38-22
23	Solenoid Stuck ON	31-23, 32-23, 33-23, 34-23, 35-23, 36-23, 37-23, 38-23

Is DTC 31-xx, 32-xx, 33-xx, 34-xx, 35-xx, 36-xx, 37-xx, or 38-xx indicated?

YES - Replace the ABS modulator-control unit: Except Si model (see **REMOVAL - EXCEPT SI MODEL**), Si model (see **REMOVAL - SI MODEL**).

NO - Intermittent failure, the system is OK at this time.

DTC 41-21: RIGHT-FRONT WHEEL LOCK; DTC 42-21: LEFT-FRONT WHEEL LOCK; DTC 43-21: RIGHT-REAR WHEEL LOCK; DTC 44-21: LEFT-REAR WHEEL LOCK

The DTCs may be indicated under these conditions:

- The vehicle goes into a spin.
- The ABS continues to operate for a long time.
- Snow build-up on the wheel sensor.
- Misadjusted brake switch
- Contaminated brake fluid

1. Raise the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
2. Turn the appropriate wheel by hand.

   APPROPRIATE WHEEL

DTC	Appropriate Wheel
41-21	Right-front
42-21	Left-front
43-21	Right-rear
44-21	Left-rear

   Is there brake drag?

   YES - Repair the brake drag.

   NO - Go to step 3.

3. Check that the appropriate wheel sensor is properly mounted (see **WHEEL SENSOR REPLACEMENT**).

   Is the wheel sensor installation OK?

   YES - Intermittent failure, the system is OK at this time. Check for loose terminals between the wheel sensor 2P connector and the ABS modulator-control unit 25P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** . If the vehicle continues to code, replace the ABS modulator-control unit: Except Si model (see **REMOVAL - EXCEPT SI MODEL**), Si model (see **REMOVAL - SI MODEL**).

   NO - Reinstall the wheel sensor, and check the mounting position (see **WHEEL SENSOR REPLACEMENT**).

DTC 51-11: MOTOR LOCK; DTC 51-13: MOTOR RELAY OFF MALFUNCTION

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Wait 5 seconds.
5. Operate each SOLENOID in the ABS FUNCTION TEST five times with the HDS.
6. Check for DTCs with the HDS.

Is DTC 51-11 or 51-13 indicated?

YES - Replace the ABS modulator-control unit: Except Si model (see **REMOVAL - EXCEPT SI MODEL**), Si model (see **REMOVAL - SI MODEL**).

NO - Intermittent failure, the system is OK at this time.

DTC 51-12: MOTOR LOCK CIRCUIT MALFUNCTION

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Check for DTCs with the HDS.

Is DTC 51-12 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose terminals at the ABS modulator-control unit 25P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** .

5. Turn the ignition switch to LOCK (0).
6. Check the No. 3 MTR (30 A) fuse in the under-hood fuse/relay box.

Is the fuse blown?

YES - Go to step 7.

NO - Reinstall the checked fuse, then go to step 9.

7. Disconnect the ABS modulator-control unit 25P connector.
8. Check for continuity between ABS modulator-control unit 25P connector terminal No. 9 and body ground.

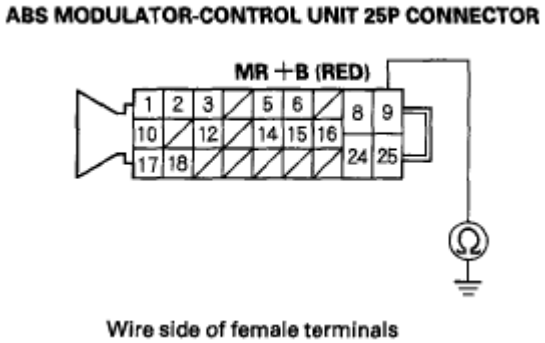

Fig. 20: Checking Continuity Between ABS Modulator-Control Unit 25P Connector Terminal No. 9 And Body Ground

Is there continuity?

YES - Repair short to body ground in the wire between the No. 3 MTR (30 A) fuse in the understood fuse/relay box and the ABS modulator-control unit.

NO - Install a new No. 3 MTR (30 A) fuse in the under-hood fuse/relay box, then go to step 10.

9. Disconnect the ABS modulator-control unit 25P connector.
10. Measure voltage between ABS modulator-control unit 25P connector terminal No. 9 and body ground.

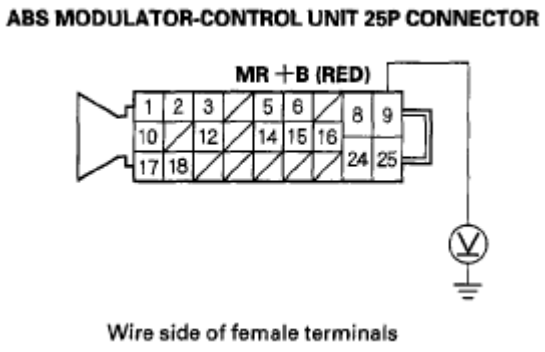

Fig. 21: Measuring Voltage Between ABS Modulator-Control Unit 25P Connector Terminal No. 9 And Body Ground

Is there battery voltage?

YES - Check for loose terminals in the ABS modulator-control unit 25P connector. If necessary, substitute a known-good ABS modulator-control unit: Except Si model (see **REMOVAL - EXCEPT SI MODEL**), Si model (see **REMOVAL - SI MODEL**), and retest.

NO - Repair open in the wire between the No. 3 MTR (30 A) fuse in the under-hood fuse/relay box and the ABS modulator-control unit.

DTC 52-12: MOTOR STUCK OFF

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Operate each SOLENOID in the ABS FUNCTION TEST five times with the HDS.
5. Check for DTCs with the HDS.

Is DTC 52-12 indicated?

YES - Replace the ABS modulator-control unit: Except Si model (see **REMOVAL - EXCEPT SI MODEL**), Si model (see **REMOVAL - SI MODEL**).

NO - Intermittent failure, the system is OK at this time.

DTC 53-01: MOTOR RELAY STUCK ON 1; DTC 53-12: MOTOR RELAY STUCK ON 2

1. Turn the ignition switch ON (II).

2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Check for DTCs with the HDS.

   Is DTC 53-01 or 53-12 indicated?

   YES - Go to step 5.

   NO - Intermittent failure, the system is OK at this time. Check for loose terminals at the ABS modulator-control unit 25P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** .

5. Turn the ignition switch to LOCK (0).
6. Disconnect the ABS modulator-control unit 25P connector.
7. Check for continuity between ABS modulator-control unit 25P connector terminal No. 25 and body ground.

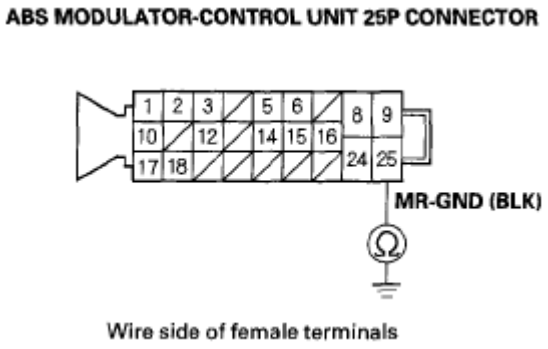

Fig. 22: Checking Continuity Between ABS Modulator-Control Unit 25P Connector Terminal No. 25 And Body Ground

Is there continuity?

YES - Check for loose terminals in the ABS modulator-control unit 25P connector. If necessary, substitute a known-good ABS modulator-control unit: Except Si model (see **REMOVAL - EXCEPT SI MODEL**), Si model (see **REMOVAL - SI MODEL**), and retest.

NO - Repair open in the wire between the ABS modulator-control unit and body ground (G202).

DTC 54-03: FAIL-SAFE RELAY 1 STUCK ON

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Check for DTCs with the HDS.

   Is DTC 54-03 indicated?

   YES - Replace the ABS modulator-control unit: Except Si model (see **REMOVAL - EXCEPT SI**

MODEL), Si model (see **REMOVAL - SI MODEL**).

NO - Intermittent failure, the system is OK at this time.

DTC 54-04: FAIL-SAFE RELAY 1 STUCK OFF (INITIAL); DTC 54-21: FAIL-SAFE RELAY 1 STUCK OFF (MAIN)

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Check for DTCs with the HDS.

   Is DTC 54-04 or 54-21 indicated?

   YES - Go to step 5.

   NO - Intermittent failure, the system is OK at this time. Check for loose terminals at the ABS modulator-control unit 25P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** (see).

5. Turn the ignition switch to LOCK (0).
6. Check the No. 3 FSR (30 A) fuse in the under-hood fuse/relay box.

   Is the fuse blown?

   YES - Go to step 7.

   NO - Reinstall the checked fuse, then go to step 9.

7. Disconnect the ABS modulator-control unit 25P connector.
8. Check for continuity between ABS modulator-control unit 25P connector terminal No. 8 and body ground.

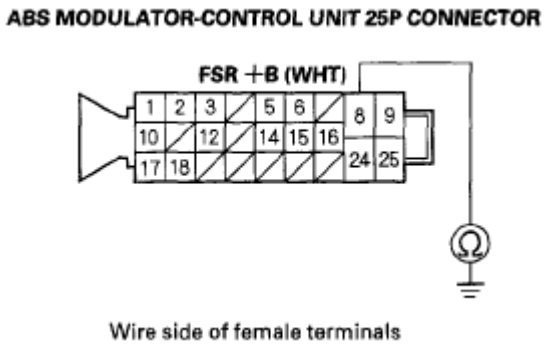

Fig. 23: Checking Continuity Between ABS Modulator-Control Unit 25P Connector Terminal No. 8 And Body Ground

Is there continuity?

YES - Repair short to body ground in the wire between the No. 3 FSR (30 A) fuse in the under-hood

fuse/relay box and the ABS modulator-control unit.

NO - Install a new No. 3 FSR (30 A) fuse in the under-hood fuse/relay box, then go to step 10.

9. Disconnect the ABS modulator-control unit 25P connector.
10. Measure voltage between ABS modulator-control unit 25P connector terminal No. 8 and body ground.

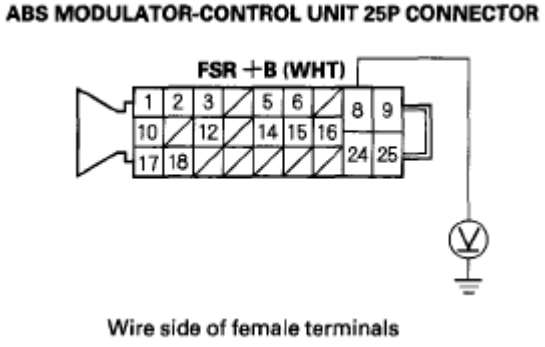

Fig. 24: Measuring Voltage Between ABS Modulator-Control Unit 25P Connector Terminal No. 8 And Body Ground

Is there battery voltage?

YES - Check for loose terminals in the ABS modulator-control unit 25P connector. If necessary, substitute a known-good ABS modulator-control unit: Except Si model (see **REMOVAL - EXCEPT SI MODEL**), Si model (see **REMOVAL - SI MODEL**), and retest.

NO - Repair open in the wire between the No. 3 FSR (30 A) fuse in the under-hood fuse/relay box and the ABS modulator-control unit.

DTC 61-01: MODULATOR-CONTROL UNIT INITIAL IG LOW VOLTAGE; DTC 61-21: MODULATOR-CONTROL UNIT POWER SOURCE LOW VOLTAGE 1; DTC 61-22: MODULATOR-CONTROL UNIT POWER SOURCE LOW VOLTAGE 2; DTC 61-23: MODULATOR-CONTROL UNIT POWER SOURCE LOW VOLTAGE 3

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then start the engine.
4. Check for DTCs with the HDS.

Is DTC 61-01, 61-21, 61-22, or 61-23 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose terminals at the ABS modulator-control unit 25P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** .

5. Check and note BATTERY voltage in the ABS DATA LIST with the HDS. If the voltage listed is 0

V, go to step 8, otherwise go to step 6.

6. Using a voltmeter, measure and note the voltage between the battery terminals.

NOTE: If the voltage is below 9.5 V, check the battery (see BATTERY TEST), and troubleshoot the alternator regulator circuit: Except Si model (see ALTERNATOR AND REGULATOR CIRCUIT TROUBLESHOOTING), Si model (see ALTERNATOR AND REGULATOR CIRCUIT TROUBLESHOOTING).

7. Compare the voltage noted in step 5 to the voltage in step 6.

Is the difference between the two voltage readings less then 3 V?

YES - Intermittent failure, the system is OK at this time. Check for loose terminals at the ABS modulator-control unit 25P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** . If the code resets after clearing, replace the ABS modulator-control unit: Except Si model (see **REMOVAL - EXCEPT SI MODEL**), Si model (see **REMOVAL - SI MODEL**).

NO - Check for loose terminals in the ABS modulator-control unit 25P connector. If necessary, substitute a known-good ABS modulator-control unit: Except Si model (see **REMOVAL - EXCEPT SI MODEL**), Si model (see **REMOVAL - SI MODEL**), and retest.

8. Turn the ignition switch to LOCK (0).
9. Disconnect the ABS modulator-control unit 25P connector.
10. Measure voltage between ABS modulator-control unit 25P connector terminal No. 8 and body ground.

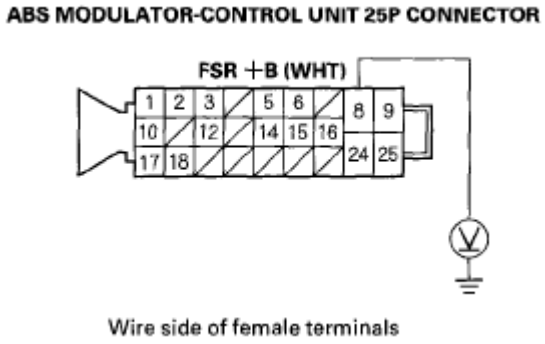

Fig. 25: Measuring Voltage Between ABS Modulator-Control Unit 25P Connector Terminal No. 8 And Body Ground

Is there battery voltage?

YES - Go to step 11.

NO - Repair open in the wire between the No. 3 FSR (30 A) fuse in the under-hood fuse/relay box and the ABS modulator-control unit.

11. Turn the ignition switch ON (II).

12. Measure voltage between ABS modulator-control unit 25P connector terminal No. 16 and body ground.

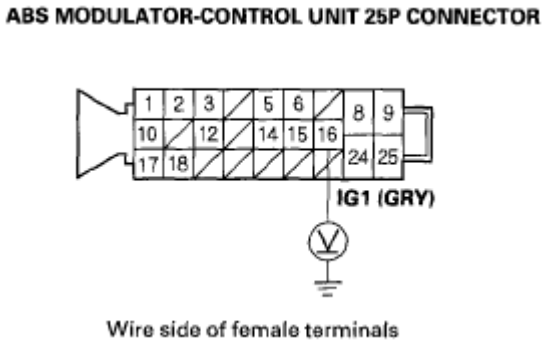

Fig. 26: Measuring Voltage Between ABS Modulator-Control Unit 25P Connector Terminal No. 16 And Body Ground

Is there battery voltage?

YES - Check for loose terminals in the ABS modulator-control unit 25P connector. If necessary, substitute a known-good ABS modulator-control unit: Except Si model (see **REMOVAL - EXCEPT SI MODEL**), Si model (see **REMOVAL - SI MODEL**), and retest.

NO - Repair open in the wire between the No. 4 (7.5 A) fuse in the under-dash fuse/relay box and the ABS modulator-control unit.

DTC 62-21: MODULATOR-CONTROL UNIT IG HIGH VOLTAGE

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then start the engine.
4. Check for DTCs with the HDS.

   Is DTC 62-21 indicated?

   YES - Go to step 5.

   NO - Intermittent failure, the system is OK at this time.

5. Using a voltmeter, measure the voltage between the battery terminals. Compare the voltage measured at the battery with the voltage shown in the ABS DATA LIST with the HDS.

   Is there a voltage difference of 3 V or more?

   YES - Replace the ABS modulator-control unit: Except Si model (see **REMOVAL - EXCEPT SI MODEL**), Si model (see **REMOVAL - SI MODEL**), and retest.

   NO - Check the battery (see **BATTERY TEST**), and troubleshoot the alternator regulator circuit: Except Si model (see **ALTERNATOR AND REGULATOR CIRCUIT TROUBLESHOOTING**), Si model (see **ALTERNATOR AND REGULATOR CIRCUIT TROUBLESHOOTING**). Also

check for loose terminals in the ABS modulator-control unit 25P connector. If it is OK, replace the ABS modulator-control unit: Except Si model (see **REMOVAL - EXCEPT SI MODEL**), Si model (see **REMOVAL - SI MODEL**).

DTC 71-21: RIGHT-FRONT OR LEFT-REAR DIFFERENT DIAMETER TIRE MALFUNCTION;
DTC 71-22: LEFT-FRONT OR RIGHT-REAR DIFFERENT DIAMETER TIRE MALFUNCTION;
DTC 71-23: RIGHT-FRONT AND RIGHT-REAR DIFFERENT DIAMETER TIRE MALFUNCTION;
DTC 71-24: LEFT-FRONT AND LEFT-REAR DIFFERENT DIAMETER TIRE MALFUNCTION;
DTC 71-25: RIGHT-FRONT AND LEFT-FRONT DIFFERENT DIAMETER TIRE MALFUNCTION;
DTC 71-26: RIGHT-REAR AND LEFT-REAR DIFFERENT DIAMETER TIRE MALFUNCTION

NOTE: The DTC will be indicated when the vehicle has a different diameter tire(s) compared to the other tire(s).

DIFFERENT DIAMETER TIRE MALFUNCTION

DTC	Sectional	Note
71-21	Right-front or left-rear	
71-22	Left-front or right-rear	
71-23	Right-front and right-rear	
71-24	Left-front and left-rear	
71-25	Right-front and left-front	
71-26	Right-rear and left-rear	

1. Check the tires for proper inflation (see **WHEEL ALIGNMENT**).
2. Turn the ignition switch ON (II).
3. Clear the DTC with the HDS.
4. Turn the ignition switch to LOCK (0).
5. Test-drive the vehicle.
6. Check for DTCs with the HDS.

Is DTC 71-21, 71-22, 71-23, 71-24, 71-25, or 71-26 indicated?

YES - Replace all four tires with the proper size (see **WHEEL ALIGNMENT**).

NO - Intermittent failure, the system is OK at this time.

DTC 81-XX*: CENTRAL PROCESSING UNIT (CPU) INTERNAL CIRCUIT MALFUNCTION

* : Subcode (Except DTC 81-11, 81-51, and 81-52)

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Check for DTCs with the HDS.

Is DTC 81-xx indicated?

YES - If the DTC 81-11, 81-51, or 81-52 is indicated at the same time, do the DTC 81-11,81-51, or 81-52 troubleshooting (see **DTC 81-xx*: Central Processing Unit (CPU) Internal Circuit Malfunction**). If DTC 81-11, 81-51, or 81-52 is not indicated, replace the ABS modulator-control unit: Except Si model (see **REMOVAL - EXCEPT SI MODEL**), Si model (see **REMOVAL - SI MODEL**), and retest.

NO - Intermittent failure, the system is OK at this time.

DTC 81-11: CENTRAL PROCESSING UNIT (CPU) INTERNAL CIRCUIT MALFUNCTION; DTC 81-51: CENTRAL PROCESSING UNIT (CPU) INTERNAL CIRCUIT MALFUNCTION; DTC 81-52: CENTRAL PROCESSING UNIT (CPU) INTERNAL CIRCUIT MALFUNCTION

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0).
4. Test-drive the vehicle.
5. Check for DTCs with the HDS.

Is DTC 81-11, 81-51, or 81-52 indicated?

YES - Replace the ABS modulator-control unit: Except Si model (see **REMOVAL - EXCEPT SI MODEL**), Si model (see **REMOVAL - SI MODEL**).

NO - Intermittent failure, the system is OK at this time.

DTC 86-01: F-CAN BUS-OFF MALFUNCTION

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Check for DTCs with the HDS.

Is DTC 86-01 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose terminals between ECM/PCM connector A (44P) and the ABS modulator-control unit 25P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** .

5. Turn the ignition switch to LOCK (0).
6. Short the SCS line with the HDS.
7. Disconnect ECM/PCM connector A (44P).
8. Disconnect the HDS from the data link connector (DLC).
9. Disconnect the gauge control module (tach) 36P connector.
10. Disconnect SRS unit connector A (28P).
11. With EPS: Disconnect EPS control unit connector D (28P).

12. With TPMS: Disconnect the TPMS control unit 20P connector.
13. Disconnect the ABS modulator-control unit 25P connector.
14. Check for continuity between the ABS modulator-control unit 25P connector terminals No. 1 and No. 17 and body ground individually.

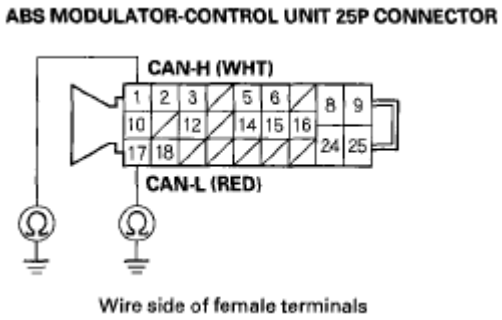

Fig. 27: Checking Continuity Between ABS Modulator-Control Unit 25P Connector Terminals No. 1 And No. 17 And Body Ground

Is there continuity?

YES - Repair short to body ground in the wire between the ECM/PCM, the gauge control module (tach), the data link connector (DLC), the SRS unit, the EPS control unit (if equipped), the TPMS control unit (if equipped), and the ABS modulator-control unit.

NO - Go to step 15.

15. Check for continuity between body ground and the ABS modulator-control unit 25P connector terminals No. 1 and No. 17 individually.

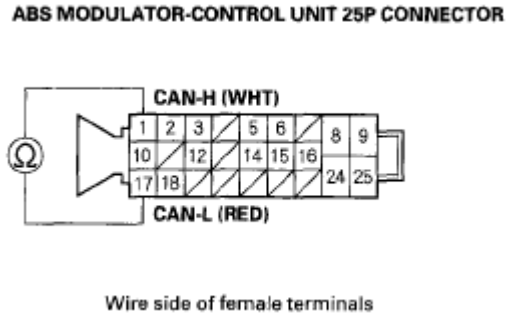

Fig. 28: Checking Continuity Between ABS Modulator-Control Unit 25P Connector Terminals No. 1 And No. 17

Is there continuity?

YES - Repair short in the wires between ABS modulator-control unit 25P connector terminals No. 1 (CAN-H line) and No. 17 (CAN-L line).

NO - Go to step 16.

16. Check for continuity between ABS modulator-control unit 25P connector terminal and ECM/PCM

connector A (44P) terminal (see **ABS MODULATOR-CONTROL UNIT 25P CONNECTOR TERMINAL AND ECM/PCM CONNECTOR A (44P) TERMINAL**).

ABS MODULATOR-CONTROL UNIT 25P CONNECTOR TERMINAL AND ECM/PCM CONNECTOR A (44P) TERMINAL

Sign	Connector Terminal No.	
	ABS Modulator-control Unit	ECM/PCM
CAN-L	17	37
CAN-H	1	36

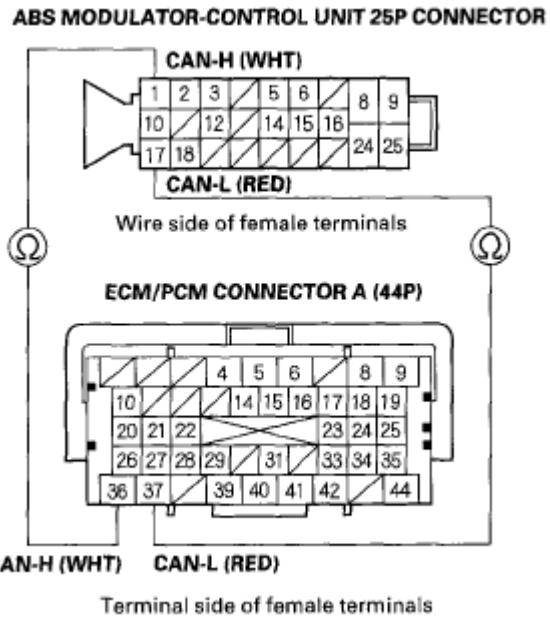

Fig. 29: Checking Continuity Between ABS Modulator-Control Unit 25P Connector Terminal And ECM/PCM Connector A (44P) Terminal

Is there continuity?

YES - Check for loose terminals in the ABS modulator-control unit 25P connector. If necessary, substitute a known-good ABS modulator-control unit: Except Si model (see **REMOVAL - EXCEPT SI MODEL**), Si model (see **REMOVAL - SI MODEL**), and retest.

NO - Repair open in the wire between the ECM/PCM and the ABS modulator-control unit.

DTC 86-24: F-CAN COMMUNICATION WITH ENGINE MALFUNCTION; DTC 86-25: F-CAN COMMUNICATION WITH ENGINE MALFUNCTION

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0).
4. Test-drive the vehicle. Drive the vehicle at 7 mph (10 km/h) or more.
5. Check for DTCs with the HDS.

Is 86-24, and/or 86-25 DTC indicated?

YES - Go to step 6.

NO - Intermittent failure, the system is OK at this time. Check for loose terminals between ECM/PCM connector A (44P) and the ABS modulator-control unit 25P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** .

6. Turn the ignition switch to LOCK (0).
7. Short the SCS line with the HDS.
8. Disconnect ECM/PCM connector A (44P).
9. Disconnect the ABS modulator-control unit 25P connector.
10. Check for continuity between ABS modulator-control unit 25P connector terminal and ECM/PCM connector A (44P) terminal (see **ABS MODULATOR-CONTROL UNIT 25P CONNECTOR TERMINAL AND ECM/PCM CONNECTOR A (44P) TERMINAL**).

ABS MODULATOR-CONTROL UNIT 25P CONNECTOR TERMINAL AND ECM/PCM CONNECTOR A (44P) TERMINAL

Sign	Connector Terminal No.	
	ABS Modulator-control Unit	ECM/PCM
CAN-L	17	37
CAN-H	1	36

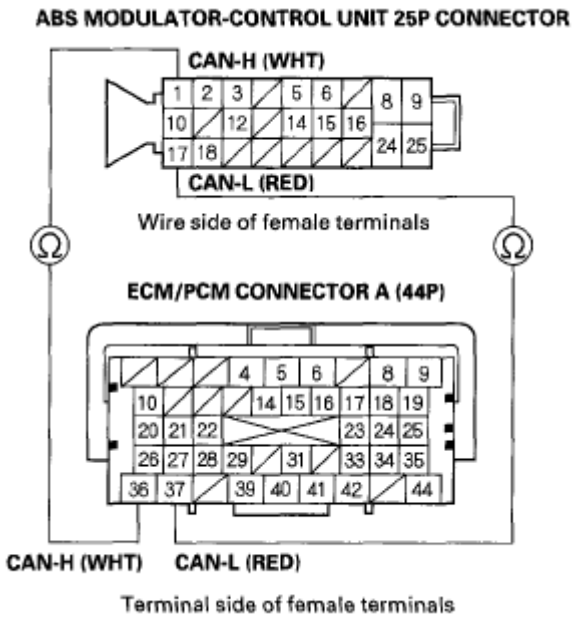

Fig. 30: Checking Continuity Between ABS Modulator-Control Unit 25P Connector Terminal And ECM/PCM Connector A (44P) Terminal

Is there continuity?

YES - Check for loose terminals in ECM/PCM connector A (44P) and at ABS modulator-control unit 25P connector. If necessary, substitute a known-good ECM/PCM, then go to step 1 and recheck. If no DTCs are indicated, replace the original ECM/PCM: Except Si model (see **ECM/PCM REPLACEMENT**), Si model (see **ECM REPLACEMENT**). If DTCs are indicated, replace the ABS modulator-control unit: Except Si model (see **REMOVAL - EXCEPT SI MODEL**), Si model

(see **REMOVAL - SI MODEL**).

NO - Repair open in the wire between the ECM/PCM and the ABS modulator-control unit.

DTC 86-FF: F-CAN COMMUNICATION WITH ABS MALFUNCTION

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Check for DTCs with the HDS.

   Is DTC 86-FF Indicated?

   YES - Replace the ABS modulator-control unit: Except Si model (see **REMOVAL - EXCEPT SI MODEL**), Si model (see **REMOVAL - SI MODEL**).

   NO - Intermittent failure, the system is OK at this time.

SYMPTOM TROUBLESHOOTING

ABS INDICATOR DOES NOT GO OFF, AND NO DTCS ARE STORED

1. Check for the communication between the vehicle and the HDS.

   Is there the communication?

   YES - Check for loose terminals in the gauge control module (tach) 36P connector. If necessary, substitute a known-good gauge control module (tach), then recheck. If it is OK, replace the original gauge control module (tach) (see **TACHOMETER**).

   NO - If the HDS does not communicate with all the systems of the vehicle, troubleshoot the DLC circuit: Except Si model (see **DLC CIRCUIT TROUBLESHOOTING**), Si model (see **DLC CIRCUIT TROUBLESHOOTING**). If the HDS does not communicate with only ABS, go to step 2.

2. Turn the ignition switch to LOCK (0).
3. Check the No. 4 (7.5 A) fuse in the under-dash fuse/relay box.

   Is the fuse blown?

   YES - Install the new No. 4 (7.5 A) fuse, and recheck. If the fuse continues to blow, check for short to body ground in the wire between the No. 4 (7.5 A) fuse in the under-dash fuse/relay box and the ABS modulator-control unit. If necessary, substitute a known-good ABS modulator-control unit: Except Si model (see **REMOVAL - EXCEPT SI MODEL**), Si model (see **REMOVAL - SI MODEL**), and retest.

   NO - Reinstall a checked fuse, then go to step 4.

4. Disconnect the ABS modulator-control unit 25P connector.

5. Turn the ignition switch ON (II).
6. Measure voltage between ABS modulator-control unit 25P connector terminal No. 16 and body ground.

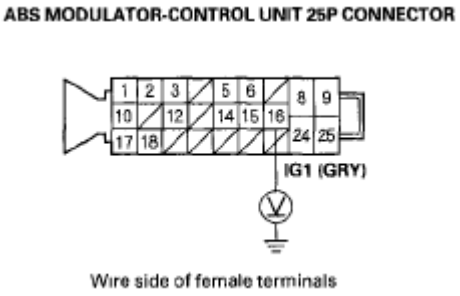

Fig. 31: Measuring Voltage Between ABS Modulator-Control Unit 25P Connector Terminal No. 16 And Body Ground

Is there battery voltage?

YES - Go to step 7.

NO - Repair open in the wire between the No. 4 (7.5 A) fuse in the under-dash fuse/relay box and the ABS modulator-control unit.

7. Turn the ignition switch to LOCK (0).
8. Check for continuity between ABS modulator-control unit 25P connector terminal No. 24 and body ground.

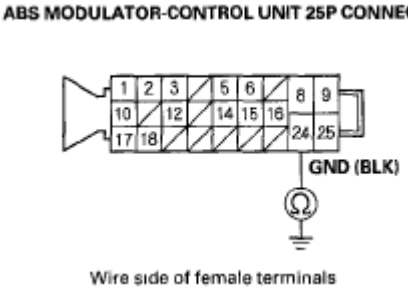

Fig. 32: Checking Continuity Between ABS Modulator-Control Unit 25P Connector Terminal No. 24 And Body Ground

Is there continuity?

YES - Check for loose terminals in the ABS modulator-control unit 25P connector, clean terminal G202 and recheck. If necessary, substitute a known-good ABS modulator-control unit: Except Si model (see **REMOVAL - EXCEPT SI MODEL**), Si model (see **REMOVAL - SI MODEL**), and retest.

NO - Repair open in the wire between the ABS modulator-control unit and body ground (G202).

BRAKE SYSTEM INDICATOR DOES NOT GO OFF, AND NO DTCS ARE STORED

1. Release the parking brake.
2. Turn the ignition switch ON (II).
3. Check the brake system indicator for several seconds when the ignition switch is turned ON (II).

   Does the indicator come on then go off?

   YES - Intermittent failure, the system is OK at this time. Check for loose terminals between the gauge control module (tach) 36P connector and the ABS modulator-control unit 25P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** .

   NO - Go to step 4.

4. Check the BRAKE INDICATOR in the ABS DATA LIST with the HDS.

   Does it indicate OFF?

   YES - Go to step 5.

   NO - Check for loose terminals in the ABS modulator-control unit 25P connector. If necessary, substitute a known-good ABS modulator-control unit: Except Si model (see **REMOVAL - EXCEPT SI MODEL**), Si model (see **REMOVAL - SI MODEL**), and retest.

5. Turn the ignition switch to LOCK (0).
6. Check the brake fluid level in the master cylinder reservoir tank.

   Is brake fluid level OK?

   YES - Go to step 7.

   NO - Do the brake pad inspection: Front (except Si model) (see **INSPECTION - EXCEPT SI MODEL**), front (Si model) (see **INSPECTION - SI MODEL**), rear (disc brake type) (see **REAR BRAKE PAD INSPECTION AND REPLACEMENT**), and add the brake fluid, then go to step 1 and recheck.

7. Disconnect the brake fluid level switch 2P connector.
8. Turn the ignition switch ON (II).

   Does the brake system indicator go off?

   YES - Replace the brake fluid reservoir tank (brake fluid level switch is included) (see **MASTER CYLINDER INSPECTION**).

   NO - Go to step 9.

9. Turn the ignition switch to LOCK (0).
10. Disconnect the gauge control module (tach) 36P connector.
11. Check for continuity between brake fluid level switch 2P connector terminal No. 2 and body ground.

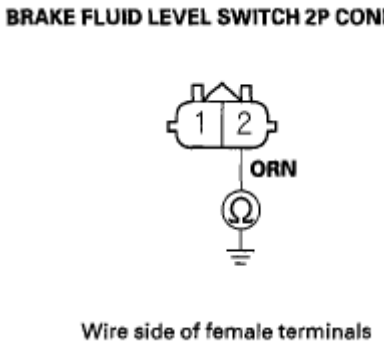

Fig. 33: Checking Continuity Between Brake Fluid Level Switch 2P Connector Terminal No. 2 And Body Ground

Is there continuity?

YES - Repair short to body ground in the wire between the gauge control module (tach) and the brake fluid level switch.

NO - Go to step 12.

12. Reconnect the gauge control module (tach) 36P connector.
13. Disconnect the parking brake switch IP connector.
14. Turn the ignition switch ON (II).

Does the brake system indicator go off?

YES - Replace the parking brake switch (see **PARKING BRAKE CABLE REPLACEMENT**).

NO - Go to step 15.

15. Turn the ignition switch to LOCK (0).
16. Disconnect the gauge control module (tach) 36P connector.
17. Check for continuity between parking brake switch 1P connector terminal No. 1 and body ground.

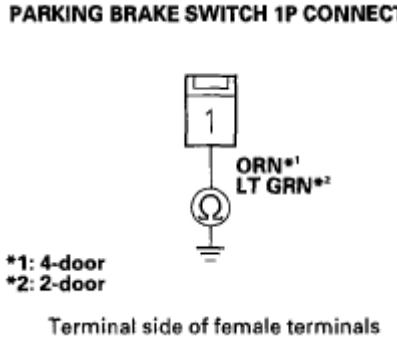

Fig. 34: Checking Continuity Between Brake Fluid Level Switch 2P Connector Terminal No. 1 And Body Ground

Is there continuity?

YES - Repair short to body ground in the wire between the gauge control module (tach) and the parking brake switch.

NO - Check for loose terminals in the gauge control module (tach) 36P connector. If necessary, substitute a known-good gauge control module (tach), then go to step 1 and recheck. If it is OK, replace the original gauge control module (tach) (see **TACHOMETER**).

ABS INDICATOR AND BRAKE SYSTEM INDICATOR DO NOT GO OFF AT THE SAME TIME

NOTE: Check for gauge DTCs with the HDS (see HOW TO CHECK FOR DTCS WITH THE HONDA DIAGNOSTIC SYSTEM (HDS)). If gauge DTCs are stored, troubleshoot those DTCs first.

1. Release the parking brake.
2. Turn the ignition switch ON (II).
3. Check the ABS indicator and the brake system indicator for several seconds when the ignition switch is turned ON (II).

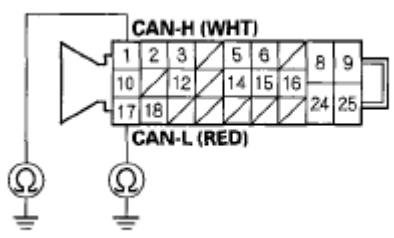
   Do the indicators come on then go off?

   YES - Intermittent failure, the system is OK at this time. Check for loose terminals between the gauge control module (tach) 36P connector and the ABS modulator-control unit 25P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** .

   NO - Go to step 4.

4. Turn the ignition switch to LOCK (0).
5. Short the SCS line with the HDS.
6. Disconnect ECM/PCM connector A (44P).
7. Disconnect the HDS from the data link connector (DLC).
8. Disconnect the gauge control module (tach) 36P connector.
9. Disconnect SRS unit connector A (28P).
10. With EPS: Disconnect EPS control unit connector D (28P).
11. With TPMS: Disconnect the TPMS control unit 20P connector.
12. Disconnect the ABS modulator-control unit 25P connector.
13. Check for continuity between the ABS modulator-control unit 25P connector terminals No. 1, and No. 17 and body ground individually.

ABS MODULATOR-CONTROL UNIT 25P CONNECTOR



Wire side of female terminals

Fig. 35: Checking Continuity Between ABS Modulator-Control Unit 25P Connector Terminals No. 1 & No. 17 And Body Ground

Is there continuity?

YES - Repair short to body ground in the wire between the ECM/PCM, the gauge control module (tach), the data link connector (DLC), the SRS unit, the EPS control unit (if equipped), the TPMS control unit (if equipped), and the ABS modulator-control unit.

NO - Go to step 14.

14. Check for continuity between ABS modulator-control unit 25P connector terminals No. 1 and No. 17.

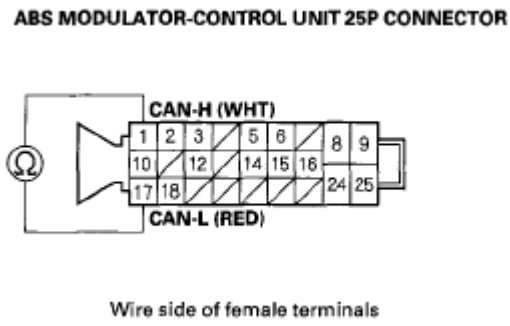


Fig. 36: Checking Continuity Between ABS Modulator-Control Unit 25P Connector Terminals No. 1 And No. 17

Is there continuity?

YES - Repair short in the wire between ABS modulator-control unit 25P connector terminals No. 1 (CAN-H line) and No. 17 (CAN-L line).

NO - Go to step 15.

15. Check for continuity between ABS modulator-control unit 25P connector terminal and gauge control module (tach) 36P connector terminal (see table).

ABS MODULATOR-CONTROL UNIT 25P CONNECTOR TERMINAL AND GAUGE CONTROL MODULE (TACH) 36P CONNECTOR TERMINAL

Sign	Connector Terminal No.	
	ABS Modulator-control Unit	Gauge Control Module (Tach)
CAN-L	17	19
CAN-H	1	1

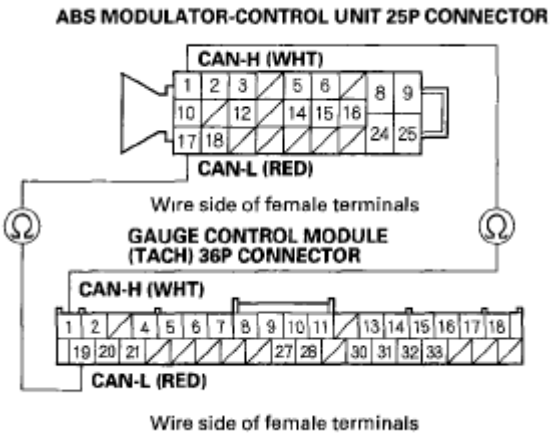

Fig. 37: Checking Continuity Between ABS Modulator-Control Unit 25P Connector Terminal And Gauge Control Module (Tach) 36P Connector Terminal

Is there continuity?

YES - Check for loose terminals in the gauge control module (tach) 36P connector. If necessary, substitute a known-good gauge control module (tach), then go to step 1 and recheck. If it is OK, replace the original gauge control module (tach) (see **TACHOMETER**). If DTCs are indicated, replace the ABS modulator-control unit: Except Si model (see **REMOVAL - EXCEPT SI MODEL**), Si model (see **REMOVAL - SI MODEL**).

NO - Repair open in the wire between the gauge control module (tach) and the ABS modulator-control unit.

ABS MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION

NOTE:

- **Do not spill brake fluid on the vehicle; it may damage the paint; if brake fluid gets on the paint, wash it off immediately with water.**
- **Be careful not to damage or deform the brake lines during removal and installation.**
- **To prevent the brake fluid from flowing, plug and cover the hose ends and joints with a shop towel or equivalent material.**

REMOVAL - EXCEPT SI MODEL

1. Disconnect the ABS modulator-control unit 25P connector (A) by pulling up the lock (B); the connector disconnects itself.

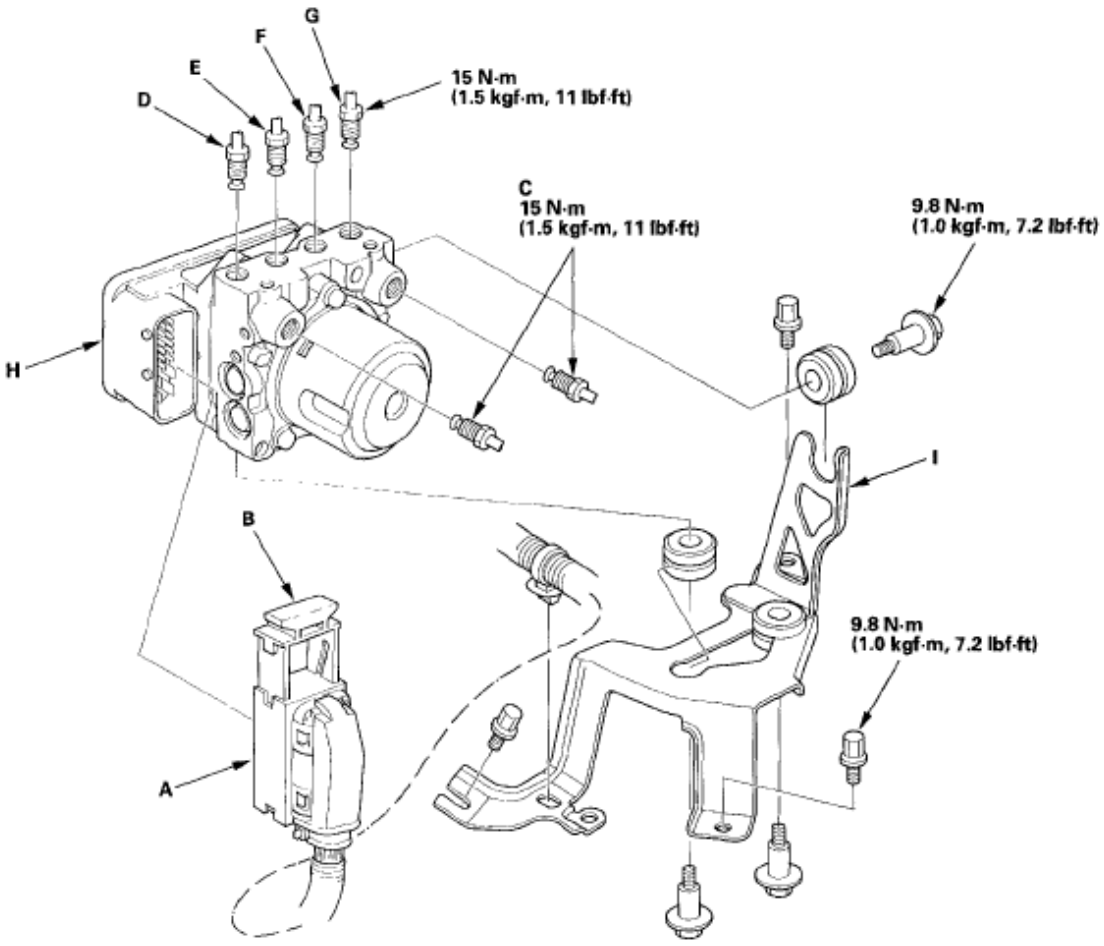

Fig. 38: Removal And Installation Of ABS Modulator-Control Unit (With Specifications)

2. Disconnect the six brake lines from the ABS modulator-control unit.

NOTE: Brake lines are connected to the master cylinder (C) and to the right-front (D), the left-rear (E), the right-rear (F) and the left-front (G) brake system.

3. Remove the ABS modulator-control unit (H) with the bracket (I) from the body.
4. Remove the ABS modulator-control unit from the bracket.

INSTALLATION - EXCEPT SI MODEL

1. Install the ABS modulator-control unit on the bracket.
2. Install the bracket with the ABS modulator-control unit to the body.
3. Reconnect the six brake lines, then tighten the flare nuts to the specified torque.
4. Align the connecting surface of the ABS modulator-control unit 25P connector to the ABS modulator-control unit.
5. Lower the lock of the ABS modulator-control unit 25P connector, then confirm the connector is fully seated.
6. Bleed the brake system (see **BRAKE SYSTEM BLEEDING**).

7. Start the engine, and check that the ABS indicator goes off.
8. Test-drive the vehicle, and check that the ABS indicator does not come on.

NOTE: If the brake pedal is spongy, there may be air trapped in the modulator and then induced into the normal brake system during modulation. Bleed the brake system again (see BRAKE SYSTEM BLEEDING).

REMOVAL - SI MODEL

1. Disconnect the ABS modulator-control unit 25P connector (A) by pulling up the lock (B); the connector disconnects itself.

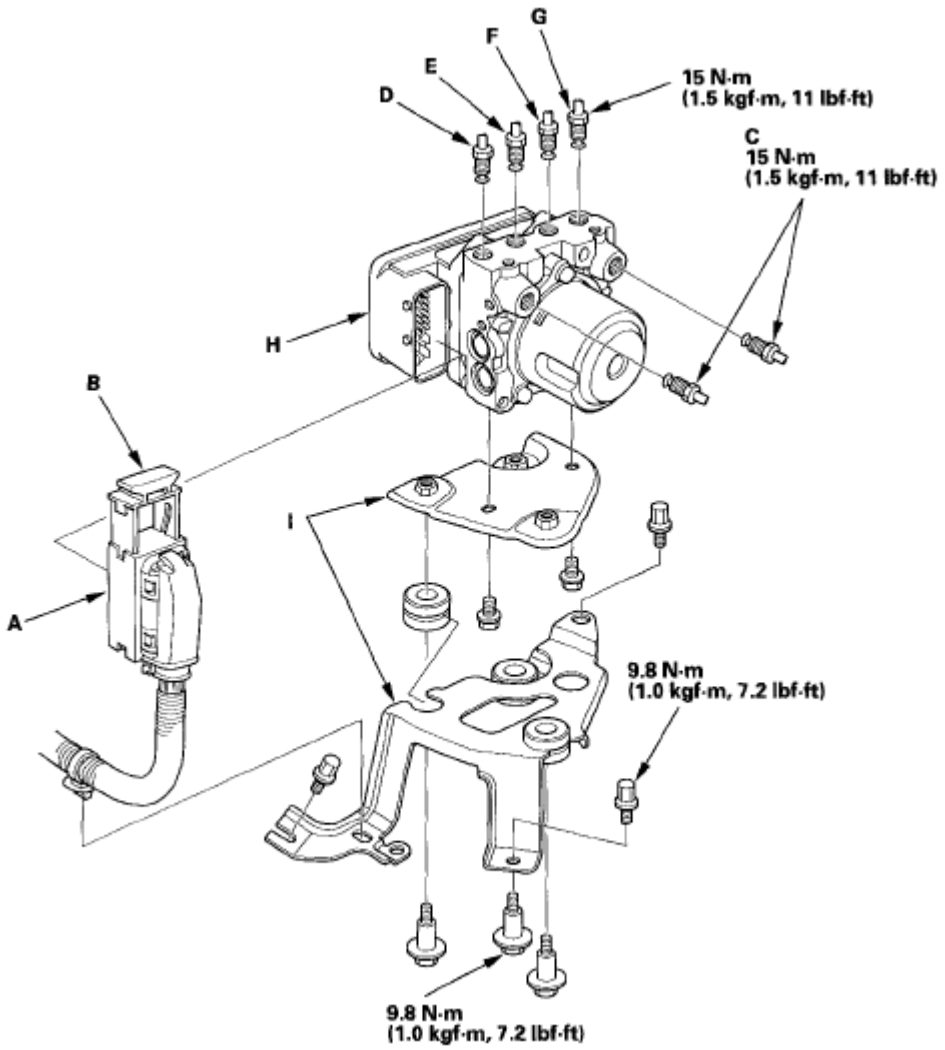

Fig. 39: Disconnecting ABS Modulator-Control Unit 25P Connector (With Specifications)

2. Disconnect the six brake lines from the ABS modulator-control unit.

NOTE: Brake lines are connected to the master cylinder (C) and to the right-front (D), the left-rear (E), the right-rear (F) and the left-front (G) brake system.

3. Remove the ABS modulator-control unit (H) with the brackets (I) from the body.
4. Remove the ABS modulator-control unit from the brackets.
5. Separate the bracket if necessary.

INSTALLATION - SI MODEL

1. Install the ABS modulator-control unit on the brackets.
2. Install the bracket with the ABS modulator-control unit to the body.
3. Reconnect the six brake lines, then tighten the flare nuts to the specified torque.
4. Align the connecting surface of the ABS modulator-control unit 25P connector to the ABS modulator-control unit.
5. Lower the lock of the ABS modulator-control unit 25P connector, then confirm the connector is fully seated.
6. Bleed the brake system (see **BRAKE SYSTEM BLEEDING**).
7. Start the engine, and check that the ABS indicator goes off.
8. Test-drive the vehicle, and check that the ABS indicator does not come on.

NOTE: If the brake pedal is spongy, there may be air trapped in the modulator and then induced into the normal brake system during modulation. Bleed the brake system again (see BRAKE SYSTEM BLEEDING).

WHEEL SENSOR REPLACEMENT

FRONT

1. Release the clamp (A), then disconnect the wheel sensor connector (B).

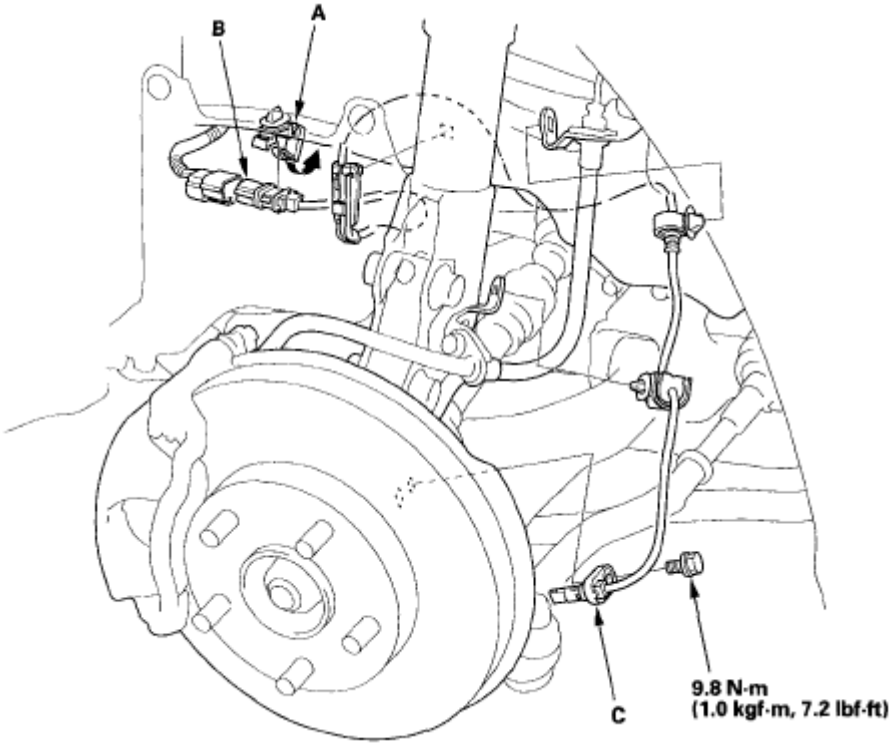

Fig. 40: Disconnecting Wheel Sensor Connector (With Specifications)

2. Remove the clips, the bolt, and the wheel sensor (C).
3. Install the wheel sensor in the reverse order of removal, and note these items:
    - Install the sensor carefully to avoid twisting the wires.
    - If the wheel sensor comes in contact with the wheel bearing, it is faulty.
4. Start the engine, and check that the ABS indicator goes off.
5. Test-drive the vehicle, and check that the ABS indicator does not come on.

REAR

1. Release the clamp (A), then disconnect the wheel sensor connector (B).

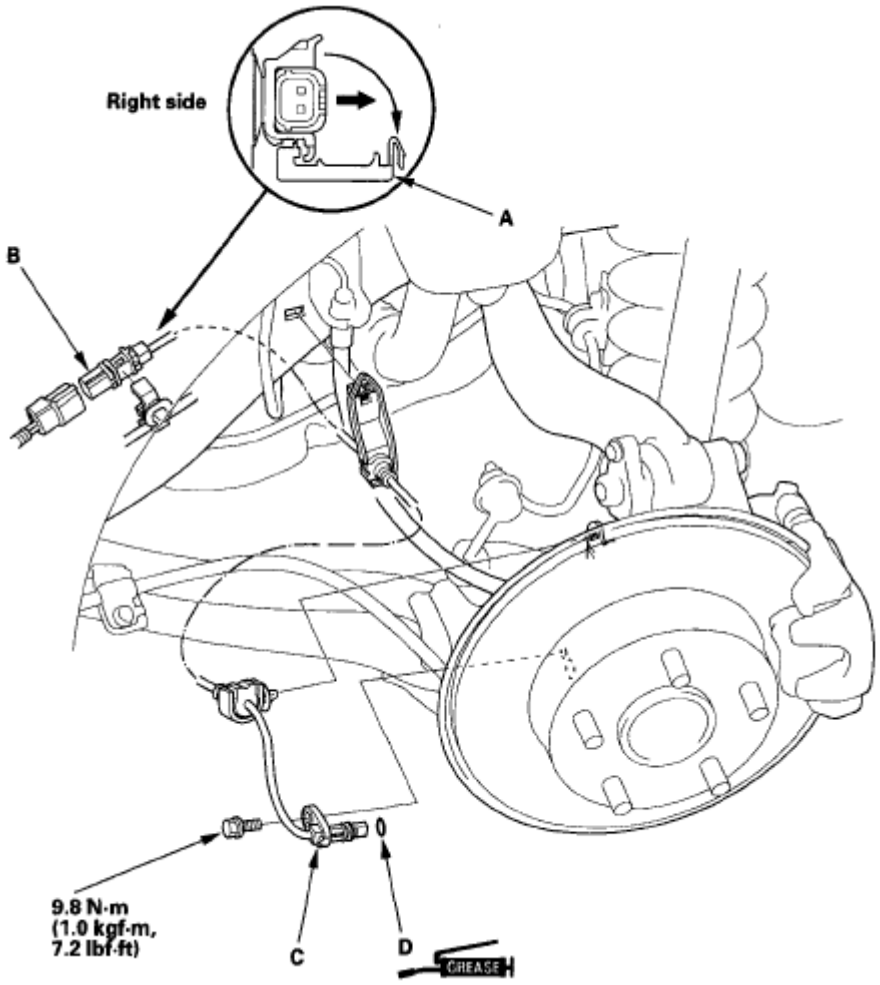

Fig. 41: Disconnecting Wheel Sensor Connector (With Specifications)

2. Remove the clips, the bolt, and the wheel sensor (C).
3. Install the wheel sensor in the reverse order of removal, and note these items:
    - Apply multipurpose grease to the O-ring (D).
    - Install the sensor carefully to avoid twisting the wires.
    - If the wheel sensor comes in contact with the hub bearing unit, it is faulty.
4. Start the engine, and check that the ABS indicator goes off.
5. Test-drive the vehicle, and check that the ABS indicator does not come on.

2006-08 GENERAL INFORMATION

Specifications - Civic (All Except GX & Hybrid)

STANDARDS AND SERVICE LIMITS

ENGINE ELECTRICAL (R18A1 ENGINE)

STANDARDS AND SERVICE LIMITS - ENGINE ELECTRICAL (R18A1 ENGINE)

Item	Measurement	Qualification	Standard or New	Service Limit
Ignition coil	Rated voltage		12V	
	Firing order		1-3-4-2	
Spark plug	Type		NGK:IZFR6K11S DENSO:SKJ20DR-M11S	
	Gap		1.0-1.1 mm (0.039-0.043 in.)	-
Ignition timing	At idle Check the red mark	M/T (in neutral)	8±2° BTDC	
		A/T (in N or P position)	8±2 ° BTDC	
Drive belt	Tension		Auto-tensioner	
Alternator	Output	At 13.5 V and normal engine temperature	90 A	
	Coil (rotor) resistance	At 68°F (20°C)	1.84-2.10 ohms	
	Slip ring O.D.		22.7 mm (0.89 in.)	21.2 mm (0.83 in.)
	Brush length		19.0 mm (0.75 in.)	5.0 mm (0.20 in.)
	Brush spring tension		3.3-4.1 N (0.34-0.42 kgf, 0.75-0.93 lbf)	
Starter	Output		1.0 kW	
	Commutator mica depth	M/T	0.50-0.80 mm (0.020-0.031 in.)	0.2 mm (0.008 in.)
		A/T		
	Commutator runout		0.02 mm (0.001 in.) max.	0.05 mm (0.002 in.)
	Commutator O.D.	M/T	28.0 mm (1.10 in.)	27.0 mm (1.06 in.)
		A/T		
	Brush length	M/T	14.0-14.5 mm (0.55-0.57 in.)	9.0 mm (0.35 in.)
		A/T		
	Brush spring tension		13.7-17.7 N (1.40-1.80 kgf, 3.09-3.97 lbf)	

ENGINE ELECTRICAL (K20Z3 ENGINE)

STANDARDS AND SERVICE LIMITS - ENGINE ELECTRICAL (K20Z3 ENGINE)

Item	Measurement	Qualification	Standard or New	Service Limit

		No. 1 journal, rear shaft	24.000-24.020 mm (0.9449-0.9457 in.)	24.03 mm (0.946 in.)
		No. 2 journal, front and rear shaft	33.021-33.069 mm (1.3000-1.3019 in.)	33.09 mm (1.303 in.)
	Relief valve, oil pressure with oil temperature at 176 °F (80 °C)	At idle	70 kPa (0.7 kgf/cm^2 , 10 psi) min.	
		At 3,000 rpm	300 kPa (3.1 kgf/cm^2 , 44 psi) min.	

COOLING SYSTEM (R18A1 ENGINE)

STANDARDS AND SERVICE LIMITS - COOLING SYSTEM (R18A1 ENGINE)

Item	Measurement	Qualification	Standard or New
Radiator	Coolant capacity (includes engine, heater, hoses, and reservoir) Use Honda Long Life Antifreeze/Coolant Type 2	M/T: engine overhaul	6.5 L (1.72 US gal)
		A/T engine overhaul	6.7 L (1.77 US gal)
		M/T: coolant change	5.2 L (1.37 US gal)
		A/T coolant change	5.3 L (1.40 US gal)
		M/T: engine overhaul	6.5 L (1.72 US gal)
		A/T engine overhaul	7.1 L (1.88 US gal)
		M/T: coolant change	5.2 L (1.37 US gal)

		A/T: coolant change	5.5 L (1.45 US gal)
Reservoir	Coolant capacity		0.4 L (0.11 US gal)
Radiator cap	Opening pressure		93-123 kPa (0.95-1.25 kgf/cm^2 , 14-18 psi)
Thermostat	Opening temperature	Begins to open	176-183°F (80-84°C)
		Fully open	203°F (951)
	Valve lift at fully open		8.0 mm (0.31 in.) min.

COOLING SYSTEM (K20Z3 ENGINE)

STANDARDS AND SERVICE LIMITS - COOLING SYSTEM (K20Z3 ENGINE)

Item	Measurement	Qualification	Standard or New
Radiator	Coolant capacities (including engine, heater, hoses, and reservoir) Use Honda Long Life Antifreeze/Coolant Type 2	Engine overhaul	6.8 L (1.80 US gal)
		Coolant change	4.5 L (1.19 US gal)
Reservoir	Coolant capacity		0.4 L (0.11 US gal)
Radiator cap	Opening pressure		93-123 kPa (0.95-1.25 kgf/cm^2 , 14-18 psi)
Thermostat	Opening temperature	Begins to open	169-176°F (76-80°C)
		Fully open	194°F (90°C)
	Valve lift at fully open		8.0 mm (0.31 in.)

FUEL AND EMISSIONS (R18A1)

STANDARDS AND SERVICE LIMITS - FUEL AND EMISSIONS

Item	Measurement	Qualification	Standard or New
Fuel pressure regulator	Pressure with fuel pressure gauge connected		380-430 kPa (3.9-4.4 kgf/cm^2 , 55-63 psi)
Fuel tank	Capacity		50 L (13.2 US gal)
Engine idle (USA models)	Idle speed without load	A/T (in N or P position), M/T (in neutral)	670 50 rpm
	Idle speed with high electrical load (A/C switch ON, temperature set to max cool, blower fan on High, rear window defogger ON, and headlights on high beam)	A/T (in N or P position), M/T (in neutral)	710 50 rpm
Engine idle (Canada models)	Idle speed without load	A/T (in N or P position), M/T (in neutral)	750 50 rpm
	Idle speed with high electrical load (A/C switch ON, temperature set to max cool, blower fan on High, rear window	A/T (in N or P position), M/T (in neutral)	750 50 rpm

	defogger ON, and headlights on high beam)		

FUEL AND EMISSIONS (K20Z3)

STANDARDS AND SERVICE LIMITS - FUEL AND EMISSIONS

Item	Measurement	Qualification	Standard or New
Fuel pressure regulator	Pressure with fuel pressure gauge connected	K20Z3 engine	330-380 kPa (3.4-3.9 kgf/cm^2 , 48-55 psi)
Fuel tank	Capacity		50 L (13.2 US gal)
Engine idle	Idle speed without load	In neutral	750 50 rpm
	Idle speed with high electrical load (A/C switch ON, temperature set to max cool, blower fan on High, rear window defogger ON, and headlights on high beam)	In neutral	750 50 rpm

CLUTCH

STANDARDS AND SERVICE LIMITS - CLUTCH

Item	Measurement	Qualification	Standard or New	Service Limit
Clutch pedal	Height from the floor		157 mm (6.18 in.)	-
	Stroke		130-140 mm (5.12-5.51 in.)	-
	Play		10-18 mm (0.39-0.71 in.)	-
	Disengagement height from the floor		77 mm (3.03 in.) min.	-
Flywheel	Runout on clutch mating surface		0.05 mm (0.002 in.) max.	0.15 mm (0.006 in.)
Clutch disc	Rivet head depth	5M/T model	1.35-1.95 mm (0.053-0.077 in.)	0.2 mm (0.01 in.)
		6M/T model	1.65-2.25 mm (0.065-0.089 in.)	0.7 mm (0.03 in.)
	Thickness	5M/T model	7.8-8.4 mm (0.30-0.33 in.)	6.0 mm (0.24 in.)
		6M/T model	8.3-8.9 mm (0.33-0.35 in.)	6.0 mm (0.24 in.)
Pressure plate	Warpage		0.03 mm (0.001 in.) max.	0.15 mm (0.006 in.)
	Height if diaphragm spring fingers	Measured with clutch alignment disc, clutch alignment shaft, remover handle, and	0.6 mm (0.02 in.) max.	0.8 mm (0.03 in.)

		feeler gauge		

MANUAL TRANSMISSION AND M/T DIFFERENTIAL (5-SPEED)

STANDARDS AND SERVICE LIMITS - MANUAL TRANSMISSION AND M/T DIFFERENTIAL (5-SPEED)

80 mm shim	80 mm shim-to-bearing outer race clearance in transmission housing		0-0.10 mm (0-0.004 in.)	Adjust

AUTOMATIC TRANSMISSION AND A/T DIFFERENTIAL

STANDARDS AND SERVICE LIMITS - AUTOMATIC TRANSMISSION AND A/T DIFFERENTIAL (1 OF 3)

Item	Measurement	Qualification	Standard or New	Service Limit
Automatic transmission fluid	Capacity Use Honda ATF-Z1	Fluid change	2.4 L (2.5 US qt)	
		Overhaul	5.9 L (6.2 US qt)	
ATF pressure	Line pressure	At 2,000 rpm in P or N position	900-960 kPa (9.2-9.8 kgf/cm^2 , 130-140 psi)	850 kPa (8.7 kgf/cm^2 , 120 psi)
	1st clutch pressure	At 2,000 rpm in 1 position	890-970 kPa (9.1-9.9 kgf/cm^2 , 130-140 psi)	840 kPa (8.6 kgf/cm^2 , 120 psi)
	2nd clutch pressure	At 2,000 rpm in 2 position	890-970 kPa (9.1-9.9 kgf/cm^2 , 130-140 psi)	840 kPa (8.6 kgf/cm^2 , 120 psi)
	3rd clutch pressure	At 2,000 rpm in 3rd gear in D3 position	890-970 kPa (9.1-9.9 kgf/cm^2 , 130-140 psi)	840 kPa (8.6 kgf/cm^2 , 120 psi)

	4th clutch pressure	At 2,000 rpm in 4th gear in D position	890-970 kPa (9.1-9.9 kgf/cm^2 , 130-140 psi)	840 kPa (8.6 kgf/cm^2 , 120 psi)
	5th clutch pressure	At 2,000 rpm in 5th gear in D position	890-970 kPa (9.1-9.9 kgf/cm^2 , 130-140 psi)	840 kPa (8.6 kgf/cm^2 , 120 psi)
Torque converter	Stall speed Check with vehicle on level ground		2,670 rpm	2,520-2,820 rpm
Clutch	Clutch end-plate-to-top disc clearance	1st	1.62-1.82 mm (0.064-0.072 in.)	-
		2nd and 4th	0.7-0.9 mm (0.028-0.035 in.)	-
		3rd and 5th	0.93-1.13 mm (0.037-0.044 in.)	-
	Clutch return spring free length	1st	36.0 mm (1.42 in.)	34.5 mm (1.36 in.)
		2nd and 4th	39.4 mm (1.55 in.)	37.4 mm (1.47 in.)
		3rd and 5th	45.15 mm (1.778 in.)	43.0 mm (1.69 in.)
	Clutch disc thickness	1st, 3rd, and 5th	1.94 mm (0.076 in.)	-
		2nd and 4th	1.96 mm (0.077 in.)	-
	Clutch plate thickness	1st, 3rd, 4th, and 5th	1.6 mm (0.063 in.)	When discolored
		2nd	2.0 mm (0.079 in.)	When discolored
	Clutch waved-plate height 1st, 3rd, and 5th clutches		0.07-0.20 mm (0.003-0.008 in.)	0.05 mm (0.002 in.)
	1st, 3rd, and 5th clutch end-plate thickness	Markl	2.1 mm (0.082 in.)	When discolored
		Mark 2	2.2 mm (0.086 in.)	When discolored
		Mark 3	2.3 mm (0.090 in.)	When discolored
		Mark 4	2.4 mm (0.094 in.)	When discolored
		Mark 5	2.5 mm (0.098 in.)	When discolored

	Final reduction	Type	Single helical gear
		Gear ratio	4.765
AUTOMATIC TRANSMISSION	Type		Electronically controlled automatic, 5-speed forward, 1 reverse, 3-element torque converter with lock-up clutch
	Primary reduction		Direct 1:1
	Gear ratio	1st	2.666
		2nd	1.534
		3rd	1.021
		4th	0.720
		5th	0.524
		Reverse	1.956
	Final reduction	Type	Single helical gear
		Gear ratio	4.437
STEERING (EPS)	Type		Rack and pinion with electrical power-assisted
	Overall ratio		13.62
	Turns, lock-to-lock		2.65

	Steering wheel diameter		360 mm (14.0 in.)
STEERING (Power Steering)	Type		Hydraulic power assisted rack and pinion
	Overall ratio		13.73
	Turns, lock-to-lock		2.67
	Steering wheel diameter		360 mm (14.0 in.)
SUSPENSION	Type	Front	Independent strut with stabilizer, coil spring
		Rear	Independent double wishbone with stabilizer, coil spring
	Shock absorber	Front and rear	Telescopic, hydraulic, nitrogen gas-filled
TIRES	Size of front and rear	DX, DX-G	P195/65+R 15 89H
		EX, LX	P205/55R16 89H
		Si	P215/45R17 89V or 215/45ZR17 91W
	Size of spare	Except Si	T125/70D15 95M
		Si (ABS model)	T125/70D16 96M
		Si (VSA model)	T135/80D16 101M
WHEEL ALIGNMENT	Camber	Front	0° 00'
		Rear (without "C" marks on the rear upper arm)	-1° 30'
		Rear (with "C" marks on the rear upper arm)	-0° 45'
	Caster	Front	7° 00'
	Total toe-in	Front	0 mm (0 in.)
		Rear	2 mm (0.08 in.)
	Front wheel turning angle (DX, DX-G)	Inward	40° 06'
		Outward (reference)	31° 55'
	Front wheel turning angle (except DX, DX-G)	Inward	38° 46'
		Outward (reference)	31° 14'
BRAKES	Type of service brake	Front	Power-assisted self-adjusting ventilated disc
		Rear (disc)	Power-assisted self-adjusting solid disc
		Rear (drum)	Power-assisted self-adjusting solid drum
	Type of parking brake		Mechanical actuating, rear wheels
	Pad friction surface area	Front (except Si)	37.5 cm^2 (5.81 sq in.) x 2
		Front (Si)	33.8 cm^2 (5.24 sq in.) x

			2
		Rear	20.6 cm^2 (3.19 sq in.) x 2
	Shoe friction surface area	Rear	57.6 cm^2 (8.93 sq in.) x 2
AIR CONDITIONING	Compressor	Type	Scroll
		Capacity	77.1 mL (4.7 cu in.)/rev.
		Maximum speed	10,000 rpm
		Lubricant capacity	75 mL (2 1/2 fl-oz)
		Lubricant type	SP-10
	Condenser	Type	Corrugated fin
	Evaporator	Type	Corrugated fin
	Blower	Type	Stabilized swirling flow
		Motor type	220 W/12V
		Speed control	Infinite variable
		Maximum capacity	470 m^3 (16.571 cu ft)/h
	Temperature control		Air-mix type
	Compressor clutch	Type	Dry, single plate, poly V-belt drive
		Electrical power consumption at 68 °F (20 ° F)	42 W maximum at 12 V
	Refrigerant	Type	HFC-134a (R-134a)
		Capacity	400-450 g (14.1-15.8 oz)
ELECTRICAL RATINGS	Battery	R18A1 engine, USA models	12V-45 Ah/20 HR (12 V-36 Ah/5 HR)
		K20Z3 engine, Canada models	12 V-47 Ah/20 HR (12 V-38 Ah/5HR)
	Fuses	Under-hood fuse/relay box	100 A, 80 A,70 A, 50 A, 40 A, 30 A, 20 A, 15 A, 10A, 7.5 A
		Under-dash fuse/relay box	30 A, 20 A, 15 A, 10 A, 7.5 A
	Light bulbs	Headlight high beam	12V-60W
		Headlight low beam	12V-51W
		Front side marker/parking/turn signal lights	2-door: 12V-28/5W (two filaments) Amber color 4-door: 12V-21/5W (two filaments) Amber color
		Rear turn signal lights	12V-21W Amber color
		Brake/Taillights	12V-21/5W (two filaments)
		Inner taillights	12V-5W (4-door)
		Rear side marker light	12V-5W
		High mount brake light	12V-21W (Except Si)

			12V-LED (Si)
		Back-up lights	12V-21W
		License plate light	2-door: 12V-3 CP 4-door: 12V-5W
		Ceiling lights	12V-5W
		Individual map light	12V-8W
		Trunk light	12V-5W
		Gauge lights	12V-LED (non-replaceable)
		Indicator lights	12V-LED, 14V-0.56W, 0.84 W
	Washer reservoir	Capacity (USA models)	2.5 L (2.6 US qt)
		Capacity (Canada models)	4.5 L (4.8 US qt)

2006-08 BRAKES

VSA System - Civic (All Except Hybrid)

COMPONENT LOCATION INDEX

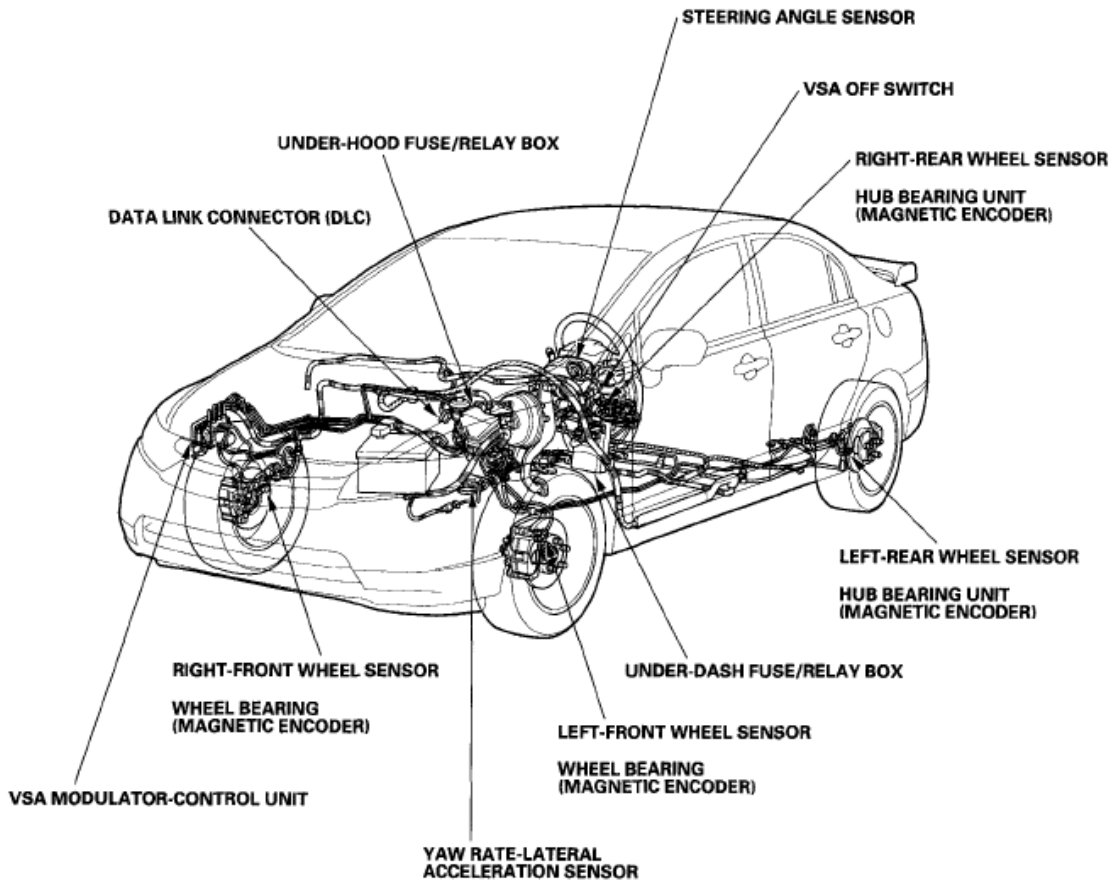

Fig. 1: Locating VSA System Components

GENERAL TROUBLESHOOTING INFORMATION

SYSTEM INDICATOR

This system has four indicators:

- ABS indicator (A)
- Brake system indicator (B)
- VSA indicator (C)
- VSA activation indicator (D)

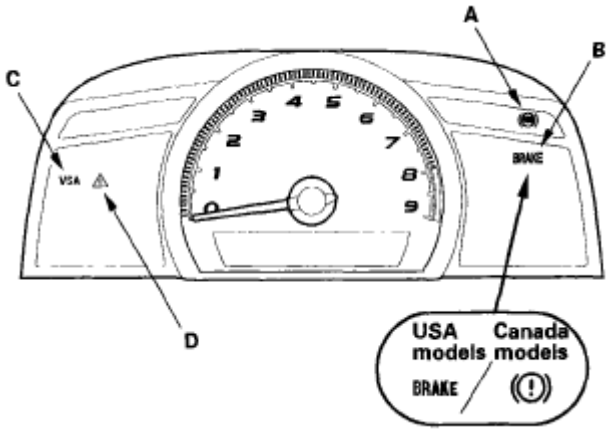

Fig. 2: Identifying System Indicator

When the system is OK, each indicator comes on for about 2 seconds after turning the ignition switch ON (II), then goes off.

When the system detects a problem, a DTC will be set and, depending upon the failure, the VSA modulator-control unit will determine which indicator(s) will be turned on. If the problem goes away (system returns to normal), the indicator(s) will be controlled in the following way depending upon the DTC that was set:

- The indicator(s) will come on and stay on when the ignition switch is ON (II).
- The indicator(s) will automatically go off.
- The indicator(s) will go off after the vehicle is driven.

ABS Indicator

The ABS indicator comes on when the ABS function is lost. The brakes still work like a conventional system.

Brake System indicator

The brake system indicator comes on when the EBD function is lost, the parking brake is applied, and/or the brake fluid level is low.

NOTE: If two or more wheel speed sensors fail, the brake system indicator will come on.

VSA Indicator

The VSA indicator comes on when the VSA function is lost.

VSA Activation Indicator

The VSA activation indicator blinks when the VSA function is activating. The VSA activation indicator comes on, when the VSA is off, or the VSA function is lost.

DIAGNOSTIC TROUBLE CODE (DTC)

- The memory can hold all DTCs. However, when the same DTC is detected more than once, the more recent DTC is written over the earlier one. Therefore, when the same problem is detected repeatedly, it is memorized as a single DTC.
- The DTCs are indicated in the order they occur.
- The DTCs are memorized in the EEPROM. Therefore, the memorized DTCs cannot be canceled by disconnecting the battery. Do the specified procedures to clear the DTCs.

SELF-DIAGNOSIS

- Self-diagnosis can be classified into two categories:
  - Initial diagnosis: Done right after the ignition switch is turned ON (II) and until the ABS and VSA indicators go off.
  - Regular diagnosis: Done right after the initial diagnosis until the ignition switch is turned OFF.
- When the system detects a problem, the VSA modulator-control unit shifts to fail-safe mode.

KICKBACK

The pump motor operates when the VSA modulator-control unit is functioning, and the fluid in the reservoir is forced out to the master cylinder, causing kickback at the brake pedal.

PUMP MOTOR

- The pump motor operates when the VSA modulator-control unit is functioning.
- The VSA modulator-control unit checks the pump motor operation during regular diagnosis when the vehicle is driven over 10 mph (15 km/h) the first time after the ignition switch is turned ON (II). You may hear the motor operate at this time, but it is normal.

BRAKE FLUID REPLACEMENT/AIR BLEEDING

Brake fluid replacement and air bleeding procedures are identical to the procedures used on vehicles without VSA system (see **BRAKE SYSTEM BLEEDING**).

HOW TO TROUBLESHOOT DTCS

The troubleshooting procedures assume that the cause of the problem is still present and the ABS and/or VSA indicator is still on. Following a troubleshooting procedure for a code that has been cleared and does not reset can result in incorrect diagnosis.

1. Question the customer about the conditions when the problem occurred, and try to reproduce the same conditions for troubleshooting. Find out when the ABS and/or VSA indicator came on, such as during VSA system operation, after VSA system operation, when vehicle was traveling at a certain speed, etc.
2. When the ABS or VSA indicator does not come on during the test-drive, but troubleshooting is done based on the DTC, check for loose connectors, poor contact of the terminals, etc. before you start troubleshooting.
3. After troubleshooting, or repairs are done, clear the DTCs, and test-drive the vehicle under the same conditions that originally set the DTCs. Make sure the ABS and VSA indicators do not come on.
4. Check for other unit DTCs which are connected via F-CAN, if there are DTCs that are related to F-

CAN, the most likely cause was that the ignition switch was turned ON (II) with the VSA modulator-control unit connector disconnected. Clear the DTCs. Check for PGM-FI and VSA codes, and troubleshoot those first.

INTERMITTENT FAILURES

The term "intermittent failure" means a system may have had a failure, but it checks OK now. If the indicator(s) of the system does not come on, check for poor connections or loose pins at all connectors related to the circuit that you are troubleshooting. If the indicators were on but then went out, the original problem may have been intermittent.

HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)

1. If the system indicators stay on, connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

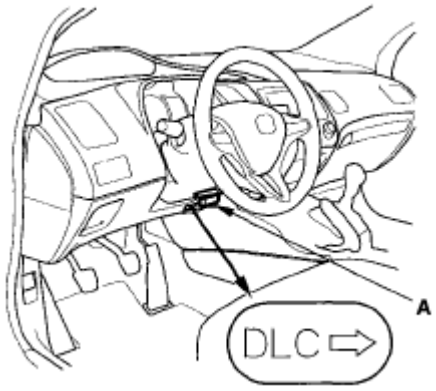

Fig. 3: Identifying DLC Connector

2. Turn the ignition switch ON (II).
3. Make sure the HDS communicates with the vehicle and the VSA modulator-control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Check the diagnostic trouble code (DTC) and note it. Also check the on board snapshot data, and download any data found. Then refer to the indicated DTC's troubleshooting, and begin the appropriate troubleshooting procedure.

NOTE:

- **The HDS communication will be stopped when the vehicle speed is at 31 mph (50 km/h) or more.**
- **The HDS can read the DTC, current data, and other system data.**
- **For specific operations, refer to the Help menu that came with the HDS.**

HOW TO RETRIEVE DTCS

1. With the ignition switch to LOCK (0), connect the HDS to the data link connector (DLC) under the driver's side of the dashboard.
2. Turn the ignition switch ON (II).
3. Make sure the HDS communicates with the vehicle and the VSA modulator-control unit. If it doesn't

troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).

4. Follow the prompts on the HDS to display the DTC(s) on the screen. After determining the DTC, refer to the **DTC TROUBLESHOOTING**.
5. Turn the ignition switch to LOCK (0).

HOW TO CLEAR DTCS

1. With the ignition switch to LOCK (0), connect the HDS to the data link connector (DLC) under the driver's side of the dashboard.
2. Turn the ignition switch ON (II).
3. Make sure the HDS communicates with the vehicle and the VSA modulator-control unit. If it doesn't troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Clear the DTC(s) by following the screen prompts on the HDS.
5. Turn the ignition switch to LOCK (0).

DTC TROUBLESHOOTING INDEX

DTC TROUBLESHOOTING INDEX

DTC		Detection Item	ABS Indicator	Brake System Indicator	VSA Indicator	VSA Activation Indicator
11	-13	Right-front wheel speed sensor circuit malfunction	ON	ON/OFF(1)	ON	ON
12	-11	Right-front wheel speed sensor electrical noise or intermittent interruption	ON	ON/OFF(1)	ON	ON
	-12	Right-front wheel speed sensor short to the other sensor circuit	ON	ON/OFF(1)	ON	ON

(1) Brake system indicator turns ON when two or more wheel speed sensors fail.

SYMPTOM TROUBLESHOOTING INDEX

When the vehicle has one of these symptoms, check for a diagnostic trouble code (DTC) with the HDS. If there is no DTC, do the diagnostic procedure for the symptom, in the sequence listed, until you find the cause.

SYMPTOM TROUBLESHOOTING INDEX

Symptom	Diagnostic procedure
HDS does not communicate with the VSA modulator-control unit or the vehicle	Troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
ABS indicator does not come on	1. Do the gauge control module troubleshooting (see **SELF-DIAGNOSTIC FUNCTION**). 2. Substitute a known-good VSA modulator-control unit, then recheck. If it is OK, replace the original VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).
ABS indicator or VSA indicator does not go off,	1. Symptom Troubleshooting (see **SYMPTOM TROUBLESHOOTING**). 2. Do the gauge control module troubleshooting (see **SELF-**

and no DTCs are stored	**DIAGNOSTIC FUNCTION**).
Brake system indicator does not come on	1. Do the gauge control module troubleshooting (see **SELF-DIAGNOSTIC FUNCTION**). 2. Substitute a known-good VSA modulator-control unit, then recheck. If it is OK, replace the original VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).
Brake system indicator does not go off, and no DTCs are stored	1. Symptom Troubleshooting (see **SYMPTOM TROUBLESHOOTING**). 2. Do the gauge control module troubleshooting (see **SELF-DIAGNOSTIC FUNCTION**).
VSA indicator does not come on	1. Do the gauge control module troubleshooting (see **SELF-DIAGNOSTIC FUNCTION**). 2. Substitute a known-good VSA modulator-control unit, then recheck. If it is OK, replace the original VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).
VSA activation indicator does not come on at start-up (bulb check)	1. Do the gauge control module troubleshooting (see **SELF-DIAGNOSTIC FUNCTION**). 2. Substitute a known-good VSA modulator-control unit, then recheck. If it is OK, replace the original VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).
VSA activation indicator does not go off, and no DTCs are stored	1. Symptom Troubleshooting (see **SYMPTOM TROUBLESHOOTING**). 2. Do the gauge control module troubleshooting (see **SELF-DIAGNOSTIC FUNCTION**). 3. Substitute a known-good VSA modulator-control unit, then recheck. If it is OK, replace the original VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).
ABS indicator, brake system indicator, and VSA indicator do not go off at same time	1. Symptom Troubleshooting (see **SYMPTOM TROUBLESHOOTING**). 2. Do the gauge control module troubleshooting (see **SELF-DIAGNOSTIC FUNCTION**).

System Outline

This system is composed of the VSA modulator-control unit, the wheel speed sensor, the steering angle sensor, and the yaw rate-lateral acceleration sensor, and the system indicators in the gauge control module (tach). The VSA modulator-control unit controls the ABS, EBD, TCS, VSA, and brake assist with the brake pressure of each wheel and the engine torque.

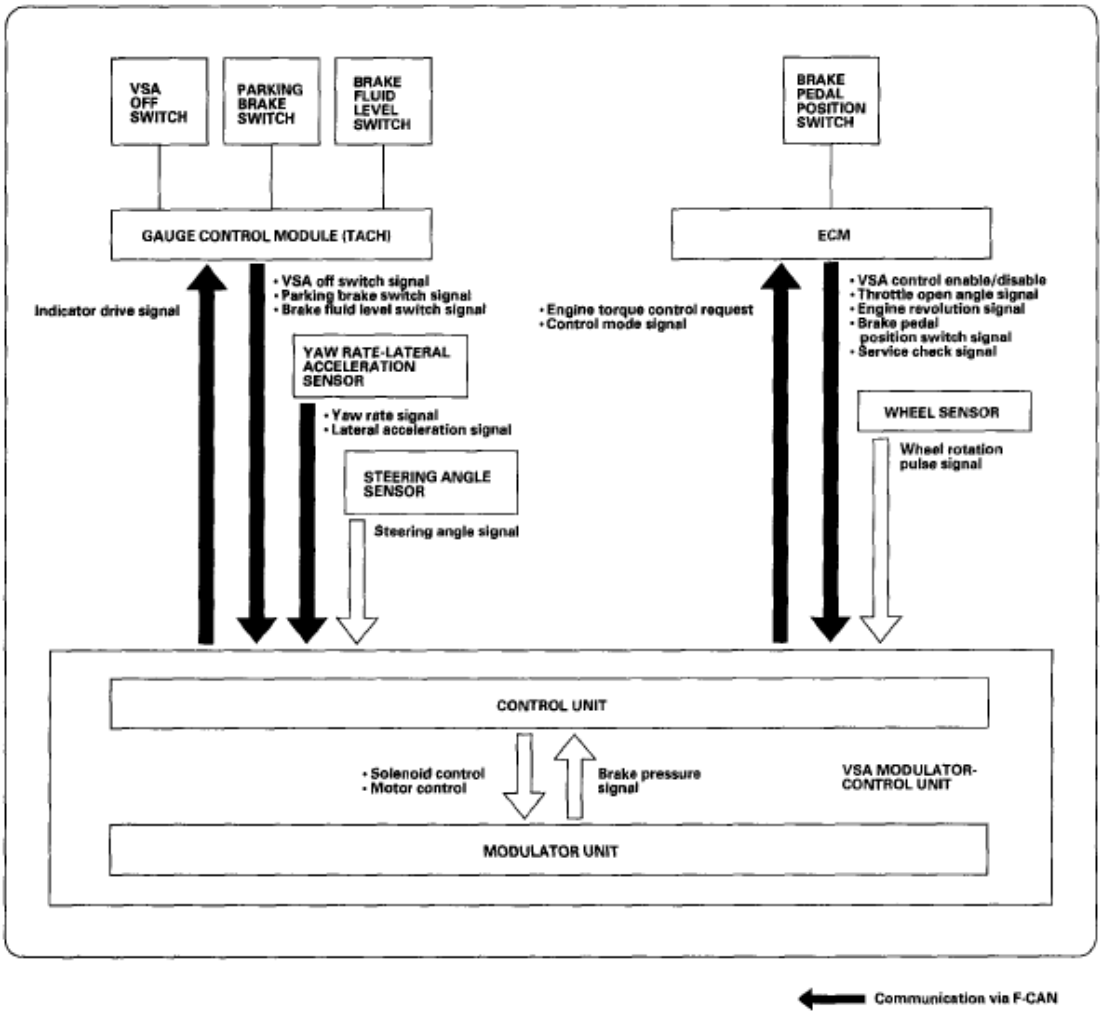

Fig. 5: Identifying VSA System Outline

ABS Features

Anti-lock control

Without ABS, when the brake pedal is pressed while driving, the wheels sometimes lock before the vehicle comes to a stop. In such an event, the maneuverability of the vehicle is reduced if the front wheels are locked, and the stability of the vehicle is reduced if the rear wheels are locked, creating an extremely unstable condition. With ABS, the system precisely controls the slip rate of the wheels to ensure maximum grip force from the tires, and it thereby ensures maneuverability and stability of the vehicle. The ABS calculates the slip rate of the wheels based on the four wheel speeds, then it controls the brake fluid pressure to reach the target slip rate.

Grip force of tire and road surface

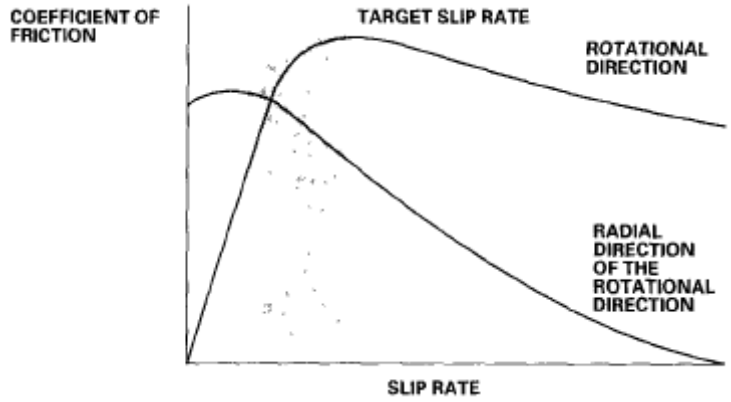

Fig. 6: Identifying Grip Force Of Tire And Road Surface Graph

Main Control

The control unit detects the wheel speed based on the wheel speed sensor signals it received, then it calculates the vehicle speed based on the detected wheel speed. The control unit detects the vehicle speed during deceleration based on the rate of deceleration.

The control unit calculates the slip rate of each wheel, and transmits the control signal to the modulator unit solenoid valve when the slip rate is high.

The hydraulic control has three modes: Pressure intensifying, pressure reducing, and pressure retaining.

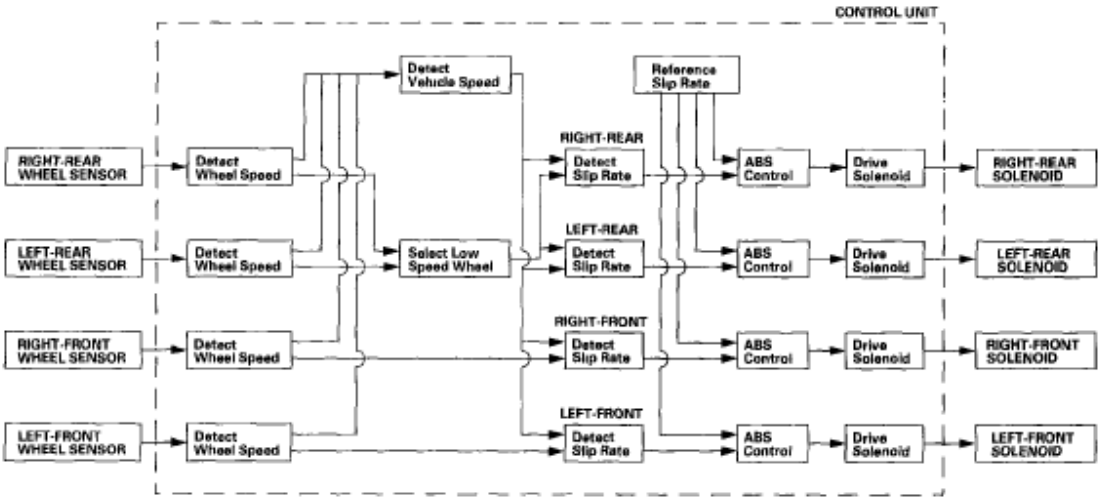

Fig. 7: Identifying Hydraulic Control Unit Graph

EBD Features

The electronic brake distribution (EBD) feature helps control vehicle braking by adjusting the rear brake force in accordance with the rear wheel load before the ABS operates. Based on the wheel speed sensor signals, the control unit uses the modulator to control the rear brakes individually. When the rear wheel speed is less than the front wheel speed, the VSA modulator-control unit retains the current rear brake fluid pressure by closing the inlet valve in the modulator. As the rear wheel speed increases and approaches the front wheel speed, the VSA modulator-control unit increases the rear brake fluid pressure by momentarily opening the inlet valve. This whole process is repeated very rapidly. While this is happening, there is

kickback at the brake pedal.

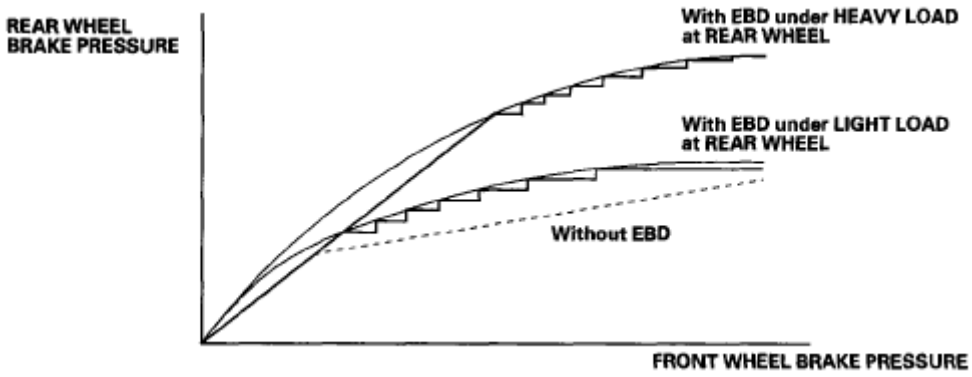

Fig. 8: Identifying Electronic Brake Distribution Graph

TCS Features

When a drive wheel loses traction on a slippery road surface and starts to spin, the VSA modulator-control unit applies brake pressure to the spinning wheel and sends engine torque control request to the ECM to slow the spinning wheel and keep traction.

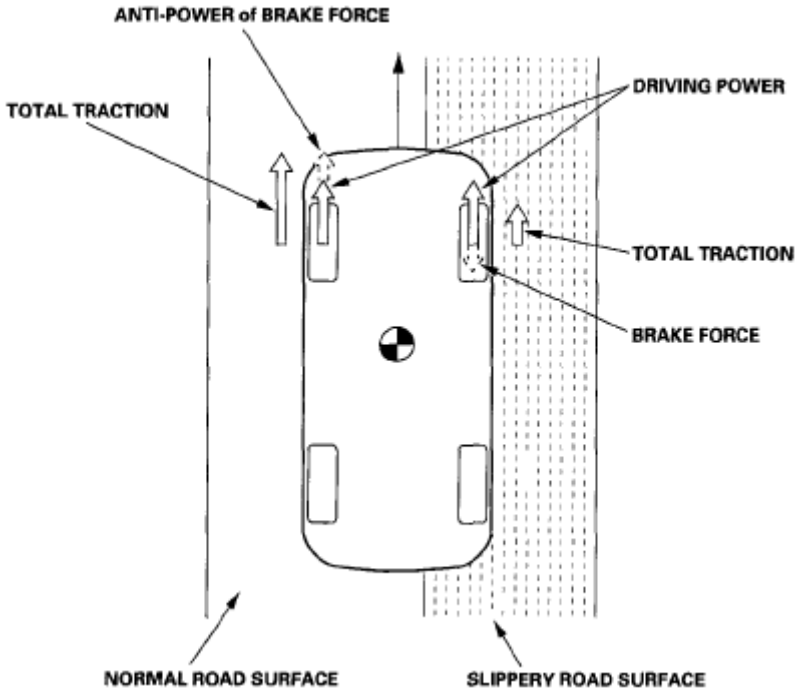

Fig. 9: Identifying Total Traction

VSA System Features

Oversteer control

Applies the brake to the front and rear outside wheels

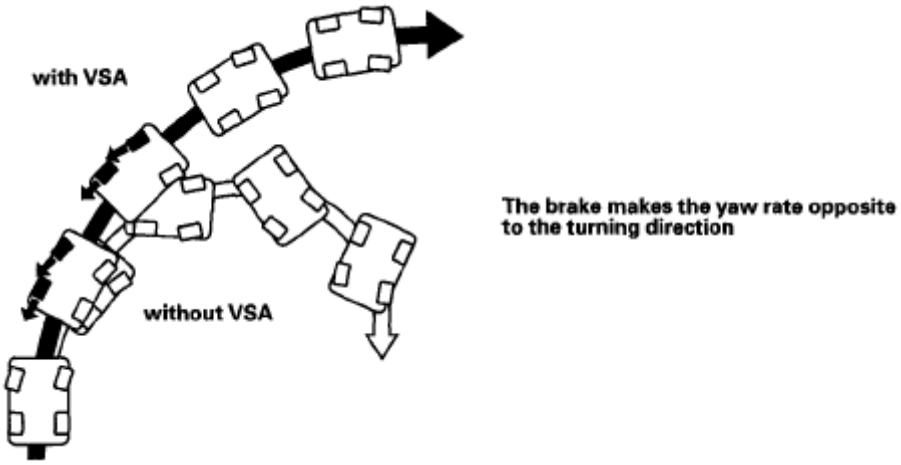

Fig. 10: Identifying VSA System - Oversteer Control

Understeer control

- Applies the brake to the front and rear inside wheels
- Controls the engine torque when accelerating

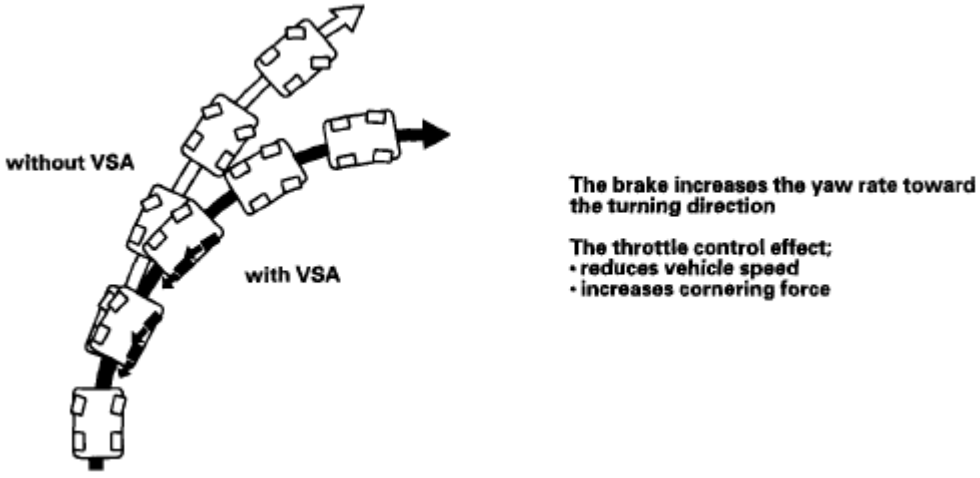

Fig. 11: Identifying VSA System - Understeer Control

Brake Assist Features

Brake assist helps ensure that any driver can achieve the full braking potential of the vehicle by increasing brake system pressure in a panic situation, bringing the vehicle into a full ABS stop.

Each time the ignition switch is turned ON (II), the VSA modulator-control unit learns the current driver's normal braking characteristics by monitoring the brake pressure sensor and the brake pedal position switch at each stop. Using these inputs and their values, the VSA modulator-control unit is able to learn the driver's normal braking habits, and then determine the difference between a normal stop and a panic stop for the individual driver of the vehicle. If during a panic stop the VSA modulator-control unit determines that the brake system pressure increases above a learned threshold in less than a learned amount of time, the VSA modulator-control unit engages brake assist. Because the brake system pressure crossed the threshold before the time threshold had expired, the VSA modulator-control unit goes into brake assist mode.

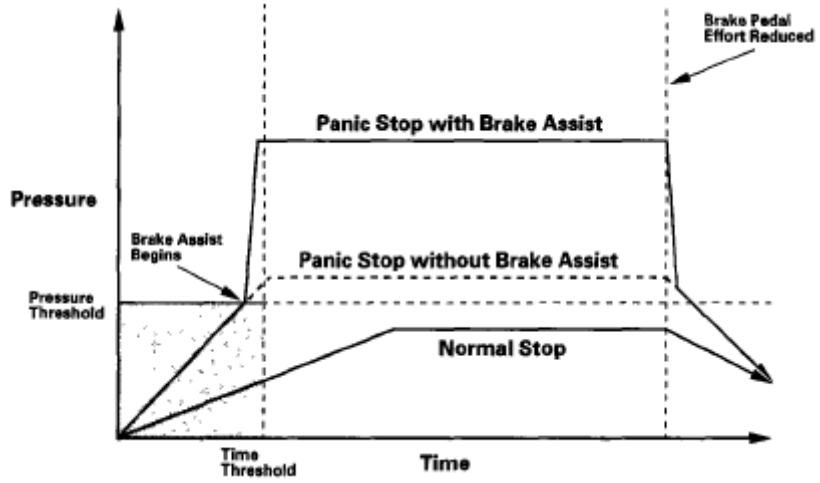

Fig. 12: Identifying Brake Assist Features

Modulator Unit

The modulator unit consists of the inlet solenoid valve, the outlet solenoid valve, the VSA NO (normally open) solenoid valve, the VSA NC (normally closed) solenoid valve, the reservoir, the pump, the pump motor, and the damping chamber.

The hydraulic control has three modes at ABS action; pressure intensifying, pressure retaining, and pressure reducing.

And pressure adding mode is combined at TCS, VSA, and brake assist action.

The hydraulic circuit is an independent four channel type; one channel for each wheel.

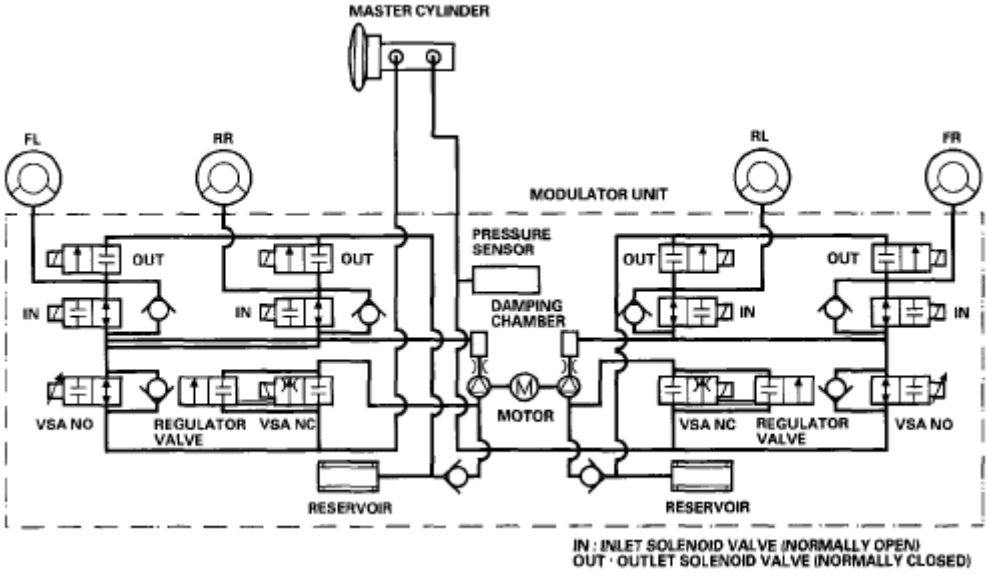

Fig. 13: Identifying Modulator Unit Diagram

VALVE REFERENCE

	VSA	VSA	Inlet	Outlet	

Mode	NO Valve	NC Valve	Solenoid Valve	Solenoid Valve	Brake Fluid
Pressure intensifying mode	open	closed	open	closed	Master cylinder fluid is pumped out to the caliper.
Pressure retaining mode	open	closed	closed	closed	Caliper fluid is retained by the inlet and outlet valves.
Pressure reducing mode	open	closed	closed	open	• Caliper fluid flows through the outlet valve to the reservoir. • The motor pumps the reservoir fluid through the damping chamber to the master cylinder (1).
Pressure adding mode	closed	open	open	closed	• Master cylinder fluid is pumped out by pump with motor through VSA NC valve to the caliper. • Caliper fluid pressure exceed master cylinder pressure.
(1) The motor will keep running until the operation of the one anti-lock brake control is finished with the first pressure reducing mode.					

CIRCUIT DIAGRAM

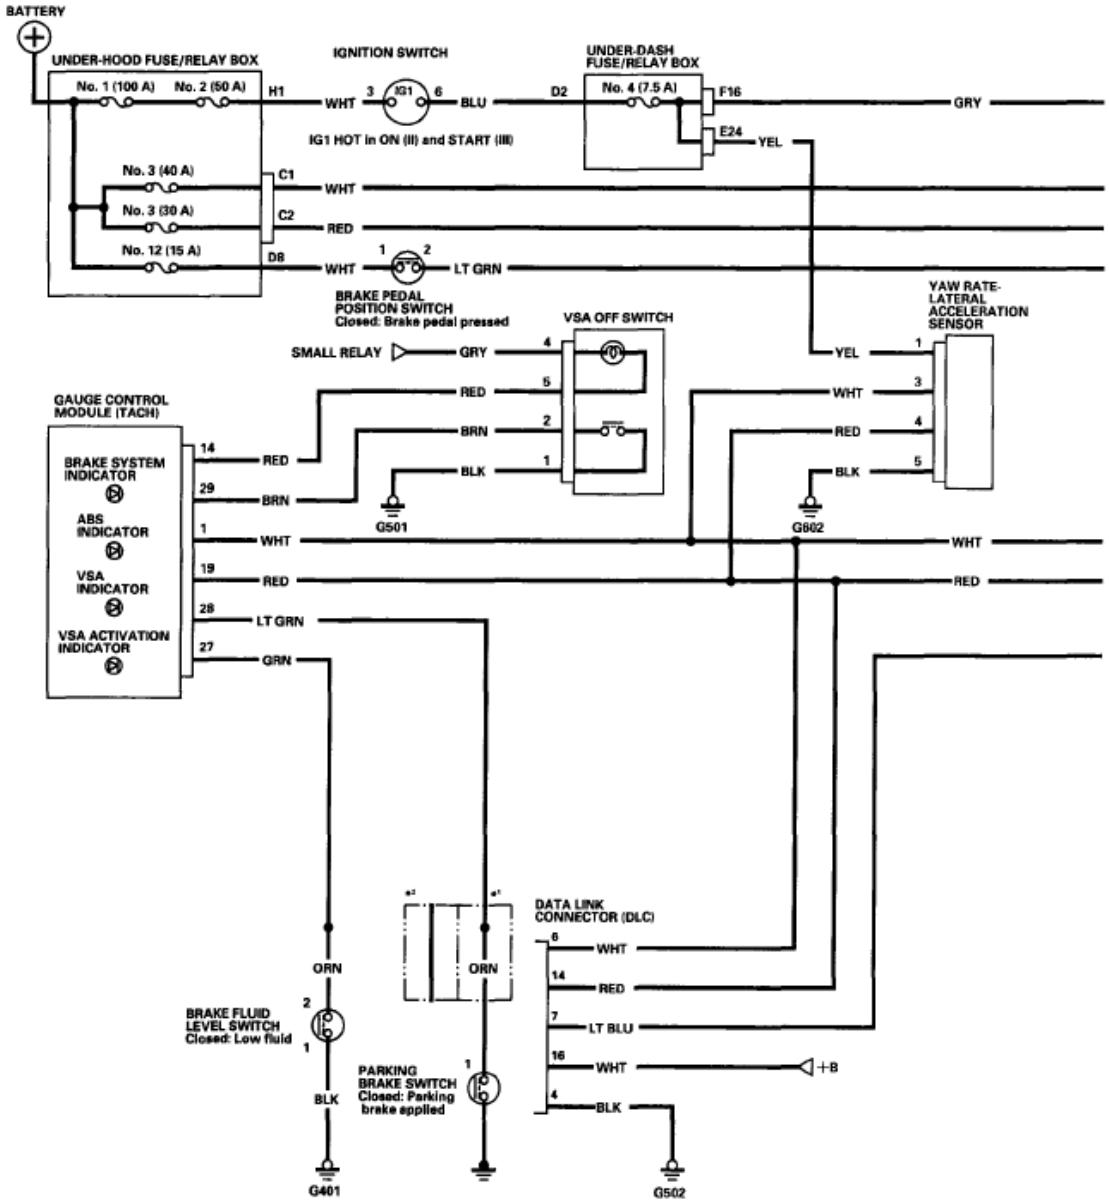

Fig. 14: Identifying VSA System Circuit Diagram (1 Of 3)

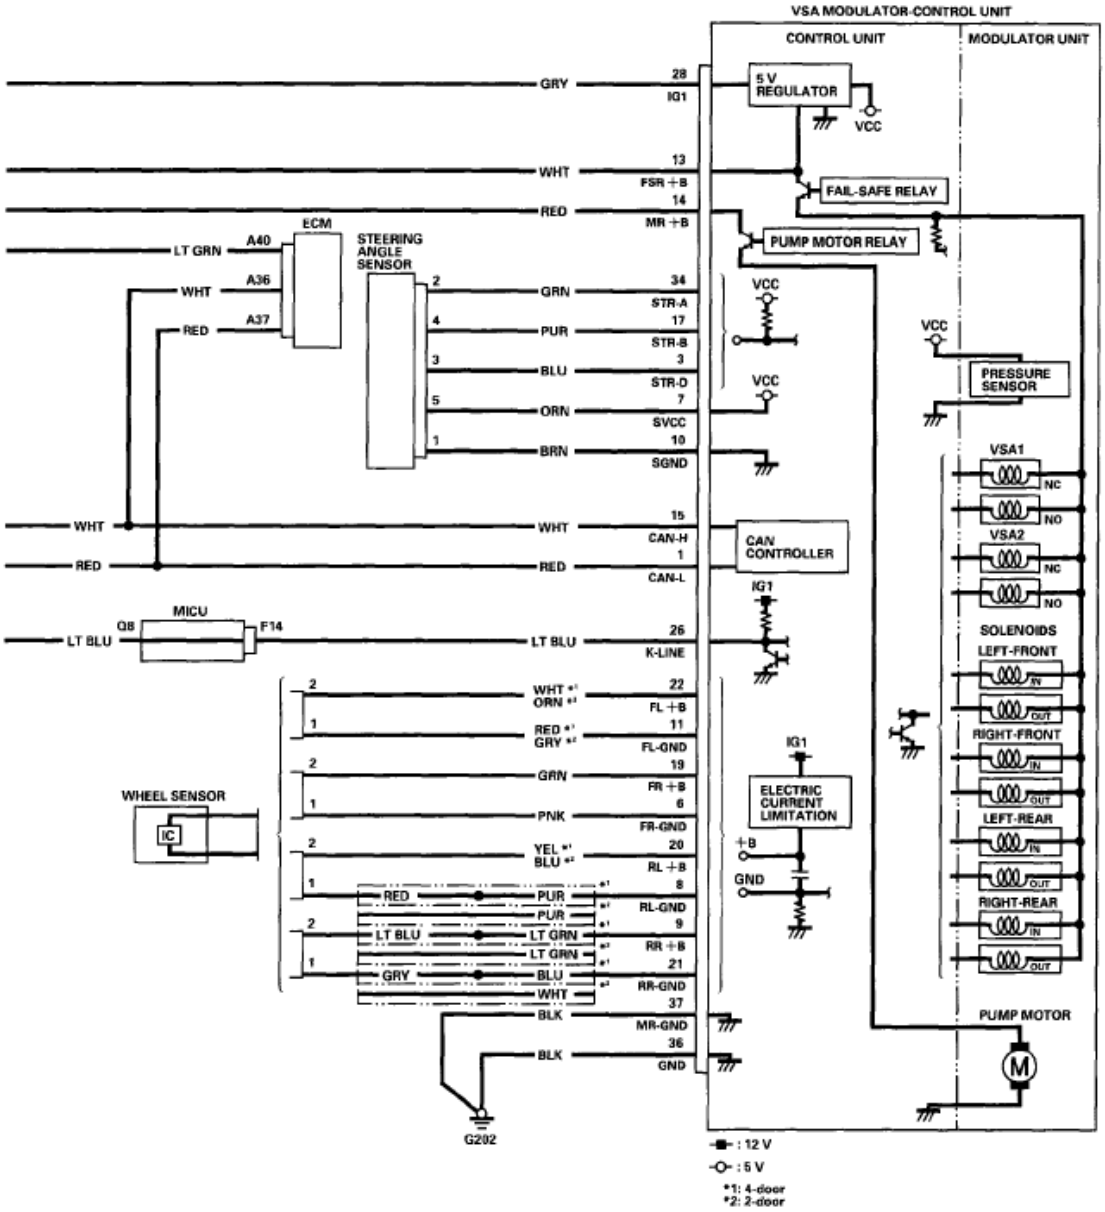

Fig. 15: Identifying VSA System Circuit Diagram (2 Of 3)

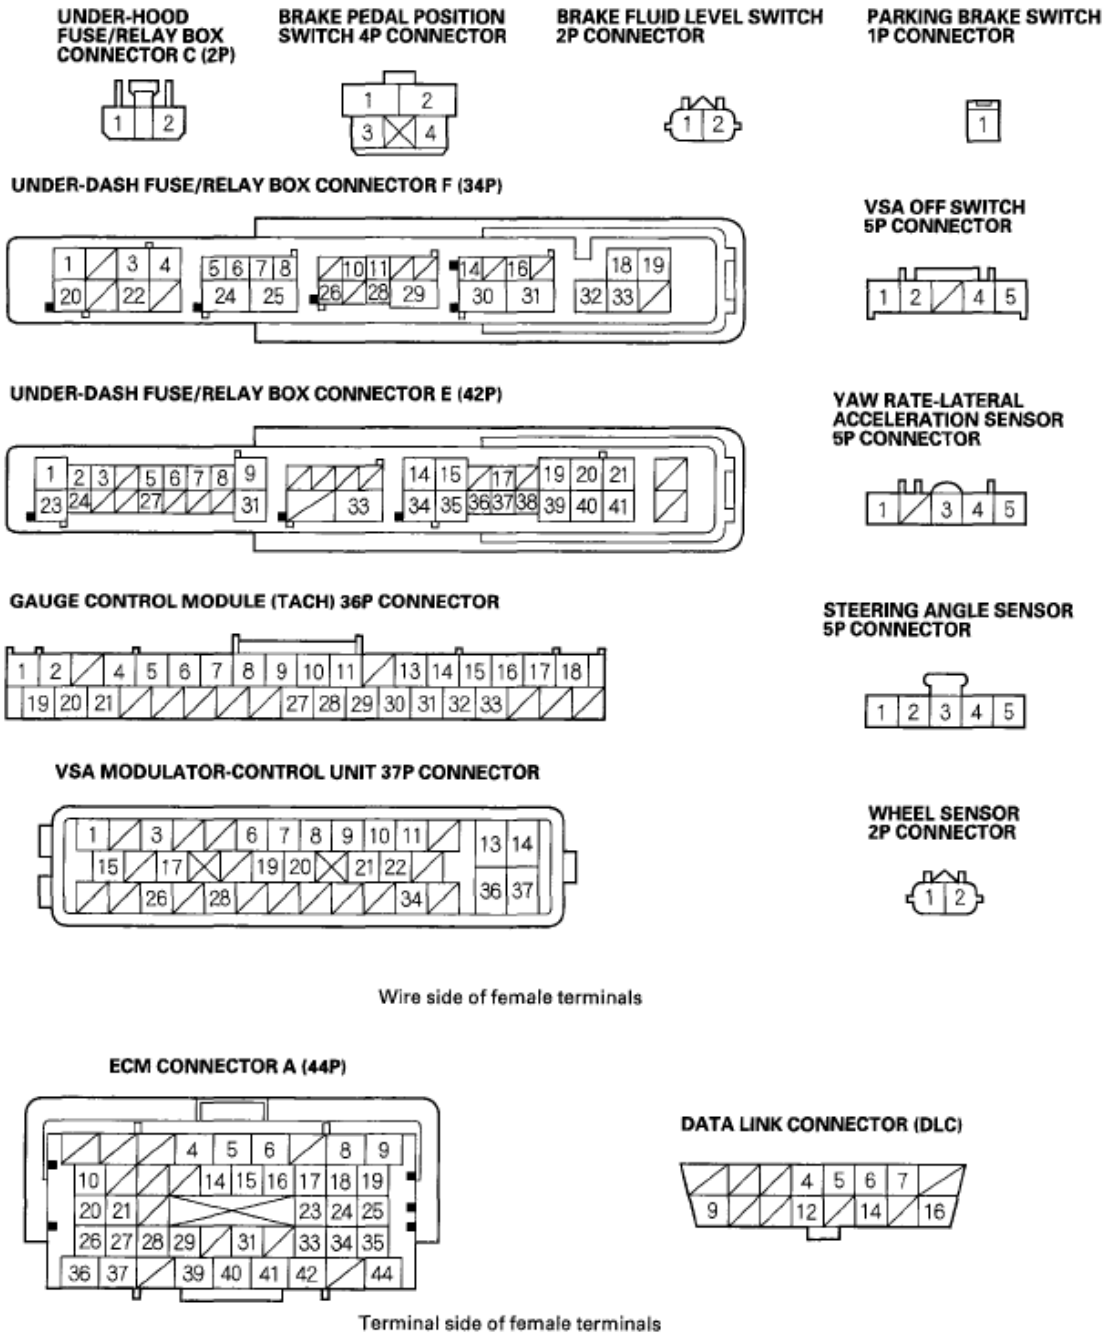

Fig. 16: Identifying VSA System Circuit Diagram (3 Of 3)

DTC TROUBLESHOOTING

DTC 11-13: RIGHT-FRONT WHEEL SPEED SENSOR CIRCUIT MALFUNCTION; DTC 13-13: LEFT-FRONT WHEEL SPEED SENSOR CIRCUIT MALFUNCTION; DTC 15-13: RIGHT-REAR WHEEL SPEED SENSOR CIRCUIT MALFUNCTION; DTC 17-13: LEFT-REAR WHEEL SPEED SENSOR CIRCUIT MALFUNCTION

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.

4. Check for DTCs with the HDS.

   Is DTC 11-13, 13-13, 15-13, and/or 17-13 indicated?

   YES -Go to step 5.

   NO -Intermittent failure, the system is OK at this time. Check for loose terminals between the wheel speed sensor 2P connector and the VSA modulator-control unit 37P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** (see).

5. Turn the ignition switch to LOCK (0).
6. Disconnect the VSA modulator-control unit 37P connector.
7. Check for continuity between the appropriate VSA modulator-control unit 37P connector wheel speed sensor +B and GND terminals (see table), then check for continuity between the same terminals and reverse the positive and negative tester probes.

DTC REFERENCE

DTC	VSA Modulator-control Unit 37P Connector Terminal No.	
11-13	No. 19	No. 6
13-13	No. 22	No. 11
15-13	No. 9	No. 21
17-13	No. 20	No. 8

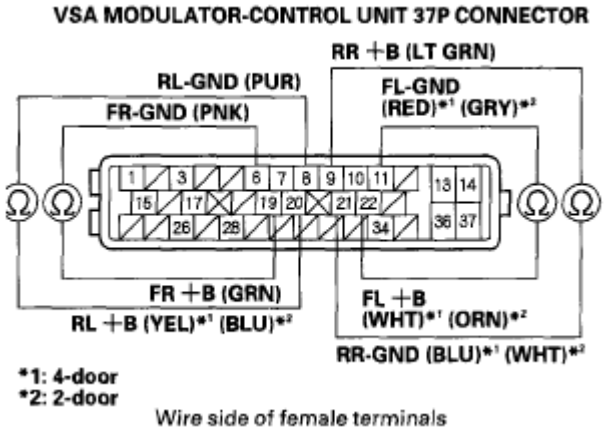

Fig. 17: Checking Continuity Between Appropriate VSA Modulator-Control Unit 37P Connector Wheel Speed Sensor +B

Is there continuity in both directions?

YES -Go to step 8.

NO -If there is no continuity in either direction, go to step 10. If there is continuity in only one direction, go to step 12.

8. Disconnect the appropriate wheel speed sensor 2P connector.
9. On the sensor side, check for continuity between appropriate wheel speed sensor 2P connector terminals No. 1 and No. 2, then check for continuity between the same terminals and reverse the

positive and negative tester probes.

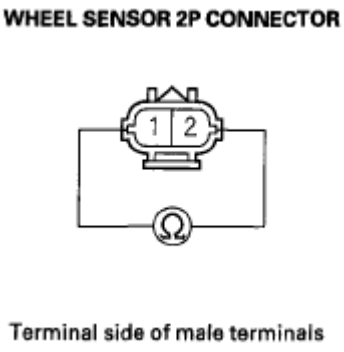

Fig. 18: Checking Continuity Between Appropriate Wheel Speed Sensor 2P Connector Terminals No. 1 And No. 2

Is there continuity in both direction?

YES -Replace the appropriate wheel speed sensor (see **WHEEL SPEED SENSOR REPLACEMENT**).

NO -Repair short in the wire between the appropriate wheel speed sensor and the VSA modulator-control unit.

10. Disconnect the appropriate wheel speed sensor 2P connector.
11. On the sensor side, check for continuity between appropriate wheel speed sensor 2P connector terminals No. 1 and No. 2, then check for continuity between the same terminals and reverse the positive and negative tester probes.

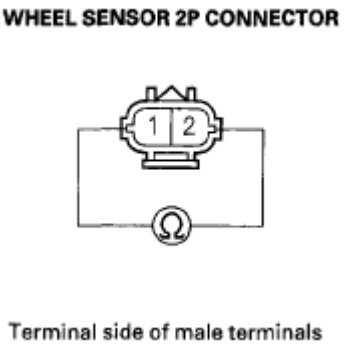

Fig. 19: Checking Continuity Between Appropriate Wheel Speed Sensor 2P Connector Terminals No. 1 And No. 2

Is there continuity in only one direction?

YES -Repair open in the wire between the appropriate wheel speed sensor and the VSA modulator-control unit.

NO -Replace the appropriate wheel speed sensor (see **WHEEL SPEED SENSOR REPLACEMENT**).

12. Check for continuity between body ground and the appropriate VSA modulator-control unit 37P connector terminal (see table).

DTC REFERENCE

DTC	VSA Modulator-control Unit 37P Connector Terminal No.	
11-13	No. 19	No. 6
13-13	No. 22	No. 11
15-13	No. 9	No. 21
17-13	No. 20	No. 8

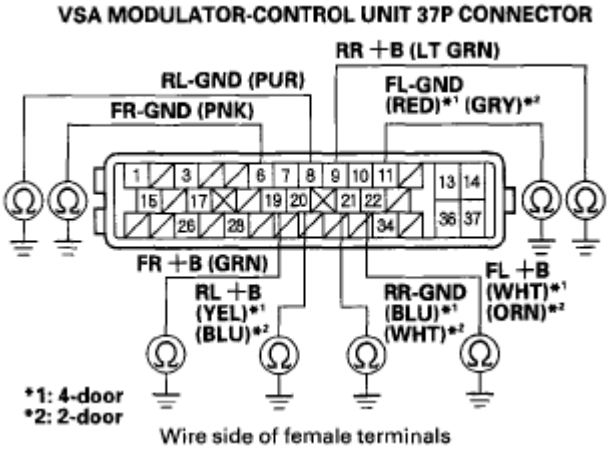

Fig. 20: Checking Continuity Between Body Ground And Appropriate VSA Modulator-Control Unit 37P Connector Terminal

Is there continuity?

YES -Go to step 13.

NO -Go to step 15.

13. Disconnect the appropriate wheel speed sensor 2P connector.
14. On the sensor side, check for continuity between body ground and appropriate wheel speed sensor 2P connector terminal No. 1 and No. 2 individually.

NOTE: Check the wheel speed sensor while mounted on the vehicle

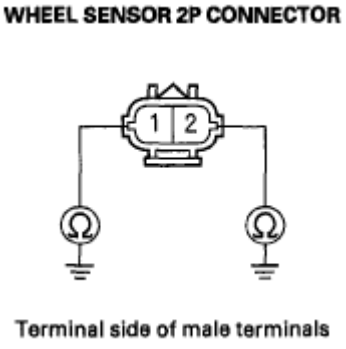

Fig. 21: Checking Continuity Between Body Ground And Appropriate Wheel Speed Sensor 2P Connector Terminal No. 1 And No. 2

Is there continuity?

YES -Replace the appropriate wheel speed sensor (see **WHEEL SPEED SENSOR REPLACEMENT**).

NO -Repair short to body ground in the wire between the appropriate wheel speed sensor and the VSA modulator-control unit.

15. Turn the ignition switch ON (II).
16. Measure voltage between body ground and the appropriate VSA modulator-control unit 37P connector terminal (see table).

DTC REFERENCE

DTC	VSA Modulator-control Unit 37P Connector Terminal No.	
11-13	No. 19	No. 6
13-13	No. 22	No. 11
15-13	No. 9	No. 21
17-13	No. 20	No. 8

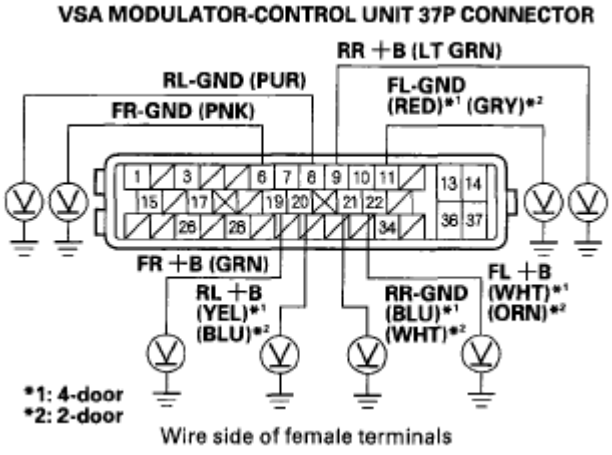

Fig. 22: Measuring Voltage Between Body Ground And Appropriate VSA Modulator-Control Unit 37P Connector Terminal

Is there 0.1 V or more?

YES -Repair short to power in the wire between the appropriate wheel speed sensor and the VSA modulator-control unit.

NO -Check for loose terminals in the VSA modulator-control unit 37P connector. If necessary, substitute a known-good VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**), and retest.

DTC 12-11: RIGHT-FRONT WHEEL SPEED SENSOR ELECTRICAL NOISE OR INTERMITTENT INTERRUPTION; DTC 14-11: LEFT-FRONT WHEEL SPEED SENSOR

ELECTRICAL NOISE OR INTERMITTENT INTERRUPTION; DTC 16-11: RIGHT-REAR WHEEL SPEED SENSOR ELECTRICAL NOISE OR INTERMITTENT INTERRUPTION; DTC 18-11: LEFT-REAR WHEEL SPEED SENSOR ELECTRICAL NOISE OR INTERMITTENT INTERRUPTION

NOTE: These DTCs may be caused by electrical interference. Check for aftermarket devices installed in the vehicle when these DTC are indicated.

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Test-drive the vehicle.
4. Check for DTCs with the HDS.

   Is DTC 12-11, 14-11, 16-11, and/or 18-11 indicated?

   YES -lf the DTC 12-12,14-12,16-12, or 18-12 is indicated at the same time, do the DTC 12-12, 14-12,16-12, or 18-12 troubleshooting (see **DTC 12-12: Right-front Wheel Speed Sensor Short to the Other Sensor Circuit; DTC 14-12: Left-front Wheel Speed Sensor Short to the Other Sensor Circuit; DTC 16-12: Right-rear Wheel Speed Sensor Short to the Other Sensor Circuit; DTC 18-12: Left-rear Wheel Speed Sensor Short to the Other Sensor Circuit**). If DTC 12-12, 14-12,16-12 or 18-12 is not indicated, go to step 5.

   NO -Troubleshoot the indicated DTC. If there are no DTCs indicated, there may be an intermittent failure, the system is OK at this time. Check for loose terminals between the wheel speed sensor 2P connector and the VSA modulator-control unit 37P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** (see).

5. Turn the ignition switch to LOCK (0).
6. Check that the appropriate wheel speed sensor is properly mounted (see **WHEEL SPEED SENSOR REPLACEMENT**).

   DTC REFERENCE

DTC	Appropriate Wheel Speed Sensor
12-11	Right-front
14-11	Left-front
16-11	Right-rear
18-11	Left-rear

   Is the wheel speed sensor installation OK?

   YES -Check for loose terminals in the VSA modulator-control unit 37P connector. If necessary, substitute a known-good VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**), and retest.

   NO -Reinstall the wheel speed sensor, and check the mounting position (see **WHEEL SPEED SENSOR REPLACEMENT**).

DTC 12-12: RIGHT-FRONT WHEEL SPEED SENSOR SHORT TO THE OTHER SENSOR

CIRCUIT; DTC 14-12: LEFT-FRONT WHEEL SPEED SENSOR SHORT TO THE OTHER SENSOR CIRCUIT; DTC 16-12: RIGHT-REAR WHEEL SPEED SENSOR SHORT TO THE OTHER SENSOR CIRCUIT; DTC 18-12: LEFT-REAR WHEEL SPEED SENSOR SHORT TO THE OTHER SENSOR CIRCUIT

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Test-drive the vehicle. Drive the vehicle at 13 mph (20 km/h) or more, and go a distance of 328 ft (100 m) or more.

   NOTE: Drive the vehicle on the road, not on the lift.

4. Check for DTCs with the HDS.

   Is DTC 12-12, 14-12, 16-12, and/or 18-12 indicated?

   YES -Go to step 5.

   NO -Intermittent failure, the system is OK at this time. Check for loose terminals between the wheel speed sensor 2P connector and the VSA modulator-control unit 37P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** (see).

5. Turn the ignition switch to LOCK (0).
6. Disconnect VSA modulator-control unit 37P connector.
7. Check for continuity between the appropriate VSA modulator-control unit 37P connector wheel speed sensor +B terminals (see table).

DTC REFERENCE

DTC	VSA Modulator-control Unit 37P Connector Terminal No.			
	Appropriate Terminal	Other Terminals		
12-12	No. 19	No. 22	No. 9	No. 20
14-12	No. 22	No. 19	No. 9	No. 20
16-12	No. 9	No. 19	No. 22	No. 20
18-12	No. 20	No. 19	No. 22	No. 9

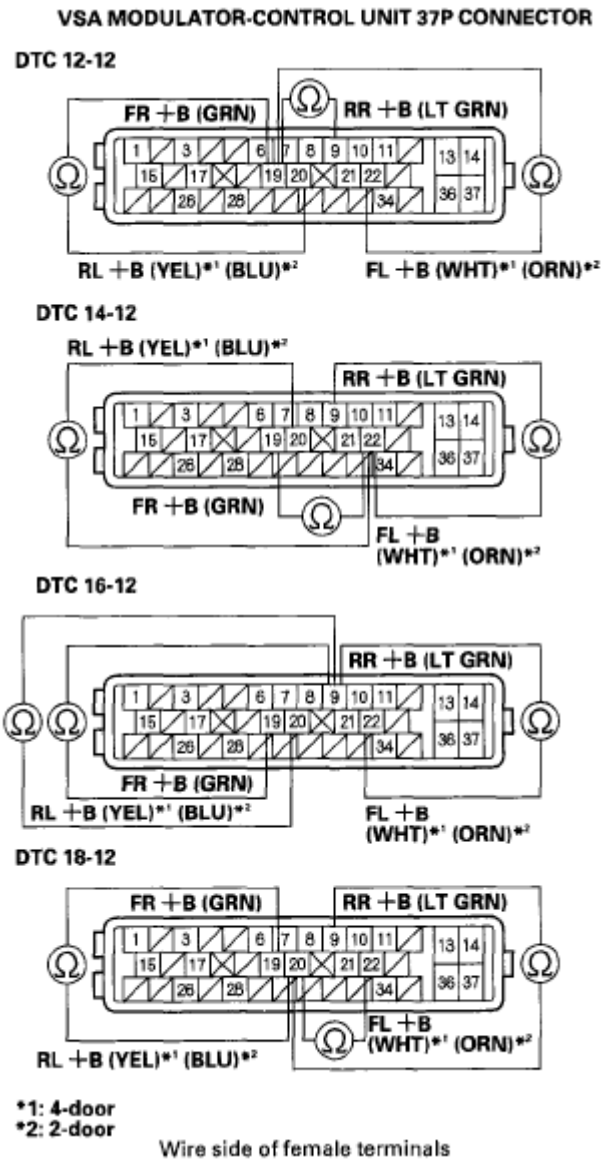

Fig. 23: Checking Continuity Between Appropriate VSA Modulator-Control Unit 37P Connector Wheel Speed Sensor +B Terminals

Is there continuity?

YES -Repair short in the wires between the appropriate wheel speed sensor and the VSA modulator-control unit.

NO -Check for loose terminals in the VSA modulator-control unit 37P connector. If necessary, substitute a known-good VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**), and retest.

DTC 12-21: RIGHT-FRONT WHEEL SPEED SENSOR INSTALLATION ERROR; DTC 14-21: LEFT-FRONT WHEEL SPEED SENSOR INSTALLATION ERROR; DTC 16-21: RIGHT-REAR WHEEL SPEED SENSOR INSTALLATION ERROR; DTC 18-21: LEFT-REAR WHEEL SPEED SENSOR INSTALLATION ERROR

1. Test-drive the vehicle. Drive the vehicle at 7 mph (10 km/h).

NOTE: Drive the vehicle on the road, not on the lift.

2. Check the RF, LF, RR, LR WHEEL SPD in the VSA DATA LIST with the HDS.

   Are all four the same indicated value?

   YES -Intermittent failure, the system is OK at this time. Check for loose terminals between the wheel speed sensor 2P connector and the VSA modulator-control unit 37P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** (see).

   NO -Go to step 3.

3. Turn the ignition switch to LOCK (0).
4. Check that the appropriate wheel speed sensor is properly mounted (see **WHEEL SPEED SENSOR REPLACEMENT**).

   DTC REFERENCE

DTC	Appropriate Wheel Speed Sensor
12-21	Right-front
14-21	Left-front
16-21	Right-rear
18-21	Left-rear

   Is the wheel speed sensor installation OK?

   YES -Replace the appropriate wheel speed sensor (see **WHEEL SPEED SENSOR REPLACEMENT**).

   NO -Reinstall the wheel speed sensor, and check the mounting position (see **WHEEL SPEED SENSOR REPLACEMENT**).

DTC 12-22: RIGHT-FRONT WHEEL SPEED SENSOR INSTALLATION ERROR (19 MPH (30 KM/H) OR MORE); DTC 14-22: LEFT-FRONT WHEEL SPEED SENSOR INSTALLATION ERROR (19 MPH (30 KM/H) OR MORE); DTC 16-22: RIGHT-REAR WHEEL SPEED SENSOR INSTALLATION ERROR (19 MPH (30 KM/H) OR MORE); DTC 18-22: LEFT-REAR WHEEL SPEED SENSOR INSTALLATION ERROR (19 MPH (30 KM/H) OR MORE)

1. Test-drive the vehicle. Drive the vehicle between 19 mph (30 km/h) and 31 mph (50 km/h) for 70 seconds or more.

   NOTE: Drive the vehicle on the road, not on the lift.

2. Check the RF, LF, RR, LR WHEEL SPD in the VSA DATA LIST with the HDS.

   Are all four the same indicated value?

   YES -Intermittent failure, the system is OK at this time. Check for loose terminals between the wheel speed sensor 2P connector and the VSA modulator-control unit 37P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** (see).

NO -Go to step 3.

3. Turn the ignition switch to LOCK (0).
4. Check that the appropriate wheel speed sensor is properly mounted (see **WHEEL SPEED SENSOR REPLACEMENT**).

DTC REFERENCE

DTC	Appropriate Wheel Speed Sensor
12-22	Right-front
14-22	Left-front
16-22	Right-rear
18-22	Left-rear

Is the wheel speed sensor installation OK?

YES -Replace the appropriate wheel speed sensor (see **WHEEL SPEED SENSOR REPLACEMENT**).

NO -Reinstall the wheel speed sensor, and check the mounting position (see **WHEEL SPEED SENSOR REPLACEMENT**).

DTC 12-23: RIGHT-FRONT WHEEL SPEED SENSOR INSTALLATION ERROR (0 TO 9 MPH (0 TO 15 KM/H)); DTC 14-23: LEFT-FRONT WHEEL SPEED SENSOR INSTALLATION ERROR (0 TO 9 MPH (0 TO 15 KM/H)); DTC 16-23: RIGHT-REAR WHEEL SPEED SENSOR INSTALLATION ERROR (0 TO 9 MPH (0 TO 15 KM/H)); DTC 18-23: LEFT-REAR WHEEL SPEED SENSOR INSTALLATION ERROR (0 TO 9 MPH (0 TO 15 KM/H))

1. Test-drive the vehicle. Drive the vehicle between 1 mph (1 km/h) and 9 mph (15 km/h) in a straight line.

NOTE: Drive the vehicle on the road, not on the lift.

2. Check the RF, LF, RR, LR WHEEL SPD in the VSA DATA LIST with the HDS.

Are all the same indicated values?

YES -Intermittent failure, the system is OK at this time. Check for loose terminals between the wheel speed sensor 2P connector and the VSA modulator-control unit 37P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** (see).

NO -Go to step 3.

3. Turn the ignition switch to LOCK (0).
4. Check that the appropriate wheel speed sensor is properly mounted (see **WHEEL SPEED SENSOR REPLACEMENT**).

DTC REFERENCE

DTC	Appropriate Wheel Speed Sensor

12-23	Right-front
14-23	Left-front
16-23	Right-rear
18-23	Left-rear

Is the wheel speed sensor installation OK?

YES -Replace the appropriate wheel speed sensor (see **WHEEL SPEED SENSOR REPLACEMENT**).

NO -Reinstall the wheel speed sensor, and check the mounting position (see **WHEEL SPEED SENSOR REPLACEMENT**).

DTC 21-11: RIGHT-FRONT MAGNETIC ENCODER MALFUNCTION (PULSE MISSING); DTC 22-11: LEFT-FRONT MAGNETIC ENCODER MALFUNCTION (PULSE MISSING); DTC 23-11: RIGHT-REAR MAGNETIC ENCODER MALFUNCTION (PULSE MISSING); DTC 24-11: LEFT-REAR MAGNETIC ENCODER MALFUNCTION (PULSE MISSING)

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Test-drive the vehicle. Drive the vehicle at 13 mph (20 km/h) or more, and go a distance of 328 ft (100 m) or more.

NOTE: Drive the vehicle on the road, not on the lift.

4. Check for DTCs with the HDS.

Is DTC 21-11, 22-11,23-11, and/or 24-11 indicated?

YES -Go to step 5.

NO -Intermittent failure, the system is OK at this time. Check for loose terminals between the wheel speed sensor 2P connector and the VSA modulator-control unit 37P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** (see).

5. Turn the ignition switch to LOCK (0).
6. Inspect the appropriate magnetic encoder for debris or cracks.

DTC REFERENCE

DTC	Appropriate Magnetic Encoder	Note
21-11	Right-front	Remove the driveshaft outboard joint from the appropriate wheel hub (see **KNUCKLE/HUB REPLACEMENT**).
22-11	Left-front	
23-11	Right-rear	Remove the hub bearing unit (see **HUB BEARING UNIT REPLACEMENT-DISC BRAKE TYPE**).
24-		

11	Left-rear	

Is the magnetic encoder surface OK?

YES -Replace the wheel bearing (front) or the hub bearing unit (rear):

- Front: Replace the front wheel bearing (see **KNUCKLE/HUB REPLACEMENT**).
- Rear: Replace the rear hub bearing unit (see **HUB BEARING UNIT REPLACEMENT-DISC BRAKE TYPE**).

NO -Clean off dust or dirt from the appropriate magnetic encoder surface on the wheel bearing or the hub bearing unit, then go to step 1 and recheck. If the DTC is still present, replace the appropriate wheel bearing or hub bearing unit.

DTC 25-11: YAW RATE SENSOR INTERNAL CIRCUIT MALFUNCTION (INITIAL); DTC 25-12: YAW RATE SENSOR INTERNAL CIRCUIT MALFUNCTION (OPEN, SHORT); DTC 25-13: YAW RATE SENSOR COMMUNICATION ERROR; DTC 25-16: YAW RATE/LATERAL ACCELERATION SENSOR INTERNAL CIRCUIT MALFUNCTION (KEEP ALIVE MEMORY (KAM) ERROR); DTC 25-21: YAW RATE SENSOR NEUTRAL POSITION MALFUNCTION

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Do the VSA sensor neutral position memorization (see **VSA SENSOR NEUTRAL POSITION MEMORIZATION**).
4. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
5. Check for DTCs with the HDS.

Is DTC 25-11, 25-12, 25-13, 25-16, or 25-21 indicated?

YES -Replace the yaw rate-lateral acceleration sensor (see **YAW RATE-LATERAL ACCELERATION SENSOR REPLACEMENT**).

NO -Intermittent failure, the system is OK at this time.

DTC 25-14: YAW RATE/LATERAL ACCELERATION SENSOR CIRCUIT HIGH VOLTAGE; DTC 25-15: YAW RATE/LATERAL ACCELERATION SENSOR CIRCUIT LOW VOLTAGE

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Do the VSA sensor neutral position memorization (see **VSA SENSOR NEUTRAL POSITION MEMORIZATION**).
4. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
5. Check for DTCs with the HDS.

Is DTC 25-14, or 25-15 indicated?

YES -lf the DTC 61-01,61-21,61-22,61-23, and/or 62-21 is indicated at the same time, check the battery performance (see **BATTERY TEST**), and do the alternator and regulator circuit

troubleshooting (see **ALTERNATOR AND REGULATOR CIRCUIT TROUBLESHOOTING**). If the DTC 61-01, 61-21,61-22, 61-23, and/or 62-21 is not indicated at the same time, replace the yaw rate-lateral acceleration sensor (see **YAW RATE-LATERAL ACCELERATION SENSOR REPLACEMENT**).

NO -Intermittent failure, the system is OK at this time.

DTC 25-22: YAW RATE SENSOR STUCK

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Do the VSA sensor neutral position memorization (see **VSA SENSOR NEUTRAL POSITION MEMORIZATION**).
4. Turn the ignition switch to LOCK (0).
5. Test-drive the vehicle. Drive the vehicle at 7 mph (10 km/h) or more.
6. Check for DTCs with the HDS.

   Is DTC 25-22 indicated?

   YES -Go to step 7.

   NO -If any DTCs are indicated, go to the indicated DTCs troubleshooting. If DTCs are not indicated, intermittent failure, the system is OK at this time.

7. Check the LATERAL ACCELERATION SENSOR and YAW RATE S in the VSA DATA LIST with the HDS.

   Is there 0 °/s indicated?

   YES -Go to step 8.

   NO -Replace the yaw rate-lateral acceleration sensor (see **YAW RATE-LATERAL ACCELERATION SENSOR REPLACEMENT**).

8. Test-drive the vehicle. Check the YAW RATE S in the VSA DATA LIST with the HDS while driving in corners.

   Does the indicated value change?

   YES -Intermittent failure, the system is OK at this time.

   NO -Replace the yaw rate-lateral acceleration sensor (see **YAW RATE-LATERAL ACCELERATION SENSOR REPLACEMENT**).

DTC 25-23: YAW RATE SENSOR CIRCUIT INTERMITTENT INTERRUPTION

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Do the VSA sensor neutral position memorization (see **VSA SENSOR NEUTRAL POSITION**

MEMORIZATION).

4. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
5. Wait 10 seconds or more.
6. Check for DTCs with the HDS.

Is DTC 25-23 indicated?

YES -Replace the yaw rate-lateral acceleration sensor (see **YAW RATE-LATERAL ACCELERATION SENSOR REPLACEMENT**).

NO -Intermittent failure, the system is OK at this time.

DTC 25-24: YAW RATE SENSOR GAIN LOW; DTC 25-25: YAW RATE SENSOR GAIN HIGH; DTC 26-24: LATERAL ACCELERATION SENSOR GAIN LOW; DTC 26-25: LATERAL ACCELERATION SENSOR GAIN HIGH

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Do the VSA sensor neutral position memorization (see **VSA SENSOR NEUTRAL POSITION MEMORIZATION**).
4. Test-drive the vehicle. Drive the vehicle at 10 mph (15 km/h)or more.
5. Check for DTCs with the HDS.

Is DTC 25-24, 25-25, 26-24, or 26-25 indicated?

YES -Replace the yaw rate-lateral acceleration sensor (see **YAW RATE-LATERAL ACCELERATION SENSOR REPLACEMENT**).

NO -Intermittent failure, the system is OK at this time.

DTC 26-11: LATERAL ACCELERATION SENSOR INTERNAL CIRCUIT MALFUNCTION (INITIAL); DTC 26-12: LATERAL ACCELERATION SENSOR INTERNAL CIRCUIT MALFUNCTION (OPEN, SHORT); DTC 26-13: LATERAL ACCELERATION SENSOR COMMUNICATION ERROR; DTC 26-21: LATERAL ACCELERATION SENSOR NEUTRAL POSITION MALFUNCTION; DTC 26-23: LATERAL ACCELERATION SENSOR CIRCUIT INTERMITTENT INTERRUPTION

NOTE: While doing this troubleshooting, avoid vibration or shaking of the vehicle.

1. Park the vehicle on a flat and level surface.
2. Turn the ignition switch ON (II).
3. Clear the DTC with the HDS.
4. Do the VSA sensor neutral position memorization (see **VSA SENSOR NEUTRAL POSITION MEMORIZATION**).
5. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
6. Wait 15 seconds or more.
7. Check for DTCs with the HDS.

Is DTC 26-11, 26-12, 26-13, 26-21, or 26-23 indicated?

YES -Replace the yaw rate-lateral acceleration sensor (see **YAW RATE-LATERAL ACCELERATION SENSOR REPLACEMENT**).

NO -Intermittent failure, the system is OK at this time.

DTC 26-22: ACCELERATION SENSOR STUCK

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Check for DTCs with the HDS.

   Is DTC 26-22 indicated?

   YES -Go to step 5.

   NO -If any DTCs are indicated, go to the indicated DTCs troubleshooting. If DTCs are not indicated, intermittent failure, the system is OK at this time.

5. Check the LATERAL ACCELERATION SENSOR and YAW RATE S in the VSA DATA LIST with the HDS.

   Is there 0 °/s indicated?

   YES -Go to step 6.

   NO -Replace the yaw rate-lateral acceleration sensor (see **YAW RATE-LATERAL ACCELERATION SENSOR REPLACEMENT**).

6. Test-drive the vehicle. Check the YAW RATE S in the VSA DATA LIST with the HDS while driving in corners.

   Does the indicated value change?

   YES -Intermittent failure, the system is OK at this time.

   NO -Replace the yaw rate-lateral acceleration sensor (see **YAW RATE-LATERAL ACCELERATION SENSOR REPLACEMENT**).

DTC 27-11: STEERING ANGLE SENSOR DIAG SIGNAL ERROR (INITIAL); DTC 27-26: STEERING ANGLE SENSOR DIAG SIGNAL ERROR (MAIN)

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Check for DTCs with the HDS.

Is DTC 27-11, or 27-26 indicated?

YES -Go to step 5.

NO -Intermittent failure, the system is OK at this time. Check for loose terminals between the steering angle sensor 5P connector and the VSA modulator-control unit 37P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** (see).

5. Turn the ignition switch to LOCK (0).
6. Disconnect the steering angle sensor 5P connector.
7. Disconnect the VSA modulator-control unit 37P connector.
8. Check for continuity between steering angle sensor 5P connector terminal No. 3 and body ground.

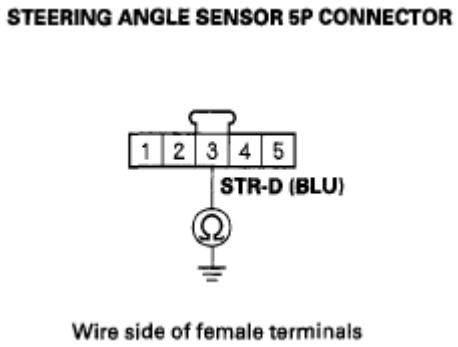

Fig. 24: Checking Continuity Between Steering Angle Sensor 5P Connector Terminal No. 3 And Body Ground

Is there continuity?

YES -Repair short to body ground in the wire between the steering angle sensor and the VSA modulator-control unit.

NO -Go to step 9.

9. Check for continuity between the VSA modulator-control unit 37P connector terminal and the steering angle sensor 5P connector terminal individually.

CONNECTOR TERMINAL DESCRIPTION

Sign	Connector Terminal No.	
	VSA Modulator-control Unit	Steering Angle Sensor
STR-D	3	3
SVCC	7	5
SGND	10	1

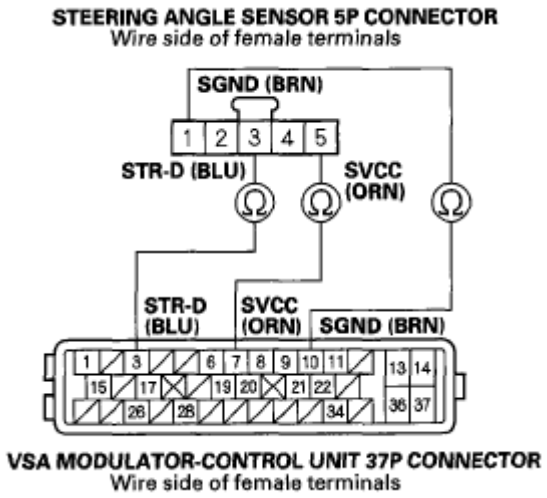

Fig. 25: Checking Continuity Between VSA Modulator-Control Unit And Steering Angle Sensor Connector Terminal

Is there continuity?

YES -Go to step 10.

NO -Repair open in the wire between the steering angle sensor and the VSA modulator-control unit.

10. Turn the ignition switch ON (II).
11. Measure voltage between steering angle sensor 5P connector terminal No. 3 and body ground.

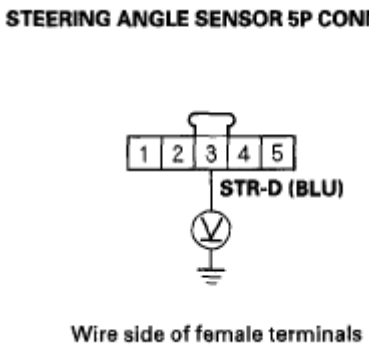

Fig. 26: Measuring Voltage Between Steering Angle Sensor 5P Connector Terminal No. 3 And Body Ground

Is there 0.1 V or more?

YES -Repair short to power in the wire between the steering angle sensor and the VSA modulator-control unit.

NO -Replace the steering angle sensor (see **STEERING ANGLE SENSOR REPLACEMENT**).

DTC 27-21: STEERING ANGLE SENSOR STUCK NEUTRAL POSITION; DTC 27-22: STEERING ANGLE SENSOR STUCK OFFSET POSITION

1. Turn the ignition switch ON (II).
2. Turn the steering wheel left and right at 90 degree or more. Check the STEERING ANGLE in the VSA DATA LIST with the HDS.

   Is there ±90° or more?

   YES -Intermittent failure, the system is OK at this time. Check for loose terminals between the steering angle sensor 5P connector and the VSA modulator-control unit 37P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** (see).

   NO -Go to step 3.

3. Turn the ignition switch to LOCK (0).
4. Disconnect the steering angle sensor 5P connector.
5. Disconnect the VSA modulator-control unit 37P connector.
6. Check for continuity between body ground and steering angle sensor 5P connector terminals No. 2 and No. 4 individually.

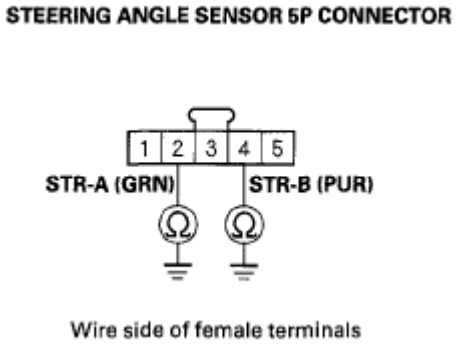

Fig. 27: Checking Continuity Between Body Ground And Steering Angle Sensor 5P Connector Terminals No. 2 And No. 4

Is there continuity?

YES -Repair short to body ground in the wire between the steering angle sensor and the VSA modulator-control unit.

NO -Go to step 7.

7. Check for continuity between the VSA modulator-control unit 37P connector terminal and the steering angle sensor 5P connector terminal individually.

CONNECTOR TERMINAL DESCRIPTION

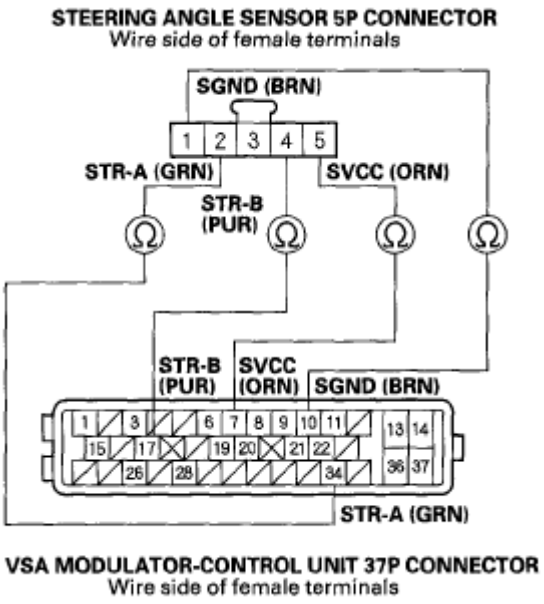

Fig. 28: Checking Continuity Between VSA Modulator-Control Unit And Steering Angle Sensor 5P Connector Terminal

Is there continuity?

YES -Go to step 8.

NO -Repair open in the wire between the steering angle sensor and the VSA modulator-control unit.

8. Check for continuity between steering angle sensor 5P connector terminals No. 2 and No. 4.

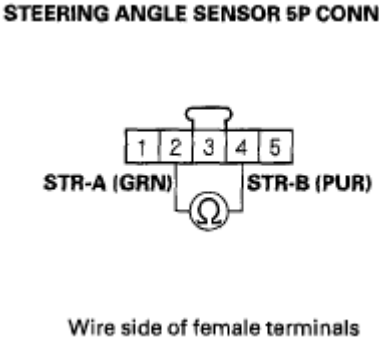

Fig. 29: Checking Continuity Between Steering Angle Sensor 5P Connector Terminals No. 2 And No. 4

Is there continuity?

YES -Repair short in the wire between the steering angle sensor and the VSA modulator-control unit.

NO -Go to step 9.

9. Check for continuity between steering angle sensor 5P connector terminals No. 5 and No. 2, No. 5 and No. 4 individually.

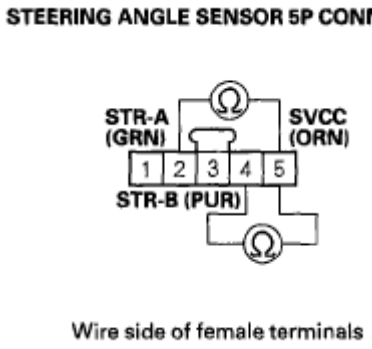

Fig. 30: Checking Continuity Between Steering Angle Sensor 5P Connector Terminals No. 5 And No. 2, No. 5 And No. 4

Is there continuity?

YES -Repair short in the wire between the steering angle sensor and the VSA modulator-control unit.

NO -Go to step 10.

10. Check for continuity between steering angle sensor 5P connector terminals No. 1 and No. 2, No. 1 and No. 4 individually.

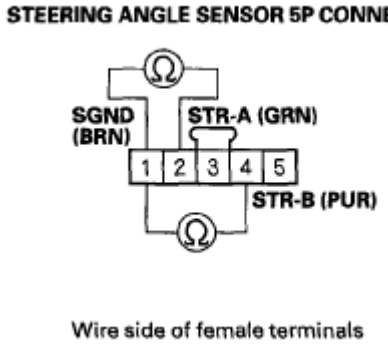

Fig. 31: Checking For Continuity Between Steering Angle Sensor 5P Connector Terminals No. 1 And No. 2

Is there continuity?

YES -Repair short in the wire between the steering angle sensor and the VSA modulator-control unit.

NO -Go to step 11.

11. Turn the ignition switch ON (II).
12. Measure voltage between body ground and steering angle sensor 5P connector terminals No. 2 and No. 4 individually.

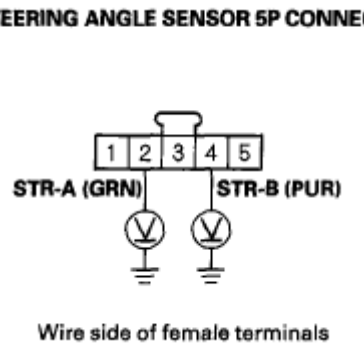

Fig. 32: Measuring Voltage Between Body Ground And Steering Angle Sensor 5P Connector Terminals No. 2 And No. 4

Is there 0.1 V or more?

YES -Repair short to power in the wire between the steering angle sensor and the VSA modulator-control unit.

NO -Replace the steering angle sensor (see **STEERING ANGLE SENSOR REPLACEMENT**).

DTC 27-23: STEERING ANGLE SENSOR COUNTER MALFUNCTION

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Turn the steering wheel from lock to lock.
5. Check for DTCs with the HDS.

Is DTC 27-23 indicated?

YES -Replace the steering angle sensor (see **STEERING ANGLE SENSOR REPLACEMENT**).

NO -Intermittent failure, the system is OK at this time.

DTC 27-24: STEERING ANGLE SENSOR EXCHANGE MALFUNCTION

1. Turn the ignition switch ON (II).
2. Turn the steering wheel 1 turn. Check the STEERING ANGLE in the VSA DATA LIST with the HDS.

Is there about 288-432 °?

YES -Intermittent failure, the system is OK at this time.

NO -Replace the steering angle sensor (see **STEERING ANGLE SENSOR REPLACEMENT**).

DTC 31-XX*: ABS RIGHT-FRONT INLET SOLENOID VALVE MALFUNCTION; DTC 32-XX*: ABS RIGHT-FRONT OUTLET SOLENOID VALVE MALFUNCTION; DTC 33-XX*: ABS LEFT-FRONT INLET SOLENOID VALVE MALFUNCTION; DTC 34-XX*: ABS LEFT-FRONT OUTLET

SOLENOID VALVE MALFUNCTION; DTC 35-XX*: ABS RIGHT-REAR INLET SOLENOID VALVE MALFUNCTION; DTC 36-XX*: ABS RIGHT-REAR OUTLET SOLENOID VALVE MALFUNCTION; DTC 37-XX*: ABS LEFT-REAR INLET SOLENOID VALVE MALFUNCTION; DTC 38-XX*: ABS LEFT-REAR OUTLET SOLENOID VALVE MALFUNCTION

*: Subcode

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Check for DTCs with the HDS.

DTC REFERENCE

Subcode	Malfunction	Note (DTC)
01	Solenoid Initial Pulse	31-01, 32-01, 33-01, 34-01, 35-01, 36-01, 37-01, 38-01
21	Solenoid Pulse	31-21, 32-21, 33-21, 34-21, 35-21, 36-21, 37-21, 38-21
22	Solenoid Speculative	31-22, 32-22, 33-22, 34-22, 35-22, 36-22, 37-22, 38-22
23	Solenoid Stuck ON	31-23, 32-23, 33-23, 34-23, 35-23, 36-23, 37-23, 38-23

Is DTC 31-xx, 32-xx, 33-xx, 34-xx, 35-xx, 36-xx, 37-xx, or 38-xx indicated?

YES -Replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

NO -Intermittent failure, the system is OK at this time.

DTC 41-21: RIGHT-FRONT WHEEL LOCK; DTC 42-21: LEFT-FRONT WHEEL LOCK; DTC 43-21: RIGHT-REAR WHEEL LOCK; DTC 44-21: LEFT-REAR WHEEL LOCK

The DTCs may be indicated under these conditions:

- The vehicle goes into a spin.
- The ABS or VSA continues to operate for a long time.
- Snow build-up on the wheel speed sensor.
- Misadjusted brake switch.
- Contaminated brake fluid.

1. Raise the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
2. Turn the appropriate wheel by hand.

DTC REFERENCE

DTC	Appropriate Wheel
41-21	Right-front
42-21	Left-front
43-21	Right-rear
44-21	Left-rear

Is there brake drag?

YES -Repair the brake drag.

NO -Go to step 3.

3. Check the appropriate wheel speed sensor is properly mounted (see **WHEEL SPEED SENSOR REPLACEMENT**).

Is the wheel speed sensor installation OK?

YES -Intermittent failure, the system is OK at this time. Check for loose terminals between the wheel speed sensor 2P connector and the VSA modulator-control unit 37P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** (see). If the vehicle continues to code, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

NO -Reinstall the wheel speed sensor, and check the mounting position (see **WHEEL SPEED SENSOR REPLACEMENT**).

DTC 51-11: MOTOR LOCK; DTC 51-13: MOTOR RELAY OFF MALFUNCTION

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Wait 5 seconds.
5. Operate SOLENOID or VSA in the VSA FUNCTION TEST five times with the HDS.
6. Check for DTCs with the HDS.

Is DTC 51-11 or 51-13 indicated?

YES -Replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

NO -Intermittent failure, the system is OK at this time.

DTC 51-12: MOTOR LOCK CIRCUIT MALFUNCTION

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Check the DTCs with the HDS.

Is DTC 51-12 indicated?

YES -Go to step 5.

NO -Intermittent failure, the system is OK at this time. Check for loose terminals at the VSA

modulator-control unit 37P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** (see).

5. Turn the ignition switch to LOCK (0).
6. Check the No. 3 MTR (30 A) fuse in the under-hood fuse/relay box.

   Is the fuse blown?

   YES -Go to step 7.

   NO -Reinstall the checked fuse, then go to step 9.

7. Disconnect the VSA modulator-control unit 37P connector.
8. Check for continuity between VSA modulator-control unit 37P connector terminal No. 14 and body ground.

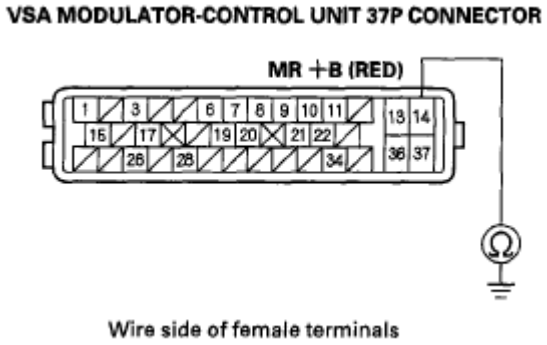

Fig. 33: Checking Continuity Between VSA Modulator-Control Unit 37P Connector Terminal No. 14 And Body Ground

   Is there continuity?

   YES -Repair short to body ground in the wire between the No. 3 MTR (30 A) fuse in the under-hood fuse/relay box and the VSA modulator-control unit.

   NO -Install the new No. 3 MTR (30 A) fuse in the under-hood fuse/relay box, then go to step 10.

9. Disconnect the VSA modulator-control unit 37P connector.
10. Measure voltage between VSA modulator-control unit 37P connector terminal No. 14 and body ground.

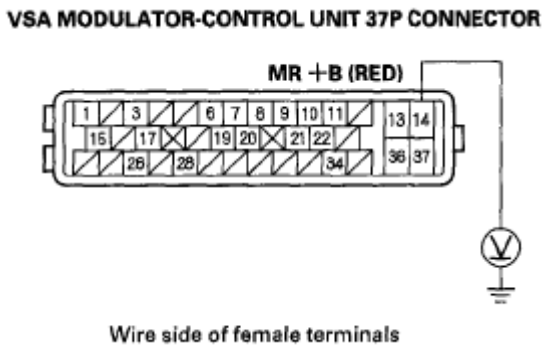

Fig. 34: Measuring Voltage Between VSA Modulator-Control Unit 37P Connector Terminal No. 14 And Body Ground

Is there battery voltage?

YES -Check for loose terminals in the VSA modulator-control unit 37P connector. If necessary, substitute a known-good VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**), and retest.

NO -Repair open in the wire between the No. 3 MTR (30 A) fuse in the under-hood fuse/relay box and the VSA modulator-control unit.

DTC 52-12: MOTOR STUCK OFF

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Operate each SOLENOID or VSA in the VSA FUNCTION TEST five times with the HDS.
5. Check for DTCs with the HDS.

Is DTC 52-12 indicated?

YES -Replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

NO -Intermittent failure, the system is OK at this time.

DTC 53-01: MOTOR RELAY STUCK ON 1; DTC 53-12: MOTOR RELAY STUCK ON 2

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Check for DTCs with the HDS.

Is DTC 53-01 or 53-12 indicated?

YES -Go to step 5.

NO -Intermittent failure, the system is OK at this time. Check for loose terminals at the VSA modulator-control unit 37P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** (see).

5. Turn the ignition switch to LOCK (0).
6. Disconnect the VSA modulator-control unit 37P connector.
7. Check for continuity between VSA modulator-control unit 37P connector terminal No. 37 and body ground.

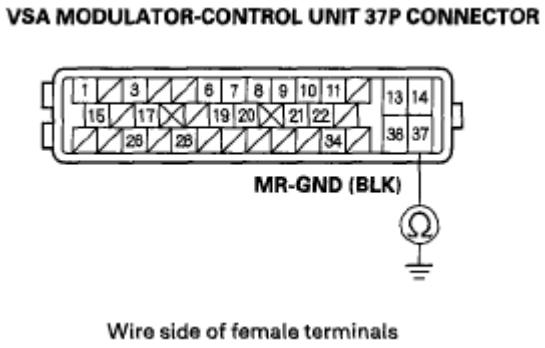

Fig. 35: Checking For Continuity Between VSA Modulator-Control Unit 37P Connector Terminal No. 37 And Body Ground

Is there continuity?

YES -Check for loose terminals in the VSA modulator-control unit 37P connector. If necessary, substitute a known-good VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**), and retest.

NO -Repair open in the wire between the VSA modulator-control unit and body ground (G202).

DTC 54-03: FAIL-SAFE RELAY 1 STUCK ON; DTC 54-04: FAIL-SAFE RELAY 1 STUCK OFF (INITIAL); DTC 54-21: FAIL-SAFE RELAY 1 STUCK OFF (MAIN)

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Check for DTCs with the HDS.

Is DTC 54-03, 54-04, or 54-21 indicated?

YES -Replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

NO -Intermittent failure, the system is OK at this time.

DTC 56-01: INITIAL VIG FET STUCK OFF; DTC 56-02: INITIAL VIG FET STUCK ON; DTC 56-11: VIG FET STUCK OFF

1. Turn the ignition switch ON (II).

2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Check for DTCs with the HDS.

   Is DTC 56-01, 56-02, or 56-11 indicated?

   YES -Replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

   NO -Intermittent failure, the system is OK at this time.

DTC 61-01: VSA MODULATOR-CONTROL UNIT INITIAL IG LOW VOLTAGE; DTC 61-21: VSA MODULATOR-CONTROL UNIT POWER SOURCE LOW VOLTAGE 1; DTC 61-22: VSA MODULATOR-CONTROL UNIT POWER SOURCE LOW VOLTAGE 2; DTC 61-23: VSA MODULATOR-CONTROL UNIT POWER SOURCE LOW VOLTAGE 3

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then start the engine.
4. Check for DTCs with the HDS.

   Is DTC 61-01, 61-21, 61-22, or 61-23 indicated?

   YES -Go to step 5.

   NO -Intermittent failure, the system is OK at this time. Check for loose terminals at the VSA modulator-control unit 37P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** (see).

5. Check and note BATTERY voltage in the VSA DATA LIST with the H DS. If the voltage listed is 0 V, go to step 8, otherwise go to step 6.
6. Using a voltmeter, measure and note the voltage between the battery terminals.

   NOTE: If the voltage is below 9.5 V, check the battery (see BATTERY TEST), and troubleshoot the alternator regulator circuit (see ALTERNATOR AND REGULATOR CIRCUIT TROUBLESHOOTING).

7. Compare the voltage noted in step 5 to the voltage in step 6.

   Is the difference between the two voltage readings less then 3 V?

   YES -Intermittent failure, the system is OK at this time. Check for loose terminals at the VSA modulator-control unit 37P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** (see). If the code resets after clearing, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

   NO -Check for loose terminals in the VSA modulator-control unit 37P connector. If necessary, substitute a known-good VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT**

REMOVAL AND INSTALLATION), and retest.

8. Turn the ignition switch to LOCK (0).
9. Disconnect the VSA modulator-control unit 37P connector.
10. Measure voltage between VSA modulator-control unit 37P connector terminal No. 13 and body ground.

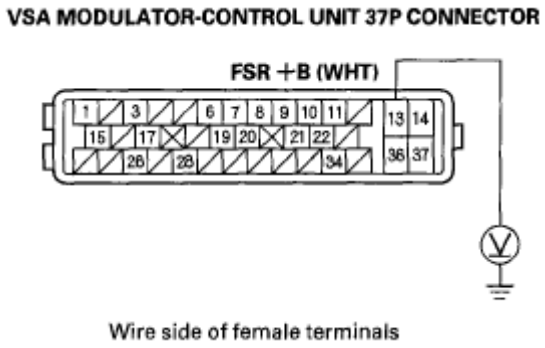

Fig. 36: Measuring Voltage Between VSA Modulator-Control Unit 37P Connector Terminal No. 13 And Body Ground

Is there battery voltage?

YES -Go to step 11.

NO -Repair open in the wire between the No. 3 FSR (40 A) fuse in the under-hood fuse/relay box and the VSA modulator-control unit.

11. Turn the ignition switch ON (II).
12. Measure voltage between VSA modulator-control unit 37P connector terminal No. 28 and body ground.

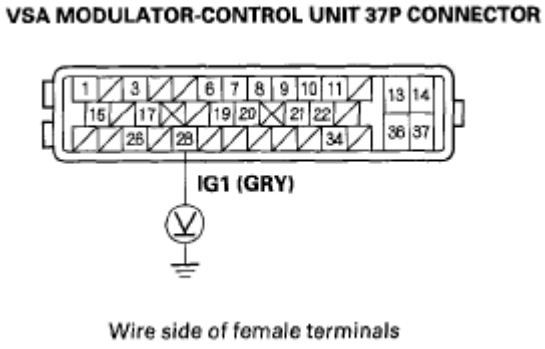

Fig. 37: Measuring Voltage Between VSA Modulator-Control Unit 37P Connector Terminal No. 28 And Body Ground

Is there battery voltage?

YES -Check for loose terminals in the VSA modulator-control unit 37P connector. If necessary, substitute a known-good VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**), and retest.

NO -Repair open in the wire between the No. 4 (7.5 A) fuse in the under-dash fuse/relay box and the VSA modulator-control unit.

DTC 62-21: VSA MODULATOR-CONTROL UNIT IG HIGH VOLTAGE

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then start the engine.
4. Check for DTCs with the HDS.

   Is DTC 62-21 indicated?

   YES -Go to step 5.

   NO -Intermittent failure, the system is OK at this time.

5. Using a voltmeter, measure the voltage between the battery terminals. Compare the voltage measured at the battery with the voltage shown in the VSA DATA LIST with the HDS.

   Is there a voltage difference of 3 V or more?

   YES -Replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

   NO -Check the battery (see **BATTERY TEST**), and troubleshoot the alternator regulator circuit (see **ALTERNATOR AND REGULATOR CIRCUIT TROUBLESHOOTING**). Also check for loose terminals in the VSA modulator-control unit 37P connector. If it is OK, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

DTC 64-11: STEERING ANGLE SENSOR POWER CIRCUIT SHORT

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Check for DTCs with the HDS.

   Is DTC 64-11 indicated?

   YES -Go to step 5.

   NO -Intermittent failure, the system is OK at this time.

5. Turn the ignition switch to LOCK (0).
6. Disconnect the steering angle sensor 5P connector.
7. Disconnect the VSA modulator-control unit 37P connector.
8. Check for continuity between steering angle sensor 5P connector terminal No. 5 and body ground.

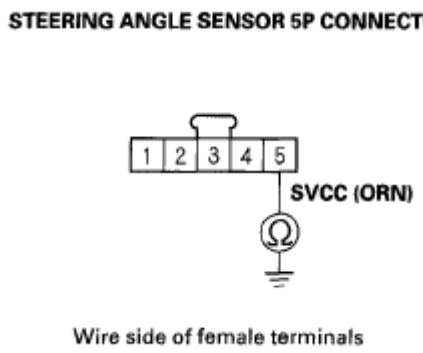

Fig. 38: Checking Continuity Between Steering Angle Sensor 5P Connector Terminal No. 5 And Body Ground

Is there continuity?

YES -Repair short to body ground in the wire between the steering angle sensor and the VSA modulator-control unit.

NO -Replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

DTC 64-12: STEERING ANGLE SENSOR POWER CIRCUIT OPEN

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Check for DTCs with the HDS.

   Is DTC 64-12 indicated?

   YES -Go to step 5.

   NO -Intermittent failure, the system is OK at this time. Check for loose terminals between the steering angle sensor 5P connector and the VSA modulator-control unit 37P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** (see).

5. Turn the ignition switch to LOCK (0).
6. Disconnect the steering angle sensor 5P connector.
7. Disconnect the VSA modulator-control unit 37P connector.
8. Check for continuity between VSA modulator-control unit 37P connector terminal No. 7 and steering angle sensor 5P connector terminal No. 5.

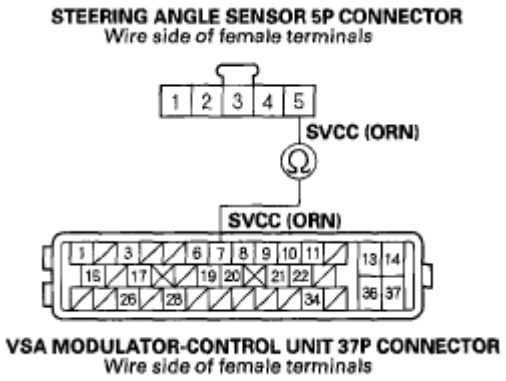

Fig. 39: Checking Continuity Between VSA Modulator-Control Unit 7 And Steering Angle Sensor 5P Connector Terminal No. 5

Is there continuity?

YES -Go to step 9.

NO -Repair open in the wire between the steering angle sensor and the VSA modulator-control unit.

9. Turn the ignition switch ON (II).
10. Measure voltage between steering angle sensor 5P connector terminal No. 5 and body ground.

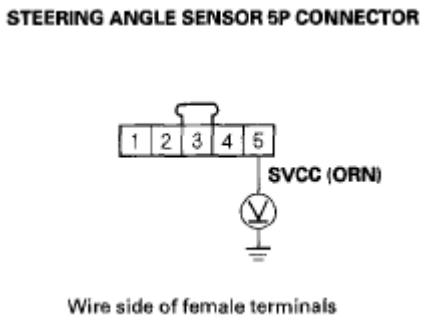

Fig. 40: Measuring Voltage Between Steering Angle Sensor 5P Connector Terminal No. 5 And Body Ground

Is there 0.1 V or more?

YES -Repair short to power in the wire between the steering angle sensor and the VSA modulator-control unit.

NO -Check for loose terminals in the VSA modulator-control unit 37P connector. If necessary, substitute a known-good VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**), and retest.

DTC 65-21: BRAKE FLUID LEVEL STUCK ON

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.

4. Check for DTCs with the HDS.

   Is DTC 65-21 indicated?

   YES -Go to step 5.

   NO -Intermittent failure, the system is OK at this time.

5. Release the parking brake.
6. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
7. Check the brake system indicator in the gauge control module (tach).

   Does the indicator come on then go off?

   YES -Go to step 8.

   NO -Go to step 9.

8. Check the FLUID LEVEL in the VSA DATA LIST with the HDS while moving the brake fluid reservoir tank float.

   Does it indicate ON when the float is lowered and OFF when the float is raised?

   YES -Intermittent failure, the system is OK at this time.

   NO -Replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

9. Check the brake fluid level in the master cylinder reservoir tank.

   Is the brake fluid level OK?

   YES -Go to step 10.

   NO -Do the brake pad inspection: Front (see **INSPECTION - SI MODEL**), rear (see **REAR BRAKE PAD INSPECTION AND REPLACEMENT**), check for brake fluid leaks or replace worn pads, then go to step 1 and recheck.

10. Check the FLUID LEVEL in the VSA DATA LIST with the HDS while moving the brake fluid reservoir tank float.

    Does it indicate ON when the float is lowered and OFF when the float raised?

    YES -Go to step 11.

    NO -Replace the brake fluid reservoir tank (brake fluid level switch is included) (see **MASTER CYLINDER INSPECTION**).

11. Turn the ignition switch to LOCK (0).

12. Disconnect the gauge control module (tach) 36P connector.
13. Disconnect the brake fluid level switch 2P connector.
14. Check for continuity between brake fluid level switch 2P connector terminal No. 2 and body ground.

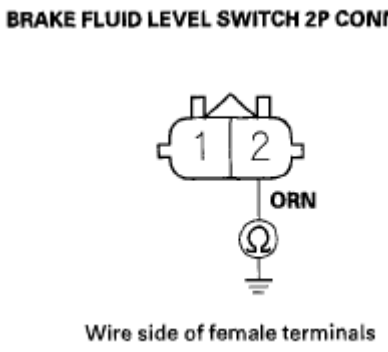

Fig. 41: Checking Continuity Between Brake Fluid Level Switch 2P Connector Terminal No. 2 And Body Ground

Is there continuity?

YES -Repair short to body ground in the wire between the gauge control module (tach) and the brake fluid level switch.

NO -Substitute a known-good gauge control module (tach), then go to step 1 and recheck. If no DTCs are indicated, replace the original gauge control module (tach) (see **REPLACEMENT**).

DTC 66-11: PRESSURE SENSOR (INSIDE OF VSA MODULATOR-CONTROL UNIT) MALFUNCTION; DTC 66-12: PRESSURE SENSOR (INSIDE OF VSA MODULATOR-CONTROL UNIT) MALFUNCTION; DTC 66-13: PRESSURE SENSOR (INSIDE OF VSA MODULATOR-CONTROL UNIT) MALFUNCTION; DTC 66-14: PRESSURE SENSOR (INSIDE OF VSA MODULATOR-CONTROL UNIT) MALFUNCTION; DTC 66-16: PRESSURE SENSOR (INSIDE OF VSA MODULATOR-CONTROL UNIT) MALFUNCTION

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Check for DTCs with the HDS.

Is DTC 66-11, 66-12, 66-13, 66-14, or 66-16 indicated?

YES -Replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

NO -Intermittent failure, the system is OK at this time.

DTC 66-15: PRESSURE SENSOR (INSIDE OF VSA MODULATOR-CONTROL UNIT) MALFUNCTION

1. Raise the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).

2. Turn all four wheels by hand.

   Is there brake drag?

   YES -Repair the brake drag.

   NO -Go to step 3.

3. Check the PRESSURE SWITCH in the VSA DATA LIST with the HDS while moving the brake pedal.

   Does the indicated value change?

   YES -Intermittent failure, the system is OK at this time.

   NO -Replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

DTC 68-21: BRAKE PEDAL POSITION SWITCH STUCK OFF

1. Turn the ignition switch ON (II).
2. Check the BRK PRESS in the VSA DATA LIST with the HDS. Do not press the brake pedal.

   Is there 10 MPa or less?

   YES -Go to step 3.

   NO -Check for brake drag or a miss-adjusted brake pedal position switch. If they are normal, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

3. Check the BRAKE SWITCH in the VSA DATA LIST with the HDS while moving the brake pedal.

   Does it indicate ON when the pedal is pressed, and OFF when pedal is released?

   YES -Intermittent failure, the system is OK at this time. Check for loose terminals between the brake pedal position switch 4P connector, ECM connector A (44P), and the VSA modulator-control unit 37P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** (see).

   NO -Go to step 4.

4. Turn the ignition switch to LOCK (0).
5. Disconnect the brake pedal position switch 4P connector.
6. Connect brake pedal position switch 4P connector terminal No. 1 and No. 2 to with a jumper wire.

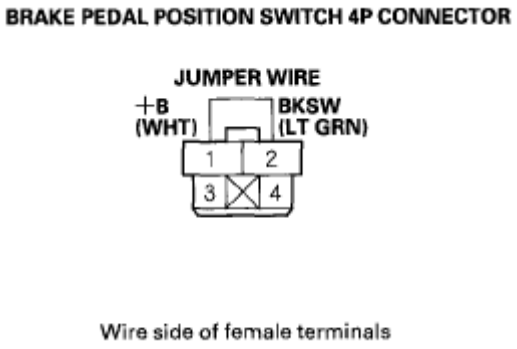

Fig. 42: Identifying Brake Pedal Position Switch 4P Connector Terminal No. 1 And No. 2 To With Jumper Wire

7. Turn the ignition switch ON (II).
8. Check the BRAKE SWITCH in the VSA DATA LIST with the HDS.

   Does it indicate ON?

   YES -Check the brake pedal position switch adjustment (see **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT**). If it is OK, replace the brake pedal position switch.

   NO -Go to step 9.

9. Disconnect the jumper wire.
10. Turn the ignition switch to LOCK (0).
11. Short the SCS line with the HDS.
12. Disconnect ECM connector A (44P).
13. Check for continuity between brake pedal position switch 4P connector terminal No. 2 and ECM connector A (44P) terminal No. 40.

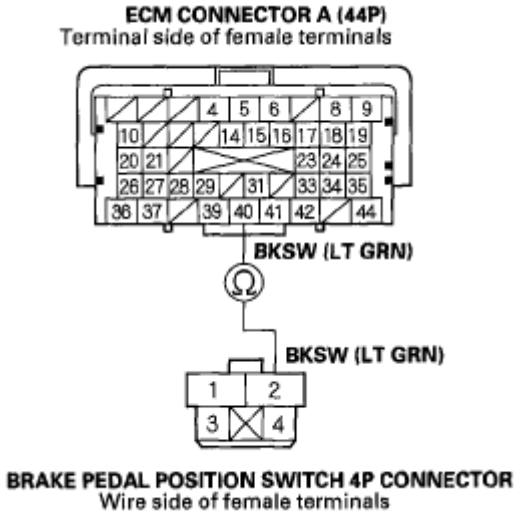

Fig. 43: Checking Continuity Between Brake Pedal Position Switch 4P Connector And ECM Connector A (44P)

Is there continuity?

YES -Substitute a known-good ECM, then go to step 1 and recheck. If DTCs are not indicated, replace the original ECM (see **ECM REPLACEMENT**).

NO -Repair open in the wire between the ECM and the brake pedal position switch.

DTC 68-22: BRAKE PEDAL POSITION SWITCH STUCK ON

1. Turn the ignition switch ON (II).
2. Check the BRK PRESS in the VSA DATA LIST with the HDS. Do not press the brake pedal.

   Is 10 MPa or more?

   YES -Check brake pedal height (see **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT**). If the brake pedal height is OK, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

   NO -Go to step 3.

3. Check the BRAKE SWITCH in the VSA DATA LIST with the HDS while moving the brake pedal.

   Does it indicate ON when the pedal is pressed, and OFF when the pedal is released?

   YES -Intermittent failure, the system is OK at this time.

   NO -Go to step 4.

4. Check the BRAKE SWITCH in the VSA DATA LIST with the HDS, and disconnect the brake pedal position switch 4P connector.

   Does the indicator change from ON to OFF?

   YES -Replace the brake pedal position switch (see **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT**).

   NO -Go to step 5.

5. Turn the ignition switch to LOCK (0).
6. Short the SCS line with the HDS.
7. Disconnect ECM connector A (44P).
8. Turn the ignition switch ON (II).
9. Measure voltage between brake pedal position switch 4P connector terminal No. 2 and body ground.

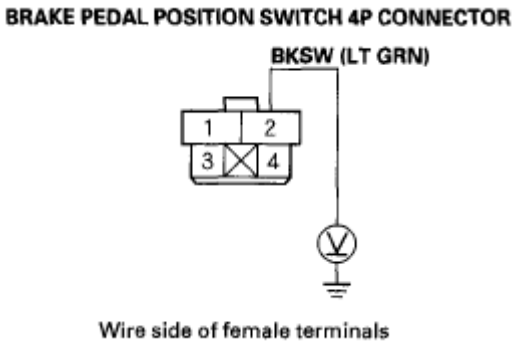

Fig. 44: Measuring Voltage Between Brake Pedal Position Switch 4P Connector Terminal No. 2 And Body Ground

Is there 0.1 V or more?

YES -Repair short to power in the wire between the ECM and the brake pedal position switch.

NO -Substitute a known-good ECM, then go to step 1 and recheck. If DTCs are not indicated, replace the original ECM (see **ECM REPLACEMENT**).

DTC 71-21: RIGHT-FRONT OR LEFT-REAR DIFFERENT DIAMETER TIRE MALFUNCTION;
DTC 71-22: LEFT-FRONT OR RIGHT-REAR DIFFERENT DIAMETER TIRE MALFUNCTION;
DTC 71-23: RIGHT-FRONT AND RIGHT-REAR DIFFERENT DIAMETER TIRE MALFUNCTION;
DTC 71-24: LEFT-FRONT AND LEFT-REAR DIFFERENT DIAMETER TIRE MALFUNCTION;
DTC 71-25: RIGHT-FRONT AND LEFT-FRONT DIFFERENT DIAMETER TIRE MALFUNCTION;
DTC 71-26: RIGHT-REAR AND LEFT-REAR DIFFERENT DIAMETER TIRE MALFUNCTION;
DTC 71-27: RIGHT-FRONT OR LEFT-REAR DIFFERENT DIAMETER TIRE MALFUNCTION;
DTC 71-28: LEFT-FRONT OR RIGHT-REAR DIFFERENT DIAMETER TIRE MALFUNCTION;
DTC 71-29: RIGHT-FRONT AND RIGHT-REAR DIFFERENT DIAMETER TIRE MALFUNCTION;
DTC 71-2A: LEFT-FRONT AND LEFT-REAR DIFFERENT DIAMETER TIRE MALFUNCTION;
DTC 71-2B: RIGHT-FRONT AND LEFT-FRONT DIFFERENT DIAMETER TIRE MALFUNCTION;
DTC 71-2C: RIGHT-REAR AND LEFT-REAR DIFFERENT DIAMETER TIRE MALFUNCTION

NOTE: The DTC will be indicated when the vehicle has a different diameter tire(s) compared to the other tire(s).

DTC REFERENCE

DTC	Sectional	Note
71-21	Right-front or left-rear	
71-22	Left-front or right-rear	
71-23	Right-front and right-rear	
71-24	Left-front and left-rear	
71-25	Right-front and left-front	
71-26	Right-rear and left-rear	
71-27	Right-front or left-rear	
71-28	Left-front or right-rear	
71-29	Right-front and right-rear	
71-2A	Left-front and left-rear	

71-2B	Right-front and left-front	
71-2C	Right-rear and left-rear	

1. Check the tires for proper inflation (see **WHEEL ALIGNMENT**).
2. Turn the ignition switch ON (II).
3. Clear the DTC with the HDS.
4. Turn the ignition switch to LOCK (0).
5. Test-drive the vehicle.
6. Check for DTCs with the HDS.

   Is DTC 71-21, 71-22, 71-23, 71-24, 71-25, 71-26, 71-27, 71-28, 71-29, 71-2A, 71-2B, or 71-2C indicated?

   YES -Replace all four tires with the proper size (see **WHEEL ALIGNMENT**).

   NO -Intermittent failure, the system is OK at this time.

DTC 81-XX*: CENTRAL PROCESSING UNIT (CPU) INTERNAL CIRCUIT MALFUNCTION

* : Subcode (Except DTC 81-11,81-3D, 81-3E, 81-51, 81-52,81-53,81-54,81-55, 81-56,81-57,81-58, and 81-59)

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Check for DTCs with the HDS.

   Is DTC 81-xx indicated?

   YES -If the DTC 81-11,81-3D,81-3E, 81-51, 81-52, 81-53, 81-54, 81-55, 81-56, 81-57,81-58, or 81-59 is indicated at the same time, do the DTC 81-11, 81-52,81-54,81-56, or 81-58 troubleshooting (see **DTC 81-xx*: Central Processing Unit (CPU) Internal Circuit Malfunction**), DTC 81-51,81-53,81-55, or 81-57 troubleshooting (see **DTC 81-51: Central Processing Unit (CPU) Internal Circuit Malfunction; DTC 81-53: Central Processing Unit (CPU) Internal Circuit Malfunction; DTC 81-55: Central Processing Unit (CPU) Internal Circuit Malfunction; DTC 81-57: Central Processing Unit (CPU) Internal Circuit Malfunction**), or DTC 81-3D, 81-3E, or 81-59 troubleshooting (see **DTC 81-3D: Central Processing Unit (CPU) Internal Circuit Malfunction; DTC 81-3E: Central Processing Unit (CPU) Internal Circuit Malfunction; DTC 81-59: Central Processing Unit (CPU) Internal Circuit Malfunction**). If DTC 81-11, 81-3D, 81-3E, 81-51, 81-52, 81-53, 81-54, 81-55, 81-56, 81-57, 81-58, or 81-59 is not indicated. Replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

   NO -Intermittent failure, the system is OK at this time.

DTC 81-11: CENTRAL PROCESSING UNIT (CPU) INTERNAL CIRCUIT MALFUNCTION; DTC 81-52: CENTRAL PROCESSING UNIT (CPU) INTERNAL CIRCUIT MALFUNCTION; DTC 81-54: CENTRAL PROCESSING UNIT (CPU) INTERNAL CIRCUIT MALFUNCTION; DTC 81-56: CENTRAL PROCESSING UNIT (CPU) INTERNAL CIRCUIT MALFUNCTION; DTC 81-58:

CENTRAL PROCESSING UNIT (CPU) INTERNAL CIRCUIT MALFUNCTION

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Test-drive the vehicle.
4. Check for DTCs with the HDS.

   Is DTC 81-11, 81-52, 81-54, 81-56, or 81-58 indicated?

   YES -Replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

   NO -Intermittent failure, the system is OK at this time.

DTC 81-51: CENTRAL PROCESSING UNIT (CPU) INTERNAL CIRCUIT MALFUNCTION; DTC 81-53: CENTRAL PROCESSING UNIT (CPU) INTERNAL CIRCUIT MALFUNCTION; DTC 81-55: CENTRAL PROCESSING UNIT (CPU) INTERNAL CIRCUIT MALFUNCTION; DTC 81-57: CENTRAL PROCESSING UNIT (CPU) INTERNAL CIRCUIT MALFUNCTION

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Test-drive the vehicle.
4. Check for DTCs with the HDS.

   Is DTC 81-51, 81-53, 81-55, or 81-57 indicated?

   YES -Go to step 5.

   NO -Intermittent failure, the system is OK at this time.

5. Turn the ignition switch to LOCK (0).
6. Disconnect the VSA modulator-control unit 37P connector.
7. Turn the ignition switch ON (II).
8. Measure voltage between body ground and the appropriate VSA modulator-control unit 37P connector terminals (see table).

DTC REFERENCE

DTC	VSA Modulator-control Unit 37P Connector Terminals No.
81-51	No. 19
81-53	No. 22
81-55	No. 9
81-57	No. 20

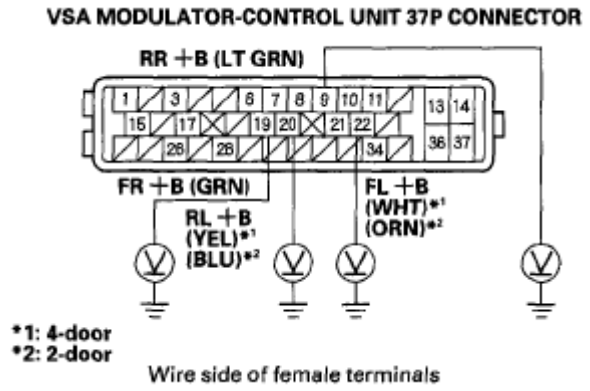

Fig. 45: Measuring Voltage Between Body Ground And Appropriate VSA Modulator-Control Unit 37P Connector Terminals

Is there 0.1 V or more?

YES -Repair short to power in the wire between the appropriate wheel speed sensor and the VSA modulator-control unit.

NO -Replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

DTC 81-3D: CENTRAL PROCESSING UNIT (CPU) INTERNAL CIRCUIT MALFUNCTION; DTC 81-3E: CENTRAL PROCESSING UNIT (CPU) INTERNAL CIRCUIT MALFUNCTION; DTC 81-59: CENTRAL PROCESSING UNIT (CPU) INTERNAL CIRCUIT MALFUNCTION

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Turn the steering wheel from lock to lock.
5. Check for DTCs with the HDS.

Is DTC 81-3D, 81-3E, or 81-59 indicated?

YES -Replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

NO -Intermittent failure, the system is OK at this time.

DTC 83-13: ECM COMMUNICATION ERROR; DTC 83-14: ECM COMMUNICATION ERROR

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Test-drive the vehicle.
4. Check for DTCs with the HDS.

Is DTC 83-13, or 83-14 indicated?

YES -Go to step 5.

NO -Intermittent failure, the system is OK at this time. Check for loose terminals between ECM connector A (44P) and the VSA modulator-control unit 37P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** (see).

5. Turn the ignition switch to LOCK (0).
6. Substitute a known-good ECM (see **SUBSTITUTING THE ECM**).
7. Turn the ignition switch ON (II).
8. Clear the DTC with the HDS.
9. Test-drive the vehicle.
10. Check for DTCs with the HDS.

Is DTC 83-13, 83-14 indicated?

YES -Replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

NO -Replace the original ECM (see **ECM REPLACEMENT**).

DTC 84-21: VSA SENSOR NEUTRAL POSITION NOT WRITING

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Do the VSA sensor neutral position memorization (see **VSA SENSOR NEUTRAL POSITION MEMORIZATION**).
4. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
5. Check for DTCs with the HDS.

Is DTC 84-21 indicated?

YES -Check for loose terminals in the VSA modulator-control unit 37P connector. If necessary, substitute a known-good VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**), and retest.

NO -The system is OK at this time.

DTC 86-01: F-CAN BUS-OFF MALFUNCTION

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Check for DTCs with the HDS.

Is DTC 86-01 indicated?

YES -Go to step 5.

NO -Intermittent failure, the system is OK at this time. Check for loose terminals between ECM connector A (44P) and the VSA modulator-control unit 37P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** (see).

5. Turn the ignition switch to LOCK (0).
6. Short the SCS line with the HDS.
7. Disconnect ECM connector A (44P).
8. Disconnect the HDS from the data link connector (DLC).
9. Disconnect the gauge control module (tach) 36P connector.
10. Disconnect SRS unit connector A (28P).
11. With EPS: Disconnect EPS control unit connector D (28P).
12. With TPMS: Disconnect the TPMS control unit 20P connector.
13. Disconnect the yaw rate-lateral acceleration sensor 5P connector.
14. Disconnect the VSA modulator-control unit 37P connector.
15. Check for continuity between VSA modulator-control unit 37P connector terminals No. 1 and No. 15 and body ground individually.

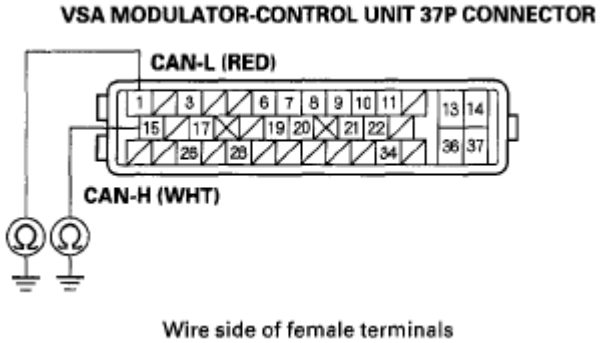

Fig. 46: Checking Continuity Between VSA Modulator-Control Unit 37P Connector Terminals No. 1 And No. 15 And Body Ground

Is there continuity?

YES -Repair short to body ground in the wire between the ECM/PCM, the gauge control module (tach), the data link connector (DLC), the SRS unit, the EPS control unit (if equipped), the TPMS control unit (if equipped), and the yaw rate-lateral acceleration sensor, and the VSA modulator-control unit.

NO -Go to step 16.

16. Check for continuity between VSA modulator-control unit 37P connector terminals No. 1 and No. 15.

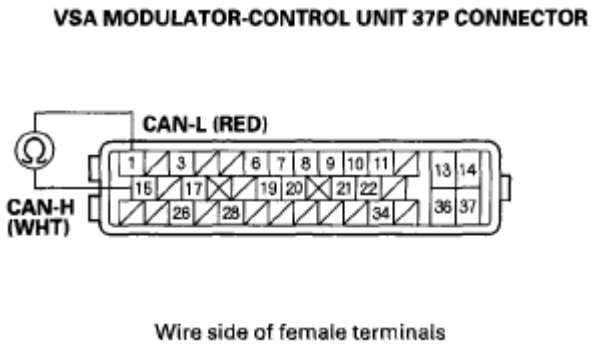

Fig. 47: Checking Continuity Between VSA Modulator-Control Unit 37P Connector Terminals No. 1 And No. 15

Is there continuity?

YES -Repair short in the wire between VSA modulator-control unit 37P connector terminals No. 1 (CAN-L line) and No. 15 (CAN-H line).

NO -Go to step 17.

17. Check for continuity between the VSA modulator-control unit 37P connector terminal and ECM connector A (44P) terminal (see table).

CONNECTOR TERMINAL DESCRIPTION

Sign	Connector Terminal No.	
	VSA Modulator-control Unit	ECM
CAN-L	1	37
CAN-H	15	36

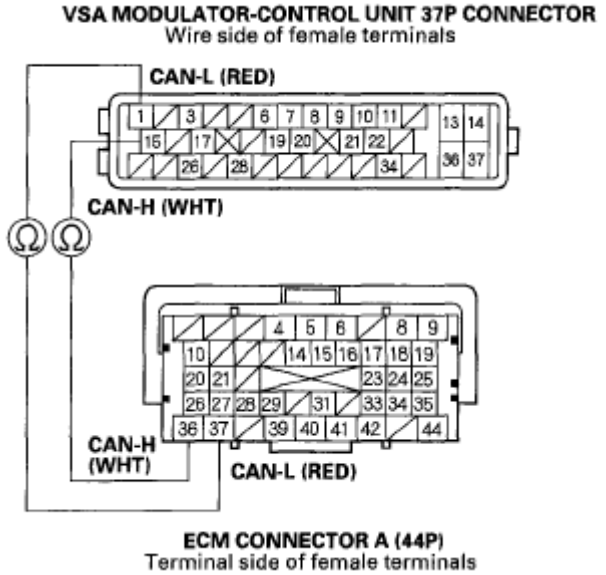

Fig. 48: Checking Continuity Between VSA Modulator-Control Unit 37P Connector Terminal And ECM Connector A (44P) Terminal

Is there continuity?

YES -Check for loose terminals in the VSA modulator-control unit 37P connector. If necessary, substitute a known-good VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**), and retest.

NO -Repair open in the wire between the ECM and the VSA modulator-control unit.

DTC 86-11: F-CAN COMMUNICATION WITH ECM MALFUNCTION; DTC 86-21: F-CAN COMMUNICATION WITH ENGINE MALFUNCTION; DTC 86-22: F-CAN COMMUNICATION WITH ENGINE MALFUNCTION; DTC 86-23: F-CAN COMMUNICATION WITH ENGINE MALFUNCTION; DTC 86-24: F-CAN COMMUNICATION WITH ENGINE MALFUNCTION; DTC 86-25: F-CAN COMMUNICATION WITH ENGINE MALFUNCTION; DTC 86-41: F-CAN COMMUNICATION WITH EAT MALFUNCTION

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0).
4. Test-drive the vehicle. Drive the vehicle at 7 mph (10 km/h) or more.
5. Check for DTCs with the HDS.

   Is 86-11, 86-21, 86-22, 86-23, 86-24, 86-25, and/or 86-41 DTC indicated?

   YES -If the DTC 86-01 is indicated at the same time, do the DTC 86-01 troubleshooting (see **DTC 86-01: F-CAN Bus-off Malfunction**). If 86-01 is not indicated, go to step 6.

   NO -If any DTCs are indicated, go to the indicated DTCs troubleshooting. If DTCs are not indicated, intermittent failure, the system is OK at this time. Check for loose terminals between ECM connector A (44P) and the VSA modulator-control unit 37P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** (see).

6. Turn the ignition switch to LOCK (0).
7. Short the SCS line with the HDS.
8. Disconnect ECM connector A (44P).
9. Disconnect the VSA modulator-control unit 37P connector.
10. Check for continuity between the VSA modulator-control unit 37P connector terminal and ECM connector A (44P) terminal (see table).

CONNECTOR TERMINAL DESCRIPTION

Sign	Connector Terminal No.	
	VSA Modulator-control Unit	ECM
CAN-L	1	37
CAN-H	15	36

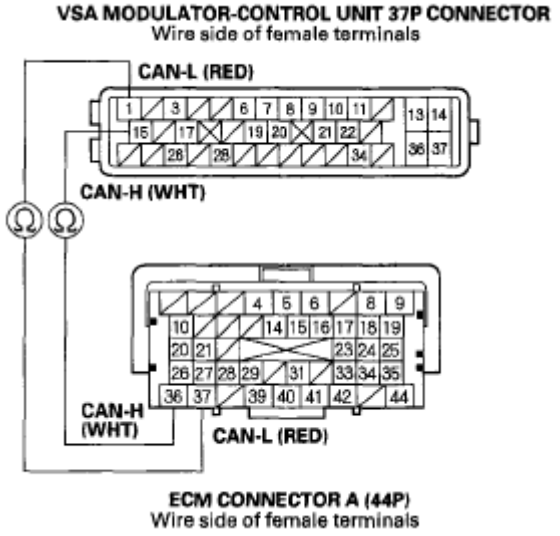

Fig. 49: Checking Continuity Between VSA Modulator-Control Unit 37P Connector Terminal And ECM Connector A (44P) Terminal

Is there continuity?

YES -Check for loose terminals in ECM connector A (44P) and at the VSA modulator-control unit 37P connector. If necessary, substitute a known-good ECM, then go to step 1 and recheck. If no DTCs are indicated, replace the original ECM (see **ECM REPLACEMENT**). If DTCs are indicated, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

NO -Repair open in the wire between the ECM and the VSA modulator-control unit.

DTC 86-31: F-CAN COMMUNICATION WITH GAUGE CONTROL MODULE MALFUNCTION

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Check for DTCs with the HDS.

   Is 86-31 DTC indicated?

   YES -If the DTC 86-01 is indicated at the same time, do the DTC 86-01 troubleshooting (see **DTC 86-01: F-CAN Bus-off Malfunction**). If 86-01 is not indicated, go to step 5.

   NO -If any DTCs are indicated, go to the indicated DTCs troubleshooting. If DTCs are not indicated, intermittent failure, the system is OK at this time. Check for loose terminals between the gauge control module (tach) 36P connector and the VSA modulator-control unit 37P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** (see).

5. Turn the ignition switch ON (II).

   Do the gauge indicators come on?

YES -Go to step 6.

NO -Do the gauge control module troubleshooting (see **SELF-DIAGNOSTIC FUNCTION**).

6. Turn the ignition switch to LOCK (0).
7. Disconnect the gauge control module (tach) 36P connector.
8. Disconnect the VSA modulator-control unit 37P connector.
9. Check for continuity between the VSA modulator-control unit 37P connector terminal and gauge control module (tach) 36P connector terminal (see table).

CONNECTOR TERMINAL DESCRIPTION

Sign	Connector Terminal No.	
	VSA Modulator-control Unit	Gauge Control Module (Tach)
CAN-L	1	19
CAN-H	15	1

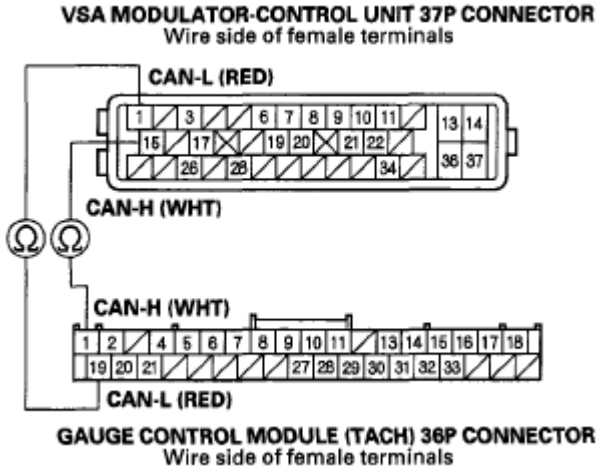

Fig. 50: Checking Continuity Between VSA Modulator-Control Unit And Gauge Control Module 36P Connector Terminal

Is there continuity?

YES -Check for loose terminals in the gauge control module (tach) 36P connector. If necessary, substitute a known-good gauge control module (tach), then go to step 1 and recheck. If no DTCs are indicated, replace the original gauge control module (tach) (see **REPLACEMENT**). If DTC 86-31 resets, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

NO -Repair open in the wire between the gauge control module (tach) and the VSA modulator-control unit.

DTC 86-71: F-CAN COMMUNICATION WITH YAW RATE-LATERAL ACCELERATION SENSOR MALFUNCTION

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.

3. Check for DTCs with the HDS.

   Is 86-71 DTC indicated?

   YES -If the DTC 86-01 is indicated at the same time, do the DTC 86-01 troubleshooting (see **DTC 86-01: F-CAN Bus-off Malfunction**). If 86-01 is not indicated, go to step 4.

   NO -If any DTCs are indicated, go to the indicated DTCs troubleshooting. If DTCs are not indicated, intermittent failure, the system is OK at this time. Check for loose terminals at the yaw rate-lateral acceleration sensor 5P connector and the VSA modulator-control unit 37P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** (see).

4. Turn the ignition switch to LOCK (0).
5. Disconnect the yaw rate-lateral acceleration sensor 5P connector.
6. Disconnect the VSA modulator-control unit 37P connector.
7. Check for continuity between the VSA modulator-control unit 37P connector terminal and the yaw rate-lateral acceleration sensor 5P connector terminal (see table).

CONNECTOR TERMINAL DESCRIPTION

Sign	Connector Terminal No.	
	VSA Modulator-control Unit	Yaw Rate-lateral Acceleration Sensor
CAN-L	1	4
CAN-H	15	3

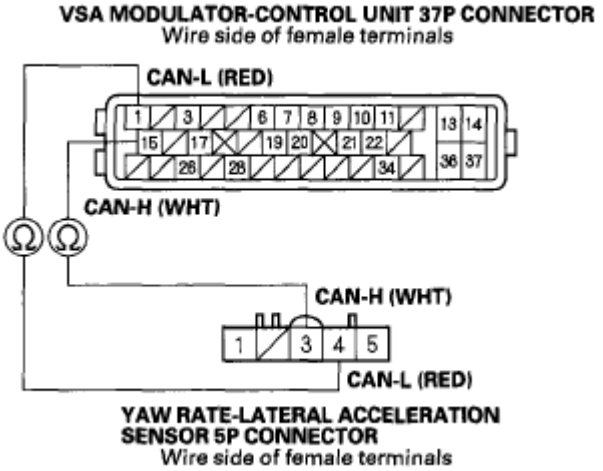

Fig. 51: Checking Continuity Between VSA Modulator-Control Unit And YAW Rate-Lateral Acceleration Sensor 5P Connector Terminal

Is there continuity?

YES -Go to step 8.

NO -Repair open in the wire between the yaw rate-lateral acceleration sensor and the VSA modulator-control unit.

8. Turn the ignition switch ON (II).

9. Measure voltage between yaw rate-lateral acceleration sensor 5P connector terminal No. 1 and body ground.

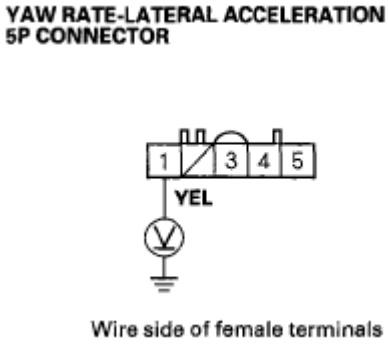

Fig. 52: Measuring Voltage Between YAW Rate-Lateral Acceleration Sensor 5P Connector Terminal And Body Ground

Is there battery voltage?

YES -Go to step 10.

NO -Check the No. 4 (7.5 A) fuse in the under-dash fuse/relay box. If the fuse is OK, repair open in the wire between the No. 4 (7.5 A) fuse and yaw rate-lateral acceleration sensor.

10. Turn the ignition switch to LOCK (0).
11. Reconnect the yaw rate-lateral acceleration sensor 5P connector.
12. Turn the ignition switch ON (II).
13. Measure voltage between yaw rate-lateral acceleration sensor 5P connector terminal No. 5 and body ground.

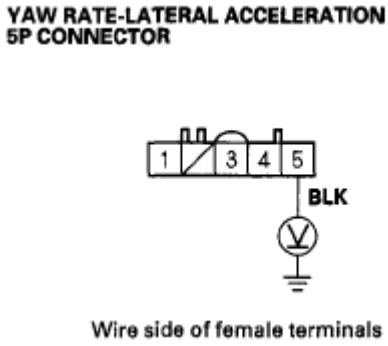

Fig. 53: Measuring Voltage Between YAW Rate-Lateral Acceleration Sensor 5P Connector Terminal And Body Ground

Is there 0.1 V or less?

YES -Replace the yaw rate-lateral acceleration sensor (see **YAW RATE-LATERAL ACCELERATION SENSOR REPLACEMENT**).

NO -Repair open in the wire between the yaw rate-lateral acceleration sensor and body ground (G602).

DTC 107-22: CENTRAL PROCESSING UNIT (CPU) INTERNAL CIRCUIT MALFUNCTION

1. Turn the ignition switch to LOCK (0) to cool the VSA modulator-control unit, and wait 1 hour or more.
2. Turn the ignition switch ON (II).
3. Clear the DTC with the HDS.
4. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
5. Check for DTCs with the HDS.

   Is DTC 107-22 indicated?

   YES -Replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

   NO -The system is OK at this time.

DTC 108-21: STEERING ANGLE SENSOR MALFUNCTION

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Do the VSA sensor neutral position memorization (see **VSA SENSOR NEUTRAL POSITION MEMORIZATION**).
4. Test-drive the vehicle.
5. Check for DTCs with the HDS.

   Is DTC 108-21 indicated?

   YES -Go to step 6.

   NO -Intermittent failure, the system is OK at this time.

6. Turn the ignition switch to LOCK (0).
7. Substitute a known-good steering angle sensor (see **STEERING ANGLE SENSOR REPLACEMENT**).
8. Turn the ignition switch ON (II).
9. Clear the DTC with the HDS.
10. Do the VSA sensor neutral position memorization (see **VSA SENSOR NEUTRAL POSITION MEMORIZATION**).
11. Test-drive the vehicle.
12. Check for DTCs with the HDS.

    Is DTC 108-21 indicated?

    YES -Replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

    NO -Replace the original steering angle sensor (see **STEERING ANGLE SENSOR**

REPLACEMENT).

DTC 112-01: CENTRAL PROCESSING UNIT (CPU) INTERNAL CIRCUIT MALFUNCTION

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0).
4. Disconnect the VSA modulator-control unit 37P connector.
5. Measure voltage between VSA modulator-control unit 37P connector terminal No. 13 and body ground.

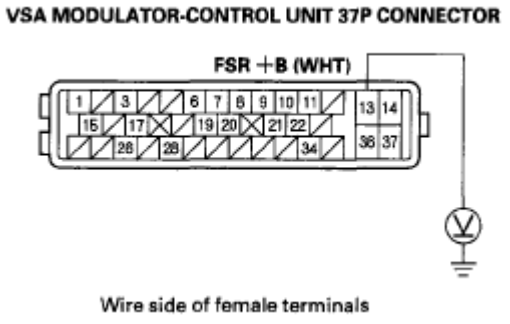

Fig. 54: Measuring Voltage Between VSA Modulator-Control Unit 37P Connector Terminal No. 13 And Body Ground

Is there battery voltage?

YES -Go to step 6.

NO -Check the battery performance (see **BATTERY TEST**), and troubleshoot the alternator and regulator circuit (see **ALTERNATOR AND REGULATOR CIRCUIT TROUBLESHOOTING**).

6. Measure voltage between VSA modulator-control unit 37P connector terminal No. 28 and body ground.

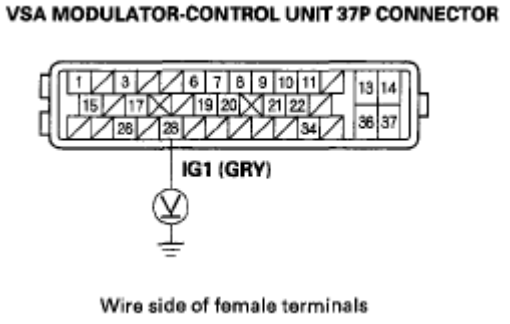

Fig. 55: Measuring Voltage Between VSA Modulator-Control Unit 37P Connector Terminal No. 28 And Body Ground

Is there 0 V?

YES -Go to step 7.

NO -Repair short to power in the wire between the No. 4 (7.5 A) fuse in the under-dash fuse-relay box and the VSA modulator-control unit.

7. Turn the ignition switch ON (II).
8. Measure voltage between VSA modulator-control unit 37P connector terminal No. 28 and body ground.

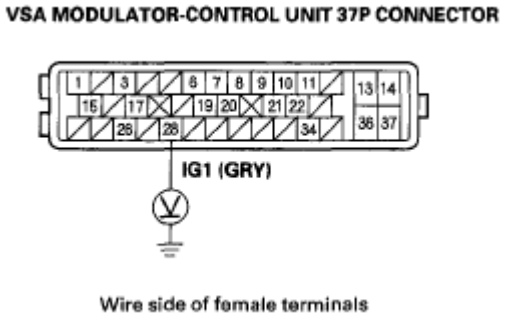

Fig. 56: Measuring Voltage Between VSA Modulator-Control Unit 37P Connector Terminal No. 28 And Body Ground

Is there battery voltage?

YES -Check for loose terminals in the VSA modulator-control unit 37P connector. If necessary, substitute a known-good VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**), and retest.

NO -Repair open in the wire between the No. 4 (7.5 A) fuse in the under-dash fuse-relay box and the VSA modulator-control unit.

DTC 121-XX*: VSA SOLENOID VALVE MALFUNCTION; DTC 122-XX*: VSA SOLENOID VALVE MALFUNCTION; DTC 123-XX*: VSA SOLENOID VALVE MALFUNCTION; DTC 124-XX*: VSA SOLENOID VALVE MALFUNCTION

*: Subcode

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it ON (II) again.
4. Check for DTCs with the HDS.

CONNECTOR TERMINAL DESCRIPTION

DTC		Sectional	Valve
121	-01	Right-front and left-rear	Regulator
	-02		
	-11		
	-21		
	-24		
	-01		

122	-21		Suction
	-22		
	-23		
123	-01	Left-front and right-rear	Regulator
	-02		
	-11		
	-21		
	-24		
124	-01		Suction
	-21		
	-22		
	-23		

Is DTC 121-xx, 122-xx, 123-xx, or 124-xx indicated?

YES -Replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

NO -Intermittent failure, the system is OK at this time.

SYMPTOM TROUBLESHOOTING

ABS indicator or VSA indicator does not go off, and no DTCs are stored

1. Check for the communication between the vehicle and the HDS.

   Is there the communication?

   YES -Check for loose terminals in the gauge control module (tach) 36P connector. If necessary, substitute a known-good gauge control module (tach), then recheck. If it is OK, replace the original gauge control module (tach) (see **REPLACEMENT**).

   NO -If the HDS does not communicate with all the system of the vehicle, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**). If the HDS does not communicate with only VSA, go to step 2.

2. Turn the ignition switch to LOCK (0).
3. Check the No. 4 (7.5 A) fuse in the under-dash fuse/ relay box.

   Is the fuse blown?

   YES -Install the new No. 4 (7.5 A) fuse, and recheck. If the fuse continues to blow, check for short to body ground in the wire between the No. 4 (7.5 A) fuse in the under-dash fuse/relay box and the VSA modulator-control unit. If necessary, substitute a known-good VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**), and retest.

   NO -Reinstall the checked fuse, then go to step 4.

4. Disconnect the VSA modulator-control unit 37P connector.
5. Turn the ignition switch ON (II).
6. Measure voltage between VSA modulator-control unit 37P terminal No. 28 and body ground.

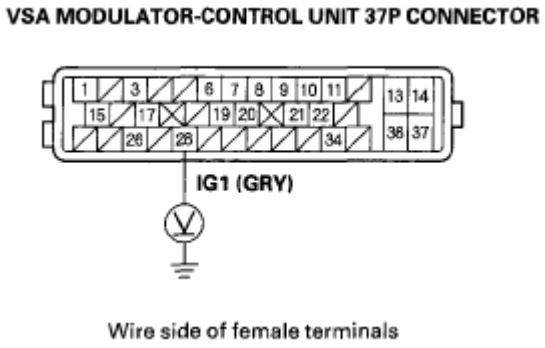

Fig. 57: Measuring Voltage Between VSA Modulator-Control Unit 37P Terminal No. 28 And Body Ground

Is there battery voltage?

YES -Go to step 7.

NO -Repair open in the wire between the No. 4 (7.5 A) fuse in the under-dash fuse/relay box and the VSA modulator-control unit.

7. Turn the ignition switch to LOCK (0).
8. Check for continuity between VSA modulator-control unit 37P terminal No. 36 and body ground.

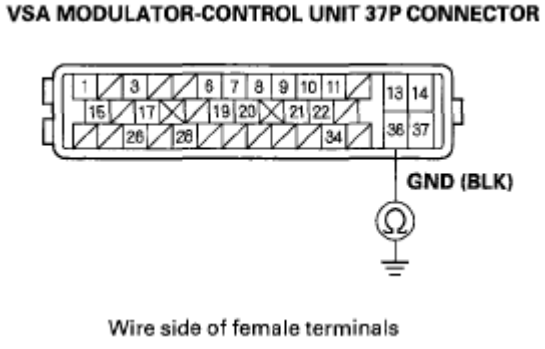

Fig. 58: Checking Continuity Between VSA Modulator-Control Unit 37P Terminal No. 36 And Body Ground

Is there continuity?

YES -Check for loose terminals in the VSA modulator-control unit 37P connector, clean terminal G202 and recheck. If necessary, substitute a known-good VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**), and retest.

NO -Repair open in the wire between the VSA modulator-control unit and body ground (G202).

BRAKE SYSTEM INDICATOR DOES NOT GO OFF, AND NO DTCS ARE STORED

1. Release the parking brake.
2. Turn the ignition switch ON (II).
3. Check the brake system indicator for several seconds when the ignition switch is turned ON (II).

   Does the indicator come on then go off?

   YES -Intermittent failure, the system is OK at this time. Check for loose terminals between the gauge control module (tach) 36P connector and the VSA modulator-control unit 37P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** (see).

   NO -Go to step 4.

4. Check the BRAKE INDICATOR in the VSA DATA LIST with the HDS.

   Does it indicate OFF?

   YES -Go to step 5.

   NO -Check for loose terminals in the VSA modulator-control unit 37P connector. If necessary, substitute a known-good VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**), and retest.

5. Turn the ignition switch to LOCK (0).
6. Disconnect the parking brake switch 1P connector.
7. Turn the ignition switch ON (II).

   Does the brake system indicator go off?

   YES -Replace the parking brake switch (see **PARKING BRAKE CABLE REPLACEMENT**).

   NO -Go to step 8.

8. Turn the ignition switch to LOCK (0).
9. Disconnect the gauge control module (tach) 36P connector.
10. Check for continuity between parking brake switch 1P connector terminal No. 1 and body ground.

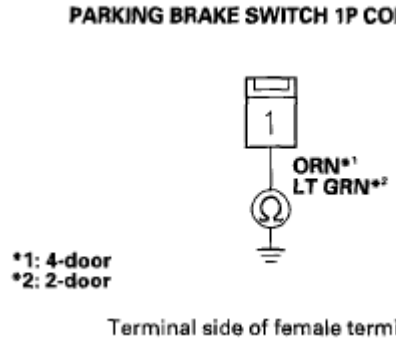

Fig. 59: Checking Continuity Between Parking Brake Switch 1P Connector Terminal No. 1 And Body Ground

Is there continuity?

YES -Repair short to body ground in the wire between the gauge control module (tach) and the parking brake switch.

NO -Check for loose terminals in the gauge control module (tach) 36P connector. If necessary, substitute a known-good gauge control module (tach), then go to step 1 and recheck. If it is OK, replace the original gauge control module (tach) (see **REPLACEMENT**).

VSA activation indicator does not go off, and no DTCs are stored

1. Turn the ignition switch ON (II).
2. Check the VSA activation indicator for several seconds when the ignition switch is turned ON (II).

   Does the indicator come on then go off?

   YES -Intermittent failure, the system is OK at this time. Check for loose terminals between the VSA OFF switch 5P connector, the gauge control module (tach) 36P connector, and the VSA modulator-control unit 37P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** (see).

   NO -Go to step 3.

3. Check the VSA OFF SWITCH in the VSA DATA LIST with the HDS while pushing the VSA OFF switch.

   Does the indicator change from ON (OFF) to OFF (ON)?

   YES -Do the gauge control module troubleshooting (see **SELF-DIAGNOSTIC FUNCTION**).

   NO -Go to step 4.

4. Turn the ignition switch to LOCK (0).
5. Check the VSA OFF switch (see **VSA OFF SWITCH TEST**).

   Is the VSA off switch OK?

   YES -Go to step 6.

   NO -Replace the VSA OFF switch (see **VSA OFF SWITCH TEST**).

6. Disconnect the gauge control module (tach) 36P connector.
7. Disconnect the VSA OFF switch 5P connector.
8. Check for continuity between VSA OFF switch 5P connector terminal No. 2 and body ground.

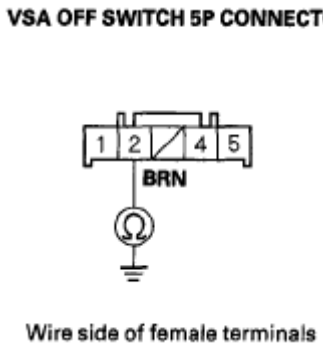

Fig. 60: Checking Continuity Between VSA Off Switch 5P Connector Terminal No. 2 And Body Ground

Is there continuity?

YES -Repair short to body ground in the wire between the gauge control module (tach) and the VSA OFF switch.

NO -Substitute a known-good VSA modulator-control unit, then go to step 1 and recheck. If it is OK, replace the original VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

ABS indicator, brake system indicator, and VSA indicator do not go off at same time

NOTE: Check for gauge DTCs with the HDS (see WIRE COLOR CODES). If goluges DTCs are stored, troubleshoot those DTCs first.

1. Release the parking brake.
2. Turn the ignition switch ON (II).
3. Check the ABS indicator, brake system indicator and the VSA indicator for several seconds when the ignition switch is turned ON (II).

   Do the indicators come on then go off?

   YES -Intermittent failure, the system is OK at this time. Check for loose terminals between the gauge control module (tach) 36P connector and the VSA modulator-control unit 37P connector. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING** (see).

   NO -Go to step 4.

4. Turn the ignition switch to LOCK (0).
5. Short the SCS line with the HDS.
6. Disconnect ECM connector A (44P).
7. Disconnect the HDS from the data link connector (DLC).
8. Disconnect the gauge control module (tach) 36P connector.
9. Disconnect SRS unit connector A (28P).
10. Disconnect EPS control unit connector D (28P).
11. With TPMS: Disconnect the TPMS control unit 20P connector.

12. Disconnect the yaw rate-lateral acceleration sensor 5P connector.
13. Disconnect the VSA modulator-control unit 37P connector.
14. Check for continuity between VSA modulator-control unit 37P connector terminals No. 1 and No. 15 and body ground individually.

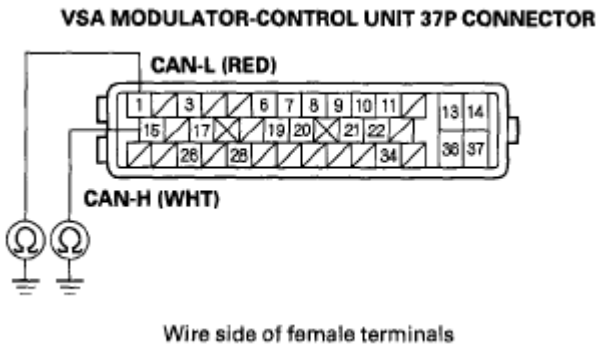

Fig. 61: Checking Continuity Between VSA Modulator-Control Unit And Body Ground

Is there continuity?

YES -Repair short to body ground in the wire between the ECM/PCM, the gauge control module (tach), the data link connector (DLC), the SRS unit, the EPS control unit (if equipped), the TPMS control unit (if equipped), and the yaw rate-lateral acceleration sensor, and the VSA modulator-control unit.

NO -Go to step 15.

15. Check for continuity between VSA modulator-control unit 37P connector terminals No. 1 and No. 15.

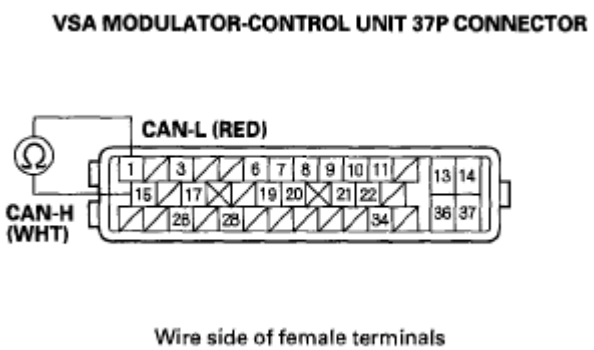

Fig. 62: Checking Continuity Between VSA Modulator-Control Unit 37P Connector Terminals No. 1 And No. 15

Is there continuity?

YES -Repair short in the wire between VSA modulator-control unit 37P connector terminals No. 1 (CAN-L line) and No. 15 (CAN-H line).

NO -Go to step 16.

16. Check for continuity between VSA modulator-control unit 37P connector terminal and gauge control

module (tach) 36P connector terminal (see table).

CONNECTOR TERMINAL DESCRIPTION

Sign	Connector Terminal No.	
	VSA Modulator-control Unit	Gauge Control Module (Tach)
CAN-L	1	19
CAN-H	15	1

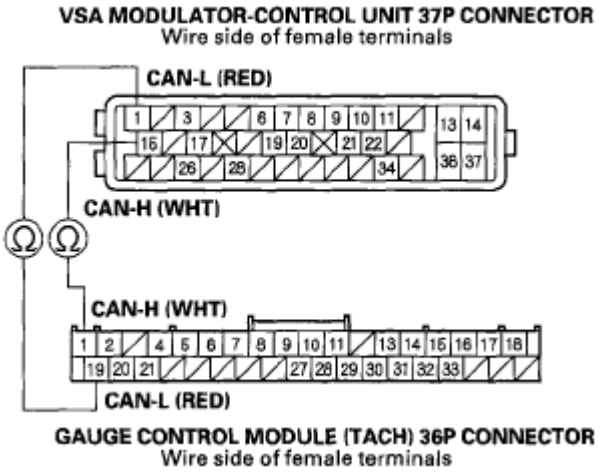

Fig. 63: Checking Continuity Between VSA Modulator-Control Unit And Gauge Control Module Connector Terminal

Is there continuity?

YES -Check for loose terminals in the gauge control module (tach) 36P connector. If necessary, substitute a known-good gauge control module (tach), then go to step 1 and recheck. If it is OK, replace the original gauge control module (tach) (see **REPLACEMENT**). If DTCs are indicated, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

NO -Repair open in the wire between the gauge control module (tach) and the VSA modulator-control unit.

STEERING ANGLE SENSOR REPLACEMENT

NOTE: Do not damage or drop the combination switch as the steering angle sensor is sensitive to shock and vibration.

1. Remove the steering wheel (see **STEERING WHEEL REMOVAL**).
2. Remove the steering column covers and the cable reel (see **CABLE REEL REPLACEMENT**).
3. Remove the combination switch assembly (see **STEERING COLUMN REMOVAL AND INSTALLATION**).
4. Remove the combination light switch (A) and the wiper/washer switch (B).

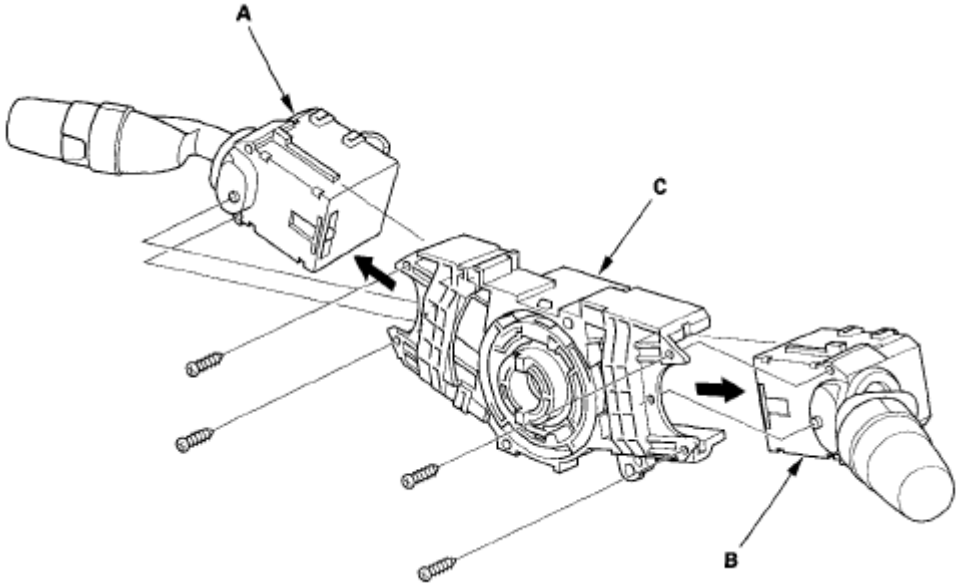

Fig. 64: Identifying Steering Angle Sensor

5. Replace the combination switch (C).
6. Install the combination switch in the reverse order of removal.

NOTE:

- **Do not remove the steering angle sensor from the combination switch body.**
- **When install the cable reel, set the turn signal cancelling sleeve position (see INSTALLATION).**

YAW RATE-LATERAL ACCELERATION SENSOR REPLACEMENT

NOTE:

- **Do not damage or drop the sensor as it is sensitive.**
- **Do not use an air or electric impact tool.**

1. Remove the center console (see **CENTER CONSOLE REMOVAL/INSTALLATION**).
2. Remove the yaw rate-lateral acceleration sensor (A) fixing bolts.

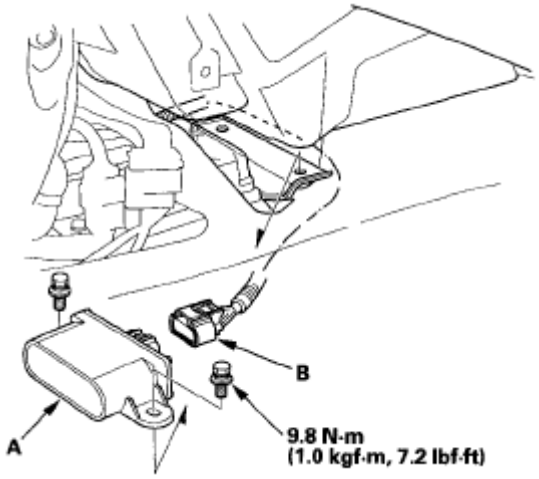

Fig. 65: Identifying YAW Rate-Lateral Acceleration Sensor Fixing Bolts

3. Pull out the yaw rate-lateral acceleration sensor, then disconnect the sensor connector (B).
4. Install the sensor in the reverse order of removal.
5. Do the VSA sensor neutral position memorization (see **VSA SENSOR NEUTRAL POSITION MEMORIZATION**).

VSA SENSOR NEUTRAL POSITION MEMORIZATION

NOTE: Do not press the brake pedal during this procedure.

1. Park the vehicle on a flat and level surface.
2. With the ignition switch to LOCK (0), connect the HDS to the data link connector (DLC) (A) under the driver's side of the dashboard.

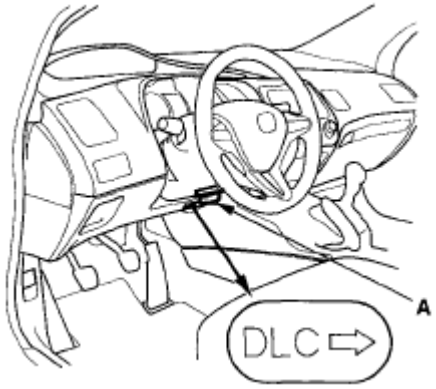

Fig. 66: Identifying DLC

3. Turn the ignition switch ON (II).
4. Make sure the HDS communicates with the vehicle and the VSA modulator-control unit. If it doesn't troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
5. Select VSA ADJUSTMENT with the HDS, and follow the screen prompts.

NOTE: See the HDS Help menu for specific instructions.

6. Turn the ignition switch to LOCK (0).

VSA OFF SWITCH TEST

1. Remove the driver's dashboard lower cover (see **DRIVER's DASHBOARD LOWER COVER REMOVAL/INSTALLATION**).
2. Push out the VSA OFF switch (A) from the back of the instrument panel.

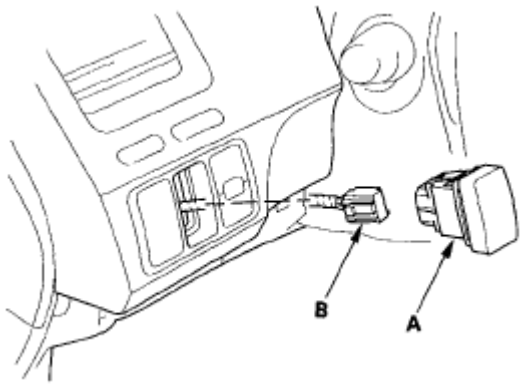

Fig. 67: Identifying VSA Off Switch (A) From Back Of Instrument Panel

3. Disconnect the VSA OFF switch 5P connector (B).
4. Check for continuity between VSA OFF switch 5P connector terminals No. 1 and No. 2. There should be continuity when the switch is pressed, and no continuity when the switch is released.

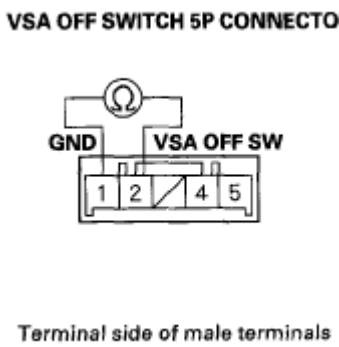

Fig. 68: Checking Continuity Between VSA Off Switch 5P Connector Terminals No. 1 And Switch

5. Check for continuity between VSA OFF switch 5P connector terminals No. 4 and No. 5. There should be continuity at all times.

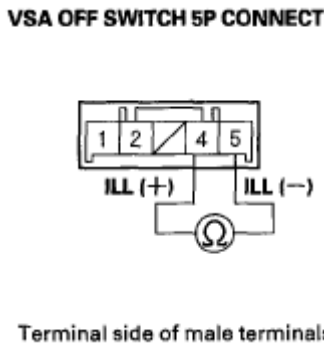

Fig. 69: Checking Continuity Between VSA Off Switch 5P Connector Terminals No. 4 And No. 5

VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION

NOTE:

- **Do not spill brake fluid on the vehicle; it may damage the paint; if brake fluid gets on the paint, wash it off immediately with water.**
- **Be careful not to damage or deform the brake lines during removal and installation.**
- **To prevent the brake fluid from flowing, plug and cover the hose ends and joints with a shop towel or equivalent material.**

Removal

1. Disconnect the VSA modulator-control unit 37P connector (A) by pushing the lock (B) and pulling down the lever (C); the connector disconnects it self.

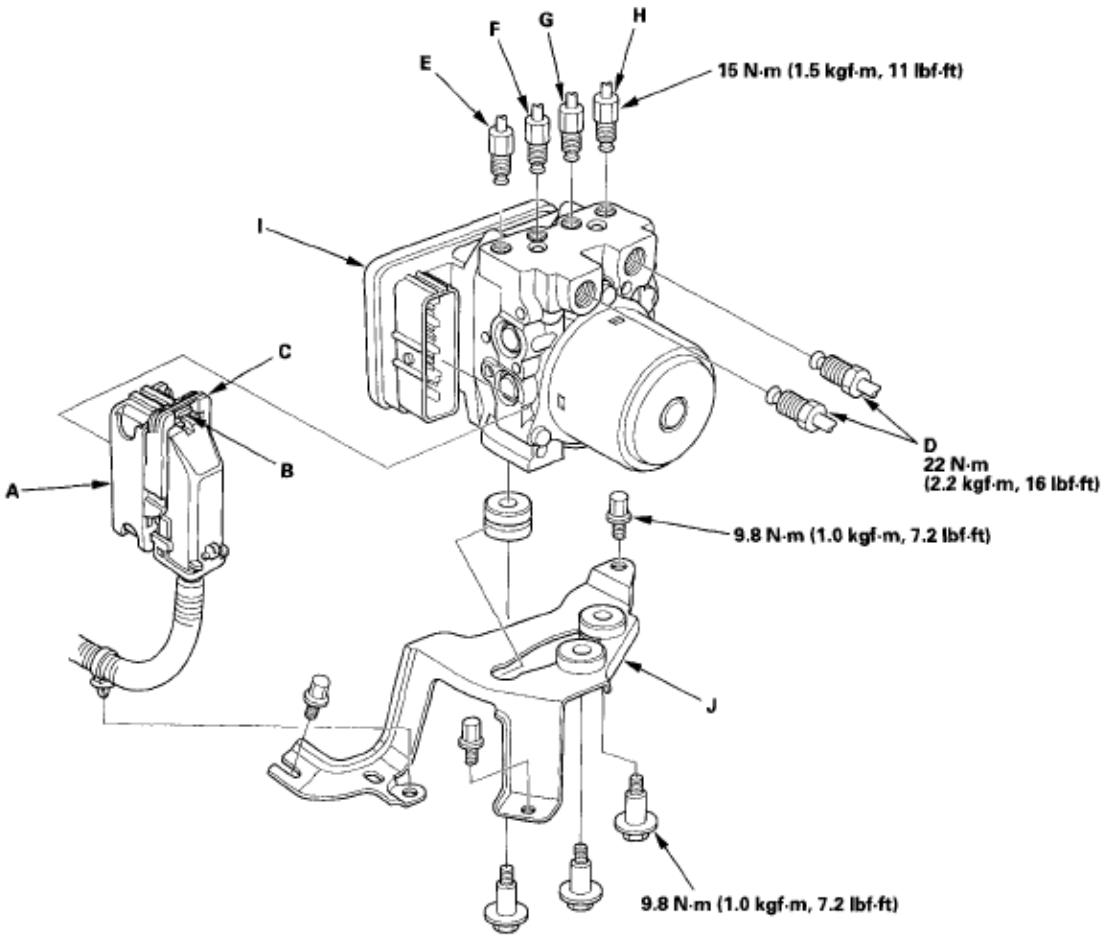

Fig. 70: Identifying VSA Modulator-Control Unit Components (With Torque Specifications)

2. Disconnect the six brake lines from the VSA modulator-control unit.

NOTE: Brake lines are connected to the master cylinder (D) and to the right-front (E), the left-rear (F), the right-rear (G), and the left-front (H) brake systems.

3. Remove the VSA modulator-control unit (I) with the bracket (J) from the body.
4. Remove the VSA modulator-control unit from the bracket.

Installation

1. Install the VSA modulator-control unit on the bracket.
2. Install the bracket with the VSA modulator-control unit to body.
3. Reconnect the six brake lines, then tighten the flare nuts to the specified torque.
4. Align the connecting surface of the VSA modulator-control unit 37P connector to the VSA modulator-control unit.
5. Pull up the lever of the VSA modulator-control unit 37P connector, then confirm the connector is fully seated.
6. Bleed the brake system (see **BRAKE SYSTEM BLEEDING**).
7. Perform VSA sensor neutral position memorization (see **VSA SENSOR NEUTRAL POSITION**

MEMORIZATION).

8. Start the engine, and check that the ABS and the VSA indicators go off.
9. Test-drive the vehicle, and check that the ABS, and the VSA indicators do not come on.

NOTE: If the brake pedal is spongy, there may be air trapped in the modulator and then induced into the normal brake system during modulation. Bleed the brake system again (see BRAKE SYSTEM BLEEDING).

WHEEL SPEED SENSOR REPLACEMENT

FRONT

1. Release the clamp (A), then disconnect the wheel speed sensor connector (B).

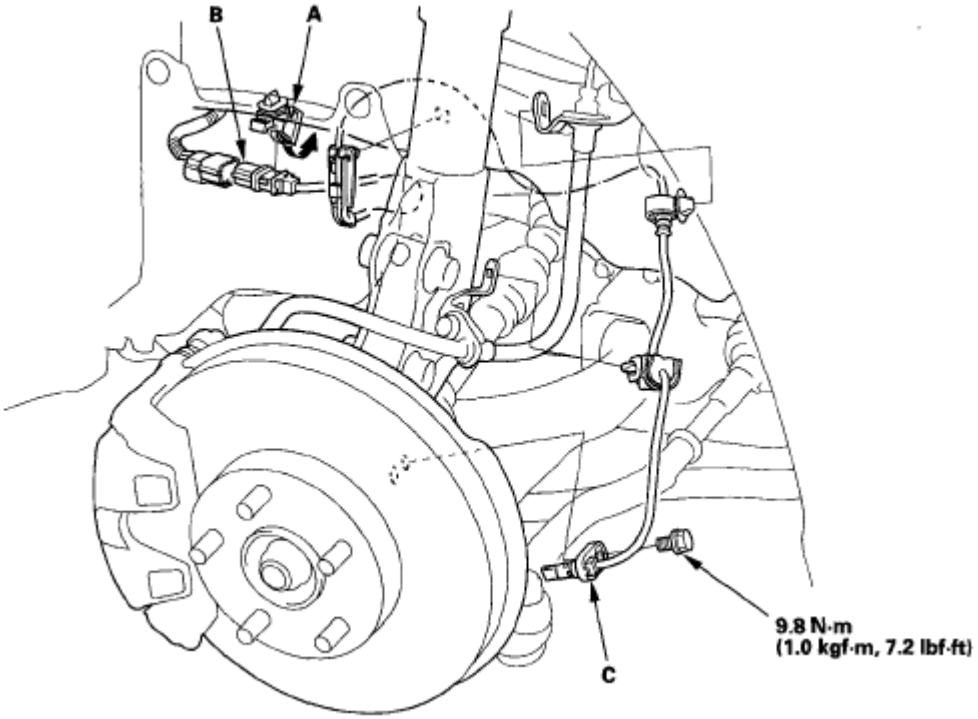

Fig. 71: Identifying Wheel Speed Sensor (Front) (With Torque Specifications)

2. Remove the clips, the bolt, and the wheel speed sensor (C).
3. Install the wheel speed sensor in the reverse order of removal, and note these items:
   - Install the sensor carefully to avoid twisting the wires.
   - If the wheel speed sensor comes in contact with the wheel bearing, it is faulty.
4. Start the engine, and check that the ABS and the VSA indicators go off.
5. Test-drive the vehicle, and check that the ABS and the VSA indicators do not come on.

REAR

1. Release the clamp (A), then disconnect the wheel speed sensor connector (B).

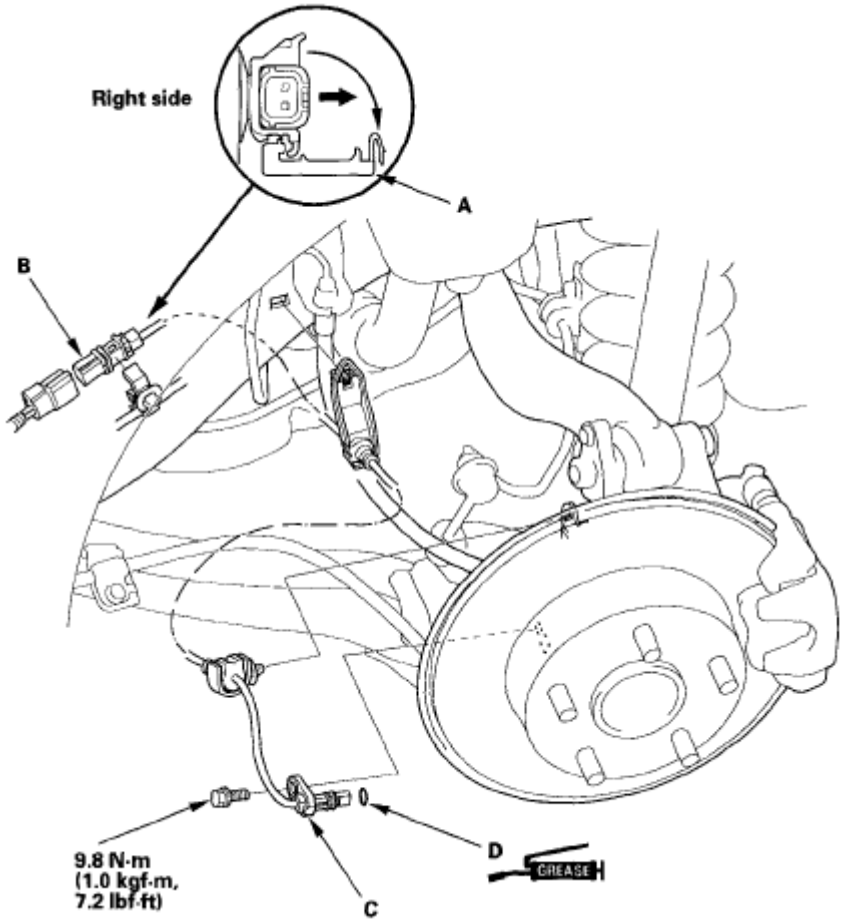

Fig. 72: Identifying Wheel Speed Sensor Connector (Rear) (With Torque Specifications)

2. Remove the clips, the bolt, and the wheel speed sensor (C).
3. Install the wheel speed sensor in the reverse order of removal, and note these items:
    - Apply multipurpose grease to the O-ring (D).
    - Install the sensor carefully to avoid twisting the wires.
    - If the wheel speed sensor comes in contact with the hub bearing unit, it is faulty.
4. Start the engine, and check that the ABS and the VSA indicators go off.
5. Test-drive the vehicle, and check that the ABS and the VSA indicators do not come on.

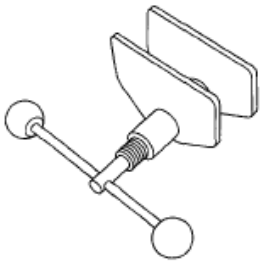
2006-08 BRAKES

Conventional Brake Components - Civic (Except Hybrid)

SPECIAL TOOLS

NOTE: **Refer to the CONVENTIONAL BRAKE COMPONENTS (GX) (SUPPLEMENT) article for additional information for the GX model.**

Ref. No.	Tool Number	Description	Qty
①	07AAE-SEPA101	Brake Caliper Piston Compressor	1



①

Fig. 1: Identifying Special Tools

COMPONENT LOCATION INDEX

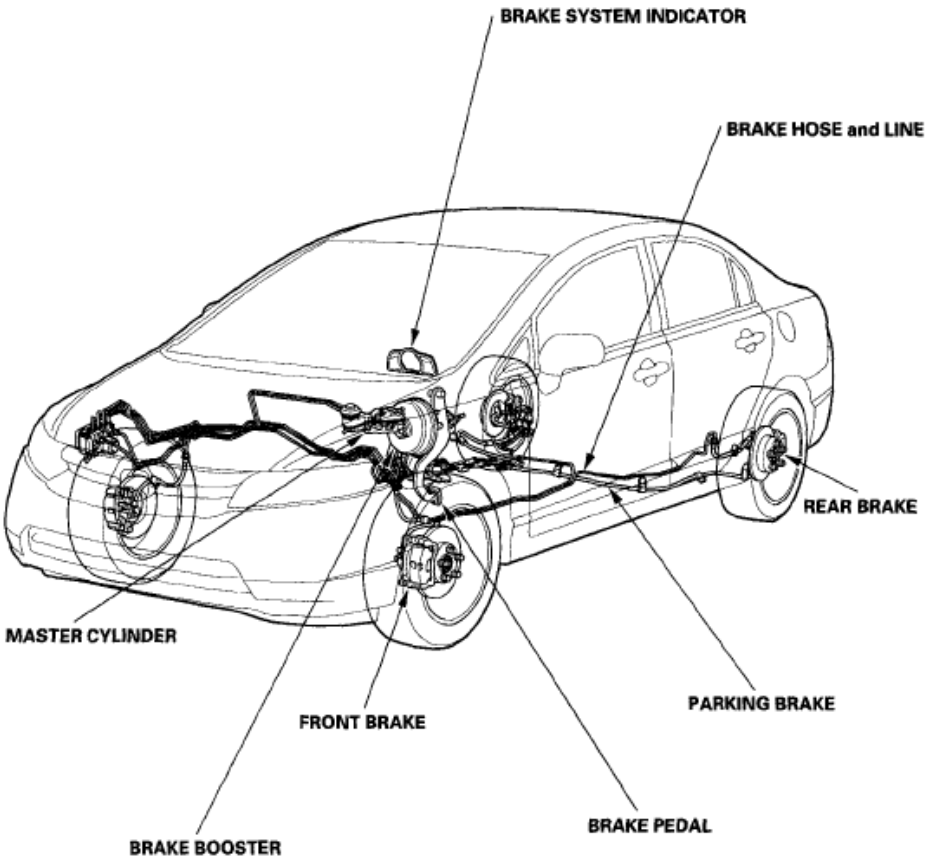


Fig. 2: Locating Conventional Brake Component

BRAKE SYSTEM INSPECTION AND TEST

Inspect the brake system components listed. Repair or replace any parts that are leaking or damaged.

BRAKE SYSTEM COMPONENT INSPECTIONS REFERENCE

Component	Procedure	Also check for
Master Cylinder	Look for damage or signs of fluid leakage at: • Reservoir tank, reservoir union or master cylinder body. • Lines, reservoir tank hose and grommets, and their joints. • Between master cylinder and booster.	Bulging seat at reservoir cap. This is a sign of fluid contamination.
Brake Hoses	Look for damage or signs of fluid leakage at: • Line joints and banjo bolt connections.	Bulging, twisted, or bent lines.

	• Hoses and lines, also inspect for twisting or damage.	
Caliper	Look for damage or signs of fluid leakage at: • Piston seal. • Banjo bolt connections. • Bleed screw.	Seized or sticking caliper pins.
Wheel Cylinder	Look for damage or signs of fluid leakage at: • Wheel cylinder. • Line joints. • Bleed Screw.	
ABS or VSA Modulator-control Unit	Look for damage or signs of fluid leakage at: • Line joints. • Modulator-control unit.	

BRAKE SYSTEM TEST

Brake pedal sinks/fades when braking

1. Set the parking brake, and start the engine, then turn off the A/C switch. Allow the engine to warm up to normal operating temperature (radiator fan comes on twice).
2. Attach a 50 mm (2 in.) piece of masking tape along the bottom of the steering wheel, and draw a horizontal reference mark across it.
3. With the transmission M/T in neutral position, A/T in P or N position, press and hold the brake pedal lightly (about the same pressure needed to keep an A/T-equipped vehicle from creeping), then release the parking brake.
4. While still holding the brake pedal, hook the end of the tape measure behind the brake pedal, then pull the tape up to the steering wheel. Note the measurement between the brake pedal and the reference mark on the steering wheel.
5. Apply steady pressure to the brake pedal for 3 minutes.
6. Watch the tape measure.
   - If the measurement increases 10 mm (3/8 in.) or less, the master cylinder is OK.
   - If the measurement increases more than 10 mm (3/8 in.), replace the master cylinder.

SYMPTOM TROUBLESHOOTING

RAPID BRAKE PAD WEAR, VEHICLE VIBRATION (AFTER A LONG DRIVE), OR HIGH, HARD BRAKE PEDAL

NOTE: Make sure that the caliper pins are installed correctly.

The upper caliper pin B and lower caliper pin A are different. If the pins are installed in the wrong location, it will cause, vibration, and or uneven or rapid pad wear, or possibly uneven tire wear. For proper caliper pin location: Except Si model (see **EXCEPT SI MODEL**), Si model (see **SI MODEL**).

1. Drive the vehicle until the brakes drag or until the pedal is high and hard. This can take 20 or more brake pedal applications during an extended test-drive.
2. With the engine running, raise the vehicle on a lift, and spin all four wheels by hand.

   Is there brake drag at any of the wheels?

   YES - Go to step 3.

   NO - Look for other causes of the pad wear, high pedal, or vehicle vibration.

3. Turn the engine off, pump the brake pedal to deplete the vacuum in the brake booster, and then spin the wheels again to check for brake drag.

   Is there brake drag at any of the wheels?

   YES - Go to step 4.

   NO - Replace the brake booster: Except Si model (see **EXCEPT SI MODEL**), Si model (see **SI MODEL**).

4. Without removing the brake lines, unbolt and separate the master cylinder from the booster, then spin the wheels to check for brake drag.

   Is there brake drag at any of the wheels?

   YES - Go to step 5.

   NO - Check the brake pedal position switch adjustment and pedal free play (see **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT**).

5. Loosen the hydraulic lines at the master cylinder, then spin the wheels to check for brake drag.

   Is there brake drag at any of the wheels?

   YES - Go to step 6.

   NO - Replace the master cylinder (see **MASTER CYLINDER REPLACEMENT**).

6. Loosen the bleed screws at each caliper or wheel cylinder, then spin the wheels to check for brake drag.

   Is there brake drag at any of the wheels?

   YES - Disassemble and repair the caliper or wheel cylinder on the wheel(s) with brake drag.

   NO - Look for and replace any damaged brake lines. If all brake lines are OK, replace the ABS or

VSA modulator-control unit: ABS (except Si model) (see **REMOVAL - EXCEPT SI MODEL**), ABS (Si model) (see **REMOVAL - SI MODEL**), VSA (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT

PEDAL HEIGHT

1. Turn the brake pedal position switch (A) counterclockwise, and pull it back until it is no longer touching the brake pedal.

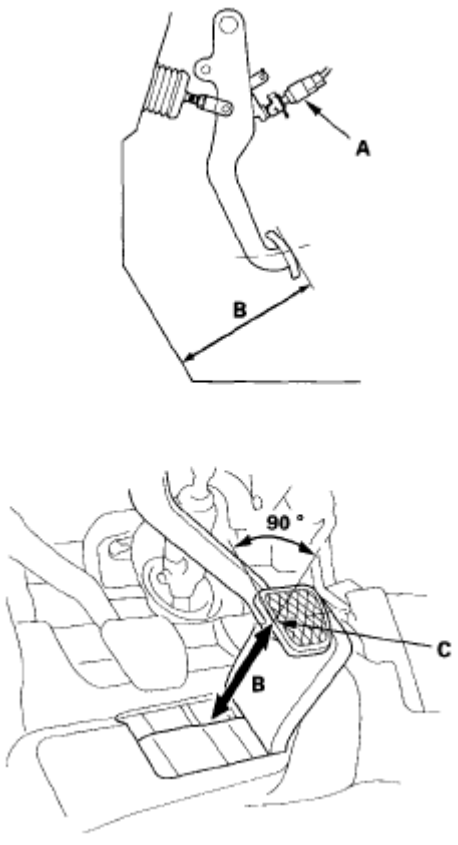

Fig. 3: Turning Brake Pedal Position Switch Counterclockwise

2. Pull back the carpet and find the cutout in the insulator. Lift up the insulator cutout and measure the pedal height (B) at the middle of the left side center of the pedal pad (C) to the floor.

   Standard pedal height (with carpet removed):

   M/T model: 153 mm (6 in.)
   A/T model: 158 mm (6 1/4 in.)

3. Loosen the pushrod locknut (A), and screw the pushrod (B) in or out with pliers until the standard pedal height from the floor is reached. After adjustment, tighten the locknut firmly. Do not adjust the pedal height with the pushrod pressed.

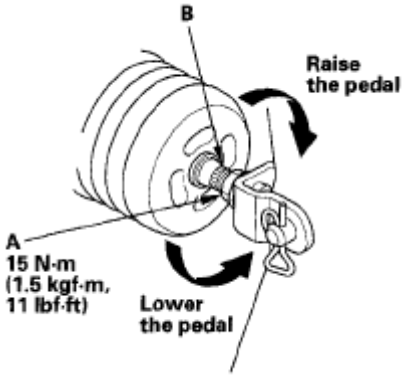

Fig. 4: Loosening Pushrod Locknut (With Specifications)

Brake Pedal Position Switch Clearance

4. Pull up on the brake pedal, then push in the brake pedal position switch until its plunger is fully pressed (threaded end (A) touching the pad (B) on the pedal arm). Then, turn the brake pedal position switch 45° clockwise to lock it. The gap between the brake pedal position switch and the pad is automatically adjusted to 0.7 mm (0.03 in.) by locking the switch. Make sure the brake lights go off when the pedal is released.

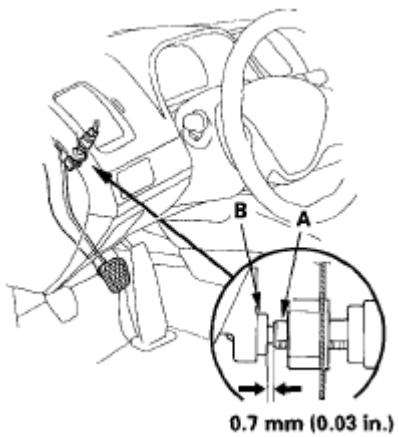

Fig. 5: Identifying Brake Pedal Position Switch

5. Check the brake pedal free play.

PEDAL FREE PLAY

1. With the ignition switch OFF, inspect the pedal free play (A) on the pedal pad (B) by pushing the pedal by hand. If the brake pedal free play is insufficient, it may result in excessive brake drag.

   Free play: 1-5 mm (1/16-3/16 in.)

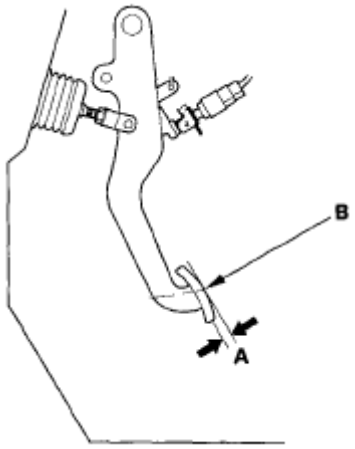

Fig. 6: Inspecting Pedal Free Play On Pedal Pad Pushing Pedal

PARKING BRAKE INSPECTION AND ADJUSTMENT

INSPECTION

1. Pull the parking brake lever (A) with 196 N (20 kgf, 44 lbf) of force to fully apply the parking brake. The parking brake lever should be locked within the specified number of clicks.

   Lever locked clicks: 8 to 10

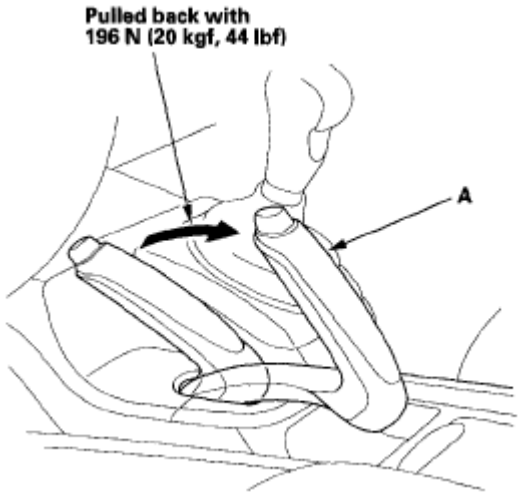

Fig. 7: Inspecting Parking Brake (With Specifications)

2. If the number of lever clicks is excessive, adjust the parking brake.

ADJUSTMENT - REAR DISC BRAKE TYPE

1. Remove the center console panel (see **CENTER CONSOLE REMOVAL/INSTALLATION**).
2. Release the parking brake lever fully.
3. Loosen the parking brake adjusting nut (A).

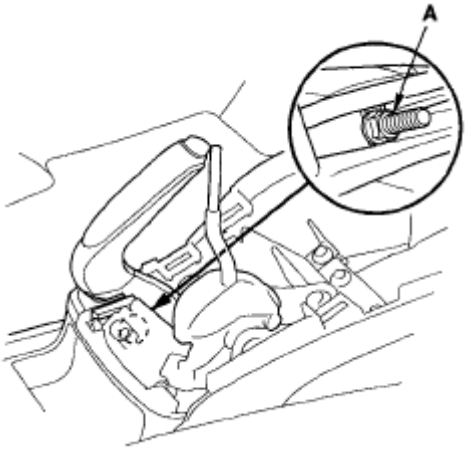

Fig. 8: Loosening Parking Brake Adjusting Nut

4. Raise the rear of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
5. Remove the rear wheels.
6. Make sure the parking brake lever (A) on the rear brake caliper contacts the stop pin (B).

NOTE: The parking brake lever will only contact the stop pin when the parking brake adjusting nut is loosened.

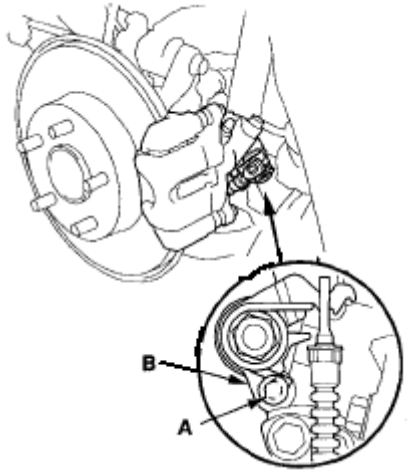

Fig. 9: Making Sure Parking Brake Lever On Rear Brake Caliper Contacts Stop Pin

7. Install the rear wheels.
8. Pull the parking brake lever 1 click.
9. Tighten the parking brake adjusting nut until the parking brakes drag slightly when the rear wheels are turned.
10. Release the parking brake lever fully, and check that the parking brakes do not drag when the rear wheels are turned. Readjust if necessary.
11. Make sure the parking brakes are fully applied when the parking brake lever is pulled all the way (8 to 10 clicks).
12. Install the center console panel (see **CENTER CONSOLE REMOVAL/INSTALLATION**).

ADJUSTMENT - REAR DRUM BRAKE TYPE

1. Remove the center console panel (see **CENTER CONSOLE REMOVAL/INSTALLATION**).
2. Release the parking brake lever fully.
3. Loosen the parking brake adjusting nut (A).

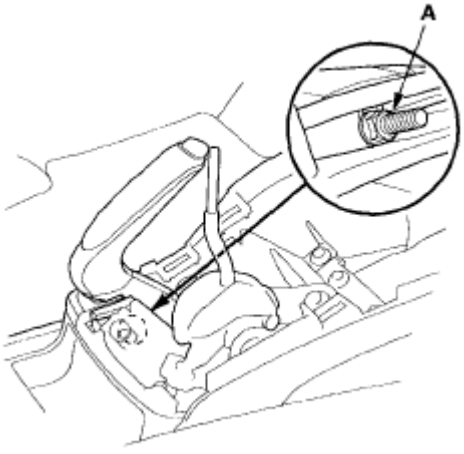

Fig. 10: Loosening Parking Brake Adjusting Nut

4. Press the brake pedal several times to set the self-adjusting brake before adjusting the parking brake.
5. Pull the parking brake lever 1 click.
6. Tighten the parking brake adjusting nut until the parking brakes drag slightly when the rear wheels are turned.
7. Release the parking brake lever fully, and check that the parking brakes do not drag when the rear wheels are turned. Readjust if necessary.
8. Make sure the parking brakes are fully applied when the parking brake lever is pulled all the way (8 to 10 clicks).
9. Install the center console panel (see **CENTER CONSOLE REMOVAL/INSTALLATION**).

BRAKE SYSTEM BLEEDING

NOTE:

- **Do not reuse the drained fluid. Use only clean Honda DOT 3 Brake Fluid from an unopened container. Using a non-Honda brake fluid can cause corrosion and shorten the life of the system.**
- **Do not mix different brands of brake fluid; they may not be compatible.**
- **Make sure no dirt or other foreign matter is allowed to contaminate the brake fluid.**
- **Do not spill brake fluid on the vehicle, it may damage the paint; if brake fluid does contact the paint, wash it off immediately with water.**
- **The reservoir connected to the master cylinder must be at the MAX (upper) level mark at the start of the bleeding procedure and checked after bleeding each brake system. Add fluid as required.**

1. Make sure the brake fluid level in the reservoir (A) is at the MAX (upper) level line (B).

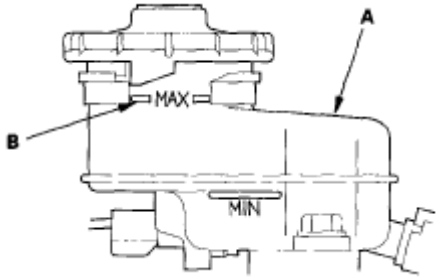

Fig. 11: Identifying Brake Fluid Level In Reservoir Is At MAX (Upper) Level Line

2. Have someone slowly pump the brake pedal several times, then apply steady pressure.
3. Start the bleeding at the driver's side of the front brake system.

NOTE: Bleed the calipers or the wheel cylinders in the sequence shown.

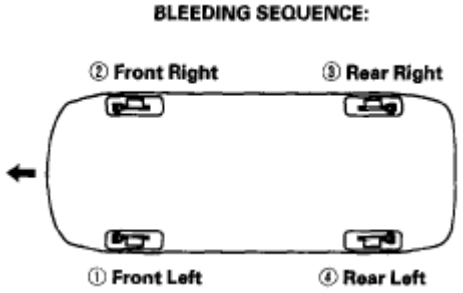

Fig. 12: Bleeding Calipers Or Wheel Cylinder In Sequence

4. Attach a length of clear drain tube (A) to the bleed screw (B), then, loosen the bleed screw to allow air to escape from the system. Then tighten the bleed screw securely.

Front

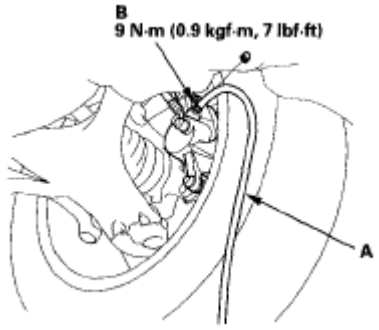

Fig. 13: Attaching Clear Drain Tube To Bleed Screw (Front) (With Specifications)

Rear-disc type

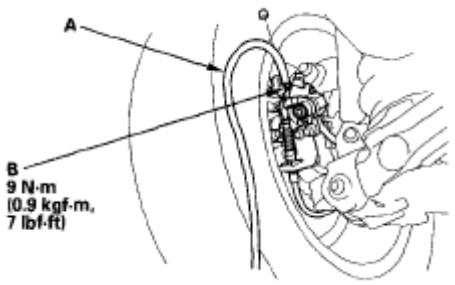

Fig. 14: Attaching Clear Drain Tube To Bleed Screw (Rear-Disc Type) (With Specifications)

Rear-drum type

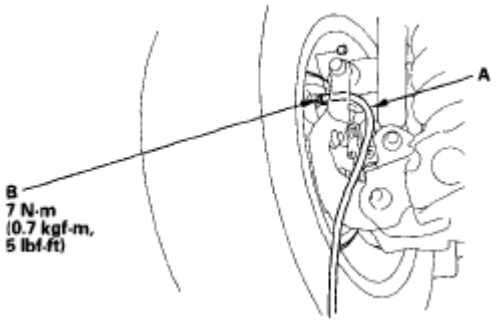

Fig. 15: Attaching Clear Drain Tube To Bleed Screw (Rear-Drum Type) (With Specifications)

5. Refill the master cylinder reservoir to the MAX (upper) level line.
6. Repeat the procedure for each brake circuit until no air bubbles are in the fluid.

BRAKE SYSTEM INDICATOR CIRCUIT DIAGRAM

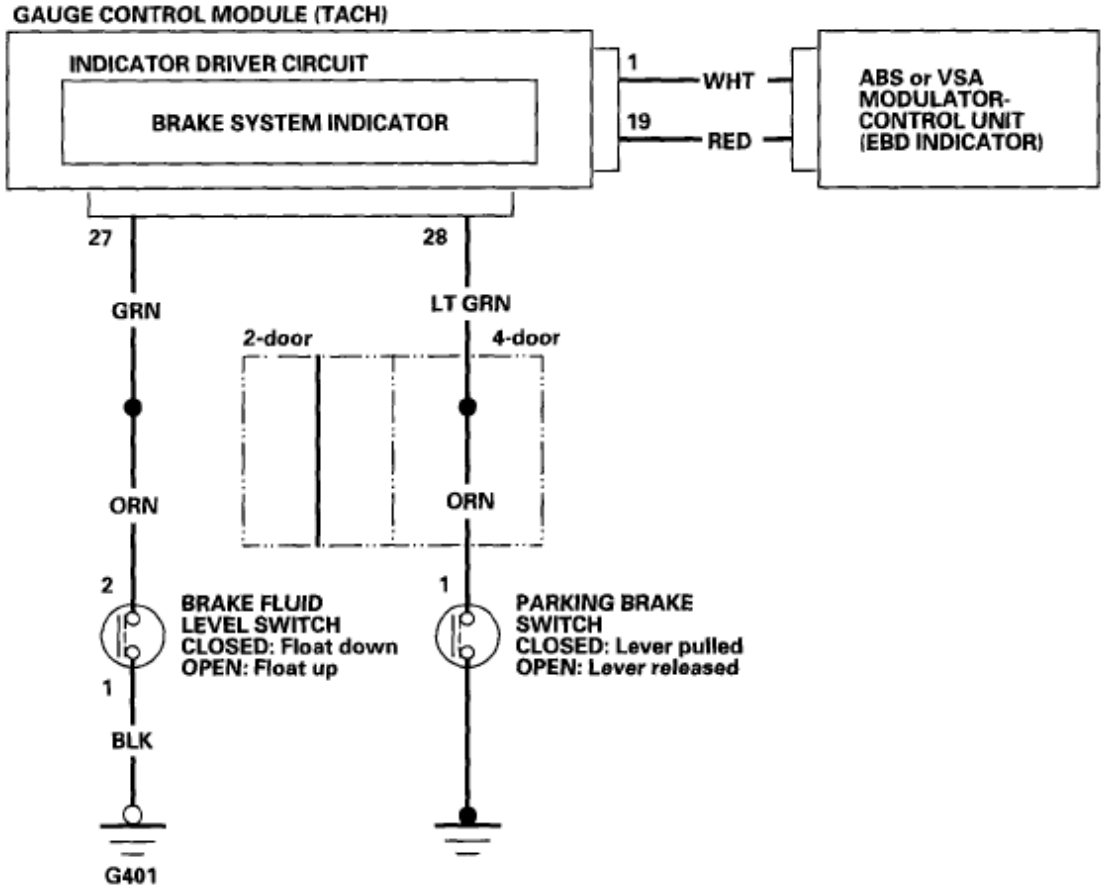

Fig. 16: Identifying Brake System Indicator Circuit Diagram

PARKING BRAKE SWITCH TEST

1. Remove the center console (see **CENTER CONSOLE REMOVAL/INSTALLATION**).
2. Disconnect the parking brake switch connector (A) from the parking brake switch (B).

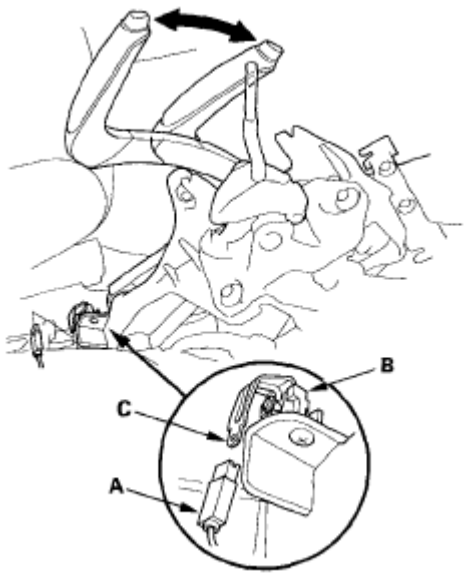

Fig. 17: Disconnecting Parking Brake Switch Connector From Parking Brake Switch

3. Check for continuity between the positive terminal (C) and body ground.
   - With the parking brake lever pulled, there should be continuity.
   - With the parking brake lever released, there should be no continuity.

NOTE:

- **If both the ABS indicator and the brake system indicator come on at the same time, check the ABS or VSA system first: ABS (see GENERAL TROUBLESHOOTING INFORMATION), VSA (see GENERAL TROUBLESHOOTING INFORMATION).**
- **If the parking brake switch and fluid level switch are OK, but the brake system indicator does not function, check the ABS or VSA system: ABS (see GENERAL TROUBLESHOOTING INFORMATION), VSA (see GENERAL TROUBLESHOOTING INFORMATION).**

4. Install the center console (see **CENTER CONSOLE REMOVAL/INSTALLATION**).

BRAKE FLUID LEVEL SWITCH TEST

Check for continuity between the terminals (1) and (2) with the float in the down position and in the up position.

NOTE:

- **Remove the brake fluid completely from the reservoir. With the float down, there should be continuity.**
- **Fill the reservoir with brake fluid to the MAX (upper) level (A). With the float up, there should be no continuity.**
- **If both the ABS indicator and the brake system indicator come on at same time, check the ABS or VSA system first: ABS (see GENERAL TROUBLESHOOTING INFORMATION), VSA (see GENERAL TROUBLESHOOTING INFORMATION).**
- **If the parking brake switch and fluid level switch are OK, but brake system indicator does not function, check the ABS or VSA system: ABS (see GENERAL TROUBLESHOOTING INFORMATION), VSA (see GENERAL TROUBLESHOOTING INFORMATION).**

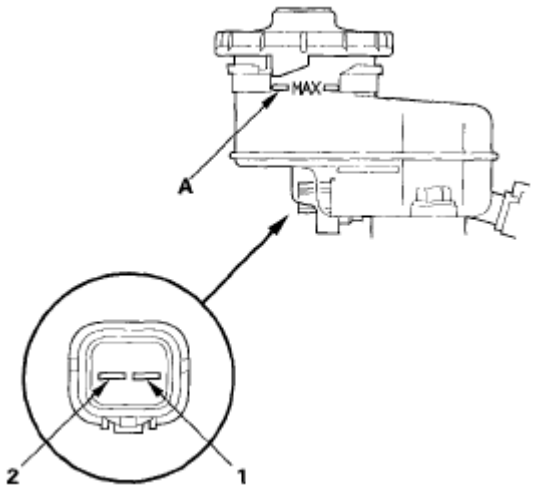

Fig. 18: Testing Brake Fluid Level Switch

FRONT BRAKE PAD INSPECTION AND REPLACEMENT

Special Tools Required

Brake caliper piston compressor 07AAE-SEPA101

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

INSPECTION - EXCEPT SI MODEL

1. Raise the front of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
2. Remove the front wheels.
3. Check the thickness (A) of the inner pad (B) and outer pad (C). Do not include the thickness of the backing plate.

   Brake pad thickness:

   Standard: 9.6-10.2 mm (0.38-0.40 in.)
   Service limit: 1.6 mm (0.06 in.)

   Inner pad

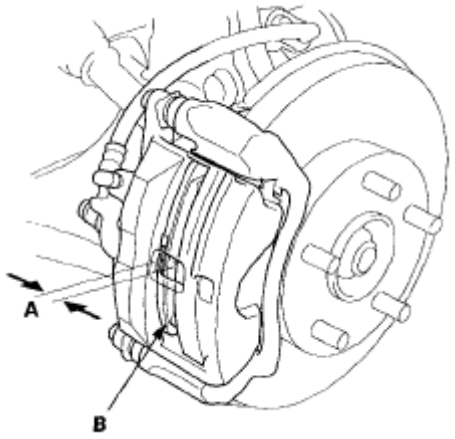

Fig. 19: Identifying Inner Pad Thickness

Outer pad

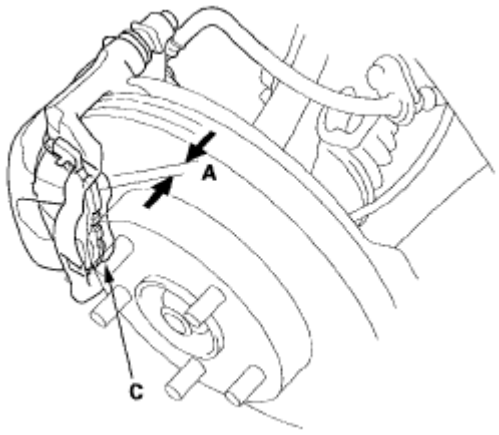

Fig. 20: Identifying Outer Pad Thickness

4. If the brake pad thickness is less than the service limit, replace the front brake pads as a set.

REPLACEMENT - EXCEPT SI MODEL

1. Remove some brake fluid from the master cylinder.
2. Raise the front of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
3. Remove the front wheels.
4. Remove the flange bolt (A), and pivot the caliper (B) up out of the way. Check the hose and pin boots for damage and deterioration.

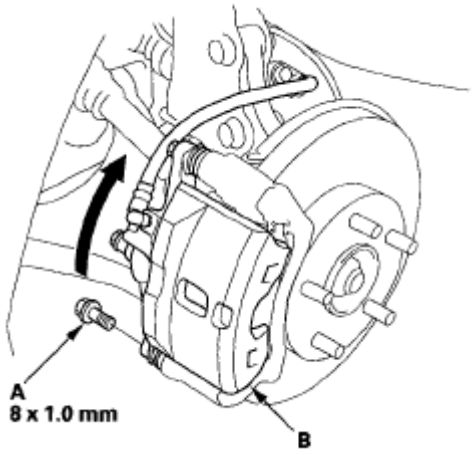

Fig. 21: Removing Flange Bolt And Pivot Caliper

5. Remove the pad shims (A) and brake pads (B).

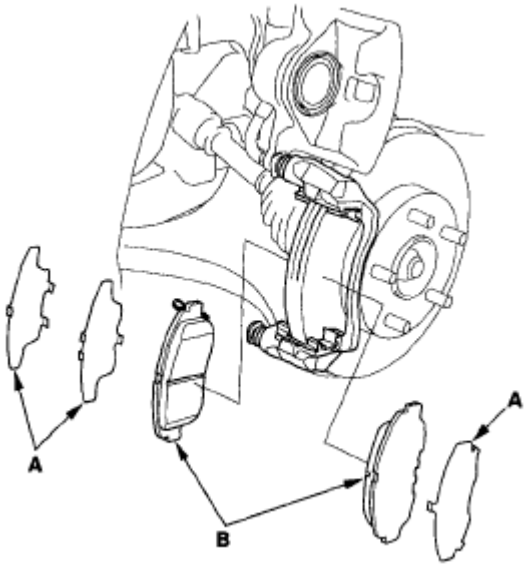

Fig. 22: Removing Pad Shims And Brake Pads

6. Remove the pad retainers (A).

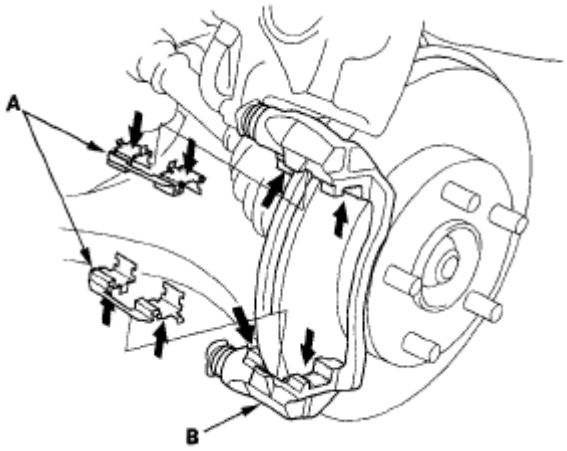

Fig. 23: Removing Pad Retainers

7. Clean the caliper bracket (B) thoroughly; remove any rust, and check for grooves and cracks.
8. Check the brake disc for damage and cracks.
9. Apply a thin coat of M-77 assembly paste (P/N 08798-9010) to the retainers on their mating surfaces (indicated by the arrows) against the caliper bracket.
10. Install the pad retainers. Wipe excess assembly paste off the retainers. Keep the assembly paste off the discs and pads.
11. Mount the brake caliper piston compressor (A) on the caliper body (B).

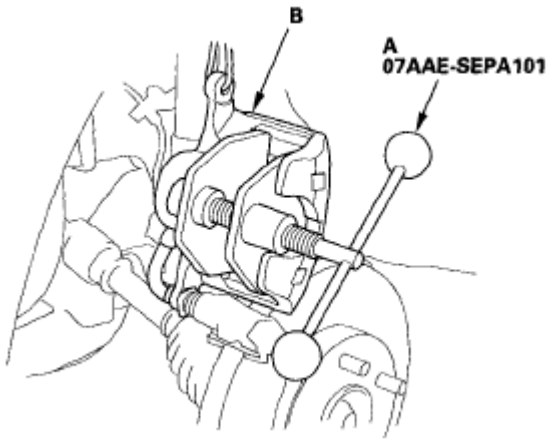

Fig. 24: Mounting Brake Caliper Piston Compressor On Caliper Body

12. Press in the piston with the brake caliper piston compressor so the caliper will fit over the brake pads. Make sure the piston boot is in position to prevent damaging it when pivoting the caliper down.

NOTE: Be careful when pressing in the piston; brake fluid might overflow from the master cylinder's reservoir.

13. Remove the brake caliper piston compressor.
14. Apply a thin coat of M-77 assembly paste (P/N 08798-9010) to the pad side of the shims (A), the back of the brake pads (B) and the other areas indicated by the arrows. Wipe excess assembly paste off the pad shims and brake pads. Contaminated brake discs or brake pads reduce stopping ability. Keep

grease and assembly paste off the brake discs and brake pads.

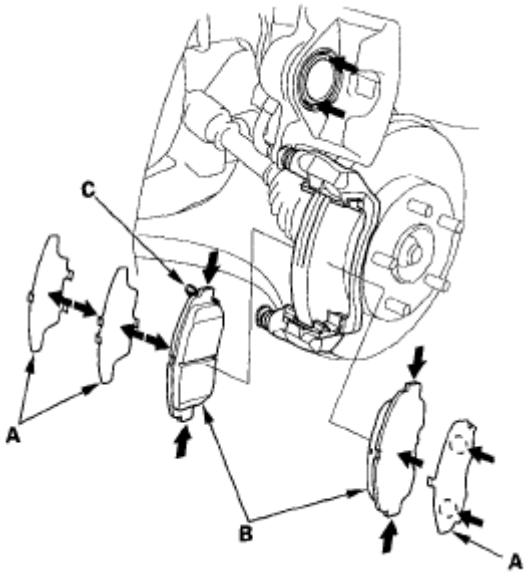

Fig. 25: Applying Assembly Paste To Pad Shims And Brake Pads

15. Install the brake pads and pad shims correctly. Install the brake pad with the wear indicator (C) on the upper inside. If you are reusing the brake pads, always reinstall the brake pads in their original positions to prevent a temporary loss of braking efficiency.
16. Pivot the caliper down into position. Install the flange bolt (A), and tighten it to the specified torque.

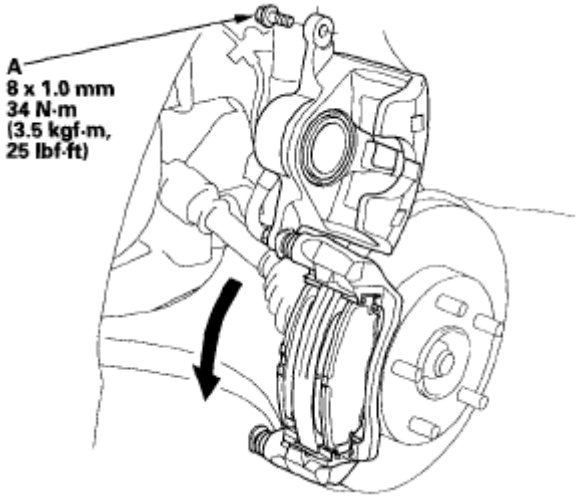

Fig. 26: Installing Flange Bolt (With Specifications)

17. Press the brake pedal several times to make sure the brakes work.

NOTE: Engagement may require a greater pedal stroke immediately after the brake pads have been replaced as a set. Several applications of the brake pedal will restore the normal pedal stroke.

18. Add brake fluid as needed.

19. After installation, check for leaks at the hose and line joints or connections, and retighten if necessary. Test-drive the vehicle, then check for leaks (see **BRAKE HOSE AND LINE INSPECTION**).

INSPECTION - SI MODEL

1. Raise the front of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
2. Remove the front wheels.
3. Check the thickness (A) of the inner pad (B) and outer pad (C). Do not include the thickness of the backing plate.

Brake pad thickness:

Standard: 9.0-9.7 mm (0.35-0.38 in.)
Service limit: 1.6 mm (0.06 in.)

Inner pad

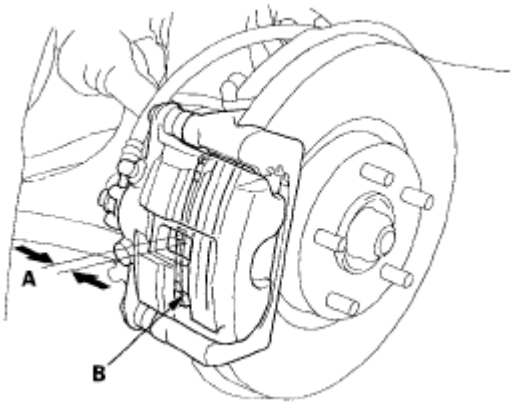

Fig. 27: Checking Inner Pad Thickness

Outer pad

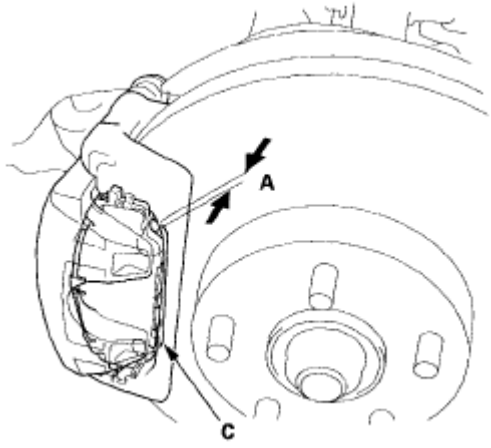

Fig. 28: Checking Outer Pad Thickness

4. If the brake pad thickness is less than the service limit, replace the front brake pads as a set.

REPLACEMENT - SI MODEL

1. Remove some brake fluid from the master cylinder.
2. Raise the front of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
3. Remove the front wheels.
4. Remove the flange bolt (A) while holding the caliper pin (B) with a wrench. Be careful not to damage the pin boot, and pivot the caliper (C) up out of the way. Check the hose and pin boots for damage and deterioration.

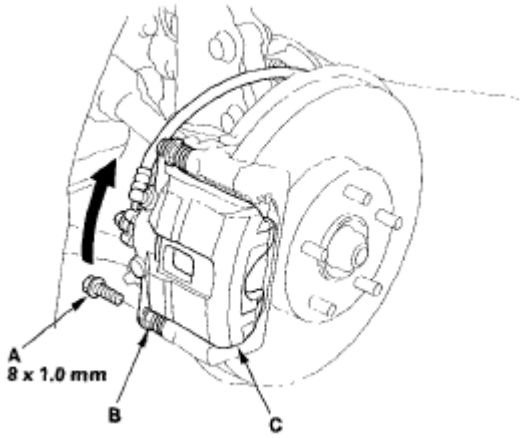

Fig. 29: Removing Flange Bolt Holding Caliper Pin With Wrench

5. Remove the pad shims (A) and brake pads (B).

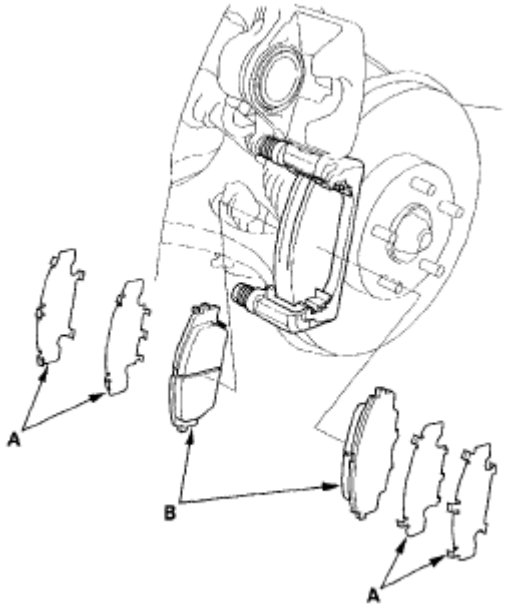

Fig. 30: Removing Pad Shims And Brake Pads

6. Remove the pad retainers (A).

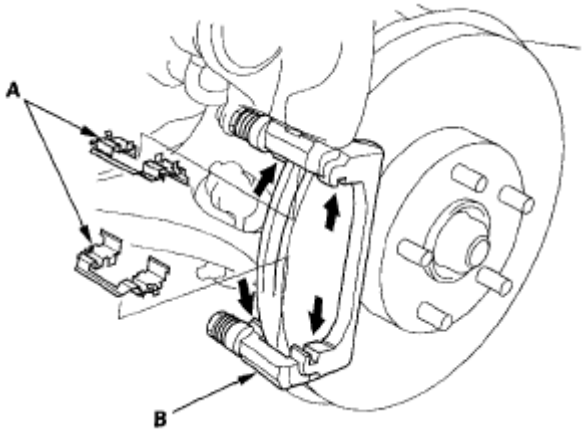

Fig. 31: Removing Pad Retainers

7. Clean the caliper bracket (B) thoroughly; remove any rust, and check for grooves and cracks.
8. Check the brake disc for damage and cracks.
9. Apply a thin coat of M-77 assembly paste (P/N 08798-9010) to the retainers on their mating surfaces (indicated by the arrows) against the caliper bracket.
10. Install the pad retainers. Wipe excess assembly paste off the retainers. Keep the assembly paste off the discs and pads.
11. Mount the brake caliper piston compressor (A) on the caliper body (B).

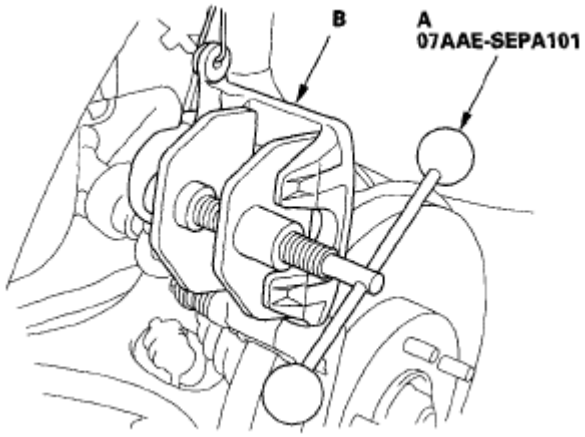

Fig. 32: Mounting Brake Caliper Piston Compressor On Caliper Body

12. Press in the piston with the brake caliper piston compressor so the caliper will fit over the brake pads. Make sure the piston boot is in position to prevent damaging it when pivoting the caliper down.

NOTE: Be careful when pressing in the piston; brake fluid might overflow from the master cylinder's reservoir.

13. Remove the brake caliper piston compressor.
14. Apply a thin coat of M-77 assembly paste (P/N 08798-9010) to the pad side of the shims (A), the back of the brake pads (B) and the other areas indicated by the arrows. Wipe excess assembly paste off the pad shims and brake pads. Contaminated brake discs or brake pads reduce stopping ability. Keep grease and assembly paste off the brake discs and brake pads.

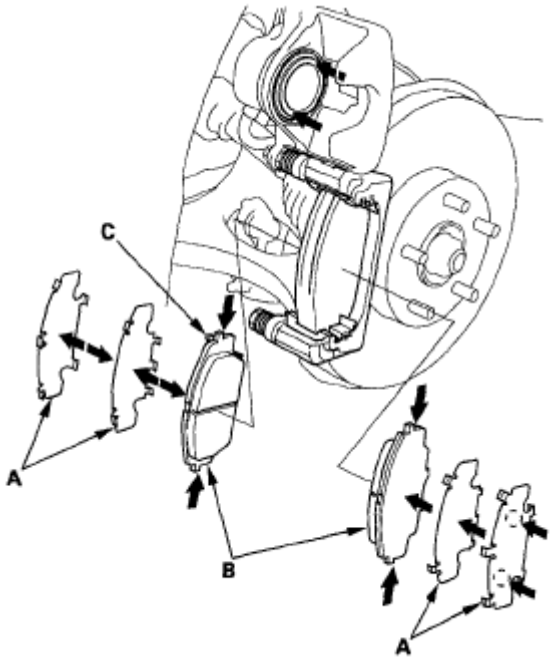

Fig. 33: Applying Assembly Paste To Pad Side Of Shims And Brake Pads

15. Install the brake pads and pad shims correctly. Install the brake pad with the wear indicator (C) on the upper inside. If you are reusing the brake pads, always reinstall the brake pads in their original positions to prevent a temporary loss of braking efficiency.
16. Pivot the caliper down into position. Install the flange bolt (A), and tighten it to the specified torque while holding the caliper pin (B), with a wrench. Be careful not to damage the pin boot.

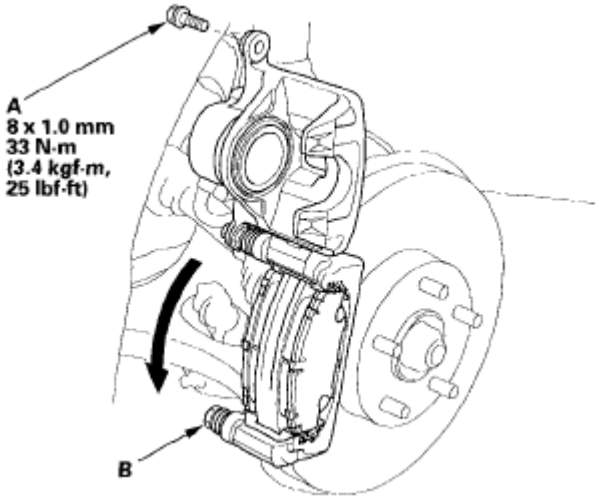

Fig. 34: Installing Flange Bolt (With Specifications)

17. Press the brake pedal several times to make sure the brakes work.

NOTE: Engagement may require a greater pedal stroke immediately after the brake pads have been replaced as a set. Several applications of the brake pedal will restore the normal pedal stroke.

18. Add brake fluid as needed.
19. After installation, check for leaks at the hose and line joints or connections, and retighten if necessary. Test-drive the vehicle, then check for leaks (see **BRAKE HOSE AND LINE INSPECTION**).

FRONT BRAKE DISC INSPECTION

RUNOUT

1. Raise the front of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
2. Remove the front wheels.
3. Remove the brake pads: Except Si model (see **REPLACEMENT - EXCEPT SI MODEL**), Si model (see **REPLACEMENT - SI MODEL**).
4. Inspect the brake disc surface for damage and cracks. Clean the brake disc thoroughly, and remove all rust.
5. Install suitable flat washers (A) and wheel nuts (B), and tighten the wheel nuts to the specified torque to hold the brake disc securely against the hub.

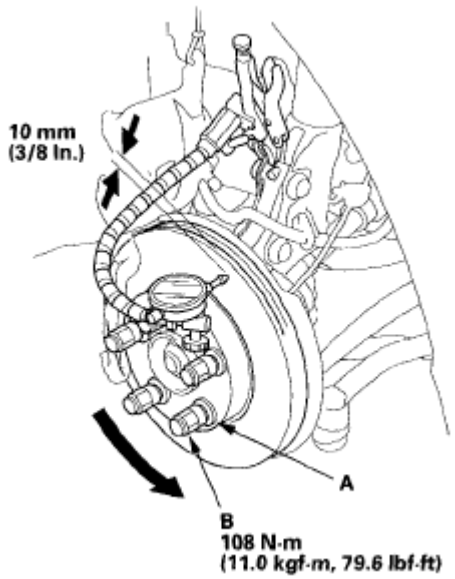

Fig. 35: Installing Flat Washers And Wheel Nuts (With Specifications)

6. Set up the dial gauge against the brake disc as shown, and measure the runout at 10 mm (3/8 in.) from the outer edge of the brake disc.

   Brake disc runout:

   Service limit: 0.04 mm (0.0016 in.)

7. If the brake disc is beyond the service limit, refinish the brake disc with an on-car brake lathe. The Kwik-Lathe produced by Kwik-Way Manufacturing Co. and the "Front Brake Disc Lathe" offered by Snap-on Tools Co. are approved for this operation.

   Max. refinishing limit:

Except Si model: 19.0 mm (0.75 in.)

Si model: 23.0 mm (0.91 in.)

NOTE:

- **If the brake disc is beyond the service limit for refinishing, replace it (see KNUCKLE/HUB REPLACEMENT).**
- **A new brake disc should be refinished if its runout is greater than 0.04 mm (0.0016 in.).**

THICKNESS AND PARALLELISM

1. Raise the front of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
2. Remove the front wheels.
3. Remove the brake pads: Except Si model (see **REPLACEMENT - EXCEPT SI MODEL**), Si model (see **REPLACEMENT - SI MODEL**).
4. Using a micrometer, measure the brake disc thickness at eight points, about 45° apart and 10 mm (3/8 in.) in from the outer edge of the brake disc. Replace the brake disc if the smallest measurement is less than the max. refinishing limit.

   Brake disc thickness:

   Standard:

   Except Si model: 20.9-21.1 mm (0.82-0.83 in.)

   Si model: 24.9-25.1 mm (0.98-0.99 in.)

   Max. refinishing limit:

   Except Si model: 19.0 mm (0.75 in.)

   Si model: 23.0 mm (0.91 in.)

   Brake disc parallelism: 0.015 mm (0.0006 in.) max.

   NOTE: This is the maximum allowable difference between the thickness measurements.

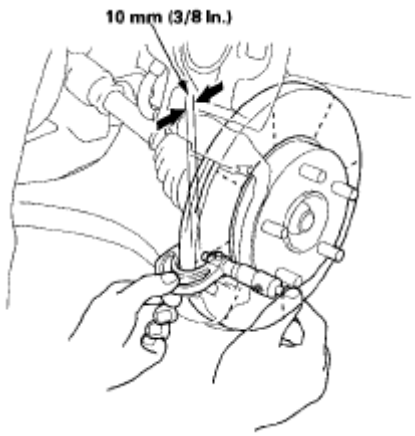

Fig. 36: Measuring Brake Disc Thickness At Eight Points By Micrometer

5. If the brake disc is beyond the service limit for parallelism, refinish the brake disc with an on-car brake lathe. The Kwik-Lathe produced by Kwik-Way Manufacturing Co. and the "Front Brake Disc Lathe" offered by Snap-on Tools Co. are approved for this operation.

NOTE: If the brake disc is beyond the service limit for refinishing, replace it (see KNUCKLE/HUB REPLACEMENT).

FRONT BRAKE CALIPER OVERHAUL

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

EXCEPT SI MODEL

Remove, disassemble, inspect, reassemble, and install the caliper, and note these items:

NOTE: Make sure that the caliper pins are installed correctly. Upper caliper pin B and lower caliper pin A are different. If the these caliper pins are installed in the wrong location, it will cause vibration, uneven or rapid brake pad wear, and possibly uneven tire wear.

- Do not spill brake fluid on the vehicle; it may damage the paint; if brake fluid gets on the paint, wash it off immediately with water.
- To prevent dripping brake fluid, cover disconnected hose joints with rags or shop towels.
- Clean all parts in brake fluid and air dry; blow out all passages with compressed air.
- Before reassembling, check that all parts are free of dirt and other foreign particles.
- Replace parts with new ones as specified in the illustration.
- Make sure no dirt or other foreign matter gets in the brake fluid.

- Make sure no grease or oil gets on the brake discs or pads.
- When reusing brake pads, always reinstall them in their original positions to prevent loss of braking efficiency.
- Do not reuse drained brake fluid. Use only clean Honda DOT 3 Brake Fluid from an unopened container. Using a non-Honda brake fluid can cause corrosion and shorten the life of the system.
- Do not mix different brands of brake fluid as they may not be compatible.
- Coat the pistons, piston seal grooves, and caliper bores with clean brake fluid.
- Replace all rubber parts with new ones whenever disassembled.
- After installing the caliper, check the brake hose and line for leaks, interference, and twisting.

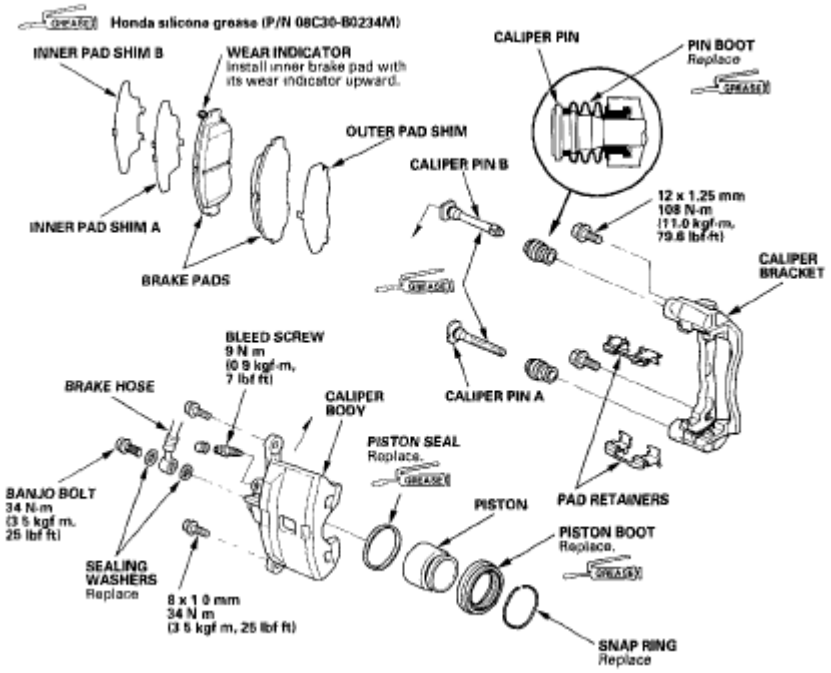

Fig. 37: Exploded View Of Front Brake Caliper Overhaul (Except Si Model) (With Specifications)

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

SI MODEL

Remove, disassemble, inspect, reassemble, and install the caliper, and note these items:

NOTE: Make sure that the caliper pins are installed correctly. Upper caliper pin B and lower caliper pin A are different. If the these caliper pins are installed in the wrong location, it will cause vibration, uneven or rapid brake pad wear, and possibly uneven tire wear.

- Do not spill brake fluid on the vehicle; it may damage the paint; if brake fluid gets on the paint, wash it off immediately with water.
- To prevent dripping brake fluid, cover disconnected hose joints with rags or shop towels.
- Clean all parts in brake fluid and air dry; blow out all passages with compressed air.
- Before reassembling, check that all parts are free of dirt and other foreign particles.

- Do not mix different brands of brake fluid as they may not be compatible.
- Coat the pistons, piston seal grooves, and caliper bores with clean brake fluid.
- Replace all rubber parts with new ones whenever disassembled.
- After installing the caliper, check the brake hose and line for leaks, interference, and twisting.

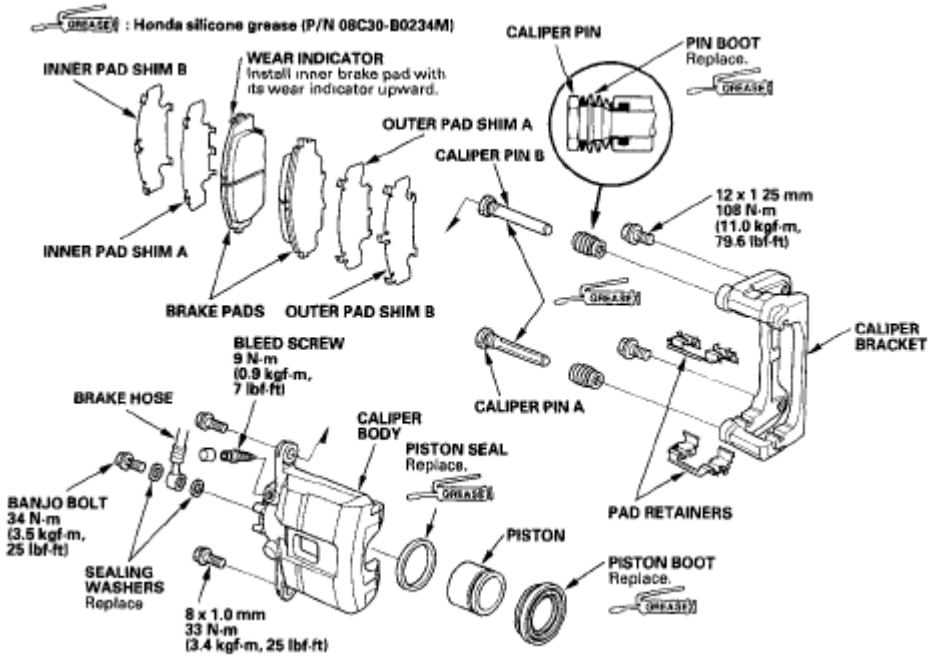

Fig. 38: Exploded View Of Front Brake Caliper Overhaul (Si Model) (With Specifications)

MASTER CYLINDER REPLACEMENT

NOTE:

- **Do not spill brake fluid on the vehicle; it may damage the paint; if brake fluid gets on the paint, wash it off immediately with water.**
- **Be careful not to damage or deform the brake lines during removal and installation.**
- **To prevent the brake fluid from flowing, plug and cover the hose ends and joints with a shop towel or equivalent.**

1. Remove the air cleaner: Except Si model (see **AIR CLEANER REMOVAL/INSTALLATION**), Si model (see **AIR CLEANER REMOVAL/INSTALLATION**).
2. Remove the reservoir cap and brake fluid from the master cylinder reservoir with a syringe.
3. Disconnect the brake fluid level switch connector (A).

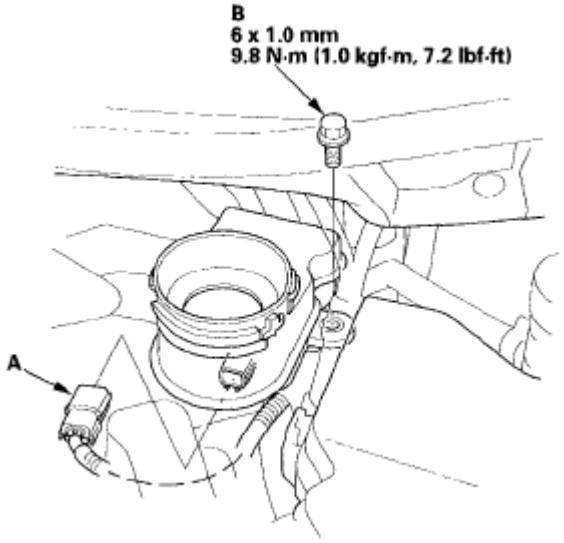

Fig. 39: Disconnecting Brake Fluid Level Switch Connector (With Specifications)

4. Remove the reservoir tank mounting bolt (B).
5. Disconnect the brake lines (A) from the master cylinder (B). To prevent spills, cover the hose joints with rags or shop towels.

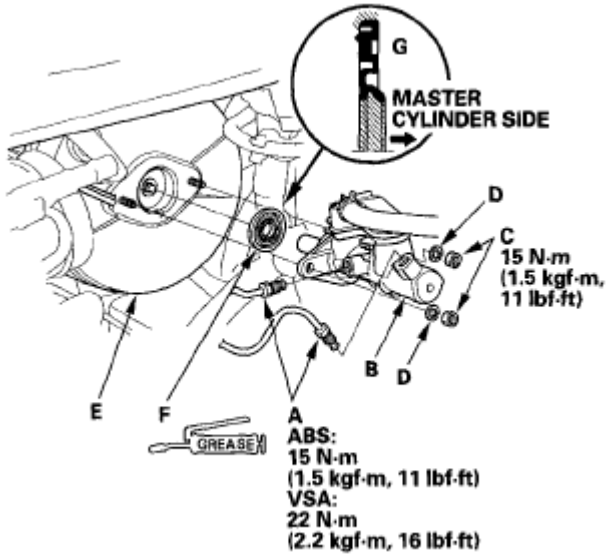

Fig. 40: Disconnecting Brake Lines From Master Cylinder (With Specifications)

6. Remove the master cylinder mounting nuts (C) and washers (D).
7. Remove the master cylinder from the brake booster (E). Be careful not to bend or damage the brake lines when removing the master cylinder.
8. Remove the rod seal (F) from the master cylinder.

NOTE: During installation, set the new rod seal onto the master cylinder with its grooved side (G) toward the master cylinder.

9. Install the master cylinder in the reverse order of removal, and note these items:
   - Use a new rod seal on reassembly.
   - Coat the inner bore lip and outer circumference of the new rod seal with the Shin-Etsu silicone grease (P/N 08798-9013).
   - Check the brake pedal height and free play after installing the master cylinder, and adjust if necessary (see **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT**).
10. Bleed the brake system (see **BRAKE SYSTEM BLEEDING**).
11. Spin the wheels to check for brake drag.

MASTER CYLINDER INSPECTION

1. Inspect and note these items:
   - Before reassembling, check that all parts are free of dirt and other foreign particles.
   - Do not try to disassemble the master cylinder assembly. Replace the master cylinder assembly with a new part if necessary.
   - Do not allow dirt or foreign matter to contaminate the brake fluid.

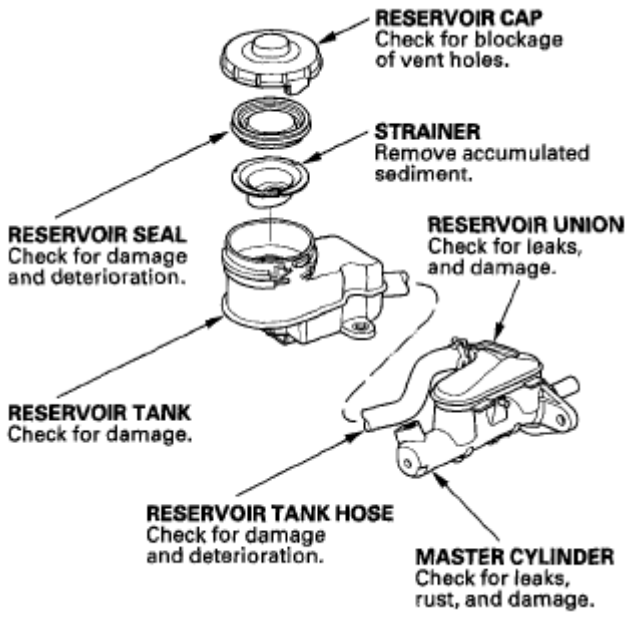

Fig. 41: Inspecting Master Cylinder

2. If the reservoir tank hose was disconnected, install the reservoir tank (A) and the reservoir tank hose (B) to the reservoir union (C).

NOTE:
- **Align the "TRIANGLE" marks (D) on the reservoir tank and reservoir union with the paint marks (E) on the hose.**
- **Position the direction of the clamp (F).**

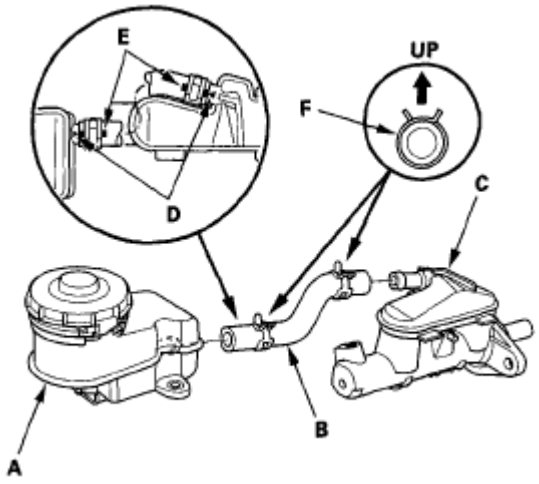

Fig. 42: Installing Reservoir Tank And Hose To Reservoir Union

BRAKE BOOSTER TEST

FUNCTIONAL TEST

1. With the engine stopped, press the brake pedal several times to deplete the vacuum reservoir, then press the brake pedal hard, and hold it for 15 seconds. If the brake pedal sinks, either the master cylinder is bypassing internally, or the brake system is leaking. Inspect the brake hoses and lines (see **BRAKE HOSE AND LINE INSPECTION**).
2. Start the engine with the brake pedal pressed. If the brake pedal sinks slightly, the vacuum booster is operating normally. If the brake pedal height does not vary, do the leak test.
3. Do the brake system test (see **BRAKE SYSTEM INSPECTION AND TEST**).

LEAK TEST

1. Press the brake pedal with the engine running, then stop the engine. If the brake pedal height does not vary while pressed for 30 seconds, the vacuum booster is OK. If the pedal height rises go to step 6. If it does not rise go to step 2.
2. Start the engine and let it idle for 30 seconds. Turn the ignition switch off, and wait 30 seconds. Press the brake pedal several times using normal pressure. When the pedal is first pressed, it should be low. On consecutive applications, the pedal height should gradually rise. Does the pedal rise on each consecutive application? If it rises the booster is OK. If it does not go to step 3.
3. Disconnect the brake booster vacuum hose (A) at the booster. The check valve is built into the hose.

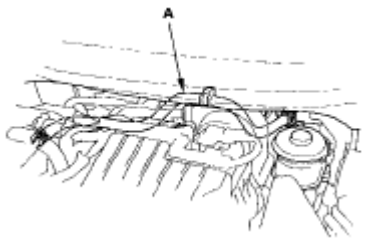

Fig. 43: Disconnecting Brake Booster Vacuum Hose At Booster

4. Start the engine, and let it idle. There should be vacuum available. If no vacuum is available, the check valve is not working properly. Replace the brake booster vacuum hose and check valve, and retest. If vacuum is found, go to step 5.
5. With the engine off, reconnect the vacuum hose to the brake booster.
6. Start the engine, and then pinch the brake booster vacuum hose between the check valve and the booster.
7. Turn the ignition switch off, and wait 30 seconds. Press the brake pedal several times using normal pressure. When the pedal is first pressed, it should be low. On consecutive applications, the pedal height should gradually rise.
    - If the pedal position does not vary inspect the seal between the master cylinder and booster. If the seal is OK, replace the brake booster.
    - If the pedal position varies, replace the brake booster vacuum hose/check valve assembly.

BRAKE BOOSTER REPLACEMENT

EXCEPT SI MODEL

1. Remove the master cylinder (see **MASTER CYLINDER REPLACEMENT**).
2. Disconnect the brake booster vacuum hose (A) from the brake booster (B).

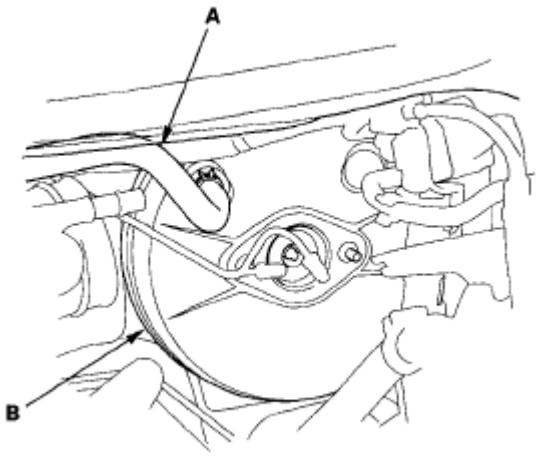

Fig. 44: Disconnecting Brake Booster Vacuum Hose From Brake Booster

3. Remove the engine wire harness clamps (A).

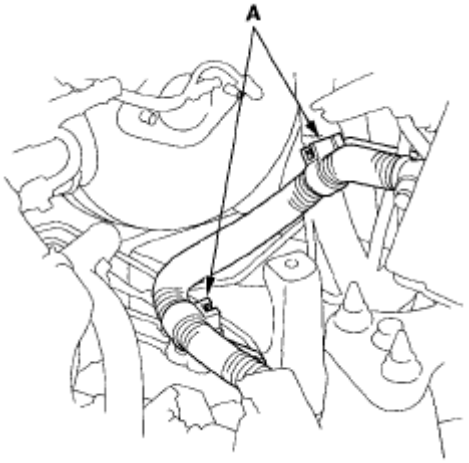

Fig. 45: Removing Engine Wire Harness Clamps

4. Remove the heater hoses (A) from the clamp (B).

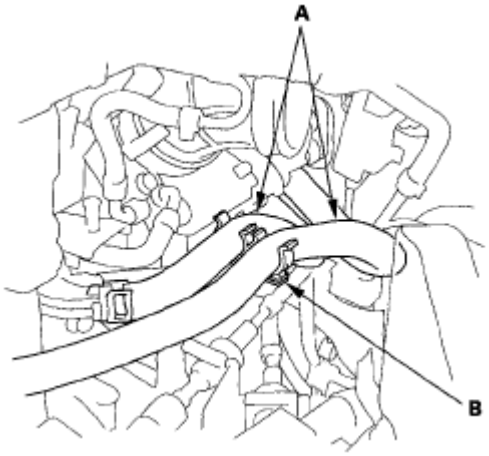

Fig. 46: Removing Heater Hoses From Clamp

5. Remove the lock pin (A) and the joint pin (B), then disconnect the yoke from the brake pedal.

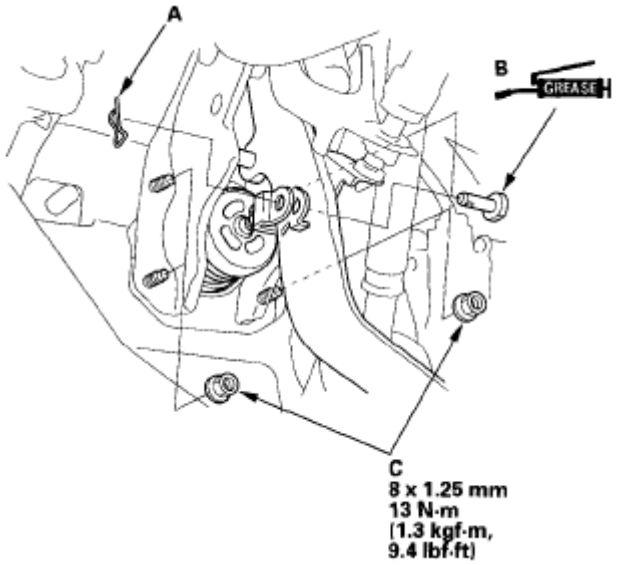

Fig. 47: Removing Lock Pin And Joint Pin (With Specifications)

6. Remove the brake booster mounting nuts (C).
7. Pull the brake booster (A) forward.

NOTE:

- **Be careful not to damage the booster surfaces and the threads on the booster studs.**
- **Be careful not to bend or damage the brake lines.**

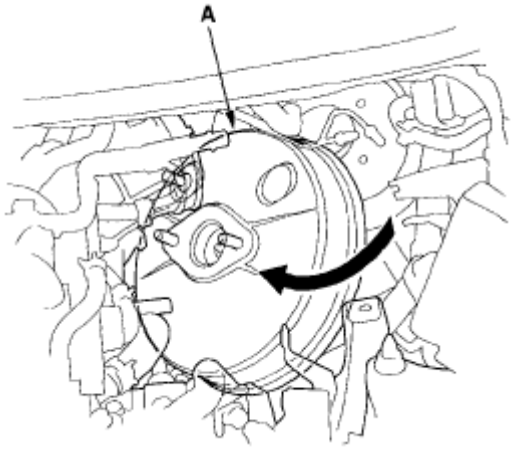

Fig. 48: Pulling Brake Booster Forward

8. Remove the brake booster (A) by pulling it out and turning it, and remove it from the engine compartment.

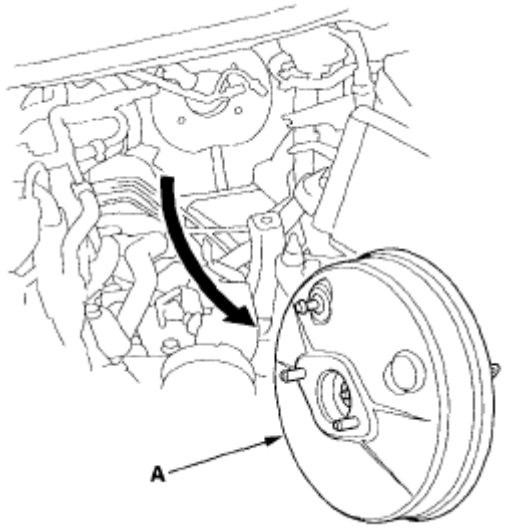

Fig. 49: Removing Brake Booster

9. Install the brake booster in the reverse order of removal, and note these items:
   - Install the master cylinder after installing the brake booster (see **MASTER CYLINDER REPLACEMENT**).
   - Check the brake pedal height and free play after installing the master cylinder, and adjust it if necessary (see **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT**).
   - Bleed the brake system (see **BRAKE SYSTEM BLEEDING**).

SI MODEL

1. Remove the master cylinder (see **MASTER CYLINDER REPLACEMENT**).
2. Disconnect the brake booster vacuum hose (A) from the brake booster (B).

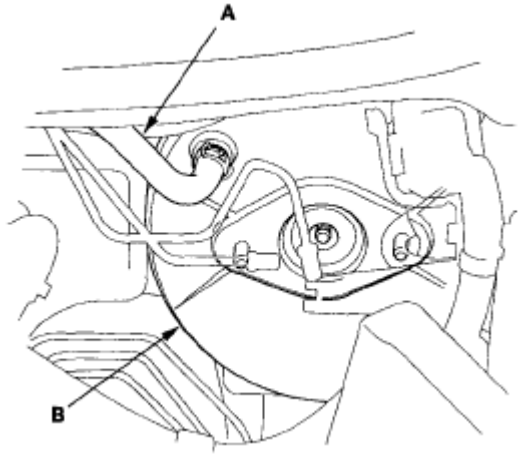

Fig. 50: Disconnecting Brake Booster Vacuum Hose

3. Remove the engine wire harness clamps (A).

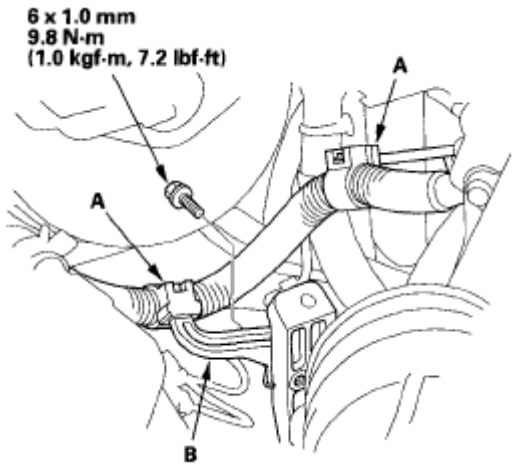

Fig. 51: Removing Engine Wire Harness Clamps (With Specifications)

4. Remove the air cleaner bracket (B).
5. Remove the lock pin (A) and the joint pin (B), then disconnect the yoke from the brake pedal.

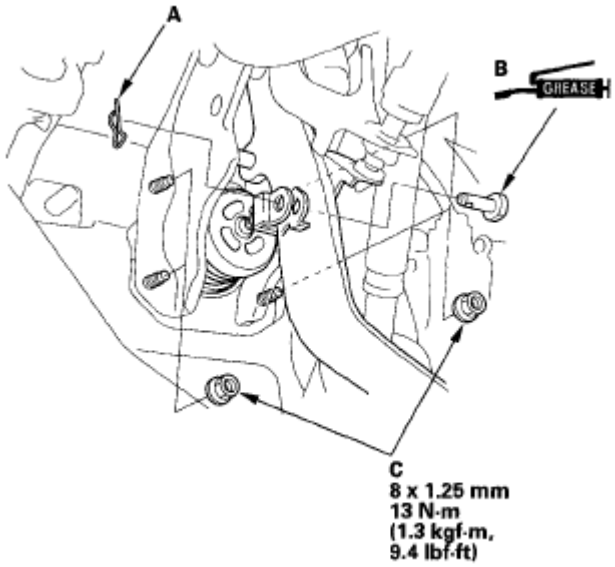

Fig. 52: Removing Lock Pin And Joint Pin (With Specifications)

6. Remove the brake booster mounting nuts (C).
7. Pull the brake booster (A) forward.

NOTE:

- **Be careful not to damage the booster surfaces and the threads on the booster studs.**
- **Be careful not to bend or damage the brake lines.**

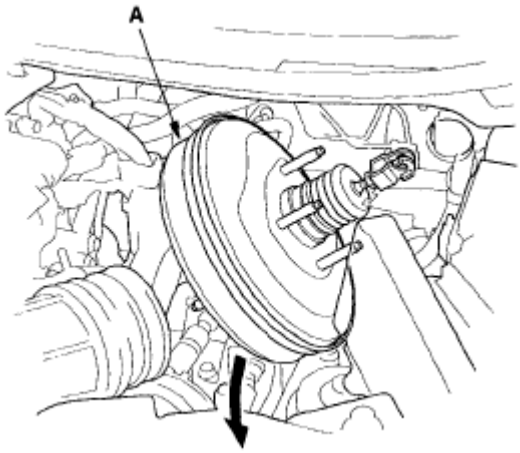

Fig. 53: Pulling Brake Booster Forward

8. Remove the brake booster by pulling it out and turning it, and remove it from the engine compartment.
9. Install the brake booster in the reverse order of removal, and note these items:
   - Install the master cylinder after installing the brake booster (see **MASTER CYLINDER REPLACEMENT**).
   - Check the brake pedal height and free play after installing the master cylinder, and adjust it if necessary (see **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT**).
   - Bleed the brake system (see **BRAKE SYSTEM BLEEDING**).

REAR BRAKE PAD INSPECTION AND REPLACEMENT

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

INSPECTION

1. Raise the rear of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
2. Remove the rear wheels.
3. Check the thickness (A) of the inner pad (B) and outer pad (C). Do not include the thickness of the backing plate.

   Brake pad thickness:

   Standard: 8.3-9.4 mm (0.33-0.37 in.)
   Service limit: 1.6 mm (0.06 in.)

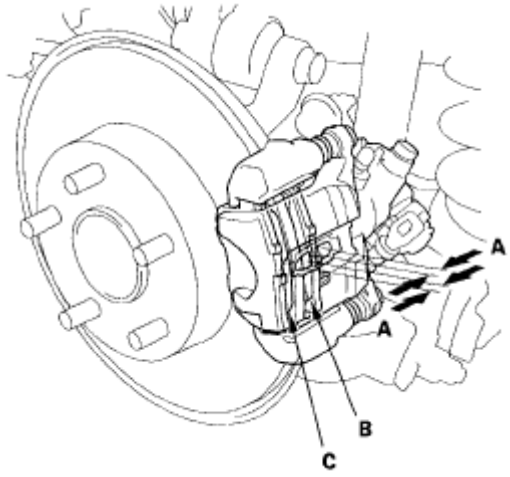

Fig. 54: Checking Thickness Of Inner Pad And Outer Pad

4. If the brake pad thickness is less than the service limit, replace all the rear brake pads as a set.

REPLACEMENT

1. Remove some brake fluid from the master cylinder.
2. Raise the rear of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
3. Remove the rear wheels.
4. Remove the brake hose mounting bolt (A).

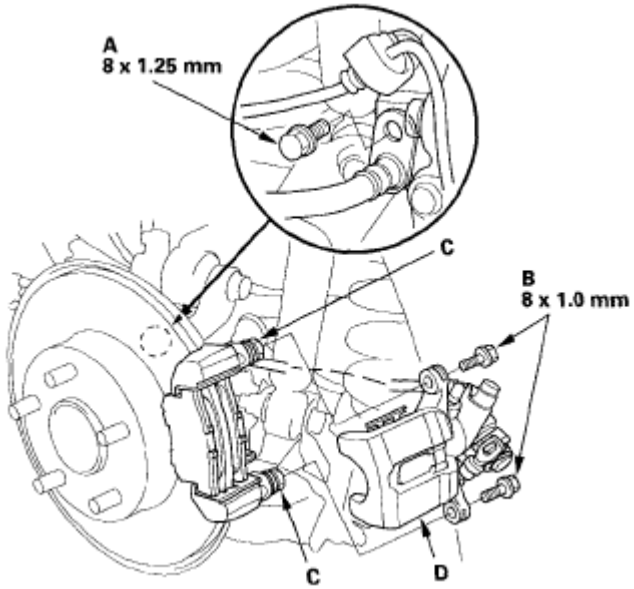

Fig. 55: Removing Brake Hose Mounting Bolt

5. Remove the flange bolts (B) while holding respective caliper pin (C) with a wrench. Be careful not to damage the pin boot, and remove the caliper (D). Check the hose and pin boots for damage and deterioration.

NOTE: Do not twist the brake hose and the parking brake cable to prevent damage.

6. Remove the pad shims (A) and brake pads (B).

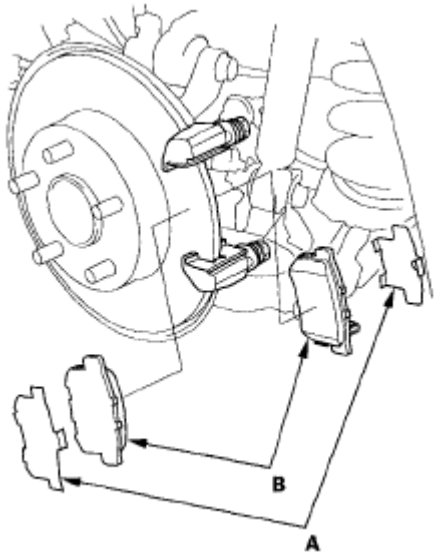

Fig. 56: Removing Pad Shims And Brake Pads

7. Remove the pad retainers (A).

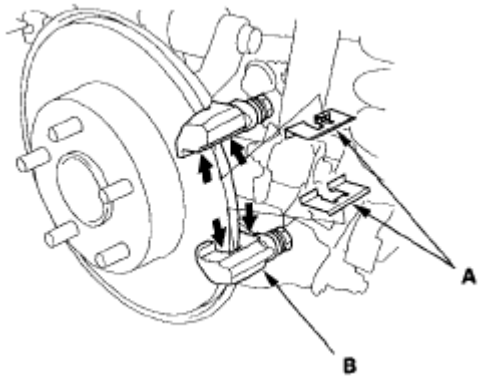

Fig. 57: Removing Pad Retainers

8. Clean the caliper bracket (B) thoroughly; remove any rust, and check for grooves and cracks.
9. Check the brake disc for damage and cracks.
10. Apply a thin coat of M-77 assembly paste (P/N 08798-9010) to the retainers on their mating surfaces (indicated by the arrows) against the caliper bracket.
11. Install the pad retainers. Wipe excess assembly paste off the retainers. Keep the assembly paste off the discs and pads.
12. Apply a thin coat of M-77 assembly paste (P/N 08798-9010) to the pad side of the shims (A), the back of the brake pads (B), and the other areas indicated by the arrows. Wipe excess assembly paste off the pad shims and brake pads. Contaminated brake discs or brake pads reduce stopping ability. Keep assembly paste off the brake discs and pads.

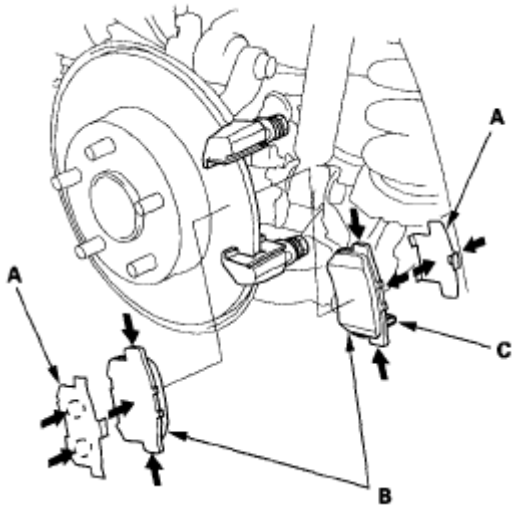

Fig. 58: Applying Assembly Paste To Pad Side Of Shims And Brake Pads

13. Install the brake pads and pad shims correctly. Install the brake pad with the wear indicator (C) on the bottom inside. If you are reusing the brake pads, always reinstall the brake pads in their original positions to prevent a temporary loss of braking efficiency.
14. Rotate the caliper piston (A) clockwise into the cylinder, then align the cutout (B) in the piston with the tab (C) on the inner pad by turning the piston back. Lubricate the boot with rubber grease to avoid twisting the piston boot. If the piston boot is twisted, back it out so it is positioned properly.

NOTE: Be careful when moving the piston back in the caliper; brake fluid might overflow from the master cylinder's reservoir.

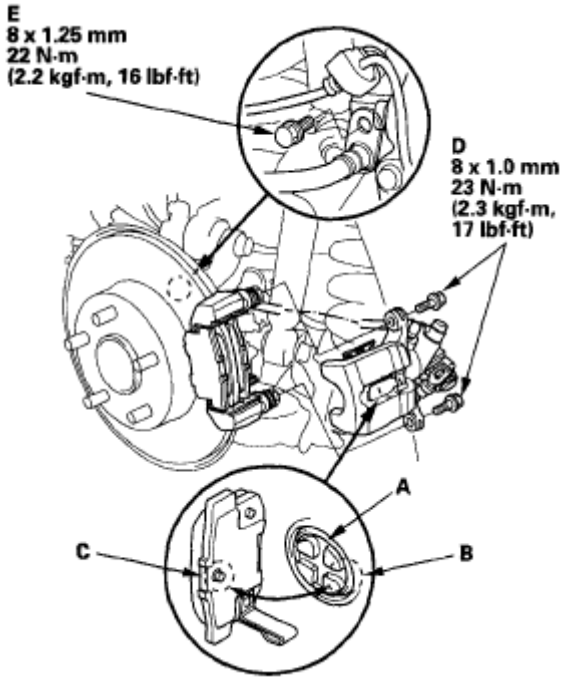

Fig. 59: Rotating Caliper Piston Clockwise Into Cylinder

15. Install the caliper. Install the flange bolts (D), and tighten it to the specified torque while holding

respective caliper pin with a wrench. Be careful not to damage the pin boots.

16. Install the brake hose mounting bolt (E).
17. Press the brake pedal several times to make sure the brakes work.

NOTE: Engagement may require a greater pedal stroke immediately after the brake pads have been replaced as a set. Several applications of the brake pedal will restore the normal pedal stroke.

18. Add brake fluid as needed.
19. After installation, check for leaks at the hose and line joints or connections, and retighten if necessary. Test-drive the vehicle, then check for leaks (see **BRAKE HOSE AND LINE INSPECTION**).

REAR BRAKE DISC INSPECTION

RUNOUT

1. Raise the rear of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
2. Remove the rear wheels.
3. Remove the brake pads (see **REAR BRAKE PAD INSPECTION AND REPLACEMENT**).
4. Inspect the brake disc surface for damage and cracks. Clean the brake disc thoroughly, and remove all rust.
5. Install suitable flat washers (A) and wheel nuts (B), and tighten the wheel nuts to the specified torque to hold the brake disc securely against the hub.

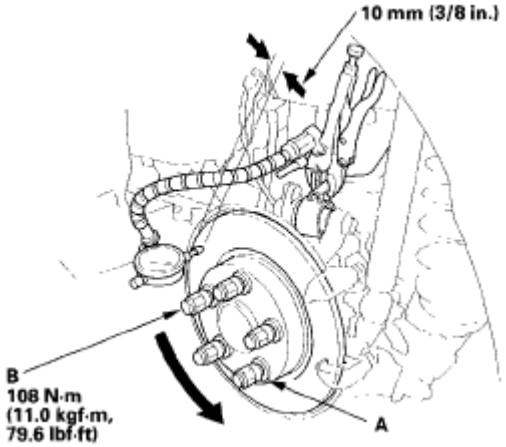

Fig. 60: Installing Suitable Flat Washer And Wheel Nuts (With Specifications)

6. Set up the dial gauge against the brake disc as shown, and measure the runout at 10 mm (3/8 in.) from the outer edge of the brake disc.

Brake disc runout:

Service limit: 0.04 mm (0.0016 in.)

7. If the brake disc is beyond the service limit, refinish the brake disc with an on-car brake lathe. The

Kwik-Lathe produced by Kwik-Way Manufacturing Co. and the "Front Brake Disc Lathe" offered by Snap-on Tools Co. are approved for this operation.

Max. refinishing limit: 8.0 mm (0.31 in.)

NOTE:

- **If the brake disc is beyond the service limit for refinishing, replace it (see HUB BEARING UNIT REPLACEMENT-DISC BRAKE TYPE).**
- **A new brake disc should be refinished if its runout is greater than 0.04 mm (0.0016 in.).**

THICKNESS AND PARALLELISM

1. Raise the rear of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
2. Remove the rear wheels.
3. Remove the brake pads (see **REAR BRAKE PAD INSPECTION AND REPLACEMENT**).
4. Using a micrometer, measure the brake disc thickness at eight points, about 45° apart and 10 mm (3/8 in.) in from the outer edge of the brake disc. Replace the brake disc if the smallest measurement is less than the max. refinishing limit.

   Brake disc thickness:

   Standard: 8.9-9.1 mm (0.35-0.36 in.)
   Max. refinishing limit: 8.0 mm (0.31 in.)

   Brake disc parallelism: 0.015 mm (0.0006 in.) max.

   NOTE: This is the maximum allowable difference between the thickness measurements.

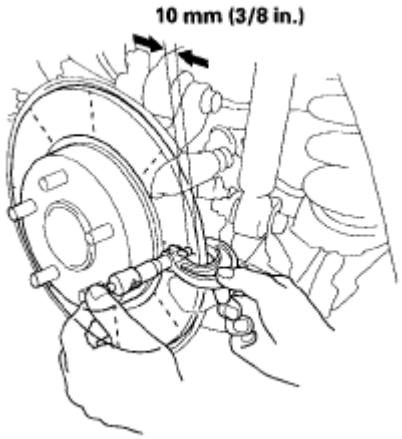

Fig. 61: Measuring Brake Disc Thickness

5. If the brake disc is beyond the service limit for parallelism, refinish the brake disc with an on-car brake lathe. The Kwik-Lathe produced by Kwik-Way Manufacturing Co. and the "Front Brake Disc Lathe" offered by Snap-on Tools Co. are approved for this operation.

NOTE: **If the brake disc is beyond the service limit for refinishing, replace it (see HUB BEARING UNIT REPLACEMENT-DISC BRAKE TYPE).**

REAR BRAKE CALIPER OVERHAUL

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

Remove, disassemble, inspect, reassemble, and install the caliper, and note these items:

- Do not spill brake fluid on the vehicle; it may damage the paint; if brake fluid gets on the paint, wash it off immediately with water.
- To prevent dripping brake fluid, cover disconnected hose joints with rags or shop towels.
- Clean all parts in brake fluid and air dry; blow out all passages with compressed air.
- Before reassembling, check that all parts are free of dirt and other foreign particles.
- Replace parts with new ones as specified in the illustration.
- Make sure no dirt or other foreign matter gets into the brake fluid.
- Make sure no grease or oil gets on the brake discs or pads.
- When reusing brake pads, always reinstall them in their original positions to prevent loss of braking efficiency.
- Do not reuse drained brake fluid. Use only clean Honda DOT 3 Brake Fluid from an unopened container. Using a non-Honda brake fluid can cause corrosion and shorten the life of the system.
- Do not mix different brands of brake fluid as they may not be compatible.
- Coat the piston, piston seal groove, and caliper bore with clean brake fluid.
- Replace all rubber parts with new ones whenever disassembled.
- After installing the caliper, check the brake hose and line for leaks, interference, and twisting.

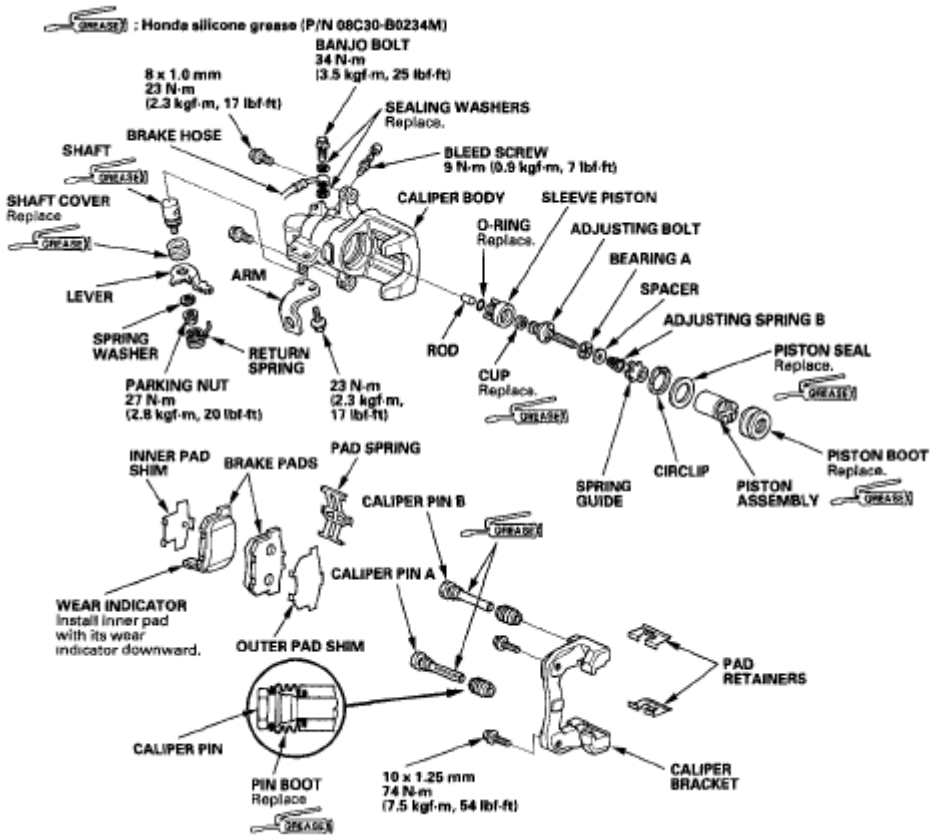

Fig. 62: Exploded View Of Rear Brake Caliper Overhaul (With Specifications)

REAR DRUM BRAKE INSPECTION

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

1. Raise the rear of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
2. Remove the rear wheels.
3. Release the parking brake, and remove the brake drum (see **HUB BEARING UNIT REPLACEMENT-DRUM BRAKE TYPE**).

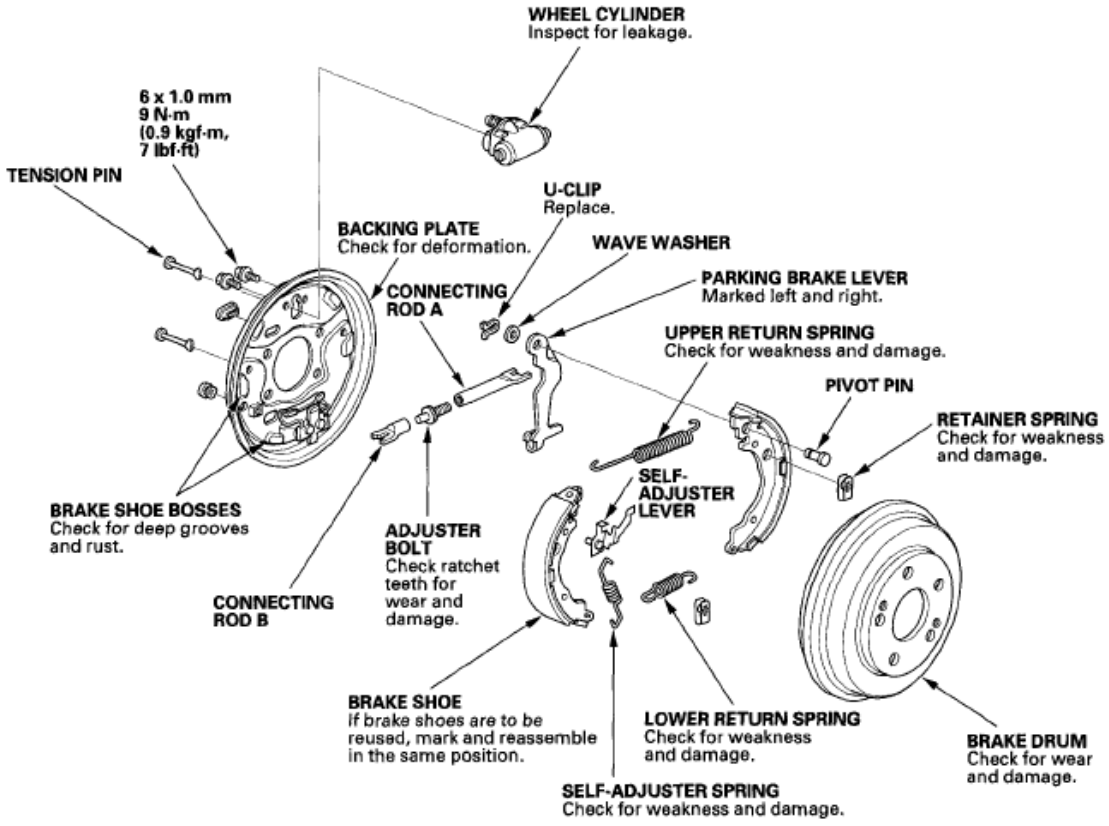

Fig. 63: Identifying Rear Drum Brake (With Specifications)

4. Check the wheel cylinder (A) for leakage.

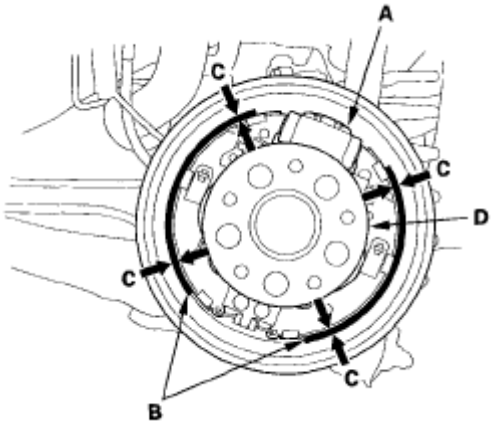

Fig. 64: Checking Wheel Cylinder For Leakage

5. Check the brake linings (B) for cracking, glazing, wear, and contamination.

NOTE: Contaminated brake linings or drums reduce stopping ability.

6. Measure the brake lining thickness (C). Measurement does not include brake shoe thickness.

Brake lining thickness:

Standard: 4.0 mm (0.16 in.)

Service limit: 2.0 mm (0.08 in.)

7. If the brake lining thickness is less than the service limit, replace the brake shoes as a set.
8. Check the hub (D) for smooth operation. If it requires servicing, replace the hub bearing unit (see **HUB BEARING UNIT REPLACEMENT-DRUM BRAKE TYPE**).
9. Measure the inside diameter of the brake drum with inside vernier calipers.

Drum inside diameter:

Standard: 199.9-200 mm (7.870-7.874 in.)

Service limit: 201 mm (7.91 in.)

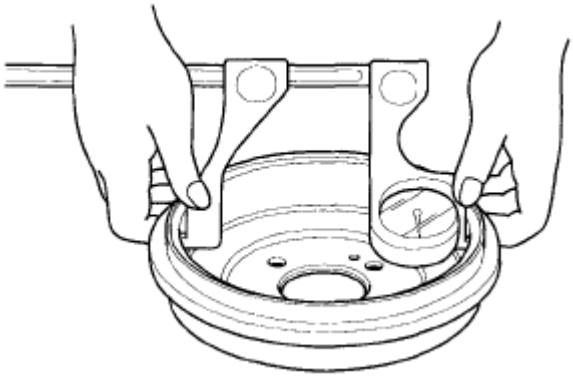

Fig. 65: Measuring Drum Inside Diameter

10. If the inside diameter of the brake drum is more than the service limit, replace the brake drum.
11. Check the brake drum for scoring, grooves, corrosion, and cracks.

REAR BRAKE SHOE REPLACEMENT

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

DISASSEMBLY

1. Raise the rear of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
2. Remove the rear wheels.
3. Release the parking brake, and remove the brake drum (see **HUB BEARING UNIT REPLACEMENT-DRUM BRAKE TYPE**).
4. Remove the tension pins (A) by pushing respective retainer spring (B) and turning the pin.

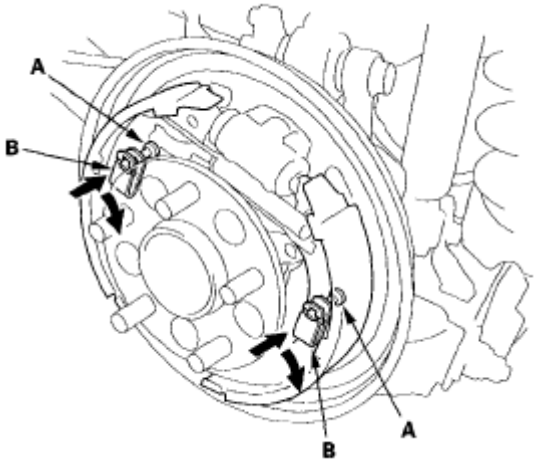

Fig. 66: Removing Tension Pins Pushing Respective Retainer Spring And Turning Pin

5. Remove the lower return spring (A), and remove the brake shoe assembly over the hub.

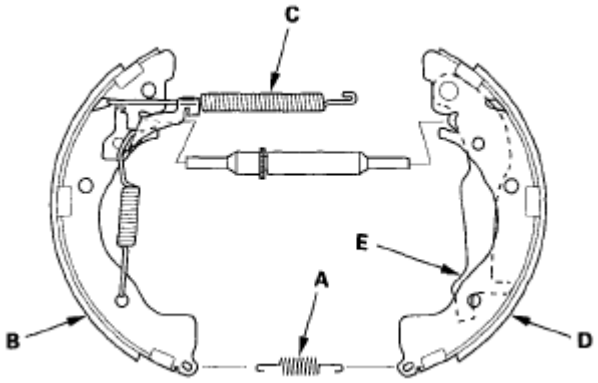

Fig. 67: Removing Lower Return Spring

6. Remove the forward brake shoe (B) by removing the upper return spring (C), and disassemble the brake shoe assembly.
7. Remove the rearward brake shoe (D) by disconnecting the parking brake cable from the parking brake lever (E).
8. Remove the U-clip (A), wave washer (B), and pivot pin (C), and separate the parking brake lever (D) from the brake shoe (E).

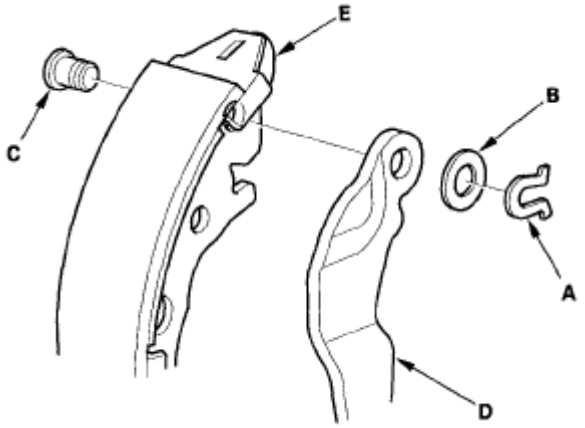

Fig. 68: Removing U-Clip, Wave Washer And Pivot Pin

REASSEMBLY

1. Apply rubber grease to the sliding surface of the pivot pin (A) for the rearward brake shoe (B).

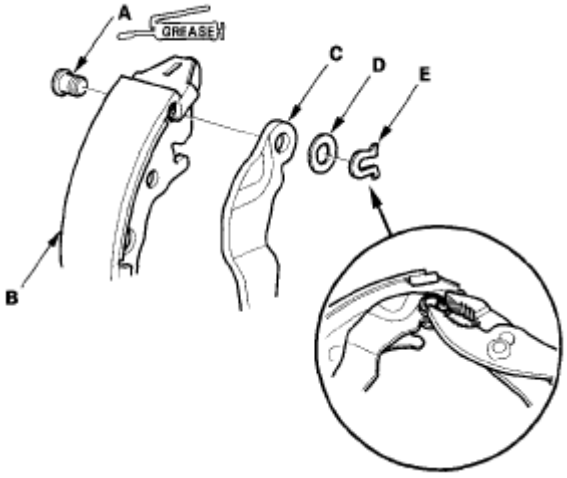

Fig. 69: Applying Grease To Sliding Surface Of Pivot Pin

2. Install the parking brake lever (C) and the wave washer (D) on the pivot pin, and secure with a new U-clip (E).

NOTE: Pinch the U-clip securely to prevent the parking brake lever from coming out of the brake shoe.

3. Connect the parking brake cable to the parking brake lever.
4. Apply a thin coat of rubber grease to the connecting rod ends (A), and the sliding surfaces (B) as shown. Wipe off any excess. Keep grease off the brake linings.

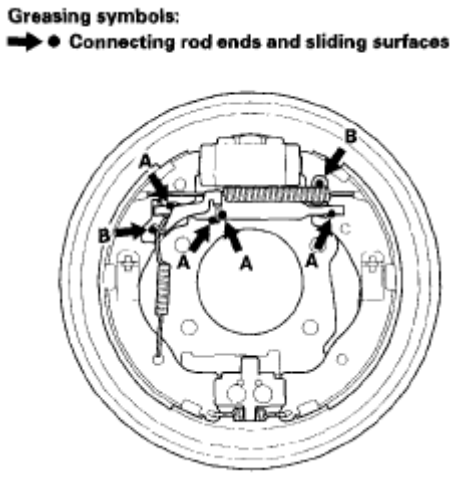

Fig. 70: Applying Coat Of Rubber Grease To Connecting Rod Ends

5. Apply a thin coat of Molykote 44MA grease to the shoe ends (A) and to the edge of the shoe surfaces (B) that make contact the backing plate as shown. Wipe off any excess. Keep grease off the brake linings.

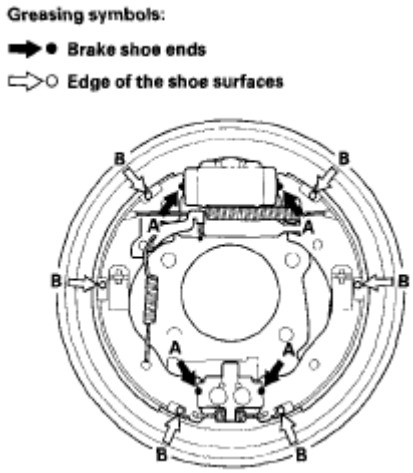

Fig. 71: Applying Grease To Shoe Ends And Edge Of Shoe Surfaces

6. Install connecting rods A and B on the adjuster bolt (C).

NOTE:

- **Clean the threaded portions of connecting rod A and the sliding surface of connecting rod B, then coat them with rubber grease.**
- **Shorten connecting rod A by fully turning the adjuster bolt.**

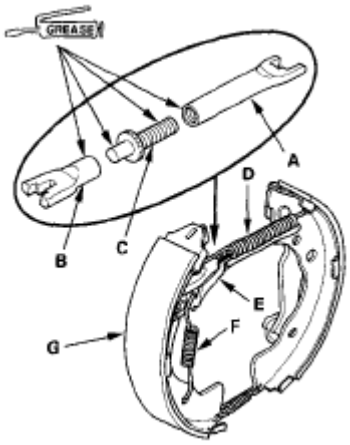

Fig. 72: Installing Connecting Rods A And B On Adjuster Bolt

7. Assemble the brake shoes, the upper return spring (D), and the connecting rods with the adjuster bolt against the backing plate, then install the self-adjuster lever (E) and the self-adjuster spring (F) on the forward brake shoe (G).
8. Install the tension pins (A) and the retainer springs (B) by pushing in respective spring and turning each pin.

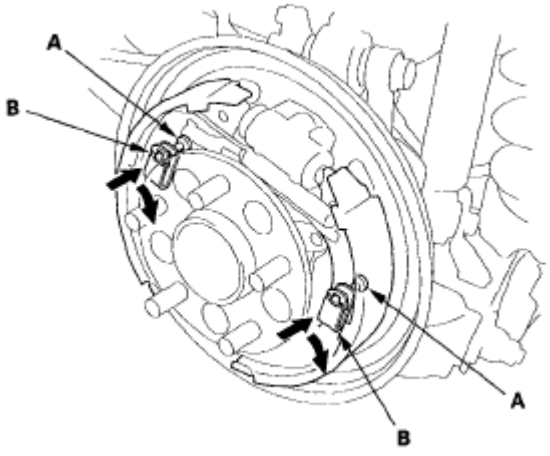

Fig. 73: Installing Tension Pins And Retainer Springs

9. Install the lower return spring.

NOTE: Make sure the brake shoes positioning on the brake shoe bosses of the backing plate, and fitting the top of the brake shoes onto the wheel cylinder pistons.

10. Install the brake drum.

NOTE: Before installing the brake drum, clean the mating surface of the rear hub and the inside of the brake drum.

11. Install the rear wheels.

12. Press the brake pedal several times to make sure the brakes work and to set the self-adjusting brake.

NOTE: Engagement of the brakes may require a greater pedal stroke immediately after the brake shoes have been replaced as a set. Several applications of the brake pedal will restore the normal pedal stroke.

13. Do the parking brake adjustment (see **PARKING BRAKE INSPECTION AND ADJUSTMENT**).

REAR WHEEL CYLINDER REPLACEMENT

NOTE:

- **Do not spill brake fluid on the vehicle; it may damage the paint; if brake fluid does contact the paint, wash it off immediately with water.**
- **To prevent spills, cover the hose joints with rags or shop towels.**

1. Remove the brake shoes (see **REAR BRAKE SHOE REPLACEMENT**).
2. Disconnect the brake line (A) from the wheel cylinder (B).

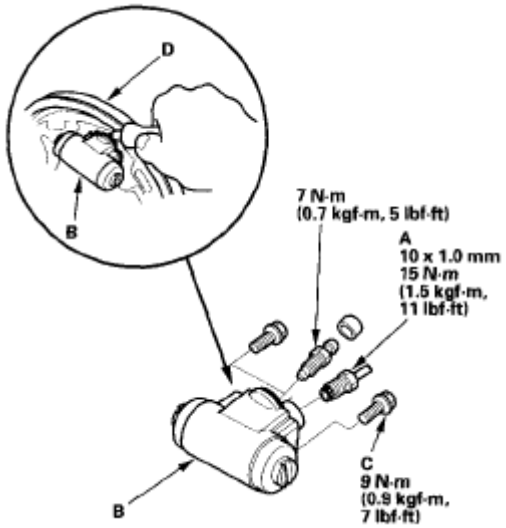

Fig. 74: Disconnecting Brake Line From Wheel Cylinder (With Specifications)

3. Remove the bolts (C) and the wheel cylinder from the backing plate.

NOTE: Use the special bolts on reassembly.

4. Apply Cemedine 366E sealant or equivalent between the wheel cylinder and backing plate (D), and install the wheel cylinder, then connect the brake line.
5. Install the brake shoes (see **REAR BRAKE SHOE REPLACEMENT**).
6. Bleed the brake system (see **BRAKE SYSTEM BLEEDING**).
7. Do the parking brake inspection and adjustment (see **PARKING BRAKE INSPECTION AND ADJUSTMENT**).
8. Spin the wheels to check for brake drag.
9. After installation, check for leaks at hose and line joints or connections, and retighten if necessary.

Test-drive the vehicle, then check for leaks (see **BRAKE HOSE AND LINE INSPECTION**).

BRAKE PEDAL REPLACEMENT

1. Disconnect the brake pedal position switch connector (A).

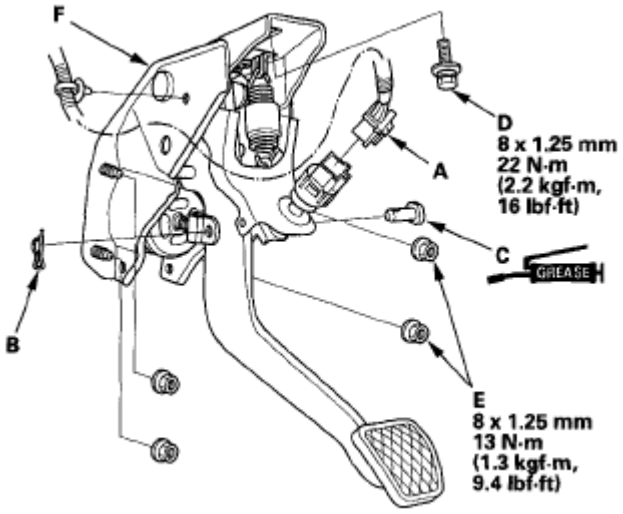

Fig. 75: Disconnecting Brake Pedal Position Switch Connector (With Specifications)

2. Remove the lock pin (B) and joint pin (C).
3. Remove the brake pedal bracket mounting bolt (D) and nuts (E).
4. Remove the brake pedal with bracket (F).
5. Install in the reverse order of removal.
6. Do the brake pedal and brake pedal position switch adjustment (see **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT**).

BRAKE HOSE AND LINE INSPECTION

1. Inspect the brake hoses for damage, deterioration, leaks, interference, and twisting.
2. Check the brake lines for damage, rusting, and leaks. Also check for bent brake lines.
3. Check for leaks at hose and line joints and connections, and retighten if necessary.
4. Check the master cylinder and the ABS or VSA modulator-control unit for damage and leaks.

MASTER CYLINDER AND ABS OR VSA MODULATOR-CONTROL UNIT

Connection Point	Component	Connected to	Specified Torque Value	Note
A	Front brake caliper	Brake hose	34 N.m (3.5 kgf.m, 25 lbf.ft)	Banjo bolt
		Bleed screw	9 N.m (0.9 kgf.m, 7 lbf.ft)	
	Rear brake caliper (disc type)	Brake hose	34 N.m (3.5 kgf.m, 25 lbf.ft)	Banjo bolt
		Bleed screw	9 N.m (0.9 kgf.m, 7	

			lbf.ft)	
B	Rear wheel cylinder (drum type)	Brake line	15 N.m (1.5 kgf.m, 11 lbf.ft)	Flare nut
		Bleed screw	7 N.m (0.7 kgf.m, 5 lbf.ft)	
C	Brake hose	Brake line	15 N.m (1.5 kgf.m, 11 lbf.ft)	Flare nut
D	Master cylinder (ABS)	Brake line	15 N.m (1.5 kgf.m, 11 lbf.ft)	Flare nut
	Master cylinder (VSA)		22 N.m (2.2 kgf.m, 16 lbf.ft)	
E	ABS modulator-control unit	Brake line	15 N.m (1.5 kgf.m, 11 lbf.ft)	Flare nut
	VSA modulator-control unit	Brake line (10 mm nut)	15 N.m (1.5 kgf.m, 11 lbf.ft)	
		Brake line (12 mm nut)	22 N.m (2.2 kgf.m, 16 lbf.ft)	
F	4-way joint	Brake line	15 N.m (1.5 kgf.m, 11 lbf.ft)	Flare nut

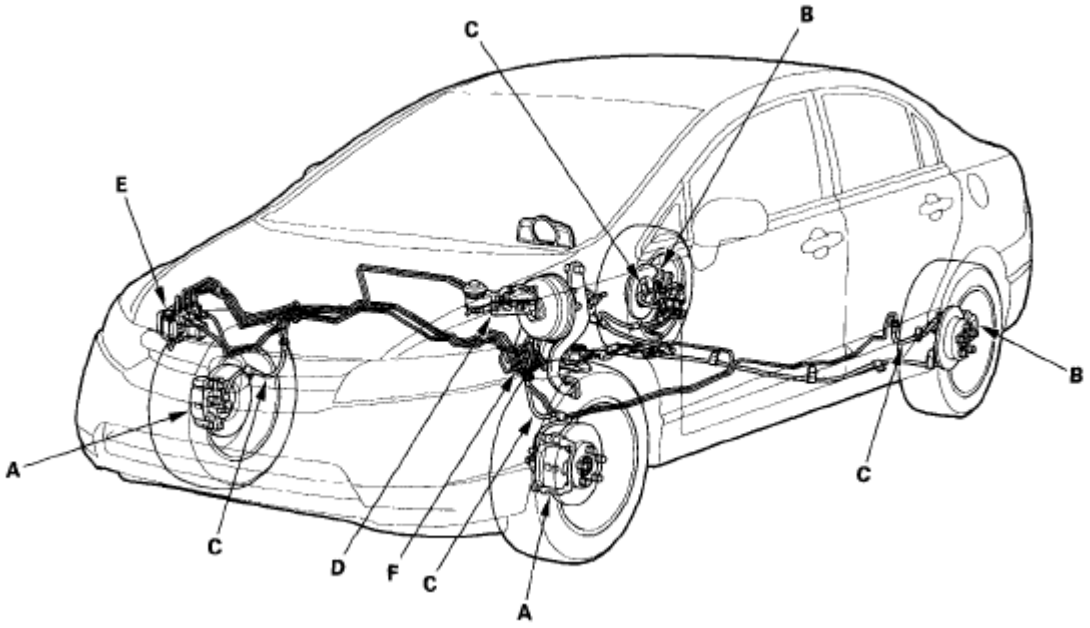

Fig. 76: Inspecting Brake Hose And Line

BRAKE HOSE REPLACEMENT

NOTE:

- **Before reassembling, check that all parts are free of dirt and other foreign particles.**
- **Replace parts with new ones whenever specified to do so.**
- **Do not spill brake fluid on the vehicle; it may damage the paint; if brake fluid gets on the paint, wash it off immediately with water.**

- **To prevent the brake fluid from flowing, plug and cover the hose ends and joints with a shop towel or equivalent material.**
- **The illustrations show only the front of the vehicle except where the procedure is different for the rear.**

REMOVAL

1. Disconnect the brake hose (A) from the brake line (B) using a 10 mm flare-nut wrench (C).

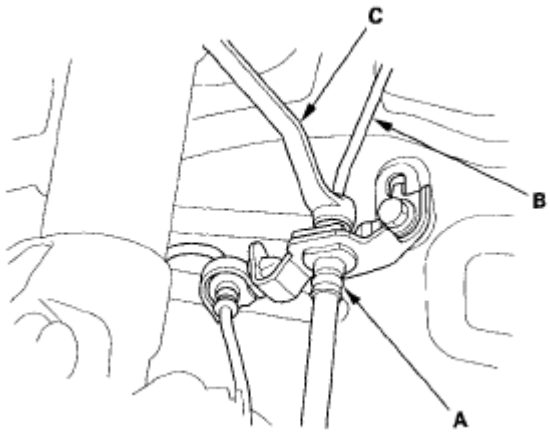

Fig. 77: Disconnecting Brake Hose From Brake Line

2. With clip type: Remove and discard the brake hose clip (A) from the brake hose (B).

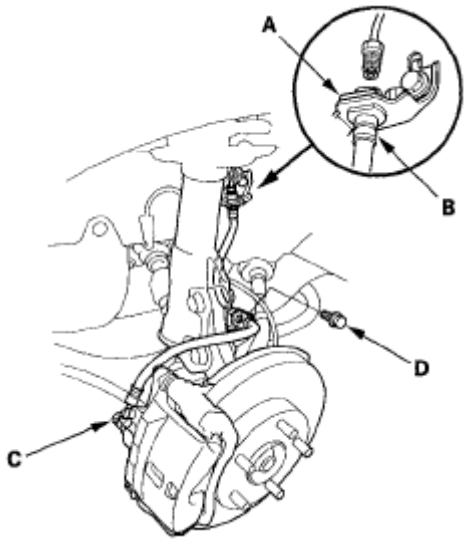

Fig. 78: Removing And Discarding Brake Hose Clip (Clip Type)

3. Disc brake type: Remove the banjo bolt (C), and disconnect the brake hose from the caliper.
4. Remove the brake hose mounting bolt(s) (D), then remove the brake hose.

NOTE: Without clip type: Remove the brake hose with the bracket.

INSTALLATION

1. Install the brake hose (A) with the mounting bolt (B).

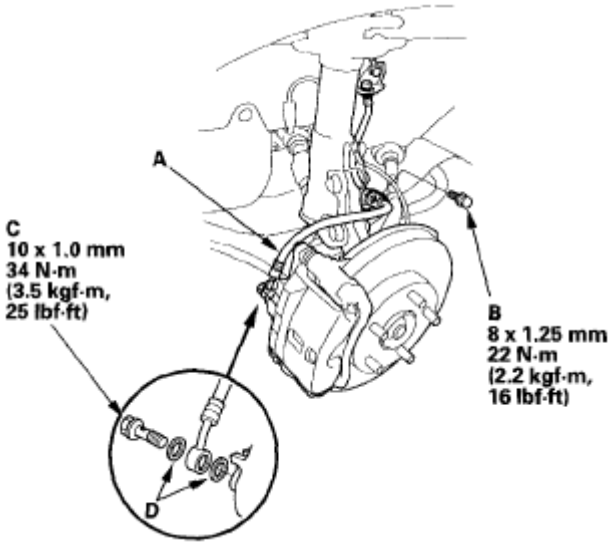

Fig. 79: Installing Brake Hose (With Specifications)

2. Disc brake type: Connect the brake hose to the caliper with the banjo bolt (C) and new sealing washers (D).
3. Position the brake hose ends (A).

NOTE:

- **With clip type: Install the brake hose on the brake hose bracket (B) with a new brake hose clip (C).**
- **Without clip type: Install the brake hose bracket (D) to the frame.**

With clip type

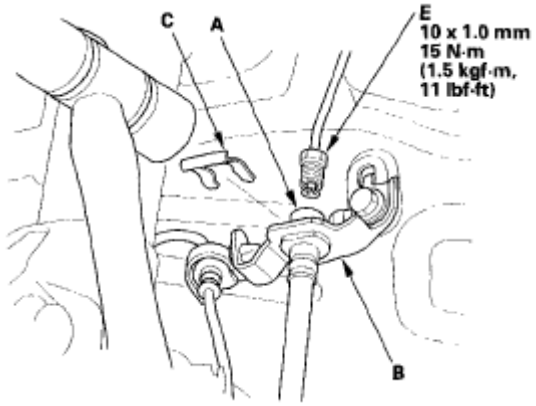

Fig. 80: Installing Brake Hose On Brake Hose Bracket (With Clip Type) (With Specifications)

Without clip type

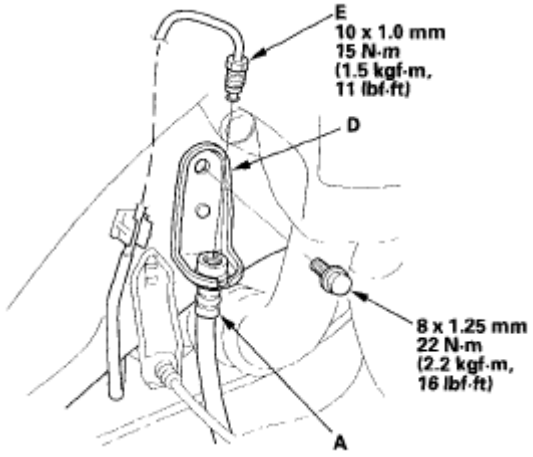

Fig. 81: Installing Brake Hose Bracket To Frame (Without Clip Type) (With Specifications)

4. Connect the brake line (E) to the brake hose.
5. After installing the brake hose, bleed the brake system (see **BRAKE SYSTEM BLEEDING**).
6. Do the following check:
    - Check the brake hose and line joint for leaks, and tighten if necessary.
    - Check the brake hoses for interference and twisting.

PARKING BRAKE CABLE REPLACEMENT

EXPLODED VIEW

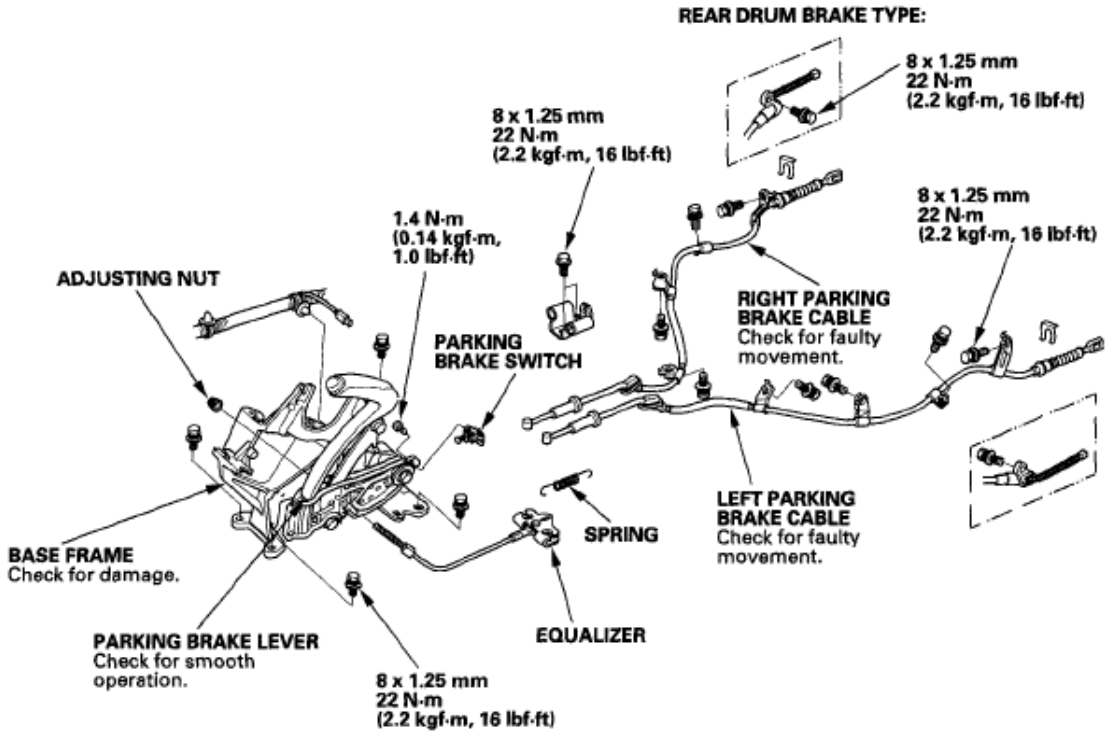

Fig. 82: Exploded View Of Conventional Brake (With Specifications)

NOTE:

- **The parking brake cables must not be bent or distorted. This will lead to stiff operation and premature failure.**
- **Refer to Fig. 82 as needed during this procedure.**

REAR DISC BRAKE TYPE

1. Release the parking brake lever fully.
2. Loosen the parking brake cable adjustment nut (see **ADJUSTMENT - REAR DISC BRAKE TYPE**).
3. Remove the parking brake cable clip (A) from the brake cable (B).

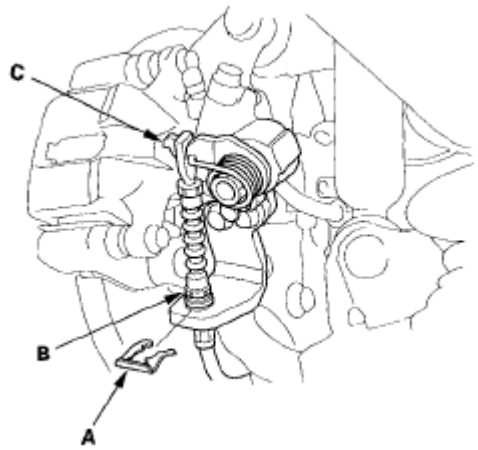

Fig. 83: Removing Parking Brake Cable Clip

4. Disconnect the parking brake cable from the lever (C).
5. Remove the parking brake cable mounting hardware, then remove the cable.
6. Install the parking brake cable in the reverse order of removal, and note these items:
   - Be careful not to bend or distort the cable.
   - Make sure the parking brake cable clip is fully seated on the cable housing.
   - Do the parking brake adjustment (see **ADJUSTMENT - REAR DISC BRAKE TYPE**).

REAR DRUM BRAKE TYPE

1. Loosen the parking brake cable adjustment nut (see **ADJUSTMENT - REAR DRUM BRAKE TYPE**).
2. Remove the brake drum and shoes, and disconnect the parking brake cable from the parking brake lever (see **REAR BRAKE SHOE REPLACEMENT**).
3. Remove the flange bolt (A) and parking brake cable (B) from the backing plate (C).

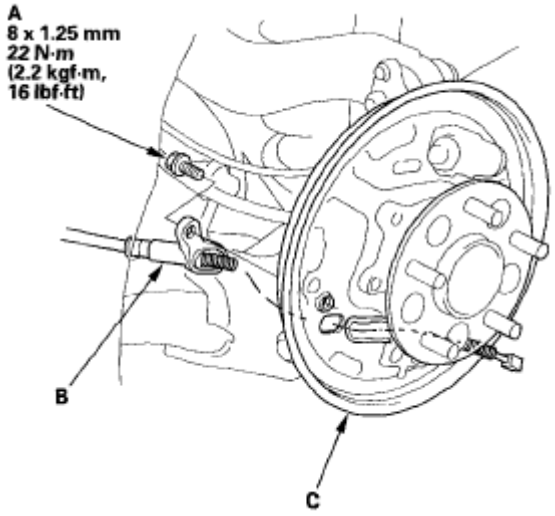

Fig. 84: Removing Flange Bolt And Parking Brake Cable (With Specifications)

4. Reinstall the parking brake cable in the reverse order of removal, and note these items:
   - Be careful not to bend or distort the cable.
   - Connect the parking brake cable to the brake lever, and install the brake shoes and drum (see **REAR BRAKE SHOE REPLACEMENT**).
   - Do the parking brake adjustment (see **ADJUSTMENT - REAR DRUM BRAKE TYPE**). Apply the parking brake firmly 10 times then adjust it again.

PARKING BRAKE LEVER GRIP AND COVER REPLACEMENT

REMOVAL

Lever Grip

1. Remove the center console (see **CENTER CONSOLE REMOVAL/INSTALLATION**).
2. Pull up the parking brake fully (8 to 10 clicks).
3. Start at the front edge (A), peel lever grip away from lever cap (B). Continue to peel the grip from the lever to gain access to the hooks (C).

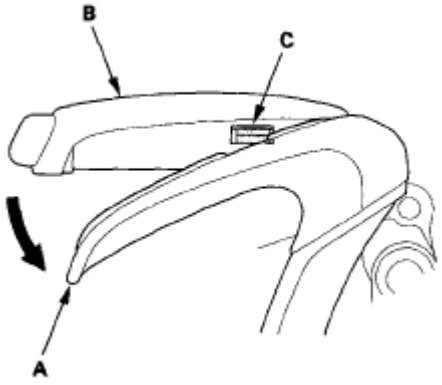

Fig. 85: Peeling Lever Grip Away From Lever Cap

4. Push in both sides of the hook (A) on the lever cap (B), and remove the lever cap and the pushrod (C) with the knob (D).

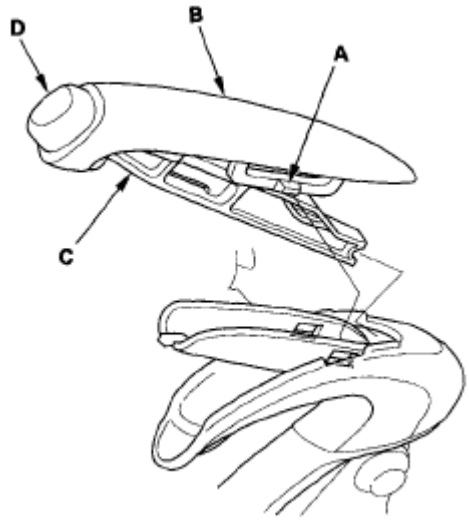

Fig. 86: Removing Lever Cap And Pushrod With Knob

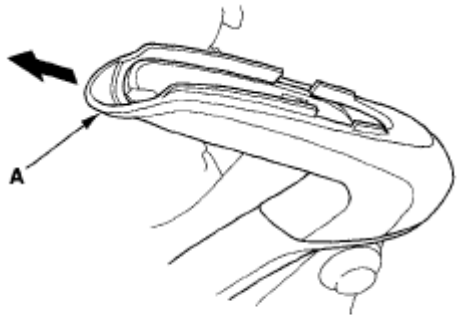
5. Remove the lever grip (A) by sliding it up.



Lever Cover

Fig. 87: Removing Lever Grip

Lever Cover

6. Remove the clip (A) on the driver's side of the parking brake lever cover (B).

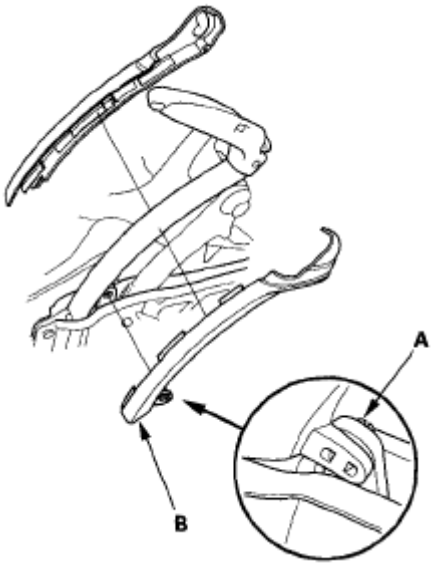


Fig. 88: Removing Clip On Driver's Side

7. Separate the parking brake lever covers, and remove them.

INSTALLATION

Lever Cover

1. Install the clip (A) on driver's side of the parking brake lever cover (B) to the lever (C).

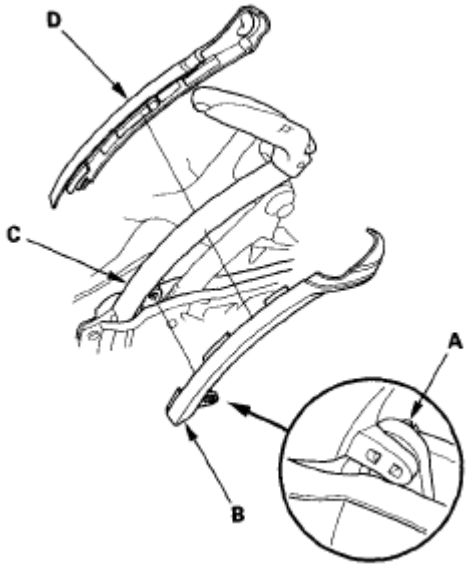

Fig. 89: Installing Clip On Driver's Side Of Parking Brake Lever Cover To Lever

2. Install the passenger's side of the parking brake lever cover (D), and squeeze both sides of the cover together.

Lever Grip

3. Install a new lever grip (A) by sliding it over the cover.

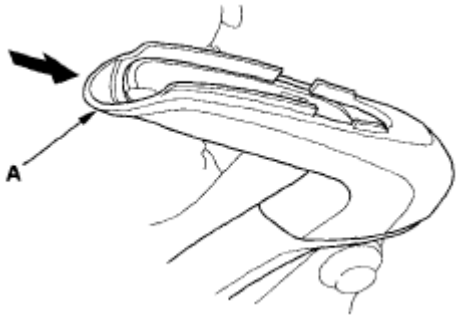

Fig. 90: Installing Lever Grip Sliding Over Cover

4. Install a new lever cap (A) on to the lever by aligning the notch (B) in the cap with the tab (C) on the lever.

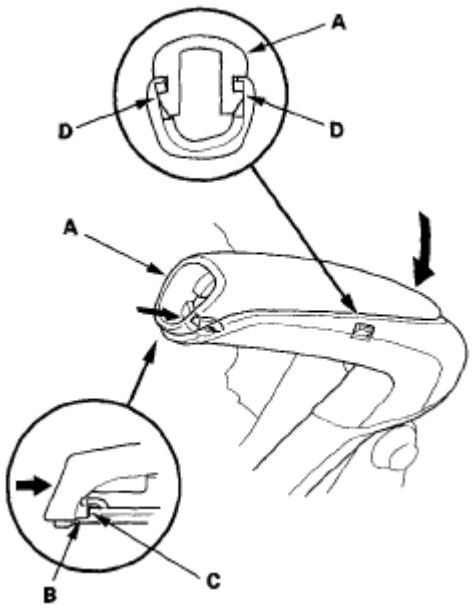

Fig. 91: Installing Lever Cap On To Lever

5. With the lever cap and grip in position, push down on the cap to lock the hooks (D) into place.
6. Carefully peel back the front edge (A) of the lever grip, and apply a small amount of gel type super glue (B). Carefully push the grip back into place and wait a minute for the glue to adhere.

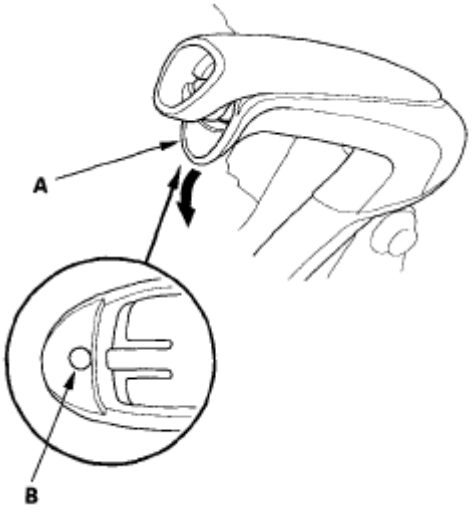

Fig. 92: Peeling Back Front Edge Of Lever Grip

7. Install a new pushrod (A) with the knob (B), and push them into the parking brake lever (C).

NOTE: Do not use the removed pushrod and knob.

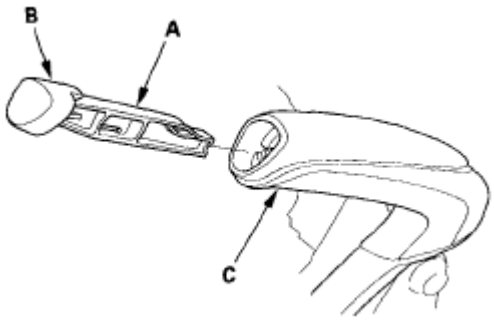

Fig. 93: Installing Pushrod With Knob

8. Release and pull the parking brake about 10 times.
9. Check the push knob play of about 0.08 in (2 mm.) and that the parking brake lever moves smoothly, then do the parking brake inspection (see **PARKING BRAKE INSPECTION AND ADJUSTMENT**).
10. Install the center console (see **CENTER CONSOLE REMOVAL/INSTALLATION**).

BRAKE PEDAL COVER REPLACEMENT

NOTE: This procedure is for models equipped with a metal brake cover.

1. Cover the carpet under the brake pedal to prevent metal shaving from getting on carpet.
2. Center-punch each of the rivets (A), and drill their heads off with a 0.12 in (3 mm.) drill bit (B).

NOTE: Do not drill the brake pedal plate (C).

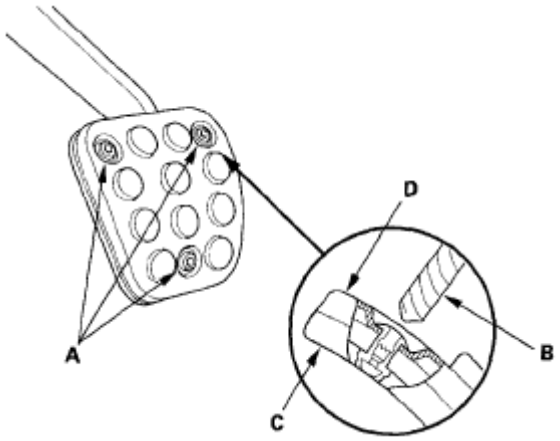

Fig. 94: Center-Punching Each Rivets

3. Remove the brake pedal cover (D).
4. Install the brake pedal cover (A) with the rivets (B) firmly.

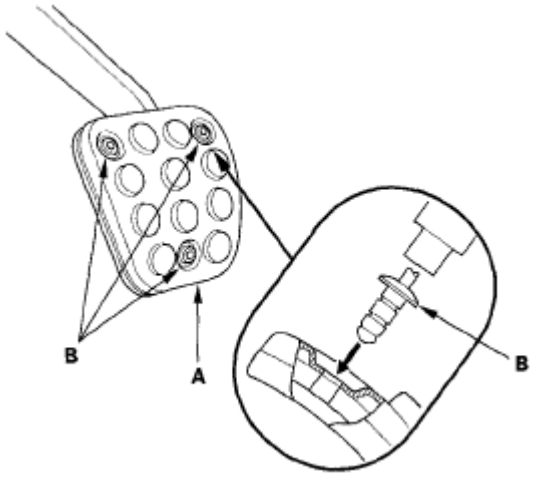

Fig. 95: Installing Brake Pedal Cover With Rivets

5. Make sure the brake pedal cover is fastened on the brake pedal by a hand.

PRELIMINARY SERVICE SPECIFICATIONS

Honda - 2006-07 Civic

BRAKES

BRAKE FLUID SPECIFICATIONS

CAUTION: Use Honda DOT3 (P/N 08798-9008) brake fluid. Use of non-Honda fluid can cause corrosion and decrease life of the brake system.

BRAKE SERVICE SPECIFICATIONS

Except Hybrid

BRAKE SPECIFICATIONS (EXCEPT HYBRID)

Item	Measurement	Qualification	Standard or New	Service Limit
Parking brake	Distance traveled when lever pulled with 196 N (20 kgf, 44 lbf) of force		8 to 10 clicks	
Brake pedal	Pedal height (carpet removed)	M/T model	153 mm (6 in.)	
		A/T model	158 mm (6 1/4 in.)	
	Free play		1-5 mm (1/16-3/16 in.)	
Brake disc	Thickness	Front (except Si)	20.9-21.1 mm (0.82-0.83 in.)	19.0 mm (0.75 in.)
		Front (Si)	24.9-25.1 mm (0.98-0.99 in.)	23.0 mm (0.91 in.)
		Rear	8.9-9.1 mm (0.35-0.36 in.)	8.0 mm (0.31 in.)
	Runout		-	0.04 mm (0.0016 in.)
	Parallelism		-	0.015 mm (0.0006 in.)
Brake pad	Pad thickness	Front (except Si)	9.6-10.2 mm (0.38-0.40 in.)	1.6 mm (0.06 in.)
		Front (Si)	9.0-9.7 mm (0.35-0.38 in.)	1.6 mm (0.06 in.)
		Rear	8.3-9.4 mm (0.33-0.37 in.)	1.6 mm (0.06 in.)
Rear brake (drum brake)	Brake drum I.D.		199.9-200 mm (7.870-7.874 in.)	201 mm (7.91 in.)
	Brake shoe lining thickness		4.0 mm (0.16 in.)	2.0 mm (0.08 in.)

Hybrid

BRAKES SPECIFICATIONS (HYBRID)

Item	Measurement	Qualification	Standard or New	Service Limit
Parking brake lever	Distance traveled when pulled with 196 N (20 kgf, 44 lbf) of force		8 to 10 clicks	
Brake pedal	Pedal height (carpet removed)		158 mm (6 7/32 in.)	
	Free play		1-5 mm (0.04-0.20 in.)	
Brake disc	Thickness	Front	20.9-21.1 mm (0.82-0.83 in.)	19.0 mm (0.75 in.)
	Runout	Front	-	0.10 mm (0.004 in.)
	Parallelism	Front	-	0.015 mm (0.0006 in.)
Brake pad	Thickness	Front	9.5-10.5 mm (0.37-0.41 in.)	1.0 mm (0.04 in.)
Brake drum	I.D.	Rear	219.9-220.0 mm (8.657-8.661 in.)	221 mm (8.70 in.)
Brake shoe	Lining thickness	Rear	4.5 mm (0.18 in.)	2.0 mm (0.08 in.)

WHEEL ALIGNMENT

EXCEPT HYBRID

COMPONENT LOCATION INDEX

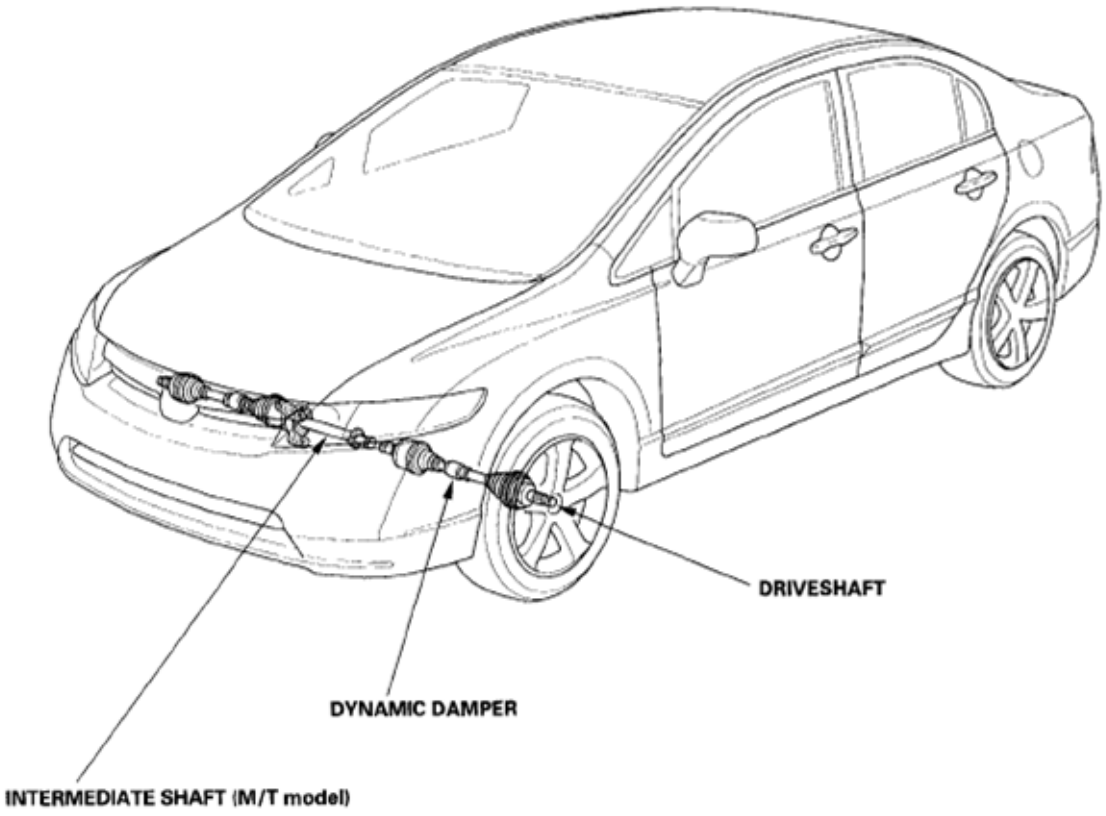

Fig. 2: Identifying Driveline/Axle Component Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DRIVESHAFT INSPECTION

1. Check the inboard boot (A) and the outboard boot (B) for cracks, damage, leaking grease, and loose boot bands (C). If any damage is found, replace the boot and boot bands.

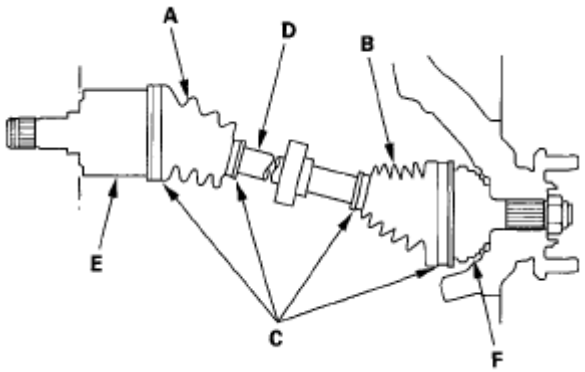

Fig. 3: Checking Inboard Boot And Outboard Boot For Cracks, Damage, Leaking Grease
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Check the driveshaft (D) for cracks and damage. If any damage is found, replace the driveshaft.
3. Check the inboard joint (E) and the outboard joint (F) for cracks and damage. If any damage is found,

replace the inboard joint or the outboard joint as an assembly.

4. Hold the inboard joint and turn the front wheel by hand, then make sure the joint is not excessively loose. If necessary, replace the inboard joint or the outboard joint as an assembly.

DRIVESHAFT REMOVAL

1. Raise the vehicle on the hoist.
2. Remove the front wheels.
3. Lift up the locking tab (A) on the spindle nut (B), then remove the nut.

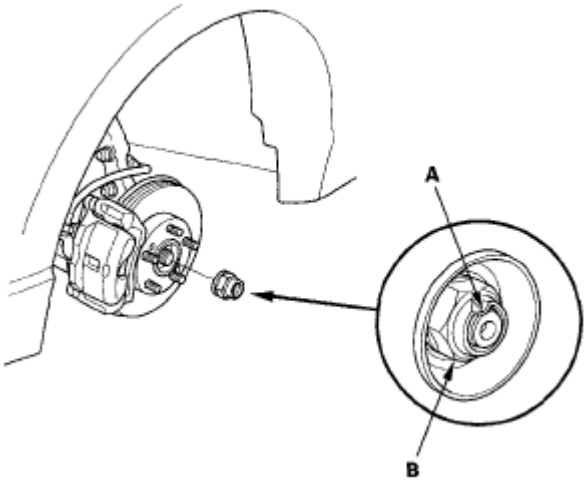

Fig. 4: Identifying Driveshaft Spindle Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Drain the transmission fluid. Reinstall the drain plug with a new washer:
   - 5-speed Manual transmission (except Si) (see **TRANSMISSION FLUID INSPECTION AND REPLACEMENT**)
   - 6-speed Manual transmission (Si) (see **TRANSMISSION FLUID INSPECTION AND REPLACEMENT**).
   - Automatic transmission (see **ATF REPLACEMENT**)
5. Remove the nuts and bolt, then separate the lower arm with a prybar.

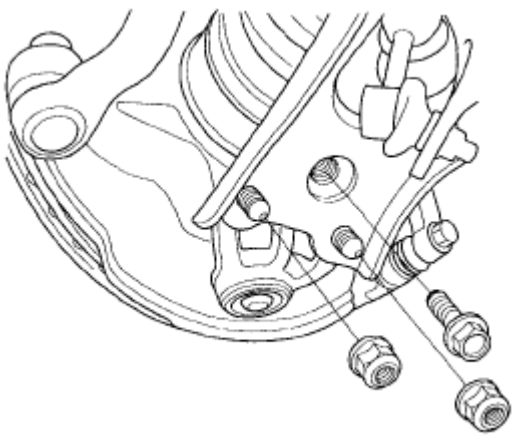

Fig. 5: Identifying Lower Arm Nuts And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the driveshaft outboard joint from the front wheel hub using a plastic hammer.

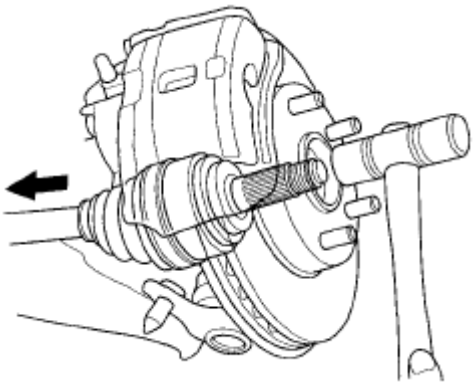

Fig. 6: Taping Driveshaft Outboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Pull the knuckle outward, and remove the driveshaft outboard joint from the front wheel hub.

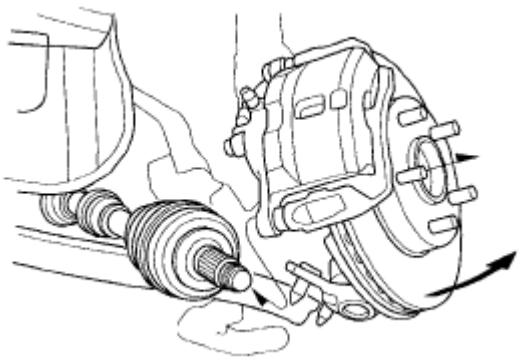

Fig. 7: Identifying Driveshaft Outboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Right driveshaft: Drive the inboard joint (A) off of the intermediate shaft using a drift and hammer (M/T model). Pry the inboard joint (B) from the transmission housing with a prybar (A/T model). Remove the driveshaft as an assembly.

NOTE: Do not pull on the driveshaft (C) or the inboard joint may come apart. Pull the driveshaft straight out to avoid damaging the oil seal.

M/T model:

M/T model:

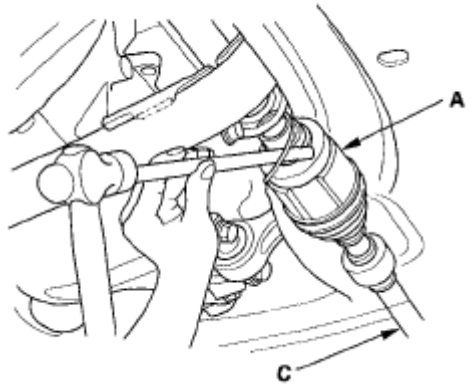

Fig. 8: Taping Inboard Joint - M/T Model
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T model:

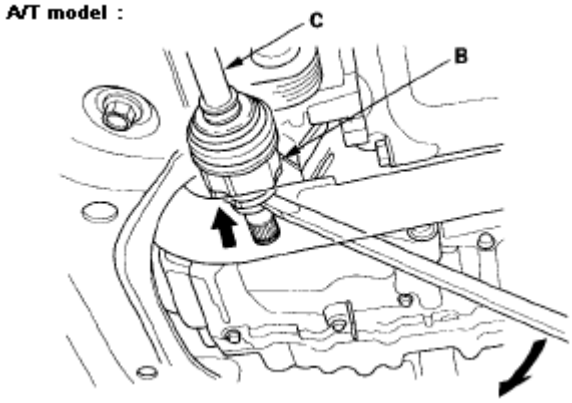

Fig. 9: Prying Inboard Joint - A/T Model
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Left driveshaft: Pry the inboard joint (A) from the transmission housing with a prybar. Remove the driveshaft as an assembly.

NOTE: Do not pull on the driveshaft (B) or the inboard joint may come apart. Pull the driveshaft straight out to avoid damaging the oil seal.

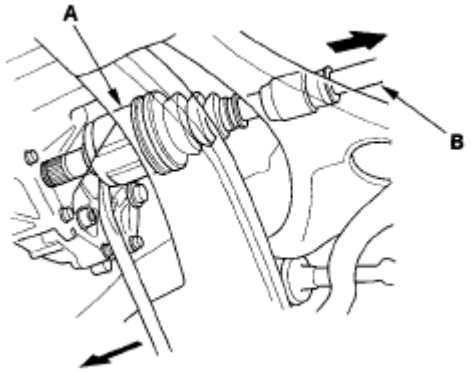

Fig. 10: Pulling Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DRIVESHAFT DISASSEMBLY

Special Tools Required

- Threaded adapter, 22 x 1.5 mm 07XAC-001010A
- Threaded adapter, 24 x 1.5 mm 07XAC-001020A
- Slide hammer, 5/8"-18 UNF, commercially available

INBOARD JOINT SIDE

1. Remove the set ring (A) from the inboard joint.

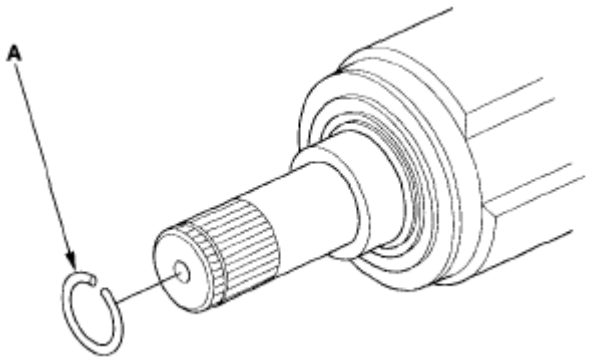

Fig. 11: Identifying Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the boot bands. Be careful not to damage the boot.
    - If the boot band is a welded type (A), cut the boot band.
    - If the boot band is a double loop type (B), lift up the band bend (C), and push it into the clip (D).
    - If the boot band is a low profile type (E), pinch the boot band using the commercially available boot band pliers (F).

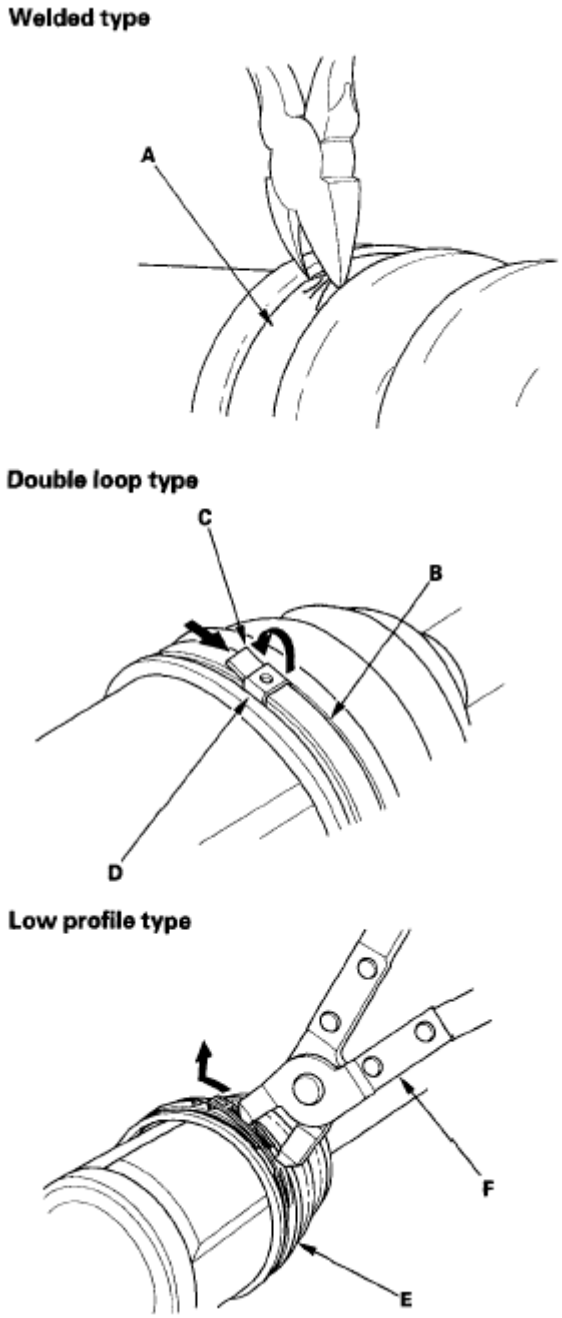

Fig. 12: Identifying Boot Band - Welded Type
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Make marks (A) on each roller (B) and inboard joint (C) to identify the locations of rollers and grooves in the inboard joint. Then remove the inboard joint on the shop towel (D). Be careful not to drop the rollers when separating them from the inboard joint.

NOTE: Do not engrave or scribe marks on the rolling surfaces.

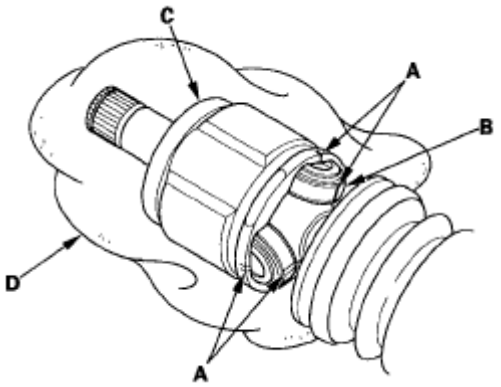

Fig. 13: Identifying Scribe Marks On Rolling Surfaces
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Use a paint pen to make marks (A) on the rollers (B) and spider (C) to identify the locations of the rollers on the spider, then remove the rollers.

NOTE: Do not engrave or scribe marks on the rolling surfaces.

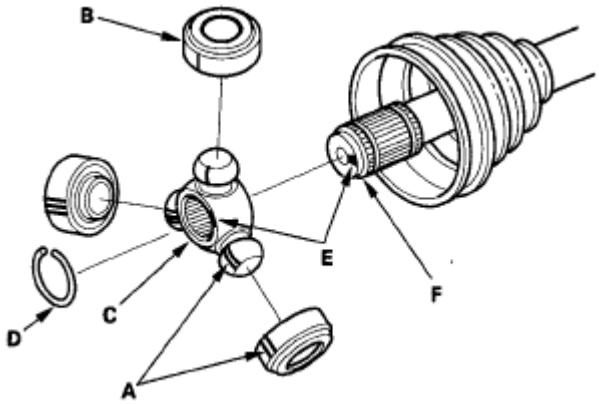

Fig. 14: Identifying Driveshaft Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the circlip (D).
6. Mark (E) the spider and driveshaft (F) to identify the position of the spider on the shaft.
7. Remove the spider.
8. Wrap the splines on the driveshaft with vinyl tape (A) to prevent damaging to the boot.

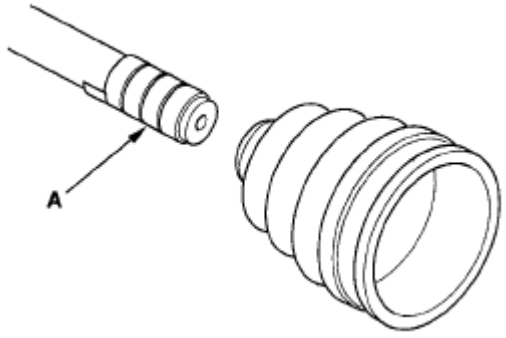

Fig. 15: Identifying Driveshaft Vinyl Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the inboard boot. Be careful not to damage the boot.
10. Remove the vinyl tape.

Outboard Joint Side:

1. Remove the boot bands (A). Lift up the three tabs (B) with a screwdriver. Be careful not to damage the boot.

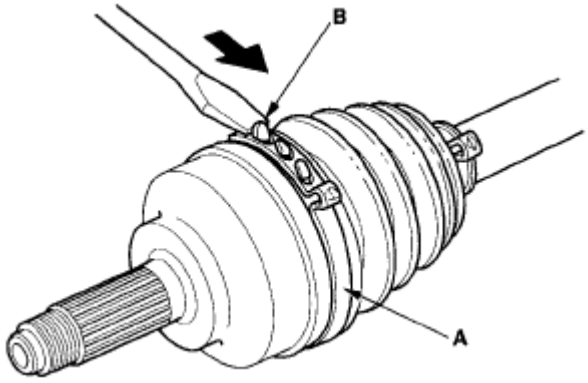

Fig. 16: Identifying Boot Bands
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Slide the outboard boot (A) partially to the inboard joint side. Be careful not to damage the boot.

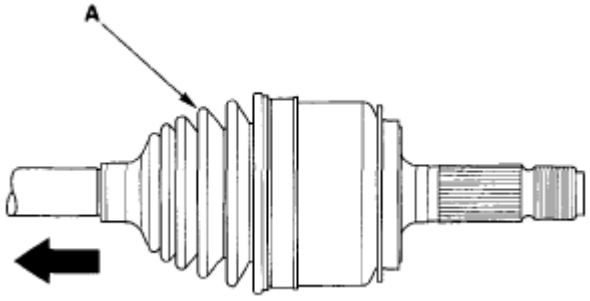

Fig. 17: Identifying Outboard Boot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Wipe off the grease to expose the driveshaft and the outboard joint inner race.
4. Make a mark (A) on the driveshaft (B) at the same level as the outboard joint rim (C).

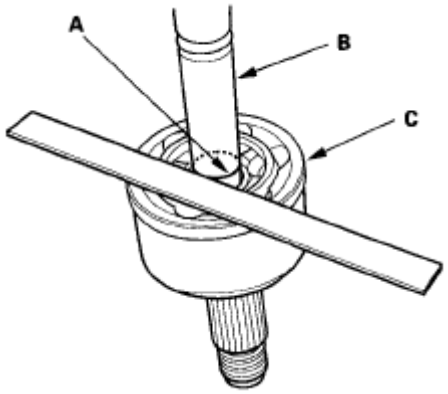

Fig. 18: Identifying Make A Mark On Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Securely clamp the driveshaft in a bench vise with a shop towel.

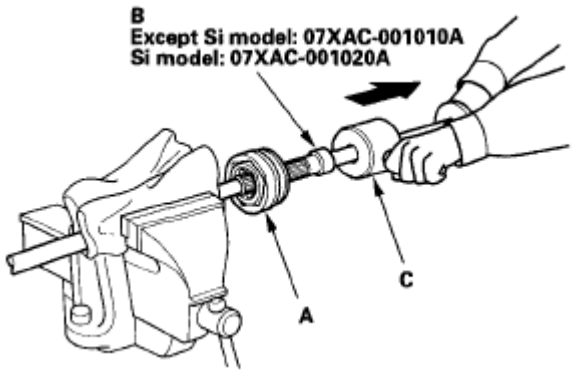

Fig. 19: Clamping Driveshaft In Bench Vise
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the outboard joint (A) using the threaded adapter (B) and a commercially available 5/8"-18 UNF slide hammer (C).
7. Remove the driveshaft from the bench vise.
8. Remove the stop ring from the driveshaft.

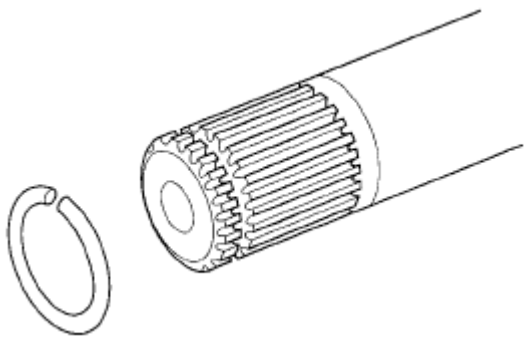

Fig. 20: Identifying Stop Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Wrap the splines on the driveshaft with vinyl tape (A) to prevent damaging to the boot.

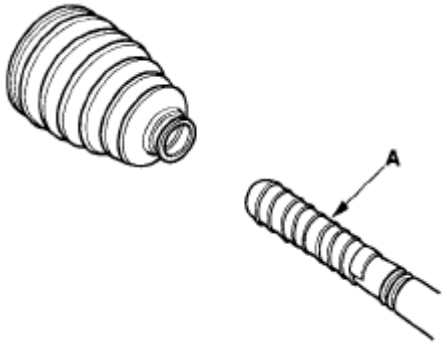

Fig. 21: Identifying Driveshaft Vinyl Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the outboard boot. Be careful not to damage the boot.
11. Remove the vinyl tape.

DYNAMIC DAMPER REPLACEMENT

1. Remove the inboard joint (see **INBOARD JOINT SIDE**).
2. Remove the double loop band or low profile bands (see step 2).
    - If the band is a welded type, cut the band.
    - If the band is a double loop type, lift up the band bend, and push it into the clip.
    - If the band is a low profile type, pinch the band using a commercially available boot band pliers.
3. Remove the dynamic damper. Type A

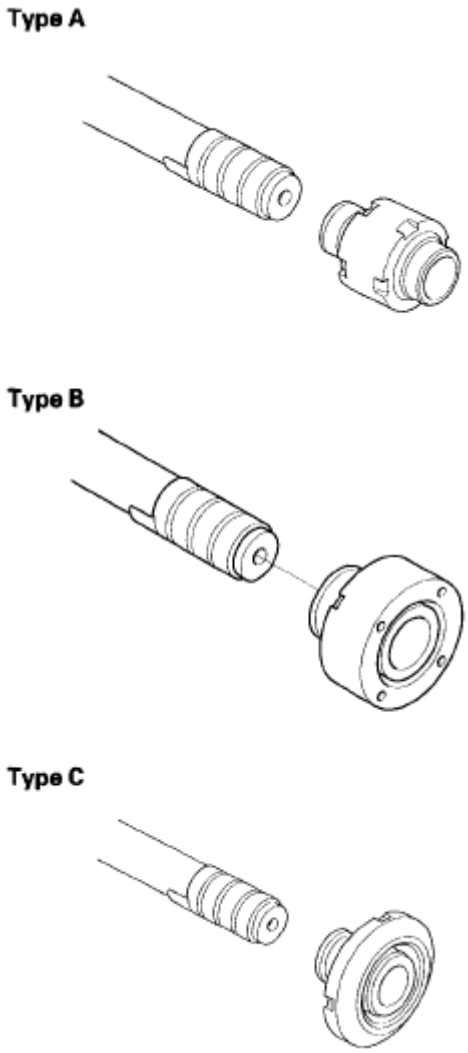

Fig. 22: Identifying Dynamic Damper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DYNAMIC DAMPER TYPE

Model	Factory		Type
5-speed M/T Model (Except Si)	Suzuka Factory	Right	Type A
		Left	Type A
	Except Suzuka Factory	Right	Type A
		Left	Type A
6-speed M/T Model (Si)		Right	Type B
		Left	Type B
A/T Model	Suzuka Factory	Right	Type A
		Left	Type C
	Except Suzuka Factory	Right	Type A
		Left	Type C

4. Install the new dynamic damper and adjust the position of the new dynamic damper to these measurements

NOTE: Be careful not to swap the dynamic damper.

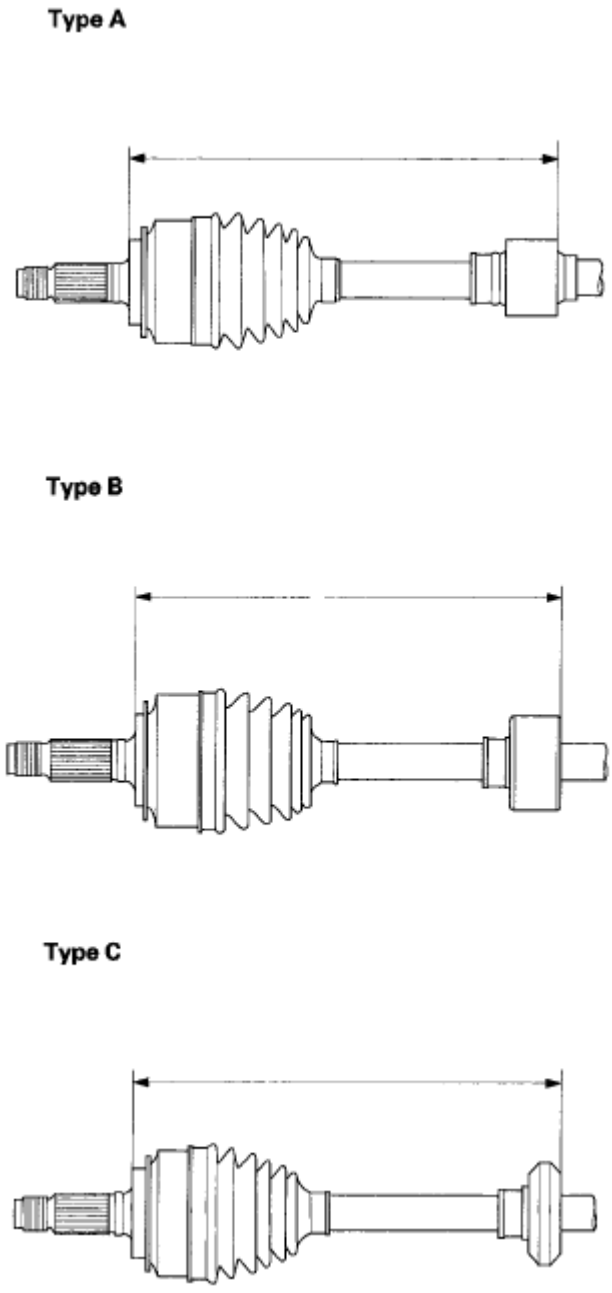

Fig. 23: Identifying Dynamic Damper Dimension
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DYNAMIC DAMPER POSITION

Model	Factory		Type	Measurement
5-speed M/T Model (Except Si)	Suzuka Factory	Right	Type A	292.5-297.5 mm (11.70-11.90 in.)
		Left	Type A	292.5-297.5 mm (11.70-11.90 in.)
	Except Suzuka	Right	Type A	293.0-297.0 mm (11.72-11.88 in)

	Factory	Left	Type A	293.0-297.0 mm (11.72-11.88 in.)
6-speed M/T Model (Si)		Right	Type B	284.0-288.0 mm (11.18-11.34 in.)
		Left	Type B	284.0-288.0 mm (11.18-11.34 in.)
A/T Model	Suzuka Factory	Right	Type A	558.0-563.0 mm (22.32-22.52 in.)
		Left	Type C	274.5-279.5 mm (10.98-11.18 in.)
	Except Suzuka Factory	Right	Type A	558.5-562.5 mm (22.34-22.50 in.)
		Left	Type C	275.0-279.0 mm (11.00-11.18 in.)

5. Install the dynamic damper band (see step 10).
6. Install the inboard joint (see **INBOARD JOINT SIDE**).

DRIVESHAFT REASSEMBLY

EXPLODED VIEW

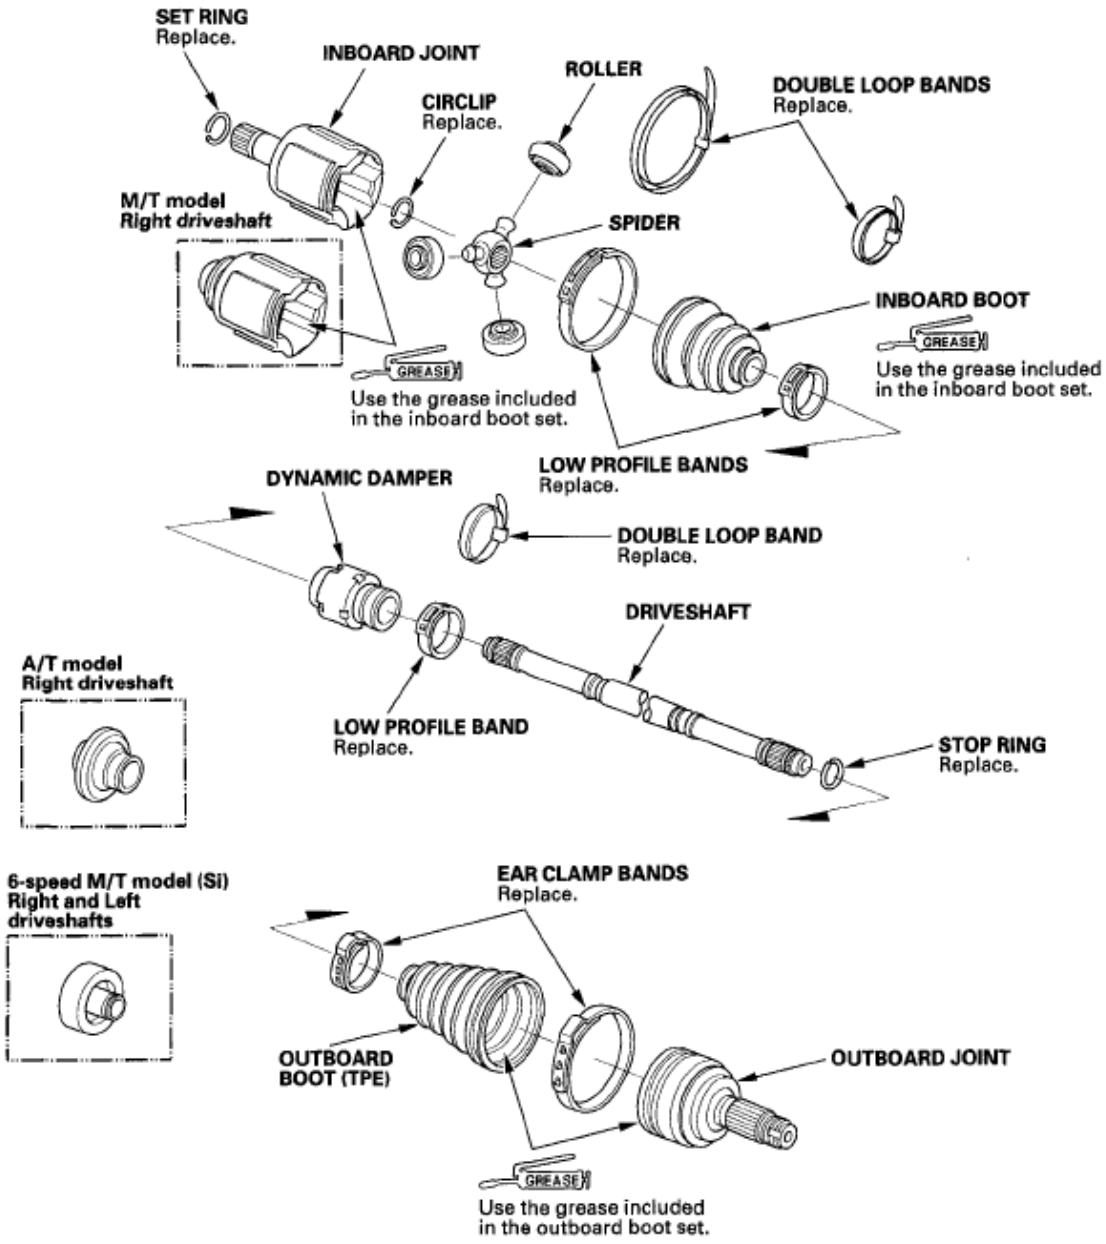

Fig. 24: Exploded View Of Driveshaft Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- Boot band tool, KD-3191 or equivalent commercially available
- Boot band pliers, Kent-Moore J-35910 or equivalent commercially available

NOTE: Refer to the exploded view, as needed, during this procedure. See Fig. 24.

INBOARD JOINT SIDE

1. Wrap the splines with vinyl tape (A) to prevent damaging to the inboard boot.

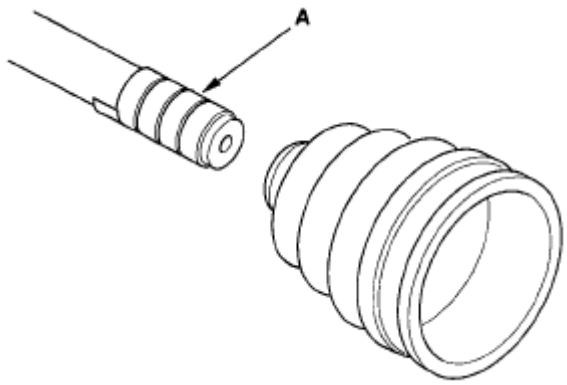

Fig. 25: Identifying Splines With Vinyl Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the inboard boot onto the driveshaft, then remove the vinyl tape. Be careful not to damage the inboard boot.
3. Install the spider (A) onto the driveshaft by aligning the marks (B) you made on the spider and the end of the driveshaft.

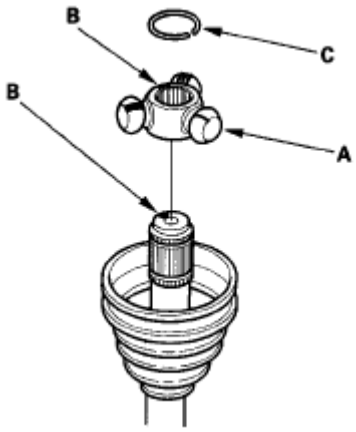

Fig. 26: Aligning Marks On Spider Of Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Fit the circlip (C) into the driveshaft groove. Always rotate the circlip in its groove to make sure it is fully seated.
5. Fit the rollers (A) onto the spider (B) with the high shoulders facing outward, and note these items:
    - Reinstall the rollers in their original positions on the spider by aligning the marks (C) you made.
    - Hold the driveshaft pointed up to prevent the rollers from falling off.

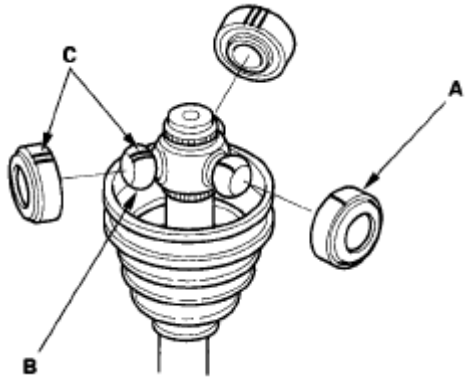

Fig. 27: Identifying Marks Driveshaft Spider
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Pack the inboard joint with the joint grease included in the new in board boot set.

   Grease quantity

   Inboard joint

   5-speed M/T model (except Si):

   130-140 g {4.6-4.9 oz)

   6-speed M/T model(Si):

   180-200 g (6.3-7.0 oz)

   A/T model:

   100-110 g (3.5-3.9 oz)

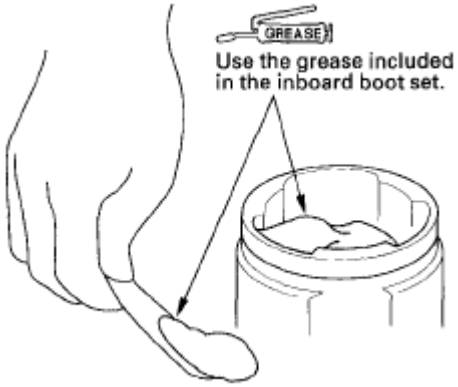

Fig. 28: Identifying Area Applying Grease
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Fit the inboard joint onto the driveshaft and note these items:
   - Reinstall the inboard joint onto the driveshaft by aligning the marks (A) you made on the inboard joint and the rollers.

- Hold the driveshaft so the inboard joint is pointing up to prevent it from falling off.

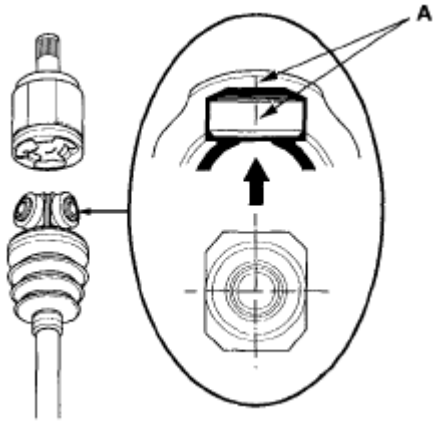

Fig. 29: Identifying Marks On Inboard Joint And Rollers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Fit the boot (A) ends onto the driveshaft (B) and the inboard joint (C).

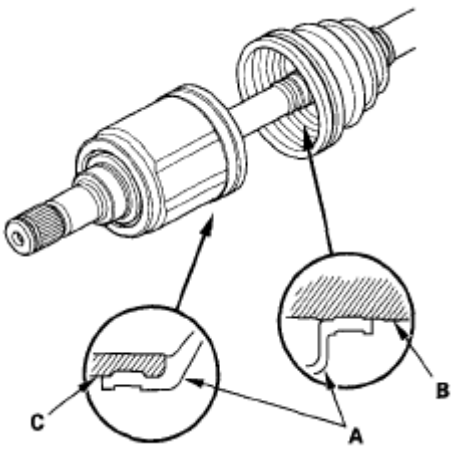

Fig. 30: Locating Driveshaft And Inboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Adjust the length of the driveshaft to the figure that is on the chart, then adjust the boots to halfway between full compression and full extension.

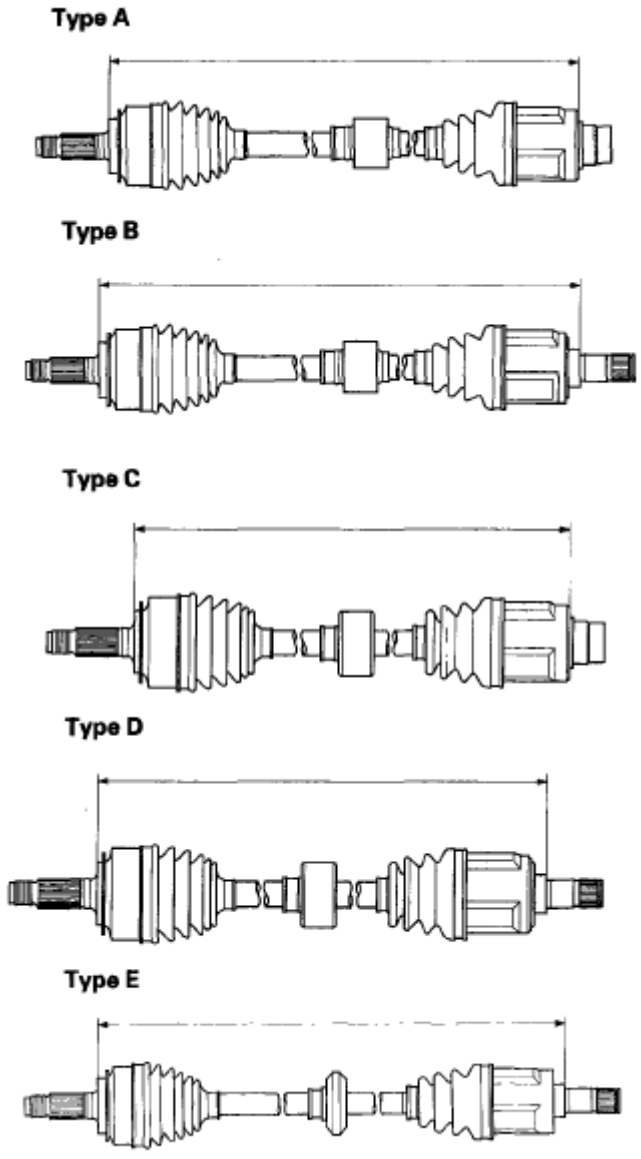

Fig. 31: Identifying Driveshaft Length
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DRIVESHAFT LENGTH (5-SPEED M/T MODEL (EXCEPT SI))

Factory		Type	Measurement
Japan-Produced	Right	Type A	487.0-502.0 mm (19.88-20.08 in.)
	Left	Type B	509.0-514.0 mm (20.36-20.56 in.)
North America-Produced	Right	Type A	493.0-498.0 mm (19.72-19.92 in.)
	Left	Type B	505.0-510.0 mm (20.20-20.40 in.)

DRIVESHAFT LENGTH (6-SPEED M/T MODEL (SI))

Factory		Type	Measurement
	Right	Type C	486.0-491.8 mm (19.17-19.36 in.)
	Left	Type D	510.7-515.7 mm (20.11-20.30 in.)

DRIVESHAFT LENGTH (A/T MODEL)

Factory		Type	Measurement
Japan-Produced	Right	Type B	803.0-808.0 mm (32.12-32.32 in.)
	Left	Type E	511.0-516.0 mm (20.44-20.64 in.)
North America-Produced	Right	Type B	807.0-812.0 mm (32.28-32.48 in.)
	Left	Type E	507.0-512.0 mm (20.28-20.48 in.)

10. Install new double loop bands (replacement part only).
11. Fit the boot ends onto the driveshaft and the inboard joint, then install the new double loop band (A) onto the boot (B).

NOTE: Pass the end of the new double loop band through the clip (C) twice in the direction of the forward rotation of the driveshaft.

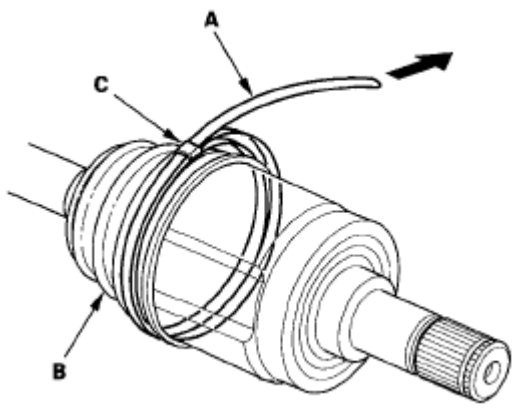

Fig. 32: Twisting In Direction Of Forward Rotation Of Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Pull up the slack in the band by hand.
13. Mark a position (A) on the band 10-14 mm (0.4-0.6 in.) from the clip (B).

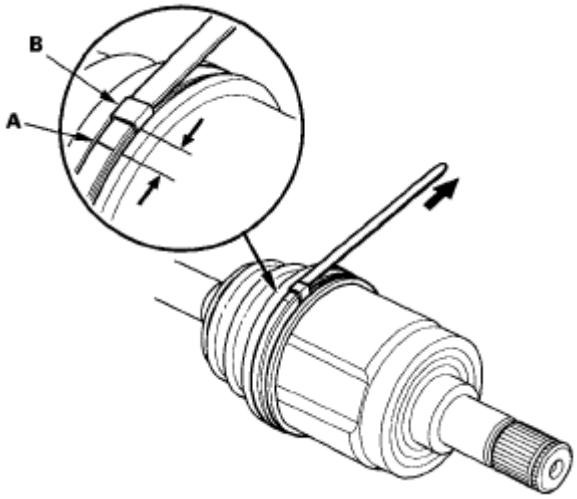

Fig. 33: Identifying Mark Position On Band From Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Thread the free end of the band through the nose section of the commercially available boot band tool (A), and into the slot on the winding mandrel

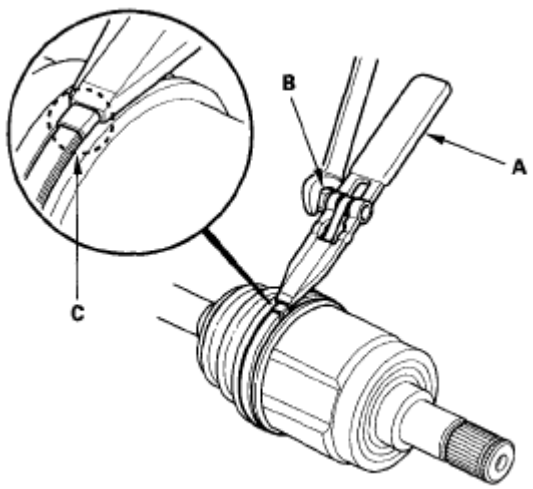

Fig. 34: Tightening Band Until Marked Spot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Using a wrench on the winding mandrel of the boot band tool, tighten the band until the marked spot (C) on the band meets the edge of the clip.
16. Lift up the boot band tool to bend the free end of the band 90 degrees to the clip. Center-punch the clip, then fold over the remaining tail onto the clip.

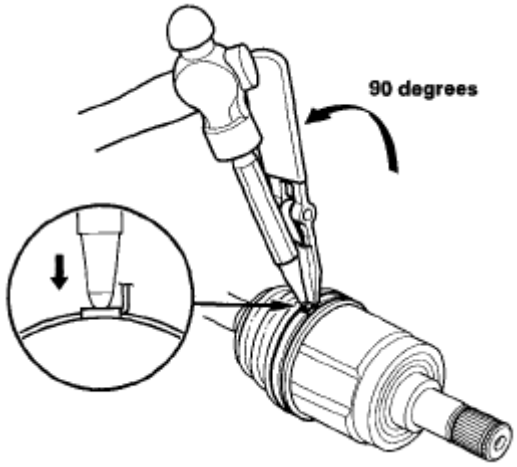

Fig. 35: Lifting Up Boot Band Tool To Bend
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Unwind the boot band tool, and cut off the excess free end of the band to leave a 5-10 mm (0.2-0.4 in.) tail protruding from the clip.

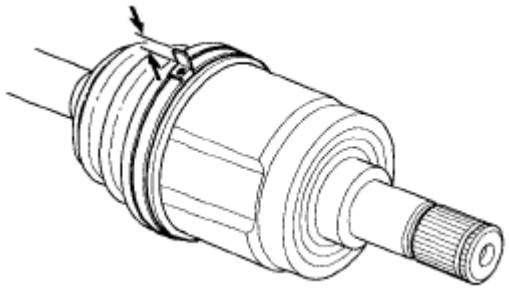

Fig. 36: Identifying Band Tail Protruding
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Bend the band end (A) by tapping it down with a hammer.

NOTE:

- **Make sure the band and clip do not interfere with anything on the vehicle and the band does not move.**
- **Remove any grease remaining on the surrounding surfaces.**

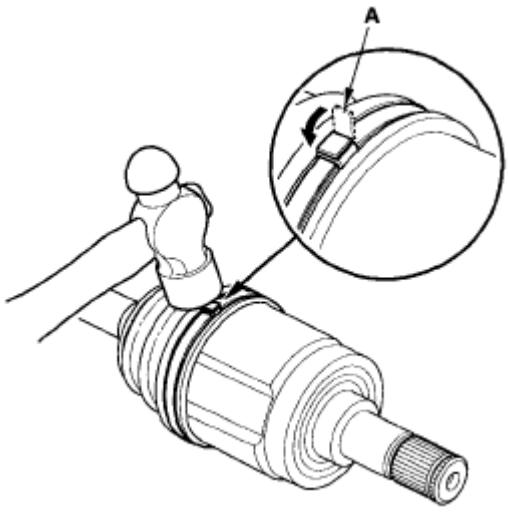

Fig. 37: Tapping Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Repeat steps 11 through 18 for the band on the other end of the boot.

OUTBOARD JOINT SIDE

1. Wrap the splines with vinyl tape (A) to prevent damaging to the outboard boot.

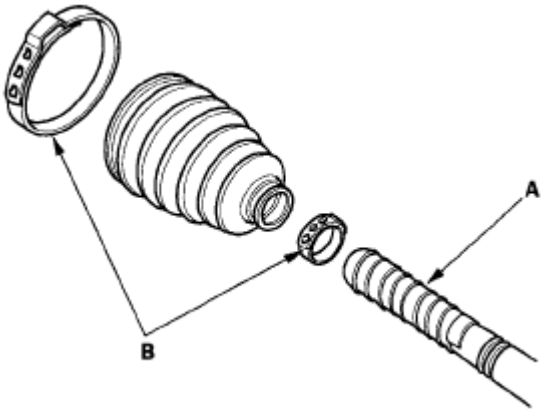

Fig. 38: Identifying Clamp Bands And Splines With Vinyl Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the new ear clamp bands (B) and outboard boot, then remove the vinyl tape. Be careful not to damage the outboard boot.
3. Install the new stop ring into the driveshaft groove (A).

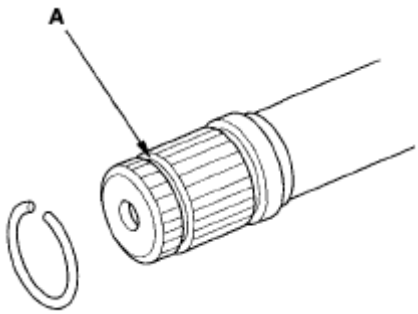

Fig. 39: Identifying Stop Ring Into Driveshaft Groove
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Pack about 35 g (1.2 oz) grease included in the new outboard boot set into the driveshaft hole in the outboard joint.

NOTE: If you are installing a new outboard joint, the grease is already installed.

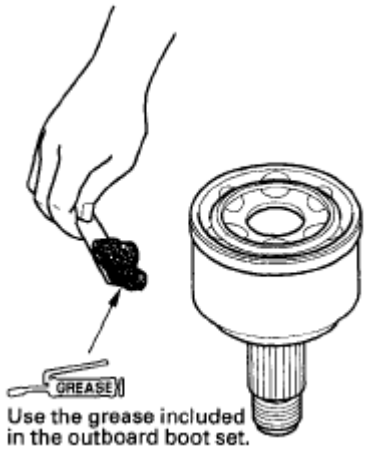

Fig. 40: Identifying Area Applying Grease
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Insert the driveshaft (A) into the outboard joint (B) until the stop ring (C) is close to the joint.

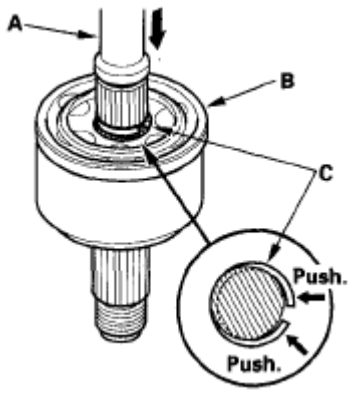

Fig. 41: Locating Driveshaft Stop Ring

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. To completely seat the outboard joint, pick up the driveshaft and joint, and tap or hit them from a height of about 10 cm (4 in.) onto a had surface.

NOTE: Do not use a hammer as excessive force may damage the driveshaft. Be careful not to damage the threaded section (A) of the outboard joint.

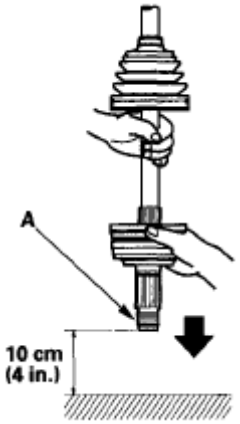

Fig. 42: Locating Threaded Section Of Outboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Check the alignment of the paint mark (A) you made with the outboard joint rim (B).

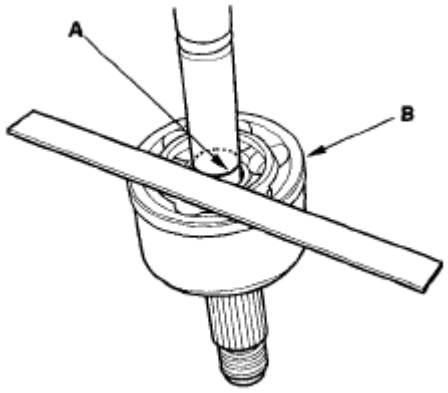

Fig. 43: Checking Alignment Of Paint Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Pack the outboard joint (A) with the remaining grease included in the new outboard boot set.

Total grease quantity

Outboard joint

5-speed M/T model (except Si):

105-115 g (3.7-4.0 oz)

6-speed M/T model (Si):

110-130 g (3.8-4.5 oz)

A/T model:

95-105 g (3.4-3.7 oz)

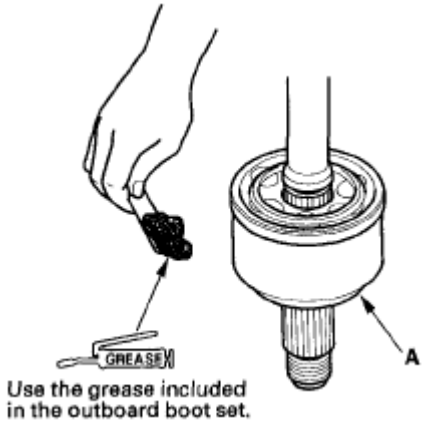

Fig. 44: Identifying Area Applying Grease
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Fit the boot (A) ends onto the driveshaft (B) and outboard joint (C).

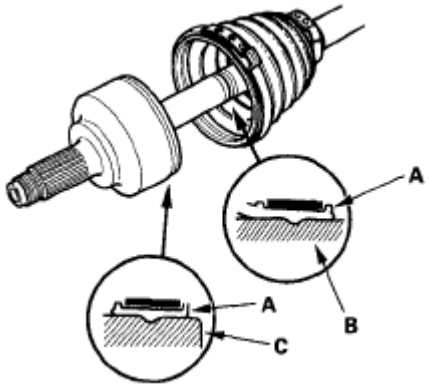

Fig. 45: Identifying Outboard Joint Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Adjust the length of the driveshaft to the figure as shown, then adjust the boots to halfway between full compression and full extension.

    Doing this prevents a vacuum or too much air in the boot, preventing it from compressing or extending properly.

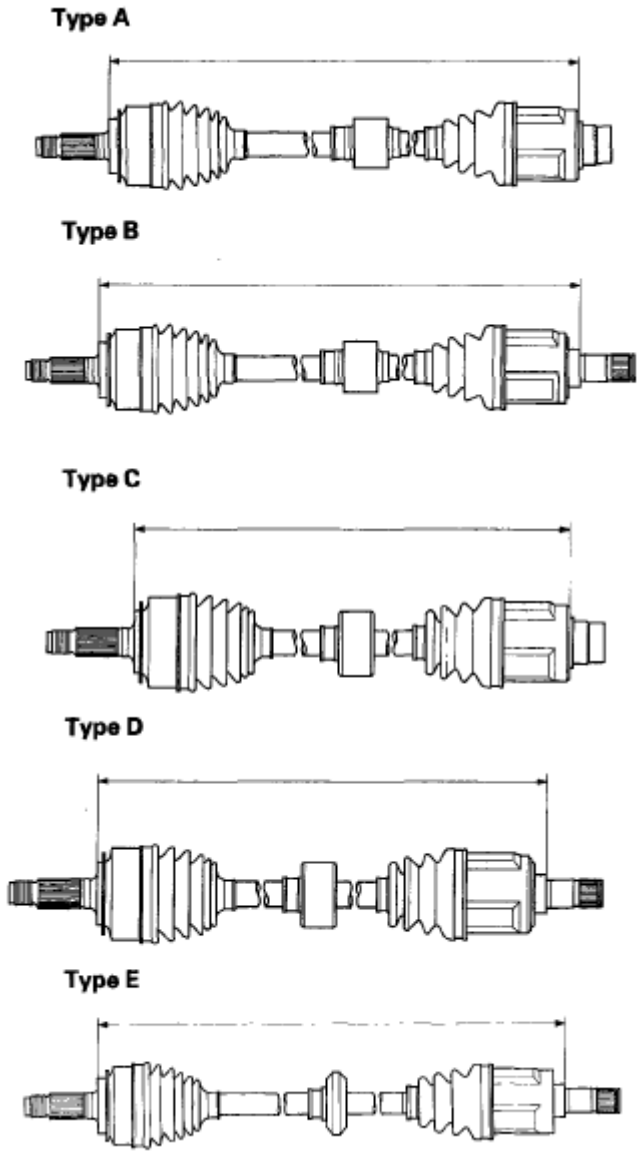

Fig. 46: Identifying Driveshaft Length
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DRIVESHAFT LENGTH (5-SPEED M/T MODEL (EXCEPT SI))

Factory		Type	Measurement
Japan-Produced	Right	Type A	487.0-502.0 mm (19.88-20.08 in.)
	Left	Type B	509.0-514.0 mm (20.36-20.56 in.)
North America-Produced	Right	Type A	493.0-498.0 mm (19.72-19.92 in.)
	Left	Type B	505.0-510.0 mm (20.20-20.40 in.)

DRIVESHAFT LENGTH (6-SPEED M/T MODEL (SI))

Factory		Type	Measurement
	Right	Type C	486.0-491.8 mm (19.17-19.36 in.)
	Left	Type D	510.7-515.7 mm (20.11-20.30 in.)

DRIVESHAFT LENGTH (A/T MODEL)

Factory		Type	Measurement
Japan-Produced	Right	Type B	803.0-808.0 mm (32.12-32.32 in.)
	Left	Type E	511.0-516.0 mm (20.44-20.64 in.)
North America-Produced	Right	Type B	807.0-812.0 mm (32.28-32.48 in.)
	Left	Type E	507.0-512.0 mm (20.28-20.48 in.)

11. Close the ear portion (A) of the band with a commercially available boot band pliers Kent Moore J-35910 or equivalent (B).

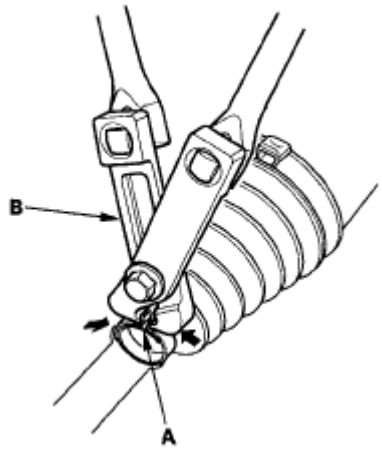

Fig. 47: Closing Portion Of Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Check the clearance between the closed ear portion of the band. If the clearance is not within the standard, close the ear portion of the band tighter.

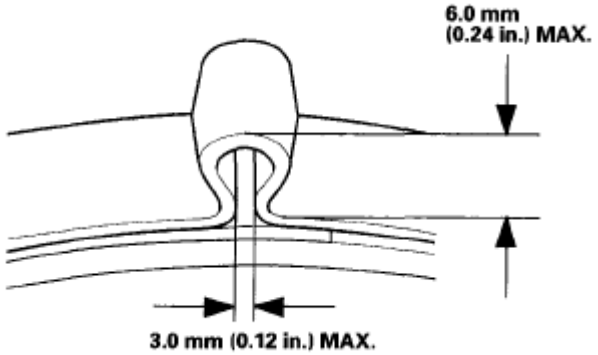

Fig. 48: Identifying Clearance Between Closed Ear Portion Of Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Repeat steps 11 and 12 for the band on the other end of the boot.

DRIVESHAFT INSTALLATION

NOTE: Before starting installation, make sure the mating surfaces of the joint and the splined section are not dusty or dirty.

1. Apply about 5 g (0.18 oz) moly 60 paste (P/N 08734-0001) to the contact area of the outboard joint and the front wheel bearing.

NOTE: The paste helps to prevent noise and vibration.

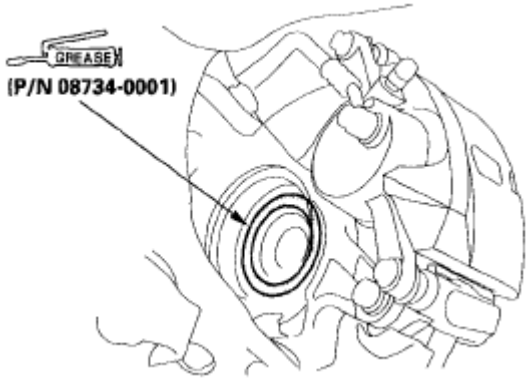

Fig. 49: Identifying Area Applying Grease
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install a new set ring onto the set ring groove of the driveshaft.

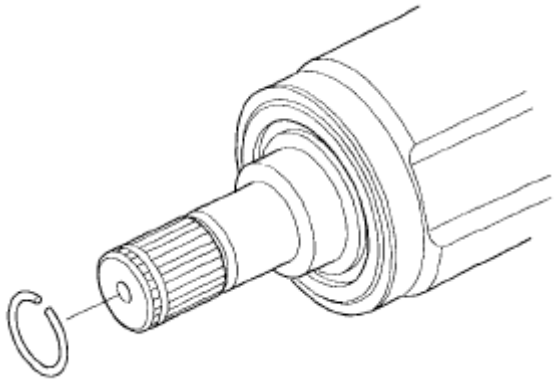

Fig. 50: Identifying Driveshaft Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. M/T model: Apply specified grease to the whole splined surface (A) of the right driveshaft. After applying grease, remove the grease from the splined grooves at intervals of 2-3 splines and from the set ring groove (B) so that air can bleed from the intermediate shaft.

   Grease quantity

   5-speed M/T model (except Si):

   0.5-1.0 g (0.02-0.04 oz)

   6-speed M/T model (Si):

   2.0-3.0 g (0.08-0.12 oz)

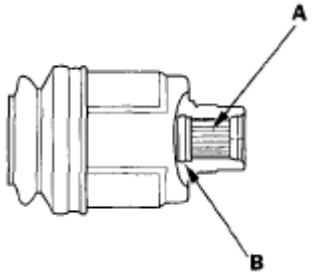

Fig. 51: Identifying Area Applying Grease
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Clean the areas where the driveshaft contacts the differential thoroughly with solvent or brake cleaner, and dry with compressed air.

   NOTE: Do not wash the rubber parts with solvent.

5. Insert the inboard end (A) of the driveshaft into the differential (B) or intermediate shaft (C) (M/T model) until the set ring (D) locks in the groove (E).

   NOTE: Insert the driveshaft horizontally to prevent damaging the differential oil seal.

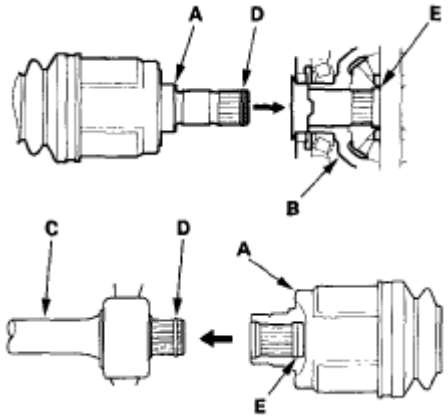

Fig. 52: Inserting Inboard Of Driveshaft Into Differential
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the outboard joint (A) into the front hub (B).

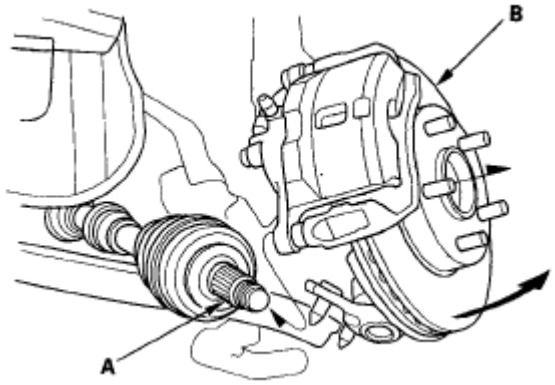

Fig. 53: Identifying Outboard Joint And Front Hub
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the knuckle (A) onto the lower arm (B). During installation, install a new flange bolt and new self-locking nuts. After lightly tightening all three fasteners, tighten them to the specified torque in the following order; the nut on the front (C), the nut on the rear (D), then the bolt (E).

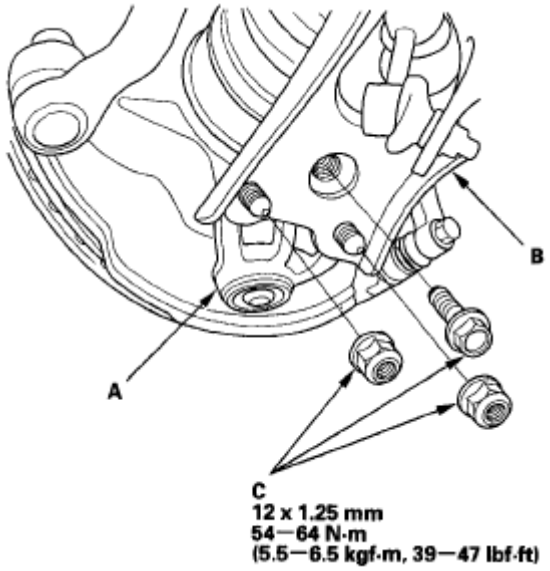

Fig. 54: Identifying Nuts And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Apply a small amount of engine oil to the seating surface of the new spindle nut (A).

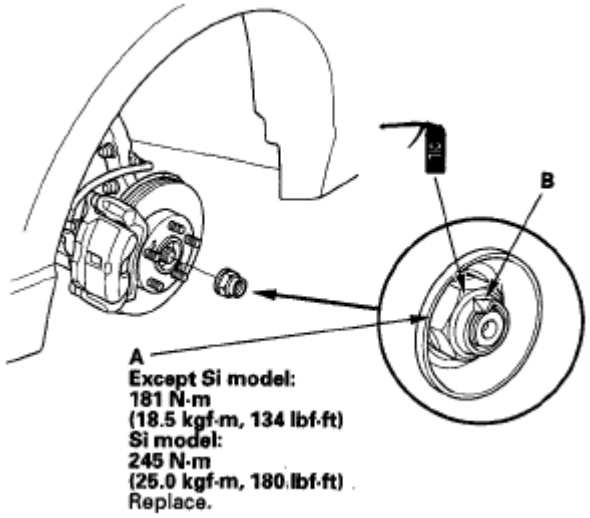

Fig. 55: Identifying Spindle Nut With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install a new spindle nut, then tighten the nut. After tightening, use a drift to stake the spindle nut shoulder (B) against the driveshaft.
10. Clean the mating surfaces of the brake discs and the front wheels, then install the front wheels.
11. Turn the front wheels by hand, and make sure there is no interference between the driveshaft and surrounding parts.
12. Refill the transmission with the recommended transmission fluid:
    - 5-speed Manual transmission (except Si) (see **TRANSMISSION FLUID INSPECTION AND REPLACEMENT**)
    - 6-speed Manual transmission (Si) (see **TRANSMISSION FLUID INSPECTION AND**

REPLACEMENT).

- Automatic transmission (see **ATF REPLACEMENT**)

13. Lower the vehicle on the lift.
14. Check the front wheel alignment, and adjust it if necessary (see **WHEEL ALIGNMENT**).
15. Test-drive the vehicle.

INTERMEDIATE SHAFT REMOVAL

5-SPEED M/T MODEL (EXCEPT SI)

1. Drain the transmission fluid. Reinstall the drain plug with a new washer (see **TRANSMISSION FLUID INSPECTION AND REPLACEMENT**).
2. Remove the right driveshaft (see **DRIVESHAFT REMOVAL**).
3. Remove the lower torque rod bracket (A).

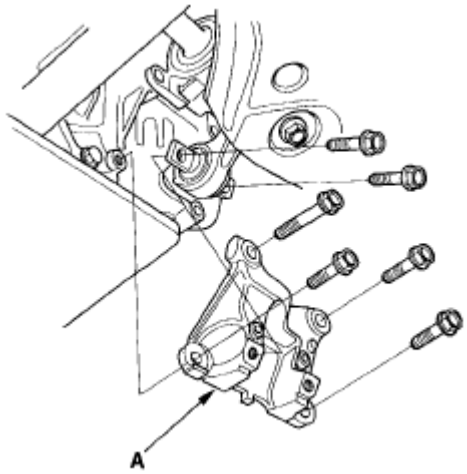

Fig. 56: Identifying Lower Torque Rod Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the flange bolts.

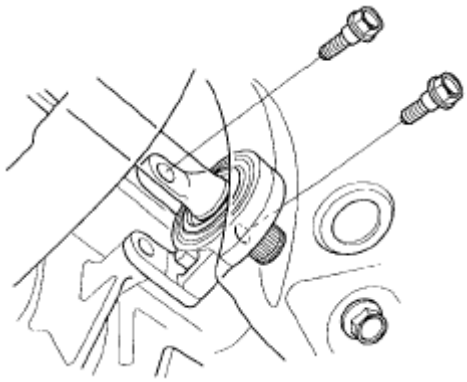

Fig. 57: Identifying Flange Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the intermediate shaft (A) from the differential. Hold the intermediate shaft horizontal until it is clear of the differential to prevent damaging the differential oil seal (B).

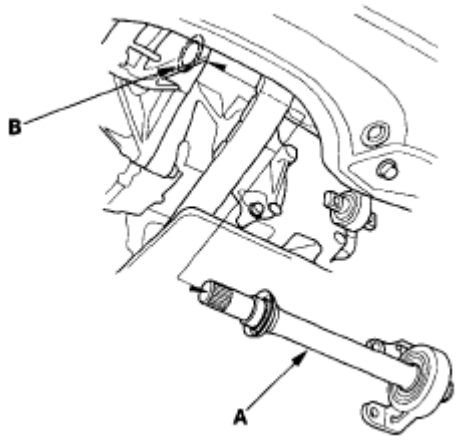

Fig. 58: Identifying Intermediate Shaft And Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6-SPEED M/T MODEL (SI)

1. Drain the transmission fluid. Reinstall the drain plug with a new washer (see **TRANSMISSION FLUID INSPECTION AND REPLACEMENT**).
2. Remove the right driveshaft (see **DRIVESHAFT REMOVAL**).
3. Remove the heat shield (A).

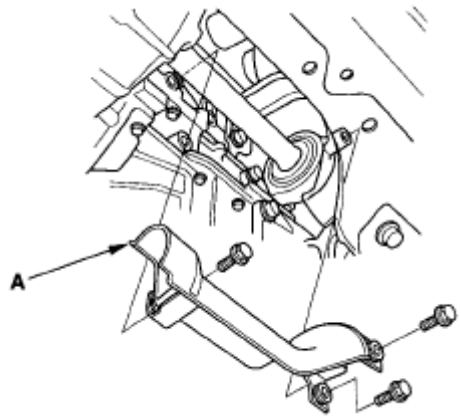

Fig. 59: Identifying Heat Shield
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the flange bolt (A) and the two shoulder bolts (B).

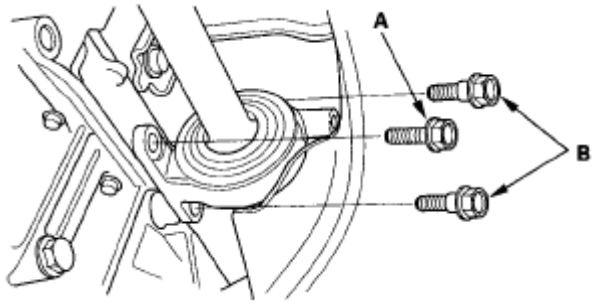

Fig. 60: Identifying Shoulder Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the intermediate shaft (A) from the differential. Hold the intermediate shaft horizontal until it is clear of the differential to prevent damaging the differential oil seal (B).

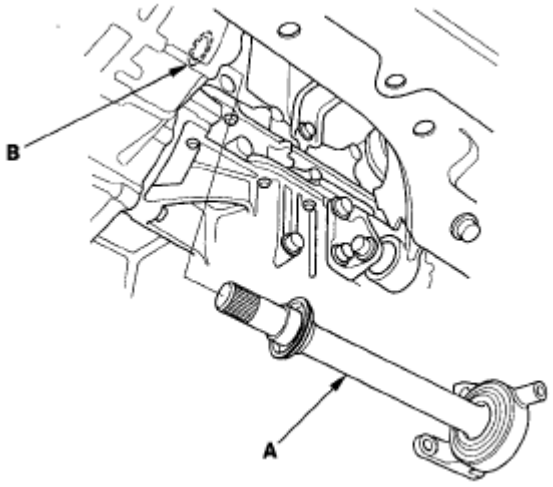

Fig. 61: Identifying Intermediate Shaft And Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INTERMEDIATE SHAFT DISASSEMBLY

Special Tools Required

- Half shaft base 07NAF-SR30101
- Oil seal driver 07947-SB00100

5-SPEED M/T MODELS (EXCEPT SI)

1. Remove the set ring (A), the outer seal (B), and the external snap ring (C).

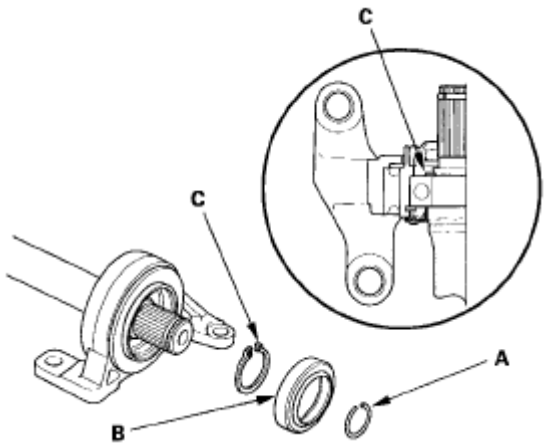

Fig. 62: Identifying External Snap Ring - 5-Speed M/T Models (Except Si)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Press the intermediate shaft (A) out of the intermediate shaft bearing (B) using a press. Be careful not to damage the bearing support ring (C) on the intermediate shaft during disassembly.

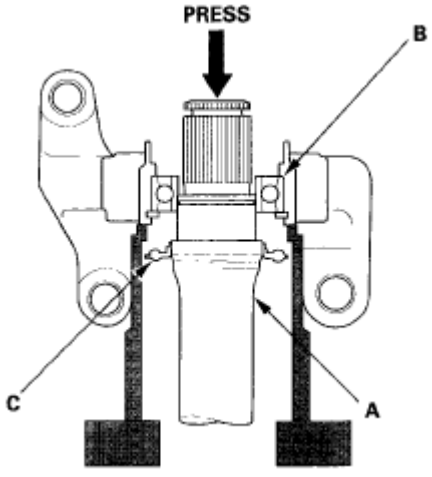

Fig. 63: Pressing Intermediate Shaft Out Of Intermediate Shaft Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the internal snap ring.

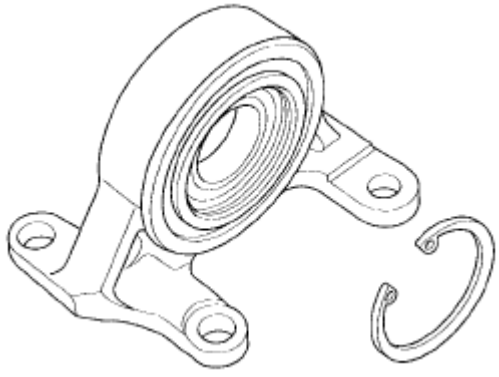

Fig. 64: Identifying Internal Snap Ring

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Press the intermediate shaft bearing (A) out of the bearing support (B) using the half shaft base (C), oil seal driver (D), and a press.

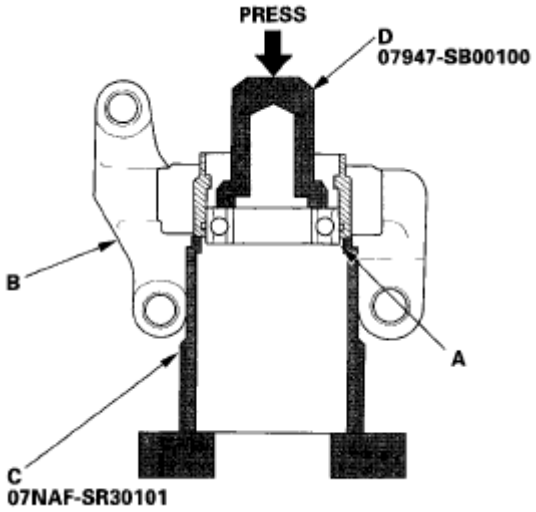

Fig. 65: Pressing Intermediate Shaft Bearing Out Of Bearing Support
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6-SPEED M/T MODEL (SI)

1. Remove the set ring (A), the outer seal (B), and the external snap ring (C).

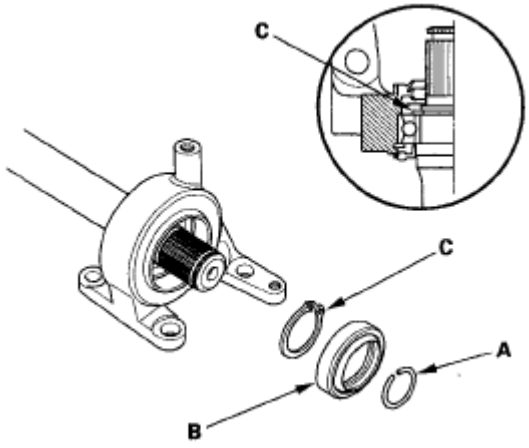

Fig. 66: Identifying External Snap Ring - 6-Speed M/T Model (Si)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Press the intermediate shaft (A) out of the intermediate shaft bearing (B) using a press. Be careful not to damage the bearing support ring (C) on the intermediate shaft during disassembly.

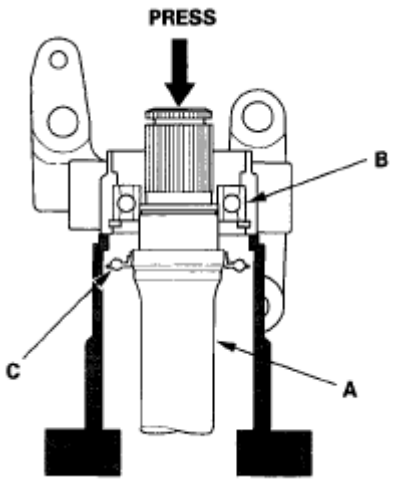

Fig. 67: Pressing Intermediate Shaft Out Of Intermediate Shaft Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the internal snap ring.

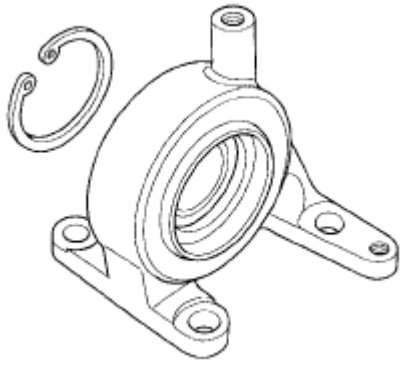

Fig. 68: Identifying Internal Snap Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Press the intermediate shaft bearing (A) out of the bearing support (B) using the half shaft base (C), oil seal driver (D) and a press.

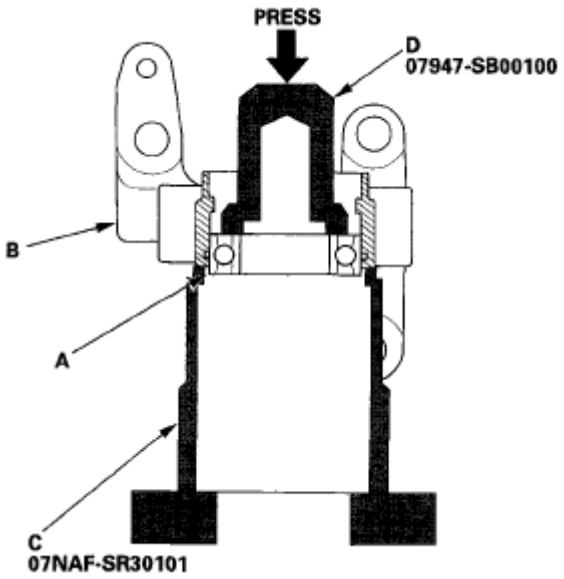

Fig. 69: Pressing Intermediate Shaft Bearing Out Of Bearing Support
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INTERMEDIATE SHAFT REASSEMBLY

5-SPEED M/T MODEL (EXCEPT SI)

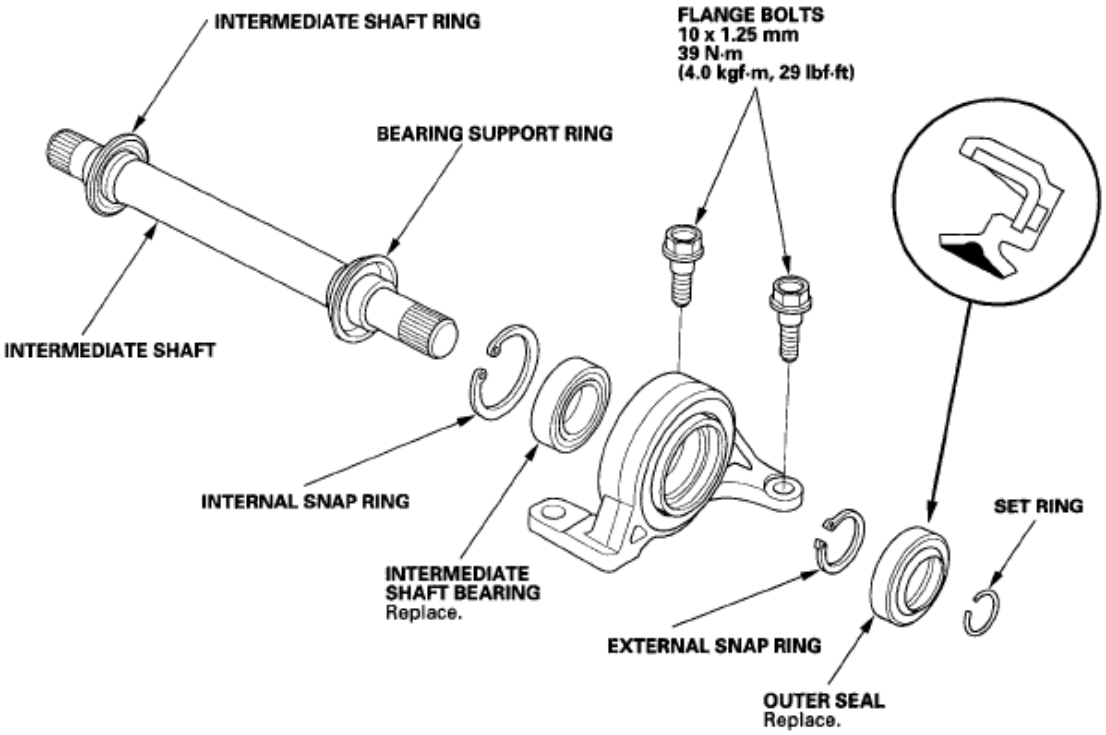

Fig. 70: Exploded View Of Intermediate Shaft - 5-Speed M/T Model (Except Si) With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- Oil seal driver 07GAD-PH70201
- Attachment, 52 x 55 mm 07746-0010400
- Attachment, 35 mm I.D. 07746-0030400
- Driver 07749-0010000

NOTE: Refer to Fig. 70, as needed, during this procedure.

5-speed M/T model (except Si)

1. Clean the disassembled parts with solvent, and dry them with compressed air.

   NOTE: Do not wash the rubber parts with solvent.

2. Press the intermediate shaft bearing (A) into the bearing support (B) using the 52 x 55 mm attachment (C), driver (D), and a press.

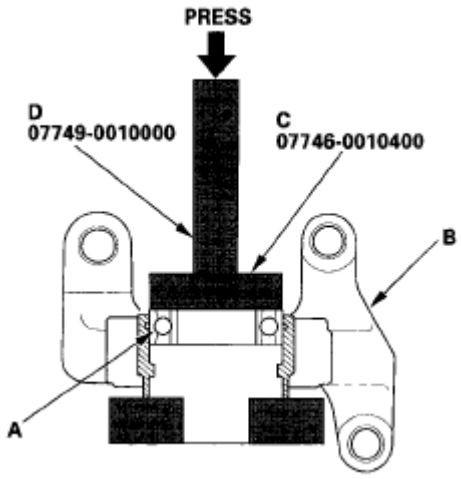

Fig. 71: Pressing Intermediate Shaft Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Seat the internal snap ring into the groove of the bearing support.

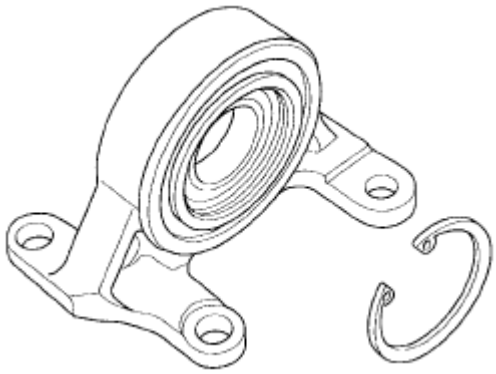

Fig. 72: Identifying Internal Snap Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Press the intermediate shaft (A) into the new shaft bearing (B) using the 35 mm I.D. attachment (C) and a press.

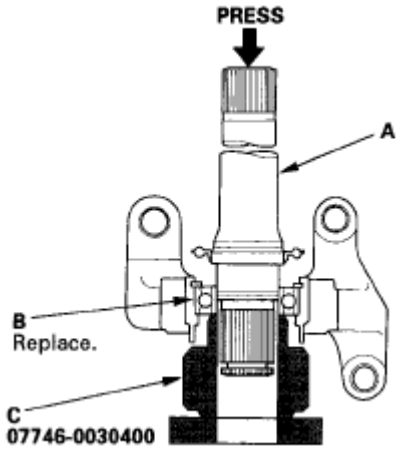

Fig. 73: Pressing Intermediate Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Seat the external snap ring (A) into the groove of the intermediate shaft (B).

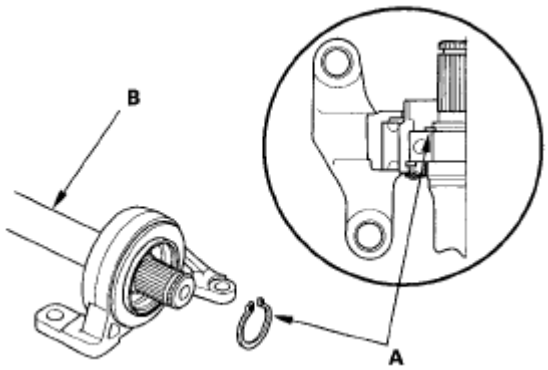

Fig. 74: Identifying External Snap Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the new outer seal (A) into the bearing support (B) using the oil seal driver (C) and a press.

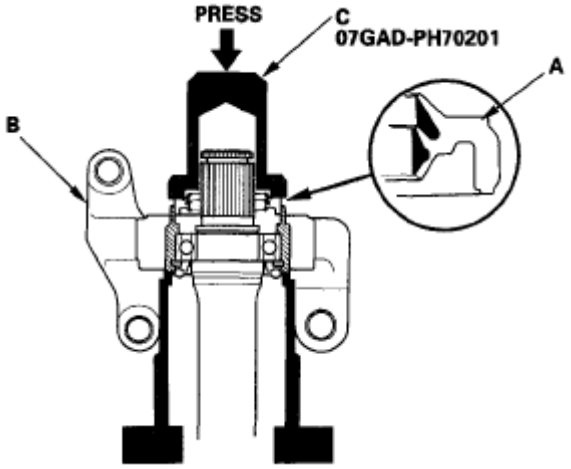

Fig. 75: Identifying Outer Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6-SPEED M/T MODEL (SI)

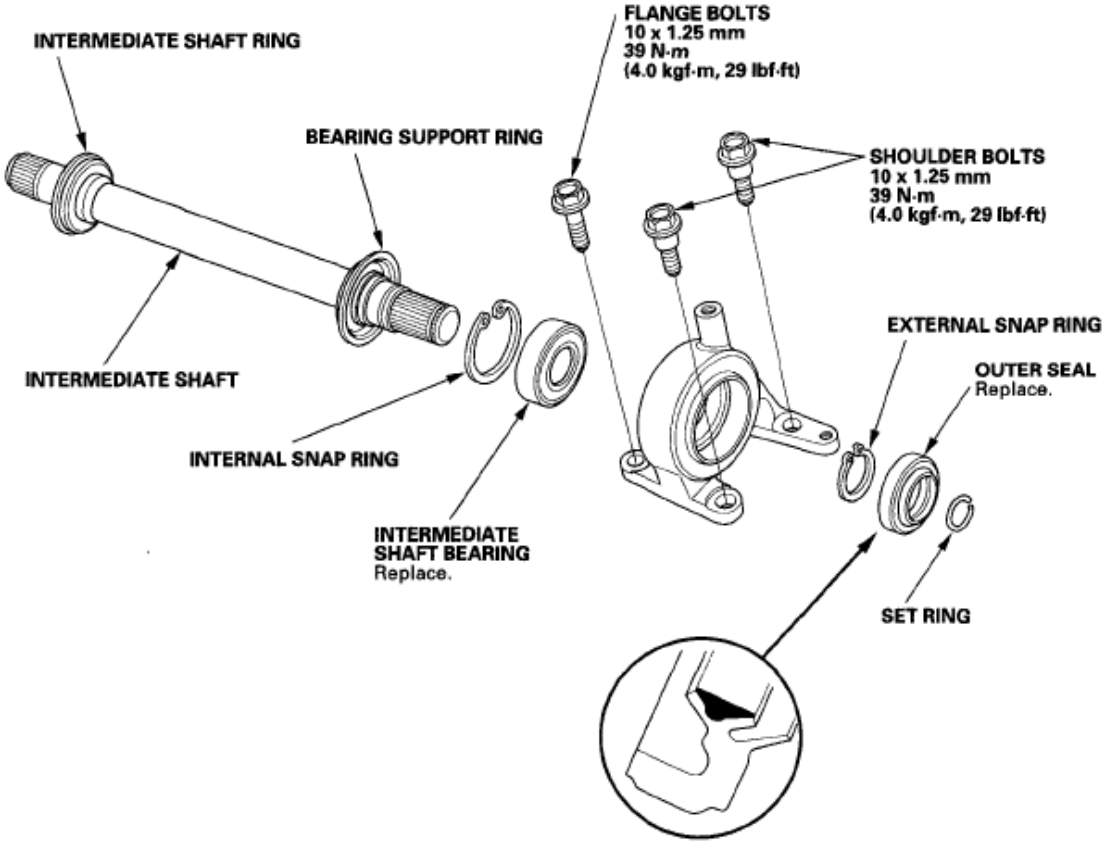

Fig. 76: Exploded View Of Intermediate Shaft - 6-Speed M/T Model (Si) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- Oil seal driver 07GAD-PH70201
- Attachment, 52 x 55 mm 07746-0010400

- Attachment, 35 mm I.D. 07746-0030400
- Driver 07749-0010000

NOTE: Refer to Fig. 76, as needed, during this procedure.

1. Clean the disassembled parts with solvent, and dry them with compressed air.

   NOTE: Do not wash the rubber parts with solvent.

2. Press the intermediate shaft bearing (A) into the bearing support (B) using the 52 x 55 mm attachment (C), driver (D), and a press.

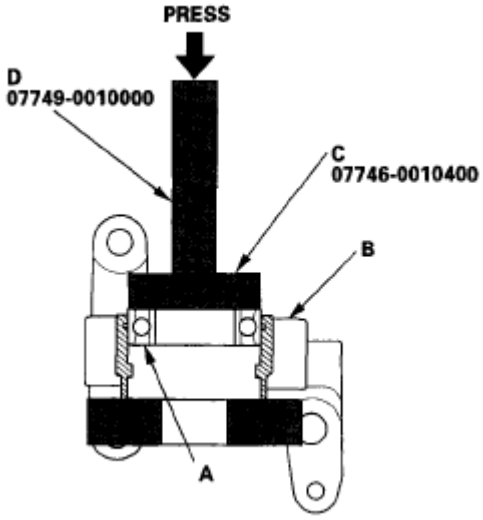

Fig. 77: Pressing Intermediate Shaft Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Seat the internal snap ring into the groove of the bearing support.

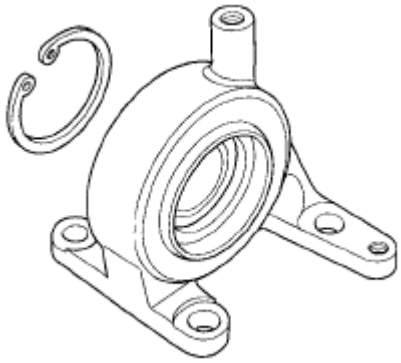

Fig. 78: Identifying Internal Snap Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Press the intermediate shaft (A) into the new shaft bearing (B) using the 35 mm I.D. attachment (C) and a press.

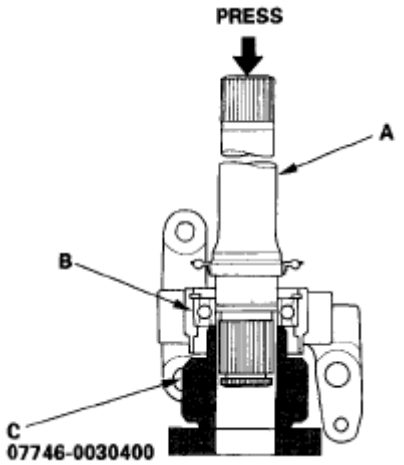

Fig. 79: Pressing Intermediate Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Seat the external snap ring (A) into the groove of the intermediate shaft (B).

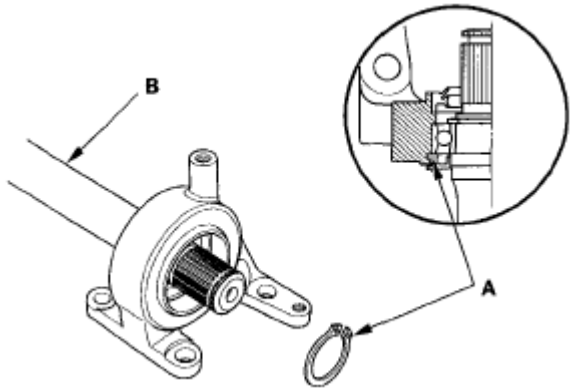

Fig. 80: Identifying External Snap Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the new outer seal (A) into the bearing support (B) using the oil seal driver (C) and a press.

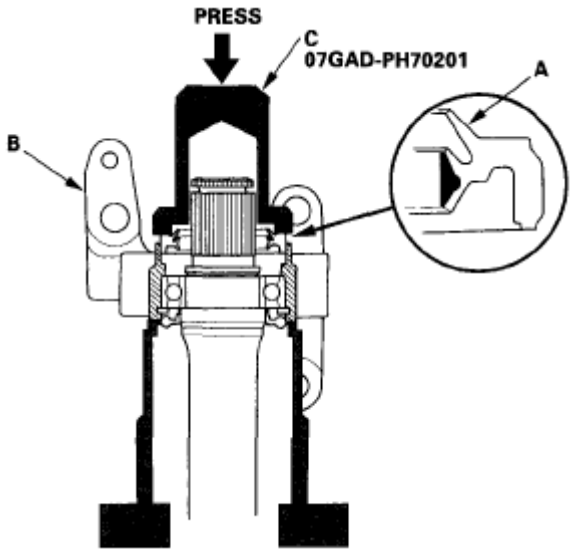

Fig. 81: Identifying Outer Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INTERMEDIATE SHAFT INSTALLATION

5-SPEED MODEL (EXCEPT SI)

1. Install the new set ring.

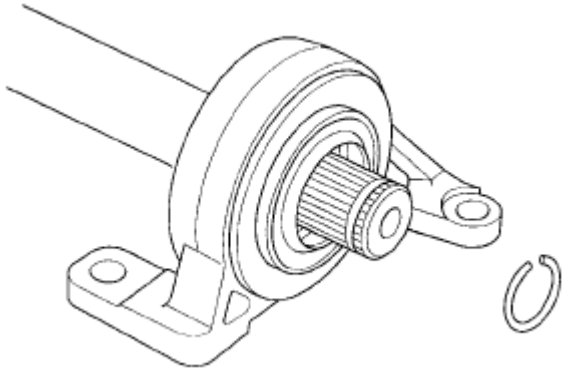

Fig. 82: Identifying Set Ring - 5-Speed Model (Except Si)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Clean the areas where the intermediate shaft contacts the differential thoroughly with solvent or brake cleaner, and dry with compressed air.

NOTE: Do not wash the rubber parts with solvent.

3. Insert the intermediate shaft assembly (A) into the differential until the set ring locks in the groove.

NOTE: Insert the intermediate shaft horizontally to prevent damaging the differential oil seal (B).

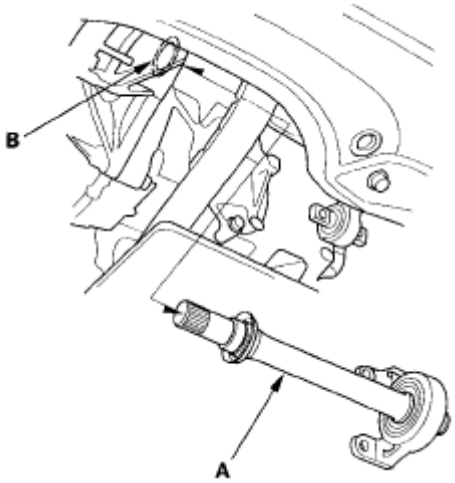

Fig. 83: Identifying Intermediate Shaft Assembly And Differential Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the flange bolts (A).

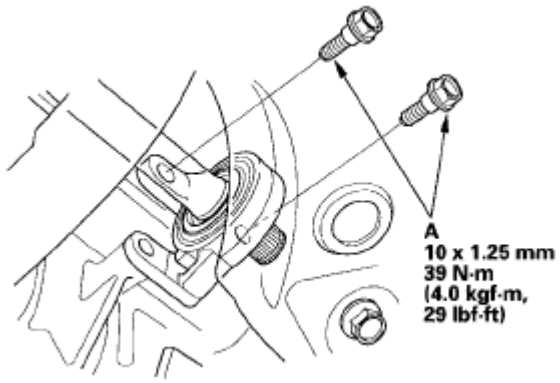

Fig. 84: Identifying Flange Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the lower torque rod bracket (A), and tighten the flange bolts in the sequence shown.

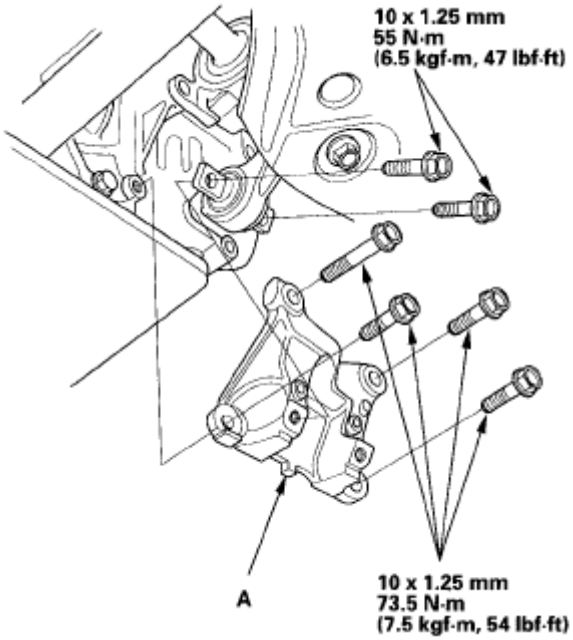

Fig. 85: Identifying Lower Torque Rod Bracket With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the right driveshaft (see **DRIVESHAFT INSTALLATION**).
7. Refill the transmission with the recommended transmission fluid (see **TRANSMISSION FLUID INSPECTION AND REPLACEMENT**).
8. Test-drive the vehicle.

6-SPEED M/T MODEL (SI)

1. Install the new set ring.

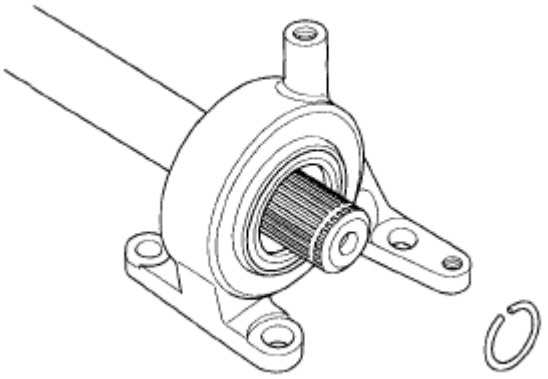

Fig. 86: Identifying Set Ring - 6-Speed M/T Model (Si)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Clean the areas where the intermediate shaft contacts the differential thoroughly with solvent or brake cleaner, and dry with compressed air.

NOTE: Do not wash the rubber parts with solvent.

3. Insert the inboard end (A) of the driveshaft into the differential (B) or intermediate shaft (C) until the set ring (D) locks in the groove (E).

NOTE: Insert the driveshaft horizontally to prevent damaging the differential oil seal.

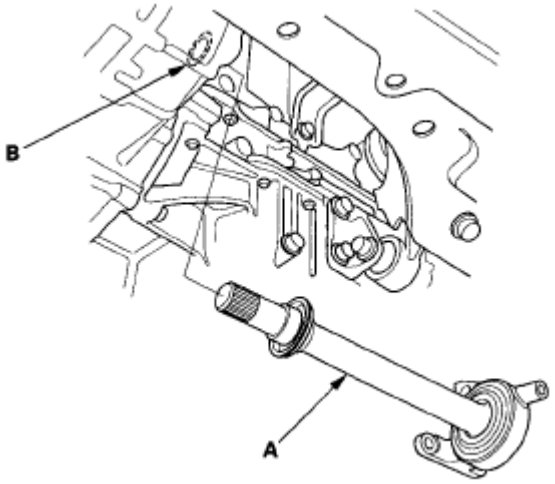

Fig. 87: Identifying Intermediate Shaft Assembly And Differential Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the flange bolt (A) and the two shoulder bolts (B).

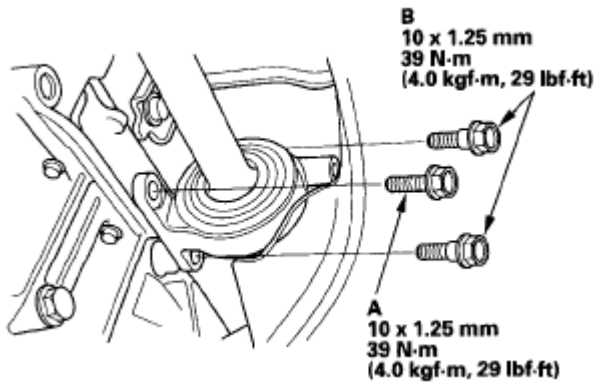

Fig. 88: Identifying Shoulder Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the heat shield (A), and tighten the three bolts.

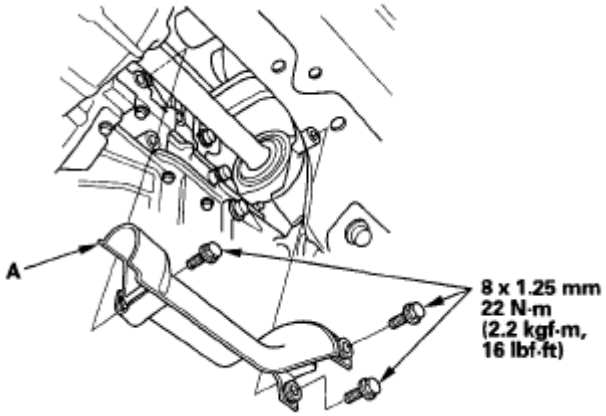

Fig. 89: Identifying Heat Shield Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the right driveshaft (see **DRIVESHAFT INSTALLATION**).
7. Refill the transmission with the recommended transmission fluid (see **TRANSMISSION FLUID INSPECTION AND REPLACEMENT**).
8. Test-drive the vehicle.

2006-08 DTC INDEX

Civic (Except Hybrid)

AUTOMATIC TRANSMISSION (SPCA) DTCS (A00298134)

NOTE: Retrieval of some diagnostic codes may require the use of special OEM tester or flash method using instrument cluster indicator. For procedures/testing of codes not shown below, refer to appropriate system article.

AUTOMATIC TRANSMISSION (SPCA) DIAGNOSTIC TROUBLE CODES (DTC) LIST

DTC	D Indicator	MIL	Detection Item
P0107	Blinks	ON or OFF	Manifold Absolute Pressure (MAP) Sensor Circuit Low Voltage Input (The MIL comes on when the PGM-FI system detects the same failure)
P0108	Blinks	ON or OFF	Manifold Absolute Pressure (MAP) Sensor Circuit High Voltage Input (The MIL comes on when the PGM-FI system detects the same failure)
P0335	Blinks	ON or OFF	Crankshaft Position (CKP) Sensor No signal (The MIL comes on when the PGM-FI system detects the same failure)
P0339	Blinks	ON or OFF	Crankshaft Position (CKP) Sensor Intermittent Interruption (The MIL comes on when the PGM-FI system detects the same failure)
P0365	Blinks	ON or OFF	Camshaft Position (CMP) Sensor No Signal (The MIL comes on when the PGM-FI system detects the same failure)
P0369	Blinks	ON or OFF	Camshaft Position (CMP) Sensor Intermittent Interruption (The MIL comes on when the PGM-FI system detects the same failure)
P0603	Blinks	ON or OFF	PCM Internal Control Module Keep Alive Memory (KAM) Error (The MIL comes on when the PGM-FI system detects the same failure)
P0705	Blinks	ON	Short in Transmission Range Switch Circuit (Multiple Shift-position Input) (This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission)
P0706	OFF	ON	Open in Transmission Range Switch Circuit (This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission)
P0711	Blinks	OFF	Problem in ATF Temperature Sensor Circuit

			(This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission)
P0712	Blinks	OFF	Short in ATF Temperature Sensor Circuit (This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission)
P0713	Blinks	OFF	Open in ATF Temperature Sensor Circuit (This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission)
P0716	Blinks	ON	Problem in Input Shaft (Mainshaft) Speed Sensor Circuit (This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission)
P0717	Blinks	ON	Problem in Input Shaft (Mainshaft) Speed Sensor Circuit (No Signal Input) (This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission)
P0718	Blinks	ON	Input Shaft (Mainshaft) Speed Sensor Intermittent Failure (This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission)
P0721	Blinks	ON	Problem in Output Shaft (Countershaft) Speed Sensor Circuit (This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission)
P0722	Blinks	ON	Problem in Output Shaft (Countershaft) Speed Sensor Circuit (No Signal Input) (This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission)
P0723	Blinks	ON	Output Shaft (Countershaft) Speed Sensor Intermittent Failure (This code is caused by an electrical circuit problem and cannot be caused by a mechanical problem in the transmission)
P0731	Blinks	OFF	Problem in 1st Clutch and 1st Clutch Hydraulic Circuit (1st Gear Incorrect Ratio)
P0732	Blinks	OFF	Problem in 2nd Clutch and 2nd Clutch Hydraulic Circuit (2nd Gear Incorrect Ratio)
P0733	Blinks	OFF	Problem in 3rd Clutch and 3rd Clutch Hydraulic Circuit (3rd Gear Incorrect Ratio)
P0734	Blinks	OFF	Problem in 4th Clutch and 4th Clutch Hydraulic Circuit (4th Gear Incorrect Ratio)

P0735	Blinks	OFF	Problem in 5th Clutch and 5th Clutch Hydraulic Circuit (5th Gear Incorrect Ratio)
P0741	OFF	ON	Torque Converter Clutch Hydraulic Circuit Stuck OFF

U0121	Blinks	OFF	F-CAN Malfunction (PCM-ABS)
U0155	Blinks	ON or OFF	F-CAN Malfunction (PCM-Gauge Control Module) (The MIL comes on when the PGM-FI system detects the same failure)

CATALYTIC CONVERTER DTCS

CATALYTIC CONVERTER SYSTEM (R18A1) - CIVIC (EXCEPT HYBRID) DTCS (A00255531)

CATALYTIC CONVERTER (R18A1) DIAGNOSTIC TROUBLE CODES (DTC) LIST

DTC	Description
P0420	Catalytic System Efficiency Below Threshold

CATALYTIC CONVERTER SYSTEM (K20Z3) - CIVIC (ALL EXCEPT SI) DTCS (A00255552)

CATALYTIC CONVERTER (K20Z3) DIAGNOSTIC TROUBLE CODES (DTC) LIST

DTC	Description
P0420	Catalytic System Efficiency Below Threshold

EVAP SYSTEM DTCS

EVAP SYSTEM (R18A1) - CIVIC (ALL EXCEPT HYBRID) DTCS (A00255540)

EVAP SYSTEM (R18A1) DIAGNOSTIC TROUBLE CODES (DTC) LIST

DTC	Description
P0443	EVAP Canister Purge Valve Circuit Malfunction
P0451	FTP Sensor Range/Performance Problem
P0452	FTP Sensor Circuit Low Voltage
P0453	FTP Sensor Circuit High Voltage
P0455	EVAP System Large Leak Detected
P0456	EVAP System Very Small Leak Detected
P0457	EVAP System Leak Detected/Fuel Fill Cap Loose Or Missing
P0496	EVAP System High Purge Flow Detected
P0497	EVAP System Low Purge Flow Detected
P0498	EVAP Canister Vent Shut Valve Circuit Low Voltage
P1454	FTP Sensor Range/Performance Problem
P2422	EVAP Canister Vent Shut Valve Stuck Closed Malfunction

EVAP SYSTEM (K20Z3) - CIVIC (EXCEPT GX & SI) DTCS (A00255553)

EVAP SYSTEM (K20Z3) DIAGNOSTIC TROUBLE CODES (DTC) LIST

DTC	Description
P0443	EVAP Canister Purge Valve Circuit Malfunction
P0451	FTP Sensor Circuit Range/Performance Problem
P0452	FTP Sensor Circuit Low Voltage
P0453	FTP Sensor Circuit High Voltage
P0455	EVAP System Large Leak Detected
P0456	EVAP System Very Small Leak Detected

P0457	EVAP System Leak Detected/Fuel Fill Cap Loose or Missing
P0496	EVAP System High Purge Flow Detected
P0497	EVAP System Low Purge Flow Detected ('06 model)
P0497	EVAP System Low Purge Flow Detected ('07 model)
P0498	EVAP Canister Vent Shut Valve Circuit Low Voltage
P0499	EVAP Canister Vent Shut Valve Circuit High Voltage
P1454	FTP Sensor Range/Performance Problem
P145C	EVAP System Purge Flow Malfunction ('07 model)
P2422	EVAP Canister Vent Shut Valve Stuck Closed Malfunction

IDLE CONTROL DTCS

IDLE CONTROL SYSTEM (R18A1) - CIVIC (ALL EXCEPT HYBRID) DTCS (A00255517)

IDLE CONTROL SYSTEM (R18A1) - CIVIC (ALL EXCEPT HYBRID) DIAGNOSTIC TROUBLE CODES (DTC) LIST

DTC	Description
P0506	Idle Control System RPM Lower Than Expected
P0507	Idle Control System RPM Higher Than Expected
P0532	A/C Pressure Sensor Circuit Low Voltage
P0533	A/C Pressure Sensor Circuit High Voltage

IDLE CONTROL SYSTEM (K20Z3) - CIVIC (ALL EXCEPT HYBRID & SI) DTCS (A00255526)

IDLE CONTROL SYSTEM (K20Z3) - CIVIC (ALL EXCEPT HYBRID & Si) DIAGNOSTIC TROUBLE CODES (DTC) LIST

DTC	Description
P0506	Idle Control System RPM Lower Than Expected
P0507	Idle Control System RPM Higher Than Expected
P0532	A/C Pressure Sensor Circuit Low Voltage
P0533	A/C Pressure Sensor Circuit High Voltage

PGM-FI DTCS

PGM-FI SYSTEM (GX) DTCS (A00259771)

PGM-FI SYSTEM (GX) DIAGNOSTIC TROUBLE CODES (DTC) LIST

DTC	Description
P0171	Fuel System Too Lean

P0172	Fuel System Too Rich
P0300	Random Misfire and Any Combination of the Following; DTC P0301: No. 1 Cylinder Misfire Detected, DTC P0302: No. 2 Cylinder Misfire Detected, DTC P0303: No. 3 Cylinder Misfire Detected, DTC P0304: No. 4 Cylinder Misfire Detected

2006-09 ELECTRICAL

Accessory Power sockets - Civic (All Except Hybrid)

COMPONENT LOCATION INDEX

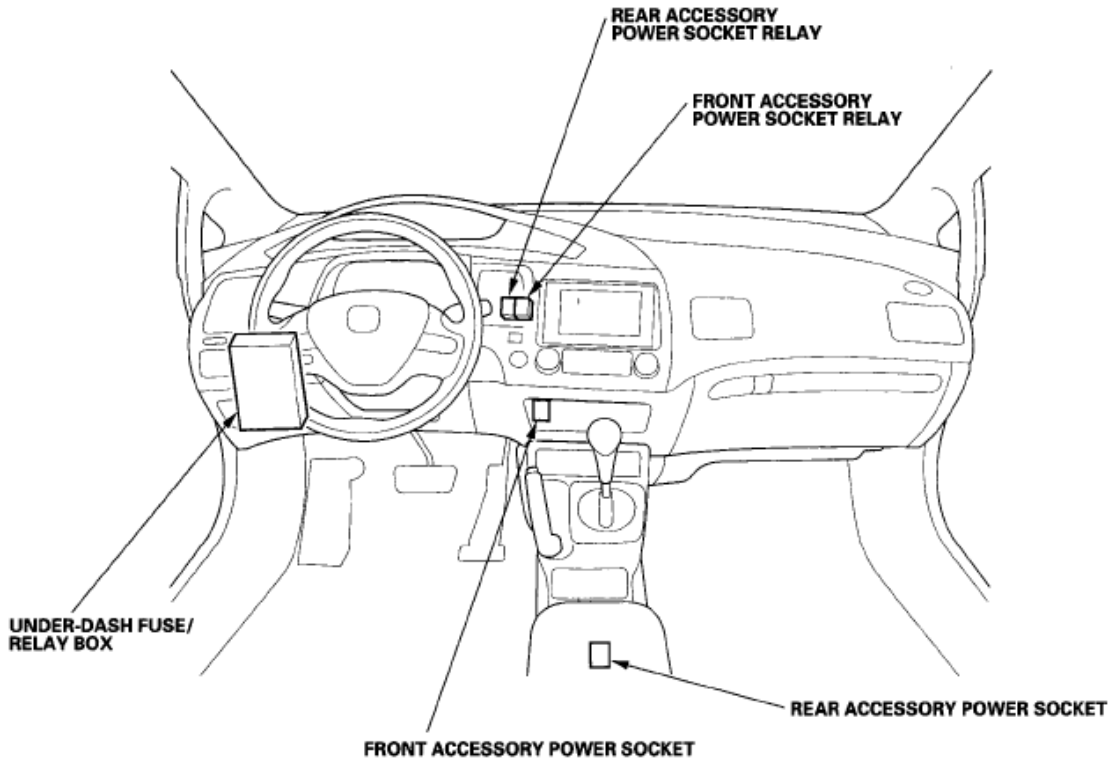

Fig. 1: Identifying Accessory Power Sockets Component Location
Courtesy of HONDA

CIRCUIT DIAGRAM

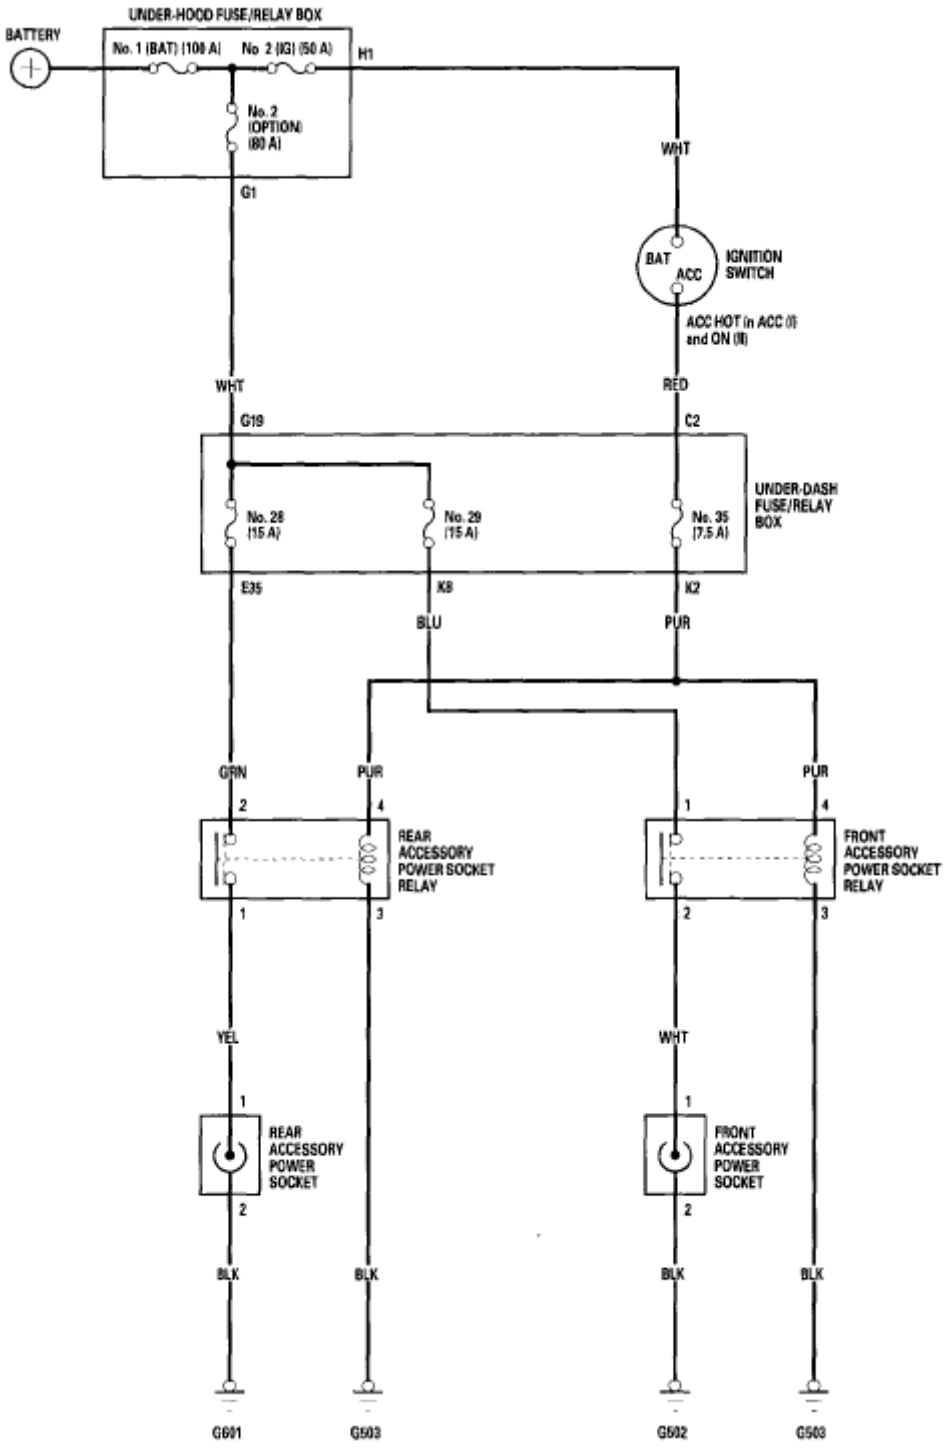

Fig. 2: Accessory Power Sockets - Circuit Diagram
Courtesy of HONDA

FRONT ACCESSORY POWER SOCKET TEST/REPLACEMENT

NOTE: If both of the front and rear accessory power sockets do not work, check the No. 35 (7.5 A) fuse in the under-dash fuse/relay box.

1. Remove the center panel.

- With Audio
  - '06-08 models (see **AUDIO UNIT REMOVAL/INSTALLATION**)
  - '09 model (see **AUDIO UNIT REMOVAL/INSTALLATION**)
- With Navigation
  - '06-08 models (see **NAVIGATION UNIT REMOVAL/INSTALLATION**)
  - '09 model (see **NAVIGATION UNIT REMOVAL/INSTALLATION**)

2. Disconnect the 2P connector (A) from the front accessory power socket (B).

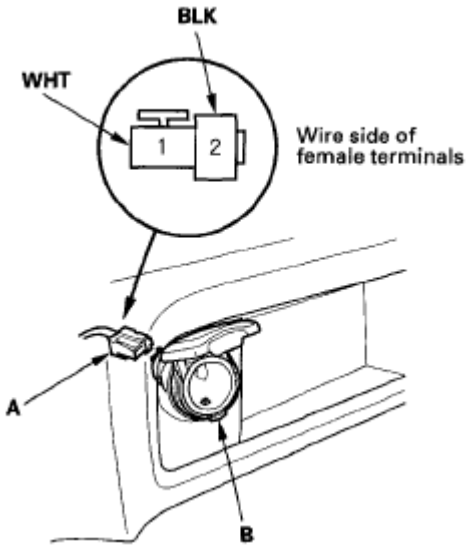

Fig. 3: Identifying 2P Connector
Courtesy of HONDA

3. Inspect the connector terminals to be sure they are all making good contact.
   - If the terminals are bent, loose, or corroded, repair them as necessary and recheck the system.
   - If the terminals look OK, go to step 4.
4. Turn the ignition switch to ACCESSORY (I).
5. Measure the voltage between front accessory power socket relay terminal No. 3 and body ground. There should be less than 0.2 V.
   - If there is less than 0.2 V, go to step 6.
   - If there is more than 0.2 V, check for:
     - Poor ground (G503) or an open in the ground wire.
     - An open or high resistance in the wire between front accessory power socket relay terminal No. 3 and ground (G503).
6. Measure the voltage between front accessory power socket 2P connector terminal No. 1 and body ground. There should be battery voltage.
   - If there is battery voltage, go to step 7.
   - If there is no voltage, check for:
     - A blown No. 29 (15 A) fuse in the under-dash fuse/relay box.
     - A faulty front accessory power socket relay.
     - An open or high resistance in the wire between front accessory power socket relay

terminal No. 2 and front accessory power socket 2P connector terminal No. 1.

7. Check for continuity between front accessory power socket 2P connector terminal No. 2 and body ground. There should be continuity.
   - If there is continuity, replace the power socket; go to step 8.
   - If there is no continuity, check for:
     - Poor ground (G502) or an open in the ground wire.
     - An open in the wire between front accessory power socket 2P connector terminal No. 2 and ground (G502).
8. Remove the socket (A).

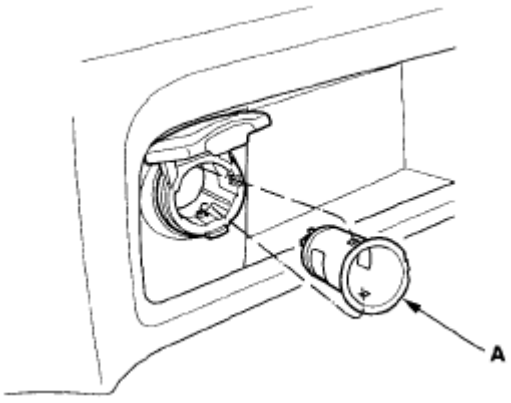

Fig. 4: Locating Socket
Courtesy of HONDA

9. Remove the housing (A) from the panel.

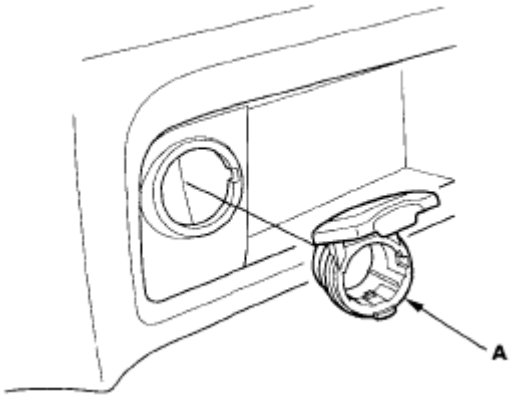

Fig. 5: Locating Panel Housing
Courtesy of HONDA

10. Install the power socket in the reverse order of removal.

CONSOLE ACCESSORY POWER SOCKET TEST/REPLACEMENT

NOTE: If both of the front and rear accessory power sockets do not work, check the No. 35 (7.5 A) fuse in the under-dash fuse/relay box.

1. Remove the center console (see **CENTER CONSOLE REMOVAL/INSTALLATION**).
2. Disconnect the 2P connector (A) from the rear accessory power socket (B).

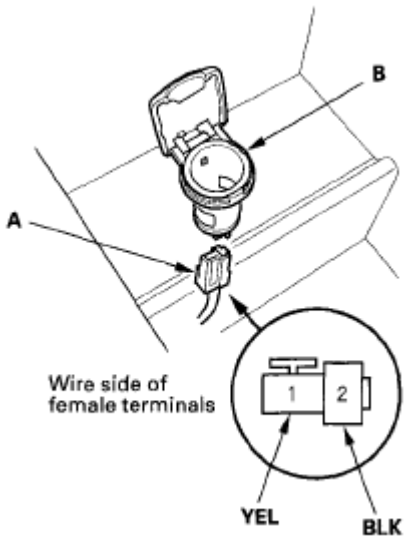

Fig. 6: Locating 2P Connector
Courtesy of HONDA

3. Inspect the connector terminals to be sure they are all making good contact.
   - If the terminals are bent, loose, or corroded, repair them as necessary and recheck the system.
   - If the terminals look OK, go to step 4.
4. Turn the ignition switch to ACC (I).
5. Measure the voltage between console accessory power socket relay terminal No. 3 and body ground. There should be less than 0.2 V.
   - If there is less than 0.2 V, go to step 6.
   - If there is more than 0.2 V, check for:
     - An open or high resistance in the wire between console accessory power socket relay terminal No. 3 and ground (G503).
     - Poor ground (G503) or an open in the ground wire.Faulty rear accessory power socket relay.
6. Measure the voltage between console accessory power socket 2P connector terminal No. 1 and body ground. There should be battery voltage.
   - If there is battery voltage, go to step 7.
   - If there is no voltage, check for:
     - A blown No. 28 (15 A) fuse in the under-dash fuse/relay box.
     - A faulty console accessory power socket relay.
     - An open or high resistance in the wire between console accessory power socket relay terminal No. 1 and console accessory power socket 2P connector terminal No. 1.
7. Check for continuity between console accessory power socket 2P connector terminal No. 2 and body ground. There should be continuity.

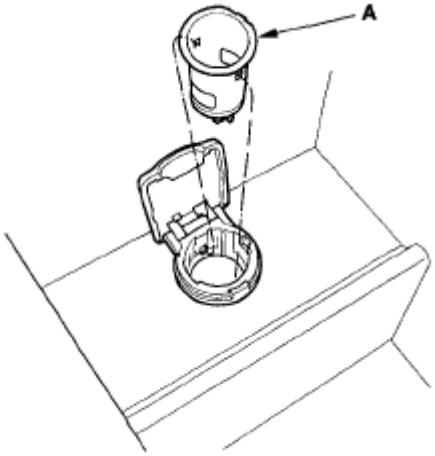

Fig. 7: Locating Socket
Courtesy of HONDA

- If there is continuity, replace the power socket; go to step 8.
- If there is no continuity, check for:
  - Poor ground (G601 [G503]) or an open in the ground wire.
  - An open in the wire between console accessory power socket 2P connector terminal No. 2 and ground (G601 [G503]).

2006-09 ELECTRICAL

Battery - Civic (Except Hybrid & Si)

BATTERY TEST

WARNING: A battery can explode if you do not follow the proper procedure, causing serious injury to anyone nearby. Follow all procedures carefully and keep sparks and open flames away from the battery.

Use an ED-18 Battery Tester, and follow the manufacturer's procedures. If you don't have one of these computerized testers, follow this conventional test procedure:

Required Test Equipment

honda Eletrical System Analizer (ED-18 Battery Tester); T/N INBED18LLH

Ordering Information

To order an Electrical System Analyzer, go to the Honda Tool and Equipment catalog on the iN, or call 888-424-6857

Software Version

Make sure you have the latest software in the ED-18. To check the version follow these steps:

- Press the POWER button.
- Select Reports, then press ENTER.
- Select i Version, then press ENTER.

If you do not have the correct version, Tools Hotline at 800-346-6327.

Using the ED-18 Battery Tester

NOTE: For set up, customizations, and other available features, refer to the ED-18 user's manual.

1. Connect the leads to the positive and negative terminal of the battery.
2. Use the arrow keys to select the battery test, then press enter, then follow the prompts.

NOTE: Make sure to enter the correct cold cranking ampere rating of the battery. If the number is not entered correctly, the result will not be accurate.

3. Here are the five possible battery conditions:
   - Good Battery: the battery has at least 60 percent of its charge and requires no action.
   - Good-Recharge: The battery condition appears to be good, but charging is recommended and then retest. See your battery charger's instructions to fully charge the battery, then recheak. Do

not charge the battery using the vehicle's alternator.

- Charge and Retest: The battery condition is not known because its charge is too low. Recharge the battery, then retest. See your battery's instructions to fully charge the battery, then recheck. Do not charge the battery using the vehicle's alternator.
- Replace Battery: The battery condition is poor. Replace it.
- Bad Cell: There is a problem with the battery. Replace it.

DISCONNECTION

NOTE: Some systems store data in memory (including seat position, mirror position, etc) is lost when the battery is disconnected. Do the following procedures before disconnecting the battery.

1. Make sure you hvae the anti-theft code(s) for the audio system and/or navigation system (if equipped).

   NOTE: For some models it maybe necessary to write down the audio the presets (AM and FM), because the audio unit does not retain the presets after the battery is disconnected.

2. Write downt he XM audio presets (if equipped).
3. Make sure the ignition switch is in LOCK (0).
4. Disconnect and isolate the negative cable from the battery.

   NOTE: Always disconnect the negative battery cable from the battery first.

5. Disconnect the positive cable from the battery.

RECONNECTION

Some systems store data in memory that is lost when the battery is disconnected. Do the following procedures to restore the system back to normal operation.

1. Clean the battery terminals.
2. Test the battery (see **Battery Test**).
3. Reconnect the positive cable (A) to the battery (B) first, then reconnect the negative cable (C) to the battery.

   NOTE: Always connect the positive cable to the battery first.

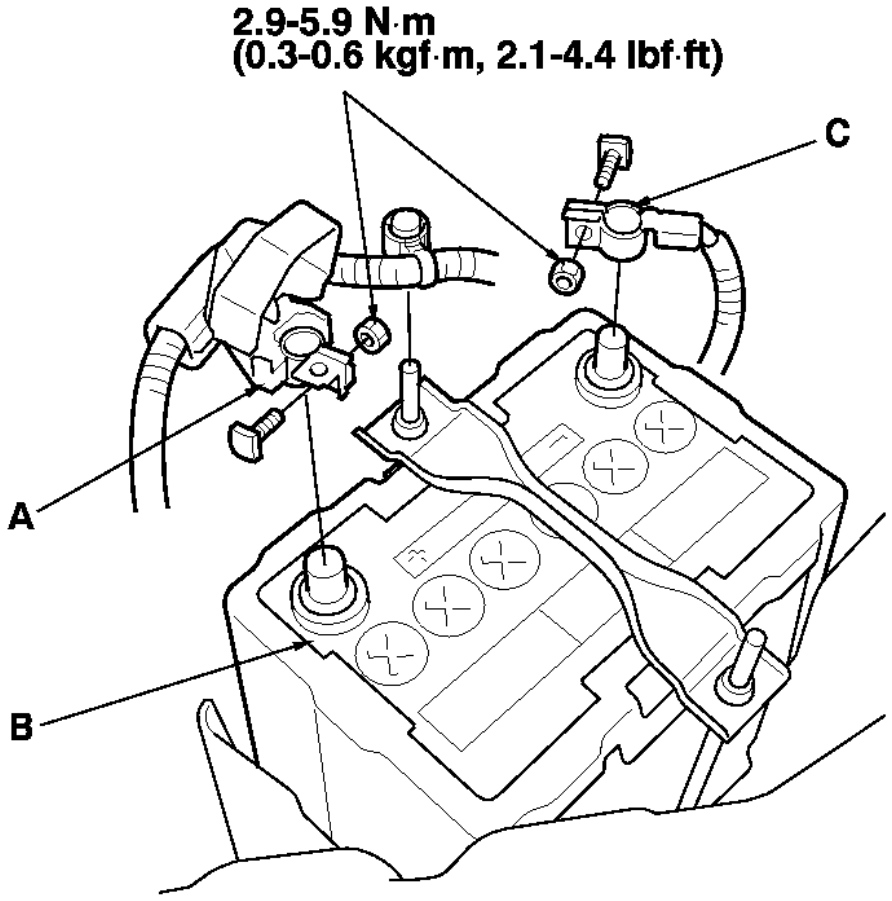

Fig. 1: Always Connect The Positive Cable To The Battery First
Courtesy of TOYOTA

4. Apply multipurpose grease to the terminals to prevent corrosion.
5. Enter the anti-theft code(s) for the audio system and/or navigation system (if equipped).
6. Enter the audio presets (if applicable), and enter the XM audio presets (if equipped).
7. Set the clock (for vehicles without navigation).

BATTERY REMOVAL AND INSTALLATION

NOTE: **The battery terminal disconnection/reconnection procedure (see Disconnection) must be done before and after doing this procedure. Some systems store data in memory that is lost when the battery is disconnected.**

REMOVAL

1. Do the battery terminal disconnection procedure (see **Disconnection**).
2. Remove the two nuts (A) securing the battery setting plate (B), then remove the battery setting plate and the battery (C).

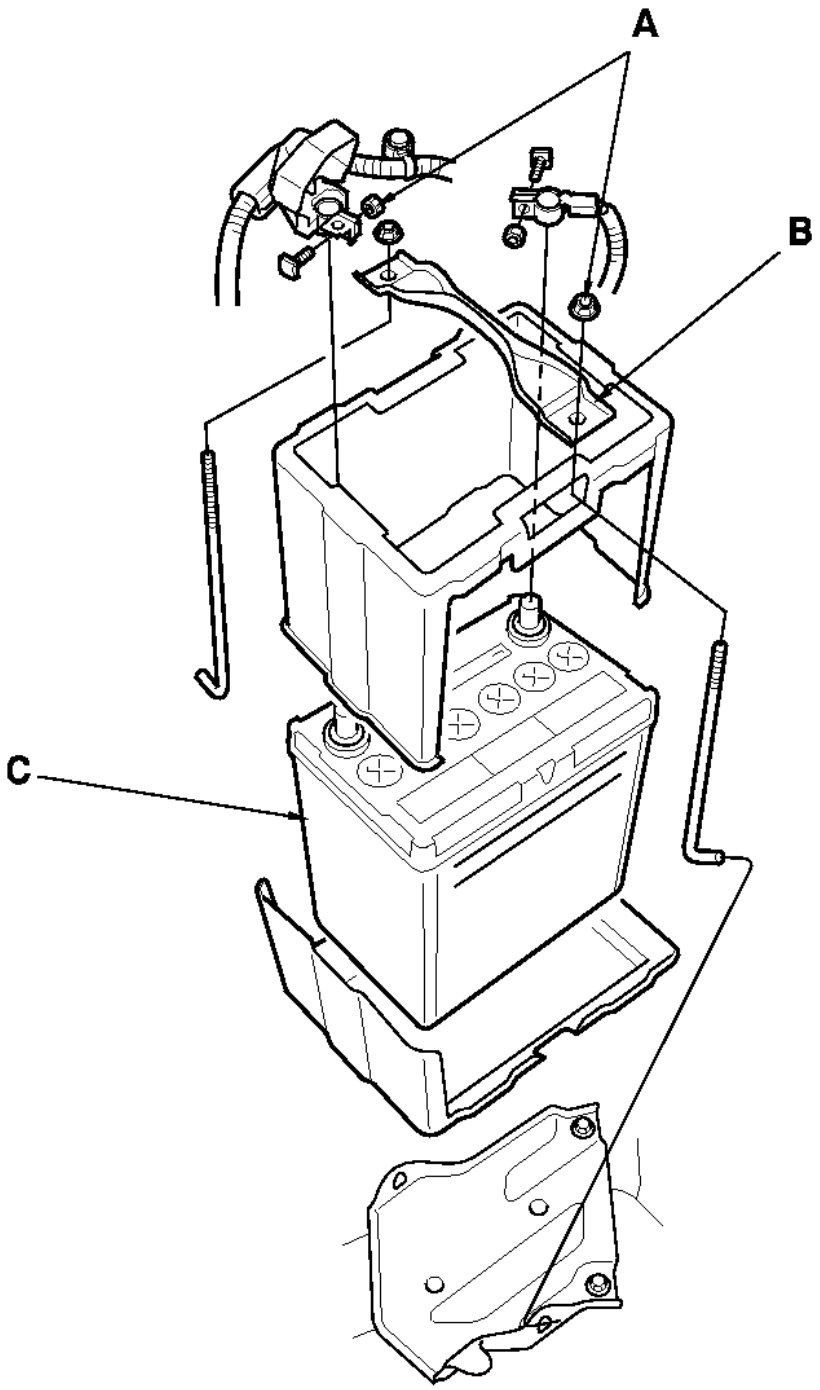

Fig. 2: Removing The Battery

INSTALLATION

1. Install the battery (A), then install the battery setting plate (B).

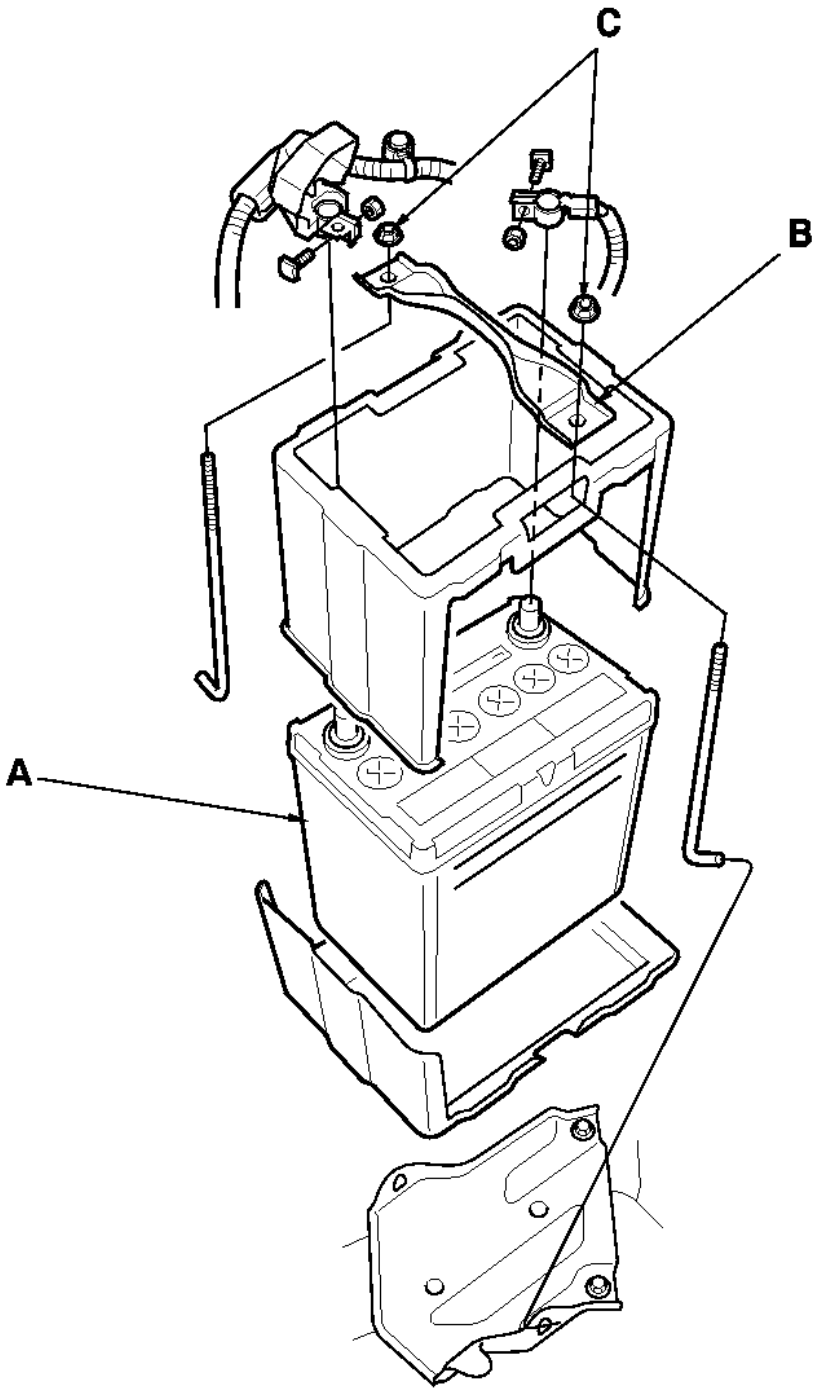

Fig. 3: Installing The Battery

2. Tighten the two nuts (C) equally until the battery is stable.

NOTE: Do not deform the battery setting plate by over-tightening the nuts.

3. Do the battery terminal reconnection procedure (see **Disconnection**).

NOTE: Make sure the positive terminal and the negative terminal are not reverse-

connected.

2006-09 ELECTRICAL

Body Electrical (Troubleshooting) - Civic (All Except Hybrid)

SPECIAL TOOLS

Ref. No.	Tool Number	Description	Qty
①	07WAZ-001010A	MPCS (MCIC) Service Connector	1
②	07TAZ-001020A	Back Probe Adaptor	1

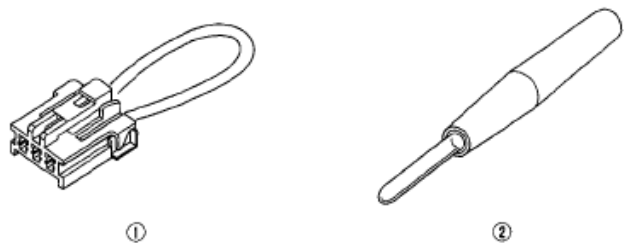

Fig. 1: Identifying Special Tools

GENERAL TROUBLESHOOTING INFORMATION

TIPS AND PRECAUTIONS

Before Troubleshooting

1. Check applicable fuses in the appropriate fuse/relay box.
2. Check the battery for damage, state of charge, and clean and tight connections.

NOTE:

- **Do not quick-charge a battery unless the battery ground cable has been disconnected, otherwise you will damage the alternator diodes.**
- **Do not attempt to crank the engine with the battery ground cable loosely connected or you will severely damage the wiring.**

Handling Connectors

- Make sure the connectors are clean and have no loose wire terminals.
- Make sure multiple cavity connectors are packed with dielectric grease (except watertight connectors).
- All connectors have push-down release type locks (A).

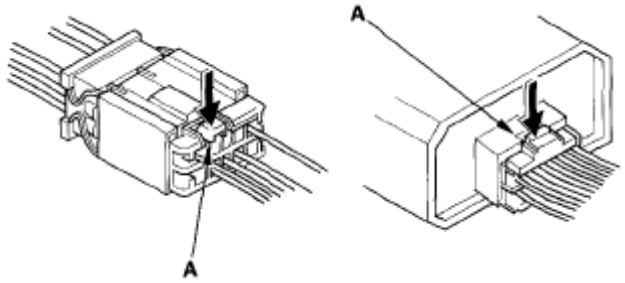

Fig. 2: Identifying Connector Lock

- Some connectors have a clip on their side used to attach them to a mount bracket on the body or on another component. This clip has a pull type lock.
- Some mounted connectors cannot be disconnected unless you first release the lock and remove the connector from its mount bracket (A).

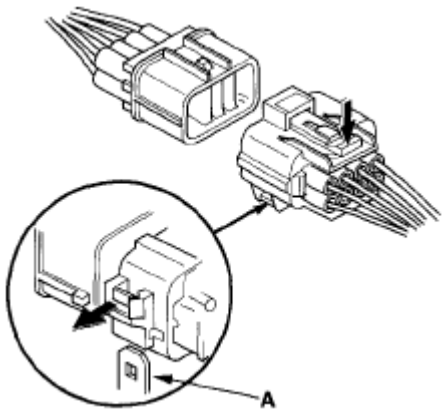

Fig. 3: Identifying Connector Mount Bracket

- Never try to disconnect connectors by pulling on their wires; pull on the connector halves instead.
- Always reinstall plastic covers.

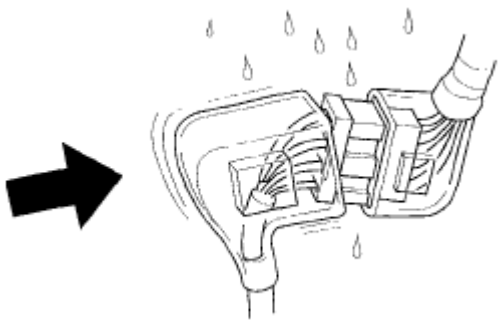

Fig. 4: Identifying Plastic Covers

- Before connecting connectors, make sure the terminals (A) are in place and not bent.

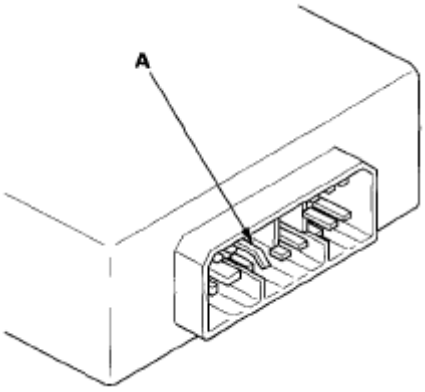

Fig. 5: Identifying Connector Terminals

- Check for loose retainer (A) and rubber seals (B).

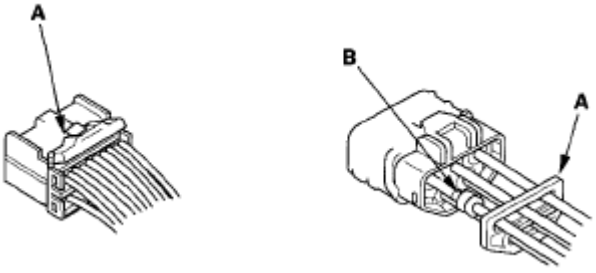

Fig. 6: Identifying Retainer And Rubber Seals

- The backs of some connectors are packed with dielectric grease. Add grease if necessary. If the grease is contaminated, replace it.

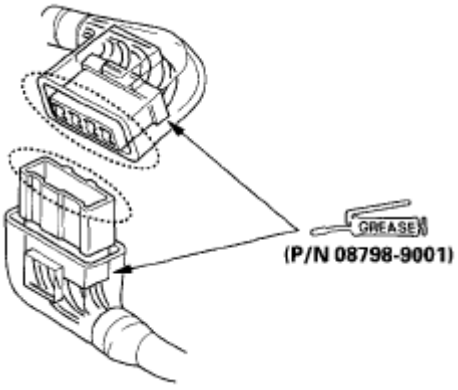

Fig. 7: Identifying Area Applying Grease

- Insert the connector all the way and make sure it is securely locked.
- Position wires so that the open end of the cover faces down.

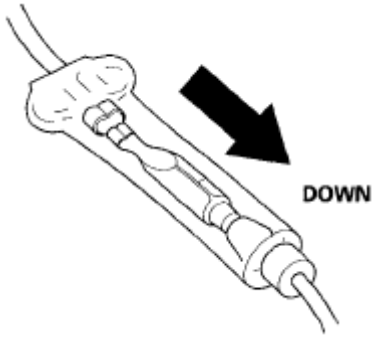

Fig. 8: Identifying Wires Cover Position

Handling Wires and Harnesses

- Secure wires and wire harnesses to the frame with their respective wire ties at the designated locations.
- Remove clips carefully; don't damage their locks (A).

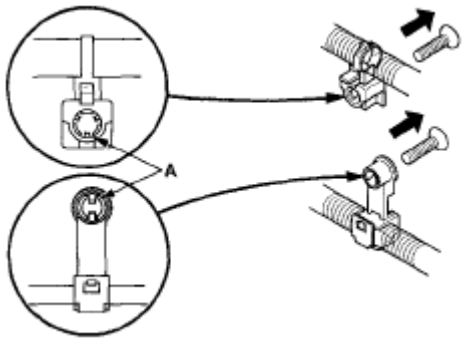

Fig. 9: Identifying Wire Harnesses Lock

- Slip pliers (A) under the clip base and through the hole at an angle, then squeeze the expansion tabs to release the clip.

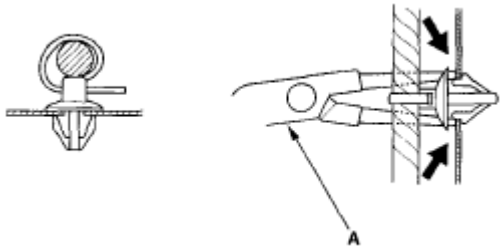

Fig. 10: Identifying Slip Pliers

- After installing harness clips, make sure the harness doesn't interfere with any moving parts.
- Keep wire harnesses away from exhaust components and other hot parts, from sharp edges of brackets and holes, and from exposed screws and bolts.
- Seat grommets in their grooves properly (A). Do not leave grommets distorted (B).

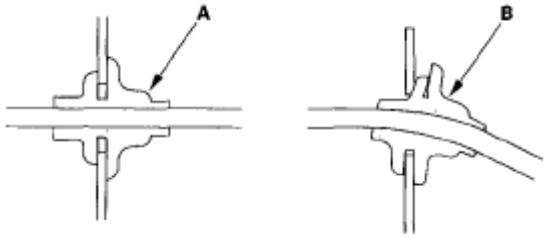

Fig. 11: Identifying Grommets Position

Testing and Repairs

- Do not use wires or harnesses with broken insulation. Replace them or repair them by wrapping the break with electrical tape.
- Never attempt to modify, splice, or repair SRS wiring. If there is an open or damage is SRS wiring or terminals, replace the harness.
- After installing parts, make sure that no wires are pinched under them.
- When using electrical test equipment, follow the manufacturer's instructions and those described in this information.
- If possible, insert the probe of the tester from the wire side (except waterproof connector).

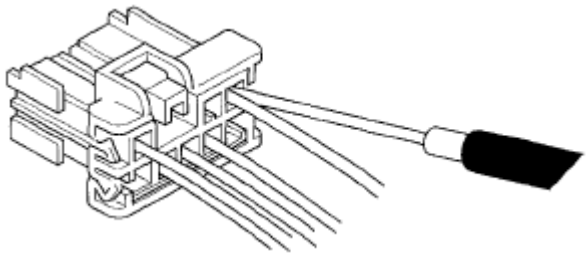

Fig. 12: Inserting Tester To Connector

- Use back probe adaptor 07TAZ-001020A.

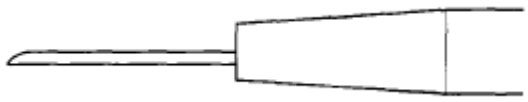

Fig. 13: Identifying Probe Adaptor 07TAZ-001020A

- Refer to the instructions in the Honda Terminal Kit for identification and replacement of connector terminals.

FIVE-STEP TROUBLESHOOTING

1. Verify The Complaint:

   Turn on all the components in the problem circuit to verify the customer complaint. Note the symptoms. Do not begin disassembly or testing until you have narrowed down the problem area.

2. Analyze The Schematic:

Look up the schematic for the problem circuit. Determine how the circuit is supposed to work by tracing the current paths from the power feed through the circuit components to ground. If several circuits fail at the same time, the fuse or a ground is a likely cause.

Based on the symptoms and your understanding of the circuit operation, identify one or more possible causes of the problem.

3. Isolate The Problem By Testing The Circuit: Make circuit tests to check the diagnosis you made in step 2. Keep in mind that a logical, simple procedure is the key to efficient troubleshooting. Test for the most likely cause of failure first. Try to make tests at points that are easily accessible.
4. Fix The Problem:

   Once the specific problem is identified, make the repair. Be sure to use proper tools and safe procedures.

5. Make Sure The Circuit Works:

   Turn on all components in the repaired circuit in all modes to make sure you've fixed the entire problem. If the problem was a blown fuse, be sure to test all of the circuits on the fuse. Make sure no new problems turn up and the original problem does not recur.

WIRE COLOR CODES

The following abbreviations are used to identify wire colors in the circuit schematics:

WIRE COLOR CODES

WHT	White
YEL	Yellow
BLK	Black
BLU	Blue
GRN	Green
RED	Red
ORN	Orange
PNK	Pink
BRN	Brown
GRY	Gray
PUR	Purple
LT BLU	Light Blue
LT GRN	Light Green

The wire insulation has one color or one color with another color stripe. The second color is the stripe.

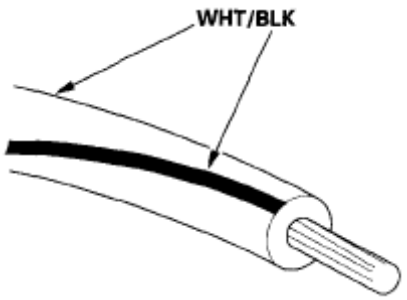

Fig. 14: Identifying Wire Color

HOW TO CHECK FOR DTCS WITH THE HONDA DIAGNOSTIC SYSTEM (HDS)

NOTE: For specific operations, refer to the user's manual that came with the Honda Diagnostic System (HDS).

1. Connect the HDS to the data link connector (A) located under the driver's side of the dashboard.

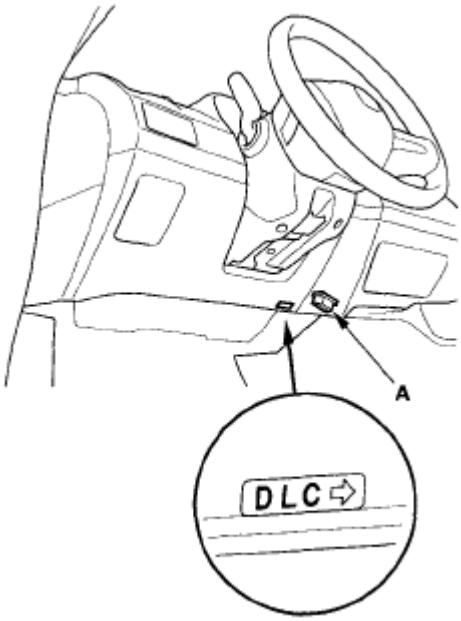

Fig. 15: Identifying Data Link Connector

2. Turn the ignition switch ON (II).
3. Make sure the HDS communicates with the vehicle, if it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Enter the BODY ELECTRICAL then select the TEST MODE menu.
5. Check for DTCs with the HDS.
6. If any DTCs are indicated, note them, and go to the indicated DTC troubleshooting.

2006-08 ELECTRICAL

Connectors and Harnesses - Civic (All Except Hybrid)

CONNECTOR INDEX

Identification numbers have been assigned to in-line connectors, junction connectors, and terminals. The number is preceded by the letter "C" for connectors, "G" for ground terminals, or "T" for non-ground terminals.

CONNECTOR INDEX

Harness	Location		
	Engine Compartment	Dashboard	Others (Floor, Door, Trunk, and Roof)
A/C WIRE HARNESS		C205, C505	
BATTERY GROUND CABLE	(-), G1		
CABLE REEL SUBHARNESS			
COIL SUBCORD (2-DOOR)			C852
CONSOLE SUBHARNESS (WITH REAR ACCESSORY POWER SOCKET)		C601	
DASHBOARD WIRE HARNESS (VIEW OF DRIVER'S SIDE)		C201, C202, C203, C501, C502, C751, C752, C801 G501, G503	
DASHBOARD WIRE HARNESS (VIEW OF MIDDLE)		C503 G504, G506	
DASHBOARD WIRE HARNESS (VIEW OF PASSENGER'S SIDE)		C505, C761, C762 G502, G505	
DRIVER'S DOOR SUBHARNESS (2-DOOR)			C754
DRIVER'S DOOR WIRE HARNESS (2-DOOR)		C751, C752	C753, C754
DRIVER'S DOOR WIRE HARNESS (4-DOOR)		C751, C752	C753
DRIVER'S SEAT POSITION SENSOR HARNESS			C602
ENGINE COMPARTMENT WIRE HARNESS (LEFT	C101, C102 G301	C201 through C205 G401	

BRANCH) (EXCEPT SI MODEL)			
ENGINE COMPARTMENT WIRE HARNESS (LEFT BRANCH) (SI MODEL)	C101, C102 G301	202 through C205, C207 G401	
ENGINE COMPARTMENT WIRE HARNESS (RIGHT BRANCH) (EXCEPT SI MODEL)	C206 G201, G202		
ENGINE COMPARTMENT WIRE HARNESS (RIGHT BRANCH) (SI MODEL)	C206, C207 G201, G202	G402, G403	
ENGINE GROUND CABLE A	T1, G2		
ENGINE GROUND CABLE B	T2, G3		
ENGINE WIRE HARNESS (A/T)	(+), C101, C102, C105, C107 T3, T4, T101, T102 G101		
ENGINE WIRE HARNESS (M/T EXCEPT SI MODEL)	(+), C101, C102, C103, C105 T3, T4, T101, T102 G101		
ENGINE WIRE HARNESS (SI MODEL)	(+), C101, C105, C106 G101		
FLOOR WIRE HARNESS (LEFT BRANCH) (2-DOOR)		C204, C501, C502, C601	C701, C852 G601
FLOOR WIRE HARNESS (LEFT BRANCH) (4-DOOR)	C207	C204, C501, C502, C601, C602	C701, C702, C771 G601, G603
FLOOR WIRE HARNESS (RIGHT BRANCH) (2-DOOR)			C782 G602
FLOOR WIRE HARNESS (RIGHT BRANCH) (4-DOOR)			C781, C782 G602
FRONT PASSENGER'S DOOR WIRE HARNESS (4-DOOR)		C761, C762	
KNOCK SENSOR SUBHARNESS (M/T)	C103		
LEFT REAR DOOR WIRE HARNESS (4-DOOR)			C771

ODS unit harness			C782
PASSENGER'S DOOR SUBHARNESS (2-DOOR)			C763
PASSENGER'S DOOR WIRE HARNESS (2-DOOR)		C761, C762	C763
REAR WINDOW DEFOGGER GROUND WIRE (2-DOOR EXCEPT SI MODEL)			G801
REAR WINDOW DEFOGGER GROUND WIRE (2-DOOR SI MODEL)			G801
REAR WINDOW DEFOGGER GROUND WIRE (4-DOOR)			G801
REAR WIRE HARNESS (LEFT BRANCH) (2-DOOR EXCEPT SI MODEL)			C701 G701
REAR WIRE HARNESS (LEFT BRANCH) (2-DOOR SI MODEL)			C701, C703
REAR WIRE HARNESS (LEFT BRANCH) (4-DOOR)			C701, C702 G701
REAR WIRE HARNESS (RIGHT BRANCH) (2-DOOR EXCEPT SI MODEL)			
REAR WIRE HARNESS (RIGHT BRANCH) (2-DOOR SI MODEL)			
REAR WIRE HARNESS (RIGHT BRANCH) (4-DOOR)			
RIGHT REAR DOOR WIRE HARNESS (4-DOOR)			C781
ROOF WIRE HARNESS (2-DOOR WITH MOONROOF)		C801	
ROOF WIRE HARNESS (2-DOOR WITHOUT MOONROOF)		C801	
ROOF WIRE HARNESS (4-DOOR WITH		C801	

MOONROOF)			
ROOF WIRE HARNESS (4-DOOR WITHOUT MOONROOF)		C801	
SHIFT SOLENOID WIRE HARNESS (A/T)		C107	
STARTER SUBHARNESS (SI MODEL)	(+), C102 through C106 T3, T4, T101, T102		
TRUNK LID SPOILER SUBHARNESS ('07 4-DOOR SI MODEL)			C703
TRUNK LID SPOILER SUBHARNESS (2-DOOR SI MODEL)			C703

CONNECTOR TO HARNESS INDEX

Ground Distribution - Civic (Except Hybrid)

GROUND TO COMPONENTS INDEX

NOTE: Refer to the GROUND DISTRIBUTION (GX) article for additional information for the GX model.

GROUND TO COMPONENTS INDEX

Ground	Component or Circuit Grounded
G1	Battery
G2	Engine
G3	Transmission housing
G101	ECM/PCM (PG is BLK; LG is BRN/YEL) BLK: A/T clutch pressure control solenoid valves A, B, C, ECM/PCM, EGR valve. Fuel tank pressure sensor, Ignition coils, Transmission range switch (A/T), VTC oil control solenoid valve BRN/YEL: CKP sensor, CMP sensor A, CMP sensor B, Data link connector (DLC), ECM/PCM, Immobilizer-keyless control unit Shielding between the ECM/PCM and these components have BRN/YEL wires: Knock sensor (KS), Secondary H02S (Sensor 2)
G201	Right headlights (high/low beams), Right front side marker/parking/turn signal lights, Windshield wiper motor. Windshield washer motor
G202	ABS modulator-control unit (Except Si model with VSA), VSA modulator-control unit (2 wires) (Si model with VSA)
G301	Blower motor relay, A/T condenser fan motor, Fan control relay, Left headlights (high/low beams), Left front side marker/parking/turn signal lights
G401	Brake fluid level switch, Clutch pedal position switch (for cruise control), Driver's door lock knob switch (2-door), Driver's door key cylinder switch (2-door), Hood switch (with security), MICU (PG), Power steering pressure (PSP) switch (4-door), Power transistor, Starter cut relay, Washer fluid level switch (Canada), Starter cut relay (M/T without clutch interlock) (G401 connects to G601 via under-dash fuse/relay box)
G402	EPS control unit
G403	Torque sensor
G501	BLK wire: Dash lights brightness controller-odometer select/reset button, Driver's power motor, MICU (SG), Power mirror switch (2-door), Power window mater switch BRN wire: Driver's door lock knob switch (4-door), Driver's door key cylinder switch (4-door), Left power mirror defogger (2-door)
G502	Data link connector (DLC), Front accessory power socket, Right power mirror defogger
G503	Accessory power socket relays (front and rear), Driver's door lock switch, Driver's window motor (2-door with AUTO UP/AUTO DOWN function), Gauge control module (tach), Heater control panel/HVAC control unit. Left power mirror defogger, Moonroof control unit/motor, Power mirror switch (4-door), Power mirror switch light (4-door), Power window master switch, Power window master switch (main switch)
G504	Cable reel (steering wheel switches ground). Front passenger's door lock knob switch, Front passenger's door lock knob switch, Gauge control module (tach). Gauge control module (speedo). Heater control panel/HVAC control unit, Ignition key switch
G505	Audio unit or navigation unit. Stereo amplifier (2 wires) (2-door)

G506	Memory erase signal (MES) connector, SRS unit (2 wires)
G601	Fuel pump, MICU (PG), Rear accessory power socket. Transmission gear selection switch light/Park-pin switch (G601 connects to G401 via under-dash fuse/relay box)
	Shielding between the SRS unit and left side impact sensor (FIRST) has BLK wire. Shielding between the left side impact sensor (FIRST) and rear safing sensor has BLK wire.
G602	Driver's seat belt buckle switch, Front passenger's seat belt buckle switch, Left rear door lock knob switch (4-door with security), MICU (SG), MICU service check connector, ODS unit, Power window relay (without AUTO UP/AUTO DOWN function). Right rear door lock knob switch (4-door with security), Yaw rate-lateral acceleration sensor (Si model with VSA)
	Shielding between the SRS unit and right side impact sensor (FIRST) has BLK wire. Shielding between the left side impact sensor (FIRST) and right side impact sensor (SECOND) have BLK wires. 2-door: Shielding between the rear safing sensor and left side impact sensor (SECOND) has BLK wire.
G603 (4-door)	Noise condenser
	Shielding between the rear safing sensor and left side impact sensor (SECOND) has BLK wire.
G701	High mount brake light, Left taillight/brake light. Left inner taillight (4-door), Left rear side marker light, Left back-up light, Left rear turn signal light, License plate lights, Right taillight/brake light, Right inner taillight (4-door), Right rear side marker light. Right back-up light, Right rear turn signal light. Trunk lid latch switch, Trunk key cylinder switch (USA LX and EX models), Trunk lid release actuator (USA EX model)
G801	Rear window defogger (-)
G851	Moonroof control unit/motor (2-door)

2006-09 ELECTRICAL

Power Distribution - Civic (Except Hybrid)

FUSE TO COMPONENTS INDEX

NOTE: Refer to the POWER DISTRIBUTION (GX) (SUPPLEMENT) article for additional information for the GX model.

UNDER-HOOD FUSE/RELAY BOX

FUSE TO COMPONENTS INDEX (UNDER-HOOD FUSE/RELAY BOX)

Fuse Number	Amps	Component(s) or Circuit(s) Protected
1	100 A (BAT)	Battery, Power distribution
	70 A (EPS)	EPS control unit
2	50 A (IG)	Ignition switch
	80 A (OPTION)	No. 5, No. 6, No. 7, No. 27, No. 28, No. 29, and No. 31 fuses (in the under-dash fuse/relay box)
3	30 A (ABS MTR)	ABS modulator-control unit (Except Si model with VSA), VSA modulator-control unit (Si model with VSA)
	30 A (ABS FSR)	ABS modulator-control unit (Except Si model with VSA), VSA modulator-control unit (Si model with VSA)
4	50 A (H/L)	No. 18, No. 19, No. 20, and No. 21 fuses (in the under-dash fuse/relay box)
	40 A (PAW)	No. 24, No. 25, No. 26, No. 30, No. 32, and No. 33 fuses (in the under-dash fuse/relay box)
5	-	Not used
6	20 A	A/C condenser fan motor (via A/C condenser fan relay)
7	20 A (M/T)	Radiator fan motor (via radiator fan relay)
	30 A (A/T)	Radiator fan motor (via radiator fan relay)
8	30 A (4-door)	Rear window defogger (via rear window defogger relay)
	40 A (2-door)	
9	40 A	Blower motor (via blower motor relay)
10	10A	Hazard lights
11	15A	A/F sensor (Sensor 1), ECM/PCM
12	15A	Brake lights, ECM/PCM, Horn, MICU
13	-	Not used
14	-	Not used
15	7.5 A	A/C condenser fan relay
16	-	Not used
17	15A	Stereo amplifier (2-door with premium sound system)
18	15A	Iqnition coils, ECM/PCM
19	15A	CKP sensor, CMP sensor B, ECM/PCM, ETCS control relay, Injectors, PGM-FI main relay 1 (Fl MAIN), PGM-FI main relay 2 (FUEL PUMP)
20	7.5 A	A/C compressor clutch (via A/C compressor clutch relay)
21	15A	ECM/PCM (via ETCS control relay)

22	7.5 A	RED [LT BLU]
23	10A	Audio unit. Data link connector, Gauge control module (tach). Gauge control module (speedo), Hazard warning switch, Immobilizer-keyless control unit, MICU
[ ] : 2-door

UNDER-DASH FUSE/RELAY BOX

FUSE TO COMPONENTS INDEX (UNDER-DASH FUSE/RELAY BOX)

Fuse Number	Amps	Component(s) or Circuit(s) Protected
1	7.5 A	Power mirror switch light (4-door), Power window relay (without key-off operation)
		Power window relay (without key-off operation)
2	15A	CMP sensor A, ECM/PCM
		Immobilizer-keyless control unit
3	10A	Alternator, ECM/PCM, EVAP canister purge valve, EVAP canister vent shut valve, MAF sensor
4	7.5 A	ABS modulator-control unit (Except Si model with VSA), VSA modulator-control unit (Si model with VSA), Yaw rate-lateral acceleration sensor (Si model with VSA), EPS control unit
5	15A	Stereo amplifier (2-door EX model)
6	--	Not used
7	--	Not used
8	--	Not used
9	7.5 A	ODS unit
		Passenger's airbag CUTOFF indicator, SRS unit
10	7.5 A	Gauge control module (tach), Power window master switch (2-door with AUTO UP/AUTO DOWN), Back-up light switch (M/T), Shift lock solenoid (A/T), MICU

11	10A	SRS unit
12	10A	Right headlight (high beam)
13	10A	Left headlight (high beam)
14	7.5 A	Audio unit light, Dash lights brightness controller light, Hazard warning switch light. Heater control panel light/HVAC control unit light, Moonroof switch light, Passenger's airbag CUTOFF indicator light, Select/reset switch light
15	7.5 A	Parking lights, Taillights, License plate lights, Side marker lights
16	10A	Right headlight (low beam)
17	10A	Left headlight (low beam)
18	20 A	MICU (+B H/L HI)
19	15A	MICU (+B SMALL LT)
20	-	Not used
21	20 A	MICU (+B H/L LO)
22	--	Not used
23	-	Not used
24	20 A	Moonroof control/motor
25	20 A	MICU (+B DR LOCK)
26	20 A	Driver's window motor (via power window master switch)
27	--	Not used
28	15A	Rear accessory power socket
29	15A	Front accessory power socket
30	20 A	Front passenger's window motor (4-door), Moonroof switch (2-door), Moonroof control unit/motor (2-door), Passenger's window motor (2-door)
31	-	Not used
32	20 A	Right rear window motor (4-door), Moonroof switch (4-door), Moonroof control unit/motor (4-door)
33	20 A	Left rear window motor (4-door)
34	-	Not used
35	7.5 A	Audio unit. Front accessory power socket, Rear accessory power socket, Stereo amplifier (2-door EX model)
36	10A	Heater control panel/HVAC control unit. Power mirrors, Recirculation control motor, Under-hood fuse/relay box (A/C compressor clutch relay. Blower motor relay. Power mirror defogger relay(1), Rear window defogger relay). Cooling fan control relay and radiator ran relay (via A/C diode)
37	7.5 A	MICU (daytime running lights power supply)
38	30 A	MICU (IG 1 WIPER)

Relays - Civic (Except Hybrid)

POWER RELAY TEST

NOTE: Refer to the RELAYS (GX) article for additional information for the GX model.

Use this chart to identify the type of relay, then do the test listed for it.

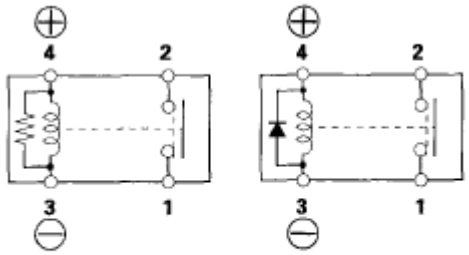
RELAY TYPES REFERENCE

Relay	Test
A/C compressor clutch relay	Normally-open type
A/C condenser fan relay	
Blower motor relay	
ETCS control relay	
Front accessory power socket relay	
Ignition coil relay	
PGM-FI main relay 1 (Fl MAIN)	
PGM-FI main relay 2 (FUEL PUMP)	
PGM-FI subrelay	
Power window relay	
Radiator fan relay	
Rear accessory power socket relay	
Rear window defogger relay	
Seat Heater (HIGH)	
Starter cut relay	
Fan control relay	Five-terminal type
Power mirror defogger relay	
Seat Heater (LOW) (1)	
(1) 2008-09 Model	

NORMALLY-OPEN TYPE

Check for continuity between the terminals.

- There should be continuity between the No. 1 and No. 2 terminals when battery positive terminal is connected to the No. 4 terminal, and battery negative terminal is connected to the No. 3 terminal.
- There should be continuity between the No. 1 and No. 2 terminals when power is disconnected.



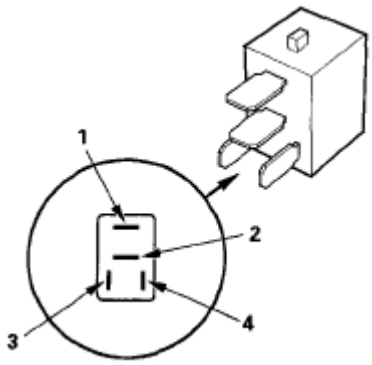


Fig. 1: Power Relay Test - Normally-Open Type

FIVE-TERMINAL TYPE

Check for continuity between the terminals.

- There should be continuity between the No. 1 and No. 2 terminals when battery positive terminal is connected to the No. 5 terminal, and battery negative terminal is connected to the No. 3 terminal.
- There should be continuity between the No. 1 and No. 4 terminals when power is disconnected.

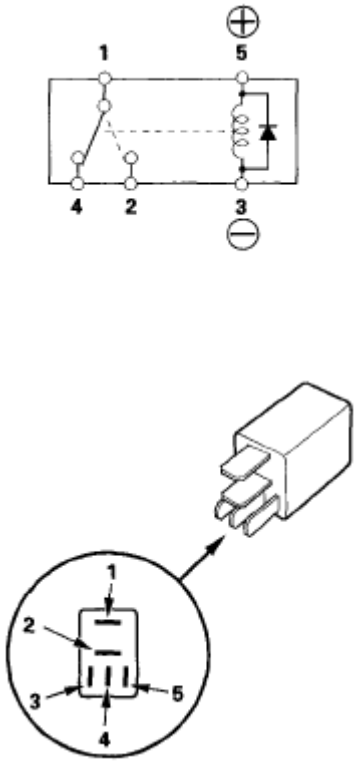

Fig. 2: Power Relay Test - Five-Terminal Type

2006-09 ELECTRICAL

Under-dash Fuse/Relay Box - Civic (Except Hybrid)

REMOVAL AND INSTALLATION

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) in the SRS before doing repairs or service.

REMOVAL

1. Make sure you have the anti-theft code for the audio or the navigation system, then write down the audio presets.
2. Make sure the ignition switch is OFF.
3. Disconnect the negative battery cable, then disconnect the positive cable, and wait at least 3 minutes.
4. Remove the driver's dashboard lower cover (see **DRIVER'S DASHBOARD LOWER COVER REMOVAL/INSTALLATION**).
5. Disconnect the connectors from the fuse side of the under-dash fuse/relay box (A).

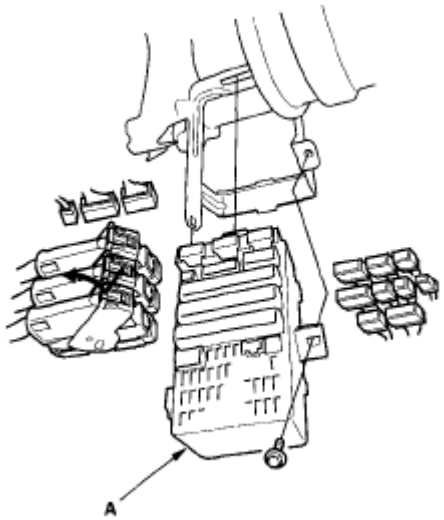

Fig. 1: Identifying Under-Dash Fuse/Relay Box

6. Remove the mounting bolt, and pull the fuse/relay box away from the body.
7. Disconnect the connectors from the back side of the under-dash fuse/relay box, then remove the under-dash fuse/relay box.
8. Carefully remove the relays by prying under the base of the relay.

NOTE: Do not use pliers. Pliers will damage the relays, which could cause the engine to stall or not start.

INSTALLATION

1. Install the relays and connect the connectors to the under-dash fuse/relay box, then install the under-

dash fuse/relay box in the reverse order of removal.

2. Install the removed parts in the reverse order of removal.
3. Connect the positive cable to the battery, then connect the negative cable to the battery.
4. Register the immobilizer system with the HDS (see **IMMOBILIZER-KEYLESS CONTROL UNIT INPUT TEST**).

NOTE: The IMOES unit is built into the MICU which is part of the under-dash fuse/relay box. Because of this construction, the IMOES must be registered, or the vehicle will not start.

5. Enter the anti-theft code for the audio or the navigation system, then enter the customer's audio presets, and set the clock.
6. Confirm that all systems work properly.

2006-09 ELECTRICAL

Under-hood Fuse/Relay Box - Civic (Except Hybrid)

REMOVAL AND INSTALLATION

REMOVAL

1. Make sure you have the anti-theft code for the audio or the navigation system, then write down the audio presets.
2. Make sure the ignition switch is OFF.
3. Disconnect the negative battery cable, then disconnect the positive cable, and wait at least 3 minutes.
4. Remove the screws (A) for the alternator and battery cable terminals from the under-hood fuse/relay box.

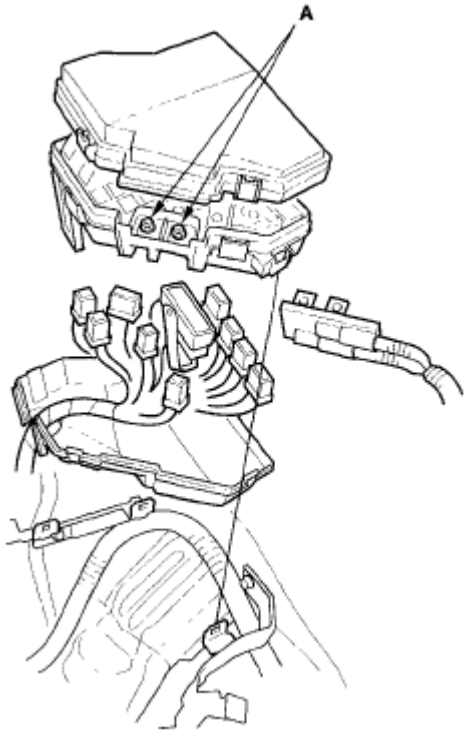

Fig. 1: Identifying Screws

5. Remove the bottom cover from the under-hood fuse/relay box.
6. Disconnect the connectors from the under-hood fuse/relay box.
7. Carefully remove the relays by prying under the base of the relay.

NOTE: Do not use pliers. Pliers will damage the relays, which could cause the engine to stall or not start.

INSTALLATION

1. Install the relays and connect the connectors to the under-hood fuse/relay box, then install the under-

hood fuse/relay box in the reverse order of removal.

2. Install the removed parts in the reverse order of removal.
3. Connect the positive cable to the battery, then connect the negative cable to the battery.
4. Enter the anti-theft code for the audio or the navigation system, then enter the customer's audio presets, and set the clock.
5. Confirm that all systems work properly.

2006-08 ELECTRICAL

Charging System (K20Z3) - Civic (All Except Si)

COMPONENT LOCATION INDEX

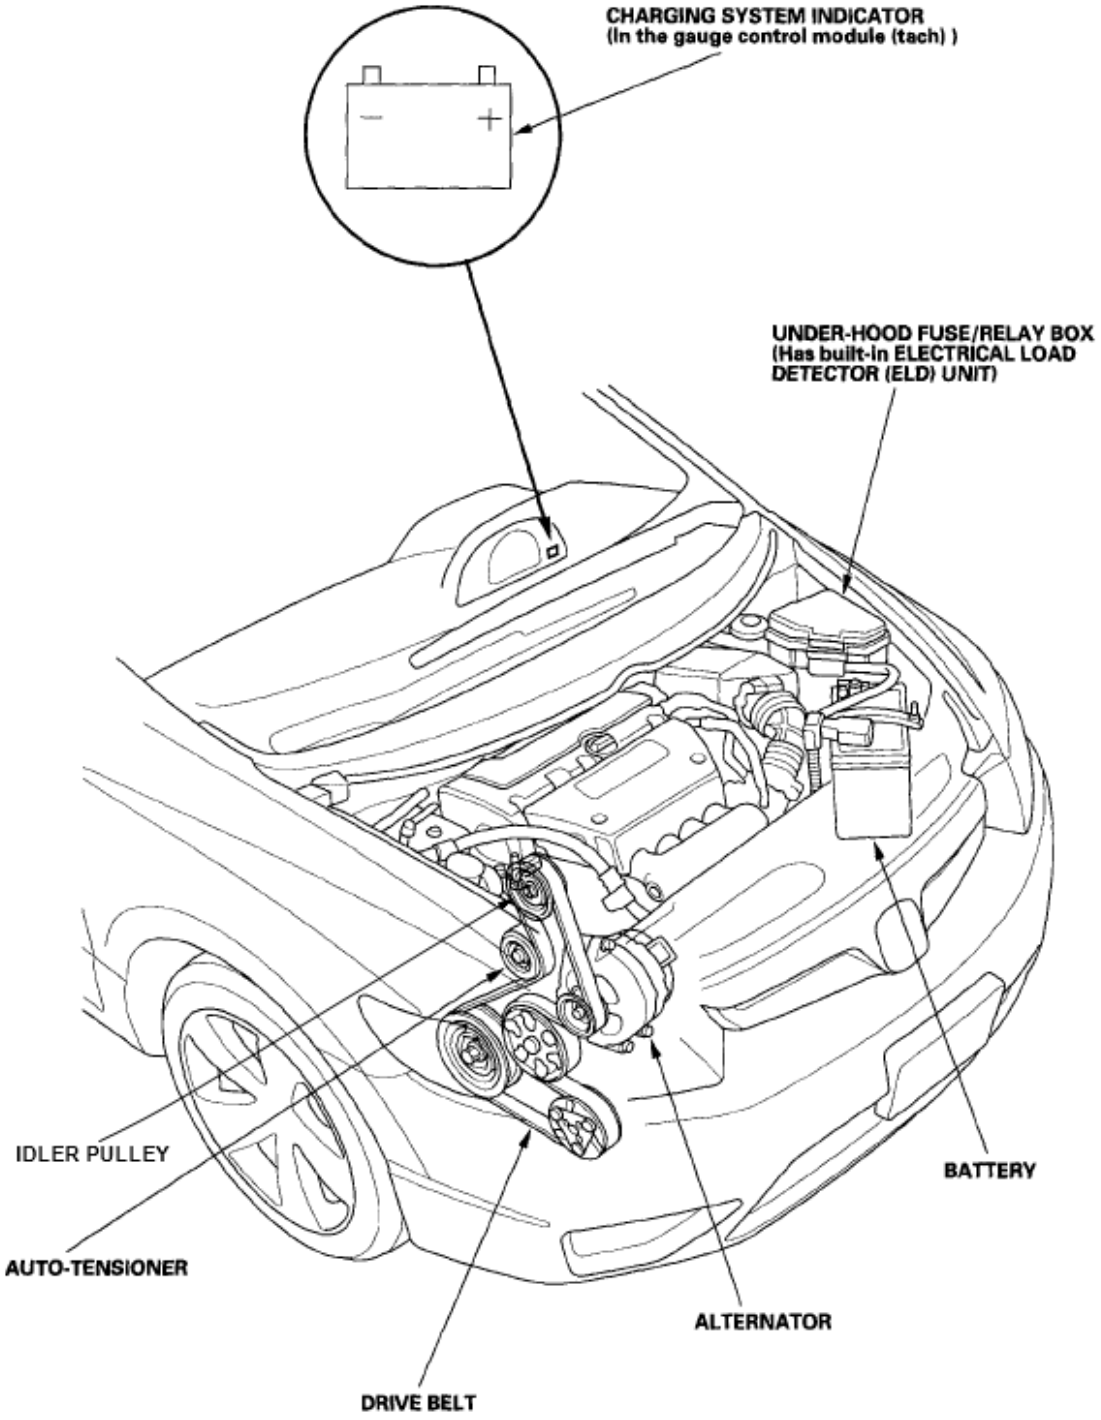

Fig. 1: Locating Charging System Components (K20Z3)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYMPTOM TROUBLESHOOTING INDEX

SYMPTOM TROUBLESHOOTING INDEX

Symptom	Diagnostic procedure
Charging system indicator does not come on with the ignition switch ON (II)	**TROUBLESHOOT THE CHARGING SYSTEM INDICATOR CIRCUIT**
Charging system indicator stays on	1. Check for PGM-FI DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). 2. Troubleshoot the charging system indicator circuit (see **CHARGING SYSTEM INDICATOR CIRCUIT TROUBLESHOOTING**). 3. Check for a broken drive belt (see **DRIVE BELT INSPECTION**). 4. Check the drive belt auto-tensioner (see **DRIVE BELT AUTO-TENSIONER INSPECTION**).
Battery discharged	1. Check for excessive parasitic electrical current draw with the ignition switch off, and the key removed. The multiplex control unit may take up to 10 minutes to turn off (sleep mode) for some models. 2. Check for a broken drive belt (see **DRIVE BELT INSPECTION**). 3. Check the drive belt auto-tensioner (see **DRIVE BELT AUTO-TENSIONER INSPECTION**). 4. Troubleshoot the alternator and regulator circuit (see **ALTERNATOR AND REGULATOR CIRCUIT TROUBLESHOOTING**). 5. Check for a poor connection at the battery terminal. 6. Test the battery (see **BATTERY TEST**).
Battery overcharged	1. Troubleshoot the alternator and regulator circuit (see **ALTERNATOR AND REGULATOR CIRCUIT TROUBLESHOOTING**). 2. Test the battery (see **BATTERY TEST**).

CIRCUIT DIAGRAM

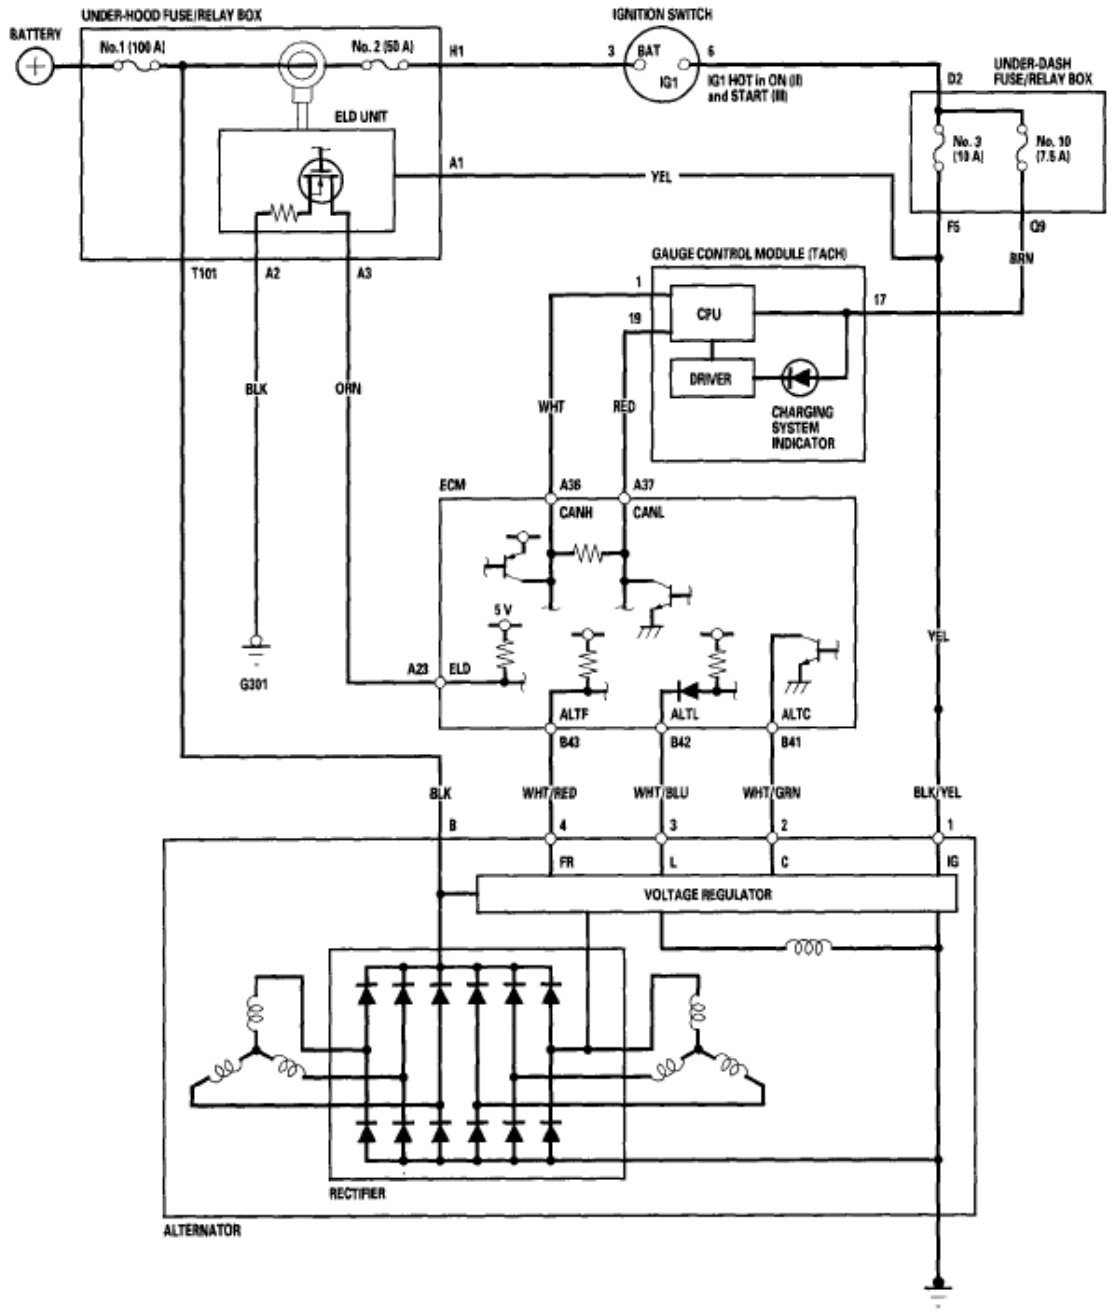

Fig. 2: Charging System - Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CHARGING SYSTEM INDICATOR CIRCUIT TROUBLESHOOTING

1. Turn the ignition switch ON (II).

   Does the charging system indicator come on?

   YES - Go to step 2.

   NO - Go to step 14.

2. Start the engine. Hold the engine speed at 2,000 rpm for 1 minute.

   Does the charging system indicator go off?

   YES - Charging system indicator circuit is OK. Go to the alternator and regulator circuit troubleshooting (see **ALTERNATOR AND REGULATOR CIRCUIT TROUBLESHOOTING**).

   NO - Go to step 3.

3. Do the gauge control module self-diagnostic function procedure (see **SELF-DIAGNOSTIC FUNCTION**).

   Does the charging system indicator flash?

   YES - Go to step 4.

   NO - Replace the gauge control module (tach) (see **REPLACEMENT**).

4. Turn the ignition switch OFF.
5. Disconnect the alternator 4P connector.
6. Turn the ignition switch ON (II).

   Does the charging system indicator go off?

   YES - Replace the alternator (see **ALTERNATOR REMOVAL AND INSTALLATION**), or repair the alternator (see **ALTERNATOR OVERHAUL**).

   NO - Go to step 7.

7. Turn the ignition switch OFF.
8. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 in **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
9. Turn the ignition switch ON (II).
10. Make sure the HDS communicates with the vehicle and the engine control module (ECM). If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
11. Jump the SCS line with the HDS, then turn the ignition switch OFF.

    NOTE: This step must be done to protect the ECM from damage.

12. Disconnect ECM connector B (44P).
13. Check for continuity between ECM connector terminal B42 and body ground.

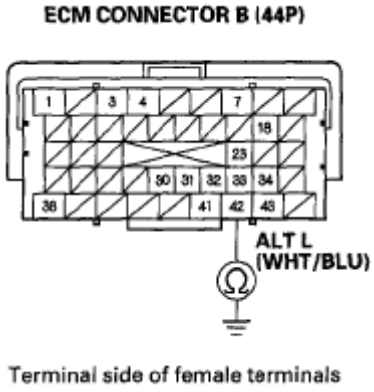

Fig. 3: Checking Continuity Between ECM Connector Terminal B42 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the alternator and the ECM.

NO - Update the ECM if it does not have the latest software (see **UPDATING THE ECM**), or substitute a known-good ECM (see **SUBSTITUTING THE ECM**), then recheck. If the symptom/indication goes away with a known-good ECM, replace the original ECM (see **ECM REPLACEMENT**).

14. Do the gauge control module self-diagnostic function procedure (see **SELF-DIAGNOSTIC FUNCTION**).

    Does the charging system indicator flash?

    YES - Go to step 15.

    NO - Replace the gauge control module (tach) (see **REPLACEMENT**).

15. Turn the ignition switch OFF.
16. Disconnect the alternator 4P connector.
17. Connect alternator 4P connector terminal No. 3 and body ground with a jumper wire.

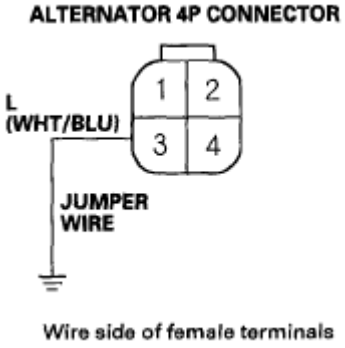

Fig. 4: Connecting Alternator 4P Connector Terminal No. 3 And Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Turn the ignition switch ON (II).

    Does the charging system indicator come on?

    YES - Replace the alternator (see **ALTERNATOR REMOVAL AND INSTALLATION**), or repair the alternator (see **ALTERNATOR OVERHAUL**).

    NO - Go to step 19.

19. Turn the ignition switch to LOCK (0).
20. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 in **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
21. Turn the ignition switch ON (II).
22. Make sure the HDS communicates with the vehicle and the ECM. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
23. Jump the SCS line with the HDS, then turn the ignition switch OFF.

    NOTE: This step must be done to protect the ECM from damage.

24. Disconnect ECM connector B (44P).
25. Check for continuity between ECM connector terminal B42 and alternator 4P connector terminal No. 3.

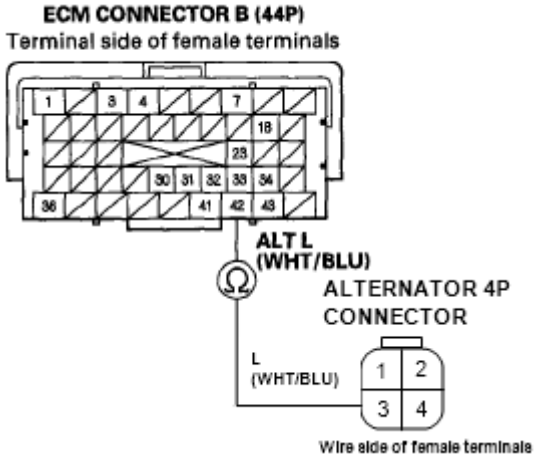

Fig. 5: Checking Continuity Between ECM Connector Terminal B42 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Update the ECM if it does not have the latest software (see **UPDATING THE ECM**), or substitute a known-good ECM (see **SUBSTITUTING THE ECM**), then recheck. If the symptom/indication goes away with a known-good ECM, replace the original ECM (see **ECM REPLACEMENT**).

NO - Repair open in the wire between the alternator and the ECM.

ALTERNATOR AND REGULATOR CIRCUIT TROUBLESHOOTING

1. Make sure the battery connections are good and the battery is sufficiently charged.
2. Connect a VAT-40 (or equivalent tester), and turn the selector switch to position 1 (starting).

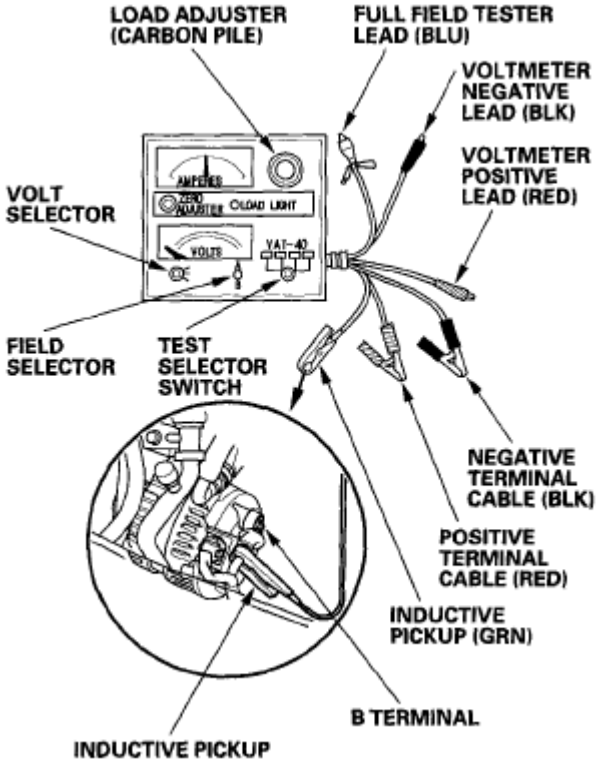

Fig. 6: Turning Selector Switch To Position 1 (Starting)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Start the engine. Hold the engine speed at 3,000 rpm, with no load until the radiator fan comes on, then let it idle.
4. Raise the engine speed to 2,000 rpm, and hold it there.

   Is the voltage over 15.1 V?

   YES - Replace the alternator (see **ALTERNATOR REMOVAL AND INSTALLATION**), or rear housing assembly (see **ALTERNATOR OVERHAUL**).

   NO - Go to step 5.

5. Release the accelerator pedal, and let the engine idle.
6. Turn off all the accessories. Select the charging test on the tester.
7. Remove the inductive pickup, and zero the ammeter.
8. Place the inductive pickup over the B terminal wire of the alternator so the arrow points away from the alternator.
9. Raise the engine speed to 2,000 rpm, and hold it there.

   Is the voltage less than 13.5 V?

YES - Go to alternator control circuit troubleshooting (see **ALTERNATOR CONTROL CIRCUIT TROUBLESHOOTING**).

NO - Go to step 10.

10. Apply a load with the VAT-40 until the battery voltage drops within 12-13.5 V.

    Is the amperage 87.5 A or more?

    YES - The charging system is OK.

    NOTE: If the charging system indicator is still on, replace the alternator (see ALTERNATOR REMOVAL AND INSTALLATION).

    NO - Replace the alternator (see **ALTERNATOR REMOVAL AND INSTALLATION**), or repair the alternator (see **ALTERNATOR OVERHAUL**).

ALTERNATOR CONTROL CIRCUIT TROUBLESHOOTING

1. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 in **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
2. Turn the ignition switch ON (II).
3. Make sure the HDS communicates with the vehicle and the engine control module (ECM). If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Check for DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). If a DTC is present, diagnose and repair the cause before continuing with this test.
5. Disconnect the alternator 4P connector from the alternator.
6. Start the engine, and turn on the headlights to high beam.
7. Measure the voltage between alternator 4P connector terminal No. 2 and the positive terminal of the battery.

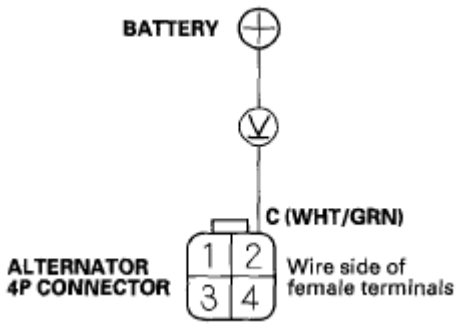

Fig. 7: Measuring Voltage Between Alternator 4P Connector Terminal No. 2 And Positive Terminal Of Battery
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 1 V or less?

YES - Go to step 11.

NO - Go to step 8.

8. Jump the SCS line with the HDS, then turn the ignition switch OFF.

NOTE: This step must be done to protect the ECM from damage.

9. Disconnect ECM connector B (44P).
10. Check for continuity between ECM connector terminal B41 and body ground.

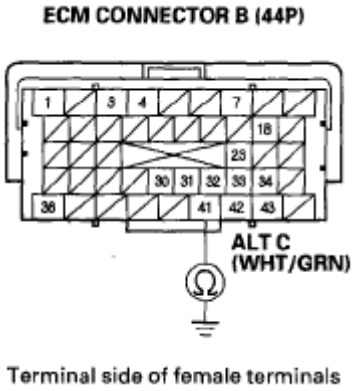

Fig. 8: Checking Continuity Between ECM Connector Terminal B41 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the alternator and the ECM.

NO - Update the ECM if it does not have the latest software (see **UPDATING THE ECM**), or substitute a known-good ECM (see **SUBSTITUTING THE ECM**), then recheck. If the symptom/indication goes away with a known-good ECM, replace the original ECM (see **ECM REPLACEMENT**).

11. Jump the SCS line with the HDS, then turn the ignition switch OFF.

NOTE: This step must be done to protect the ECM from damage.

12. Disconnect ECM connector B (44P).
13. Check for continuity between ECM connector terminal B41 and alternator 4P connector terminal No. 2.

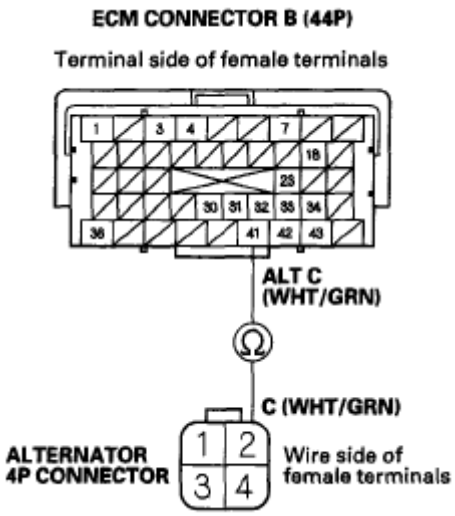

Fig. 9: Checking Continuity Between ECM Connector Terminal B41 And Alternator 4P Connector Terminal No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the alternator (see **ALTERNATOR REMOVAL AND INSTALLATION**), or repair the alternator (see **ALTERNATOR OVERHAUL**).

NO - Repair open in the wire between the alternator and the ECM.

DRIVE BELT INSPECTION

1. Inspect the belt for cracks and damage. If the belt is cracked or damaged, replace it.
2. Check that the auto-tensioner indicator (A) is within the standard range (B) as shown. If it is out of the standard range, replace the drive belt (see **DRIVE BELT INSPECTION**).

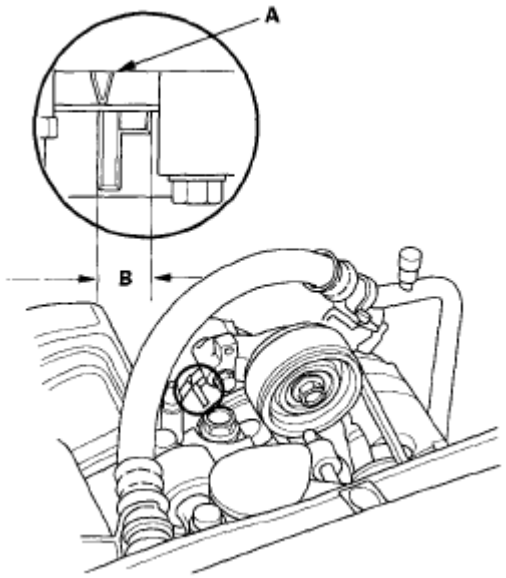

Fig. 10: Checking Auto-Tensioner Indicator Is Within Standard Range

Courtesy of AMERICAN HONDA MOTOR CO., INC.

DRIVE BELT REMOVAL/INSTALLATION

Special Tools Required

Belt tension release tool Snap-on YA9317 or equivalent, commercially available

1. Move the auto-tensioner (A) using the belt tension release tool to relieve tension from the drive belt, then remove the drive belt.

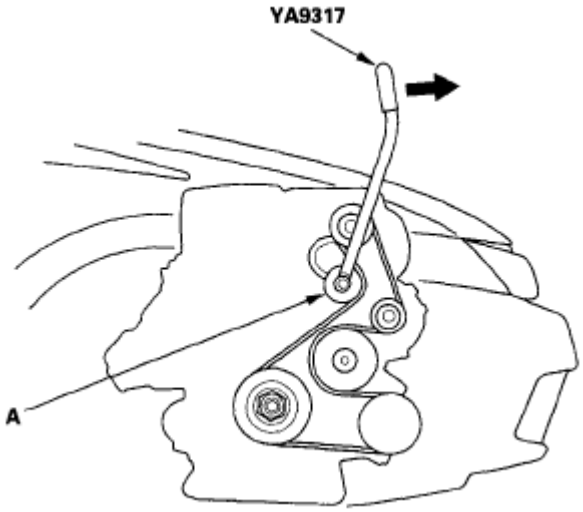

Fig. 11: Moving Auto-Tensioner Using Belt Tension Release Tool To Relieve Tension From Drive Belt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the new belt in the reverse order of removal.

DRIVE BELT AUTO-TENSIONER INSPECTION

Special Tools Required

Belt tension release tool Snap-on YA9317 or equivalent, commercially available

1. Turn the ignition switch ON (II), and make sure to turn the A/C switch OFF. Turn the ignition switch OFF.
2. Check the position of the auto-tensioner indicator's pointer (A). Start the engine then check the position again with the engine idling. If the position of the indicator moves of fluctuates a lot, replace the auto-tensioner (see **DRIVE BELT AUTO-TENSIONER REMOVAL/INSTALLATION**).

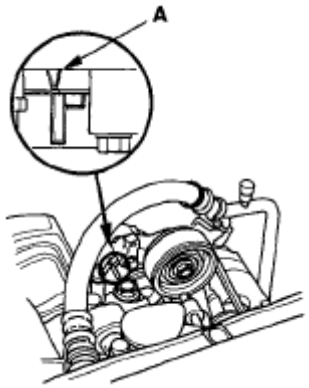

Fig. 12: Checking Position Of Auto-Tensioner Indicator's Pointer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check for abnormal noise from the tensioner pulley. If you hear abnormal noise, replace the tensioner pulley.
4. Remove the drive belt (see **DRIVE BELT INSPECTION**).
5. Move the auto-tensioner within its limit using the belt tension release tool in the direction shown. Check that the tensioner moves smoothly and without any abnormal noise. If the tensioner does not move smoothly, or you hear abnormal noise, replace the auto-tensioner (see **DRIVE BELT AUTO-TENSIONER REMOVAL/INSTALLATION**).

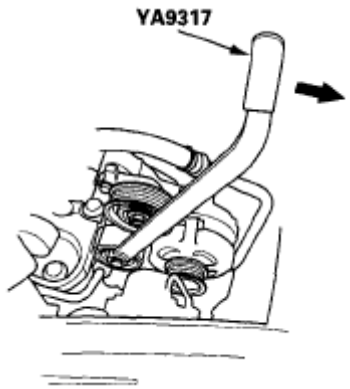

Fig. 13: Moving Auto-Tensioner Within Its Limit Using Belt Tension Release Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the auto-tensioner (see **DRIVE BELT AUTO-TENSIONER REMOVAL/INSTALLATION**).
7. Clamp the auto-tensioner (A) by using two 8 mm bolts (B) and a vise (C) as shown. Do not clamp the auto-tensioner itself.

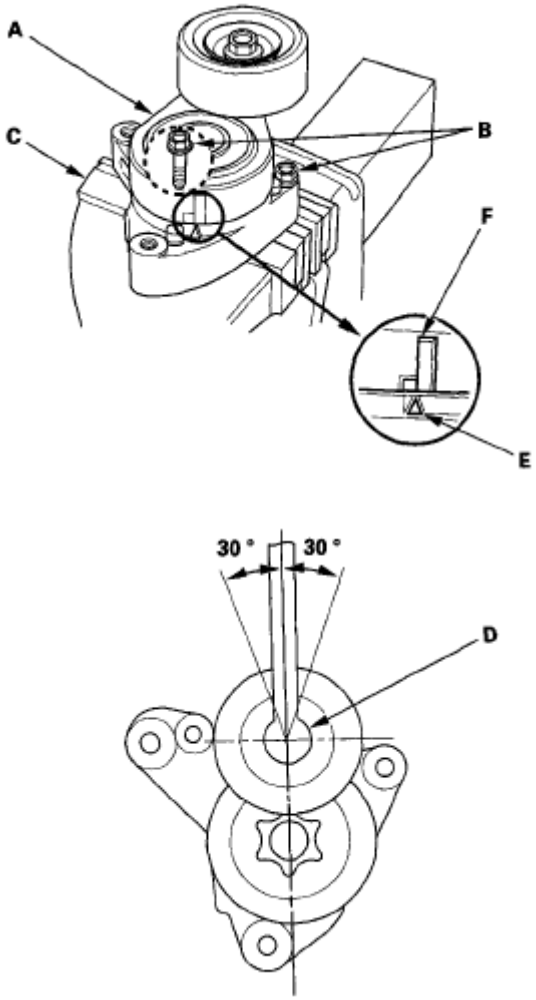

Fig. 14: Clamping Auto-Tensioner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Set the torque wrench (D) in the pulley bolt in the direction shown.
9. Align the indicator (E) on the tensioner base with center mark (F) on the tensioner arm by using the torque wrench, and measure the torque. If the torque value is out of specification, replace the auto-tensioner.

NOTE: If the indicator exceeds the center mark, recheck the torque.

Auto-tensioner Spring Torque: 32.5-39.7 N.m (3.31-4.05 kgf.m, 23.9-29.3 lbf.ft)

DRIVE BELT AUTO-TENSIONER REMOVAL/INSTALLATION

1. Remove the drive belt (see **DRIVE BELT INSPECTION**).
2. Remove the idler pulley base.

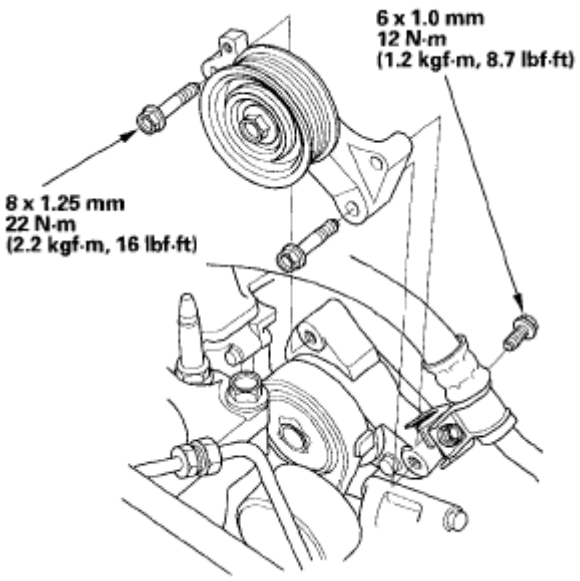

Fig. 15: Removing Idler Pulley Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pulley bolt (A), then remove the tensioner pulley (B).

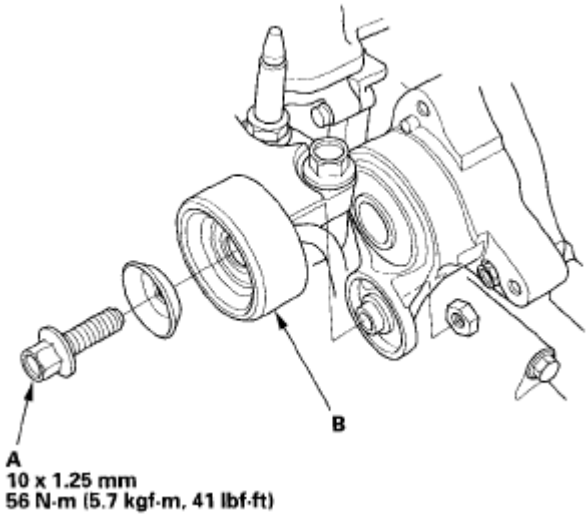

Fig. 16: Removing Pulley Bolt And Tensioner Pulley
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the auto-tensioner.

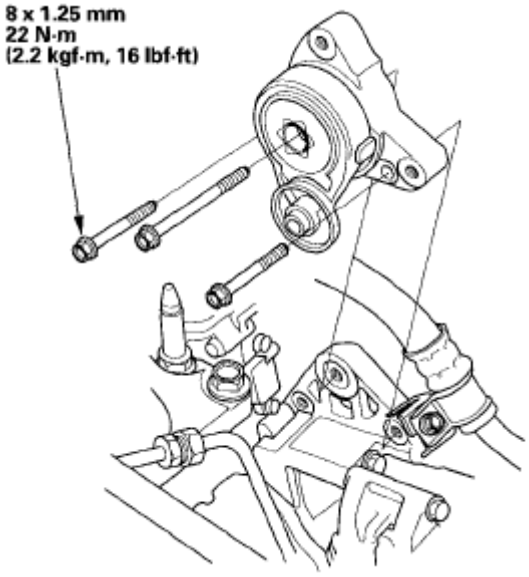

Fig. 17: Removing Auto-Tensioner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the auto-tensioner in the reverse order of removal.

TENSIONER PULLEY REPLACEMENT

1. Remove the drive belt (see **DRIVE BELT INSPECTION**).
2. Remove the pulley bolt (A), then remove the tensioner pulley (B).

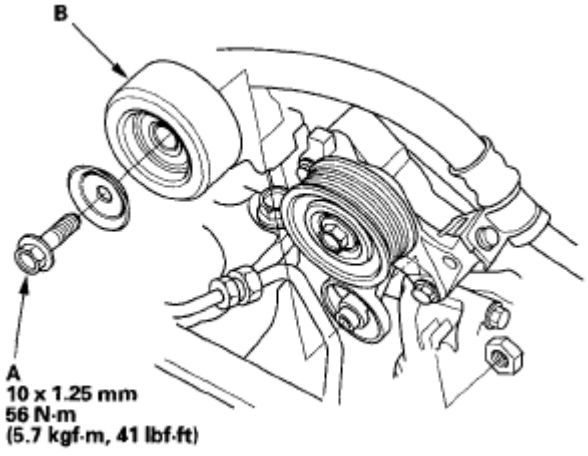

Fig. 18: Removing Pulley Bolt And Tensioner Pulley
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the tensioner pulley in the reverse order of removal.

IDLER PULLEY REPLACEMENT

1. Remove the drive belt (see **DRIVE BELT INSPECTION**).
2. Remove the idler pulley.

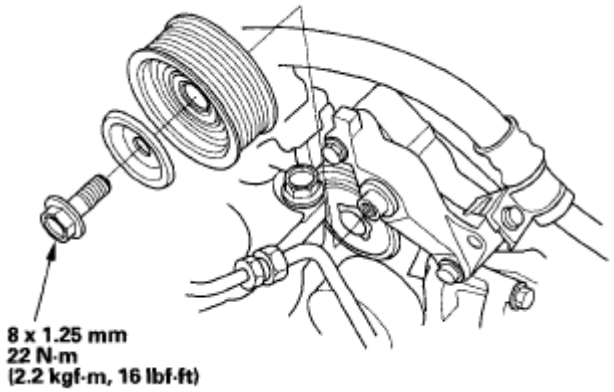

Fig. 19: Removing Idler Pulley
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the idler pulley in the reverse order of removal.

ALTERNATOR REMOVAL AND INSTALLATION

REMOVAL

1. Make sure you have the anti-theft code for the audio system and the navigation system (if equipped), then write down the audio presets.
2. Disconnect the negative cable from the battery first, then disconnect the positive cable.
3. Remove the drive belt (see **DRIVE BELT INSPECTION**).
4. Remove the front grille cover (see **FRONT GRILLE COVER REPLACEMENT**).
5. Disconnect the fan motor connectors (A) and hood switch connector (B), then remove the harness clamps (C).

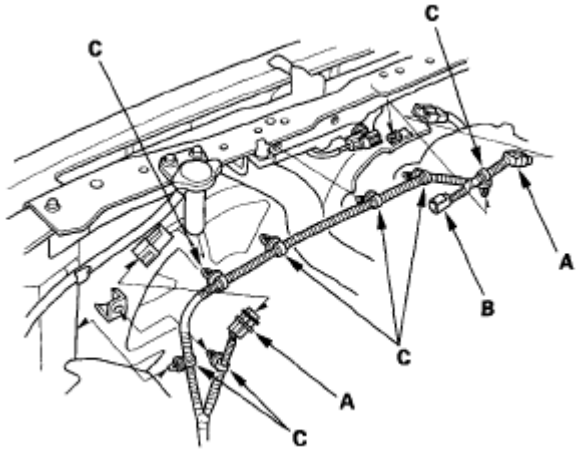

Fig. 20: Disconnecting Fan Motor Connectors And Hood Switch Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the reservoir hose (A), radiator cap base mounting bolts (B), clips (C) and radiator upper brackets (D).

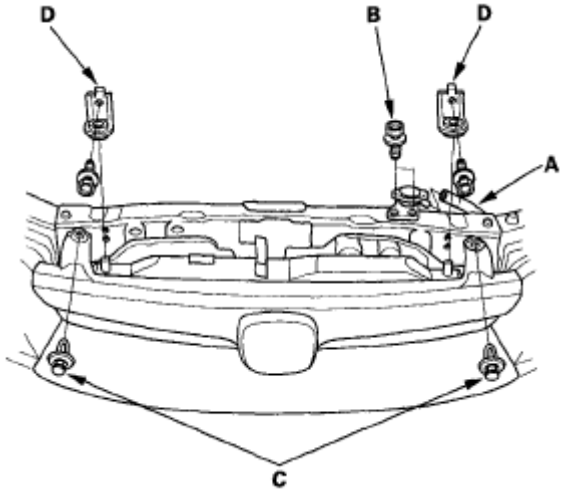

Fig. 21: Removing Reservoir Hose, Radiator Cap Base Mounting Bolts, Clips And Radiator Upper Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the condenser bracket mounting bolts (A), then remove the bulkhead (B).

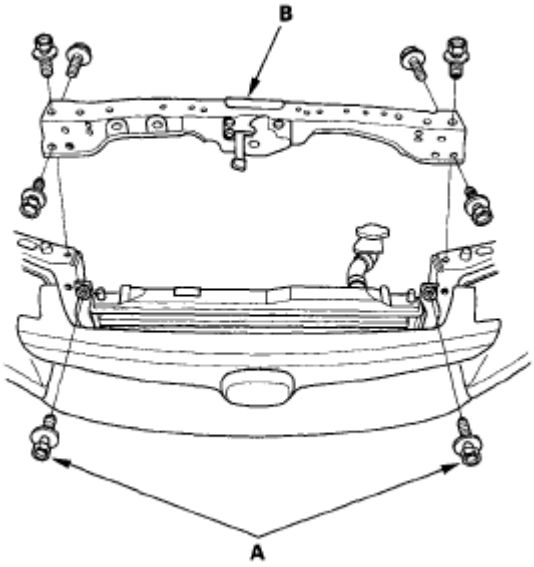

Fig. 22: Removing Condenser Bracket Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the three bolts securing the alternator.

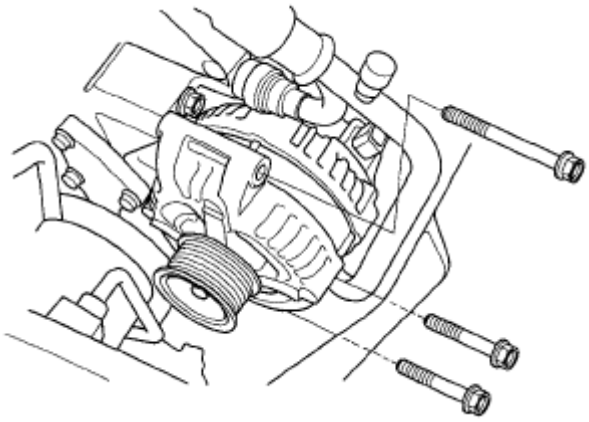

Fig. 23: Removing Alternator Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Disconnect the alternator connector (A), BLK wire (B) and harness clamp (C) from the alternator, then remove the alternator.

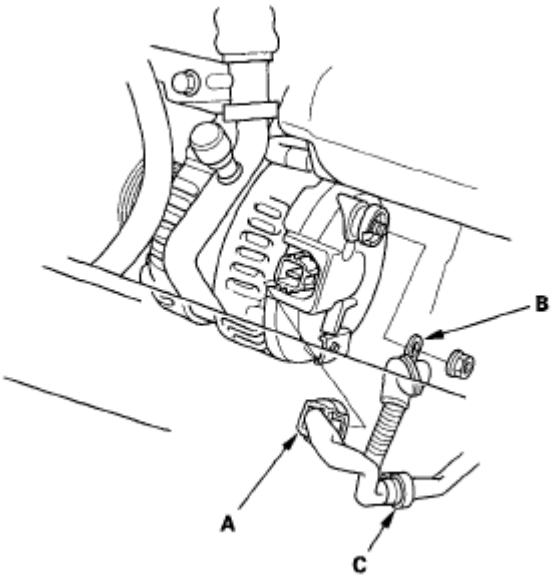

Fig. 24: Removing Alternator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Connect the alternator connector (A), BLK wire (B) and harness clamp (C) to the alternator.

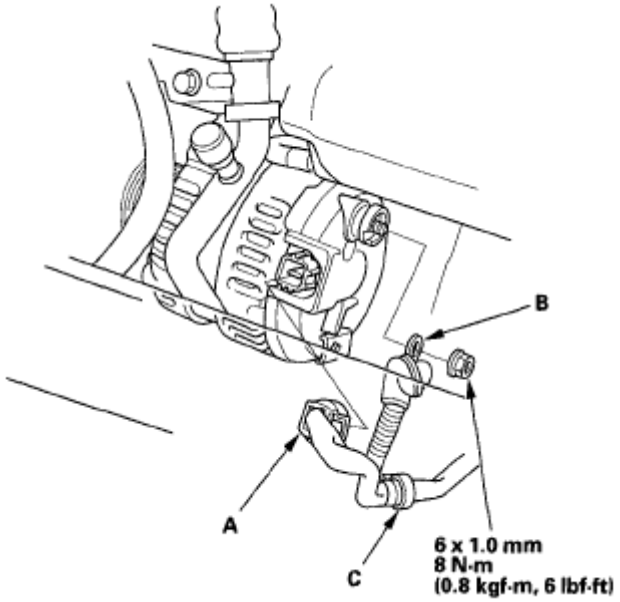

Fig. 25: Connecting Alternator Connector, BLK Wire And Harness Clamp To Alternator (With Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Tighten the three bolts securing the alternator.

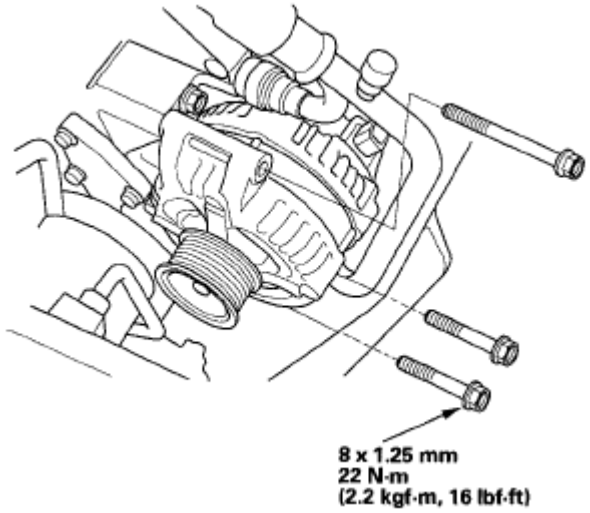

Fig. 26: Tightening Alternator Bolts (With Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the bulkhead (A), then install the condenser bracket mounting bolts (B).

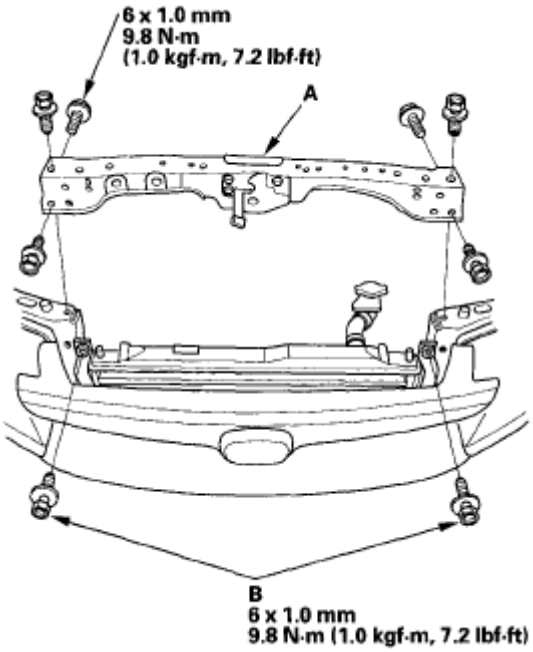

Fig. 27: Installing Condenser Bracket Mounting Bolts (With Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Apply body paint to the bulkhead mounting bolts.
5. Install the radiator upper brackets (A), radiator cap base mounting bolts (B), reservoir hose (C), and Clips (D).

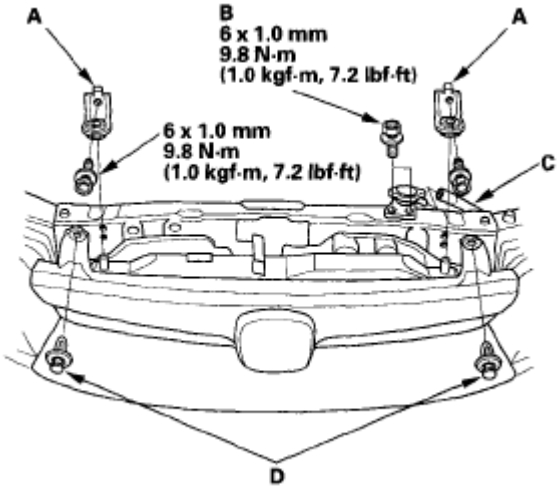

Fig. 28: Installing Radiator Upper Brackets And Radiator Cap Base Mounting Bolts (With Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Connect the fan motor connectors (A) and hood switch connector (B), then install the harness clamps (C).

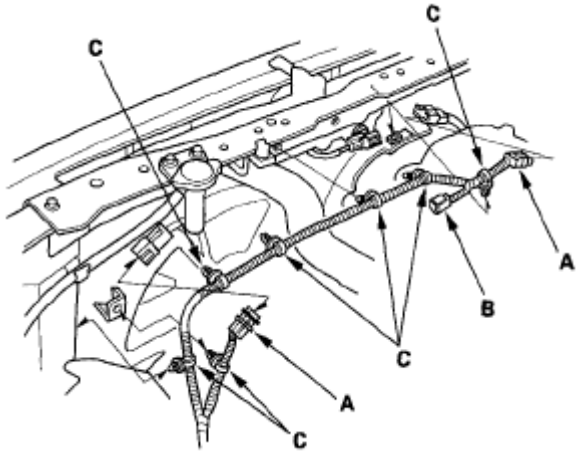

Fig. 29: Connecting Fan Motor And Hood Switch Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the front grille cover (see **FRONT GRILLE COVER REPLACEMENT**).
8. Install the drive belt (see **DRIVE BELT INSPECTION**).
9. Connect the positive cable to the battery first, then connect the negative cable.
10. Enter the anti-theft code for the audio system and the navigation system (if equipped), then enter the audio preset.
11. Set the clock.

ALTERNATOR OVERHAUL

EXPLODED VIEW

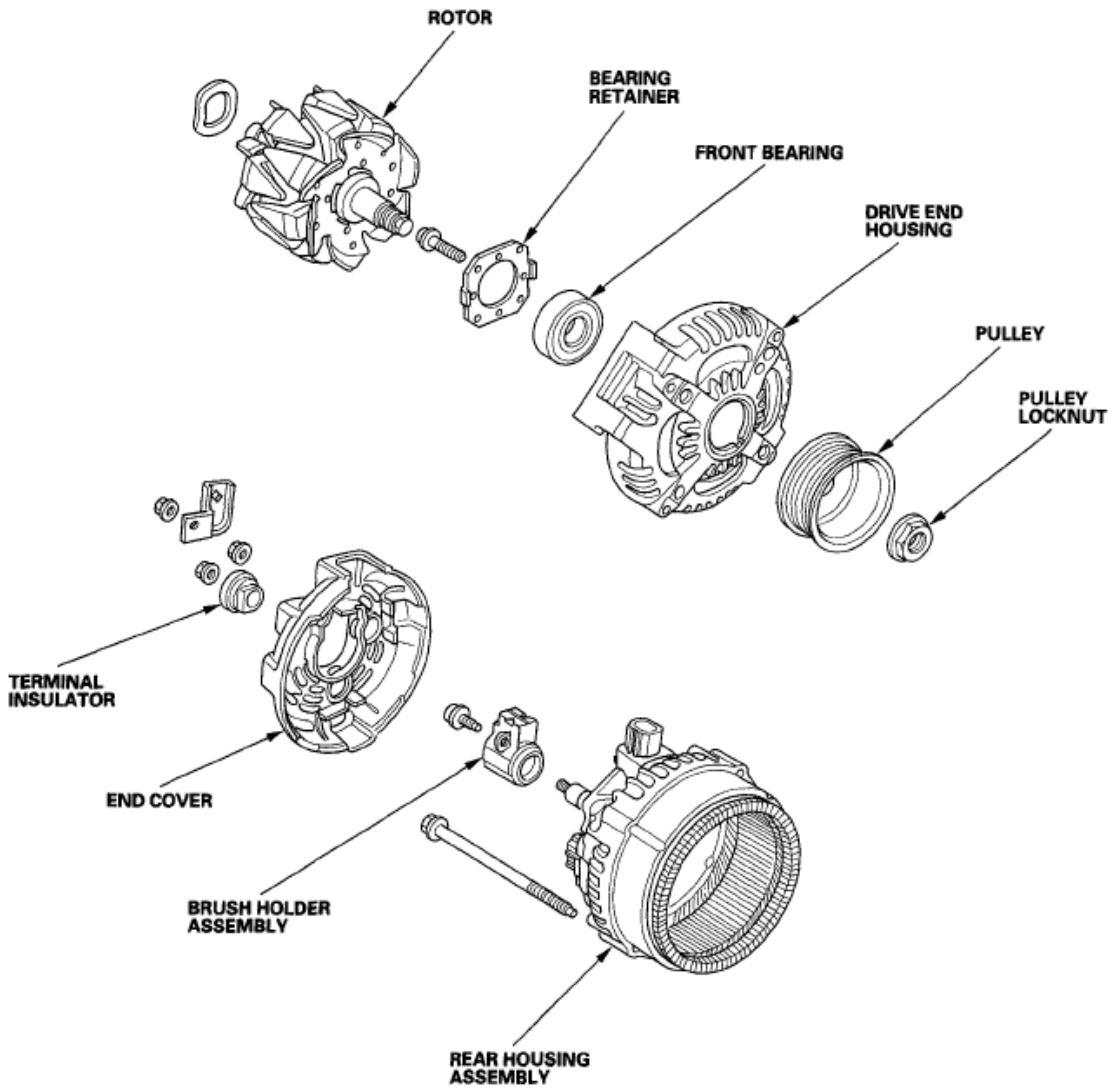

Fig. 30: Exploded View Of Alternator Overhaul
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- Driver 07749-0010000
- Attachment, 42 x 47 mm 07746-0010300

NOTE: Refer to Fig. 30 as needed during this procedure.

1. Test the alternator and regulator before you remove them (see **ALTERNATOR AND REGULATOR CIRCUIT TROUBLESHOOTING**).
2. Remove the alternator (see **ALTERNATOR REMOVAL AND INSTALLATION**).
3. If the front bearing needs replacing, remove the pulley locknut with a 10 mm wrench (A) and a 22 mm wrench (B). If necessary, use an impact wrench.

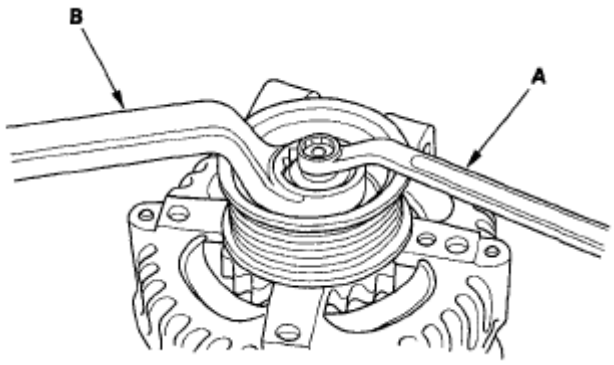

Fig. 31: Removing Locknut With Wrench
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the harness stay and the three flange nuts from the alternator.

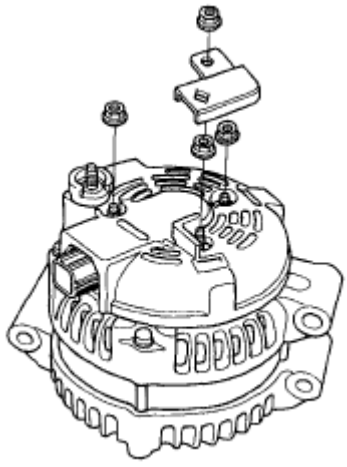

Fig. 32: Removing Harness Stay And Flange Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the end cover.

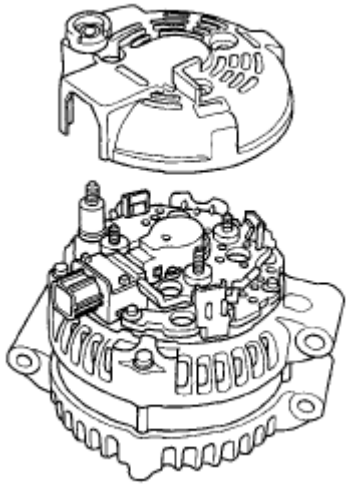

Fig. 33: Removing End Cover

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the brush holder.

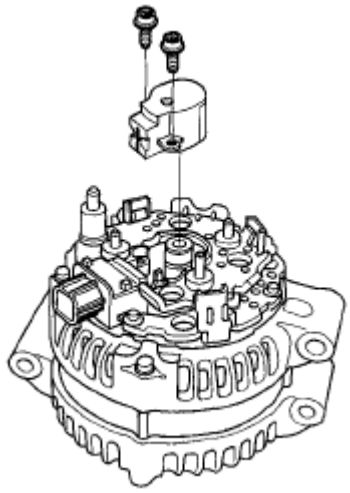

Fig. 34: Removing Brush Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the four bolts, then remove the rear housing assembly (A), and washer (B).

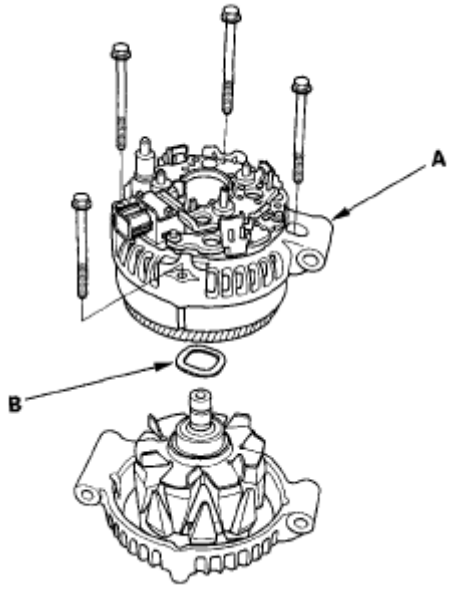

Fig. 35: Removing Rear Housing Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. If you are not replacing the front bearing, go to step 13. Remove the rotor from the drive end housing.

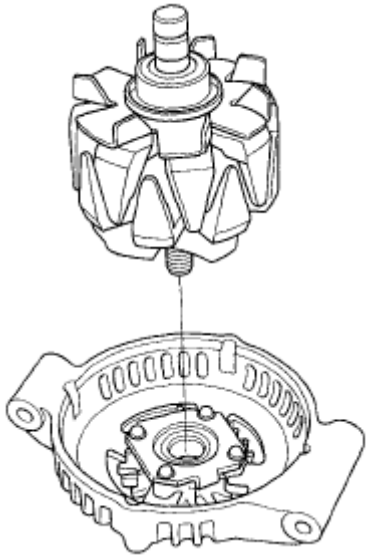

Fig. 36: Removing Rotor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Inspect the rotor shaft for scoring, and inspect the bearing journal surface in the drive end housing for seizure marks.
   - If the rotor is damaged, replace the rotor assembly.
   - If the rotor is OK, go to step 10.
10. Remove the front bearing retainer plate.

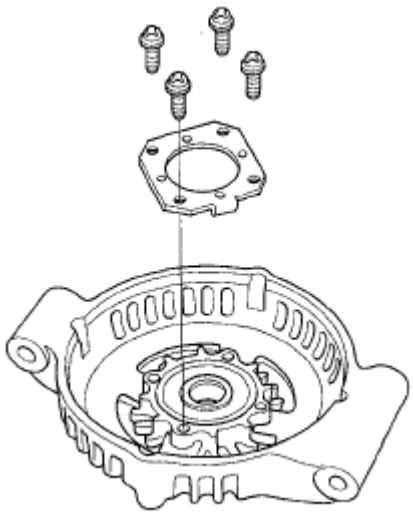

Fig. 37: Removing Front Bearing Retainer Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Drive out the front bearing with a brass drift and hammer.

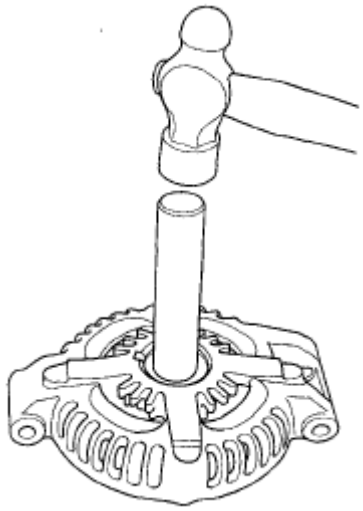

Fig. 38: Removing Front Bearing With Brass Drift And Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. With a hammer and special tools, install a new front bearing in the drive end housing.

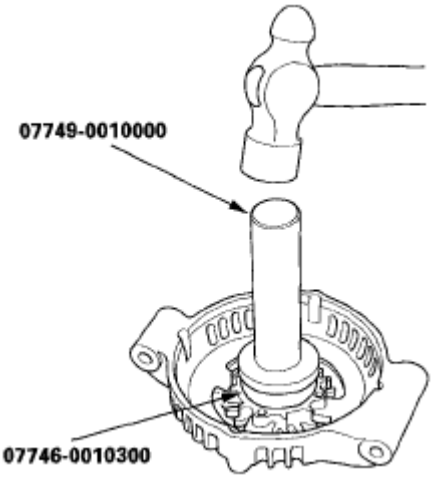

Fig. 39: Installing Front Bearing In Drive End Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Alternator Brush Inspection

13. Measure the length of both brushes (A) with vernier caliper (B).
    - If either brush is shorter than the service limit, replace the brush holder assembly.
    - If brush length is OK, go to step 14.

Alternator Brush Length

Standard (New): 10.5 mm (0.41 in.)
Service Limit: 1.5 mm (0.06 in.)

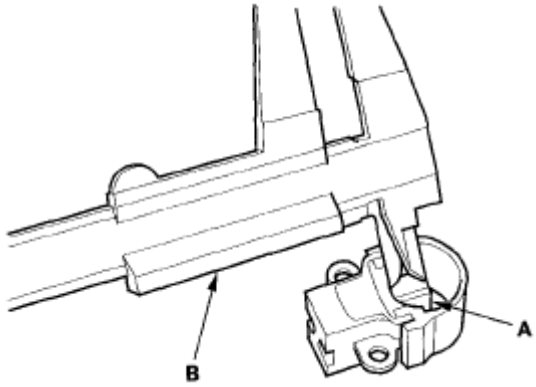

Fig. 40: Measuring Length Of Brushes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rotor Slip Ring Test

14. Check for continuity between the slip rings (A).
    - If there is continuity, go to step 15.
    - If there is no continuity, replace the rotor assembly.

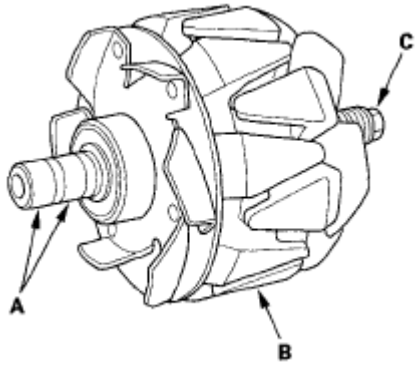

Fig. 41: Checking Continuity Between Slip Rings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Check for continuity between each slip ring and the rotor (B) and the rotor shaft (C).
    - If there is no continuity, replace the rear housing assembly, and go to step 16.
    - If there is continuity, replace the rotor assembly.

Alternator Reassembly

16. If you removed the pulley, put the rotor in the drive end housing, then tighten its locknut to 110 N.m (11.2 kgf.m, 81.0 lbf.ft).
17. Remove any grease or any oil from the slip rings.
18. Put the rear housing assembly and drive end housing/rotor assembly together, tighten the four through bolts.
19. Push the brushes (A) in, then insert a pin or drill bit (B) (about 1.6 mm (0.06 in.) diameter) to hold them there.

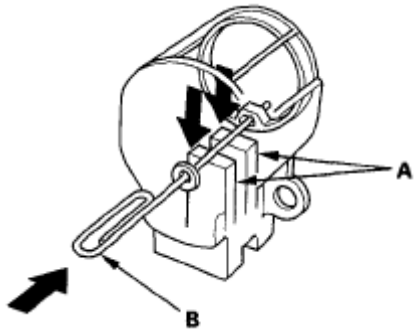

Fig. 42: Pushing Brushes In And Inserting Pin Or Drill Bit To Hold
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Install the brush holder, and pull out the pin.

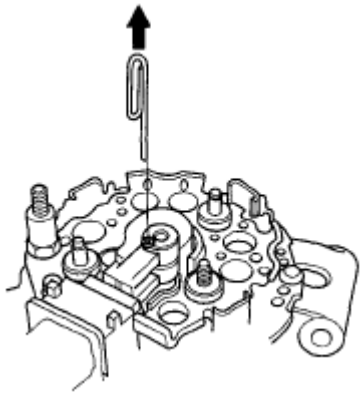

Fig. 43: Installing Brush Holder And Removing Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Install the end cover.
22. After assembling the alternator, turn the pulley by hand to make sure the rotor turns smoothly and without noise.
23. Install the alternator (see **ALTERNATOR REMOVAL AND INSTALLATION**) and drive belt (see **DRIVE BELT INSPECTION**).

2006-08 ELECTRICAL

Charging System (R18A1) - Civic (All Except Hybrid)

COMPONENT LOCATION INDEX

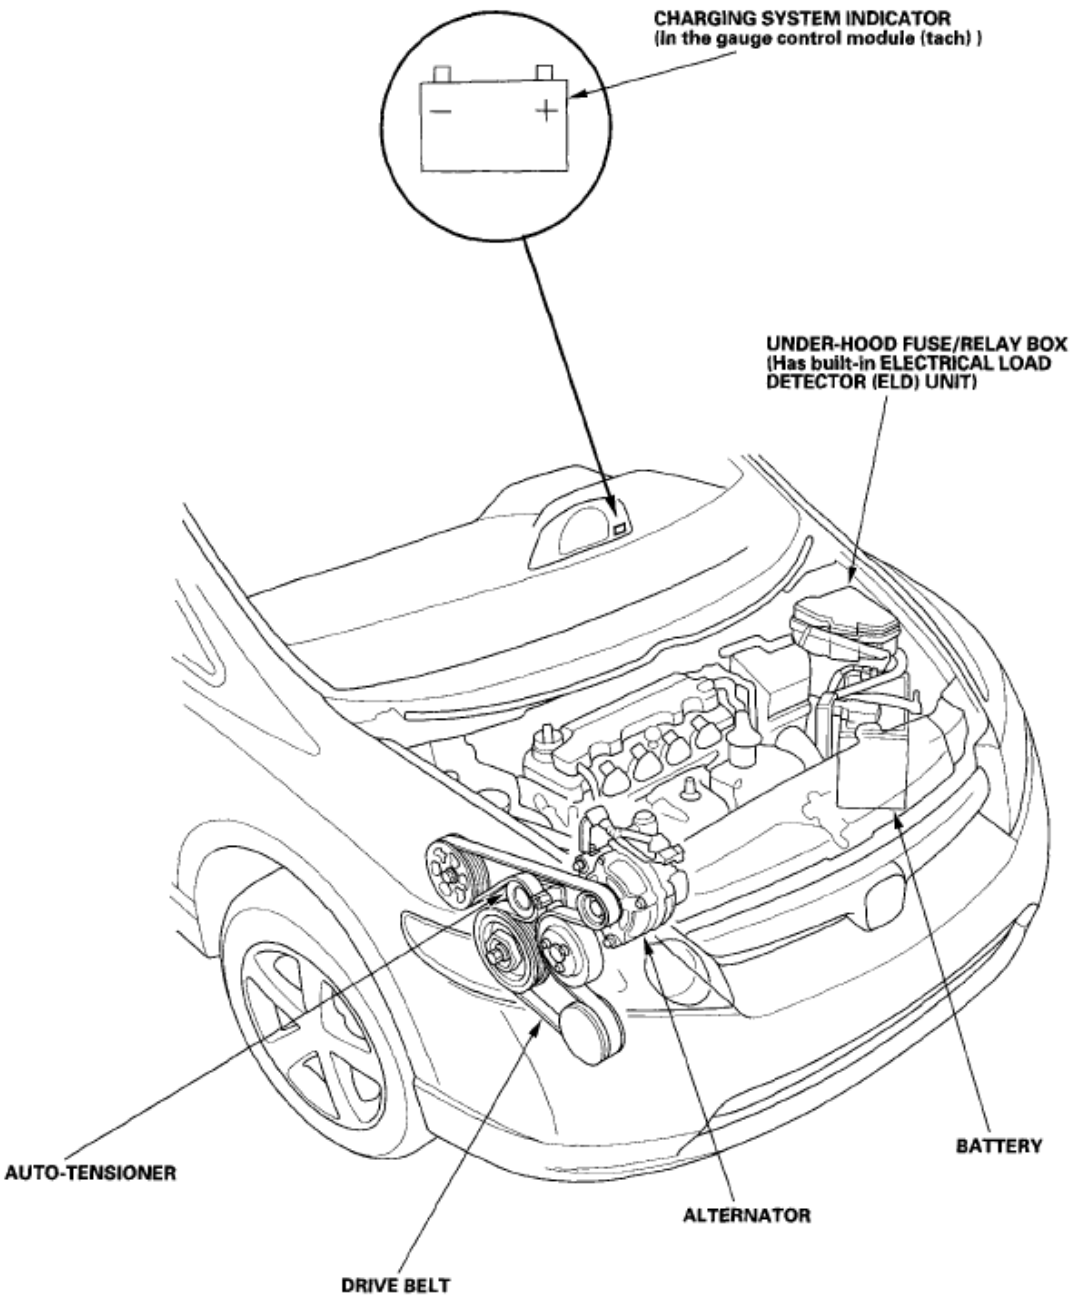

Fig. 1: Identifying Charging System Component
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYMPTOM TROUBLESHOOTING INDEX

SYMPTOM TROUBLESHOOTING INDEX

Symptom	Diagnostic procedure	Also check for
Charging system indicator does not come on with the ignition switch ON (II)	Troubleshoot the charging system indicator circuit (see **CHARGING SYSTEM INDICATOR CIRCUIT TROUBLESHOOTING**).	
Charging system indicator stays on	1. Check for PGM-FI DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). 2. Troubleshoot the charging system indicator circuit (see **CHARGING SYSTEM INDICATOR CIRCUIT TROUBLESHOOTING**). 3. Check for a broken drive belt (see **DRIVE BELT INSPECTION**). 4. Check the drive belt auto-tensioner (see **DRIVE BELT AUTO-TENSIONER INSPECTION**).	
Battery discharged	1. Check for excessive parasitic electrical current draw with the ignition switch off, and the key removed. The multiplex control unit may take up to 10 minutes to turn off (sleep mode) for some models. 2. Check for a broken drive belt (see **DRIVE BELT INSPECTION**). 3. Check the drive belt auto-tensioner (see **DRIVE BELT AUTO-TENSIONER INSPECTION**). 4. Troubleshoot the alternator and regulator circuit (see **ALTERNATOR AND REGULATOR CIRCUIT TROUBLESHOOTING**). 5. Check for a poor connection at the battery terminal. 6. Test the battery (see **BATTERY TEST**).	
Battery overcharged	1. Troubleshoot the alternator and regulator circuit (see **ALTERNATOR AND REGULATOR CIRCUIT TROUBLESHOOTING**). 2. Test the battery (see **BATTERY TEST**).	

CIRCUIT DIAGRAM

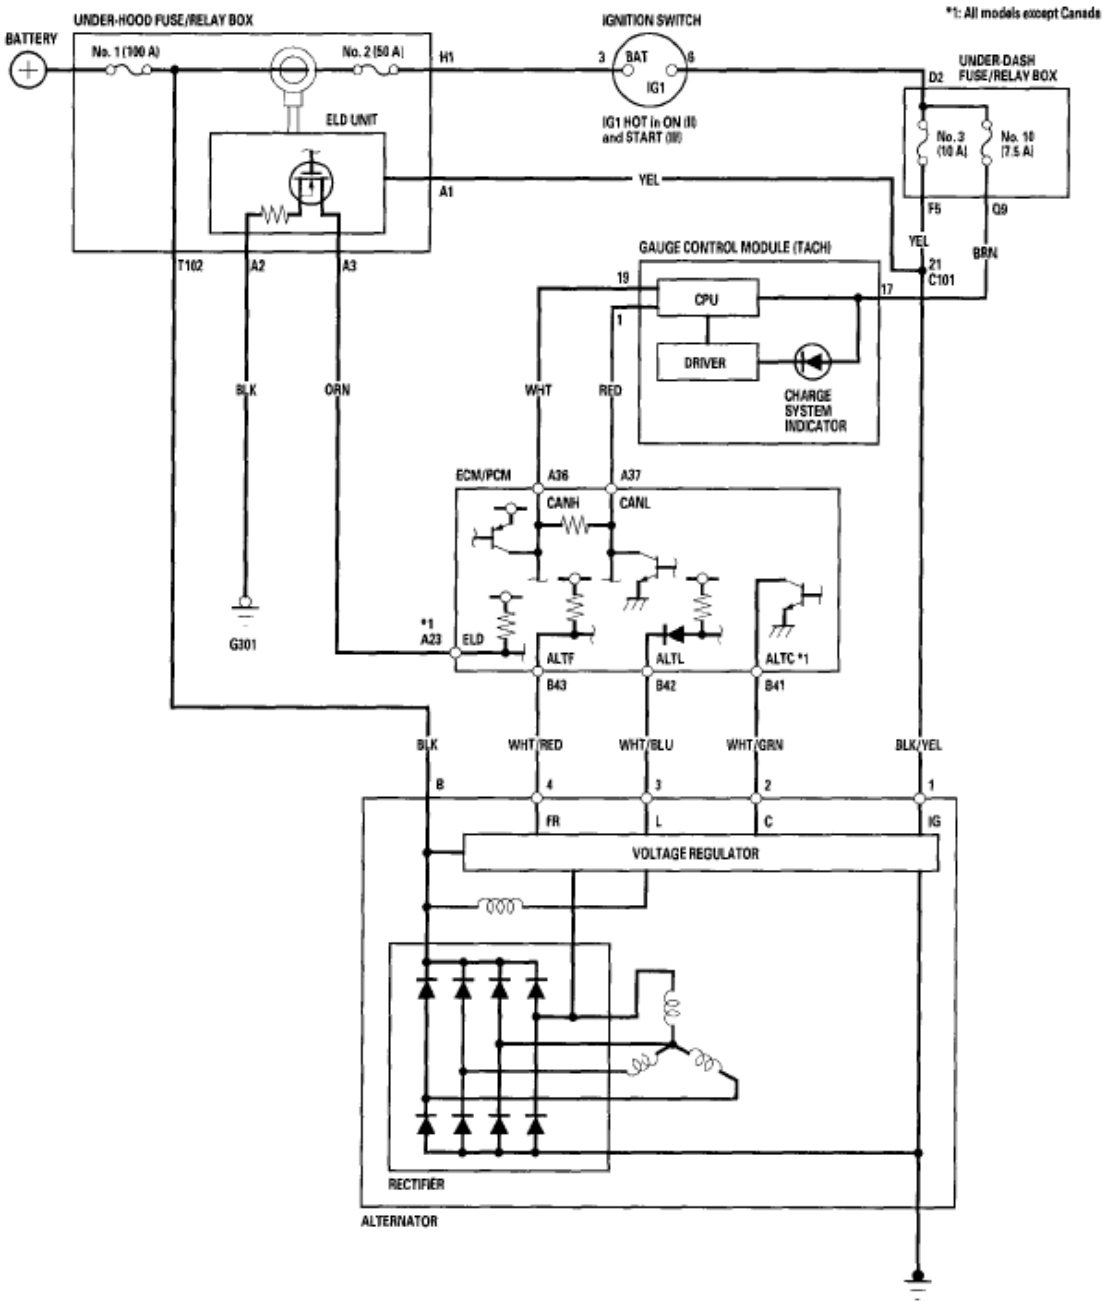

Fig. 2: Charging System - Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CHARGING SYSTEM INDICATOR CIRCUIT TROUBLESHOOTING

1. Turn the ignition switch ON (II).

   Does the charging system indicator come on?

   YES -Go to step 2.

   NO -Go to step 14.

2. Start the engine. Hold the engine speed at 2,000 rpm for 1 minute.

   Does the charging system indicator go off?

   YES -Charging system indicator circuit is OK. Go to the **ALTERNATOR AND REGULATOR CIRCUIT TROUBLESHOOTING** .

   NO -Go to step 3.

3. Do the gauge control module self-diagnostic function procedure (see **SELF-DIAGNOSTIC FUNCTION**).

   Does the charging system indicator flash?

   YES -Go to step 4.

   NO -Replace the gauge control module (tach) (see **REPLACEMENT**).

4. Turn the ignition switch to LOCK (0)
5. Disconnect the alternator 4P connector.
6. Turn the ignition switch ON (II).

   NOTE: The charging system indicator may come on and then go off.

   Does the charging system indicator go off?

   YES -Replace the alternator (see **ALTERNATOR REMOVAL AND INSTALLATION**), or repair the alternator (see **ALTERNATOR OVERHAUL**).

   NO -Go to step 7.

7. Turn the ignition switch to LOCK (0).
8. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 on **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
9. Turn the ignition switch ON (II).
10. Make sure the HDS communicates with the vehicle and the engine control module (ECM)/powertrain control module (PCM). If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
11. Jump the SCS line with the HDS, then turn the ignition to LOCK (0).

    NOTE: This step must be done to protect the ECM/PCM from damage.

12. Disconnect ECM/PCM connector B (44P).
13. Check for continuity between ECM/PCM connector terminal B42 and body ground.

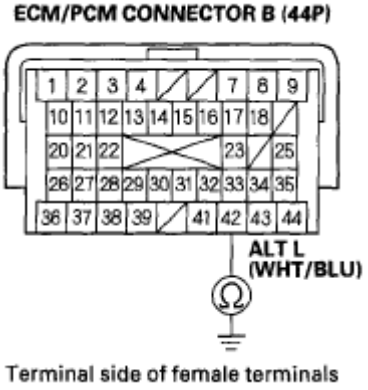

Fig. 3: Checking For Continuity Between ECM/PCM Connector Terminal B42 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short in the wire between the alternator and the ECM/PCM.

NO -Update the ECM/PCM if it does not have the latest software (see **UPDATING ECM/PCM**), or substitute a known-good ECM/PCM (see **SUBSTITUTING THE ECM/PCM**), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see **ECM/PCM REPLACEMENT**).

14. Do the gauge control module self-diagnostic function procedure (see **SELF-DIAGNOSTIC FUNCTION**).

    Does the charging system indicator flash?

    YES -Go to step 15.

    NO -Replace the gauge control module (tach) (see **REPLACEMENT**).

15. Turn the ignition switch OFF.
16. Disconnect the alternator 4P connector.
17. Connect alternator 4P connector terminal No. 3 and body ground with a jumper wire.

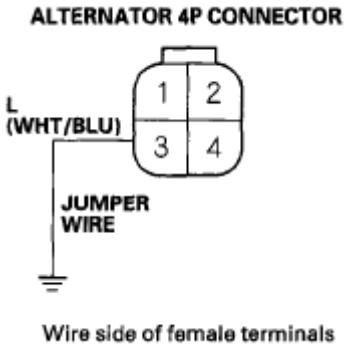

Fig. 4: Connecting Alternator 4P Connector Terminal No. 3 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Turn the ignition switch ON (II).

    Does the charging system indicator come on?

    YES -Replace the alternator (see **ALTERNATOR REMOVAL AND INSTALLATION**), or repair the alternator (see **ALTERNATOR OVERHAUL**).

    NO -Go to step 19.

19. Turn the ignition switch to LOCK (0).
20. Connect the HDS to the DLC (see step 2 on **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
21. Turn the ignition switch ON (II).
22. Make sure the HDS communicates with the vehicle and the ECM/PCM. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
23. Jump the SCS line with the HDS, then turn the ignition switch OFF.

    NOTE: This step must be done to protect the ECM/PCM from damage.

24. Disconnect ECM/PCM connector B (44P).
25. Check for continuity between ECM/PCM connector terminal B42 and body ground.

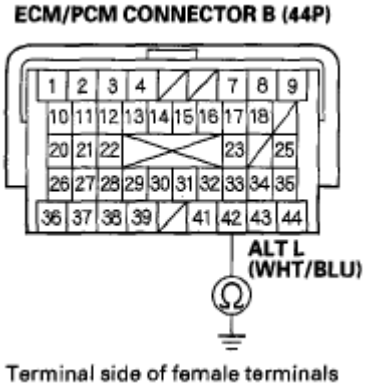

Fig. 5: Checking For Continuity Between ECM/PCM Connector Terminal B42 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Update the ECM/PCM if it does not have the latest software (see **UPDATING ECM/PCM**), or substitute a known-good ECM/PCM (see **SUBSTITUTING THE ECM/PCM**), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see **ECM/PCM REPLACEMENT**).

NO -Repair open in the wire between the alternator and the ECM/PCM.

ALTERNATOR AND REGULATOR CIRCUIT TROUBLESHOOTING

1. Make sure the battery connections are good and the battery is sufficiently charged.
2. Connect a VAT-40 (or equivalent tester), and turn the selector switch to position 1 (starting).

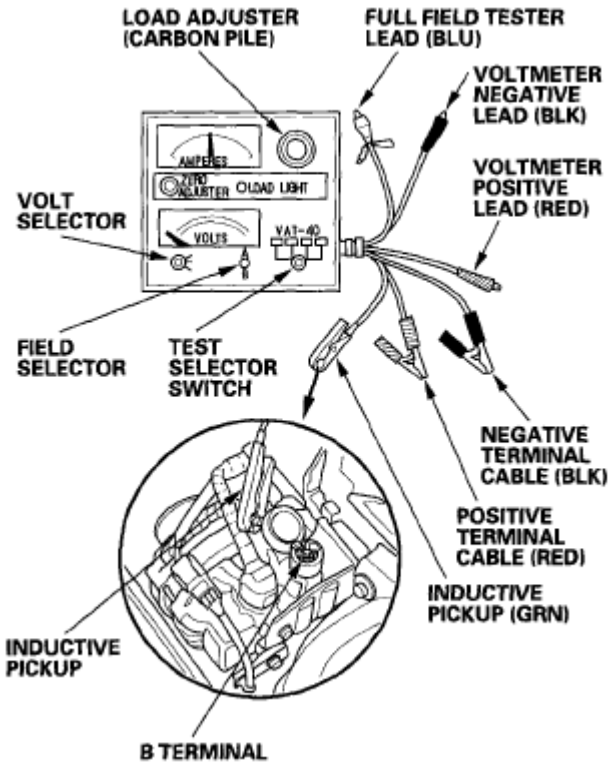

Fig. 6: Identifying VAT-40 (Or Equivalent Tester)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Start the engine. Hold the engine speed at 3,000 rpm, with no load until the radiator fan comes on, then let it idle.
4. Raise the engine speed to 2,000 rpm, and hold it there.

   Is the voltage over 15.1 V?

   YES -Replace the alternator (see **ALTERNATOR REMOVAL AND INSTALLATION**), or rear housing assembly (see **ALTERNATOR OVERHAUL**).

   NO -Go to step 5.

5. Release the accelerator pedal, and let the engine idle.
6. Turn off all the accessories. Select the charging test on the tester.
7. Remove the inductive pickup, and zero the ammeter.
8. Place the inductive pickup over the B terminal wire of the alternator so the arrow points away from the alternator.
9. Raise the engine speed to 2,000 rpm, and hold it there.

   Is the voltage less than 13.5 V?

   YES -Go to **ALTERNATOR CONTROL CIRCUIT TROUBLESHOOTING** (see).

NO -Go to step 10.

10. Apply a load with the VAT-40 until the battery voltage drops within 12-13.5 V.

    Is the amperage 87.5 A or more?

    YES -The charging system is OK.

    NOTE: If the charging system indicator is still on, replace the alternator (see ALTERNATOR REMOVAL AND INSTALLATION).

    NO -Replace the alternator (see **ALTERNATOR REMOVAL AND INSTALLATION**), or repair the alternator (see **ALTERNATOR OVERHAUL**).

ALTERNATOR CONTROL CIRCUIT TROUBLESHOOTING

1. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 on **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
2. Turn the ignition switch ON (II).
3. Make sure the HDS communicates with the vehicle and the engine control module (ECM)/powertrain control module (PCM). If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Check for DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). If a DTC is present, diagnose and repair the cause before continuing with this test.
5. Disconnect the alternator 4P connector from the alternator.
6. Start the engine, and turn on the headlights to high beam.
7. Measure the voltage between alternator 4P connector terminal No. 2 and the positive terminal of the battery.

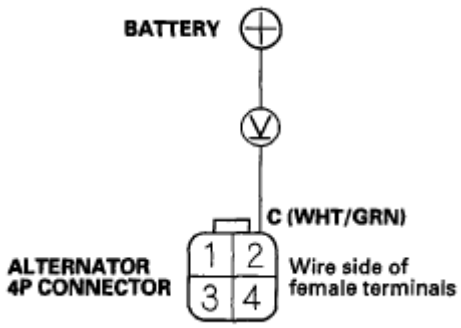

Fig. 7: Identifying Voltage Between Alternator 4P Connector Terminal No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 1 V or less?

YES -Go to step 11.

NO -Go to step 8.

8. Jump the SCS line with the HDS, then turn the ignition switch OFF.

NOTE: This step must be done to protect the ECM/PCM from damage.

9. Disconnect ECM/PCM connector B (44P).
10. Check for continuity between ECM/PCM connector terminal B41 and body ground.

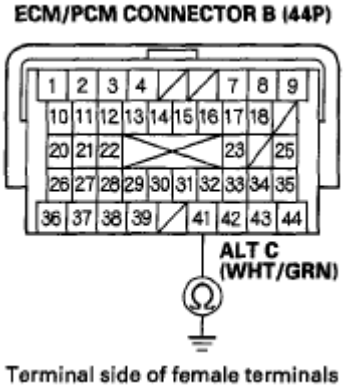

Fig. 8: Checking Continuity Between ECM/PCM Connector Terminal B41 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short in the wire between the alternator and the ECM/PCM.

NO -Update the ECM/PCM if it does not have the latest software (see **UPDATING ECM/PCM**), or substitute a known-good ECM/PCM (see **SUBSTITUTING THE ECM/PCM**), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see **ECM/PCM REPLACEMENT**).

11. Jump the SCS line with the HDS, then turn the ignition switch OFF.

NOTE: This step must be done to protect the ECM/PCM from damage.

12. Disconnect ECM/PCM connector B (44P).
13. Check for continuity between ECM/PCM connector terminal B41 and alternator 4P connector terminal No. 2.

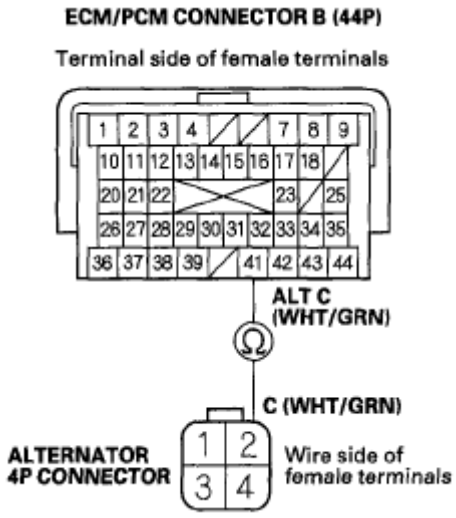

Fig. 9: Checking Continuity Between ECM/PCM Connector Terminal B41 And Alternator 4P Connector Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Replace the alternator (see **ALTERNATOR REMOVAL AND INSTALLATION**), or repair the alternator (see **ALTERNATOR OVERHAUL**).

NO -Repair open in the wire between the alternator and the ECM/PCM.

DRIVE BELT INSPECTION

1. Inspect the belt for cracks and damage. If the belt is cracked or damaged, replace it.
2. Check that the auto-tensioner indicator (A) is within the standard range (B) as shown. If it is out of the standard range, replace the drive belt (see **DRIVE BELT INSPECTION**). After you inspected or replaced the drive belt, go to step 3.

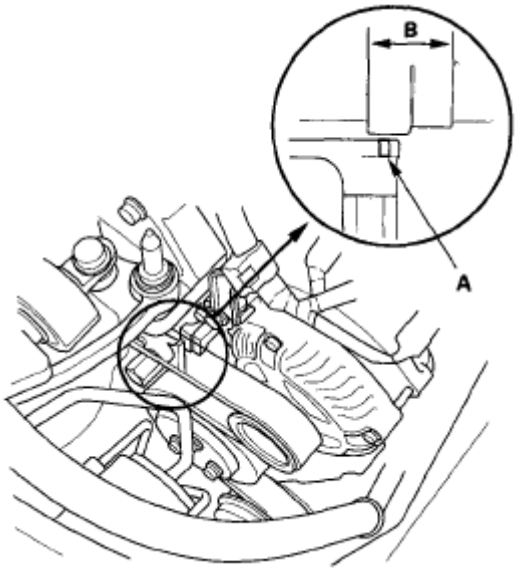

Fig. 10: Checking Auto-Tensioner Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If the maintenance minder required to inspect the drive belt, reset the maintenance minder (see **RESETTING THE MAINTENANCE INFORMATION DISPLAY**), and this procedure is complete.

DRIVE BELT REMOVAL/INSTALLATION

1. Set a long-handled, boxed-end wrench on the drive belt auto-tensioner from above the engine. Slowly turn the wrench in the direction shown, then remove the drive belt.

NOTE: This is a hydraulic type auto-tensioner; you must turn the wrench slowly.

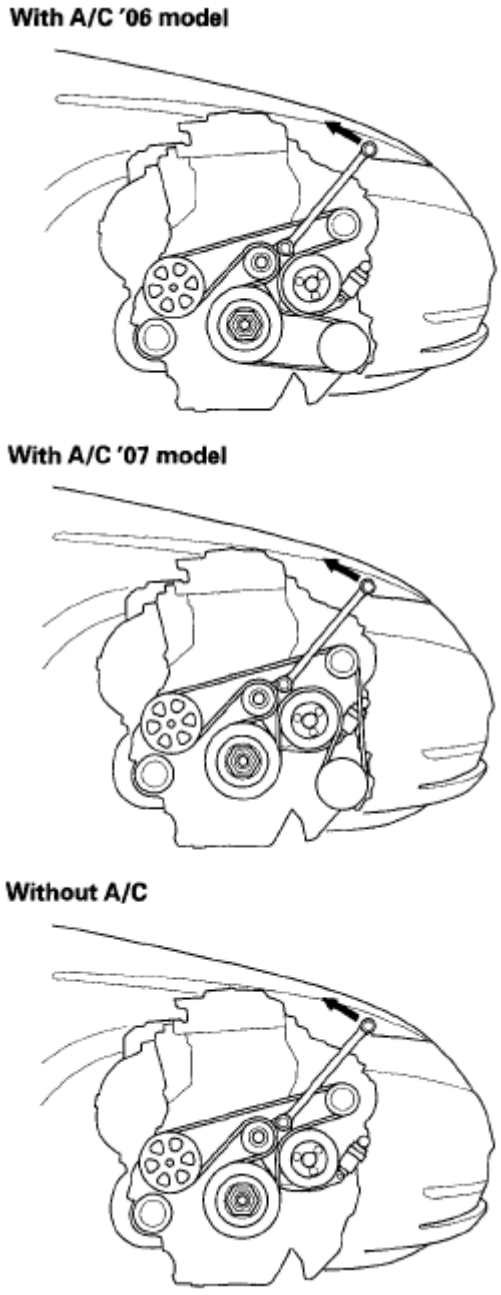

Fig. 11: Identifying Drive Belt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the new belt in the reverse order of removal.

DRIVE BELT AUTO-TENSIONER INSPECTION

1. Turn the ignition switch ON (II), and make sure to turn the A/C switch OFF. Turn the ignition switch OFF.
2. Check the position of the auto-tensioner indicator's pointer (A). Start the engine then check the position again with the engine idling. If the position of the indicator moves or fluctuates a lot, replace the auto-tensioner (see **DRIVE BELT AUTO-TENSIONER REMOVAL/INSTALLATION**).

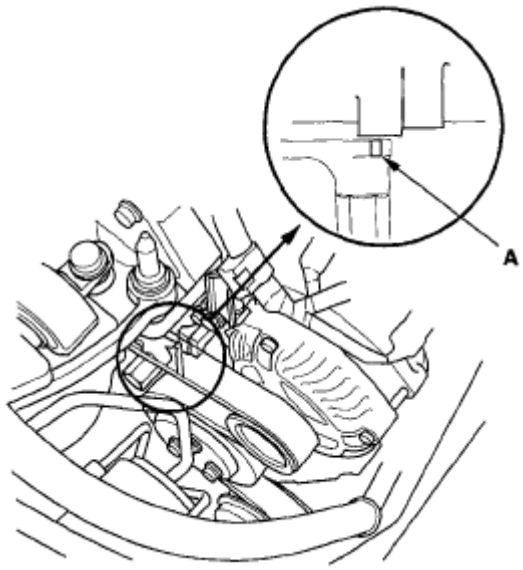

Fig. 12: Identifying Drive Belt Auto-Tensioner Inspection
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check for abnormal noise from the tensioner pulley. If you hear abnormal noise, replace the auto-tensioner pulley (see **DRIVE BELT AUTO-TENSIONER REMOVAL/INSTALLATION**).
4. Remove the drive belt (see **DRIVE BELT INSPECTION**).
5. Set a long-handled, boxed-end wrench on the drive belt auto-tensioner from above the engine. Slowly turn the wrench in the direction shown. Check that the tensioner moves smoothly and without any abnormal noise. If the tensioner does not move smoothly, or you hear abnormal noise, replace the auto-tensioner (see **DRIVE BELT AUTO-TENSIONER REMOVAL/INSTALLATION**).

NOTE: This is a hydraulic type auto-tensioner; you must turn the wrench slowly.

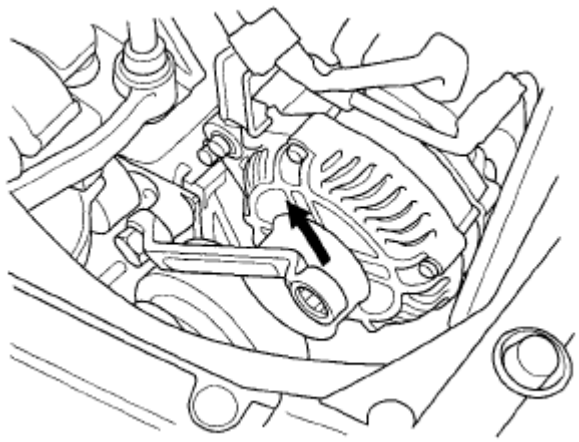

Fig. 13: Identifying Long-Handled, Boxed-End Wrench
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DRIVE BELT AUTO-TENSIONER REMOVAL/INSTALLATION

1. Loosen the water pump pulley mounting bolts.

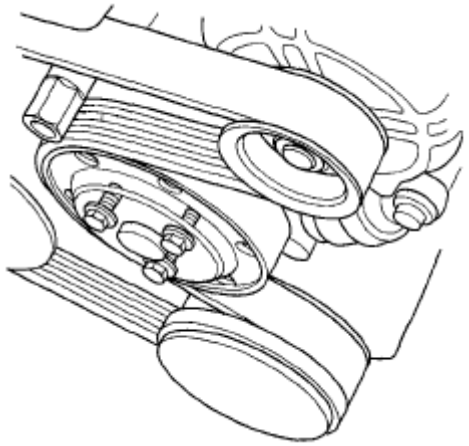

Fig. 14: Identifying Water Pump Pulley Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the drive belt (see **DRIVE BELT INSPECTION**).
3. Remove the alternator (see **ALTERNATOR REMOVAL AND INSTALLATION**).
4. Remove the water pump pulley.

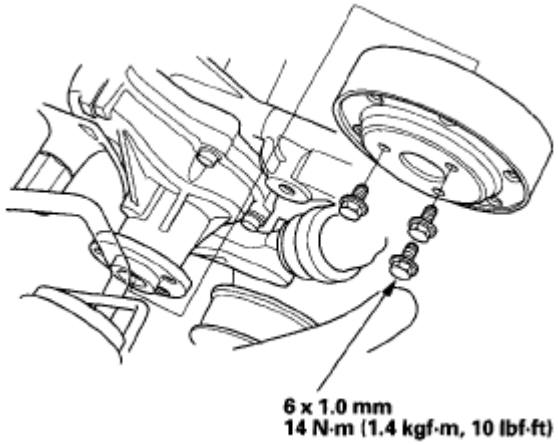

Fig. 15: Identifying Water Pump Pulley (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the drive belt auto-tensioner.

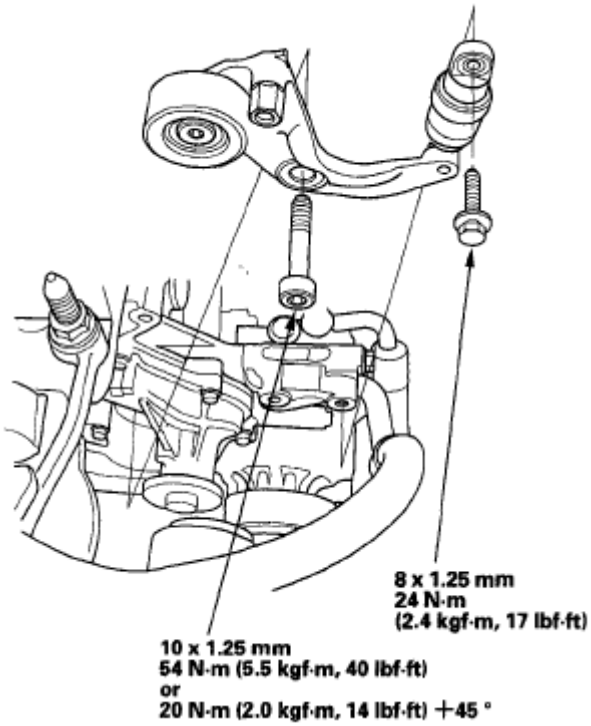

Fig. 16: Identifying Drive Belt Auto-Tensioner (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the drive belt auto-tensioner in the reverse order of removal.

DRIVE BELT AUTO-TENSIONER AIR BLEEDING

1. Remove the drive belt (see **DRIVE BELT INSPECTION**).
2. Set a long-handled, boxed-end wrench on the drive belt auto-tensioner from the top of the engine. Apply slow and steady pressure (3 seconds or more to complete the stroke) to compress the drive belt auto-tensioner. Pull the wrench back, taking 3 or more seconds to complete the stroke. Do this action a total of 3 times to complete the air bleeding.

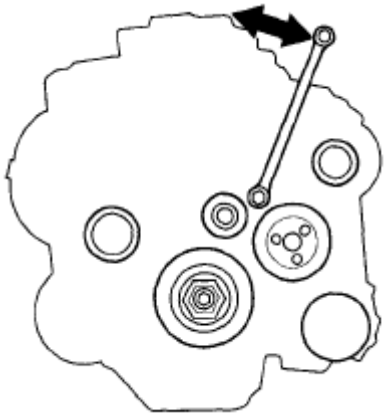

Fig. 17: Identifying Drive Belt Auto-Tensioner Air Bleeding
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the drive belt (see **DRIVE BELT INSPECTION**).

ALTERNATOR REMOVAL AND INSTALLATION

REMOVAL

1. Make sure you have the anti-theft code for the audio system and the navigation system (if equipped), then write down the audio presets.
2. Disconnect the negative cable from the battery first, then disconnect the positive cable.
3. Remove the drive belt (see **DRIVE BELT INSPECTION**).
4. Disconnect the alternator connector (A) and BLK wire (B) from the alternator.

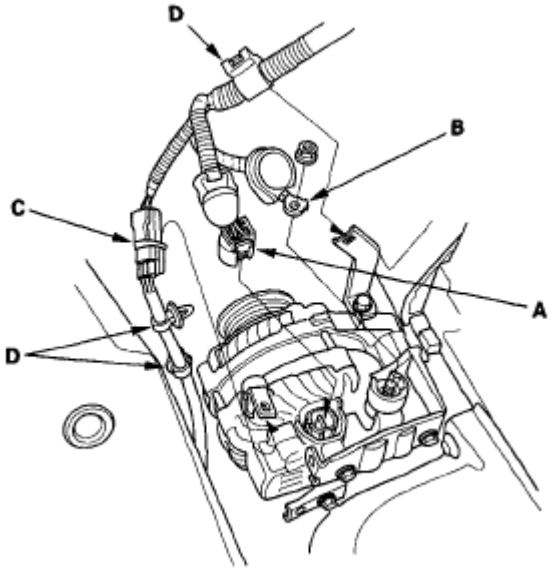

Fig. 18: Identifying Alternator Components Description
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the harness connector (C) and harness clamps (D) from the alternator.
6. Remove the alternator.

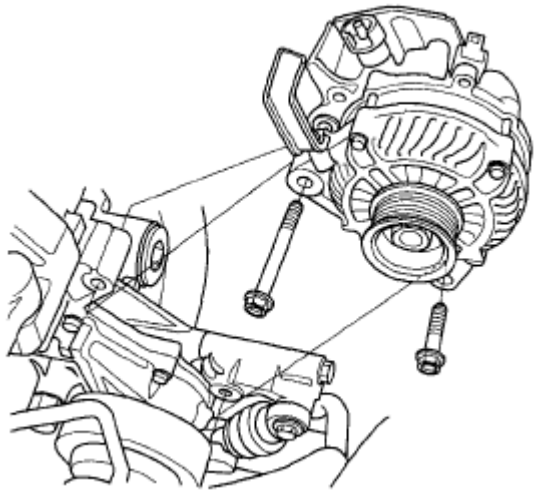

Fig. 19: Identifying Alternator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Install the alternator.

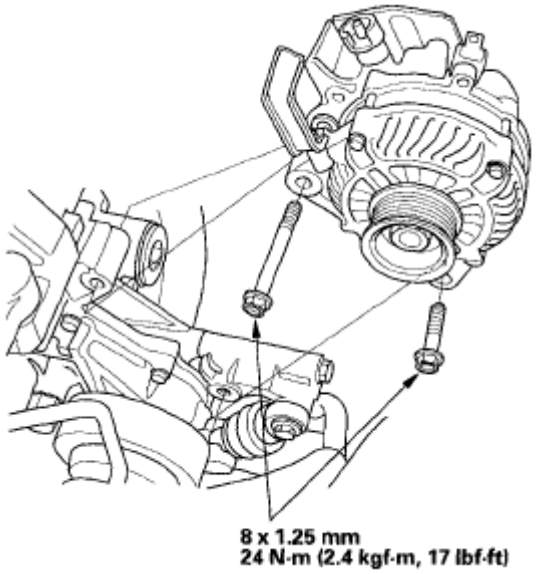

Fig. 20: Identifying Alternator (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the alternator connector (A) and BLK wire (B) to the alternator.

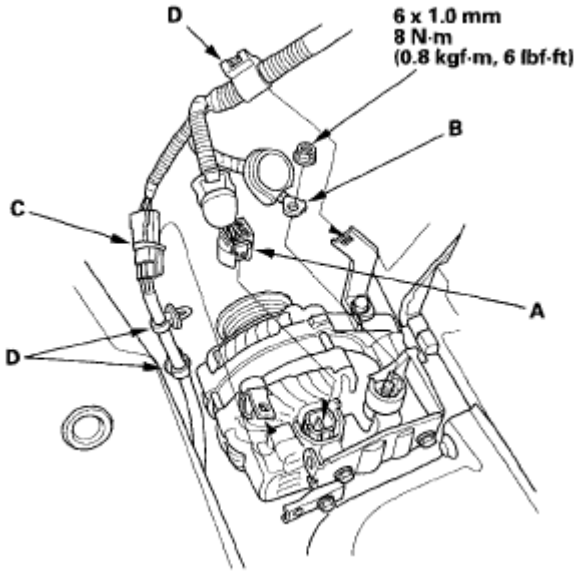

Fig. 21: Identifying Alternator Connector And BLK Wire To Alternator (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the harness connector (C) and harness clamp (D) to the alternator.
4. Install the drive belt (see **DRIVE BELT INSPECTION**).
5. Connect the positive cable to the battery first, then connect the negative cable.

6. Enter the anti-theft code for the audio system and the navigation system (if equipped), then enter the audio presets.
7. Set the clock.

ALTERNATOR OVERHAUL

EXPLODED VIEW

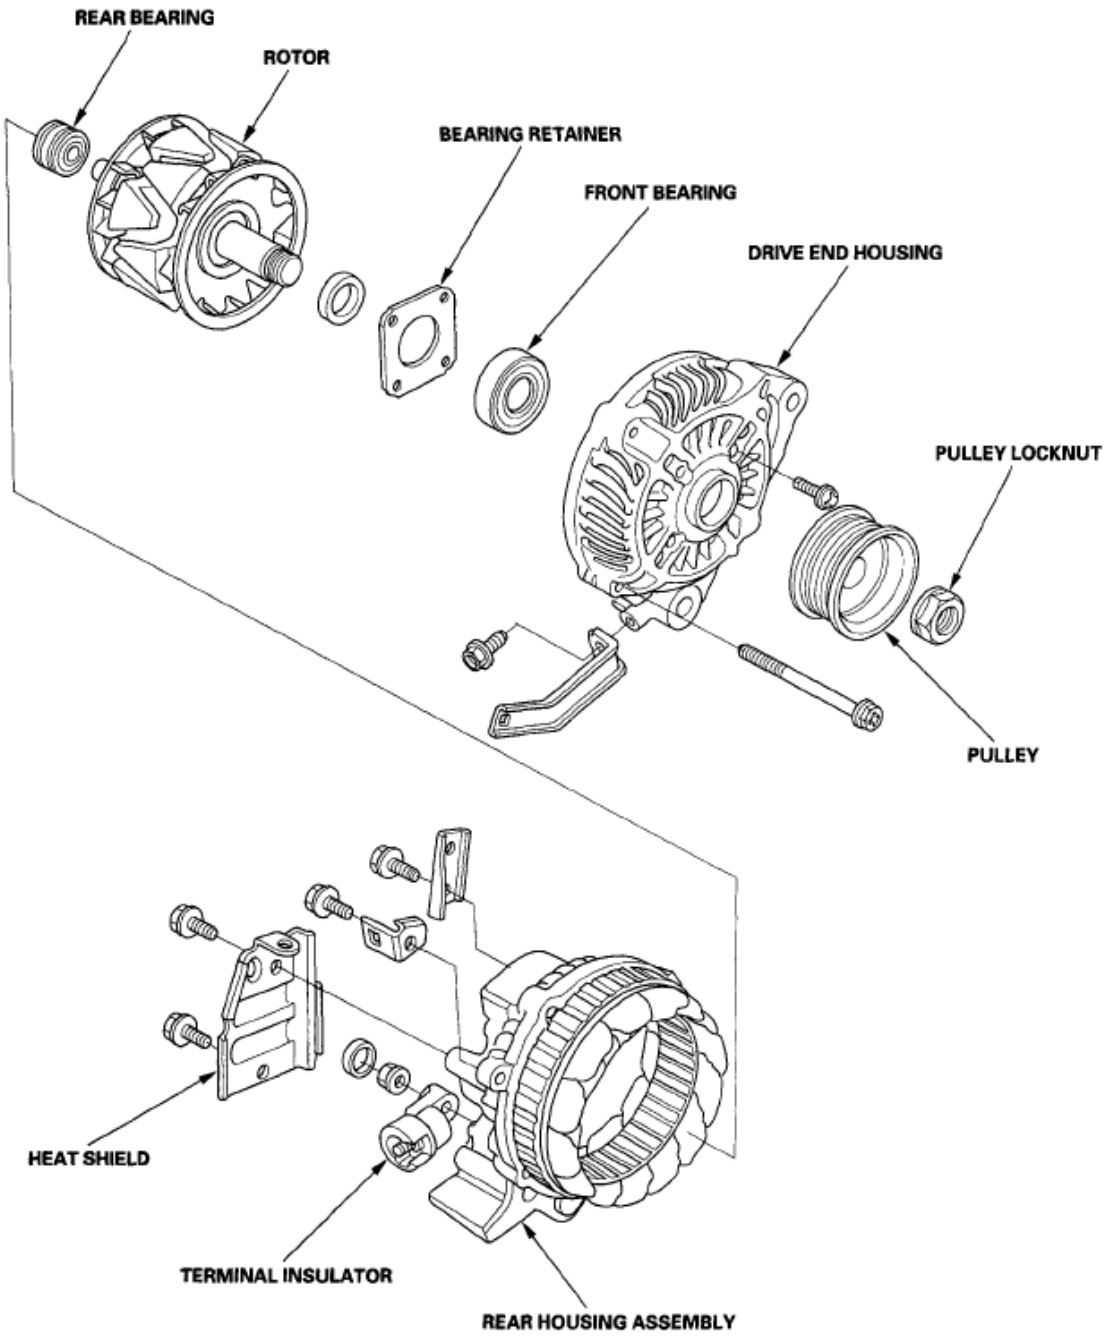

Fig. 22: Exploded View Of Alternator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- Driver 07749-0010000
- Attachment, 42 x 47 mm 07746-0010300

NOTE: Refer to the exploded view as needed during this procedure. See Fig. 22.

Alternator Disassembly

1. Test the alternator and regulator before you remove them (see **ALTERNATOR AND REGULATOR CIRCUIT TROUBLESHOOTING**).
2. Remove the alternator (see **ALTERNATOR REMOVAL AND INSTALLATION**).
3. Remove the heat shield (A) and harness brackets (B).

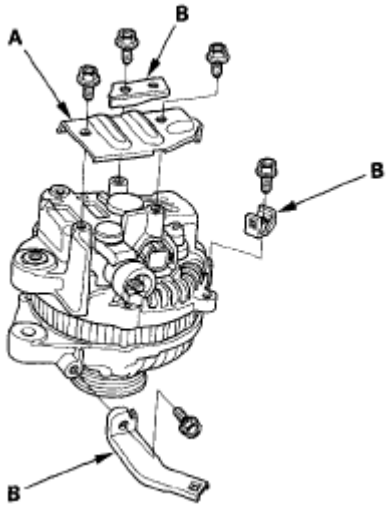

Fig. 23: Removing Heat Shield And Harness Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the terminal insulator.

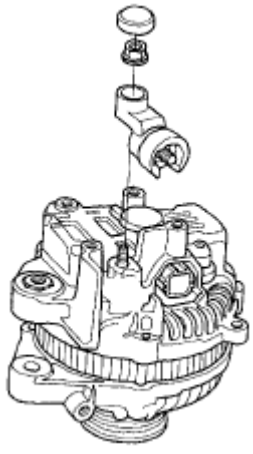

Fig. 24: Removing Terminal Insulator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the four through bolts.

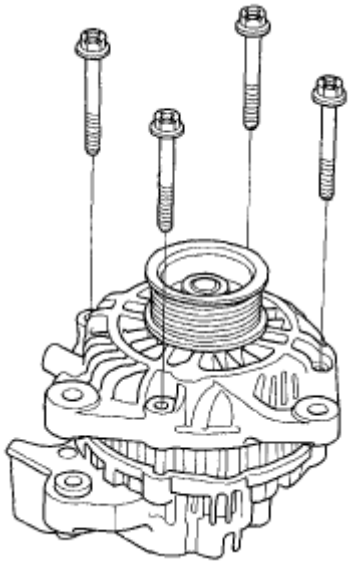

Fig. 25: Removing Through Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Heat the rear bearing seat with a heat gun for about 5 minutes (129-140 °F, 50-60 °C).

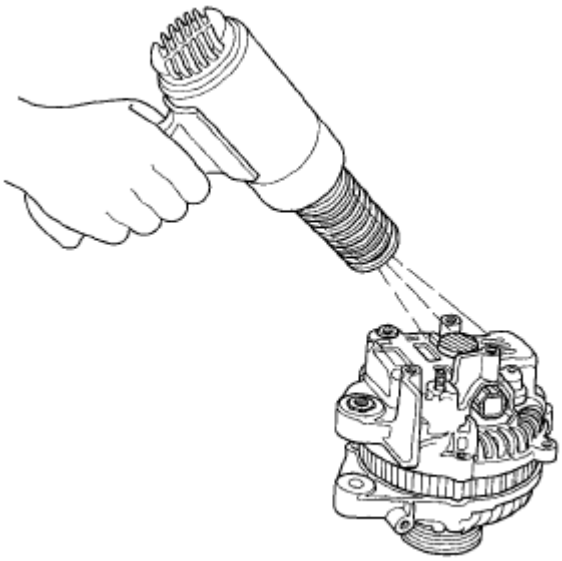

Fig. 26: Identifying Heat Rear Bearing Seat With Heat Gun
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Separate the rear housing from the drive end housing by inserting a flat-tip screwdriver into the openings and prying them apart.

NOTE: Be careful not to damage the stator with the tip of the screwdriver.

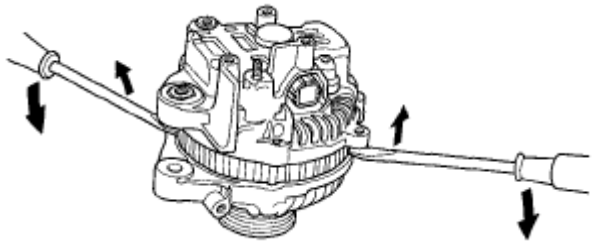

Fig. 27: Identifying Rear Housing From Drive End Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Separate the rear housing (A) and drive end housing (B) with the stator (C) attached to the rear housing.

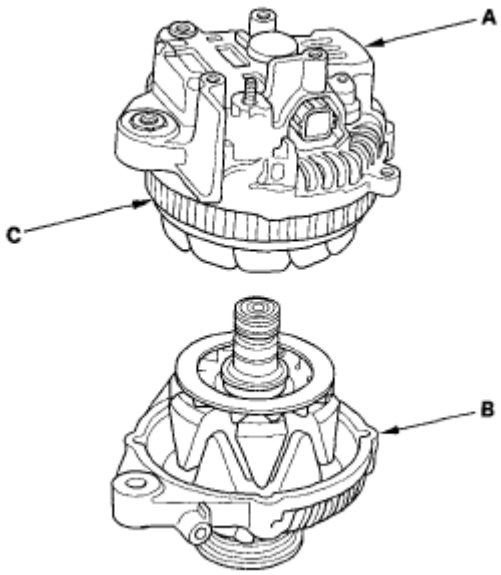

Fig. 28: Separating Rear Housing And Drive End Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. If you are not replacing the front bearing and/or rear bearing, go to step 17. Clamp the rotor in a soft-jawed vise, then remove the pulley locknut.

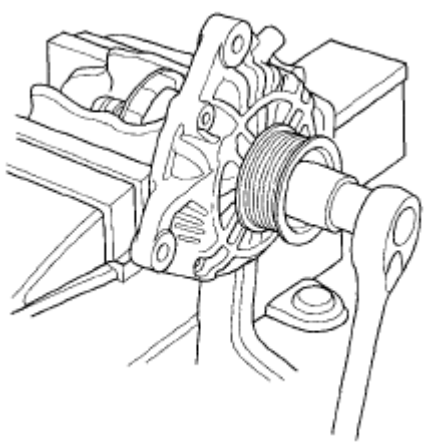

Fig. 29: Removing Pulley Locknut

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the rotor using a puller as shown.

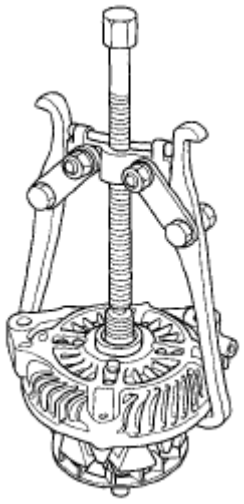

Fig. 30: Removing Rotor Using Puller
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Inspect the rotor shaft for scoring, and inspect the bearing journal surface in the drive end housing for seizure marks.
    - If either the rotor or drive end housing is damaged, replace the alternator.
    - If both the rotor and the drive end housing are OK, go to step 12.
12. Remove the rear bearing using the puller as shown.

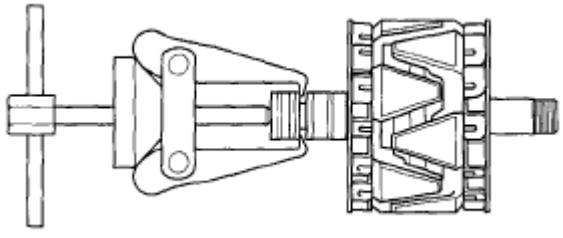

Fig. 31: Removing Rear Bearing Using Puller
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Use a hand press to install the new rear bearing. Apply pressure only on the inner race to avoid damaging the bearing.

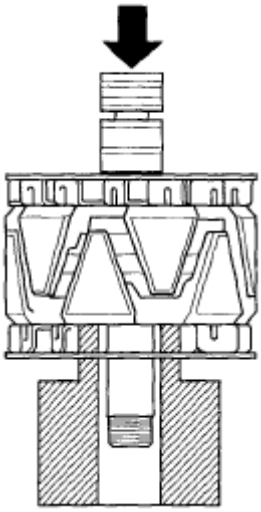

Fig. 32: Applying Pressure On Inner Race Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Remove the front bearing retainer plate.

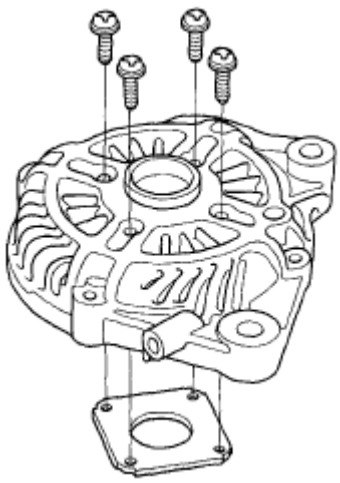

Fig. 33: Removing Front Bearing Retainer Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Support the drive end housing in a vise, and drive out the front bearing with a brass drift and hammer.

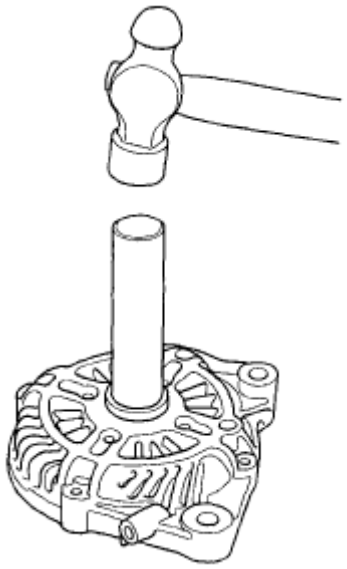

Fig. 34: Identifying Support Drive End Housing In Vise
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. With a hammer and the special tools, install a new front bearing in the drive end housing.

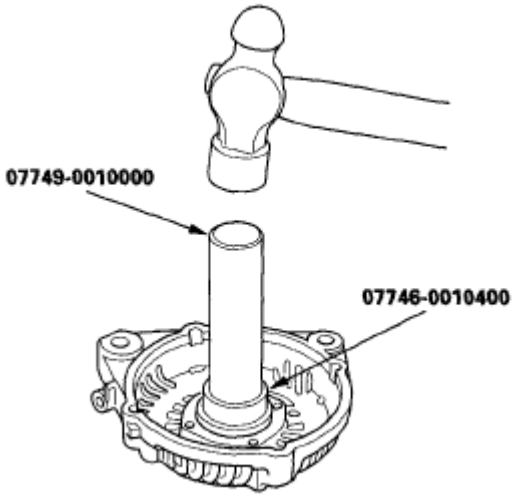

Fig. 35: Installing Front Bearing In Drive End Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Alternator Brush Inspection

17. Measure the length of both brushes with a vernier caliper.
    - If either brush is shorter than the service limit, replace the rear housing assembly.
    - If the brush length is OK, go to step 18.

Alternator Brush Length

Standard (New): 19.0 mm (0.75 in.)

Service Limit: 5.0 mm (0.2 in.)

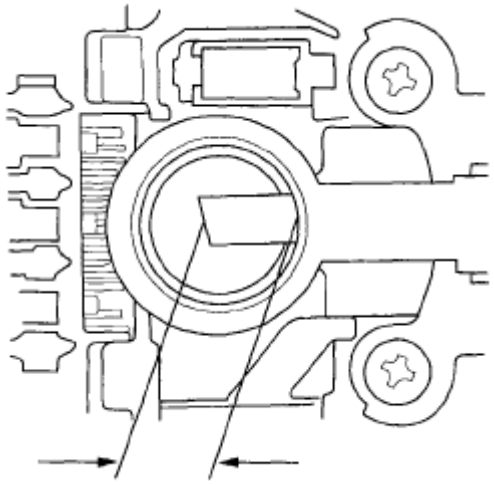

Fig. 36: Measuring Length Of Both Brushes With Vernier Caliper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rotor Slip Ring Test

18. Check for continuity between the slip rings (A).
    - If there is continuity, go to step 19.
    - If there is no continuity, replace the rotor assembly.

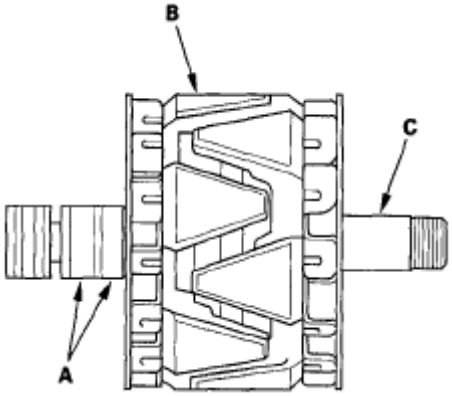

Fig. 37: Checking Continuity Between Slip Rings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Check for no continuity between each slip ring (A) and the rotor (B) and the rotor shaft (C).
    - If there is no continuity, replace the rear housing assembly, and go to step 20.
    - If there is continuity, replace the rotor assembly.

Alternator Reassembly

20. If you removed the pulley, put the rotor in the drive end housing, then tighten its locknut to 111 N.m (11.3 kgf-m, 81.7 lbf-ft).
21. Remove any grease or oil from the slip rings.
22. Push the brushes (A) in, then insert a pin or drill bit (B) (about 1.8 mm (0.77 in.) diameter) to hold them there.

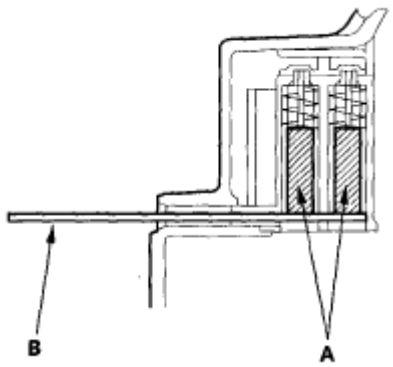

Fig. 38: Removing Grease Or Oil From Slip Rings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Heat the rear bearing seat with a heat gun for about 5 minutes (129-140 °F, 50-60 °C).
24. Put the rear housing assembly (A) and drive end housing/rotor assembly (B) together, tighten the four through bolts (C), and pull out the pin (D).

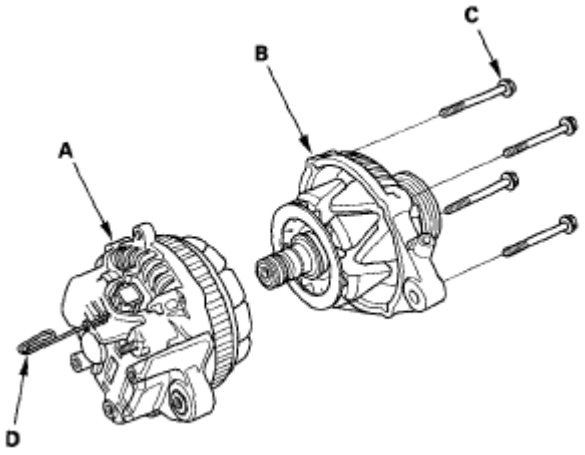

Fig. 39: Identifying Heat Rear Bearing Seat With Heat Gun
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. After assembling the alternator, turn the pulley by hand to make sure the rotor turns smoothly and without noise.
26. Install the alternator (see **ALTERNATOR REMOVAL AND INSTALLATION**) and drive belt (see **DRIVE BELT INSPECTION**).

2007 HONDA

Civic - Except Hybrid

BUZZERS, RELAYS & TIMERS

BUZZERS, RELAYS & TIMERS LOCATION

Component	Location
A/C Compressor Clutch Relay	In under-hood fuse/relay box. See **Fig. 2**.
A/C Condenser Fan Relay	In underhood fuse/relay box. See **Fig. 2**.
Blower Motor Relay	In under-hood fuse/relay box. See **Fig. 2**.
ETCS Control Relay	In under-hood fuse/relay box. See **Fig. 2**.
Fan Control Relay	In under-hood fuse/relay box. See **Fig. 2**.
Front Accessory Power Socket Relay	Near under-dash junction box. See **Fig. 66**.
Fuel Shut-Off Solenoid Valve Relay	Under left side of dash. See **Fig. 163**.
Ignition Coil Relay	In under-hood fuse/relay box. See **Fig. 2**.
Injector Control Module Relay	Under left side of dash. See **Fig. 163**.
PGM-FI Main Relay 1	In under-hood fuse/relay box. See **Fig. 2**.
PGM-FI Main Relay 2	In under-dash fuse/relay box. See **Fig. 1**.
PGM-FI Sub-Relay	In under-hood fuse/relay box. See **Fig. 2**.
Power Mirror Defogger Relay	In under-hood fuse/relay box. See **Fig. 2**.
Power Window Relay	In under-dash fuse/relay box. See **Fig. 1**.
Radiator Fan Relay	In under-hood fuse/relay box. See **Fig. 2**.
Rear Accessory Power Socket Relay	Near under-dash junction box. See **Fig. 66**.
Rear Window Defogger Relay	In under-hood fuse/relay box. See **Fig. 2**.
Starter Control Relay	Under left side of dash. See **Fig. 163**.
Starter Cut Relay	In under-dash fuse/relay box. See **Fig. 1**.

CIRCUIT PROTECTION DEVICES

CIRCUIT PROTECTION DEVICES LOCATION

Component	Location
Under-Dash Fuse/Relay Box	Under left end of dash. See **Fig. 58**.
Under-Dash Junction Box	Under left side of dash. See **Fig. 65**.
Under-Hood Fuse/Relay Box	Left side of engine compartment. See **Fig. 43**.

CONTROL UNITS

CONTROL UNITS LOCATION

Component	Location
ABS Modulator-Control Unit	Right side of engine compartment. See **Fig. 3**.
Antenna Module Unit (2-Door)	Inside right "C" pillar.
ECM/PCM	Left side of engine compartment. See **Fig. 44**.
EPS Control Unit	Behind right kick panel. See **Fig. 86**.
Gauge Control Module (Speedo)	Left side of dash. See **Fig. 150**.

Gauge Control Module (Tach)	Left side of dash. See **Fig. 151**.
Immobilizer-Keyless Control Unit	On steering column. See **Fig. 56**.
Injector Control Module	Behind right kick panel. See **Fig. 164**.
Moonroof Control Unit	Center rear of roof. See **Fig. 116**.
ODS Unit	In front passenger' seat back. See **Fig. 93**.
SRS Unit	Under middle of dash. See **Fig. 77**.
VSA Modulator Control Unit	Right side of engine compartment. See **Fig. 3**.
XM Receiver (2 Door)	Right side of trunk. See **Fig. 126**.
XM Receiver (4 Door)	Right side of trunk. See **Fig. 173**.

MOTORS

MOTORS LOCATION

Component	Location
A/C Condenser Fan Motor Connector	Top of A/C condenser fan motor. See **Fig. 15**.
Air Mix Control Motor	On left side of HVAC assembly. See **Fig. 68**.
Blower Motor	Under right side of dash. See **Fig. 85**.
Driver's Power Window Motor	In driver's door. See **Fig. 106**.
Front Passenger's Power Window Motor	In front passenger's door. See **Fig. 106**.
Fuel Tank Unit	In top of fuel tank. See **Fig. 123**.
Left Power Mirror Connector (4-Door)	Front of driver's door. See **Fig. 110**.
Left Power Mirror (2-Door)	Front of driver's door. See **Fig. 109**.
Left Rear Power Window Motor	In left rear door. See **Fig. 111**.
Mode Control Motor	Behind glove box, on HVAC assembly. See **Fig. 81**.
Radiator Fan Motor Connector	Front of engine compartment. See **Fig. 16**.
Recirculation Control Motor	Behind glove box, on HVAC assembly. See **Fig. 82**.
Right Power Mirror	Front of front passenger's door. See **Fig. 109**.
Right Rear Power Window Motor	In right rear door. See **Fig. 111**.
Starter	Lower right rear of engine. See **Fig. 157**.
Windshield Washer Motor	Behind right side of front bumper. See **Fig. 131**.
Windshield Wiper Motor	Under right side of cowl cover. See **Fig. 51**.

SENDING UNITS & SENSORS

SENDING UNITS & SENSORS LOCATION

Component	Location
A/C Pressure Sensor	Right side of engine compartment. See **Fig. 3**.
A/F Sensor Connector (Except Si)	Top left rear of engine. See **Fig. 26**.
A/F Sensor Connector (Si)	Rear of engine compartment. See **Fig. 147**.
APP Sensor	Under left side of dash. See **Fig. 68**.
CKP Sensor (Except Si)	Top left rear of engine. See **Fig. 25**.
CKP Sensor (Si)	Lower front of engine. See **Fig. 135**.

CMP Sensor	Rear of engine. See **Fig. 32**.
CMP Sensor A	Right rear of engine. See **Fig. 34**.
CMP Sensor B	Right rear of engine. See **Fig. 34**.
Driver's Seat Position Sensor	Under driver's seat. See **Fig. 87**.
ECT Sensor 1 (Except Si)	Rear of engine. See **Fig. 29**.
ECT Sensor 1 (Si)	Right rear of engine. See **Fig. 35**.
ECT Sensor 2	Lower left side of radiator. See **Fig. 139**.
EGR Valve & EGR Valve Position Sensor	Top left rear of engine. See **Fig. 27**.
EOP Sensor	Top right front of engine. See **Fig. 11**.
EPS Torque Sensor	Under left side of engine compartment. See **Fig. 174**.
Evaporator Temperature Sensor Connector	Under right side of dash. See **Fig. 84**.
Front Passenger's Weight Sensor (Front Inner Side)	Under left side of front passenger's seat. See **Fig. 94**.
Front Passenger's Weight Sensor (Front Outer Side)	Under right side of front passenger's seat. See **Fig. 95**.
Front Passenger's Weight Sensor (Rear Inner Side)	Under left side of front passenger's seat. See **Fig. 94**.
Front Passenger's Weight Sensor (Rear Outer Side)	Under right side of front passenger's seat. See **Fig. 95**.
FTP Sensor	Under left side of floor. See **Fig. 149**.
FTP Sensor (GX)	Behind rear seat (GX). See **Fig. 166**.
FTT Sensor	Behind rear seat (GX). See **Fig. 166**.
Fuel Pressure Sensor	Right rear of engine. See **Fig. 162**.
Fuel Temperature Sensor	Rear of engine. See **Fig. 159**.
Inner Side Front Passenger's Weight Sensor Connector (2-Door)	Under front passenger's seat. See **Fig. 92**.
Input Shaft (Mainshaft) Speed Sensor	On transmission housing. See **Fig. 37**.
Knock Sensor (Except Si)	Lower right rear of engine. See **Fig. 145**.
Knock Sensor (Si)	Left front side of engine. See **Fig. 24**.
Left Front Impact Sensor	Behind left side of front bumper. See **Fig. 134**.
Left Rear Wheel Speed Sensor Connector	Under left rear of vehicle (Right similar). See **Fig. 175**.
Left Side Impact Sensor (1st) (2-Door)	Left side of floor. See **Fig. 99**.
Left Side Impact Sensor (1st) (4-Door)	Base of left "B" pillar. See **Fig. 103**.
Left Side Impact Sensor (2nd) (2-Door)	In left "B" pillar. See **Fig. 102**.
Left Side Impact Sensor (2nd) (4-Door)	In left "C" pillar. See **Fig. 120**.
MAF/IAT Sensor (Except Si)	Left rear of engine compartment. See **Fig. 48**.
MAF/IAT Sensor (Si)	Left side of engine compartment. See **Fig. 49**.
MAP Sensor (Except Si)	Rear of engine. See **Fig. 32**.
MAP Sensor (Si)	Left rear side of engine. See **Fig. 23**.
Motor Angle Sensor Connector	Under rear of engine. See **Fig. 137**.
Outer Side Front Passenger's Weight Sensor Connector (2-Door)	Under front passenger's seat. See **Fig. 92**.
Output Shaft (Countershaft) Speed Sensor	Under transmission housing (Si). See **Fig. 156**.

Output Shaft (Countershaft) Speed Sensor (A/T)	On transmission housing. See **Fig. 38**.
Output Shaft (Countershaft) Speed Sensor (M/T)	On transmission housing. See **Fig. 144**.
Outside Air Temperature Sensor	Behind left side of front bumper. See **Fig. 133**.
Rear Safing Sensor	Middle of floor. See **Fig. 100**.
Right Front Impact Sensor	Behind right side of front bumper. See **Fig. 134**.
Right Side Impact Sensor (1st)	Right side of floor.
Right Side Impact Sensor (2nd) (2-Door)	In right "B" pillar.
Right Side Impact Sensor (2nd) (4-Door)	In right "C" pillar. See **Fig. 120**.
Secondary HO2S Connector (Except Si)	Top left rear of engine. See **Fig. 26**.
Secondary HO2S Connector (Si)	Under center console. See **Fig. 97**.
Steering Angle Sensor	In steering column cover (Si). See **Fig. 171**.
TP Sensor/Throttle Actuator (Except Si)	On throttle body.
TP Sensor/Throttle Actuator (Si)	On throttle body. See **Fig. 169**.
Wheel Speed Sensor Connector (Left Front)	On left frame rail. See **Fig. 141**.
Wheel Speed Sensor Connector (Right Front)	On frame rail. See **Fig. 141**.
Wheel Speed Sensor Connector (Right Rear)	Under right rear of floor. See **Fig. 148**.
Wheel Speed Sensor (Left Rear)	Under left rear of floor. See **Fig. 148**.
Yaw Rate-Lateral Acceleration Sensor (Si)	Under middle of dash. See **Fig. 176**.

SOLENOIDS & SOLENOID VALVES

SOLENOIDS & SOLENOID VALVES LOCATION

Component	Location
A/C Compressor Connector (Except Si)	Left front of engine. See **Fig. 8**.
A/C Compressor Connector (Si)	Lower left front of engine. See **Fig. 138**.
A/T Clutch Pressure Control Solenoid Valve A	On transmission housing. See **Fig. 39**.
A/T Clutch Pressure Control Solenoid Valve B	On transmission housing. See **Fig. 39**.
A/T Clutch Pressure Control Solenoid Valve C	On transmission housing. See **Fig. 39**.
EGR Valve & EGR Valve Position Sensor	Top left rear of engine. See **Fig. 27**.
EVAP Canister Purge Valve	Right rear of engine. See **Fig. 33**.
EVAP Canister Vent Shut Valve	Under left side of floor. See **Fig. 149**.
Fuel Pressure Regulator Shut-Off Solenoid Valve	Right rear of engine. See **Fig. 160**.
Fuel Tank Internal Solenoid Valve (GX)	Left side of trunk (GX). See **Fig. 167**.
IMT Actuator	Right front of engine. See **Fig. 10**.
Injectors No. 1, 2, 3 & 4 (Except Si)	Top of engine, at respective cylinders. See **Fig. 20**.
Injectors No. 1, 2, 3 & 4 (Si)	Top left side of engine, at respective cylinders. See **Fig. 22**.
Reverse Lockout Solenoid	Top of transmission housing. See **Fig. 42**.
Rocker Arm Oil Control Solenoid (Except Si)	Top front of engine. See **Fig. 9**.
Rocker Arm Oil Control Solenoid (Si)	Top front of engine. See **Fig. 14**.
Shift Lock Solenoid Connector	Under center console. See **Fig. 96**.
Starter Solenoid (Except Si)	Lower right rear of engine. See **Fig. 157**.
Starter Solenoid (Si)	On starter motor.
Trunk Lid Opener Solenoid/Latch Switch	Middle of trunk lid. See **Fig. 128**.

VTC Oil Control Solenoid Valve	Front of engine. See **Fig. 13**.

SWITCHES

SWITCHES LOCATION

Component	Location
A/T Gear Position Indicator Panel Light/Park Pin Switch Connector (A/T)	Under center console. See **Fig. 96**.
Back-Up Light Switch (Except Si)	On transaxle housing. See **Fig. 40**.
Back-Up Light Switch (Si)	On transmission housing. See **Fig. 41**.
Brake Fluid Level Switch	On brake master cylinder reservoir. See **Fig. 46**.
Brake Pedal Position Switch	Under left side of dash. See **Fig. 63**.
Clutch Interlock Switch	Under left side of dash. See **Fig. 61**.
Clutch Pedal Position Switch	Under left side of dash. See **Fig. 61**.
Driver's Door Lock Actuator/Knob Switch	Rear of driver's door. See **Fig. 107**.
Driver's Door Switch	In left "B" pillar. See **Fig. 104**.
Driver's Seat Belt Switch Connector	Under driver's seat. See **Fig. 89**.
Front Passenger's Door Lock Actuator/Knob Switch	Rear of front passenger's door. See **Fig. 107**.
Front Passenger's Door Switch	In right "B" pillar. See **Fig. 104**.
Front Passenger's Seat Belt Switch Connector	Under front passenger's seat. See **Fig. 91**.
Fuel Fill Door Switch Connector (GX)	Left rear shelf (GX). See **Fig. 168**.
Fuel Pressure Regulator Switch	Right rear of engine. See **Fig. 161**.
Left Rear Door Lock Actuator/Knob Switch	Rear of left rear door. See **Fig. 112**.
Left Rear Door Switch	In left "C" pillar. See **Fig. 105**.
Oil Pressure Switch (Except Si)	Top left rear of engine. See **Fig. 25**.
Oil Pressure Switch (Si)	Near oil filter. See **Fig. 136**.
Parking Brake Switch	At base of parking brake lever. See **Fig. 96**.
PSP Switch	Right side of engine compartment. See **Fig. 6**.
Right Rear Door Lock Actuator/Knob Switch	Rear of right rear door.
Right Rear Door Switch	In right "C" pillar. See **Fig. 105**.
Rocker Arm Oil Pressure Switch (Si)	Top front of engine. See **Fig. 14**.
Security Hood Switch Connector	Front center of engine compartment. See **Fig. 17**.
Transmission Range Switch	On transmission housing. See **Fig. 141**.
Trunk Key Cylinder Switch	Right side of trunk lid, on key cylinder assembly. See **Fig. 130**.
Trunk Key Cylinder Switch	Right side of trunk lid. See **Fig. 155**.
Trunk Latch Switch Connector	Middle of trunk lid. See **Fig. 127**.
Trunk Lid Opener Solenoid/Latch Switch	Middle of trunk lid. See **Fig. 128**.
2nd Clutch Transmission Fluid Pressure Switch	On transmission housing. See **Fig. 37**.
3rd Clutch Transmission Fluid Pressure Switch	On transmission housing. See **Fig. 143**.

MISCELLANEOUS

MISCELLANEOUS LOCATION

Component	Location
Alternator (Except Si)	Left front of engine. See **Fig. 8**.
Alternator (Si)	Lower left front of engine. See **Fig. 12**.
AM/FM Antenna Amplifier	Right "C" pillar. See **Fig. 122**.
AM Signal Window Antenna (2-Door)	Top right side of rear window. See **Fig. 121**.
AM Signal Window Antenna (4-Door)	In right "C" pillar. See **Fig. 122**.
Antenna Lead Connector (2-Door)	Under front of center console. See **Fig. 79**.
Antenna Lead Connector (4-Door)	Under front of center console. See **Fig. 80**.
Blower Power Transistor	Under right side of dash, near blower motor. See **Fig. 84**.
Cable Reel Connector A	On steering column. See **Fig. 55**.
Cable Reel Connector B	On steering column. See **Fig. 54**.
Cable Reel Connector C	In steering wheel. See **Fig. 53**.
DLC	Under left side of dash. See **Fig. 69**.
Driver's Airbag First & Second Inflators Connector	In steering wheel. See **Fig. 52**.
Driver's Seat Belt Buckle Tensioner Connector	Under driver's seat. See **Fig. 89**.
Driver's Seat Belt Tensioner Connector (4-Door)	Base of left "B" pillar. See **Fig. 103**.
Driver's Seat Belt Tensioner (2-Door)	At left "B" pillar. See **Fig. 102**.
Driver's Side Airbag Inflator Connector	Under driver's seat. See **Fig. 88**.
EPS Gearbox Connectors A & B	Under rear of engine. See **Fig. 137**.
FM Signal Window Antenna (2-Door)	Top right side of rear window. See **Fig. 121**.
FM Signal Window Antenna (4-Door)	In right "C" pillar. See **Fig. 122**.
Front Passenger's Airbag First & Second Inflators Connector	Behind right side of dash. See **Fig. 74**.
Front Passenger's Seat Belt Buckle Tensioner Connector	Under front passenger's seat. See **Fig. 91**.
Front Passenger's Seat Belt Tensioner Connector (4-Door)	Base of right "B" pillar. See **Fig. 103**.
Front Passenger's Seat Belt Tensioner (2-Door)	At right "B" pillar. See **Fig. 102**.
Front Passenger's Side Airbag Inflator Connector	Under front passenger's seat. See **Fig. 90**.
Fuel Pressure Regulator Leak Check Connector	Front of engine compartment. See **Fig. 158**.
GPS Antenna	Under middle of dash. See **Fig. 73**.
Horn	Behind left side of front bumper. See **Fig. 133**.
Ignition Coils No. 1, 2, 3 & 4 (Except Si)	Top of engine. See **Fig. 19**.
Ignition Coils No. 1, 2, 3 & 4 (Si)	Top of engine. See **Fig. 21**.
Junction Connector C101	Near brake master cylinder. See **Fig. 47**.
Junction Connector C105	Top rear of engine. See **Fig. 28**.
Junction Connector C206	Right side of engine compartment. See **Fig. 5**.
Junction Connector C207	Right rear of engine compartment. See **Fig. 7**.
Left Side Curtain Airbag Inflator Connector (2-Door)	In left "C" pillar. See **Fig. 117**.
Left Side Curtain Airbag Inflator Connector (4-Door)	In left "C" pillar. See **Fig. 118**.
MES Connector	On under-dash fuse/relay box. See **Fig. 152**.

Microphone (Navigation)	In roof console. See **Fig. 113**.
Noise Reduction Condenser Connector	In left "C" pillar. See **Fig. 120**.
Right Side Curtain Airbag Inflator Connector (2-Door)	In right "C" pillar. See **Fig. 117**.
Right Side Curtain Airbag Inflator Connector (4-Door)	In right "C" pillar. See **Fig. 118**.
Stereo Amplifier (4-Door) (Si)	Under driver's seat. See **Fig. 98**.
Thermal Joint S1 (Except Si)	Rear of engine. See **Fig. 31**.
Thermal Joint S1 (Si)	Rear of engine. See **Fig. 36**.
Thermal Joint S2 (Except Si)	Rear of engine. See **Fig. 31**.
Thermal Joint S3 (Except Si)	Rear of engine. See **Fig. 31**.
Thermal Joint S3 (Si)	Rear of engine. See **Fig. 36**.
Thermal Joint S4	Rear of engine. See **Fig. 31**.
Thermal Joint S4	Rear of engine. See **Fig. 31**.
Thermal Joint S11 (Si)	Rear of engine. See **Fig. 36**.
XM Antenna Lead Connector	Left rear of roof. See **Fig. 115**.
XM Antenna Lead Connector	Left rear of roof. See **Fig. 172**.

CONNECTORS

CONNECTORS LOCATION

Component	Location
C102 (Except Si) (Black, 1 Pin)	Near brake master cylinder. See **Fig. 47**.
C102 (Si) (Black, 1 Pin)	Left front of engine compartment. See **Fig. 50**.
C103 (Black, 1 Pin)	On lower rear of engine. See **Fig. 146**.
C106 (Black, 10 Pin)	Left side of engine. See **Fig. 18**.
C107 (Black, 10 Pin)	On transmission housing. See **Fig. 38**.
C109 (Black/Gray, 8 Pin)	Underside of transmission housing. See **Fig. 142**.
C201 (2-Door) (Blue/White, 14 Pin)	Behind left kick panel. See **Fig. 71**.
C201 (4-Door) (Blue, 14 Pin)	Behind left kick panel. See **Fig. 72**.
C202 (2 Door) (Blue, 20 Pin)	Behind left kick panel. See **Fig. 170**.
C203 (Yellow, 4 Pin)	Under under-dash fuse/relay box. See **Fig. 59**.
C204 (2-Door) (White, 14 Pin)	Behind left kick panel. See **Fig. 71**.
C204 (4-Door) (White, 14 Pin)	Behind left kick panel. See **Fig. 60**.
C205 (Brown, 2 Pin)	Under left side of dash. See **Fig. 67**.
C208 (2 Door, 4 Door) (White, 3 Pin)	Behind left kick panel. See **Fig. 60**.
C209 (White, 4 Pin)	Under right side of engine compartment. See **Fig. 137**.
C210 (Optional) (Brown, 1 Pin)	Under left end of dash. See **Fig. 63**.
C211 (Optional) (Brown, 1 Pin)	Behind right side of front bumper. See **Fig. 132**.
C501 (2-Door) (White, 23 Pin)	Behind left kick panel. See **Fig. 71**.
C501 (4-Door) (White, 23 Pin)	Behind left kick panel. See **Fig. 72**.
C502 (White, 20 Pin)	Behind left kick panel. See **Fig. 72**.
C502 (2 Door) (White, 4 Pin)	Behind left kick panel. See **Fig. 170**.

C504 (White, 24 Pin)	Behind right side of dash. See **Fig. 74**.
C505 (Si) (White, 23 Pin)	Under middle of dash. See **Fig. 79**.
C509 (Optional) (White, 6 Pin)	Under middle of dash. See **Fig. 75**.
C601 (White, 2 Pin)	Under middle of dash. See **Fig. 76**.
C602 (White, 2 Pin)	Under driver's seat. See **Fig. 88**.
C605 (White, 4 Pin)	Under center console.
C701 (2-Door) (White, 14 Pin)	In left "C" pillar. See **Fig. 117**.
C701 (4-Door) (White, 14 Pin)	In left "C" pillar. See **Fig. 119**.
C702 (4 Door) (Light Blue, 6 Pin)	Left "C" pillar. See **Fig. 119**.
C703 (Green, 2 Pin)	Middle of trunk lid. See **Fig. 129**.
C751 (Blue, 23 Pin)	Under left end of dash. See **Fig. 57**.
C752 (White, 18 Pin)	Under left end of dash. See **Fig. 57**.
C754 (White, 18 Pin)	In driver's door. See **Fig. 108**.
C761 (Blue, 23 Pin)	Under right end of dash. See **Fig. 57**.
C762 (White, 18 Pin)	Under right end of dash. See **Fig. 57**.
C763 (White, 18 Pin)	In front passenger's door. See **Fig. 108**.
C771 (White, 18 Pin)	At left "B" pillar. See **Fig. 104**.
C781 (White, 18 Pin)	At right "B" pillar. See **Fig. 104**.
C782 (White, 4 Pin)	Under front passenger's seat. See **Fig. 90**.
C801 (Ex & Si) (Blue, 20 Pin)	Under under-dash fuse/relay box. See **Fig. 59**.
C801 (2 door: DX, DX-G & LX) (2 Pin)	Under under-dash fuse/relay box. See **Fig. 59**.
C801 (4 Door: DX, DX-G & LX) (6 Pin)	Under under-dash fuse/relay box. See **Fig. 59**.
C852 (Brown, 1 Pin)	In left "C" pillar. See **Fig. 117**.
C861 (GX) (Light Blue, 6 Pin)	Left side of rear seat back. See **Fig. 165**.

GROUNDS

GROUNDS LOCATION

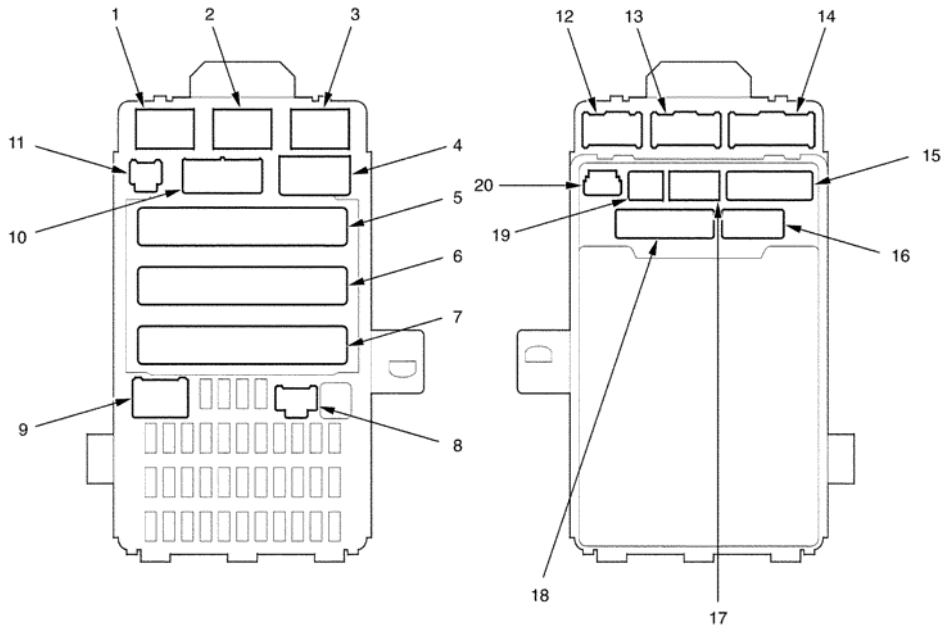
Component	Location
G1	Left side of engine compartment. See **Fig. 45**.
G2	At top right front of engine. See **Fig. 4**.
G3	Left side of engine compartment. See **Fig. 45**.
G101 (Except Si)	Right rear of engine. See **Fig. 30**.
G101 (Si)	Left rear of engine. See **Fig. 23**.
G201	Behind right side of front bumper. See **Fig. 132**.
G202	Behind right side of front bumper. See **Fig. 132**.
G301	Lower left side of engine compartment. See **Fig. 140**.
G401	Behind left kick panel. See **Fig. 70**.
G402	Behind glove box. See **Fig. 83**.
G403	Behind glove box. See **Fig. 83**.
G403 (2 Door)	Behind right kick panel. See **Fig. 86**.
G501	Under gauge assembly. See **Fig. 62**.
G502	Behind glove box. See **Fig. 82**.

G503	Under left side of dash. See **Fig. 64**.
G504	Near under-dash junction box. See **Fig. 66**.
G505	Behind glove box. See **Fig. 81**.
G506	Under middle of dash. See **Fig. 78**.
G601	Front left side of floor. See **Fig. 98**.
G602	Front right side of floor. See **Fig. 101**.
G603	In left "C" pillar. See **Fig. 119**.
G701 (2-Door)	Left side of trunk. See **Fig. 124**.
G701 (4-Door)	Left rear of trunk. See **Fig. 125**.
G801	Left side of roof. See **Fig. 153**.
G801	Right "C" pillar. See **Fig. 154**.
G851 (2-Door)	Base of right "C" pillar. See **Fig. 114**.
G851 (4-Door)	In right "C" pillar.

COMPONENT LOCATION GRAPHICS

NOTE: Figures may show multiple component locations. Refer to appropriate table for proper figure references.

Under-dash Fuse/Relay Box



(View of Front Side) (View of Rear Side)

Ref	Socket	Cavities	Connects to
1	Power Window Relay	4	
2	PGM-FI Main Relay 2	4	
3	Starter Cut Relay	4	
4	D	2	Dashboard wire harness
5	E	42	Floor Wire Harness
6	F	34	Engine Compartment Wire Harness
7	G	21	Engine Compartment Wire Harness
8	H (MICU Service Check Connector)	3	
9	A (Optional Connector)	6	
10	C	4	Dashboard wire harness
11	B (MES Connector)		Dashboard wire harness
12	K	8	Dashboard wire harness

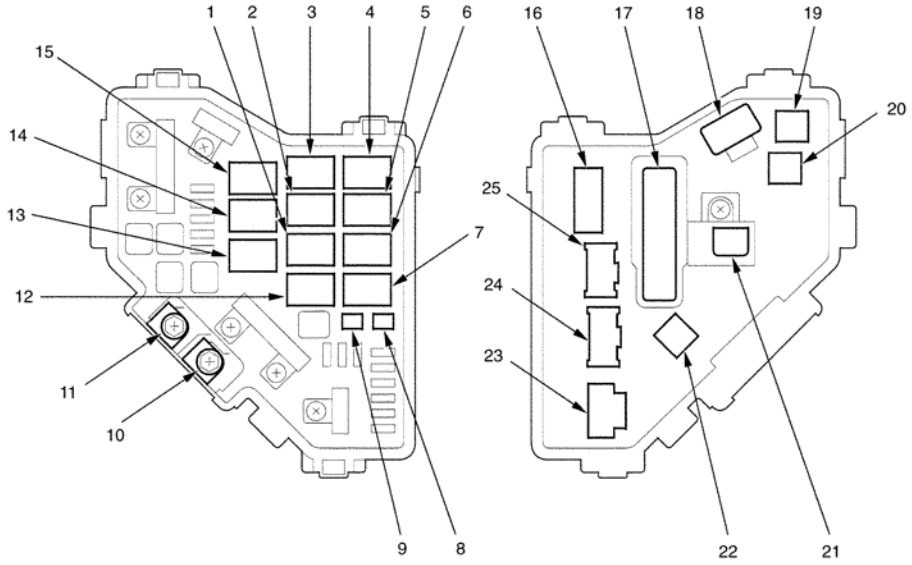
Under-hood Fuse/Relay Box



Ref	Socket	Cavities	Connects to
1	Rear Window Defogger Relay	4	
2	Blower Motor Relay	4	
3	A/C Condenser Fan Relay	4	
4	Fan Control Relay	5	
5	Power Mirror Defogger Relay (Canada: LX, EX, Si)	5	
6	PGM-FI Sub-relay	4	
7	Ignition Coil Relay	4	
8	Radiator Fan Diode	2	(Plugs directly into the fuse/relay box)
9	A/C Condenser Fan Diode	2	
10	T3		Engine Wire Harness (DX, DX-G, LX, EX)
10	T3		Starter Sub-harness (Si)
11	T101		Engine Wire Harness (DX, DX-G, LX, EX)
11	T101		Starter Sub-harness (Si)
12	A/C Compressor Clutch Relay	4	
13	PGM-FI Main Relay 1	4	
14	ETCS Control Relay	4	
15	Radiator Fan Relay	4	
16	J	4	Engine Compartment Wire Harness
17	F	20	Engine Compartment Wire Harness
18	K	2	Engine Compartment Wire Harness
19	G	1	Engine Compartment Wire Harness
20	H	1	Engine Compartment Wire Harness
21	A (ELD Unit) (USA; Canada: Si)	3	Engine Compartment Wire Harness
22	B (Si)	1	Engine Compartment Wire Harness
23	C	2	Engine Compartment Wire Harness
24	E	10	Engine Compartment Wire Harness
25	D	8	Engine Compartment Wire Harness

Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYMPTOM TROUBLESHOOTING INDEX

SYMPTOM TROUBLESHOOTING INDEX

Symptom	Diagnostic Procedure	Also check for
Engine overheats	1. Check the coolant level. 2. Check for any engine coolant leakage (from gaskets, hoses, O-rings, etc.). 3. Check for dirt, leaves, or insects on radiator and condenser. 4. Check for deteriorated coolant. 5. Check for a damaged or deformed fan shroud. 6. Inspect the fan motors (see **FAN MOTOR TEST**) or fan relays (see **POWER RELAY TEST**). 7. Check the radiator cap (see **RADIATOR CAP TEST**). 8. Check the thermostat (see **FAN MOTOR TEST**). 9. Inspect the water pump (see **WATER PUMP INSPECTION**). 10. Check for a plugged or deteriorated radiator hoses. 11. Check for plugged heater core or hoses. 12. Check for a damaged cylinder head gasket.	
The A/C condenser fan runs at low speed, but it does not run at high speed when the engine coolant temperature is above 199 °F (93 °C)	A/C condenser fan high speed circuit troubleshooting (see **A/C CONDENSER FAN HIGH SPEED CIRCUIT TROUBLESHOOTING**).	Cleanliness and tightness of all connectors
With the A/C off and the engine coolant temperature at 199 °F (93 °C) or below, the radiator fan runs at high speed and the A/C condenser fan does not run. When the engine coolant temperature is above 199 °F (93 °C), both fans run at high speed	Remove the fan control relay, and test. • If the relay is faulty, replace it. • If the relay is OK, check for a short in the wire between the fan control relay 5P socket terminal No. 1 and radiator fan motor 2P connector terminal No. 1.	Cleanliness and tightness of all connectors
Both the radiator fan and the A/C condenser fan run at high speed with the ignition switch ON (II), the A/C off, and the engine coolant temperature below 194 °F (90 °C)	Check for short in the wire between A/C condenser fan relay 4P socket terminal No. 3 and ECM connector terminal A5.	Cleanliness and tightness of all connectors
Both the radiator fan and the A/C condenser fan run at low speed with the ignition switch ON (II) and the A/C off	Check for short in the wire between radiator fan relay 4P socket terminal No. 4 and ECM connector terminal A4.	Cleanliness and tightness of all connectors
Both the radiator fan and the A/C	Radiator and A/C condenser fans low speed circuit troubleshooting (see **RADIATOR**	Cleanliness and tightness

condenser fan do not run at low speed with the A/C on	**AND A/C CONDENSER FAN LOW SPEED CIRCUIT TROUBLESHOOTING**).	of all connectors
Both the radiator fan and the A/C condenser fan run at low speed, but the radiator fan does not run at high speed when the engine coolant temperature is above 199 °F (93 °C)	**RADIATOR FAN HIGH SPEED CIRCUIT TROUBLESHOOTING** (see).	Cleanliness and tightness of all connectors
Both the radiator fan and the A/C condenser fan do not run at high speed when the engine coolant temperature is above 199 T (93 °C)	Check for open in the wire between A/C condenser fan relay 4P socket terminal No. 3 and ECM connector terminal A5.	Cleanliness and tightness of all connectors

CIRCUIT DIAGRAM

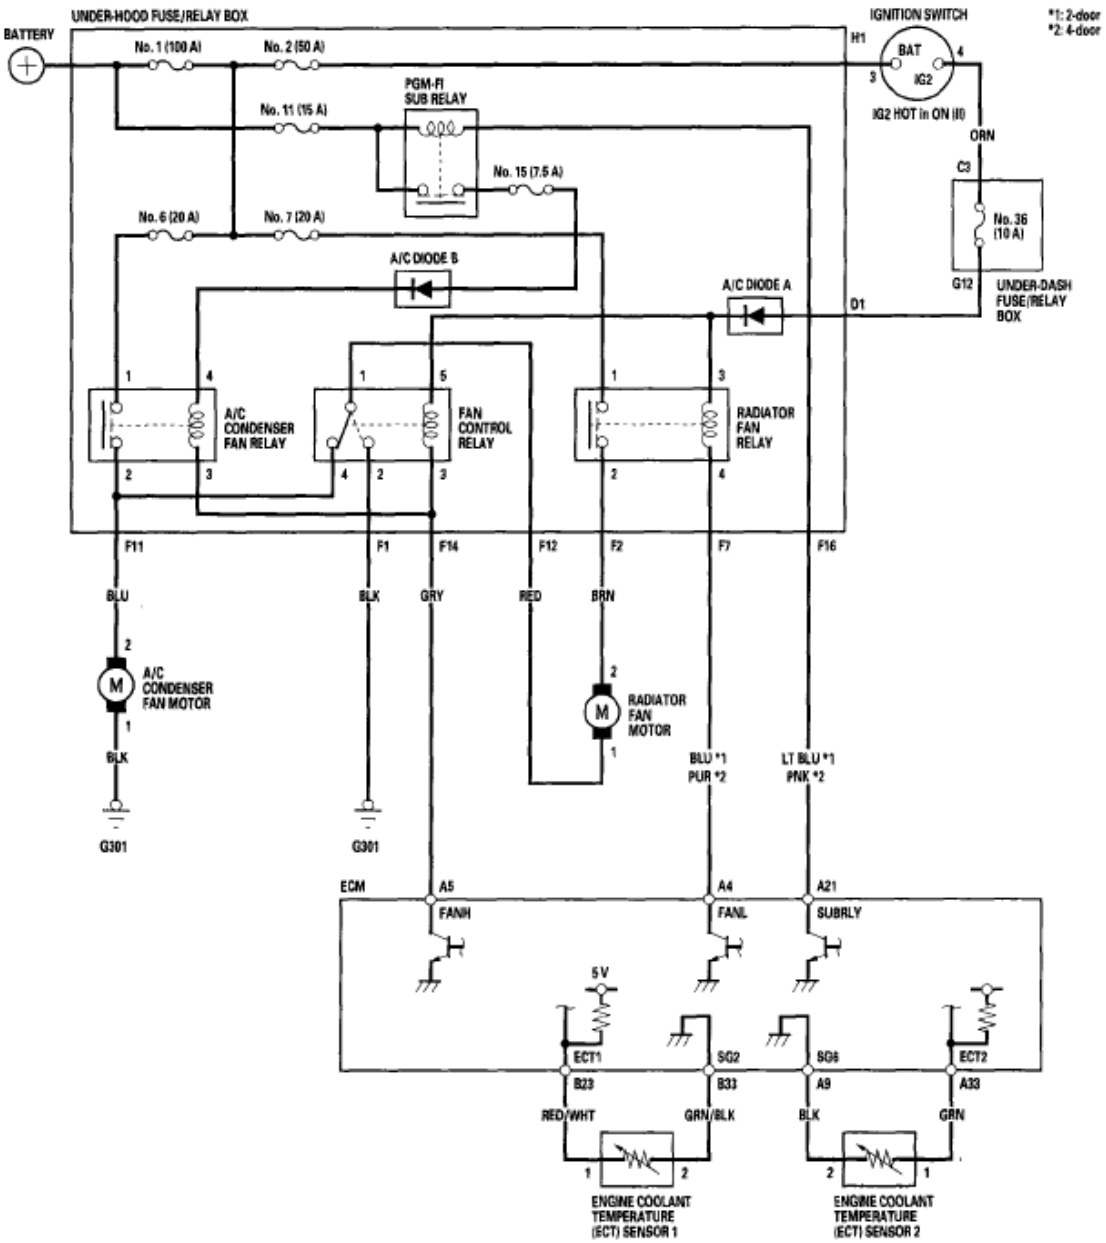

Fig. 2: Fan Controls Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

RADIATOR FAN HIGH SPEED CIRCUIT TROUBLESHOOTING

1. Check the No. 7 (20 A) fuse in the under-hood fuse/relay box and the No. 36 (10 A) fuse in the under-dash fuse/relay box.

   Are the fuses OK?

   YES -Reinstall the fuse(s), then go to step 2.

   NO -Replace the fuse(s) and recheck. If the fuse continues to blow, locate and repair the short in the circuit between the under-hood fuse/relay box and the radiator fan motor, or between under-dash fuse/relay box connector terminal G12 and under-hood fuse/relay box connector terminal D1.

2. Remove the radiator fan relay and the fan control relay from the under-hood fuse/relay box, and test them.

   Are the relays OK?

   YES -Go to step 3.

   NO -Replace the radiator fan relay and/or fan control relay.

3. Measure the voltage between radiator fan relay 4P socket terminal No. 1 and body ground.

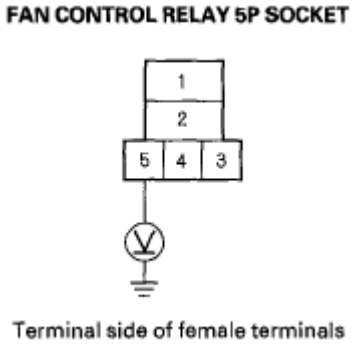

Fig. 3: Measuring Voltage Between Fan Control Relay 5P Socket Terminal 5 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   Is there battery voltage?

   YES -Go to step 4.

   NO -Replace the under-hood fuse/relay box.

4. Connect fan control relay 5P socket terminals No. 1 and No. 2 with a jumper wire.

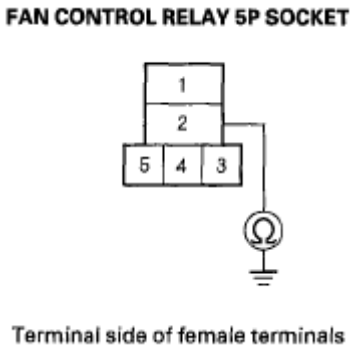

Fig. 4: Checking For Continuity Between Fan Control Relay 5P Socket Terminal 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Connect radiator fan relay 4P socket terminals No. 1 and No. 2 with a jumper wire.

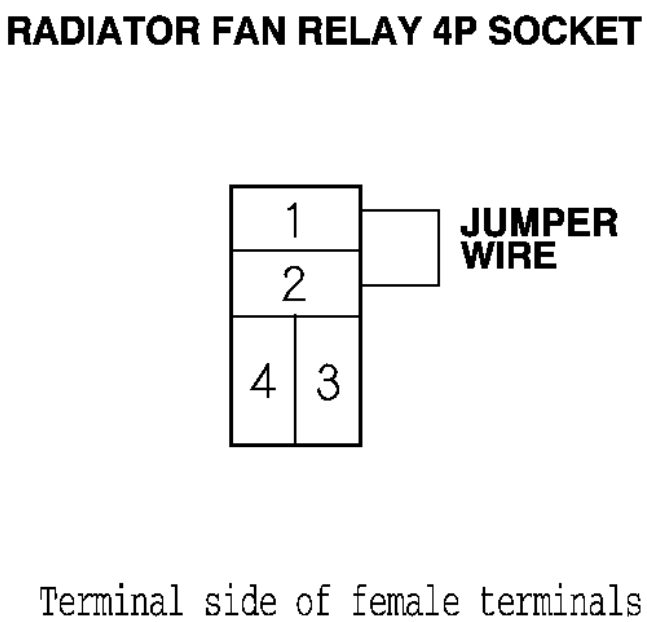

Fig. 5: Terminal Side Of Female Terminals
Courtesy of TOYOTA

Does the radiator fan run at high speed?

YES -Go to step 10.

NO -Go to step 6.

6. Remove the jumper wires, then check for continuity between fan control relay 5P socket terminal No. 2 and body ground.

Is there continuity?

YES -Go to step 7.

NO -Repair open in the wire between fan control relay 5P socket terminal No. 2 and body ground.

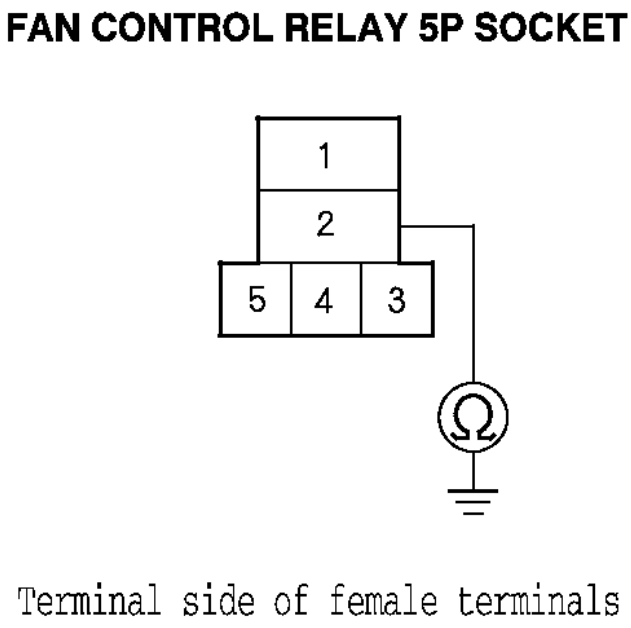

Fig. 6: Fan Control Relay 5P Socket
Courtesy of TOYOTA

7. Test the radiator fan motor.

   Is the motor OK?

   YES -Go to step 8.

   NO -Replace the radiator fan motor.

8. Check for continuity between radiator fan relay 4P socket terminal No. 2 and radiator fan motor 2P connector terminal No. 2.

   Is there continuity?

   YES -Go to step 9.

   NO -Repair open in the wire between radiator fan relay 4P socket terminal No. 2 and radiator fan motor 2P connector terminal No. 2.

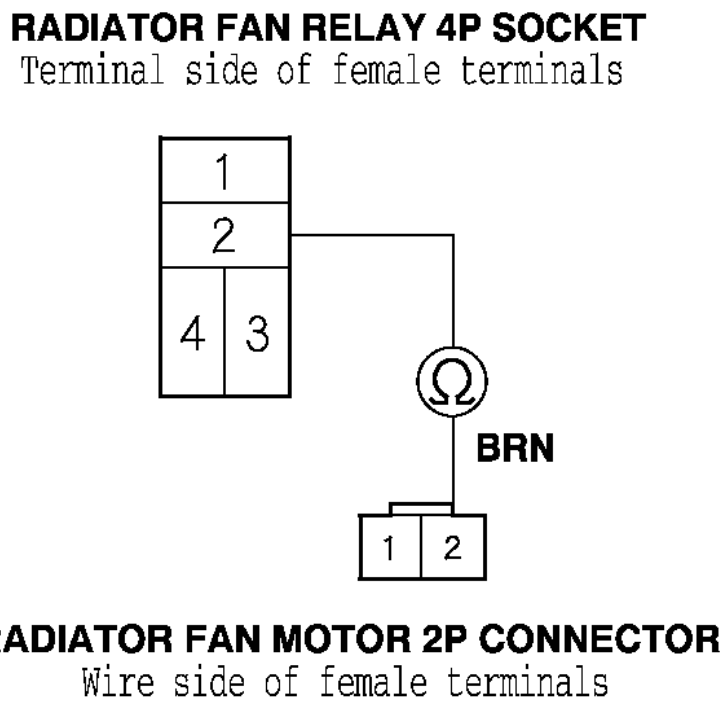

Fig. 7: Radiator Fan Motor 2P Connector - Brown
Courtesy of TOYOTA

9. Check for continuity between fan control relay 5P socket terminal No. 1 and radiator fan motor 2P connector terminal No. 1.

   Is there continuity?

   YES -Check for poor connections or loose terminals at the under-hood fuse/relay box, the radiator fan motor, and body ground (G301), then go to step 1.

   NO -Repair open in the wire between fan control relay 5P socket terminal No. 1 and radiator fan motor 2P connector terminal No. 1.

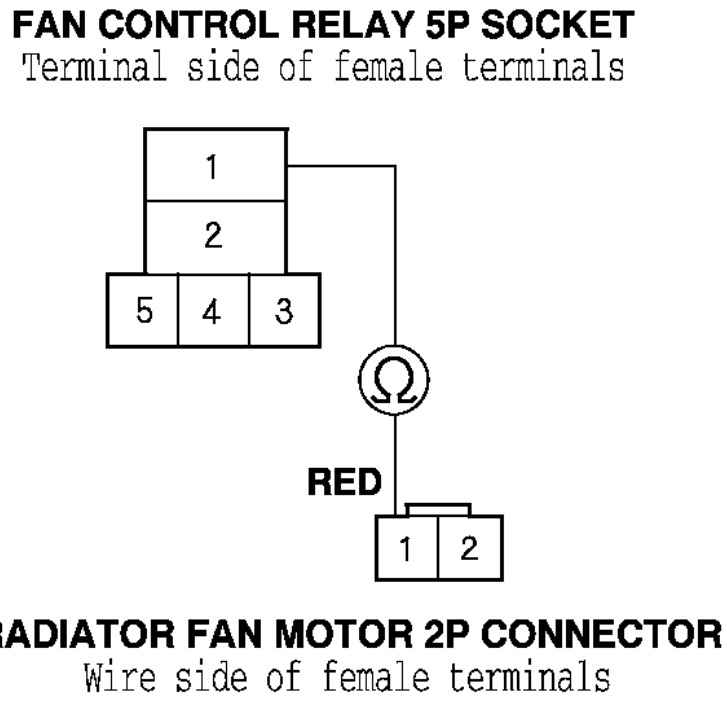

Fig. 8: Radiator Fan Motor 2p Connector - Red
Courtesy of TOYOTA

10. Turn the ignition switch to ON (II).
11. Measure the voltage between radiator fan relay 4P socket terminal No. 3 and body ground.

Is there battery voltage?

YES -Go to step 12.

NO -Repair open in the wire between the under-dash fuse/relay box and the under-hood fuse/relay box.

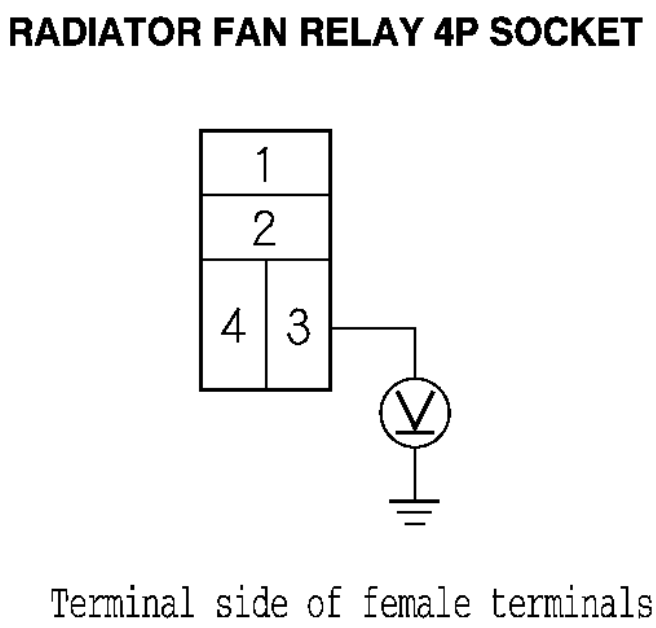

Fig. 9: Radiator Fan Relay 4p Socket
Courtesy of TOYOTA

12. Turn the ignition switch to LOCK (0).
13. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC).
14. Turn the ignition switch to ON (II).
15. Make sure the HDS communicates with the vehicle and the ECM. If it does not communicate, troubleshoot the DLC circuit.
16. Jump the SCS line with the HDS, then turn the ignition switch to LOCK (0).

NOTE: This step must be done to protect the ECM from damage.

17. Disconnect ECM connector A (44P).
18. Check for continuity between radiator fan relay 4P socket terminal No. 4 and ECM connector terminal A4.

Is there continuity?

YES -Go to step 19.

NO -Repair open in the wire between radiator fan relay 4P socket terminal No. 4 and ECM connector terminal A4.

19. Turn the ignition switch to ON (II).
20. Measure the voltage between fan control relay 5P socket terminal No. 5 and body ground.

Is there battery voltage?

YES -Go to step 21.

NO -Repair open in the wire between the under-dash fuse/relay box and the under-hood fuse/relay box.

21. Turn the ignition switch to LOCK (0).
22. Check for continuity between fan control relay 5P socket terminal No. 3 and ECM connector terminal A5.

Is there continuity?

YES -Update the ECM if it does not have the latest software, or substitute a known-good ECM, then recheck. If the symptom goes away with a known-good ECM, replace the original ECM.

NO -Repair open in the wire between fan control relay 5P socket terminal No. 3 and ECM connector terminal A5.

SYMPTOM TROUBLESHOOTING INDEX

SYMPTOM TROUBLESHOOTING INDEX

Symptom	Diagnostic Procedure	Also check for
Engine overheats	1. Check the coolant level. 2. Check for any engine coolant leakage (from gaskets, hoses, O-rings, etc.). 3. Check for dirt, leaves, or insects on radiator and condenser. 4. Check for deteriorated coolant. 5. Check for a damaged or deformed fan shroud. 6. Inspect the fan motors (see **FAN MOTOR TEST**) or fan relays (see **POWER RELAY TEST**). 7. Check the radiator cap (see **RADIATOR CAP TEST**). 8. Check the thermostat (see **FAN MOTOR TEST**). 9. Inspect the water pump (see **WATER PUMP INSPECTION**). 10. Check for a plugged or deteriorated radiator hoses. 11. Check for plugged heater core or hoses. 12. Check for a damaged cylinder head gasket.	
The A/C condenser fan runs at low speed, but it does not run at high speed when the engine coolant temperature is above 206 °F (96.5 °C)	A/C condenser fan high speed circuit troubleshooting (see **A/C CONDENSER FAN HIGH SPEED CIRCUIT TROUBLESHOOTING**).	Cleanliness and tightness of all connectors
With the A/C off (if equipped) and the engine coolant temperature at 206 °F (96.5 CC) or below, the radiator fan runs at high speed and the A/C condenser fan does not run. When the engine coolant temperature is above 206 °F (96.5 °C), both fans run at high speed	Remove the fan control relay, and test. • If the relay is faulty, replace it. • If the relay is OK, check for a short in the wire between the fan control relay 5P socket terminal No. 1 and radiator fan motor 2P connector terminal No. 1.	Cleanliness and tightness of all connectors
Both the radiator fan and the A/C condenser fan run at high speed with the ignition switch ON (II), the A/C off (if equipped), and the engine coolant temperature below 202 T (94.5 °C)	Check for short in the wire between A/C condenser fan relay 4P socket terminal No. 3 and ECM/PCM connector terminal A5.	Cleanliness and tightness of all connectors
Both the radiator fan and the A/C condenser fan run at low speed with the ignition switch ON (II) and the A/C off (if equipped)	Check for short in the wire between radiator fan relay 4P socket terminal No. 3 and ECM/PCM connector terminal A4.	Cleanliness and tightness of all connectors

Both the radiator fan and the A/C condenser fan do not run at low speed with the A/C on (if equipped)	Radiator and A/C condenser fans low speed circuit troubleshooting (see **RADIATOR AND A/C CONDENSER FAN LOW SPEED CIRCUIT TROUBLESHOOTING**).	Cleanliness and tightness of all connectors
Both the radiator fan and the A/C condenser fan run at low speed, but the radiator fan does not run at high speed when the engine coolant temperature is above 206 °F (96.5 °C)	**RADIATOR FAN HIGH SPEED CIRCUIT TROUBLESHOOTING** (see).	Cleanliness and tightness of all connectors
Both the radiator fan and the A/C condenser fan do not run at high speed when the engine coolant temperature is above 206 °F (96.5 °C)	Check for open in the wire between A/C condenser fan relay 4P socket terminal No. 3 and ECM/PCM connector terminal A5.	Cleanliness and tightness of all connectors

CIRCUIT DIAGRAM

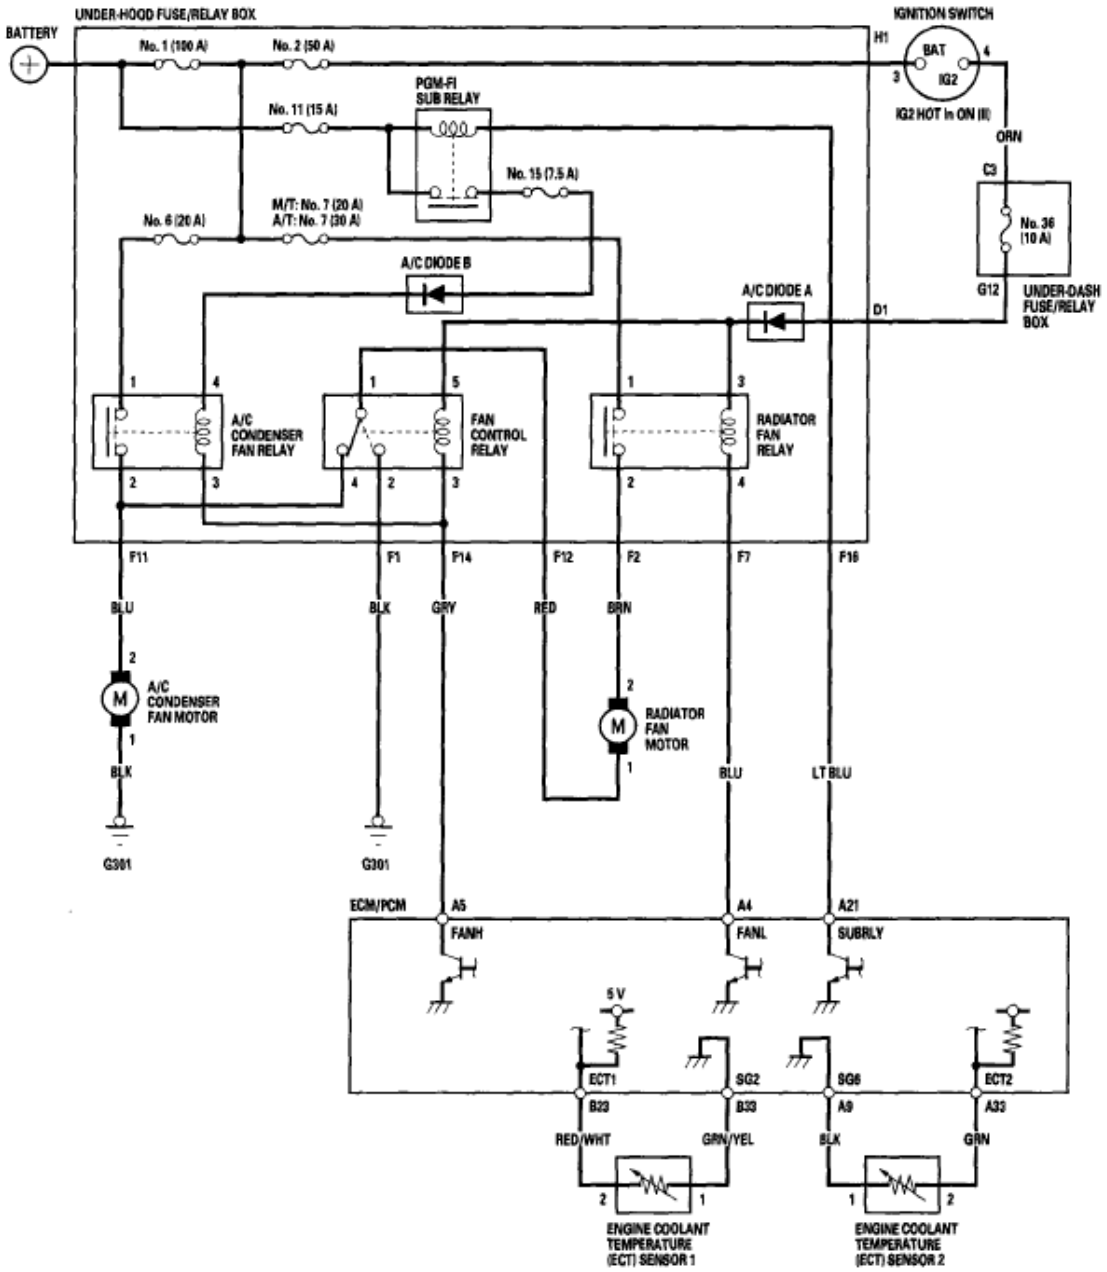

Fig. 2: Fan Controls Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

RADIATOR FAN HIGH SPEED CIRCUIT TROUBLESHOOTING

1. Check the No. 7 (20 A) fuse in the under-hood fuse/relay box and the No. 36 (10 A) fuse in the under-dash fuse/relay box.

   Is the relay OK?

   YES -Reinstall the fuse(s), then go to step 2.

   NO -Replace the fuse(s) and recheck. If the fuse continues to blow, locate and repair the short in the circuit between the under-hood fuse/relay box and the radiator fan motor, or between under-dash

fuse/relay box connector terminal G12 and under-hood fuse/relay box connector terminal D1.

2. Remove the radiator fan relay and the fan control relay from the under-hood fuse/relay box, and test them.

   Are the relays OK?

   YES - Go to step 3.

   NO - Replace the radiator fan relay and/or fan control relay.

3. Measure the voltage between radiator fan relay 4P socket terminal No. 1 and body ground.

   Is there battery voltage?

   YES - Go to step 4.

   NO - Replace the under-hood fuse/relay box.

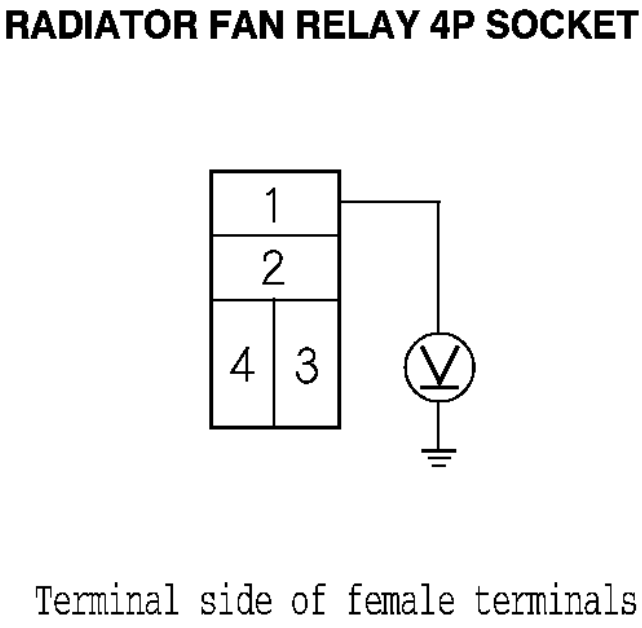

Fig. 3: Radiator Fan Relay 4P Socket
Courtesy of TOYOTA

4. Connect fan control relay 5P socket terminals No. 1 and No. 2 with a jumper wire.

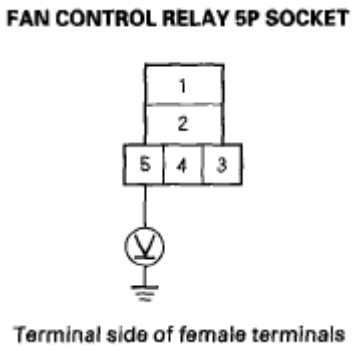

Fig. 4: Measuring Voltage Between Fan Control Relay 5P Socket Terminal No. 5 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES -Go to step 5.

NO -Repair open in the wire between the under-hood fuse/relay box and the under-dash fuse/relay box.

5. Connect radiator fan relay 4P socket terminals No. 1 and No. 2 with a jumper wire.

   Does the radiator fan run at high speed?

   YES -Go to step 10.

   NO -Go to step 6.

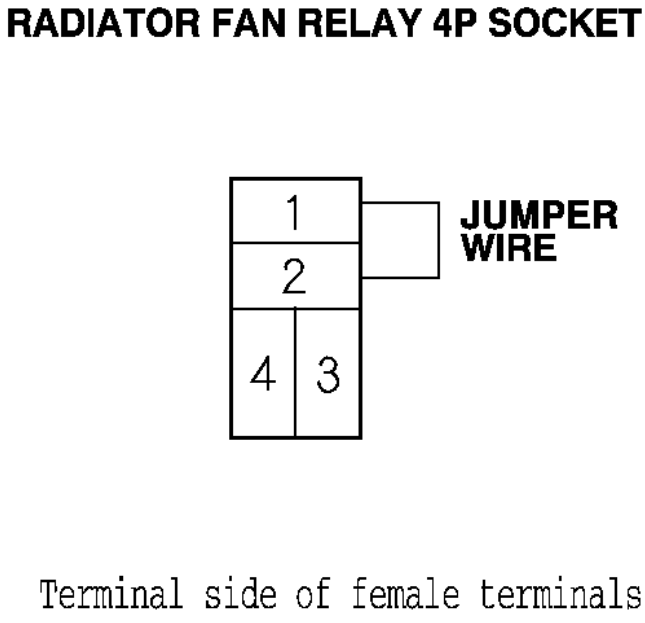

Fig. 5: Radiator Fan Relay 4P Socket Jumper Wire
Courtesy of TOYOTA

6. Remove the jumper wires, then check for continuity between fan control relay 5P socket terminal No. 2 and body ground.

   Is there continuity?

   YES -Go to step 7.

   NO -Repair open in the wire between fan control relay 5P socket terminal No. 2 and body ground.

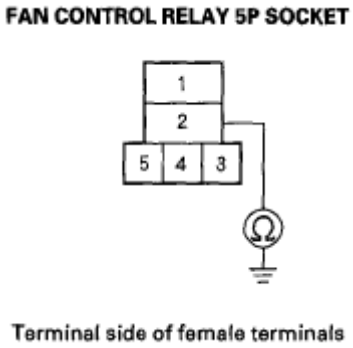

Fig. 6: Checking For Continuity Between Fan Control Relay 5P Socket Terminal No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Test the radiator fan motor.

   Is the motor OK?

   YES -Go to step 8.

   NO -Replace the radiator fan motor.

8. Check for continuity between radiator fan relay 4P socket terminal No. 2 and radiator fan motor 2P connector terminal No. 2.

   Is there continuity?

   YES -Go to step 9

   NO -Repair open in the wire between radiator fan relay 4P socket terminal No. 2 and radiator fan motor 2P connector terminal No. 2.

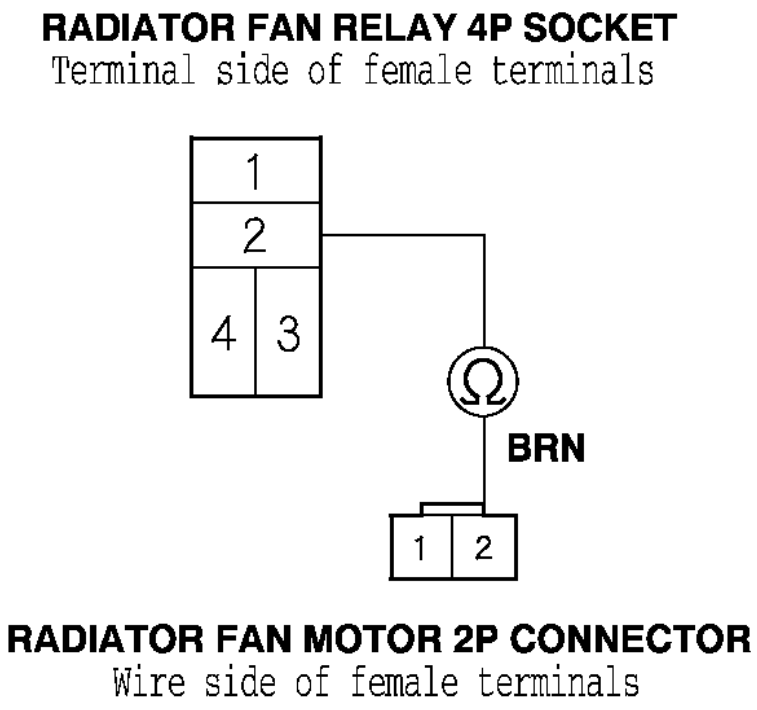

Fig. 7: Radiator Fan Motor 2P Conector - Brown
Courtesy of TOYOTA

9. Check for continuity between fan control relay 5P socket terminal No. 1 and radiator fan motor 2P connector terminal No. 1.

   Is there continuity?

   YES -Check for poor connections or loose terminals at the under-hood fuse/relay box, the radiator fan motor, and body ground (G301), then go to step 1.

   NO -Repair open in the wire between fan control relay 5P socket terminal No. 1 and radiator fan motor 2P connector terminal No. 1.

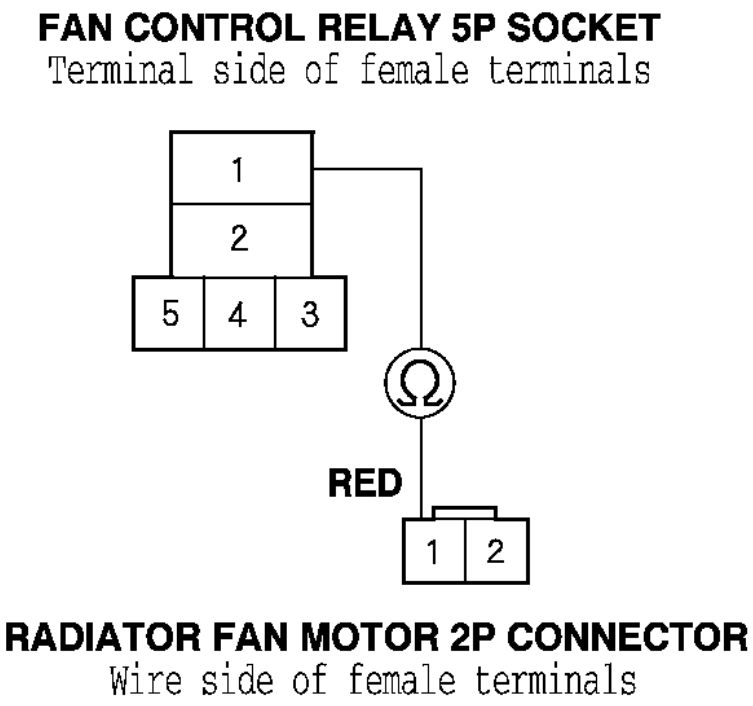

Fig. 8: Radiator Fan Motor 2P Connector - Red
Courtesy of TOYOTA

10. Turn the ignition switch to ON (II).
11. Measure the voltage between radiator fan relay 4P socket terminal No. 3 and body ground.

Is there battery voltage?

YES -Go to step 12.

NO -Repair open in the wire between the under-dash fuse/relay box and the under-hood fuse/relay box.

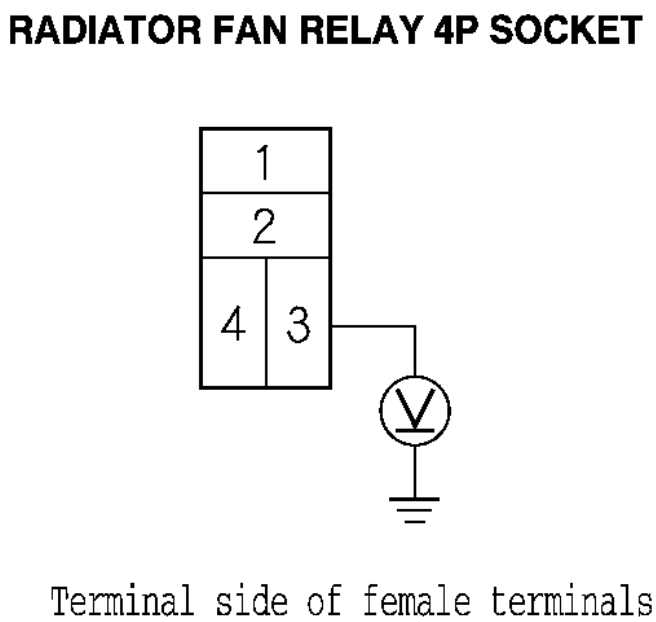

Fig. 9: Radiator Fan Relay 4P Socket Terminal No. 3
Courtesy of TOYOTA

12. Turn the ignition switch to LOCK (0).
13. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC).
14. Turn the ignition switch to ON (II).
15. Make sure the HDS communicates with the vehicle and the engine control module (ECM)/powertrain control module (PCM). If it does not communicate, troubleshoot the DLC circuit.
16. Jump the SCS line with the HDS, then turn the ignition switch to LOCK (0).

NOTE: This step must be done to protect the ECM/PCM from damage.

17. Disconnect ECM/PCM connector A (44P).
18. Check for continuity between radiator fan relay 4P socket terminal No. 4 and ECM/PCM connector terminal A4.

Is there continuity?

YES -Go to step 19.

NO -Repair open in the wire between radiator fan relay 4P socket terminal No. 4 and ECM/PCM connector terminal A4.

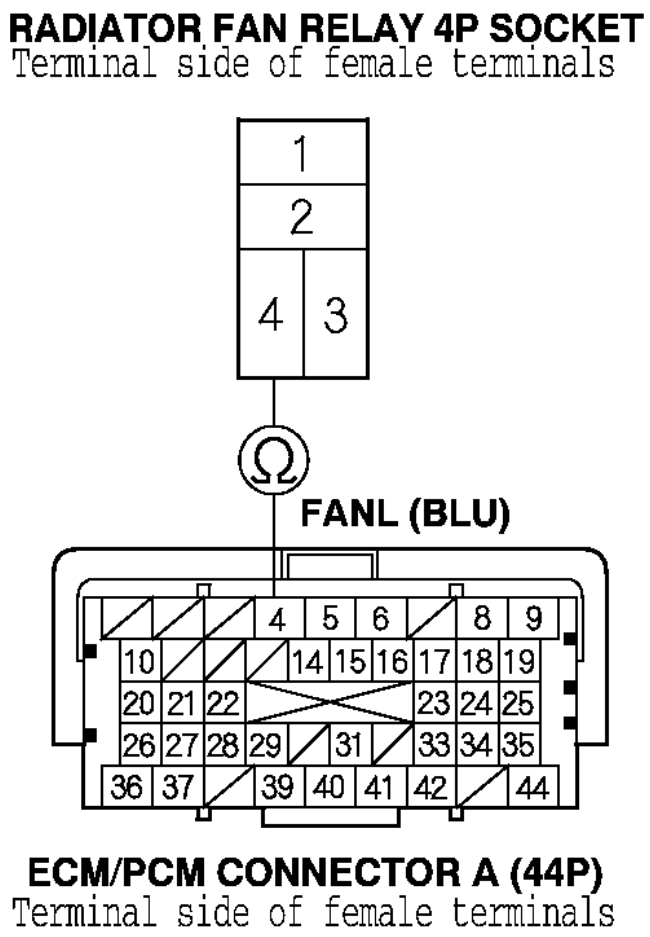

Fig. 10: Radiator Fan Relay 4P Socket - Blue
Courtesy of TOYOTA

19. Turn the ignition switch to ON (II).
20. Measure the voltage between fan control relay 5P socket terminal No. 5 and body ground.

Is there battery voltage?

YES -Go to step 21.

NO -Repair open in the wire between the under-dash fuse/relay box and the under-hood fuse/relay box.

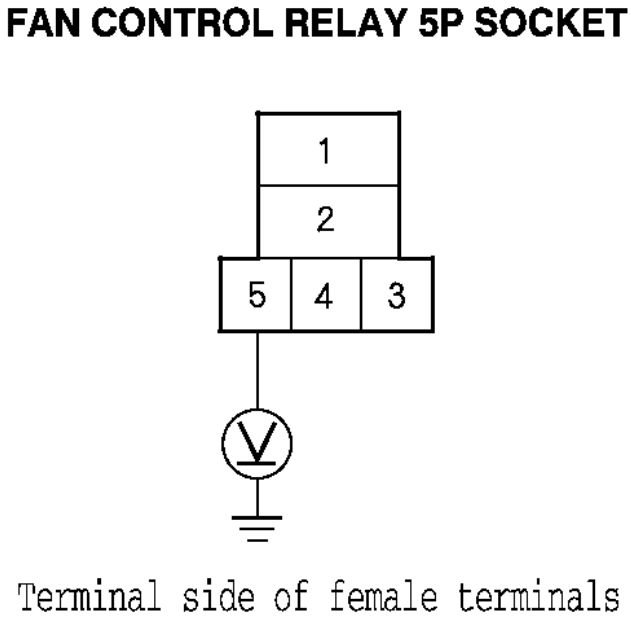

Fig. 11: Fan Control Relay 5P Socket
Courtesy of TOYOTA

21. Turn the ignition switch to LOCK (0).
22. Check for continuity between fan control relay 5P socket terminal No. 3 and ECM/PCM connector terminal A5.

    Is there continuity?

    YES -Update the ECM/PCM if it does not have the latest software, or substitute a known-good ECM/PCM, then recheck. If the symptom goes away with a known-good ECM/PCM, replace the original ECM/PCM.

    NO -Repair open in the wire between fan control relay 5P socket terminal No. 3 and ECM/PCM connector terminal A5.

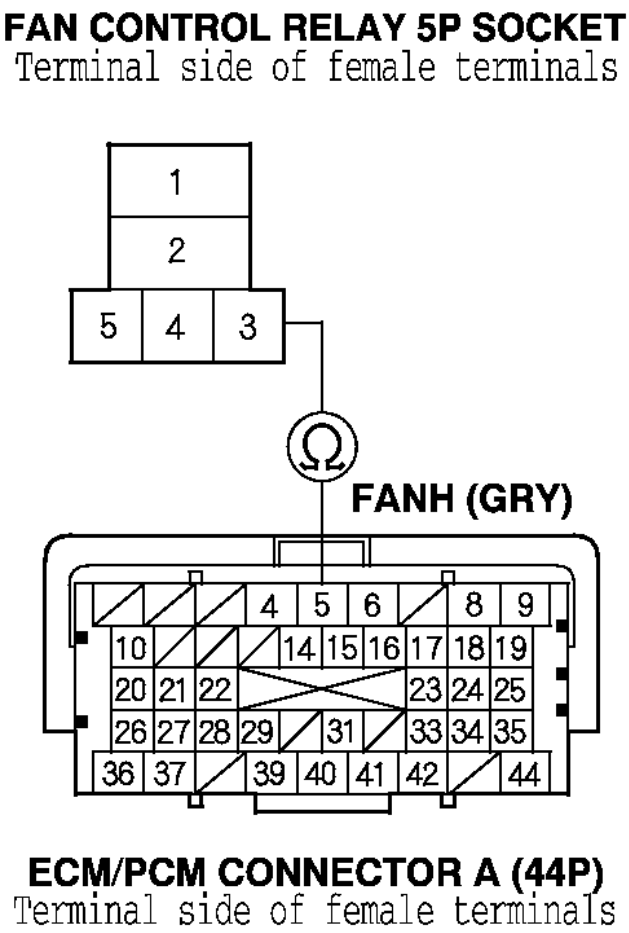

Fig. 12: Fan Control Relay 5P Socket - Grey
Courtesy of TOYOTA

2006-08 ENGINE

Cooling System (K20Z3) - Civic (All Except Si)

BELT ROUTING

For belt routing illustration, see **COMPONENT LOCATION INDEX** in CHARGING SYSTEM article.

COMPONENT LOCATION INDEX

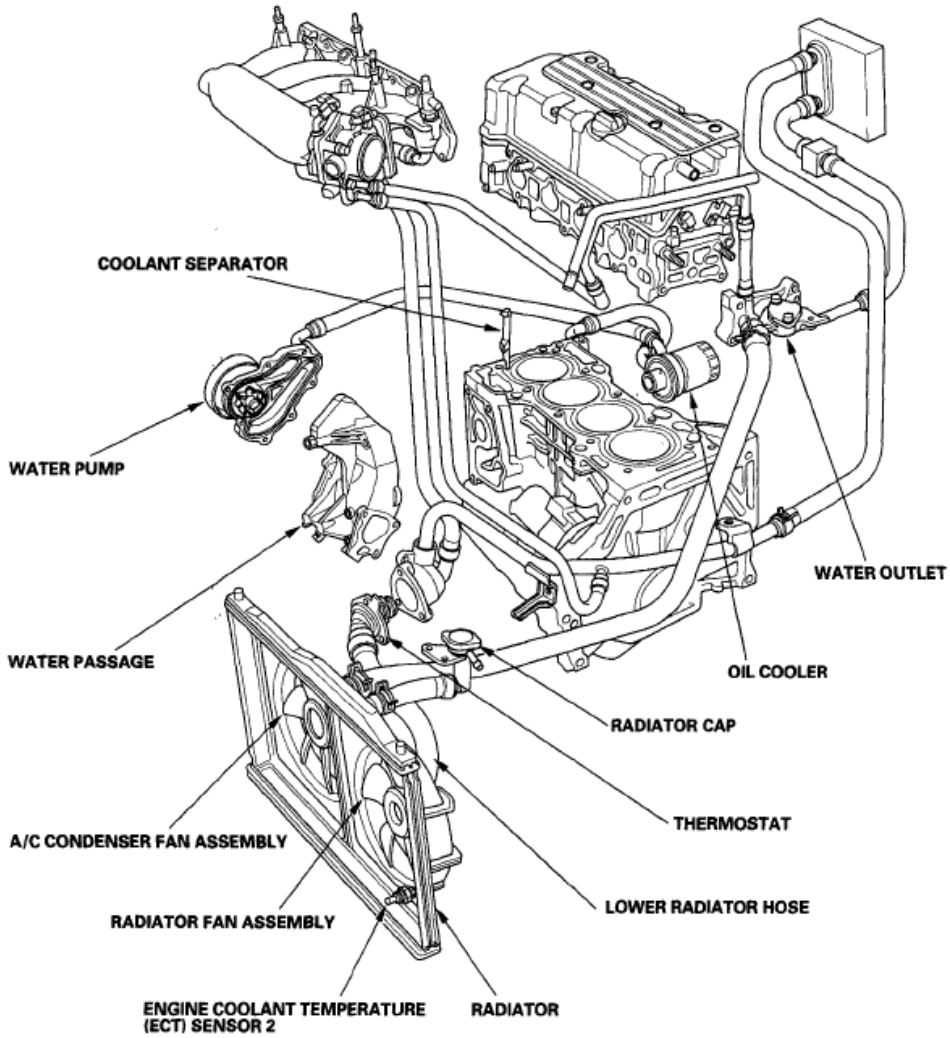

Fig. 1: Identifying Cooling System Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

RADIATOR CAP TEST

1. Remove the radiator cap (A). Wet the seal with engine coolant, then install it on a commercially available pressure tester (B).

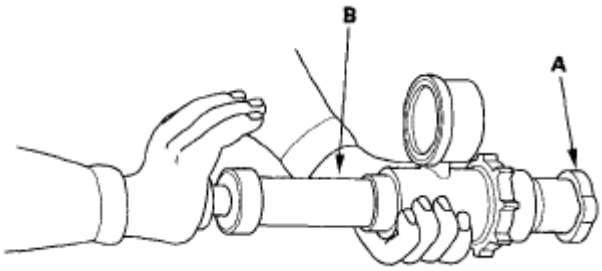

Fig. 2: Installing Cap On Pressure Tester
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply a pressure of 93-123 kPa (0.95-1.25 kgf/cm^2 , 14-18 psi).
3. Check for a drop in pressure.
4. If the pressure drops, replace the cap.

RADIATOR TEST

1. Wait until the engine is cool, then carefully remove the radiator cap, and fill the radiator with engine coolant to the top of the filler neck.
2. Attach a commercially available pressure tester (A) to the radiator, and apply a pressure of 93-123 kPa (0.95-1.25 kgf/cm^2 , 14-18 psi).

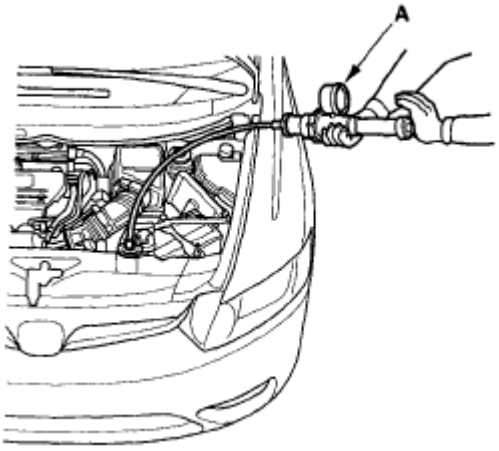

Fig. 3: Attaching Pressure Tester To Radiator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Inspect for engine coolant leaks, and a drop in pressure.
4. Remove the tester, then reinstall the radiator cap.
5. Check for engine oil in the coolant and/or coolant in the engine oil.

FAN MOTOR TEST

1. Disconnect the 2P connectors from the radiator fan motor and condenser fan motor.

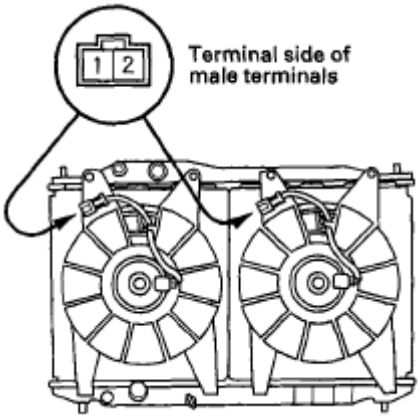

Fig. 4: Identifying 2P Connectors From Radiator Fan Motor And Condenser Fan Motor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Test the motor by connecting battery power to the terminal No. 2 and ground to the terminal No. 1.
3. If the motor fails to run, or does not run smoothly, replace it.

THERMOSTAT TEST

Replace the thermostat if it is open at room temperature.

To test a closed thermostat:

1. Suspend the thermostat (A) in a container of water. Do not let the thermometer (B) touch the bottom of the hot container.

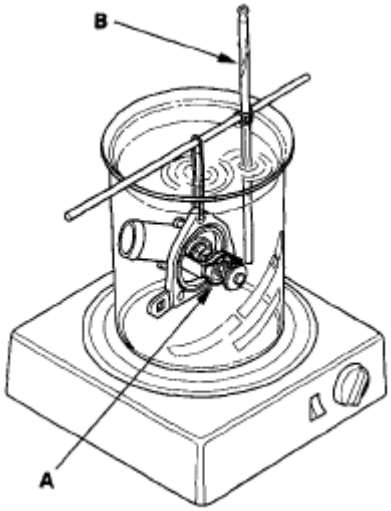

Fig. 5: Identifying Thermostat In Container Of Water
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Heat the water, and check the temperature with a thermometer. Check the temperature when the thermostat first opens, then check the temperature when the thermostat is fully open.
3. Measure the lift height of the thermostat when it is fully open. If the thermostat is not within the specification, replace it.

Standard Thermostat

Lift Height: Above 8.0 mm (0.31 in.)

Starts Opening: 169-176 °F (76-80 °C)

Fully Open: 194 °F (90 °C)

WATER PUMP INSPECTION

1. Remove the drive belt (see **DRIVE BELT INSPECTION**).
2. Turn the water pump pulley counterclockwise. Check that it turns freely. If it doesn't turn smoothly, replace the water pump (see **WATER PUMP INSPECTION**).

NOTE: When you check the water pump, you may see a small amount of "weeping" from the bleed holes (A). This it is normal.

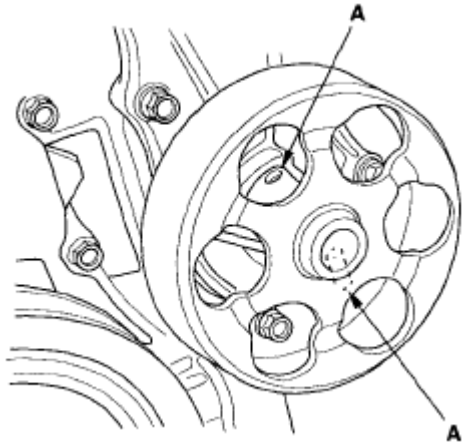

Fig. 6: Identifying Bleed Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the drive belt (see **DRIVE BELT INSPECTION**).

WATER PUMP REPLACEMENT

1. Remove the drive belt (see **DRIVE BELT INSPECTION**).
2. Drain the engine coolant (see **COOLANT CHECK**).
3. Remove the drive belt auto-tensioner pulley (see **DRIVE BELT AUTO-TENSIONER REMOVAL/INSTALLATION**).
4. Remove the crankshaft pulley (see **CRANKSHAFT PULLEY REMOVAL AND INSTALLATION**).
5. Remove the oil cooler joint pipe (A), then remove the seven bolts securing the water pump. Remove the water pump (B).

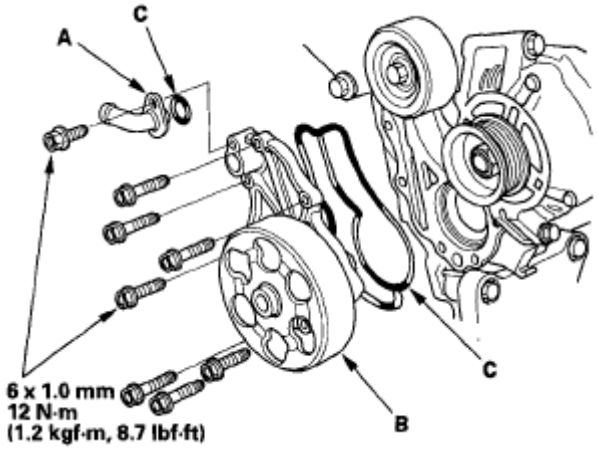

Fig. 7: Identifying Water Pump Components (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Inspect, and clean the O-ring groove and mating surface with the water passage.
7. Install the water pump with new O-rings (C) in the reverse order of removal.
8. Clean up any spilled engine coolant.
9. Install the drive belt auto-tensioner pulley (see **DRIVE BELT AUTO-TENSIONER REMOVAL/INSTALLATION**).
10. Install the crankshaft pulley (see **INSTALLATION**).
11. Install the drive belt (see **DRIVE BELT REMOVAL/INSTALLATION**).
12. Refill the radiator with engine coolant, and bleed the air from the cooling system with the heater valve open (see step 6).

COOLANT CHECK

1. Look at the coolant level in the coolant reservoir. Make sure it is between the MAX mark (A) and MIN mark (B).

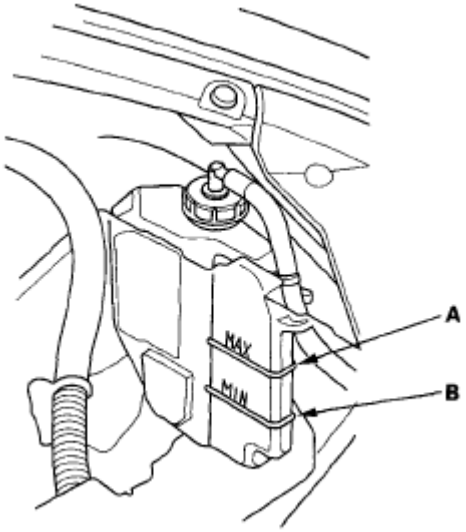

Fig. 8: Identifying MAX Mark And MIN Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. If the coolant level in the coolant reservoir is at or below the MIN mark, add coolant to bring it up to the MAX mark, and inspect the cooling system for leaks.

COOLANT REPLACEMENT

1. Start the engine. Set the heater temperature control dial to maximum heat, then turn off the ignition switch. Make sure the engine and radiator are cool to the touch.
2. Remove the radiator cap.
3. Loosen the drain plug (A), and drain the coolant.

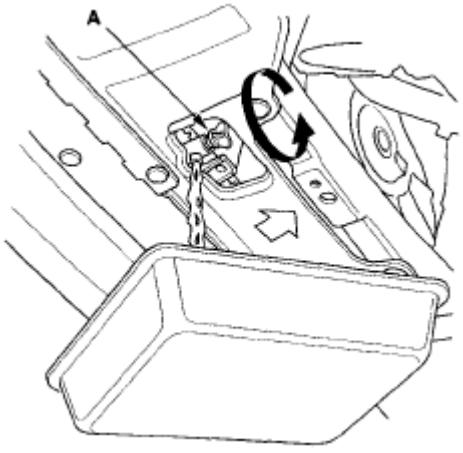

Fig. 9: Loosening Drain Plug
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. After the coolant has drained, tighten the radiator drain plug.
5. Remove the coolant reservoir, and drain the coolant, then reinstall the coolant reservoir.
6. Fill the coolant reservoir to the MAX mark (A) with Honda Long Life Antifreeze/Coolant Type 2 (P/N OL999-9001).

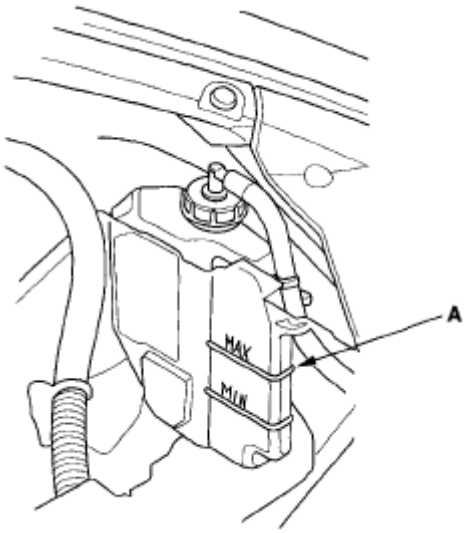

Fig. 10: Identifying MAX Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Pour Honda Long Life Antifreeze/Coolant Type 2 (P/N OL999-9001) into the radiator up to the base of the filler neck.

NOTE:

- **Always use Honda Long Life Antifreeze/Coolant Type 2 (P/N OL999-9001). Using a non-Honda coolant can result in corrosion, causing the cooling system to malfunction or fail.**
- **Honda Long Life Antifreeze/Coolant Type 2 is a mixture of 50 % antifreeze and 50 % water. Do not add water.**

Engine Coolant Capacities (Including the reserve tank capacity of 0.4 L (0.11 US gal))

At Coolant Change: 4.5 L (1.19 US gal)

After Engine Overhaul: 6.8 L (1.80 US gal)

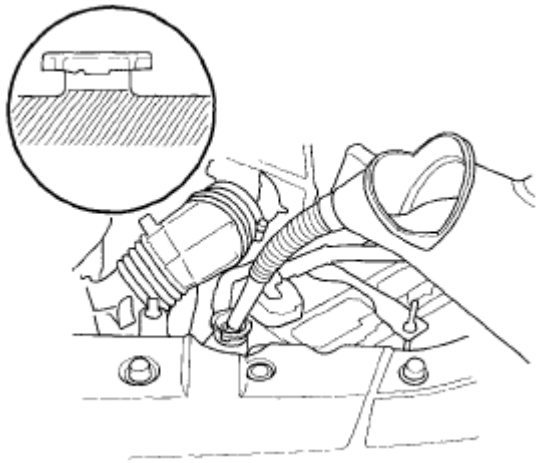

Fig. 11: Identifying Engine Coolant Capacities
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Loosely install the radiator cap.
9. Set the heated temperature control dial to maximum heat.
10. Start the engine, and let it run until it warms up (the radiator fan comes on at least twice).
11. Turn off the engine. Check the level in the radiator, and add Honda Long Life Antifreeze/Coolant Type 2, if needed.
12. Install the radiator cap securely, then start the engine again, and check for leaks.
13. Clean up any spilled engine coolant.
14. Turn the ignition switch to ON (II).'07-10 2 and 4-door models: If the maintenance minder indicated to replace the engine coolant, reset the maintenance minder. If the maintenance minder did not indicate to replace the engine coolant, go to step 14.

    '06 2-door model: If the maintenance minder indicated to replace the engine coolant, reset the maintenance minder. If the maintenance minder did not indicate to replace the engine coolant, notify the customer that the maintenance minder term was not reset and the maintenance minder will indicate to replace the engine coolant before it is actually needed.

15. Turn the ignition switch to LOCK (0).
16. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC). (See **FUEL AND EMISSIONS SYSTEMS (K20Z3)**).
17. Make sure the HDS communicates with the vehicle and the engine control module (ECM). If it does not communicate, troubleshoot the DLC circuit. (see **DLC CIRCUIT TROUBLESHOOTING**).
18. Select GAUGES in the BODY ELECTRICAL with the HDS.
19. Select ADJUSTMENT in the GAUGES with the HDS.
20. Select MAINTENANCE MINDER in the ADJUSTMENT menu with the HDS.
21. Select RESET in the MAINTENANCE MINDER with the HDS.
22. Select MAINTENANCE SUB ITEM 5 RESET with the HDS.

THERMOSTAT REPLACEMENT

1. Drain the engine coolant (see **COOLANT CHECK**).
2. Remove the splash shield .
3. Remove the lower hose, then remove the thermostat.

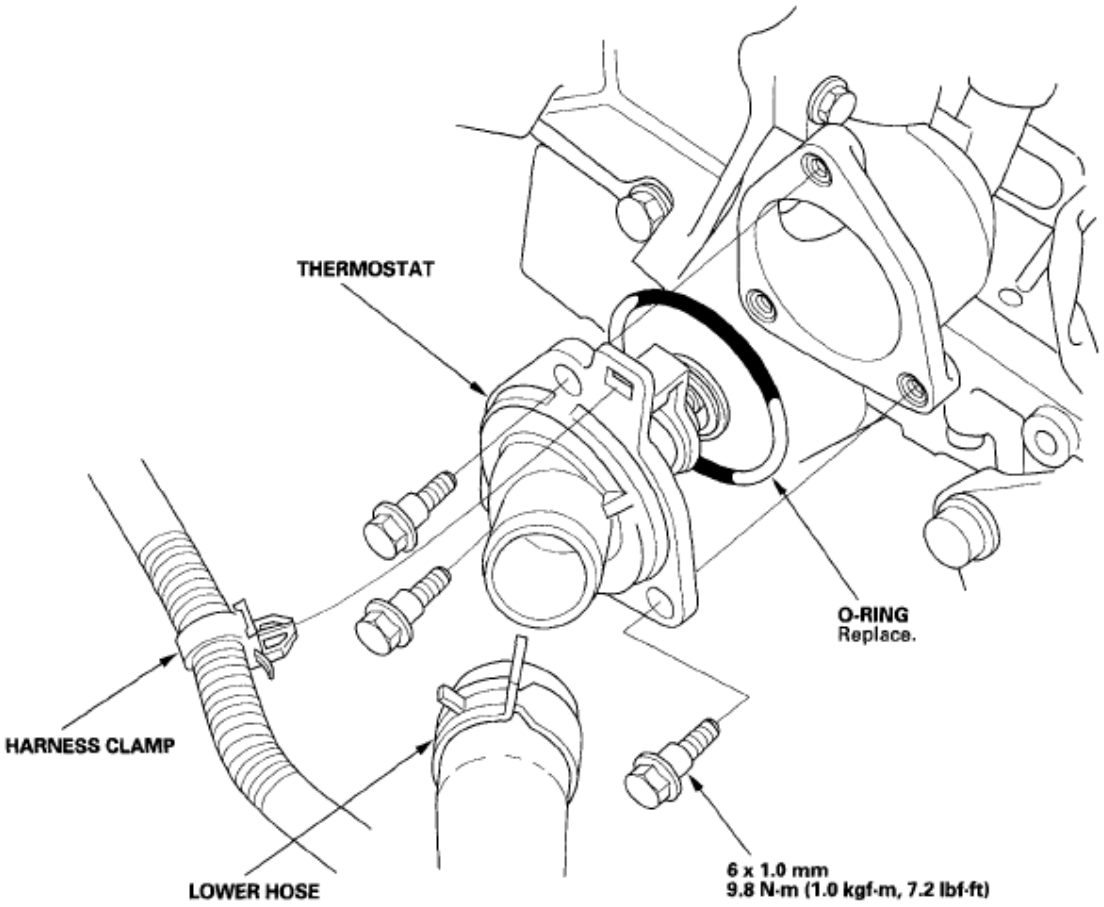

Fig. 12: Identifying Thermostat, Harness Clamp And Lower Hose (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the thermostat with a new O-ring, then install the lower hose.
5. Install the splash shield .

6. Refill the radiator with engine coolant, and bleed the air from the cooling system with the heater valve open (see step 6).
7. Clean up any spilled engine coolant.

WATER PASSAGE REPLACEMENT

1. Drain the engine coolant (see **COOLANT CHECK**).
2. Remove the alternator (see **ALTERNATOR REMOVAL AND INSTALLATION**).
3. Remove the condenser fan shroud assembly.
4. Remove the A/C compressor without disconnecting the A/C hoses (see step 38 on **ENGINE REMOVAL**).
5. Remove the intake manifold (see **REMOVAL**).
6. Remove a bolt (A) securing the connecting pipe.

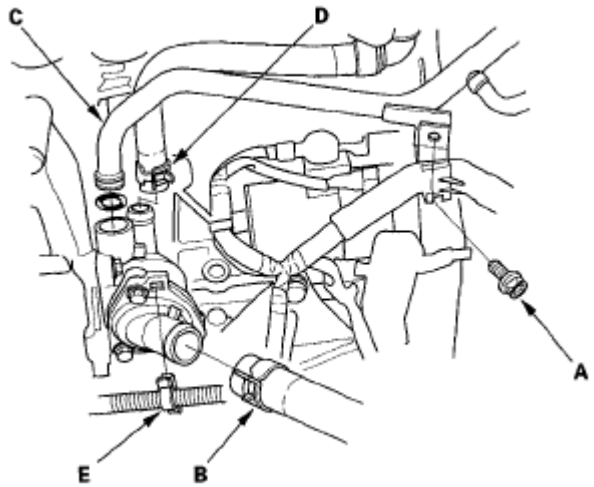

Fig. 13: Identifying Lower Radiator Hose, Connecting Pipe And Harness Clamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the lower radiator hose (B), connecting pipe (C), water bypass hose (D), and harness clamp (E).
8. Remove the positive crankcase ventilation (PCV) hose (A), then remove the water passage (B).

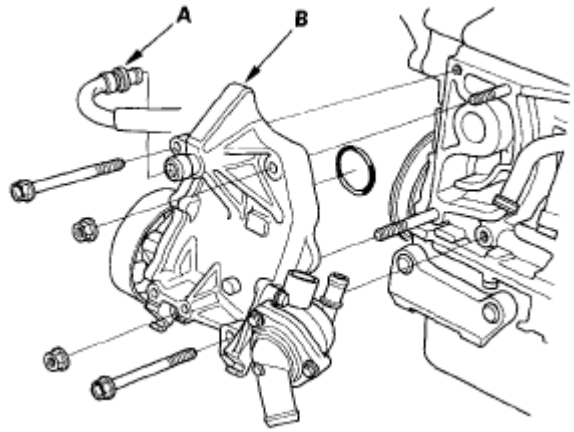

Fig. 14: Identifying Positive Crankcase Ventilation (PCV) Hose And Water Passage
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the thermostat housing.

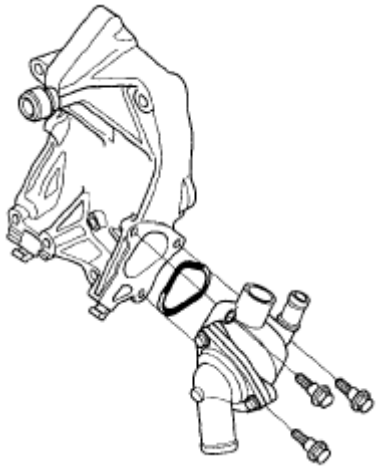

Fig. 15: Identifying Thermostat Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the water pump (see **WATER PUMP INSPECTION**).
11. Install the water pump (see **WATER PUMP INSPECTION**).
12. Install the thermostat housing (A) with a new O-ring (B).

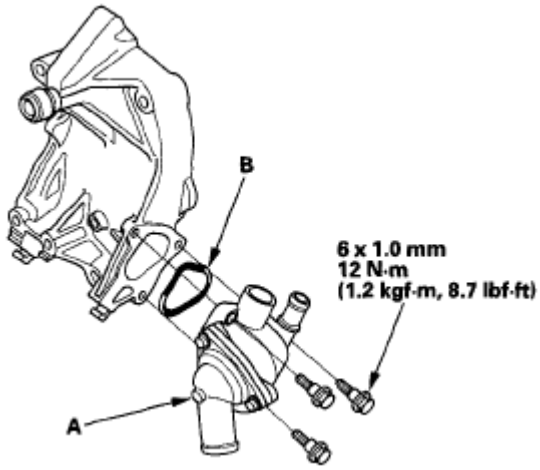

Fig. 16: Identifying Thermostat Housing With New O-Ring (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Clean, and dry the water passage mating surfaces.
14. Apply liquid gasket, P/N 08717-0004,08718-0001, 08718-0002,08718-0003, or 08718-0009, evenly to the engine block mating surface of the water passage.

NOTE: Do not install components if too much time has passed after applying the liquid gasket (for P/N 08718-0002, no more than 4 minutes, for all others, no more than 5 minutes). Instead, remove the old residue and

reapply the liquid gasket.

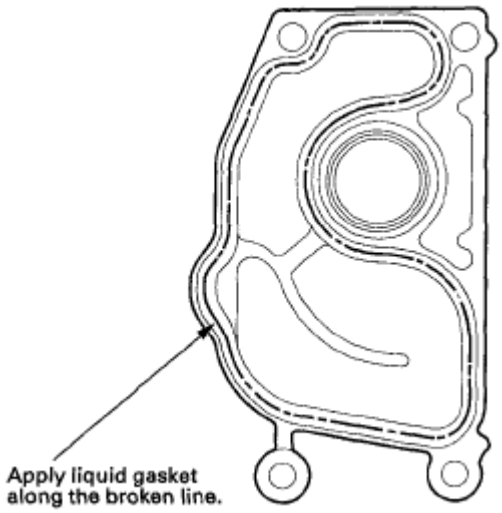

Fig. 17: Identifying Engine Block Mating Surface
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Install the water passage (A) with a new O-ring (B).

NOTE:

- **Wait at least 30 minutes to allow liquid gasket to cure before filling the engine with oil.**
- **Do not run the engine for at least 3 hours to allow liquid gasket to cure after installing the water passage.**

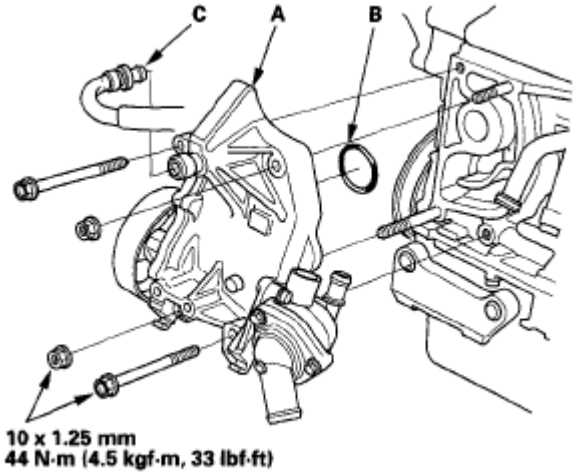

Fig. 18: Identifying Water Passage With New O-Ring (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Install the PCV hose (C).
17. Install the connecting pipe (A) with a new O-ring (B).

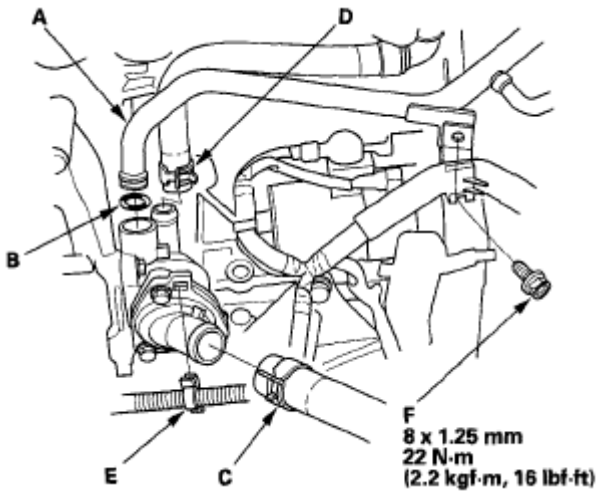

Fig. 19: Identifying Connecting Pipe With New O-Ring (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Install the lower radiator hose (C), water bypass hose (D), and harness clamp (E).
19. Tighten a bolt (F) securing the connecting pipe.
20. Install the intake manifold (see **INSTALLATION**).
21. Install the A/C compressor (see step 24 on **ENGINE INSTALLATION**).
22. Install the condenser fan shroud assembly.
23. Install the alternator (see **INSTALLATION**).
24. Refill the radiator with engine coolant, and bleed the air from the cooling system with the heater valve open (see step 6 on).
25. Clean up any spilled engine coolant.

WATER OUTLET REMOVAL AND INSTALLATION

REMOVAL

1. Drain the engine coolant (see **COOLANT CHECK**).
2. Remove the air cleaner assembly (see **AIR CLEANER REMOVAL/INSTALLATION**).
3. Remove the harness holder (A) from the bracket, then remove the harness holder bracket (B).

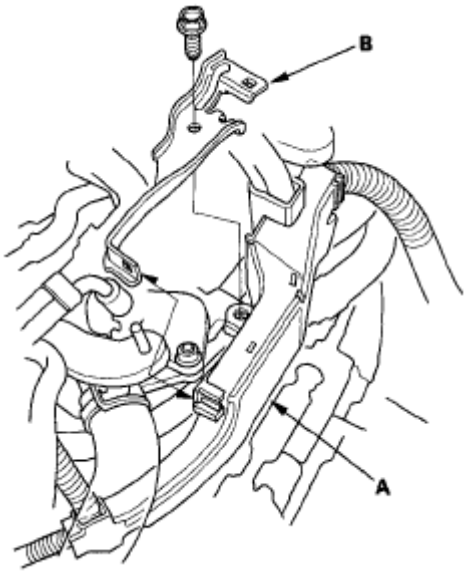

Fig. 20: Identifying Harness Holder Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the upper radiator hose (A), heater hose (B), and water bypass hose (C).

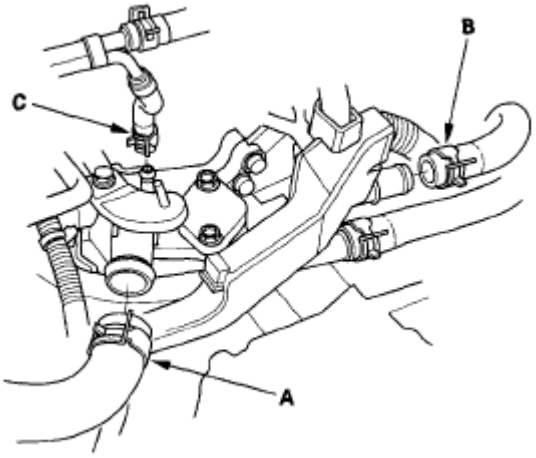

Fig. 21: Identifying Upper Radiator Hose, Heater Hose, And Water Bypass Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the air cleaner housing brackets.

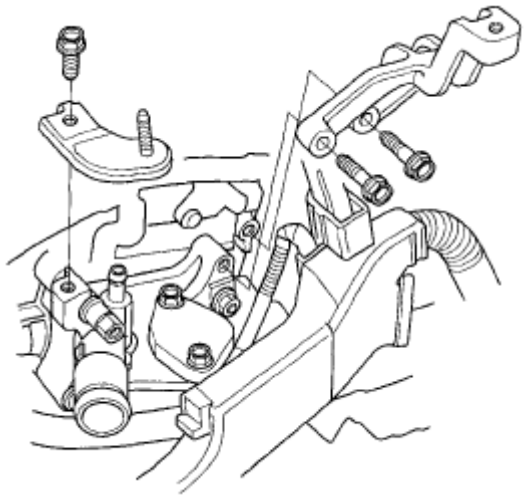

Fig. 22: Identifying Air Cleaner Housing Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the water outlet.

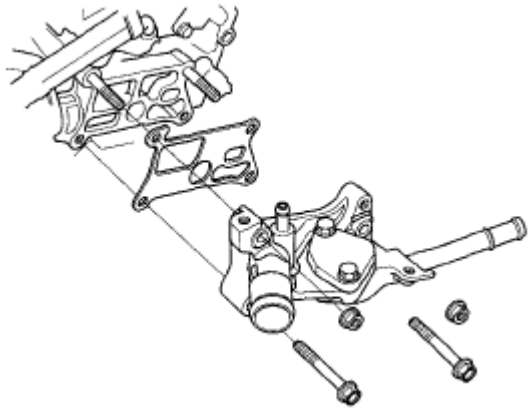

Fig. 23: Identifying Water Outlet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the EGR plate.

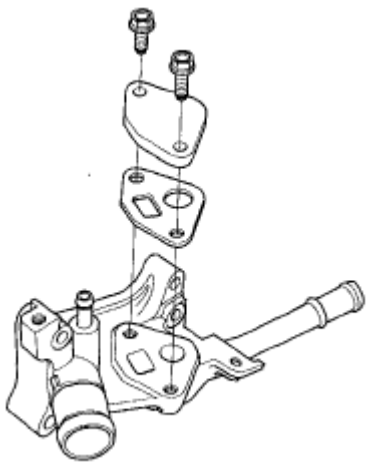

Fig. 24: Identifying EGR Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Install the EGR plate (A) with a new gasket (B).

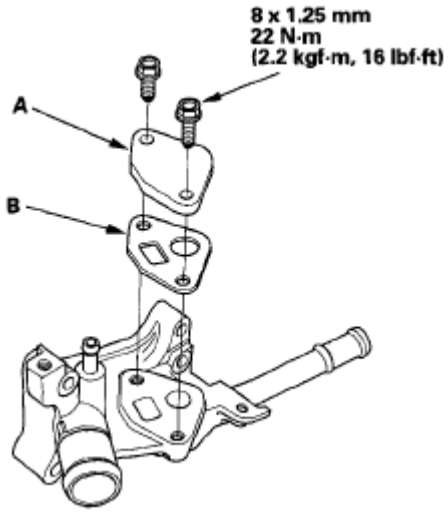

Fig. 25: Identifying EGR Plate With Gasket (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the water outlet (A) with a new gasket (B).

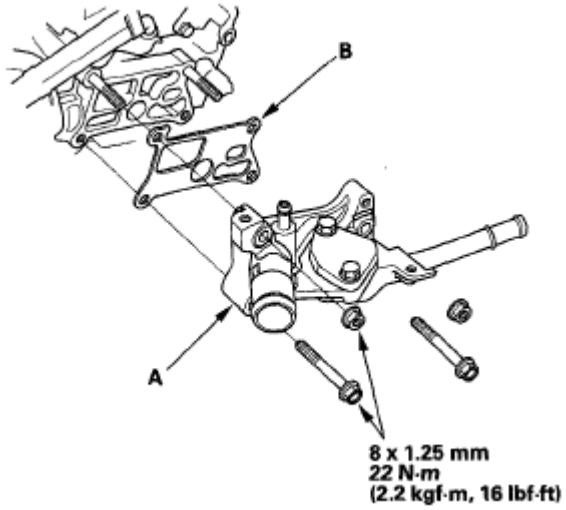

Fig. 26: Identifying Water Outlet With New Gasket (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the air cleaner housing brackets.

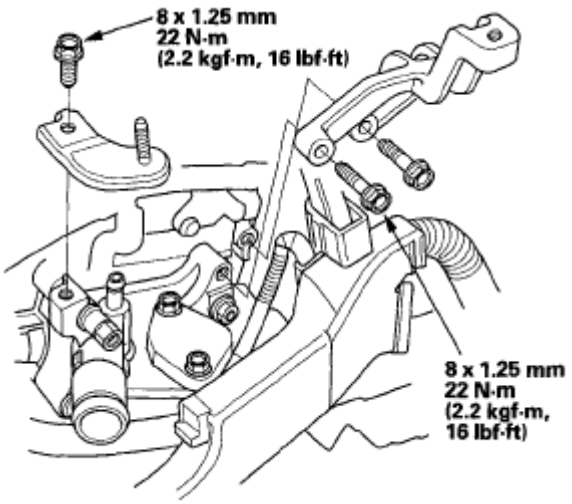

Fig. 27: Identifying Air Cleaner Housing Brackets (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the upper radiator hose (A), heater hose (B), and water bypass hose (C).

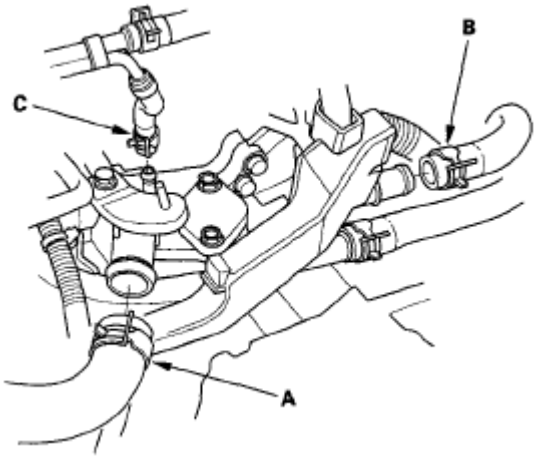

Fig. 28: Identifying Upper Radiator Hose, Heater Hose , And Water Bypass Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the harness holder bracket (A), then install the harness holder (B).

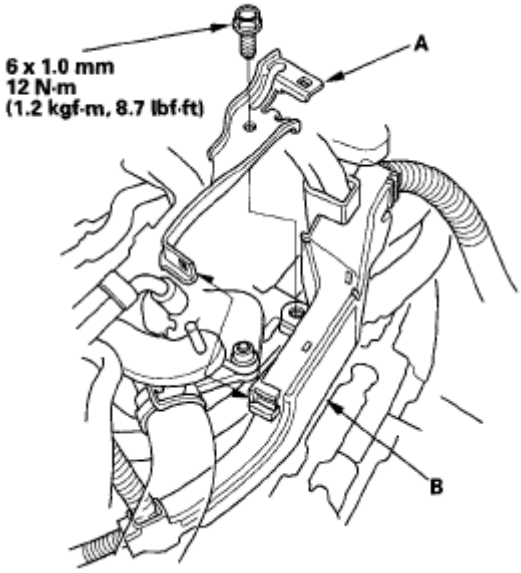

Fig. 29: Identifying Harness Holder Bracket And Harness Holder (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the air cleaner assembly (see **AIR CLEANER REMOVAL/INSTALLATION**).
7. Refill the radiator with engine coolant, and bleed the air from the cooling system with the heater valve open (see step 6).
8. Clean up any spilled engine coolant.

RADIATOR AND FAN REPLACEMENT

1. Do the battery removal procedure (See **BATTERY REMOVAL AND INSTALLATION**).
2. Drain the engine coolant (See **Coolant Check**).
3. Remove the front grille cover (See **FRONT GRILLE COVER REPLACEMENT**).
4. Disconnect the fan motor connectors (A) and hood switch connector (B), then remove the harness clamps (C).

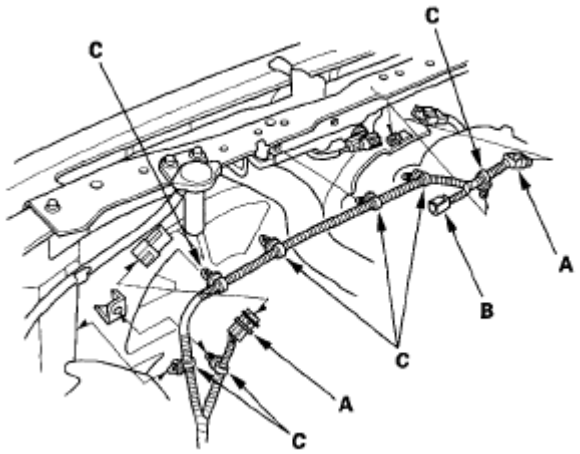

Fig. 30: Identifying Fan Motor Connectors And Hood Switch Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the reservoir hose (A), and remove the radiator cap base mounting bolts (B), and the bolts (C), and the radiator upper brackets (D).

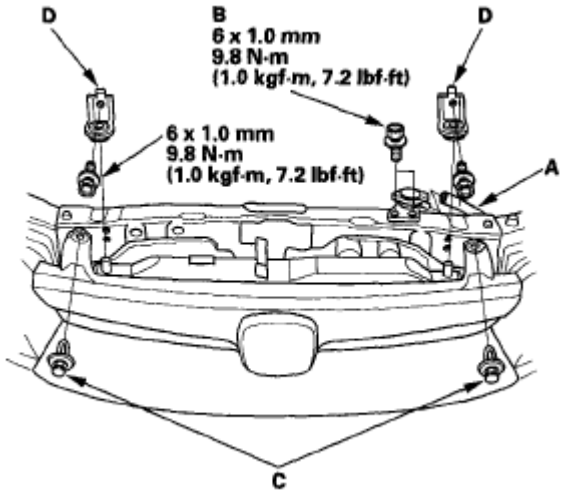

Fig. 31: Identifying Reservoir Hose, Radiator Cap Base Mounting Bolts And Clips (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Disconnect the upper radiator hose (A).

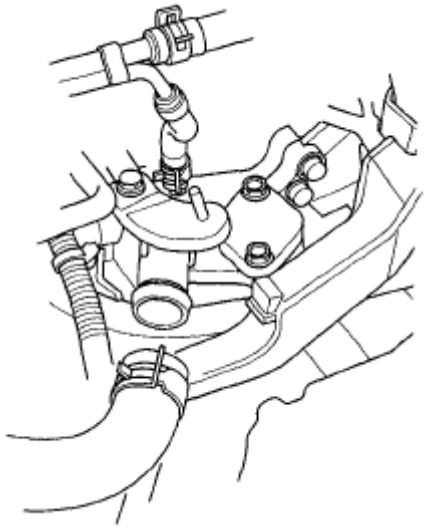

Fig. 32: Identifying Upper Radiator Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Raise the vehicle on the lift.
8. Remove the splash shield.

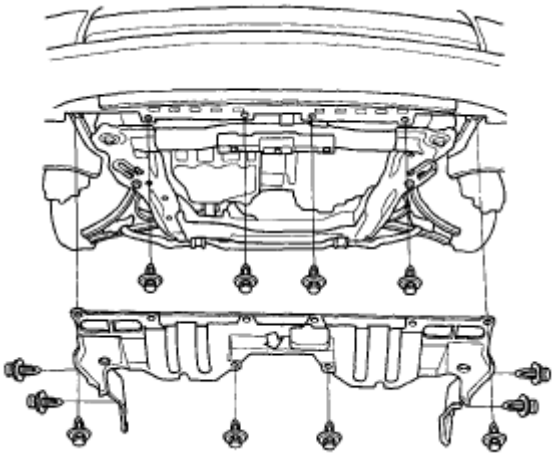

Fig. 33: Identifying Splash Shield
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Disconnect the engine coolant temperature (ECT) sensor 2 connector (A), and remove the harness clamp (B).

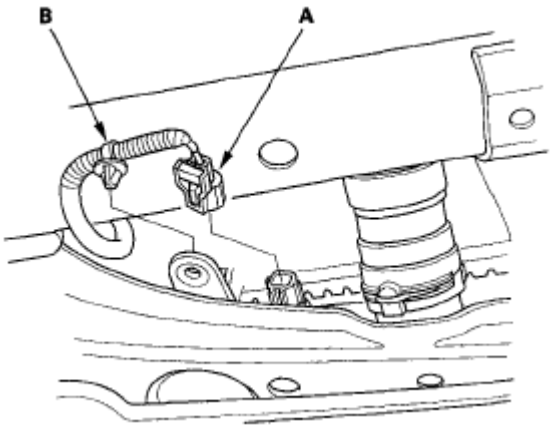

Fig. 34: Identifying Engine Coolant Temperature (ECT) And Harness Clamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Disconnect the lower radiator hose (C) from the radiator.
11. Remove the condenser bracket mounting bolts (A), then remove the bulkhead (B).

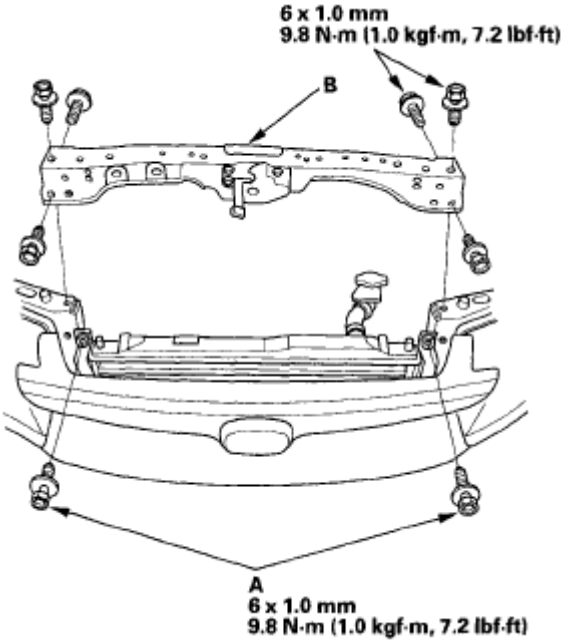

Fig. 35: Identifying Condenser Bracket Mounting Bolts And Bulkhead (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Pull up the radiator, then remove the fan shroud assemblies and other parts from the radiator.

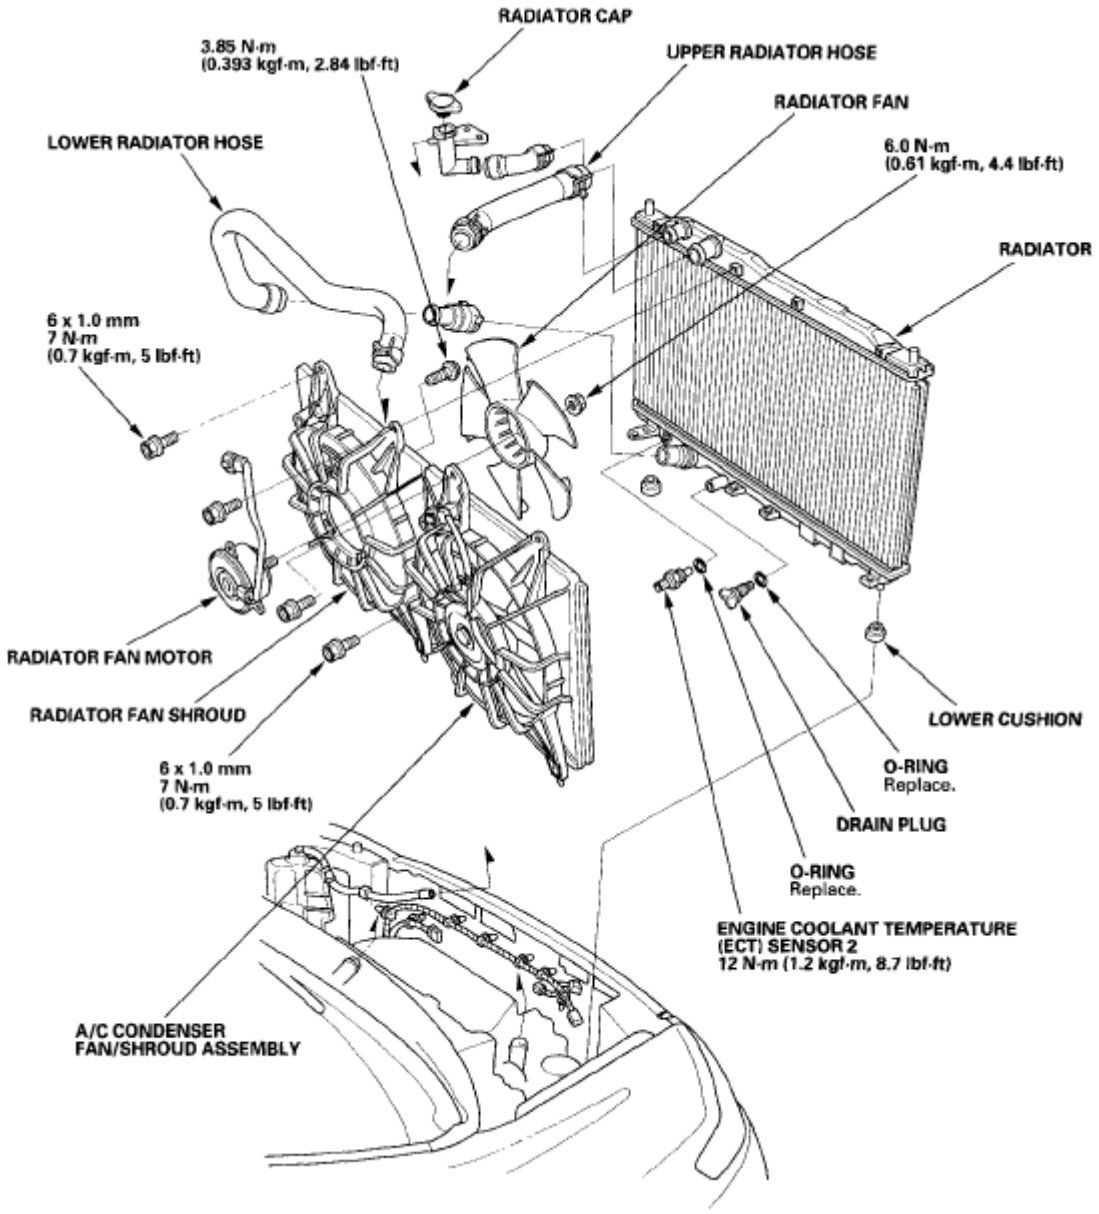

Fig. 36: Identifying Fan Shroud Assemblies And Parts From Radiator (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install the radiator in the reverse order of removal. Make sure the upper and lower cushions are set securely.
14. Connect the lower radiator hose to the radiator.
15. Install the bulkhead in the reverse order of removal. Apply body paint to the bulkhead mounting bolts.
16. Do the battery installation procedure (See **INSTALLATION**).
17. Fill the radiator with engine coolant and bleed the air (see step 6).
18. Clean up any spilled engine coolant.

2006-08 ENGINE

Cooling System (R18A1) - Civic (Except Hybrid)

BELT ROUTING

For belt routing illustration, see **COMPONENT LOCATION INDEX** in CHARGING SYSTEM article.

COMPONENT LOCATION INDEX

NOTE: Refer to the COOLING SYSTEM (GX) (SUPPLEMENT) article for additional information for the GX model.

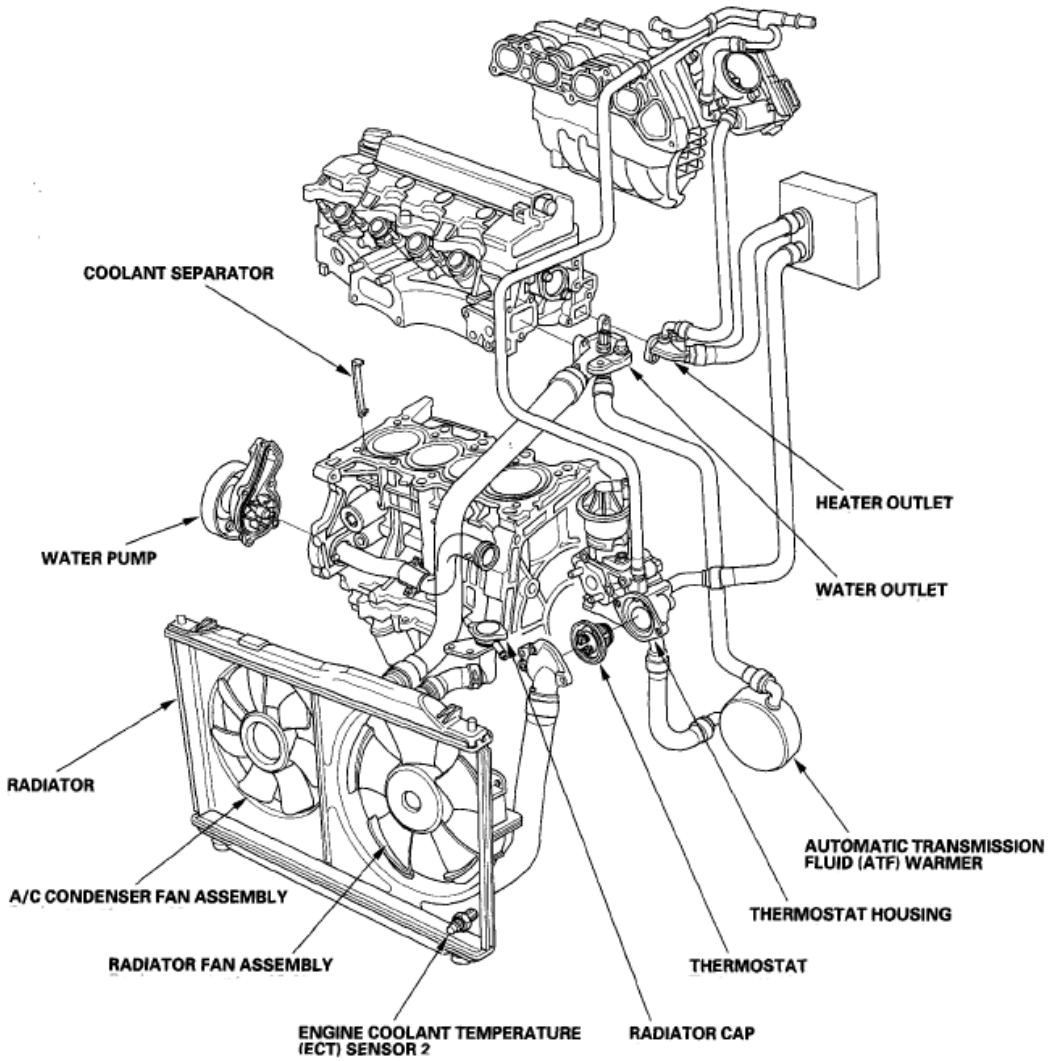

Fig. 1: Identifying Component Location Index
Courtesy of AMERICAN HONDA MOTOR CO., INC.

RADIATOR CAP TEST

1. Remove the radiator cap (A). Wet the seal with engine coolant, then install it on a commercially

available pressure tester (B).

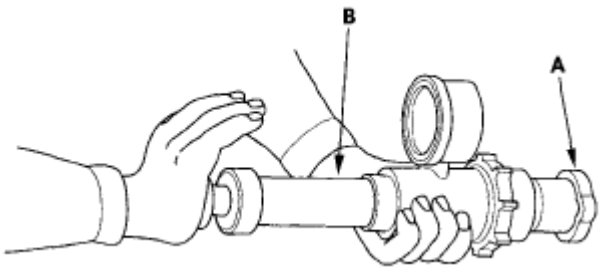

Fig. 2: Testing Radiator Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply a pressure of 93-123 kPa (0.95-1.25 kgf/cm^2 , 14-18 psi).
3. Check for a drop in pressure.
4. If the pressure drops, replace the cap.

RADIATOR TEST

1. Wait until the engine is cool, then carefully remove the radiator cap, and fill the radiator with engine coolant to the top of the filler neck.
2. Attach a commercially available pressure tester (A) to the radiator, and apply a pressure of 93-123 kPa (0.95-1.25 kgf/cm^2 , 14-18 psi).

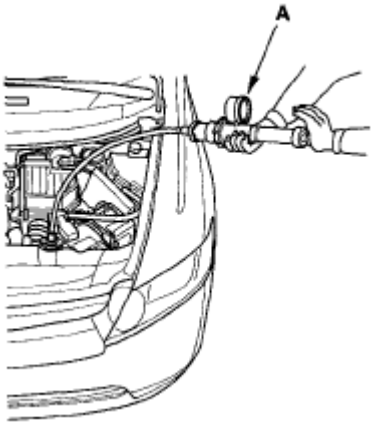

Fig. 3: Testing Radiator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Inspect for engine coolant leaks, and a drop in pressure.
4. Remove the tester, then reinstall the radiator cap.
5. Check for engine oil in the coolant and/or coolant in the engine oil.

FAN MOTOR TEST

1. Disconnect the 2P connectors from the radiator fan motor (A) and condenser fan motor (B).

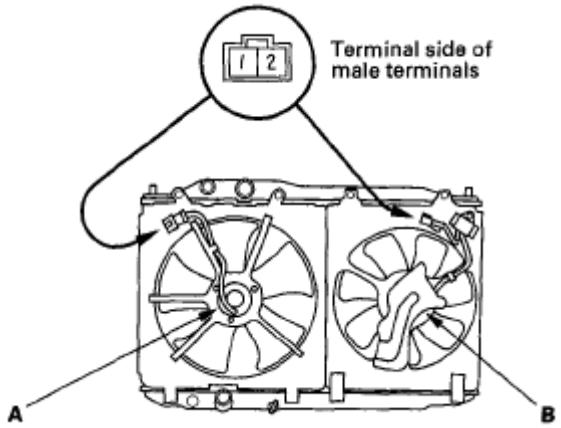

Fig. 4: Identifying Radiator Fan Motor And Condenser Fan Motor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Test each motor by connecting battery power to the No. 2 terminal and ground to the No. 1 terminal.
3. If either motor fails to run, or does not run smoothly, replace it (see **RADIATOR AND FAN REPLACEMENT**).

THERMOSTAT TEST

Replace the thermostat if it is open at room temperature.

To test a closed thermostat:

1. Suspend the thermostat (A) in a container of water. Do not let the thermometer (B) touch the bottom of the hot container.

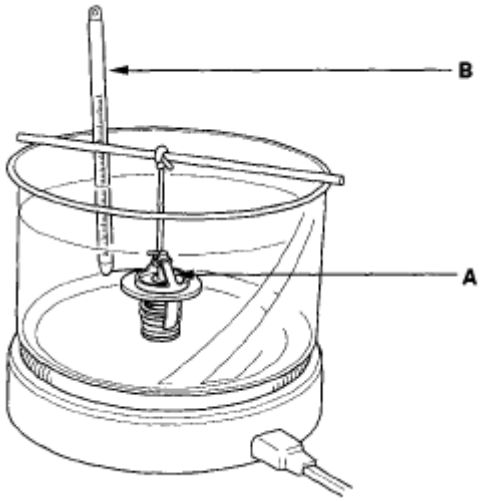

Fig. 5: Checking Temperature When Thermostat Opens
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Heat the water and check the temperature with a thermometer. Check the temperature when the thermostat first opens, then check the temperature when the thermostat is fully open.
3. Measure the lift height of the thermostat when it is fully open.

Standard Thermostat

Lift Height: Above 8.0 mm (0.31 in.)

Starts Opening: 176-183 °F (80-84 °C)

Fully Open: 203 °F (95 °C)

WATER PUMP INSPECTION

1. Loosen the water pump pulley mounting bolts.

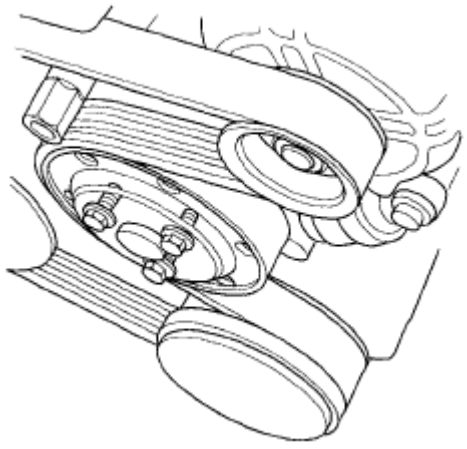

Fig. 6: Identifying Water Pump Pulley Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the drive belt (see **DRIVE BELT INSPECTION**).
3. Remove the water pump pulley.

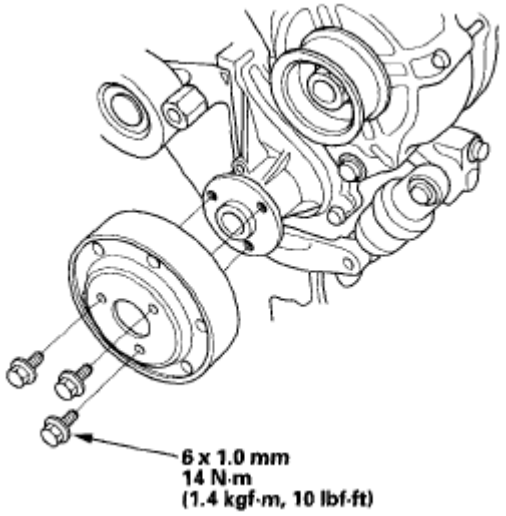

Fig. 7: Identifying Torque Specifications Of Water Pump Pulley Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Turn the water pump counterclockwise. Check that it turns freely. If doesn't turn smoothly, replace the water pump (see **WATER PUMP REPLACEMENT**).

NOTE: When you check the water pump, you may see a small amount of "weeping" from the bleed holes (A). This is normal.

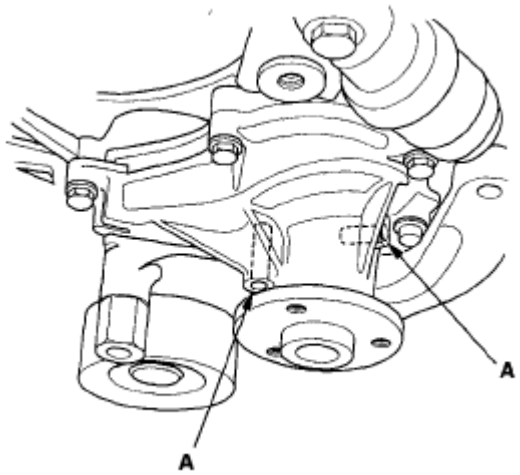

Fig. 8: Identifying Bleed Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the water pump pulley.
6. Install the drive belt (see **DRIVE BELT INSPECTION**).
7. Tighten the water pump pulley mounting bolts to the specified torque.

WATER PUMP REPLACEMENT

1. Drain the engine coolant (see **COOLANT REPLACEMENT**).
2. Remove the drive belt auto-tensioner (see **DRIVE BELT AUTO-TENSIONER REMOVAL/INSTALLATION**).
3. Remove the water pump (A) by removing the five bolts.

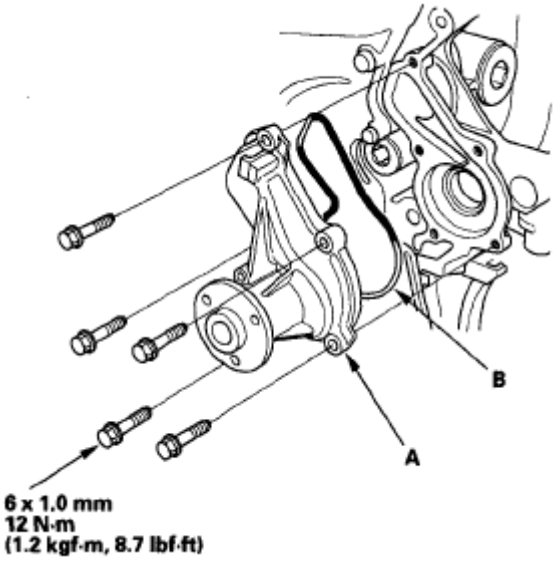

Fig. 9: Identifying Torque Specifications Of Water Pump Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Inspect, and clean the O-ring groove and the mating surface of the engine block.
5. Install the water pump with a new O-ring (B) in the reverse order of removal.
6. Clean up any spilled engine coolant.
7. Install the drive belt auto-tensioner (see **DRIVE BELT AUTO-TENSIONER REMOVAL/INSTALLATION**).
8. Refill the radiator with engine coolant, then bleed the air from the cooling system (see step 8).

COOLANT CHECK

1. Look at the coolant level in the coolant reservoir. Make sure it is between the MAX mark (A) and MIN mark (B).

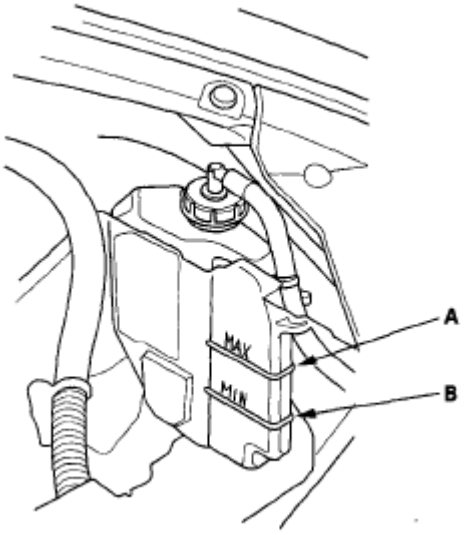

Fig. 10: Identifying Coolant Reservoir MAX Mark And MIN Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. If the coolant level in the coolant reservoir is at or below the MIN mark, add coolant to bring it between the MIN and MAX marks, then inspect the cooling system for leaks.

COOLANT REPLACEMENT

1. Start the engine. Set the heater temperature control dial to maximum heat, then turn off the ignition switch. Make sure the engine and radiator are cool to the touch.
2. Remove the radiator cap.
3. Loosen the drain plug (A), and drain the coolant.

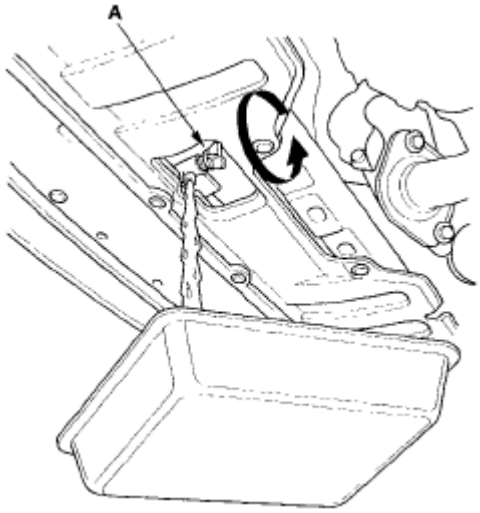

Fig. 11: Identifying Drain Plug
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the drain bolt (A) located at the front of the engine block.

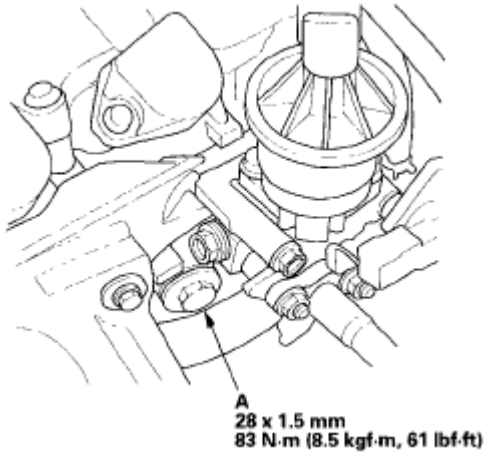

Fig. 12: Identifying Torque Specifications Of Drain Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. After the coolant has drained, apply liquid gasket to the drain bolt threads, then reinstall the bolt with a new washer and tighten it securely.
6. Tighten the radiator drain plug securely.

7. Remove the coolant reservoir, then drain the coolant, and reinstall the reserve tank.
8. Fill the reserve tank to the MAX mark (A) with Honda Long Life Antifreeze/Coolant Type 2 (P/N OL999-9001).

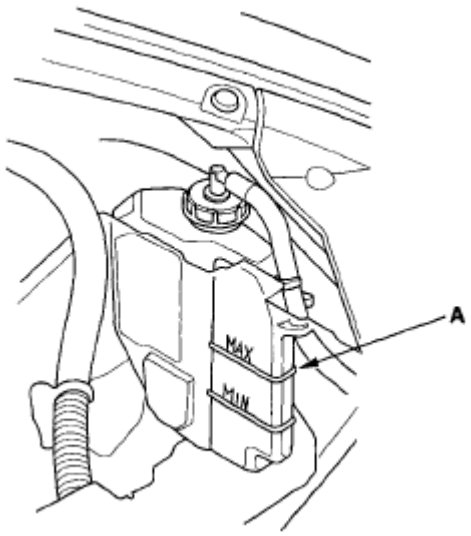

Fig. 13: Identifying Reserve Tank MAX Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Pour Honda Long Life Antifreeze/Coolant Type 2 into the radiator up to the base of the filler neck.

NOTE:

- **Always use Honda Long Life Antifreeze/Coolant Type 2 (P/N OL999-9001). Using a non-Honda coolant can result in corrosion, causing the cooling system to malfunction or fail.**
- **Honda Long Life Antifreeze/Coolant Type 2 is a mixture of 50 % antifreeze and 50 % water. Do not add water.**

Engine Coolant Capacities (Including the reserve tank capacity of 0.4 L (0.11 US gal)):

4-door model:

M/T:

At Coolant Change: 5.2 L (1.37 US gal)

After Engine Overhaul: 6.5 L (1.72 US gal)

A/T:

At Coolant Change: 5.3 L (1.40 US gal)

After Engine Overhaul: 6.7 L (1.77 US gal)

2-door model:

M/T:

At Coolant Change: 5.2 L (1.37 US gal)

After Engine Overhaul: 6.5 L (1.72 US gal)

A/T:

At Coolant Change: 6.5 L (1.45 US gal)

After Engine Overhaul: 7.1 L (1.88 US gal)

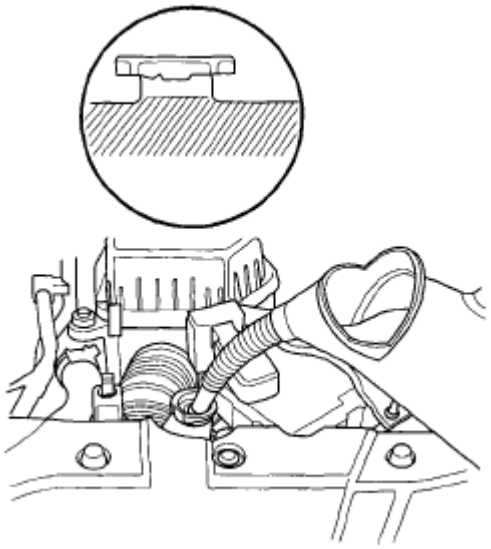

Fig. 14: Pouring Honda Long Life Antifreeze/Coolant Type 2 Into Radiator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Loosely install the radiator cap.
11. Start the engine, and let it run until it warms up (the radiator fan comes on at least twice).
12. If the maintenance minder required to replace the engine coolant, reset the maintenance minder (see **RESETTING THE MAINTENANCE INFORMATION DISPLAY**), then go to step 20. If the maintenance minder did not require to replace the engine coolant, go to next step.
13. Connect the HDS to the data link connector.
14. Turn the ignition switch ON (II).
15. Make sure the HDS communicates with the vehicle and the ECM/PCM. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
16. Select BODY ELECTRICAL with the HDS.
17. Select ADJUSTMENT in the GAUGES MENU with the HDS.
18. Select RESET in the MAINTENANCE MINDER with the HDS.
19. Select MAINTENANCE SUB ITEM 5 RESET with the HDS.
20. Turn off the engine. Check the level in the radiator, and add Honda Long Life Antifreeze/Coolant Type 2, if needed.
21. Put the radiator cap on tightly, then run the engine again, and check for leaks.

22. Clean up any spilled engine coolant.
23. Reset the maintenance information display (see **RESETTING THE MAINTENANCE INFORMATION DISPLAY**).

THERMOSTAT REPLACEMENT

1. Drain the engine coolant (see **COOLANT REPLACEMENT**).
2. Remove the harness clamp bracket and thermostat cover, then remove the thermostat.

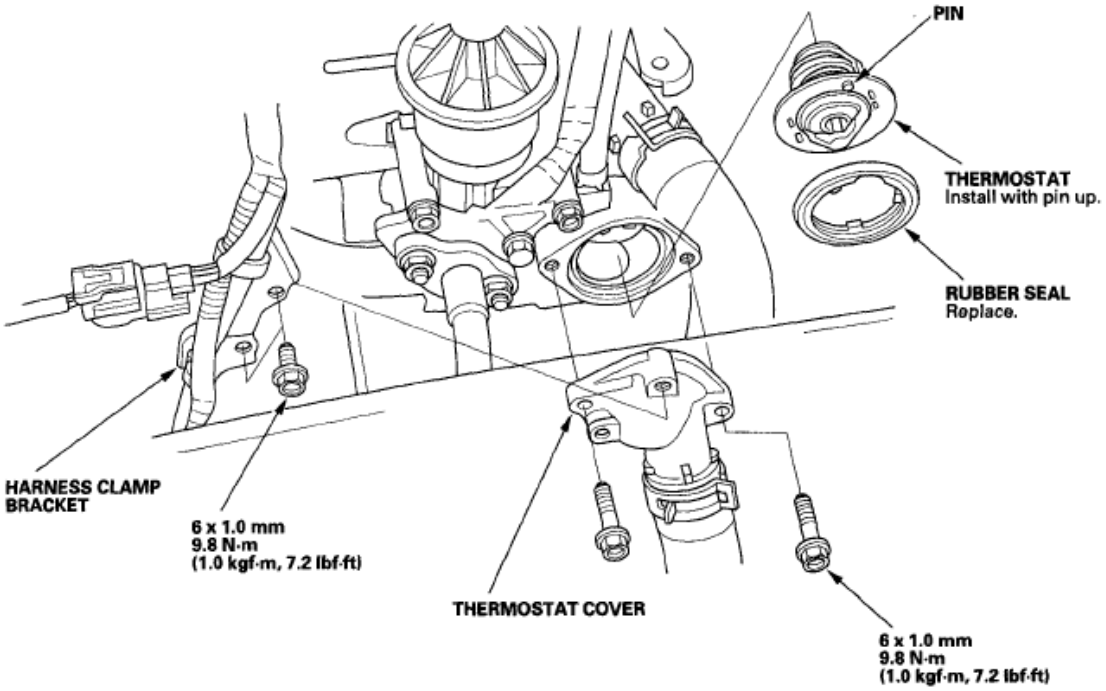

Fig. 15: Identifying Thermostat Cover With Tightening Torque
Courtesy of AMERICAN HONDA MOTOR CO., INC.

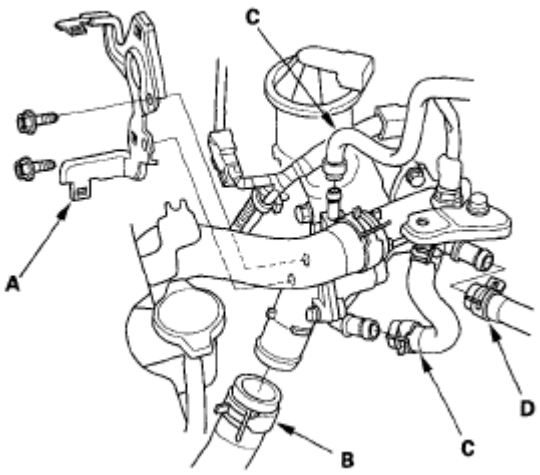
3. Install the thermostat with a new rubber seal.
4. Refill the radiator with engine coolant, then bleed air from the cooling system (see step 8).
5. Clean up any spilled engine coolant.

THERMOSTAT HOUSING REMOVAL AND INSTALLATION

REMOVAL

1. Drain the engine coolant (see **COOLANT REPLACEMENT**).
2. Remove the air cleaner assembly (see **THROTTLE BODY CLEANING**).
3. Remove the harness bracket (A), and cover the air fuel ratio (A/F) sensor connector and secondary heated oxygen sensor (secondary H02S) connector with a tape to protect the connectors from engine coolant, then remove the lower radiator hose (B), the water bypass (C), and the heater hose (D).

M/T



A/T

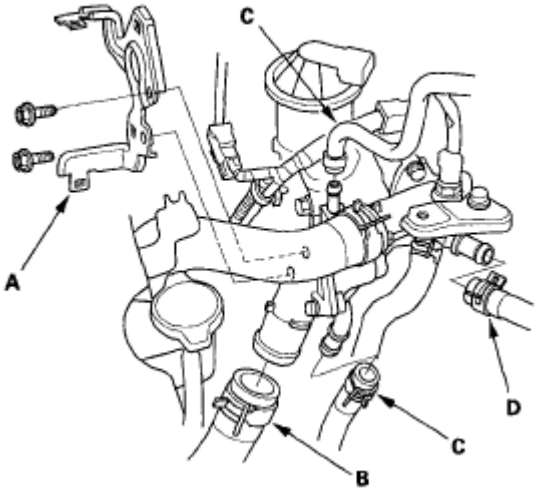


Fig. 16: Identifying Harness Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the exhaust gas recirculation (EGR) pipe.

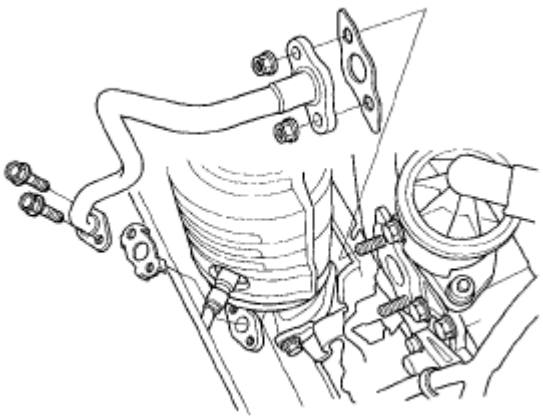

Fig. 17: Identifying Exhaust Gas Recirculation Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the EGR connector.
6. Remove the thermostat housing.

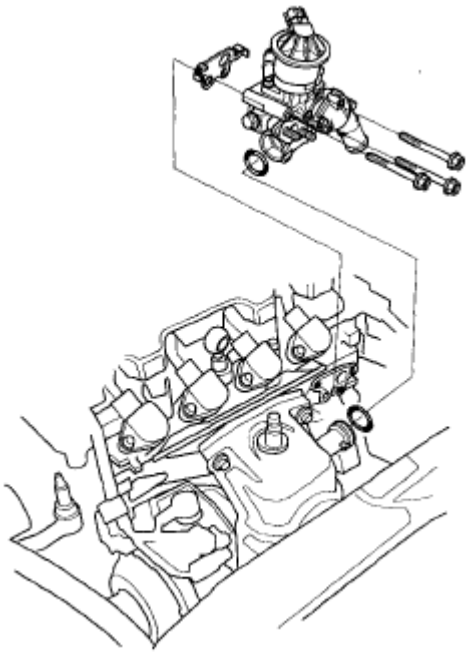

Fig. 18: Identifying Thermostat Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the EGR valve (A), thermostat cover (B), and thermostat (C).

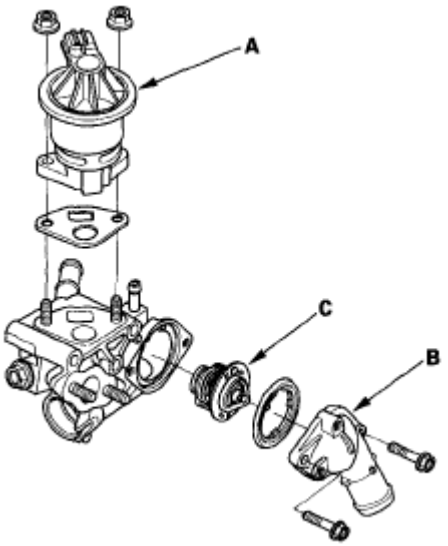

Fig. 19: Identifying EGR Valve, Thermostat Cover And Thermostat
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Install the new rubber seal (A) onto the thermostat, then install the thermostat (B) with pin (C) up, and install the thermostat cover (D).

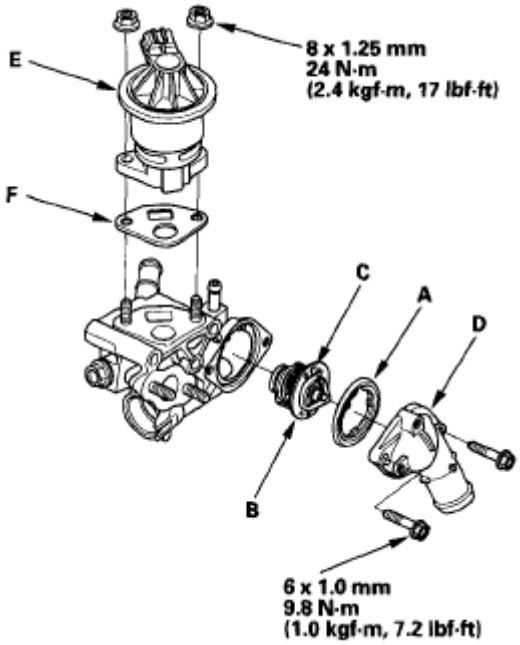

Fig. 20: Identifying Thermostat, Pin And Thermostat Cover With Tightening Torque
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the EGR valve (E) with a new gasket (F).
3. Install the thermostat housing (A), using a new gasket (B) and new O-ring (C).

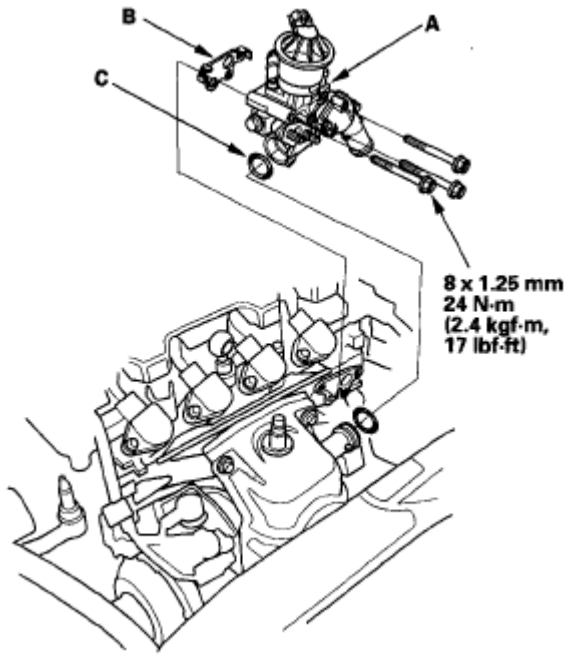

Fig. 21: Identifying Thermostat Housing, Gasket And O-Ring With Tightening Torque
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Connect the EGR connector.
5. Install the EGR pipe (A), using the new gaskets (B).

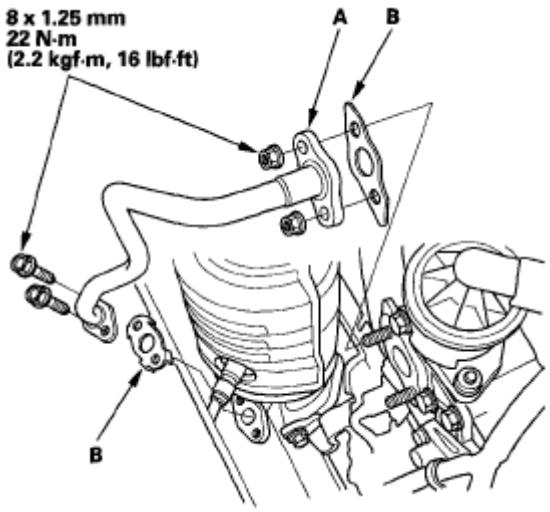

Fig. 22: Identifying EGR Pipe And Gaskets With Tightening Torque
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the lower radiator hose (A), heater hose (B), and water bypass hoses (C), then install the harness bracket (D).

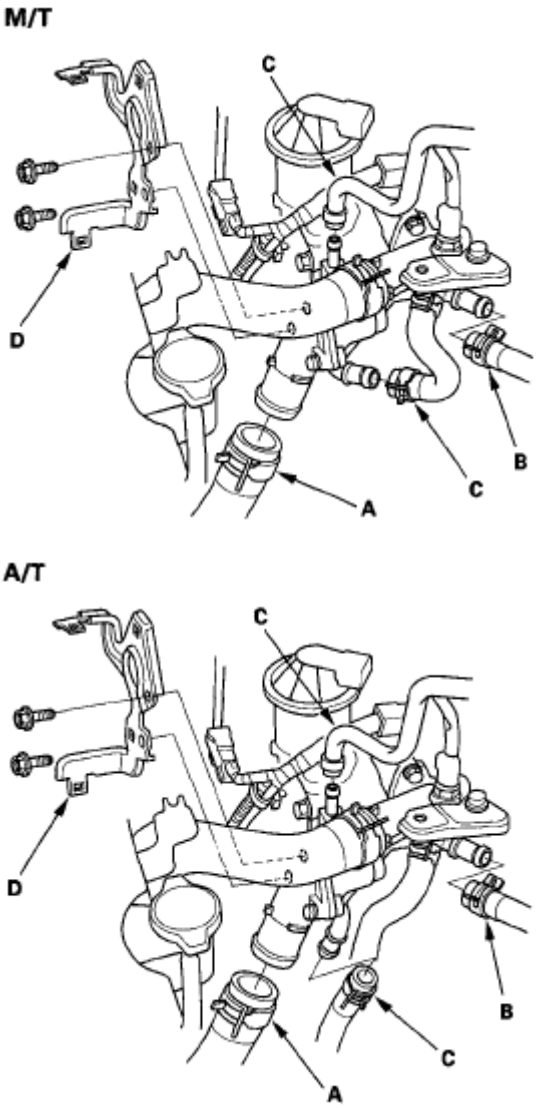

Fig. 23: Identifying Lower Radiator Hose, Heater Hose, And Water Bypass Hoses
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the air cleaner assembly (see **THROTTLE BODY CLEANING**).
8. Refill the radiator with engine coolant, and bleed the air from the cooling system with the heater valve open (see step 8).

WATER OUTLET REMOVAL AND INSTALLATION

REMOVAL

1. Drain the engine coolant (see **COOLANT REPLACEMENT**).
2. Remove the air cleaner assembly (see **THROTTLE BODY CLEANING**).
3. Remove the air cleaner housing bracket (A), then remove the harness holder (B) from the cylinder head.

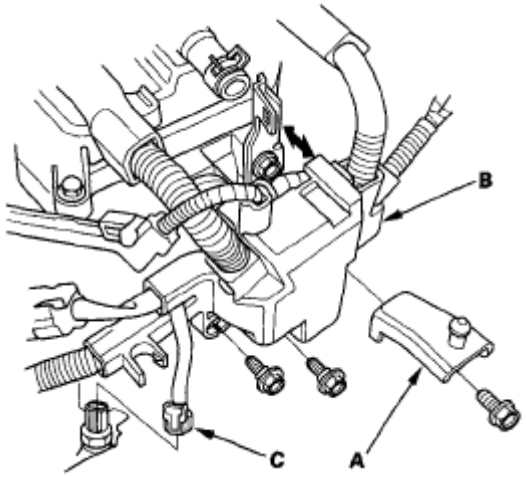

Fig. 24: Identifying Air Cleaner Housing Bracket And Harness Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the engine coolant temperature (ECT) sensor 1 connector (C).
5. Remove the air cleaner housing bracket (A), upper radiator hose (B), and water bypass hose (C).

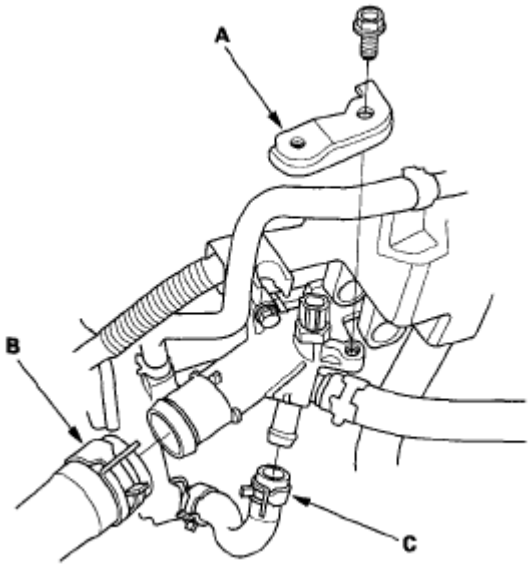

Fig. 25: Identifying Air Cleaner Housing Bracket, Upper Radiator Hose And Water Bypass Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the water outlet (A) and ECT sensor 1 (B).

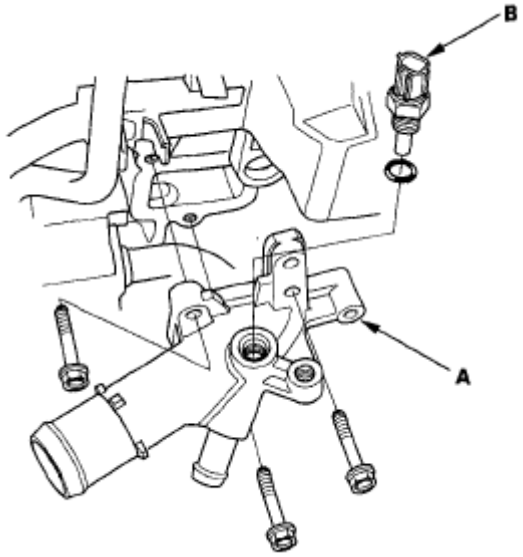

Fig. 26: Identifying Water Outlet And ECT Sensor 1
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Remove all of the old liquid gasket from the water outlet mating surfaces, bolts, and bolt holes.
2. Clean, and dry the water outlet mating surfaces.
3. Apply liquid gasket, P/N 08717-0004,08718-0001, 08718-0002, 08718-0003, or 08718-0009, evenly to the cylinder head mating surface of the water outlet.

NOTE: Do not install components if too much time has passed after applying the liquid gasket (for P/N 08718-0002, no more than 4 minutes, for all others, no more than 5 minutes). Instead, remove the old residue and reapply the liquid gasket.

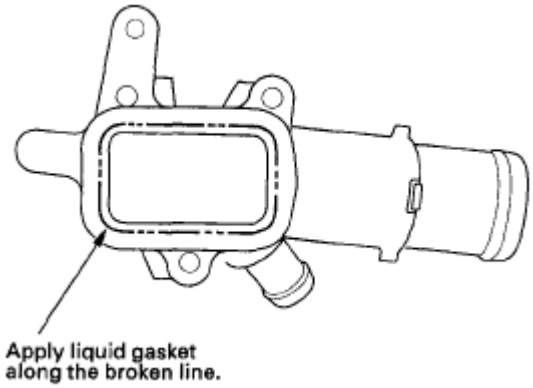

Fig. 27: Identifying Liquid Gasket Applying Line
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the water outlet (A), then install the ECT sensor 1 (B) with a new O-ring (C).

NOTE:
- **Wait at least 30 minutes to allow liquid gasket to cure before filling**

the engine with coolant.

- **Do not run the engine for at least 3 hours to allow liquid gasket to cure after installing the water outlet.**

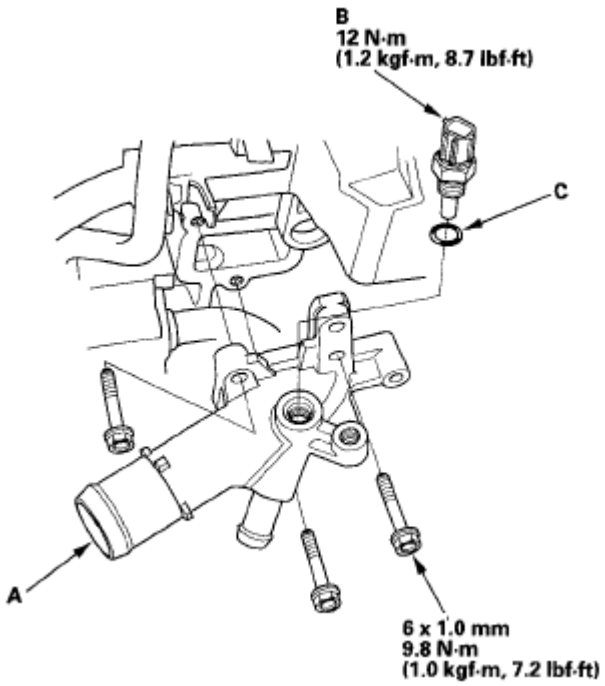

Fig. 28: Identifying Torque Specifications Of Water Outlet Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the air cleaner housing bracket (A), upper radiator hose (B), and water bypass hose (C).

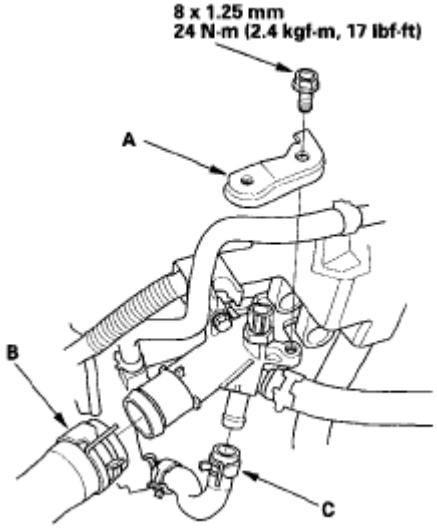

Fig. 29: Identifying Torque Specifications Of Air Cleaner Housing Bracket Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Connect the engine temperature (ECT) sensor 1 connector (A).

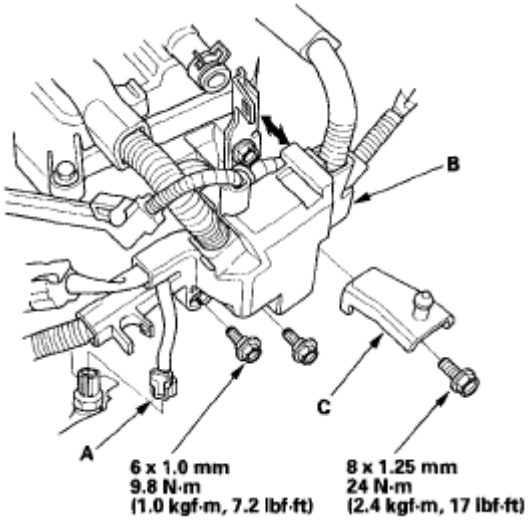

Fig. 30: Identifying Engine Temperature Sensor 1 Connector With Tightening Torques
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the harness holder (B) on the cylinder head, then install the air cleaner housing bracket (C).
8. Install the air cleaner assembly (see **THROTTLE BODY CLEANING**).
9. Refill the radiator with engine coolant, and bleed the air from the cooling system with the heater valve open (see step 8).

HEATER OUTLET REPLACEMENT

1. Drain the engine coolant (see **COOLANT REPLACEMENT**).
2. Remove the air cleaner assembly (see **THROTTLE BODY CLEANING**).
3. Remove the heater hose (A) from the clamp.

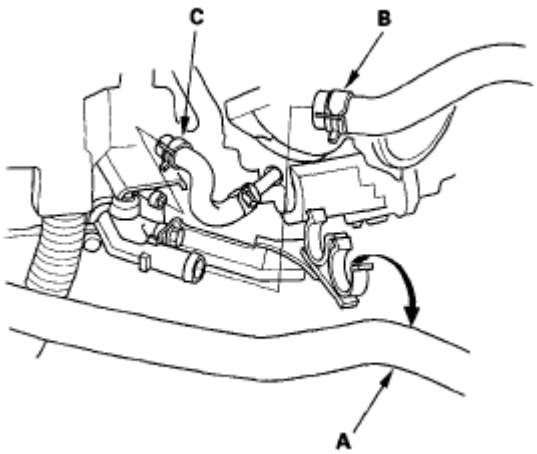

Fig. 31: Identifying Heater Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the heater hose (B) and water bypass hose (C).
5. Remove the heater outlet (A).

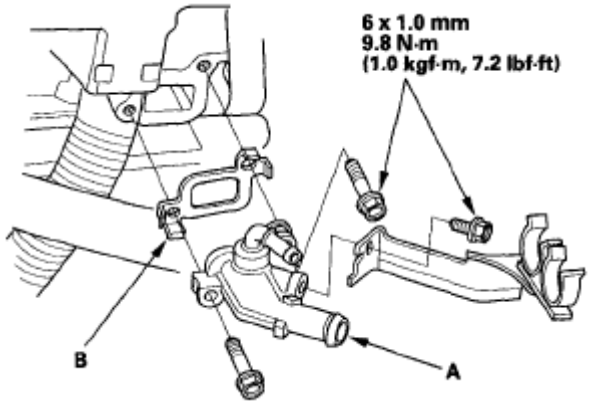

Fig. 32: Identifying Heater Outlet With Tightening Torque
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the heater outlet with a new gasket (B).
7. Install the other parts in the reverse order of removal.
8. Refill the radiator with engine coolant, and bleed the air from the cooling system with the heater valve open (see step 8).

RADIATOR AND FAN REPLACEMENT

1. Do the battery removal procedure.
2. Drain the engine coolant
3. Remove the battery.
4. Drain the engine coolant (see **COOLANT REPLACEMENT**).
5. Remove the bulkhead cover.
6. Disconnect the fan motor connectors (A) and hood switch connector (B), then remove the harness clamps (C).

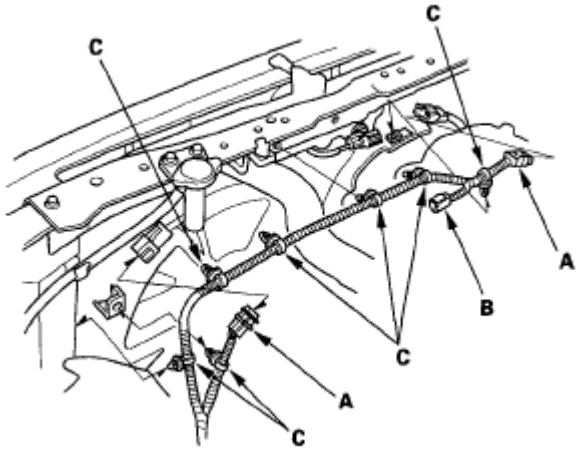

Fig. 33: Identifying Fan Motor Connectors And Hood Switch Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the reservoir hose (A), radiator cap base mounting bolts (B), clips (C), and radiator upper brackets (D).

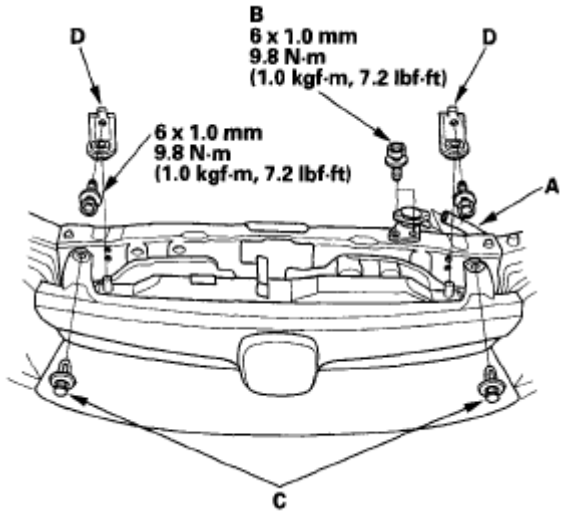

Fig. 34: Identifying Torque Specifications Of Radiator Cap Base Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the upper radiator hose (A) and lower radiator hose (B).

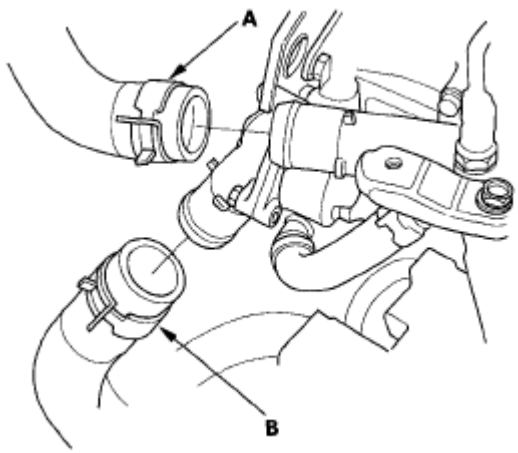

Fig. 35: Identifying Upper Radiator Hose And Lower Radiator Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the splash shield.

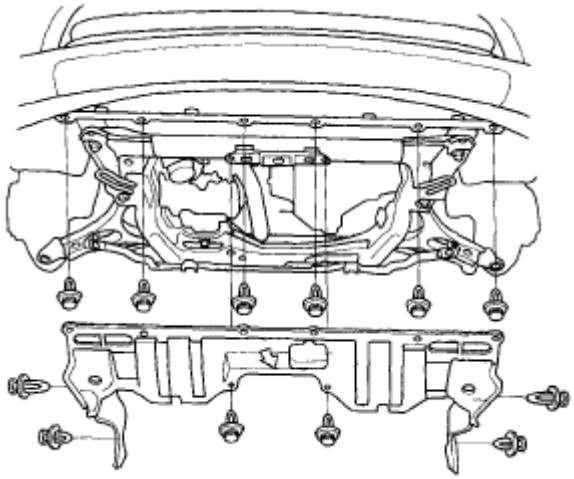

Fig. 36: Identifying Splash Shield
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Disconnect the engine coolant temperature (ECT) sensor 2 connector (A), and remove the harness clamp (B).

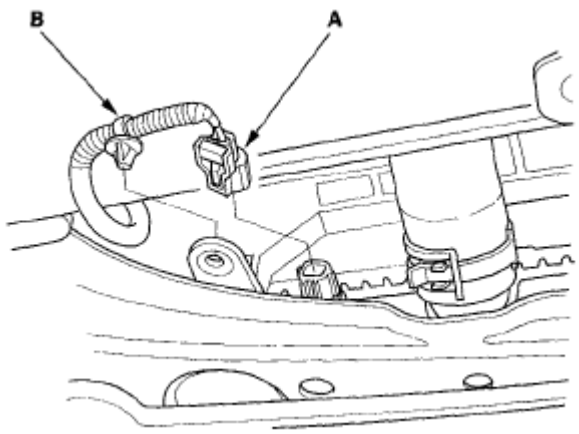

Fig. 37: Identifying Engine Coolant Temperature Sensor 2 Connector And Harness Clamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Remove the condenser bracket mounting bolts (A), then remove the bulkhead (B).

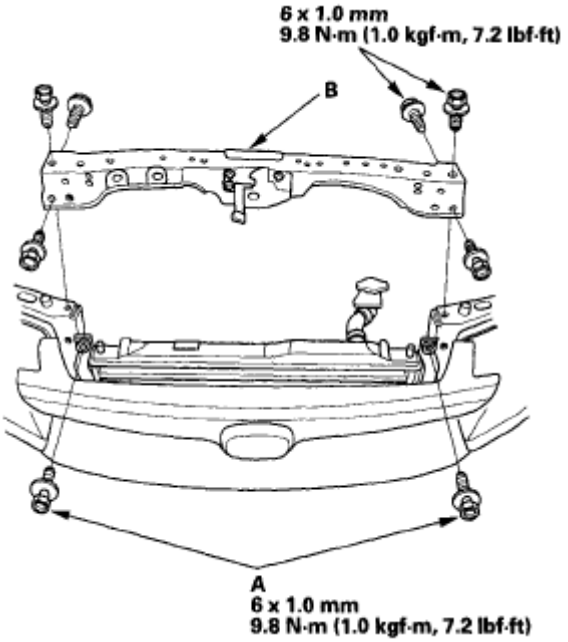

Fig. 38: Identifying Condenser Bracket Mounting Bolts And Bulkhead With Tightening Torque
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Pull up the radiator, then remove the fan shroud assemblies and other parts from the radiator.

DENSO

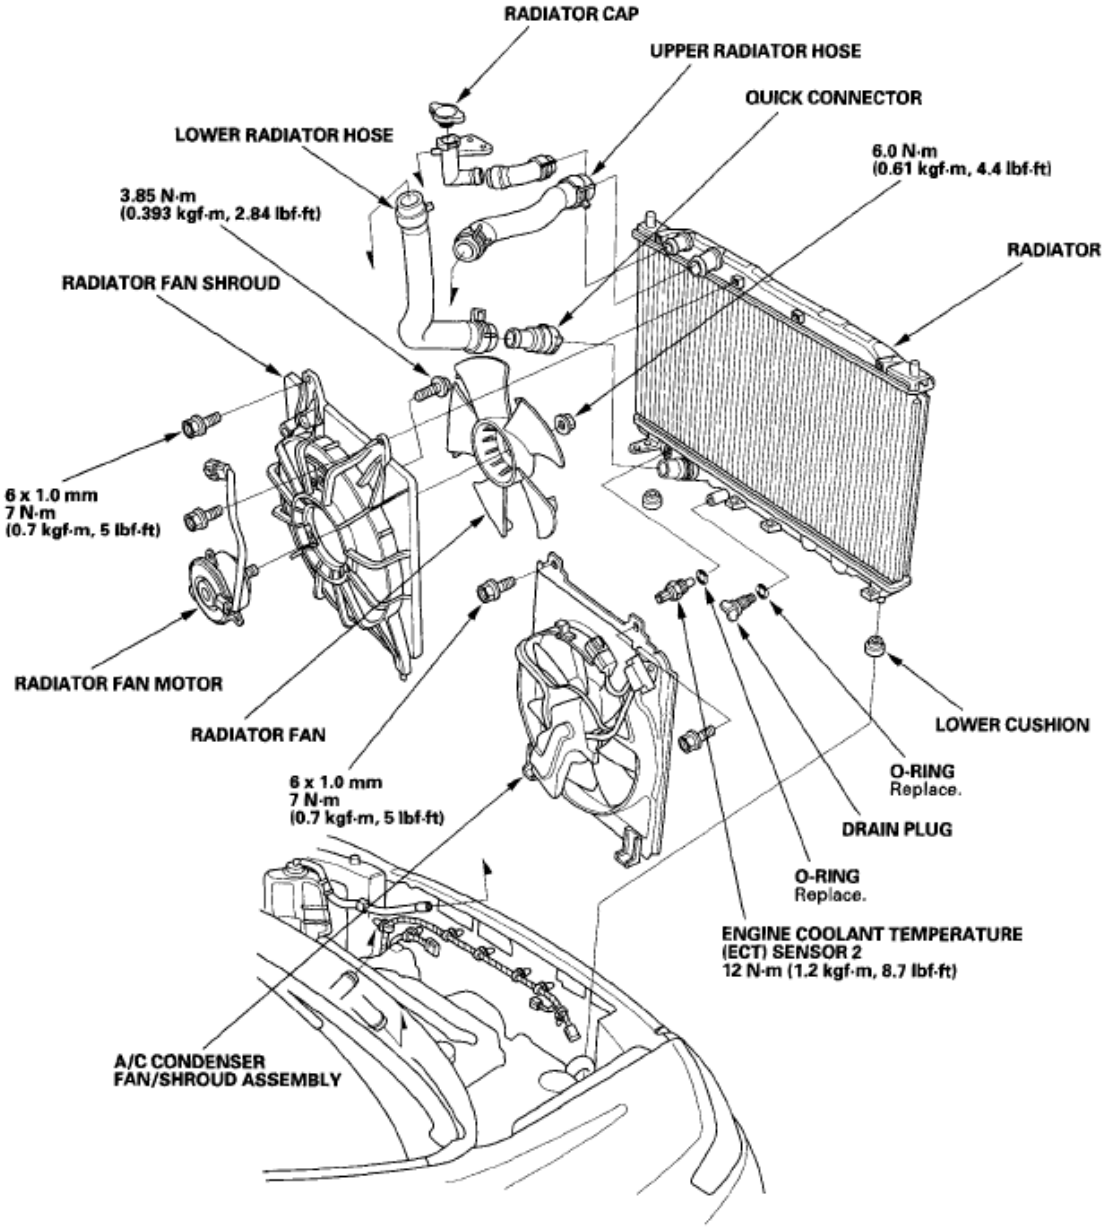

Fig. 39: Identifying Radiator And Fan Components - DENSO - With Tightening Torque
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CoPAR

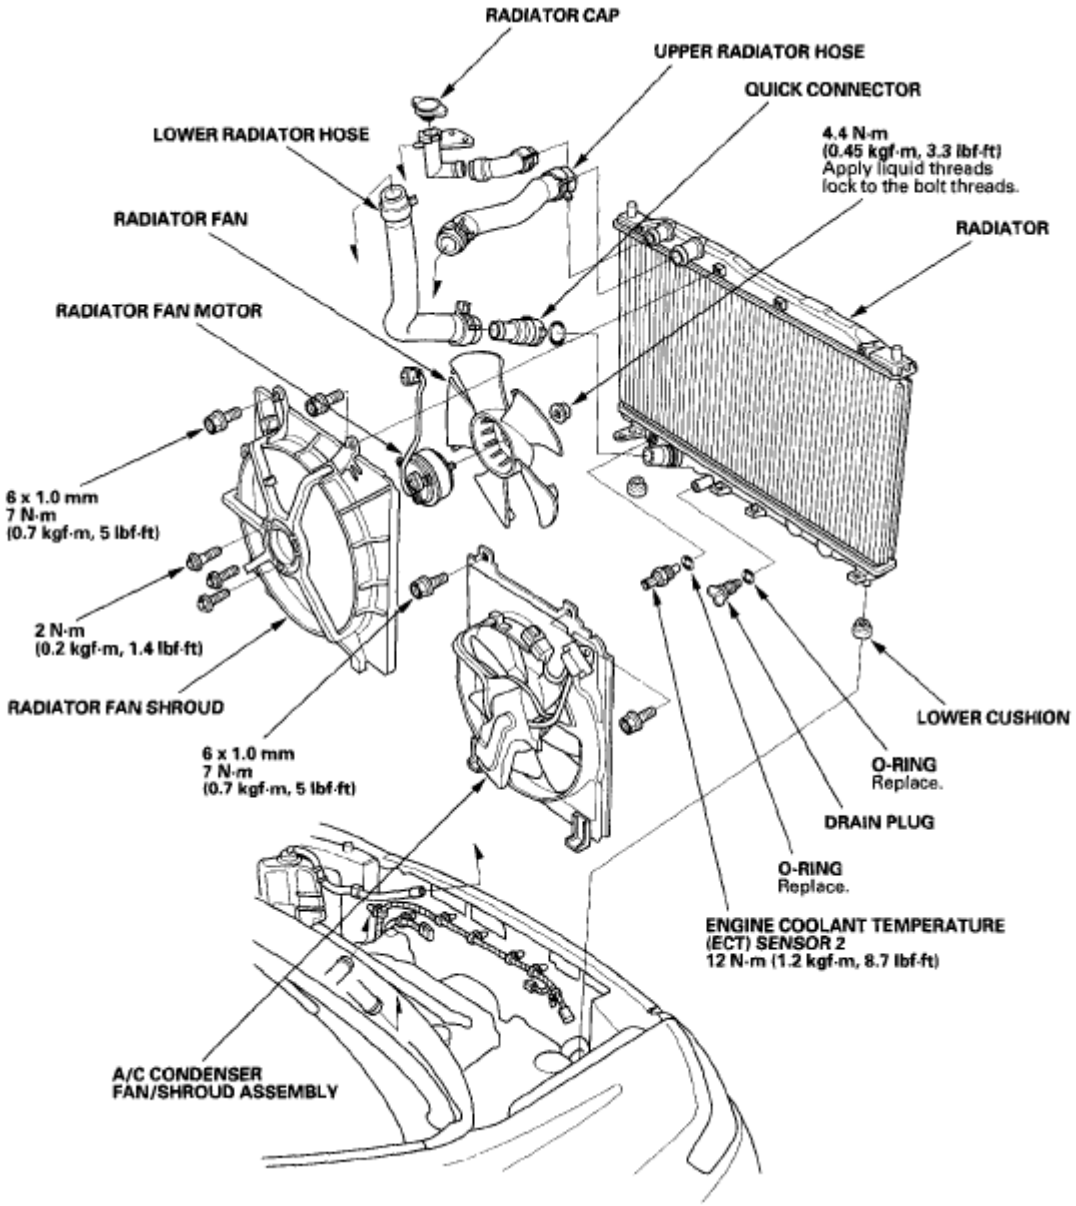

Fig. 40: Identifying Radiator And Fan Components - COPAR - With Tightening Torque
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install the radiator in the reverse order of removal. Make sure the upper and lower cushions are set securely.
14. Install the bulkhead in the reverse order of removal. Apply body paint to the bulkhead mounting bolts.
15. Install the battery, and connect the positive cable to the battery first, then connect the negative cable.
16. Enter the anti-theft code for the audio system and the navigation system (if equipped), then enter the audio preset. Set the clock.
17. Fill the radiator with engine coolant and bleed the air (see step 8).

2006-08 ENGINE PERFORMANCE

Catalytic Converter System (K20Z3) - Civic (All Except Si)

COMPONENT LOCATION INDEX

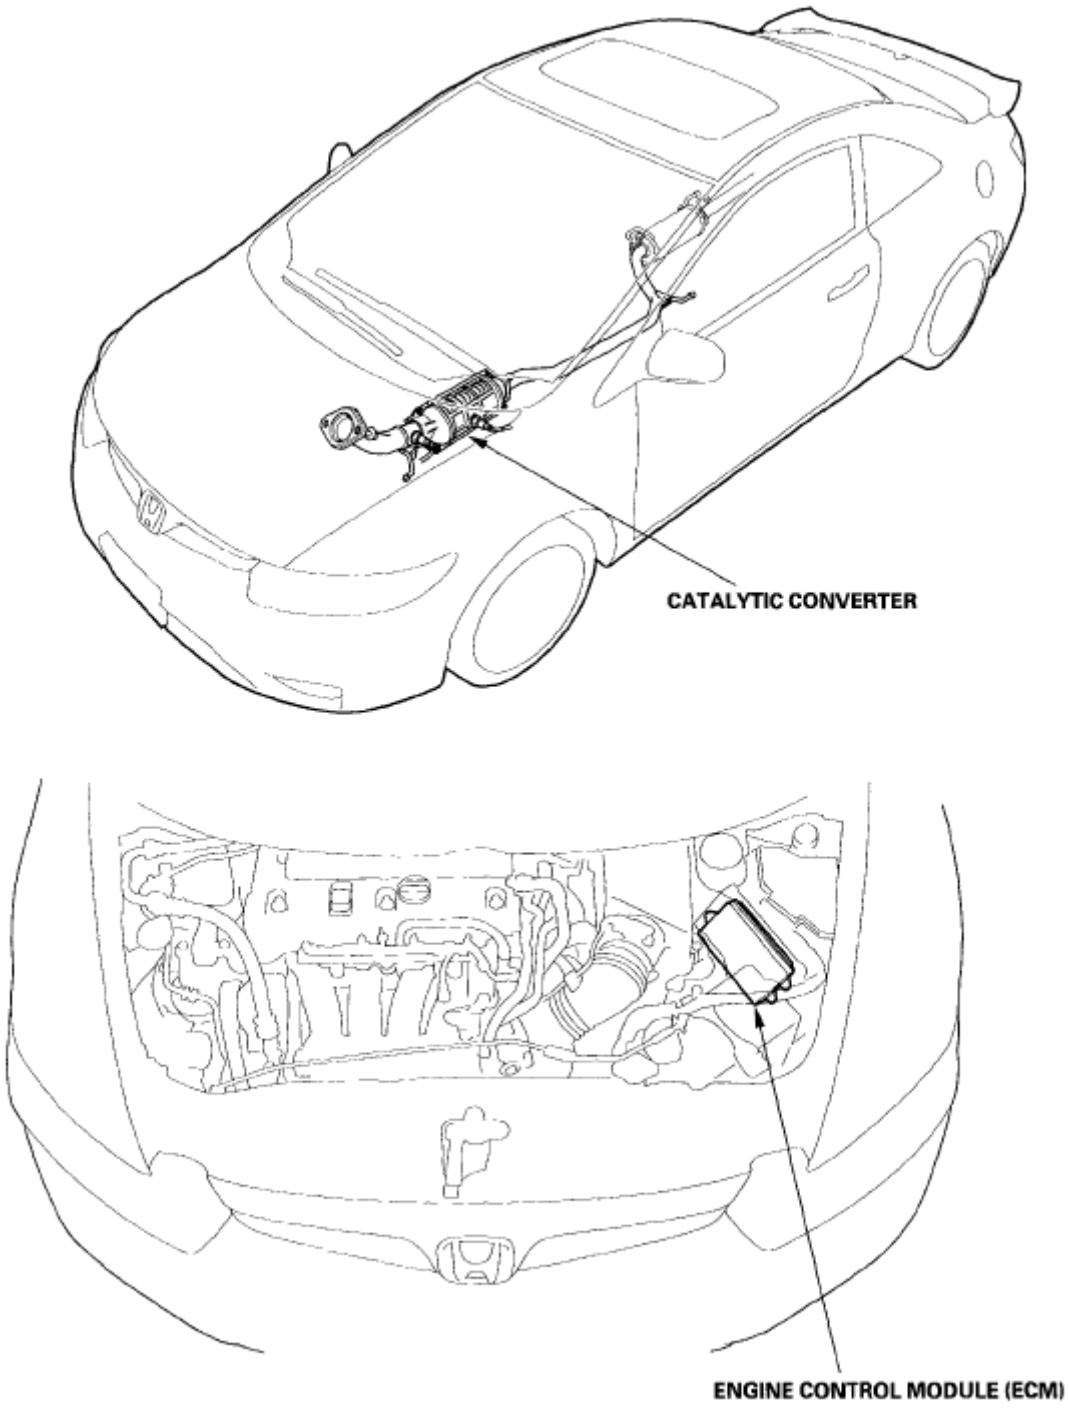

Fig. 1: Identifying Catalytic Converter System Component Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC TROUBLESHOOTING

DTC P0420: CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**
- **If some of the DTCs listed below are stored at the same time as DTC P0420, troubleshoot them first, then recheck for DTC P0420.**

  P0137, P0138: Secondary H02S (Sensor 2) P0141: Secondary H02S (Sensor 2) heater

- **Poor quality fuel may cause this DTC.**

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in neutral) until the radiator fan comes on, then let it idle.
4. Test-drive under these conditions:
   - Engine coolant temperature (ECT SENSOR 1) above 158 °F (70 °C)
   - Transmission in 5th gear
   - Vehicle speed between 45-75 mph (72-120 km/h) for 5 minutes or more with cruise control set
   - '06 model: Maintain the vehicle speed at 55 mph (88 km/h) for 5 minutes or more with cruise control set

     '07 model: Maintain the vehicle speed at 55 mph (88 km/h) for 30 seconds or more
5. Monitor the OBD STATUS for DTC P0420 in the DTCs MENU with the HDS.

   Does the screen indicate EXECUTING?

   YES -Go to step 6.

   NO -If the screen indicates OUT OF CONDITION, go to step 4 and recheck. If the screen indicates PASSED, intermittent failure, the system is OK at this time. If the screen indicates FAILED, go to step 8.
6. Continue test driving until a result comes on.
7. Monitor the OBD STATUS for DTC P0420 in the DTCs MENU with the HDS.

   Does the screen indicate FAILED?

   YES -Go to step 8.

   NO -If the screen indicates PASSED, intermittent failure, the system is OK at this time. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF

CONDITION, go to step 4 and recheck.

8. Turn the ignition switch OFF.
9. Replace the TWC (see **CATALYTIC CONVERTER REMOVAL/INSTALLATION**).
10. Turn the ignition switch ON (II).
11. Reset the ECM with the HDS.
12. Do the ECM idle learn procedure (see **ECM IDLE LEARN PROCEDURE**).
13. Start the engine. Hold the engine speed at 3,000 rpm without load (in neutral) until the radiator fan comes on, then let it idle.
14. Test-drive for about 10 minutes, varying the vehicle speed.
15. Check the CATA MONITOR CONDITION in the DATA LIST with the HDS.

    Is the temperature OK?

    YES -Go to step 16.

    NO -Go to step 13 and recheck.

16. Test-drive under these conditions:
    - Engine coolant temperature (ECT SENSOR 1) above 158 °F (70 °C)
    - '09-10 models: Vehicle speed between 55-75 mph (88-120 km/h) for 10 seconds, then decelerate (with throttle fully closed). Repeat this three or more times
    - '06 and '09-10 models: Vehicle speed at 55 mph (88 km/h) for 5 minutes

      '07-08 models: Vehicle speed at 55 mph (88 km/h) for 30 seconds or more

17. Monitor the OBD STATUS for DTC P0420 in the DTCs MENU with the HDS.

    Does the screen indicate EXECUTING?

    YES -Go to step 18.

    NO -Go to step 16 and recheck.

18. Continue test-driving until a result comes on.
19. Check for Temporary DTCs or DTCs with the HDS.

    Are any Temporary DTCs or DTCs indicated?

    YES -go to the indicated DTCs troubleshooting .

    NO -Go to step 20.

20. Monitor the OBD STATUS for DTC P0420 in the DTCs MENU with the HDS.

    Does the screen indicate PASSED?

YES -Troubleshooting is complete.

NO -If the screen indicates FAILED, check the fuel quality. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 13 and recheck.

CATALYTIC CONVERTER REMOVAL/INSTALLATION

1. Remove the A/F sensor (sensor 1) (see **A/F SENSOR REPLACEMENT**).
2. Remove the secondary H02S (sensor 2) (see **A/F SENSOR REPLACEMENT**).
3. Remove the catalytic converter (A).

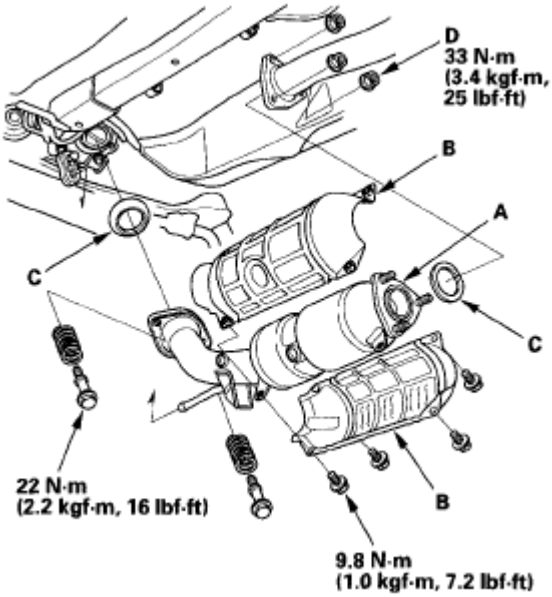

Fig. 2: Identifying Catalytic Converter, Converter Cover & Gaskets (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the converter cover (B).
5. Install the parts in the reverse order of removal with new gaskets (C) and new self-locking nuts (D).

2006-08 ENGINE

Intake Manifold and Exhaust System - Civic (Except Hybrid)

INTAKE MANIFOLD AND EXHAUST SYSTEM (R18A1)

NOTE: Refer to the INTAKE MANIFOLD AND EXHAUST SYSTEM (GX) (SUPPLEMENT) article for additional information for the GX model.

INTAKE MANIFOLD REMOVAL AND INSTALLATION

Exploded View

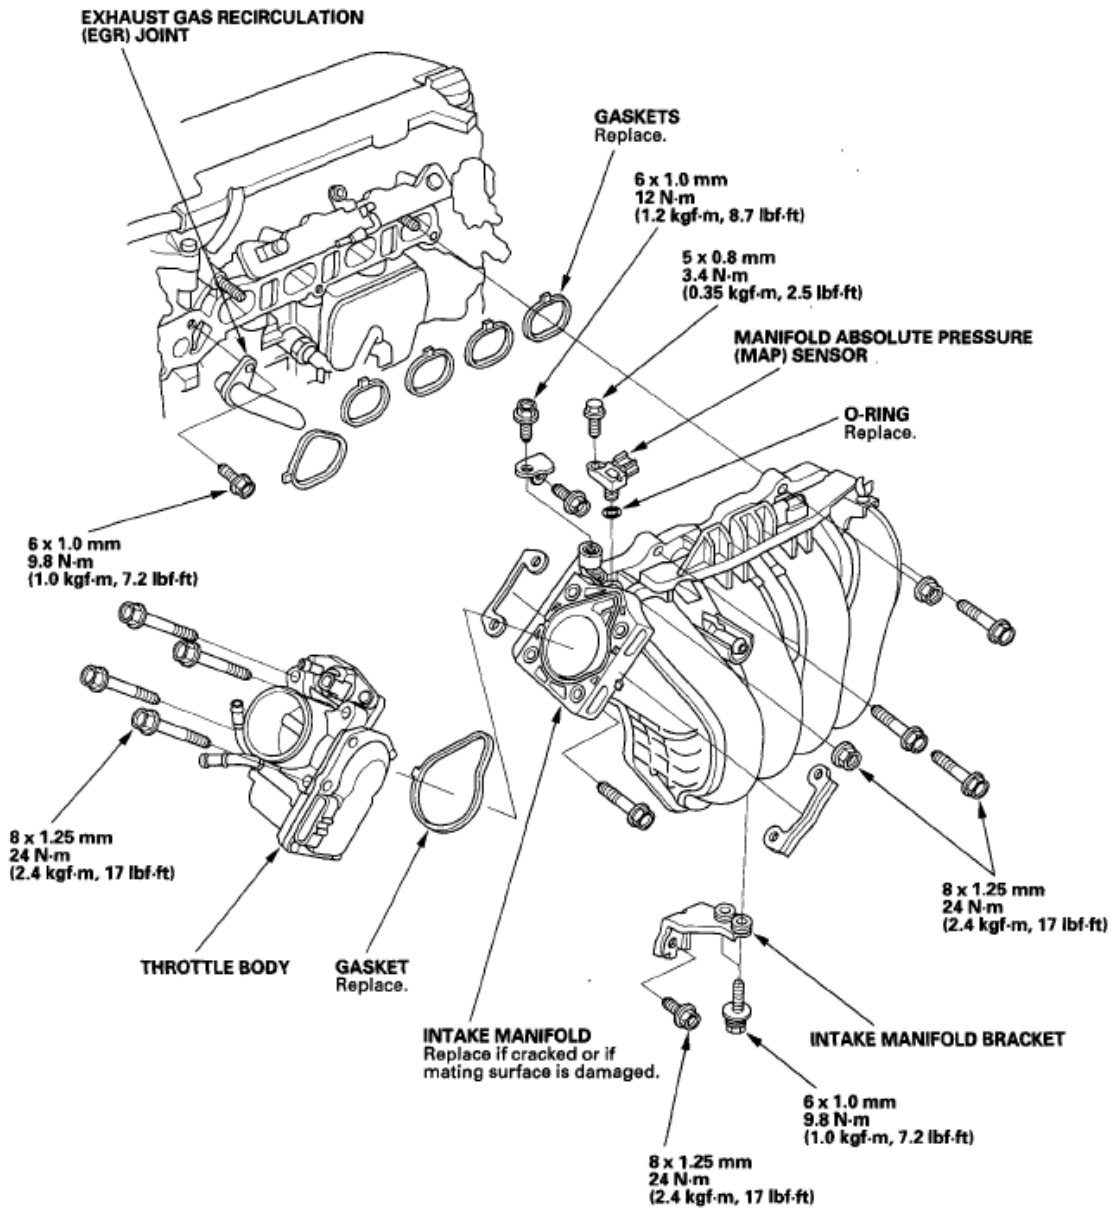

Fig. 1: Exploded View Of Intake Manifold (With Torque Specifications)
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

Removal

1. Remove the cowl cover and under-cowl panel (see **FRONT GRILLE COVER REPLACEMENT**).
2. Relieve the fuel pressure (see **AIR CLEANER ELEMENT INSPECTION/REPLACEMENT**).
3. Remove the air cleaner assembly (see **AIR CLEANER ELEMENT INSPECTION/REPLACEMENT**).
4. Remove the air intake duct.

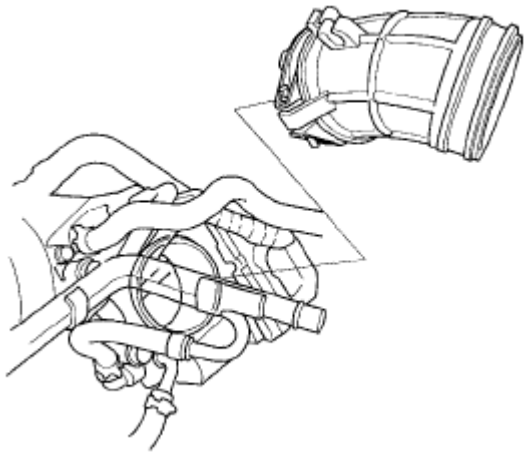

Fig. 2: Identifying Air Intake Duct
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

5. Remove the injector cover.

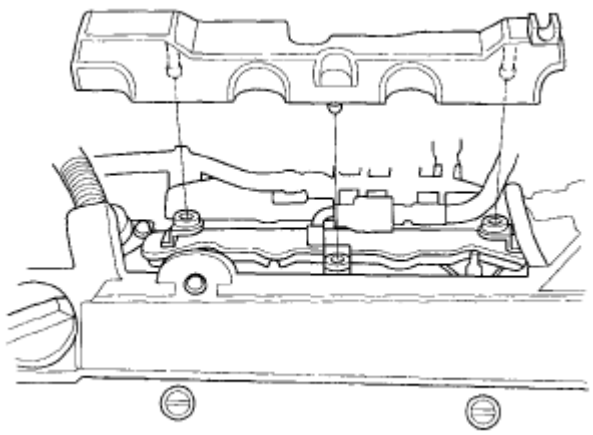

Fig. 3: Identifying Injector Cover
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

6. Remove the evaporative emission (EVAP) canister hose (A), brake booster vacuum hose (B), positive crankcase ventilation (PCV) hose (C), and power steering (P/S) hose clamp (D).

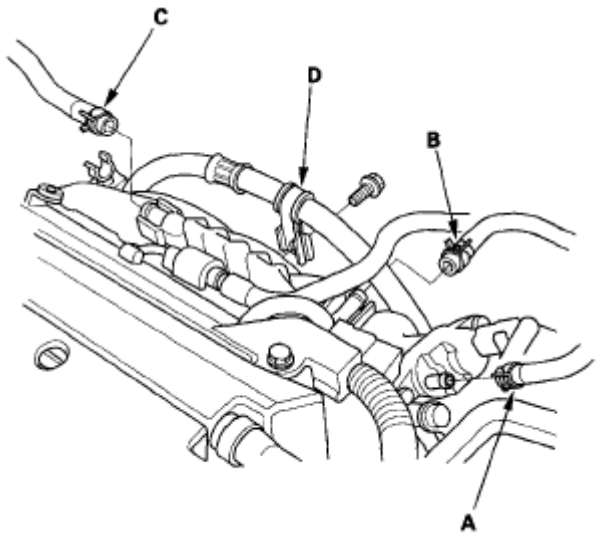

Fig. 4: Identifying Evaporative Emission Canister Hose And Brake Booster Vacuum Hose
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

7. Remove the quick-connect fitting cover (A), then disconnect the fuel feed hose (see **FUEL LINE/QUICK-CONNECT FITTING REMOVAL**).

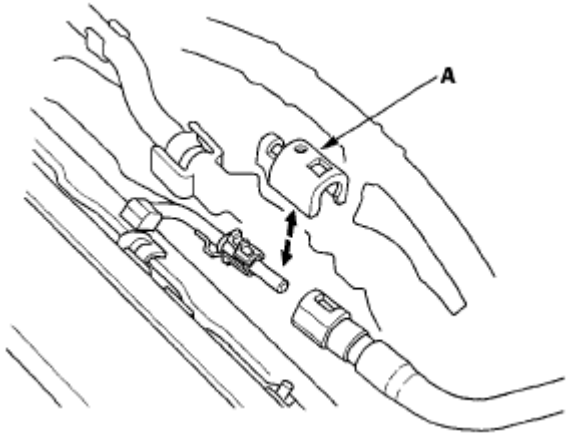

Fig. 5: Identifying Quick-Connect Fitting Cover
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

8. Remove the engine wire harness connectors and wire harness clamps from the intake manifold.
   - Throttle actuator connector
   - Manifold absolute pressure (MAP) sensor connector
   - Evaporative emission (EVAP) canister purge valve connector
   - Intake manifold tuning (IMT) valve actuator connector
9. Remove the water bypass hoses, then plug the water bypass hoses.

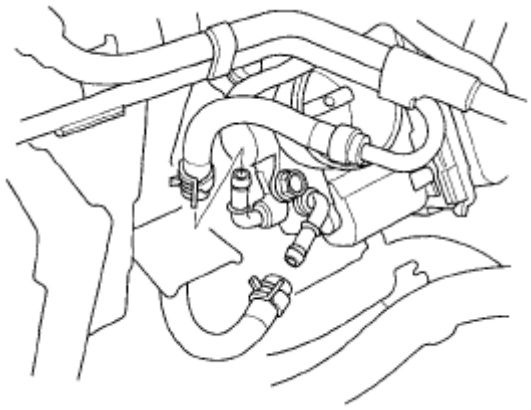

Fig. 6: Identifying Water Bypass Hoses
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

10. Remove the throttle body.

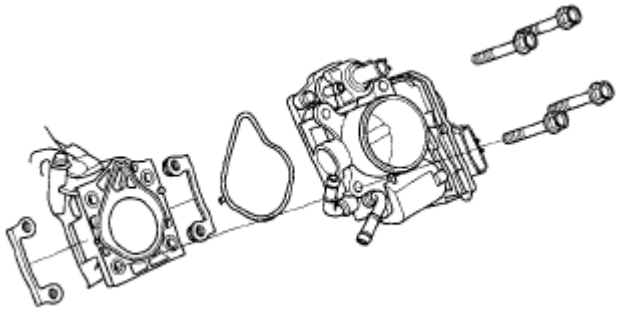

Fig. 7: Identifying Throttle Body
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

11. Remove the heater hose clamp bracket.

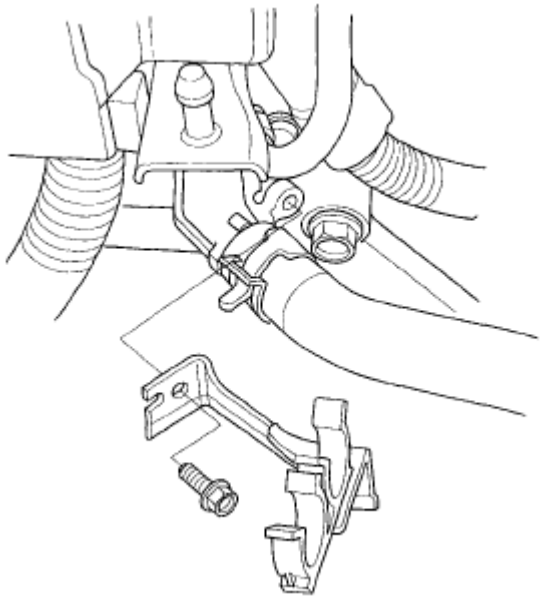

Fig. 8: Identifying Heater Hose Clamp Bracket

Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

12. Raise the vehicle on the lift to full height.
13. Remove the intake manifold bracket.

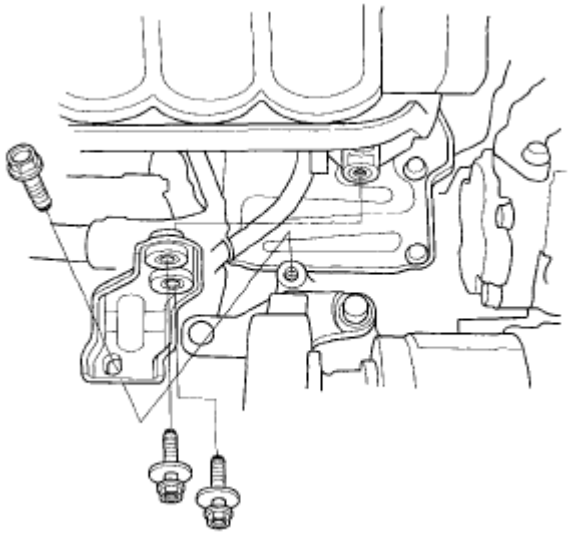

Fig. 9: Identifying Intake Manifold Bracket
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

14. Lower the vehicle on the lift.
15. Remove the all intake manifold mounting bolts and nuts, then remove the intake manifold from the cylinder head.

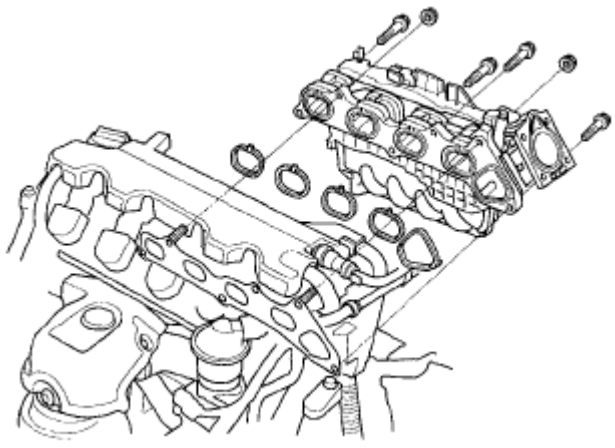

Fig. 10: Identifying Intake Manifold Mounting Bolts And Nuts
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

16. Remove the harness clamps, then remove the intake manifold from the vehicle.

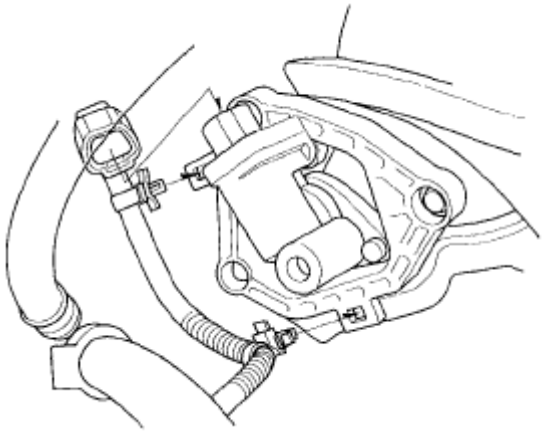

Fig. 11: Identifying Harness Clamps
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

Installation

1. Install the harness clamps to the intake manifold.

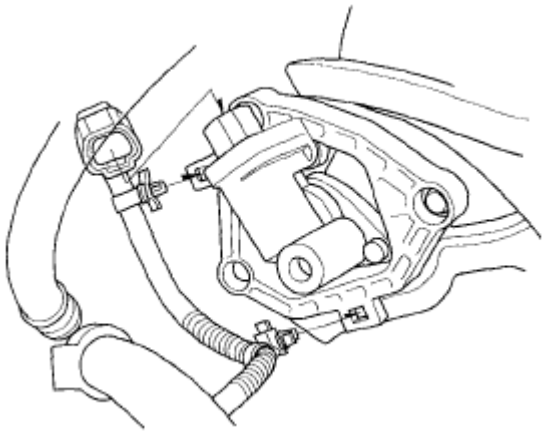

Fig. 12: Identifying Harness Clamps
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

2. Install the intake manifold (A) with new gaskets (B), and tighten the bolts and nuts in a crisscross pattern in two or three steps, beginning with the inner bolt.

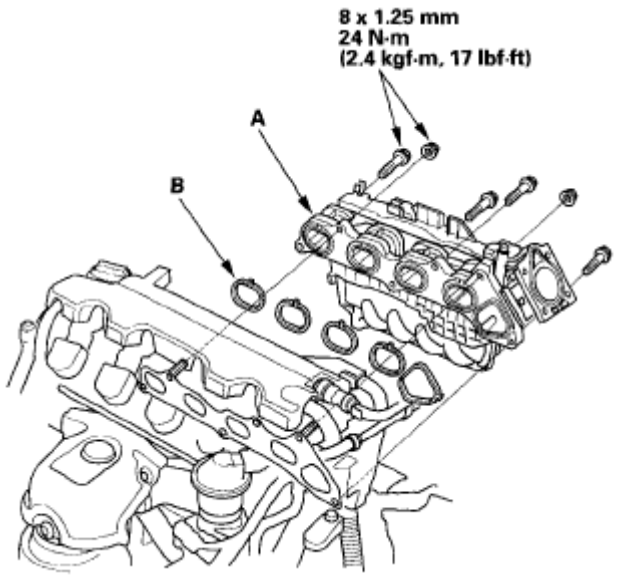

Fig. 13: Identifying Intake Manifold And Gaskets (With Torque Specifications)
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

3. Raise the vehicle on the lift to full height.
4. Install the intake manifold bracket (A).

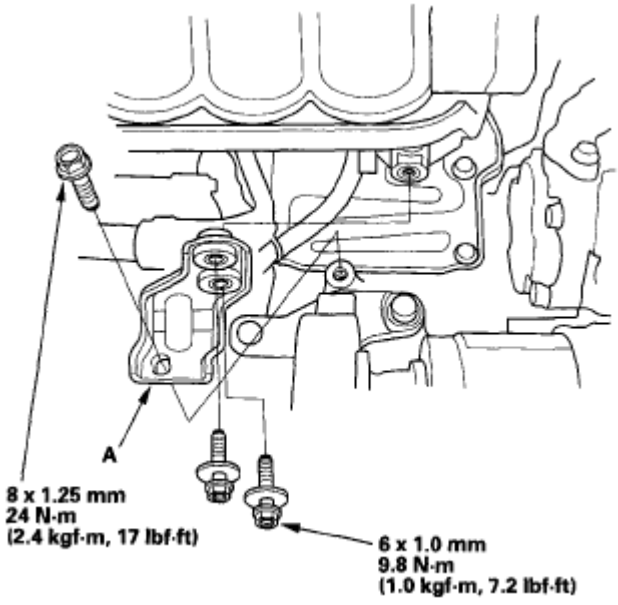

Fig. 14: Identifying Intake Manifold Bracket (With Torque Specifications)
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

5. Lower the vehicle on the lift.
6. Install the heater hose clamp bracket.

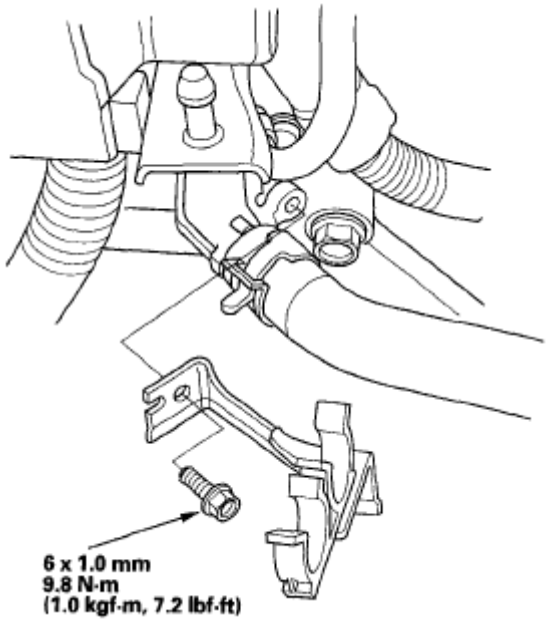

Fig. 15: Identifying Heater Hose Clamp Bracket (With Torque Specifications)
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

7. Install the throttle body (A) with a new gasket (B).

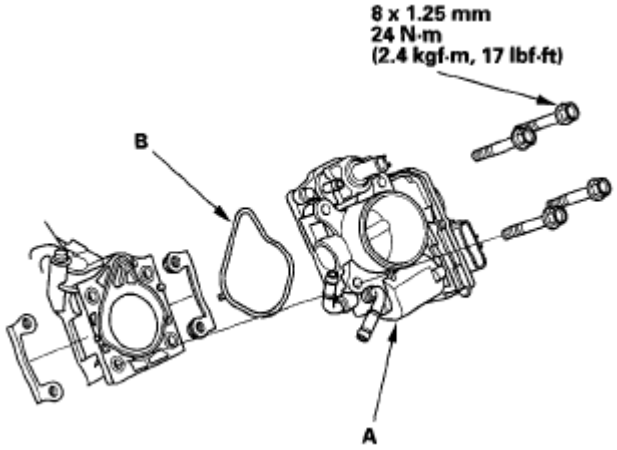

Fig. 16: Identifying Throttle Body And Gasket (With Torque Specifications)
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

8. Install the water bypass hoses.

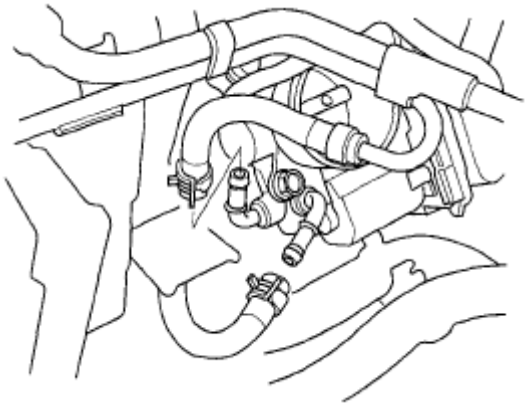

Fig. 17: Identifying Water Bypass Hoses
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

9. Connect the engine wire harness connectors, and install the wire harness clamps to the intake manifold.
    - Throttle actuator connector
    - Manifold absolute pressure (MAP) sensor connector
    - Evaporative emission (EVAP) canister purge valve connector
    - Intake manifold tuning (IMT) valve actuator connector
10. Connect the fuel feed hose (see **FUEL LINE/QUICK-CONNECT FITTING REMOVAL**), then install the quick-connect fitting cover (A).

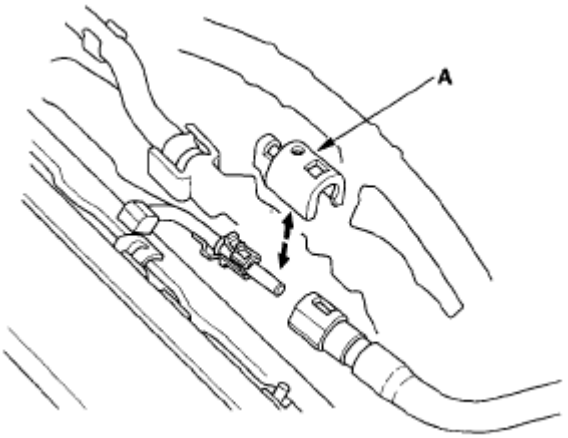

Fig. 18: Identifying Quick-Connect Fitting Cover
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

11. Install the evaporative emission (EVAP) canister hose (A), brake booster vacuum hose (B), positive crankcase ventilation (PCV) hose (C), and power steering (P/S) hose clamp (D).

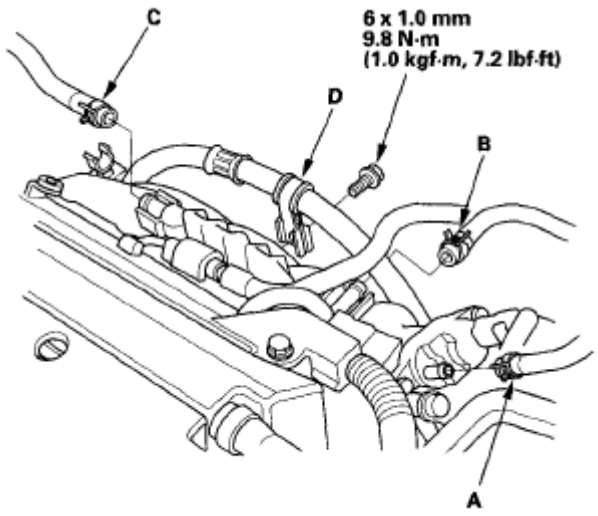

Fig. 19: Identifying Evaporative Emission Canister Hose And Brake Booster Vacuum Hose (With Torque Specifications)
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

12. Install the injector cover.

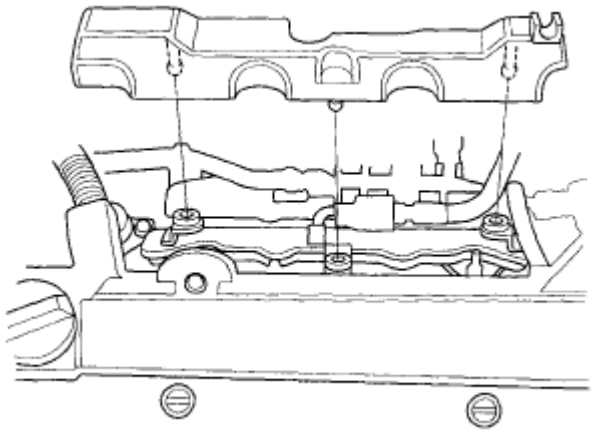

Fig. 20: Identifying Injector Cover
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

13. Install the air intake duct.

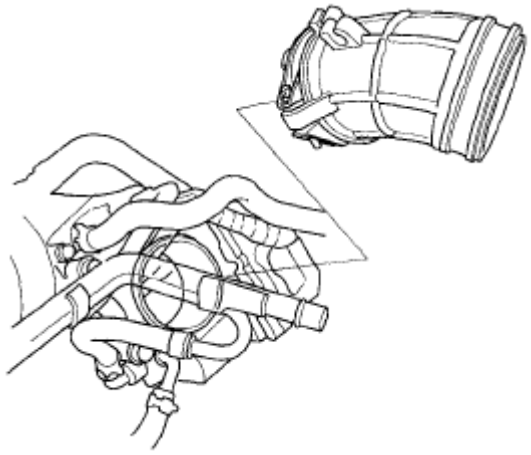

Fig. 21: Identifying Air Intake Duct
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

14. Install the air cleaner assembly (see **AIR CLEANER ELEMENT INSPECTION/REPLACEMENT**).
15. Install the cowl cover and under-cowl panel (see **FRONT GRILLE COVER REPLACEMENT**).
16. Clean up any spilled engine coolant.
17. After installation, check that all tubes, hoses, and connectors are installed correctly.
18. Refill the radiator with engine coolant, and bleed the air from the cooling system with the heater valve open (see step 8 on **COOLANT REPLACEMENT**).

EXHAUST PIPE AND MUFFLER REPLACEMENT

NOTE: Use new gaskets and self-locking nuts when reassembling.

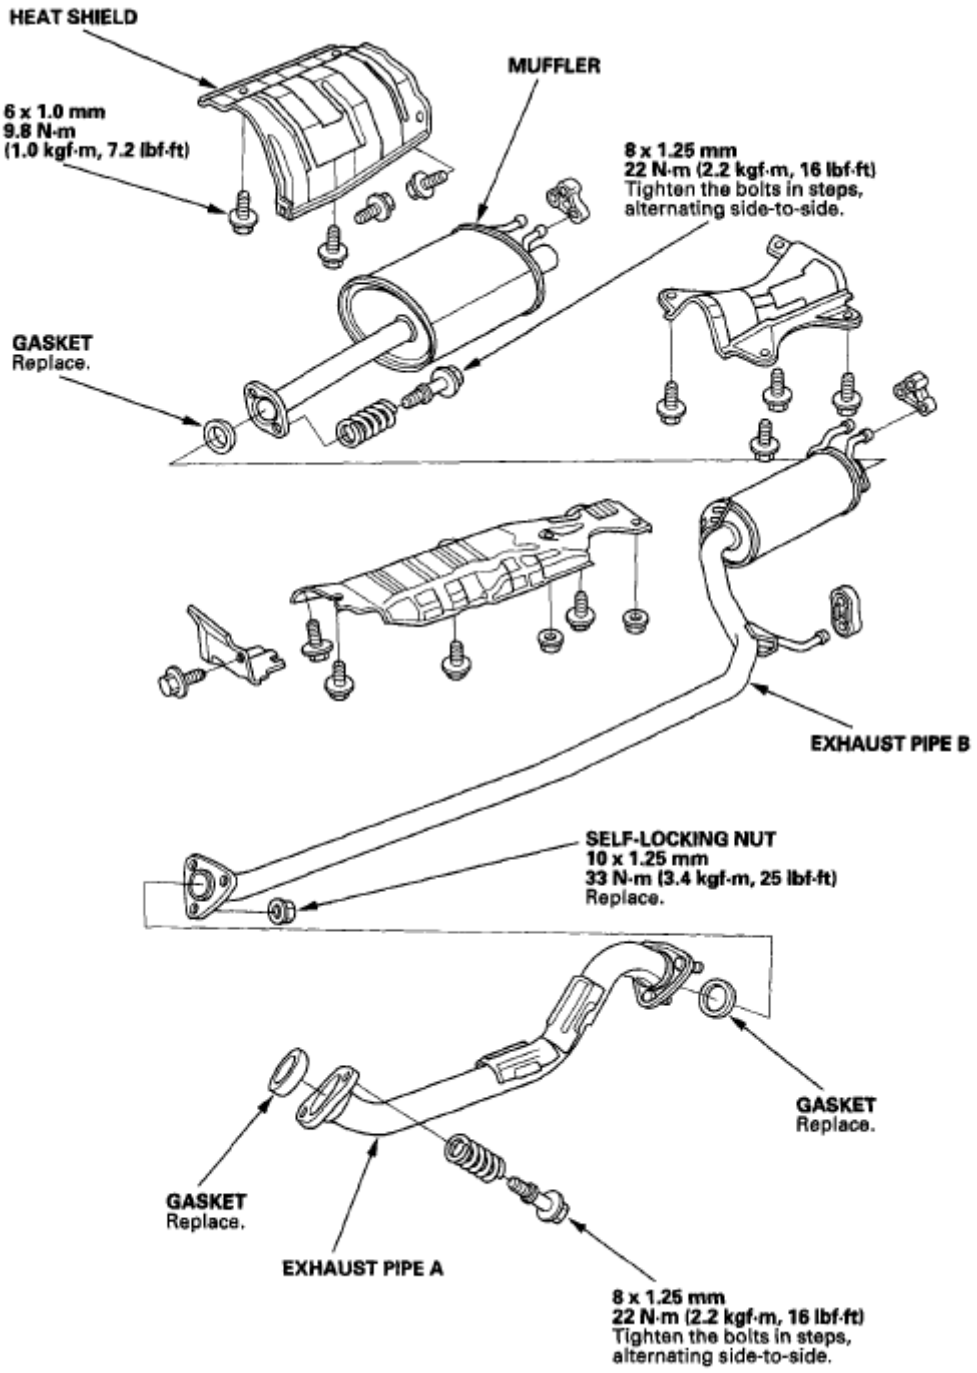

Fig. 22: Identifying Exhaust Pipe And Muffler Components (With Torque Specifications)
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

INTAKE MANIFOLD AND EXHAUST SYSTEM (K20Z3)

INTAKE MANIFOLD REMOVAL AND INSTALLATION

Exploded View

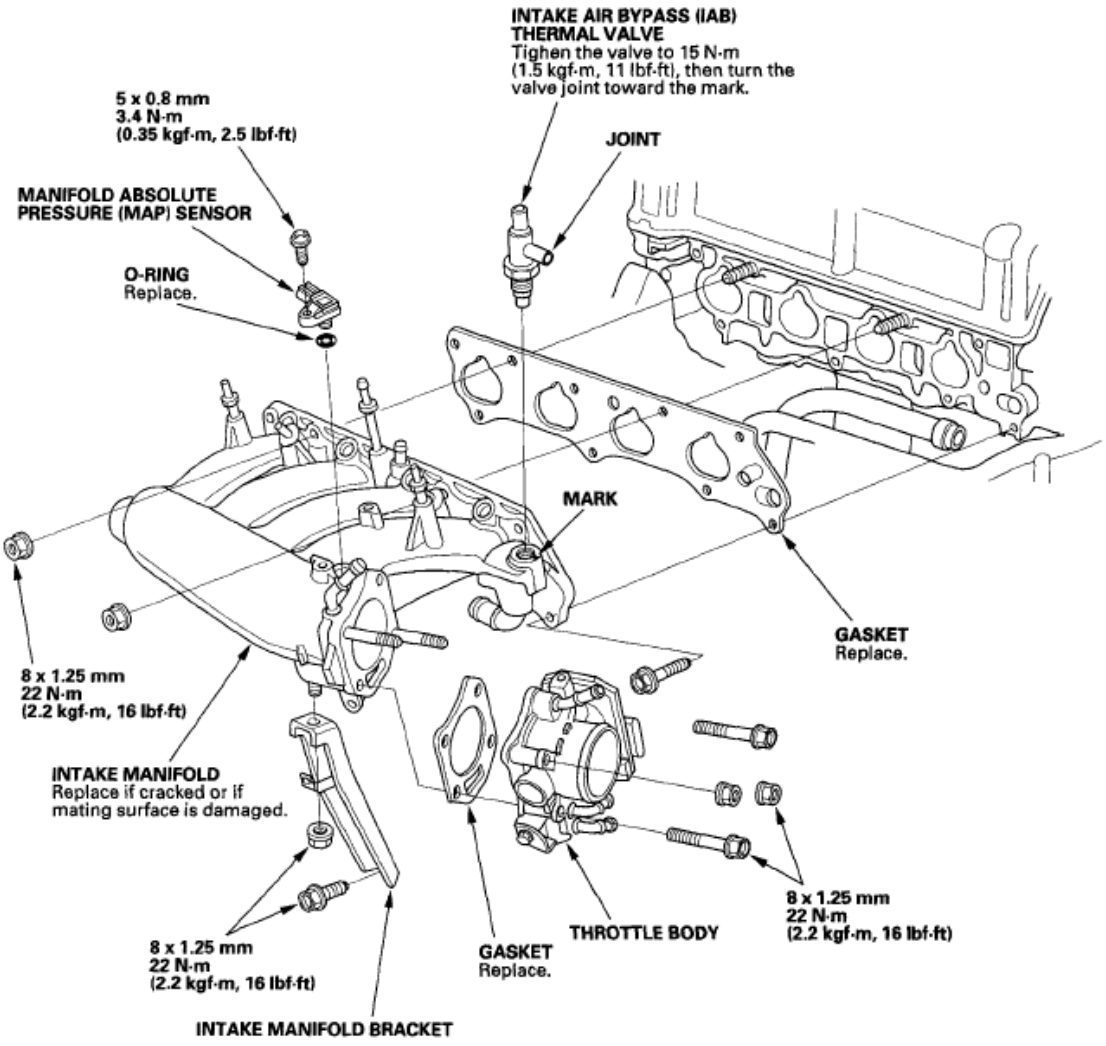

Fig. 23: Exploded View Of Intake Manifold (With Torque Specifications)
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

Removal

1. Drain the engine coolant (see **COOLANT CHECK**).
2. Remove the engine cover.

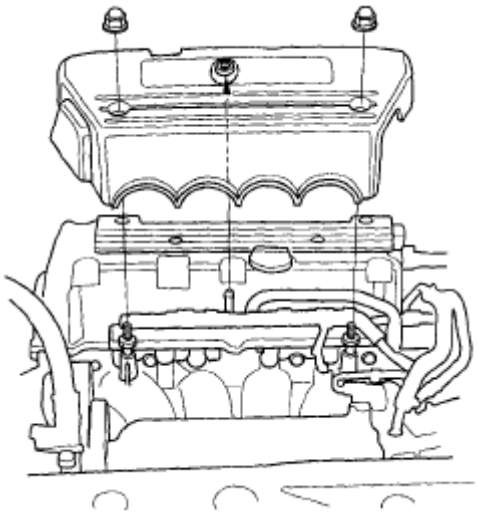

Fig. 24: Identifying Engine Cover
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

3. Remove the vacuum hose (A) and breather pipe (B), then remove the air intake duct (C).

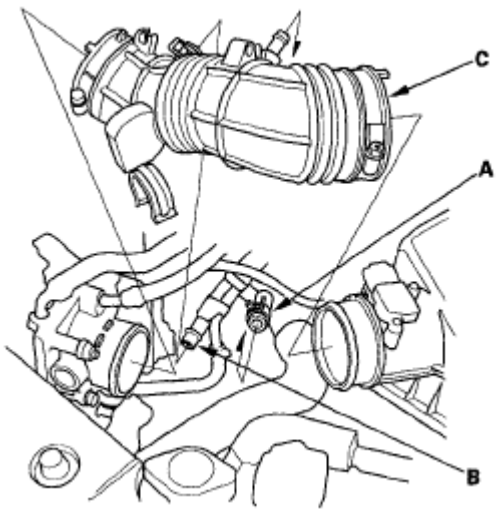

Fig. 25: Identifying Air Intake Duct
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

4. Remove the engine wire harness connectors and wire harness clamps from the intake manifold.
   - Four fuel injector connectors
   - Manifold absolute pressure (MAP) sensor connector
   - Throttle actuator connector
5. Remove the ground cable (A) and harness clamp bracket (B), then remove the harness holder (C) from the stay.

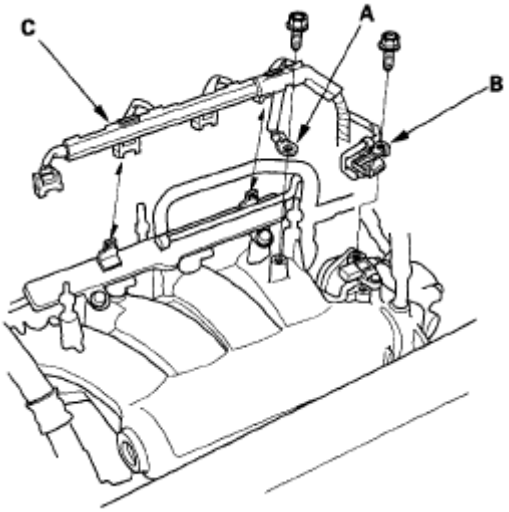

Fig. 26: Identifying Ground Cable, Harness Clamp Bracket And Harness Holder
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

6. Remove the positive crankcase ventilation (PCV) hose (A), evaporative emission (EVAP) canister hose (B) and brake booster vacuum hose (C).

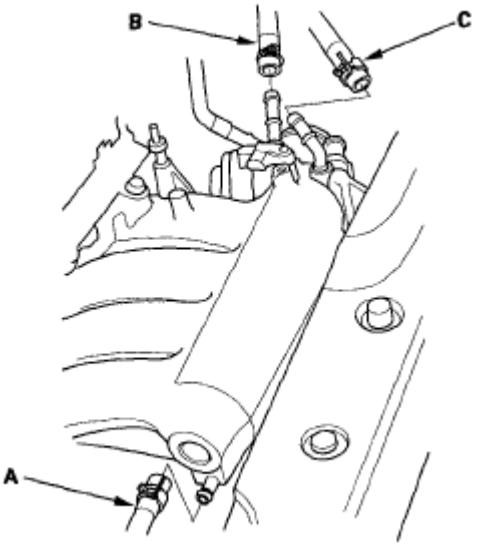

Fig. 27: Identifying Positive Crankcase Ventilation Hose
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

7. Remove the water bypass hoses, then plug the water bypass hoses.

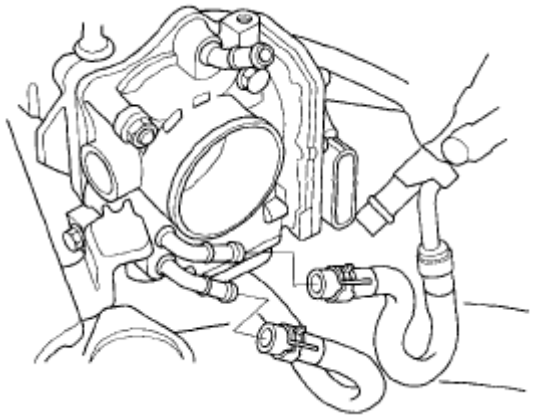

Fig. 28: Identifying Water Bypass Hoses
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

8. Remove the quick-connect fitting cover (A), then disconnect the fuel feed hose (see **FUEL LINE/QUICK-CONNECT FITTING REMOVAL**).

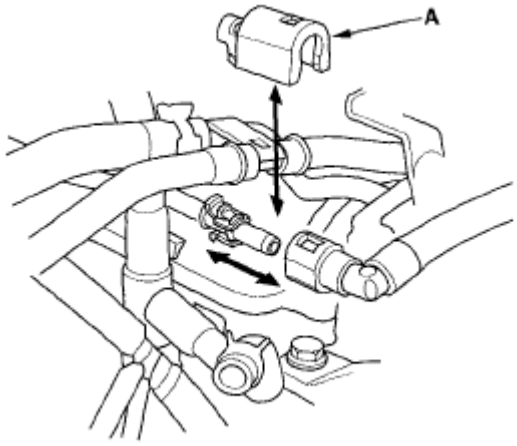

Fig. 29: Identifying Quick-Connect Fitting Cover
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

9. Raise the vehicle on the lift to full height.
10. Remove the connector (A), then remove the intake manifold bracket (B).

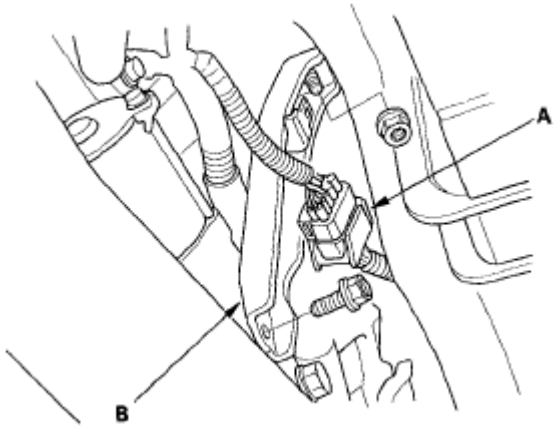

Fig. 30: Identifying Intake Manifold Bracket
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

11. Lower the vehicle on the lift.
12. Remove the intake manifold (A) from the cylinder head, then remove the water bypass hose (B).

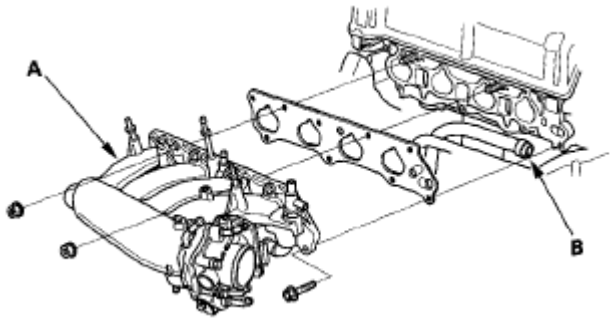

Fig. 31: Identifying Intake Manifold
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

Installation

1. Install the water bypass hose (A) to the intake manifold (B), then install the intake manifold with a new gasket (C), and tighten the bolts and nuts in a crisscross pattern in two or three steps, beginning with the inner bolt.

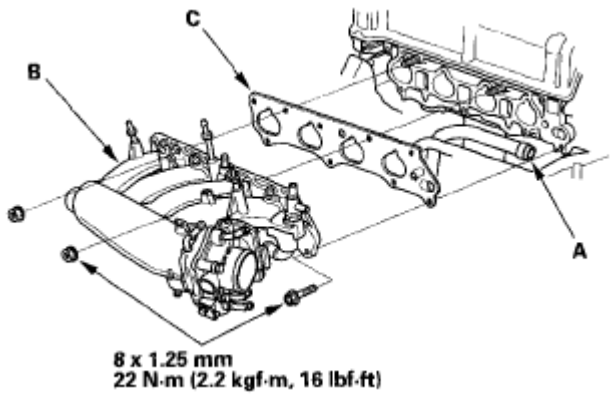

Fig. 32: Identifying Intake Manifold (With Torque Specifications)
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

2. Raise the vehicle on the lift to full height.
3. Install the intake manifold bracket (A), then install the connector (B).

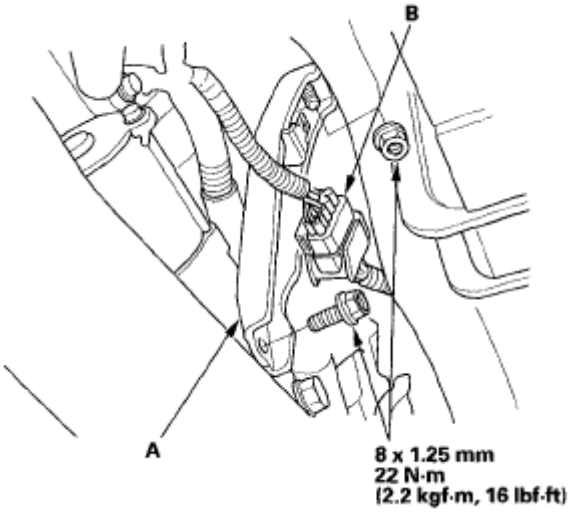

Fig. 33: Identifying Intake Manifold Bracket (With Torque Specifications)
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

4. Lower the vehicle on the lift.
5. Connect the fuel feed hose (see **FUEL LINE/QUICK-CONNECT FITTING INSTALLATION**), then install the quick-connect fitting cover (A).

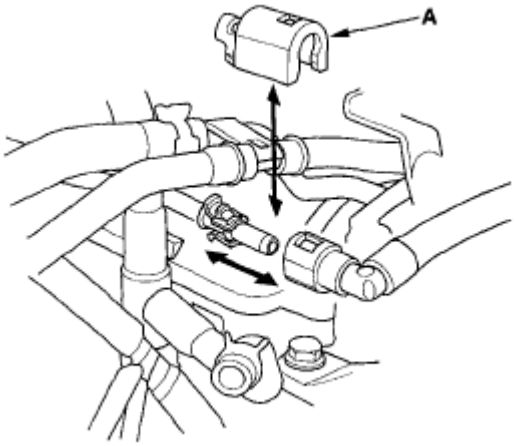

Fig. 34: Identifying Quick-Connect Fitting Cover
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

6. Install the water bypass hoses.

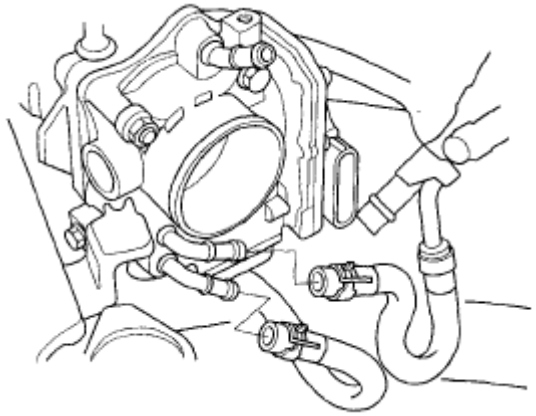

Fig. 35: Identifying Water Bypass Hoses
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

7. Install the positive crankcase ventilation (PCV) hose (A), evaporative emission (EVAP) canister hose (B) and brake booster vacuum hose (C).

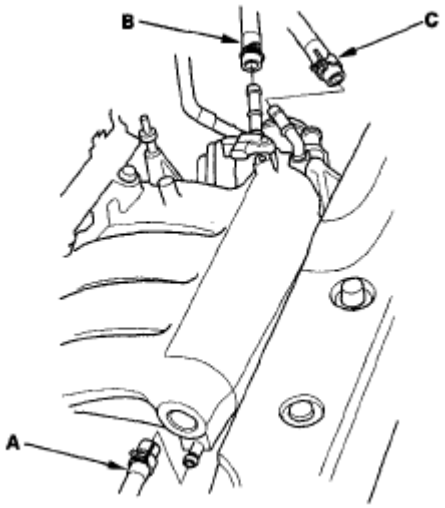

Fig. 36: Identifying Positive Crankcase Ventilation Hose
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

8. Install the harness holder (A) to the stay, then install the ground cable (B) and harness clamp bracket (C).

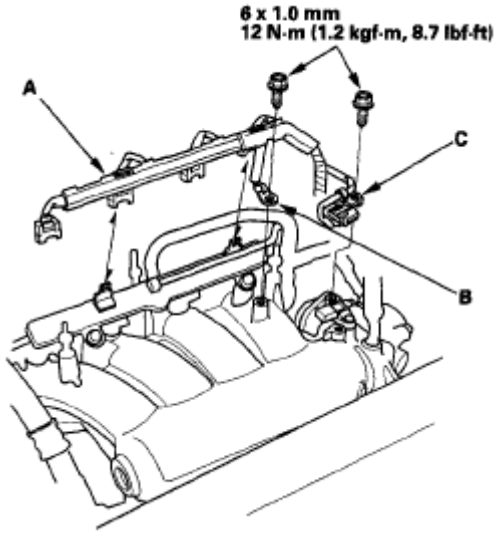

Fig. 37: Identifying Harness Holder (With Torque Specifications)
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

9. Connect the engine wire harness connectors, and install the wire harness clamps to the intake manifold.
    - Four fuel injector connectors
    - Manifold absolute pressure (MAP) sensor connector
    - Throttle actuator connector
10. Install the air intake duct (A), then install the vacuum hose (B) and breather pipe (C).

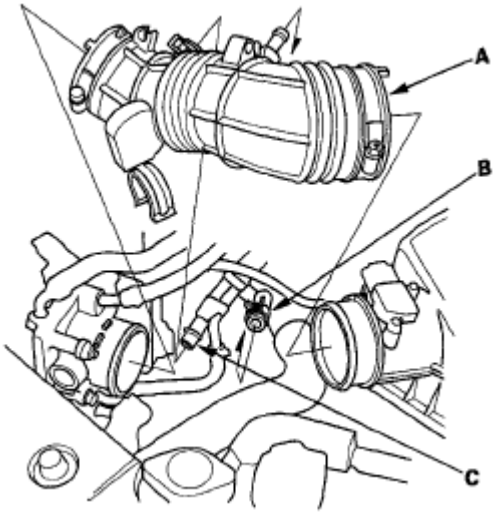

Fig. 38: Identifying Air Intake Duct
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

11. Install the engine cover.

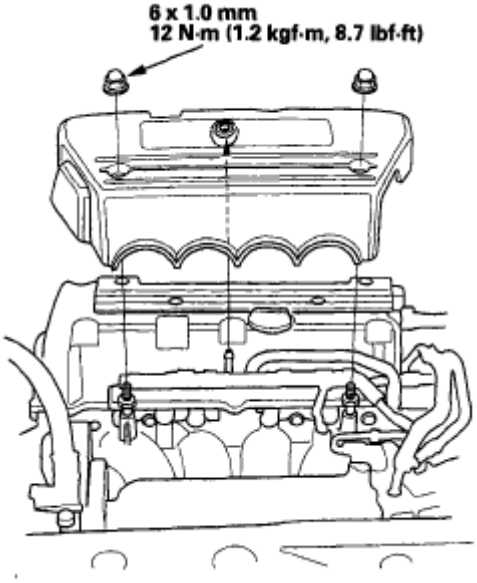

Fig. 39: Identifying Engine Cover (With Torque Specifications)
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

12. Clean up any spilled engine coolant.
13. After installation, check that all tubes, hoses and connectors are installed correctly.
14. Refill the radiator with engine coolant, and bleed the air from the cooling system with the heater valve open (see step 6 on **COOLANT REPLACEMENT**).

EXHAUST MANIFOLD REMOVAL AND INSTALLATION

1. Relieve the fuel pressure (see **FUEL PRESSURE RELIEVING**).
2. Loosen the drain plug in the radiator, and drain the engine coolant (see **COOLANT CHECK**).
3. Remove the under-cowl panel (see **FRONT GRILLE COVER REPLACEMENT**).
4. Remove the evaporative emission (EVAP) canister hose (A) and brake booster vacuum hose (B).

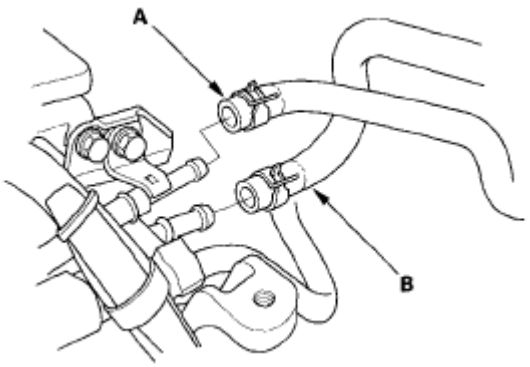

Fig. 40: Identifying Evaporative Emission Canister Hose And Brake Booster Vacuum Hose
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

5. Remove the quick-connect fitting cover (A), then disconnect the fuel feed hose (see **FUEL LINE/QUICK-CONNECT FITTING REMOVAL**).

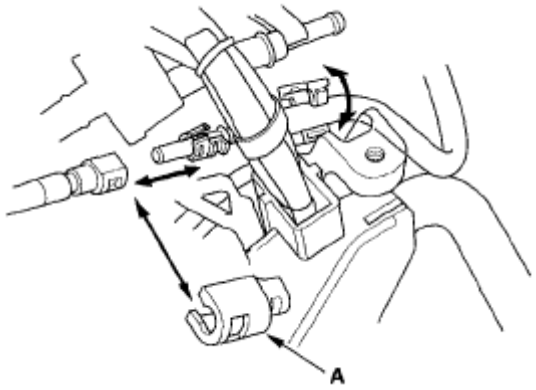

Fig. 41: Identifying Quick-Connect Fitting Cover
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

6. Remove the heater hoses.

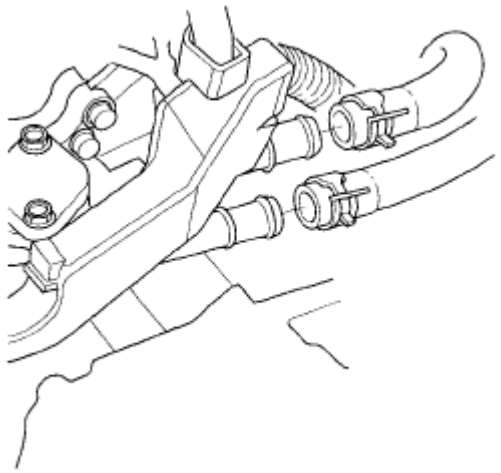

Fig. 42: Identifying Heater Hoses
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

7. Remove the rocker arm oil control solenoid (see **ROCKER ARM OIL CONTROL VALVE REMOVAL/INSTALLATION**).
8. Remove the intermediate shaft heat shield .
9. Remove the cover and exhaust manifold bracket, then remove the exhaust manifold.

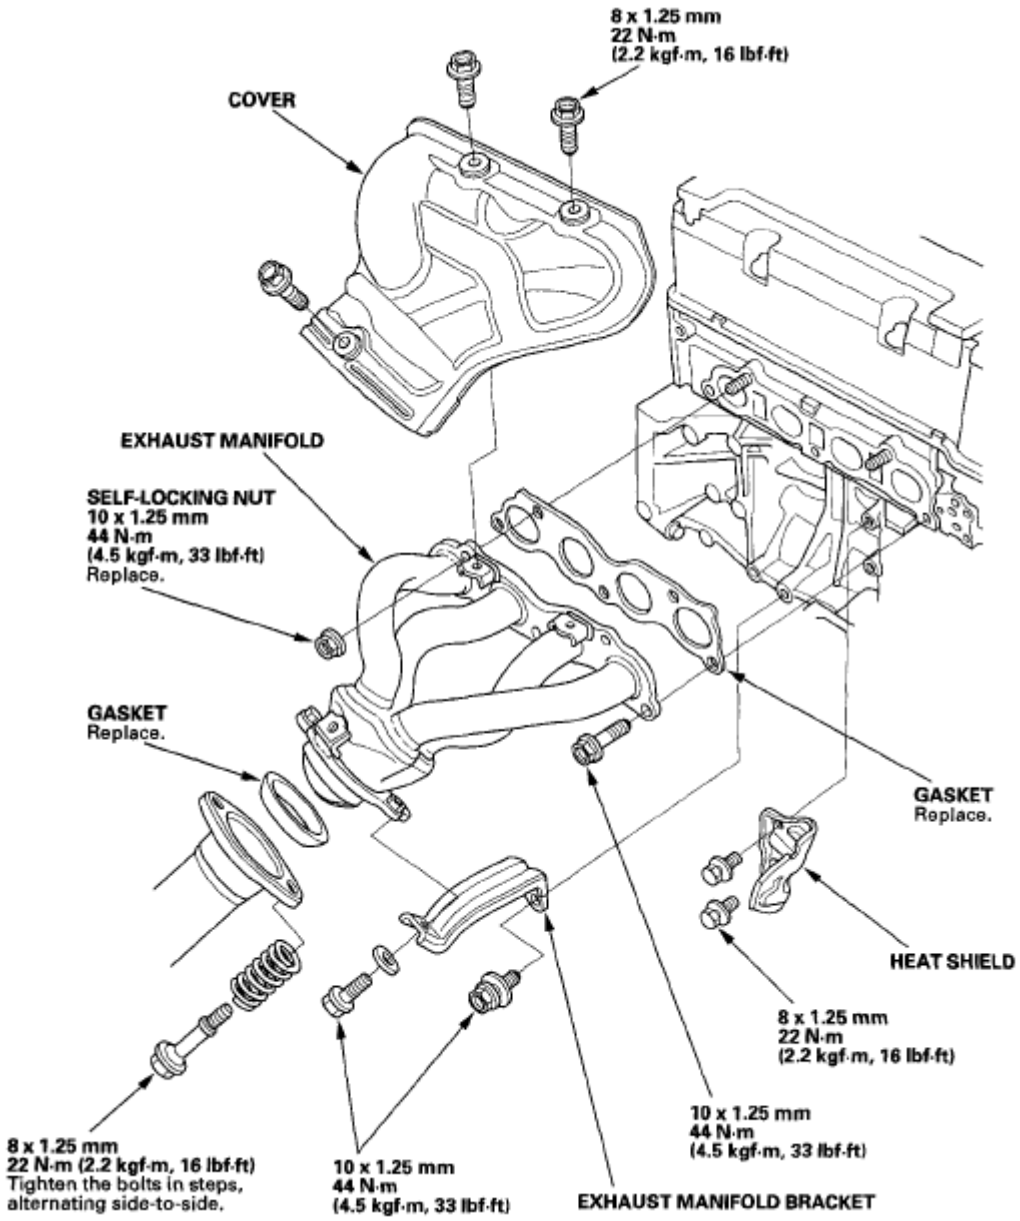

Fig. 43: Exploded View Of Exhaust Manifold (With Torque Specifications)
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

10. Install the exhaust manifold and tighten the bolts and nuts in a crisscross pattern in two or three steps, beginning with the inner bolt.
11. Install the other parts in the reverse order of removal.
12. Inspect for leaks: Turn the ignition switch ON (II) (do not operate the starter) so the fuel pump runs for about 2 seconds and pressurizes the fuel line. Repeat this operation two or three times, then check for fuel leakage at any point in the fuel line.
13. Refill the radiator with engine coolant, and bleed air from the cooling system with the heater valve open (see step 6 on **COOLANT REPLACEMENT**).

EXHAUST PIPE AND MUFFLER REPLACEMENT

NOTE: Use new gaskets and self-locking nuts when reassembling.

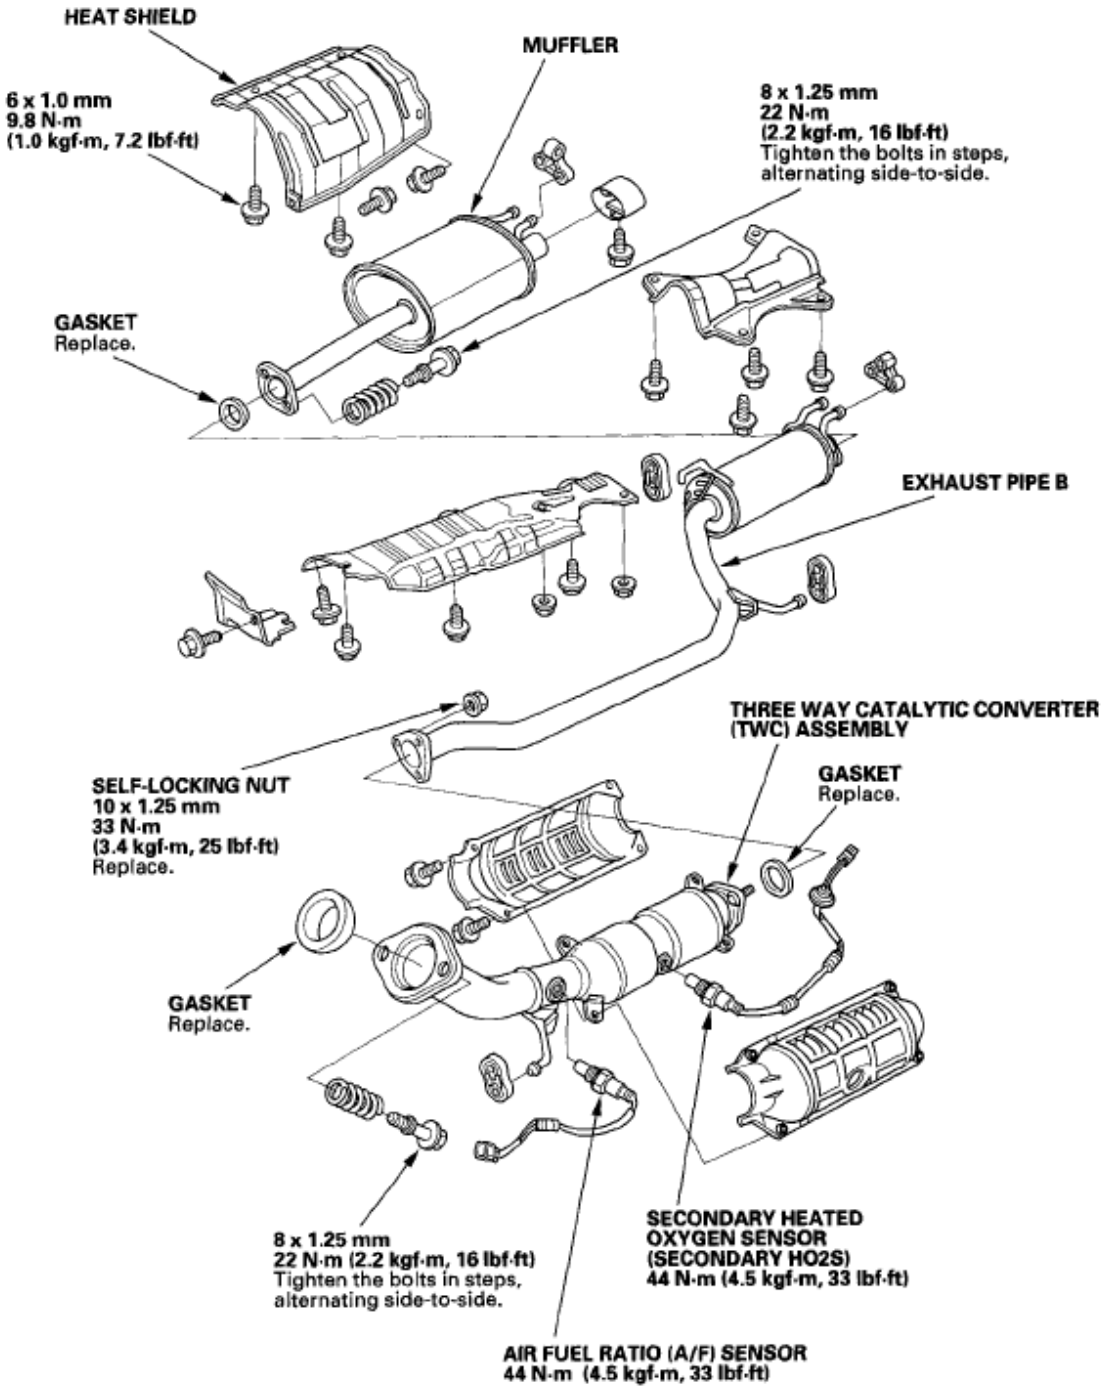

Fig. 44: Exploded View Of Exhaust Pipe And Muffler (With Torque Specifications)
Courtesy of TOYOTA MOTOR SALES, U.S.A., INC.

2006-08 ENGINE PERFORMANCE

Fuel Supply System (K20Z3) - Civic (All Except GX & Si)

COMPONENT LOCATION INDEX

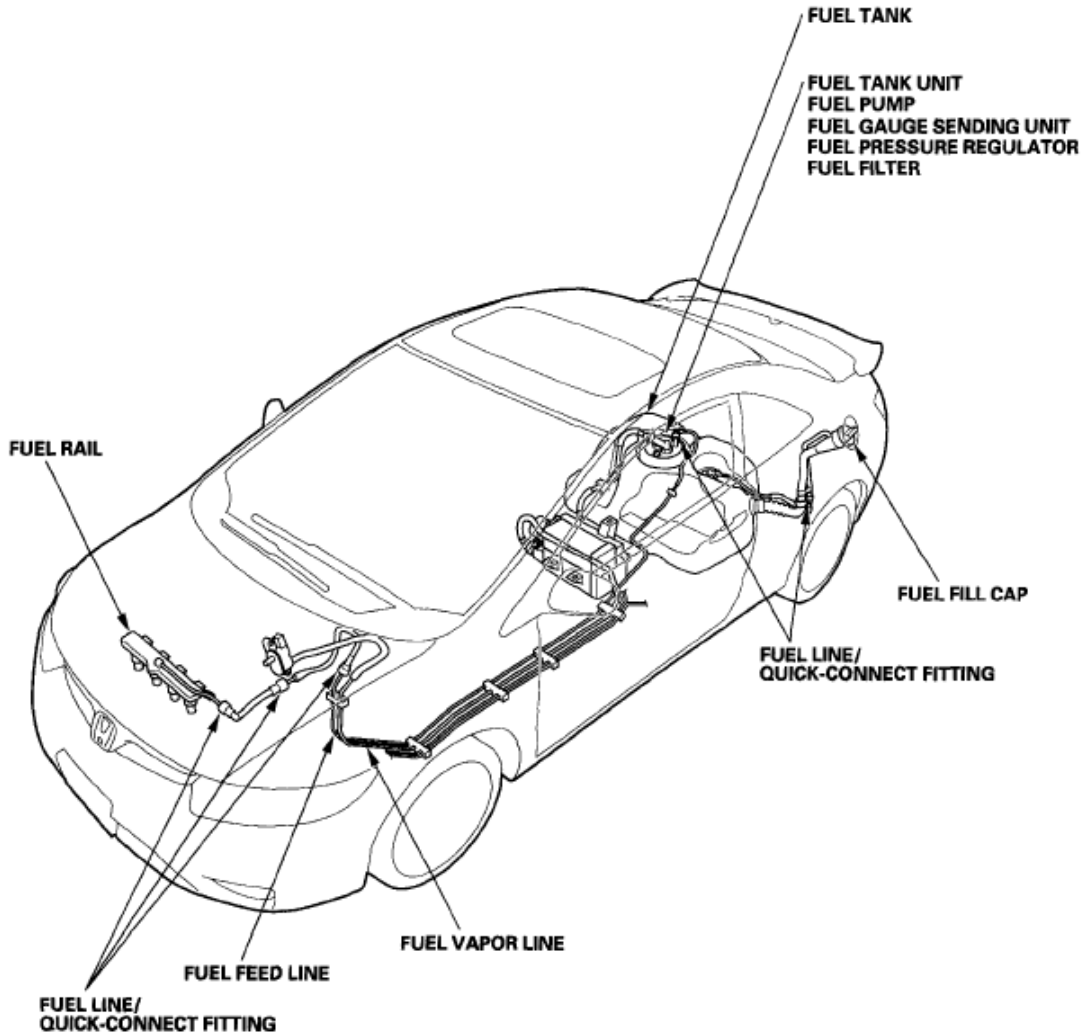

Fig. 1: Identifying Fuel Supply System Component Location (1 Of 2)
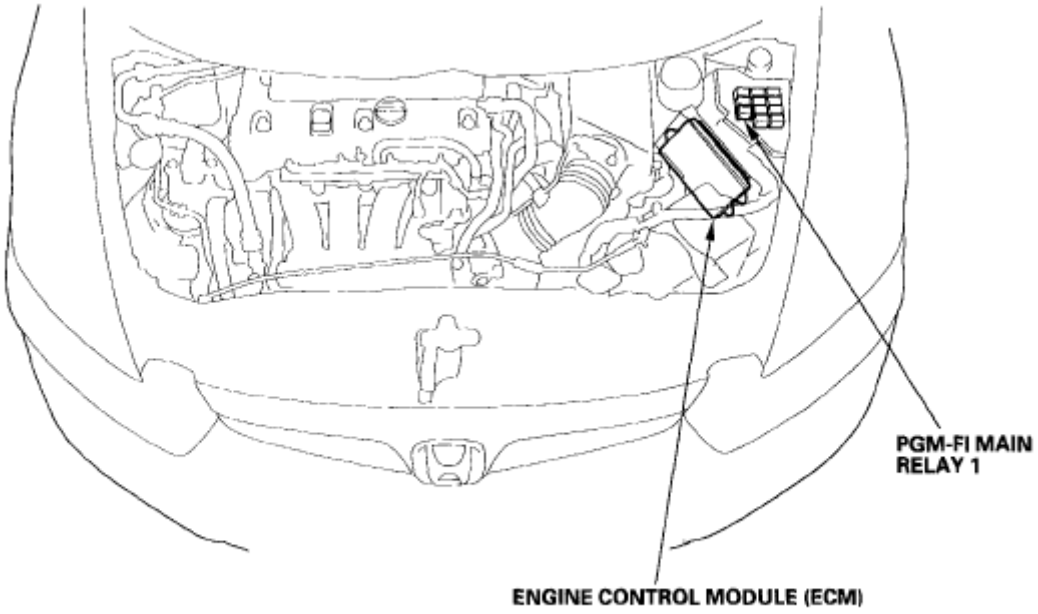
Courtesy of AMERICAN HONDA MOTOR CO., INC.



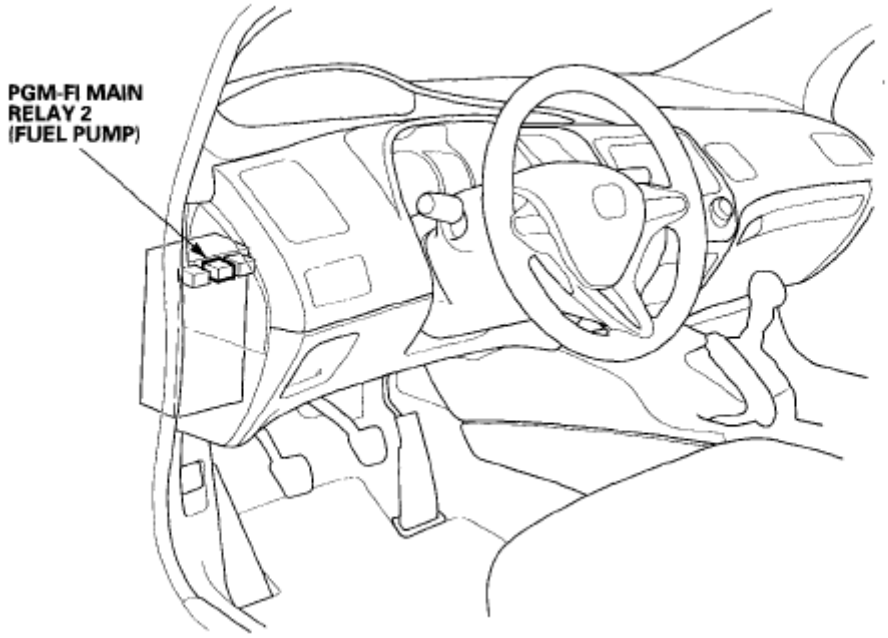


Fig. 2: Identifying Fuel Supply System Component Location (2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC TROUBLESHOOTING

DTC P0461: FUEL LEVEL SENSOR (FUEL GAUGE SENDING UNIT) CIRCUIT RANGE/PERFORMANCE PROBLEM

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see**

GENERAL TROUBLESHOOTING INFORMATION).

- **Because it requires 162 miles (260 km) of driving without refueling to complete this diagnosis, DTC P0461 cannot be duplicated during this troubleshooting.**

1. Test the fuel gauge sending unit (see **FUEL GAUGE SENDING UNIT TEST**).

   Is the fuel gauge sending unit OK?

   YES - Check for poor connections or loose terminals at the fuel gauge sending unit and the gauge assembly.

   NO - Replace the fuel gauge sending unit (see **FUEL PUMP/FUEL GAUGE SENDING UNIT REPLACEMENT**), then go to step 2.

2. Turn the ignition switch ON (II).
3. Reset the ECM with the HDS.
4. Do the ECM idle learn procedure (see **ECM IDLE LEARN PROCEDURE**).
5. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0461 indicated?

   YES - Check for poor connections or loose terminals at the fuel gauge sending unit and the gauge control module (tach), then go to step 1.

   NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0462: FUEL LEVEL SENSOR (FUEL GAUGE SENDING UNIT) CIRCUIT LOW VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS, and wait 5 seconds.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0462 indicated?

   YES - Go to step 4.

   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the gauge control module (tach) and the fuel gauge sending unit.

4. Turn the ignition switch OFF.
5. Remove the rear seat cushion (see **SEAT CUSHION**).
6. Remove the rear floor upper cross-member and the access panel from the floor (see **FUEL TANK**

UNIT REMOVAL/INSTALLATION).

7. Disconnect the fuel tank unit 4P connector.
8. Turn the ignition switch ON (II).
9. Clear the DTC with the HDS, and wait 5 seconds.
10. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0463 indicated?

YES - Replace the fuel gauge sending unit (see **FUEL PUMP/FUEL GAUGE SENDING UNIT REPLACEMENT**), then go to step 22.

NO - Go to step 11.

11. Turn the ignition switch OFF.
12. Remove the gauge control module (tach) (see **TACHOMETER**).
13. Disconnect the gauge control module (tach) 36P connector.
14. Check for continuity between fuel tank unit 4P connector terminal No. 1 and body ground.

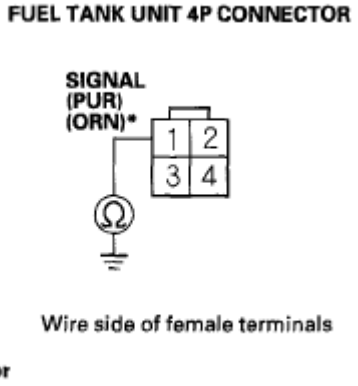

Fig. 3: Checking Continuity Between Fuel Tank Unit 4P Connector Terminal No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

***: 4-door**

Is there continuity?

YES - Repair short in the wire between the gauge control module (tach) (signal line) and the fuel gauge sending unit, then go to step 23.

NO - Go to step 15.

15. Reconnect the gauge control module (tach) 36P connector.
16. Remove the fuel tank unit (see **FUEL TANK UNIT REMOVAL/INSTALLATION**).
17. Connect the fuel tank unit 4P connector.
18. Turn the ignition switch ON (II).
19. Clear the DTC with the HDS.

20. Set the float (A) to the E position.

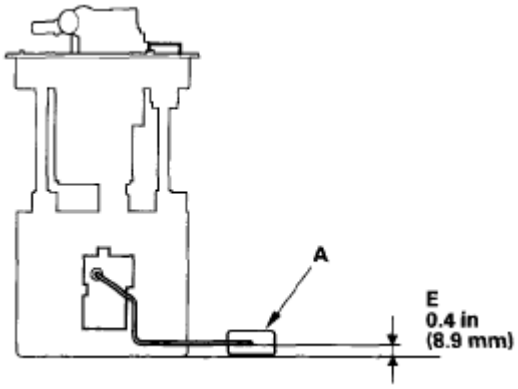

Fig. 4: Setting Float To E Position (With Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Check the fuel gauge.

    Does the gauge move to the empty position?

    YES - Go to step 31.

    NO - Replace the gauge control module (tach), then go to step 22.

22. Turn the ignition switch OFF.
23. Reconnect all connectors.
24. Install the parts in the reverse order of removal.
25. Turn the ignition switch ON (II).
26. Reset the ECM with the HDS.
27. Do the ECM idle learn procedure (see **ECM IDLE LEARN PROCEDURE**).
28. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0462 indicated?

    YES - Check for poor connections or loose terminals at the gauge control module (tach) and the fuel gauge sending unit, then go to step 1.

    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

29. Reconnect all connectors.
30. Install the parts in the reverse order of removal.
31. Update the ECM if it does not have the latest software (see **UPDATING THE ECM**), or substitute a known-good ECM (see **SUBSTITUTING THE ECM**).
32. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0462 indicated?

YES - Check for poor connections or loose terminals at the gauge control module (tach) and the fuel gauge sending unit. If the ECM was updated, substitute a known-good ECM (see **SUBSTITUTING THE ECM**), then recheck. If the ECM was substituted, go to step 1.

NO - If the ECM was updated, troubleshooting is complete. If the ECM was substituted, replace the original ECM (see **ECM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0463: FUEL LEVEL SENSOR (FUEL GAUGE SENDING UNIT) CIRCUIT HIGH VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS, and wait 5 seconds.
3. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0463 indicated?

YES - Go to step 4.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the gauge control module (tach) and the fuel gauge sending unit.

4. Turn the ignition switch OFF.
5. Remove the rear seat cushion (see **REAR SEAT REMOVAL/INSTALLATION**).
6. Remove the rear floor upper cross-member and the access panel from the floor (see **FUEL TANK UNIT REMOVAL/INSTALLATION**).
7. Disconnect the fuel tank unit 4P connector.
8. Connect fuel tank unit 4P connector terminal No. 3 to body ground with a jumper wire.

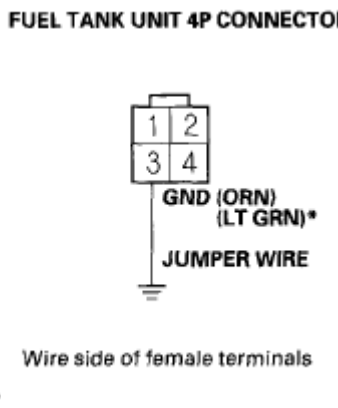

Fig. 5: Connecting Fuel Tank Unit 4P Connector Terminal No. 3 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

***: 4-door**

9. Remove the gauge control module (tach) (see **TACHOMETER**).
10. Disconnect the gauge control module (tach) 36P connector.
11. Check for continuity between gauge control module (tach) 36P connector terminal No. 33 and body ground.

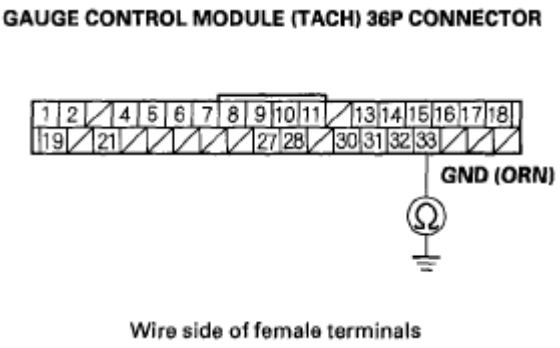

Fig. 6: Checking Continuity Between Gauge Control Module (Tach) 36P Connector Terminal No. 33 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 12.

NO - Repair open in the wire between the gauge control module (tach) (GND line) and the fuel gauge sending unit, then go to step 24.

12. Connect fuel tank unit 4P connector terminal No. 1 to body ground with a jumper wire.

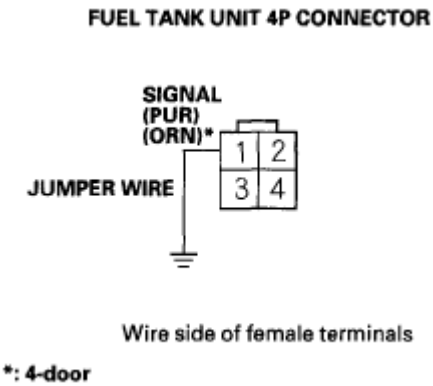

Fig. 7: Connecting Fuel Tank Unit 4P Connector Terminal No. 1 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

***: 4-door**

13. Check for continuity between gauge control module (tach) 36P connector terminal No. 32 and body ground.

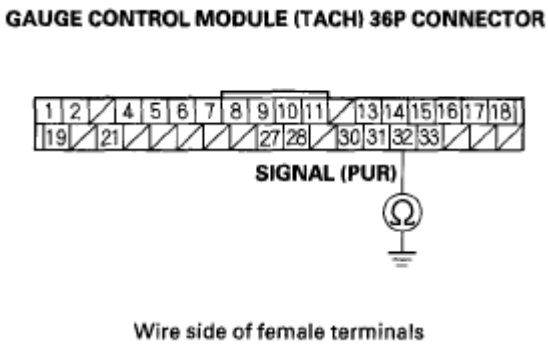

Fig. 8: Checking Continuity Between Gauge Control Module (Tach) 36P Connector Terminal No. 32 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 14.

NO - Repair open in the wire between the gauge control module (tach) (signal line) and the fuel gauge sending unit, then go to step 24.

14. Remove the jumper wire from the fuel tank unit 4P connector.
15. Remove the fuel tank unit (see **FUEL TANK UNIT REMOVAL/INSTALLATION**).
16. Test the fuel gauge sending unit (see **FUEL GAUGE SENDING UNIT TEST**).

Is the fuel gauge sending unit OK?

YES - Go to step 17.

NO - Replace the fuel gauge sending unit (see **FUEL PUMP/FUEL GAUGE SENDING UNIT REPLACEMENT**), then go to step 23.

17. Connect the fuel tank unit 4P connector.
18. Reconnect the gauge control module (tach) 36P connector.
19. Turn the ignition switch ON (II).
20. Clear the DTC with the HDS.
21. Set the float (A) to the F position.

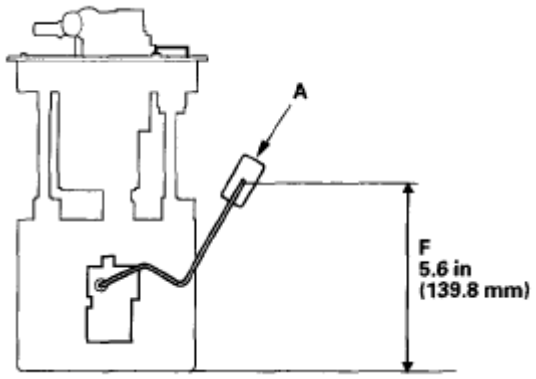

Fig. 9: Setting Float To F Position (With Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Check the fuel gauge.

    Does the gauge move to the full position?

    YES - Go to step 32.

    NO - Replace the gauge control module (tach) (see **TACHOMETER**), then go to step 23.

23. Turn the ignition switch OFF.
24. Reconnect all connectors.
25. Install the parts in the reverse order of removal.
26. Turn the ignition switch ON (II).
27. Reset the ECM with the HDS.
28. Do the ECM idle learn procedure (see **ECM IDLE LEARN PROCEDURE**).
29. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0463 indicated?

    YES - Check for poor connections or loose terminals at the gauge control module (tach) and the fuel gauge sending unit, then go to step 1.

    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

30. Reconnect all connectors.
31. Install the parts in the reverse order of removal.
32. Update the ECM if it does not have the latest software (see **UPDATING THE ECM**), or substitute a known-good ECM (see **SUBSTITUTING THE ECM**).
33. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0463 indicated?

    YES - Check for poor connections or loose terminals at the gauge control module (tach) and the fuel gauge sending unit. If the ECM was updated, substitute a known-good ECM (see **SUBSTITUTING**

THE ECM), then recheck. If the ECM was substituted, go to step 1.

NO - If the ECM was updated, troubleshooting is complete. If the ECM was substituted, replace the original ECM (see **ECM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

FUEL PUMP CIRCUIT TROUBLESHOOTING

If you suspect a problem with the fuel pump, check that the fuel pump actually runs; when it is on, you will hear some noise if you listen to the fuel fill port with the fuel fill cap removed. The fuel pump should run for 2 seconds when the ignition switch is first turned on. If the fuel pump does not make noise, check as follows:

1. Turn the ignition switch OFF.
2. Remove the under-dash fuse/relay box (see **REMOVAL AND INSTALLATION**), then remove PGM-FI main relay 2 (FUEL PUMP) (A) from the under-dash fuse/relay box.

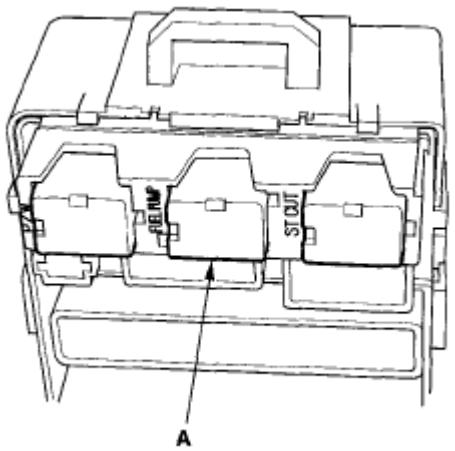

Fig. 10: Identifying PGM-FI Main Relay 2 (Fuel Pump)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Reinstall the under-dash fuse/relay box.
4. Turn the ignition switch ON (II).
5. Measure voltage between PGM-FI main relay 2 (FUEL PUMP) 4P connector terminal No. 4 and body ground.

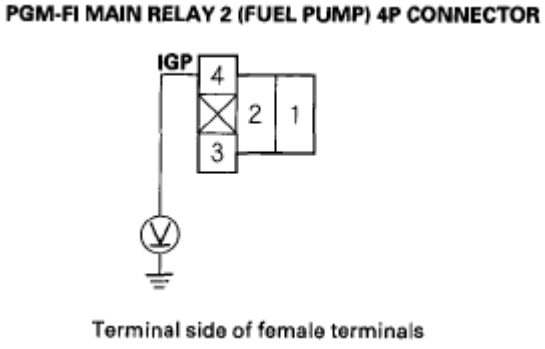

Fig. 11: Measuring Voltage Between PGM-FI Main Relay 2 (Fuel Pump) 4P Connector

Terminal No. 4 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 12.

NO - Go to step 6.

6. Turn the ignition switch OFF.
7. Disconnect the under-hood fuse/relay box connector E (10P).
8. Disconnect C101 connector at left side of engine compartment (see **CONNECTOR TO HARNESS INDEX**).
9. Disconnect the under-dash fuse/relay box connector G (21P).
10. Connect under-dash fuse/relay box connector G (21P) terminal No. 4 to body ground with a jumper wire.

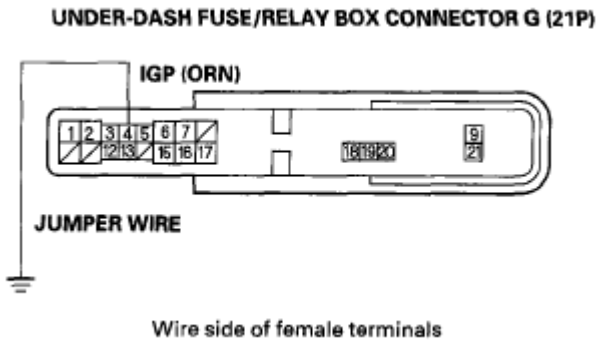

Fig. 12: Connecting Under-Dash Fuse/Relay Box Connector G (21P) Terminal No. 4 To Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Check for continuity between under-hood fuse/relay box connector E (10P) terminal No. 5 and body ground.

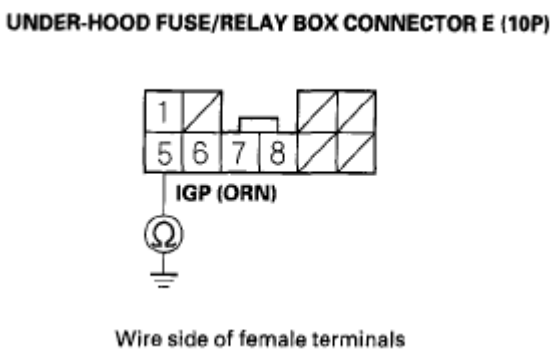

Fig. 13: Checking Continuity Between Under-Hood Fuse/ Relay Box Connector E (10P) Terminal No. 5 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -

- Replace PGM-FI main relay 1.
- If needed, replace the under-hood fuse/relay box (see **REMOVAL AND INSTALLATION**).

NO - Repair open in the wire between the under-hood fuse/relay box and the under-dash fuse/relay box.

12. Measure voltage between PGM-FI main relay 2 (FUEL PUMP) 4P connector terminal No. 1 and body ground.

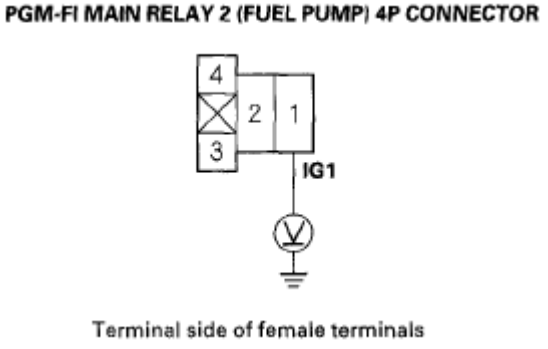

Fig. 14: Measuring Voltage Between PGM-FI Main Relay 2 (Fuel Pump) 4P Connector Terminal No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 13.

NO -

- Check the No. 2 FUEL PUMP (15 A) fuse in the under-dash fuse/relay box.
- If needed, replace the under-dash fuse/relay box (see **REMOVAL AND INSTALLATION**).

13. Turn the ignition switch OFF.
14. Connect PGM-FI main relay 2 (FUEL PUMP) 4P connector terminal No. 3 to body ground with a jumper wire.

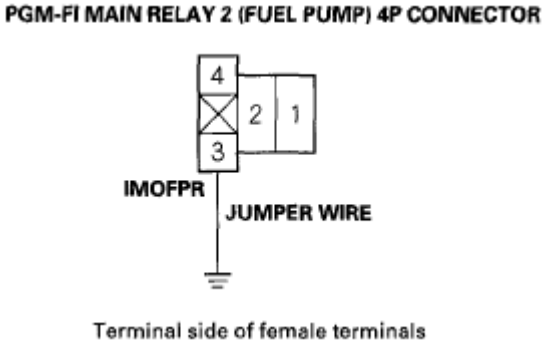

Fig. 15: Connecting PGM-FI Main Relay 2 (Fuel Pump) 4P Connector Terminal No. 3 To Body Ground With Jumper Wire

Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Jump the SCS line with the HDS.
16. Disconnect ECM connector A (44P).
17. Check for continuity between body ground and ECM connector terminal A15.

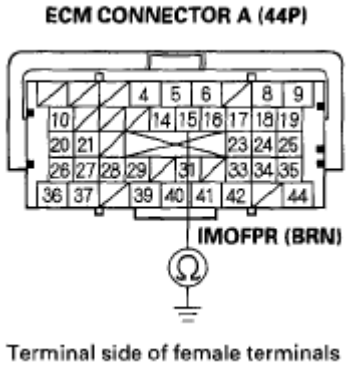

Fig. 16: Checking Continuity Between Body Ground And ECM Connector Terminal A15
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 18.

NO - Repair open in the wire between PGM-FI main relay 2 (FUEL PUMP) and the ECM (A15).

18. Remove the under-dash fuse/relay box (see **REMOVAL AND INSTALLATION**), then reinstall PGM-FI main relay 2 (FUEL PUMP).
19. Reinstall the under-dash fuse/relay box (see **REMOVAL AND INSTALLATION**).
20. Connect ECM connector terminal A6 to body ground with a jumper wire.

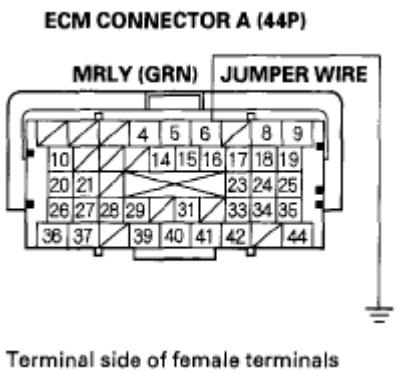

Fig. 17: Connecting ECM Connector Terminal A6 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Turn the ignition switch ON (II).
22. Measure voltage between ECM connector terminal A15 and body ground.

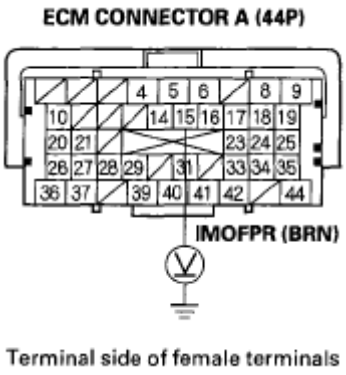

Fig. 18: Measuring Voltage Between ECM Connector Terminal A15 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 23.

NO - Replace PGM-FI main relay 2 (FUEL PUMP).

23. Turn the ignition switch OFF.
24. Reconnect ECM connector A (44P).
25. Open the SCS line with the HDS.
26. Turn the ignition switch OFF.
27. Turn the ignition switch ON (II), and measure voltage between under-dash fuse/relay box connector F (34P) terminal No. 10 and body ground within 2 seconds.

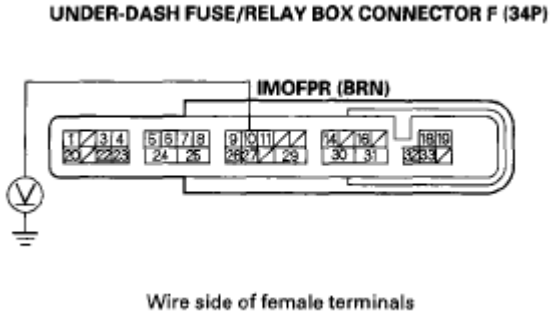

Fig. 19: Measuring Voltage Between Under-Dash Fuse/Relay Box Connector F (34P) Terminal No. 10 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Update the ECM if it does not have the latest software (see **UPDATING THE ECM**), or substitute a known-good ECM (see **SUBSTITUTING THE ECM**), then recheck. If the symptom/indication goes away with a known-good ECM, replace the original ECM (see **ECM REPLACEMENT**).

NO - Go to step 28.

28. Turn the ignition switch ON (II), and measure voltage between under-dash fuse/relay box connector F (34P) terminal No. 10 and body ground after 2 seconds.

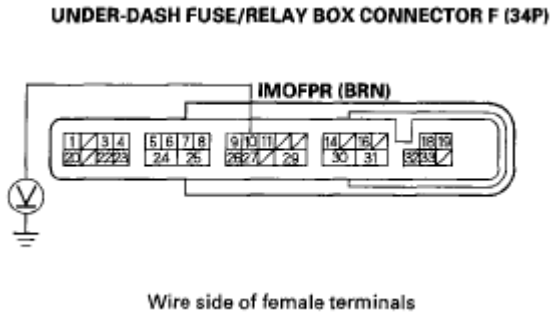

Fig. 20: Measuring Voltage Between Under-Dash Fuse/Relay Box Connector F (34P) Terminal No. 10 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 29.

NO - If needed, replace the under-dash fuse/relay box (see **REMOVAL AND INSTALLATION**), then go to step 29.

29. Turn the ignition switch OFF.
30. Remove the rear seat cushion (see **REAR SEAT REMOVAL/INSTALLATION**).
31. Remove the rear floor upper cross-member, then remove the access panel from the floor (see **FUEL TANK UNIT REMOVAL/INSTALLATION**).
32. Turn the ignition switch ON (II), and measure voltage between fuel tank unit 4P connector terminal No. 2 and body ground within 2 seconds.

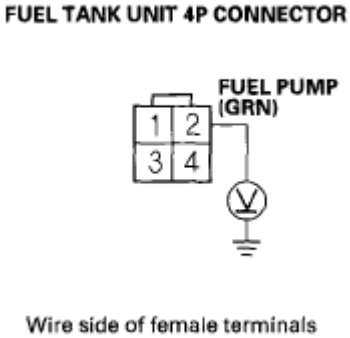

Fig. 21: Measuring Voltage Between Fuel Tank Unit 4P Connector Terminal No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 37.

NO - Go to step 33.

33. Turn the ignition switch OFF.
34. Remove PGM-FI main relay 2 (FUEL PUMP).
35. Connect PGM-FI main relay 2 (FUEL PUMP) 4P connector terminals No. 1 and No. 2 with a jumper wire.

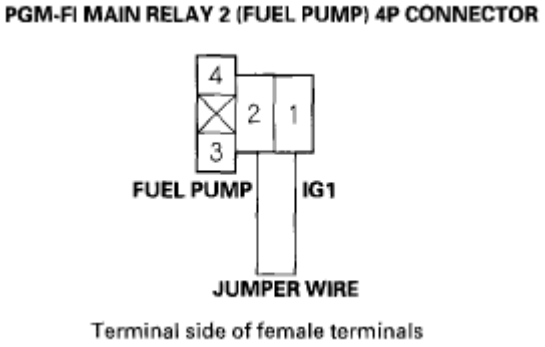

Fig. 22: Connecting PGM-FI Main Relay 2 (Fuel Pump) 4P Connector Terminals No. 1 And No. 2 With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

36. Turn the ignition switch ON (II), and measure voltage between fuel tank unit 4P connector terminal No. 2 and body ground within 2 seconds.

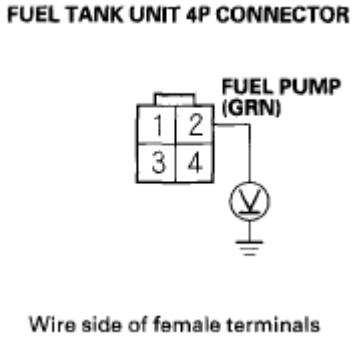

Fig. 23: Measuring Voltage Between Fuel Tank Unit 4P Connector Terminal No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Replace PGM-FI main relay 2 (FUEL PUMP).

NO - Repair open in the wire between PGM-FI main relay 2 (FUEL PUMP) and the fuel tank unit 4P connector.

37. Turn the ignition switch OFF.
38. Check for continuity between fuel tank unit 4P connector terminal No. 4 and body ground.

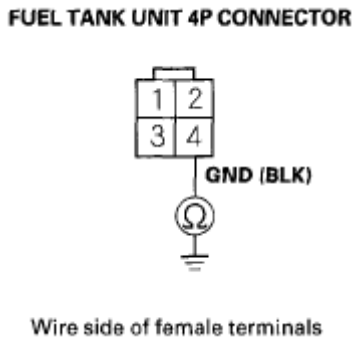

Fig. 24: Checking Continuity Between Fuel Tank Unit 4P Connector Terminal No. 4 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the fuel pump (see **FUEL PUMP/FUEL GAUGE SENDING UNIT REPLACEMENT**).

NO - Repair open in the wire between the fuel tank unit 4P connector and G601; 4-door (see **CONNECTOR TO HARNESS INDEX**), 2-door (see **CONNECTOR TO HARNESS INDEX**).

FUEL PRESSURE RELIEVING

Before disconnecting fuel lines or hoses, relieve pressure from the system by disabling the fuel pump and disconnecting the fuel tube/quick connect fitting in the engine compartment.

WITH THE HDS

1. Make sure you have the anti-theft code for the audio system and the navigation system (if equipped).
2. Turn the ignition switch OFF.
3. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

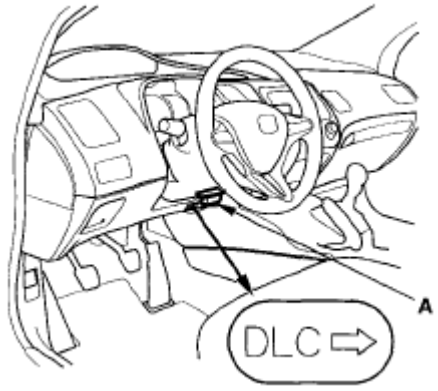

Fig. 25: Connecting HDS To DLC
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Turn the ignition switch ON (II).

5. Make sure the HDS communicates with the ECM and other vehicle systems. If it doesn't, go to the DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**).
6. Turn the ignition switch OFF.
7. Remove the fuel fill cap to relieve the pressure in the fuel tank.
8. Turn the ignition switch ON (II).
9. From the INSPECTION MENU of the HDS, select Fuel Pump OFF, then start the engine, and let it idle until it stalls.

NOTE:

- **Do not allow the engine to idle above 1,000 rpm or the ECM will continue to operate the fuel pump.**
- **A DTC or a Temporary DTC may be set during this procedure. Check for DTCs, and clear them as needed (see DTC CLEAR).**

10. Turn the ignition switch OFF.
11. Disconnect the negative cable from the battery.
12. Remove the quick-connect fitting cover (A).

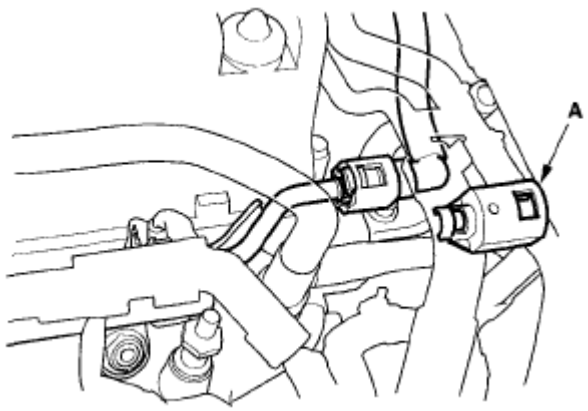

Fig. 26: Removing Quick-Connect Fitting Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Check the fuel quick-connect fitting for dirt, and clean it if needed.
14. Place a rag or shop towel over the quick-connect fitting (A).

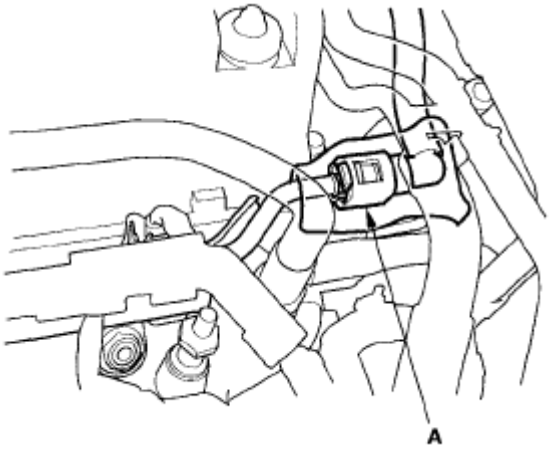

Fig. 27: Placing Rag Or Shop Towel Over Quick-Connect Fitting
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Disconnect the quick-connect fitting (A): Hold the connector (B) with one hand, and squeeze the retainer tabs (C) with the other hand to release them from the locking tabs (D). Pull the connector off.

NOTE:

- **Be careful not to damage the line (E) or other parts.**
- **Do not use tools.**
- **If the connector does not move, keep the retainer tabs pressed down, and alternately pull and push the connector until it comes off easily.**
- **Do not remove the retainer from the line; once removed, the retainer must be replaced with a new one.**

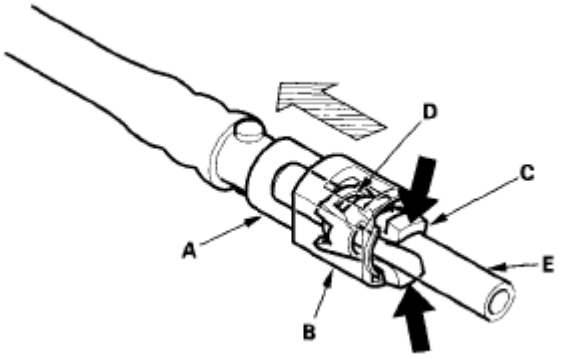

Fig. 28: Disconnecting Quick-Connector Fitting
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. After disconnecting the quick-connect fitting, check it for dirt or damage (see step 4 in **FUEL LINE/QUICK-CONNECT FITTING REMOVAL**).
17. Reconnect the negative cable to the battery, then do this:
18. Enter the anti-theft code for the audio system or the navigation system (if equipped), then enter the audio presets, Set the clock (on vehicles without navigation).

WITHOUT THE HDS

1. Make sure you have the anti-theft code for the audio system and the navigation system (if equipped).
2. Remove the under-dash fuse/relay box (see **REMOVAL AND INSTALLATION**), then remove PGM-FI main relay 2 (FUEL PUMP) (A) from the under-dash fuse/relay box.

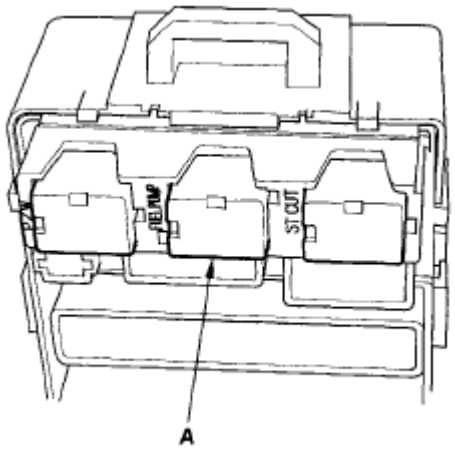

Fig. 29: Identifying PGM-FI Main Relay 2 (Fuel Pump)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Reinstall the under-dash fuse/relay box.
4. Start the engine, and let it idle until it stalls.

NOTE: If any DTCs are stored, clear and ignore them.

5. Turn the ignition switch OFF.
6. Remove the fuel fill cap.
7. Disconnect the negative cable from the battery.
8. Remove the quick-connect fitting cover (A).

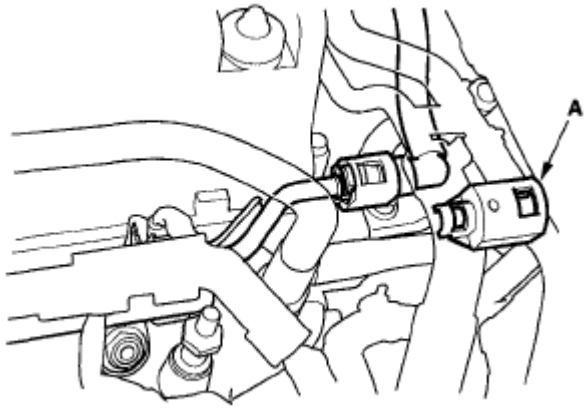

Fig. 30: Removing Quick-Connect Fitting Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Check the fuel quick-connect fitting for dirt, and clean it if needed.
10. Place a rag or shop towel over the quick-connect fitting (A).

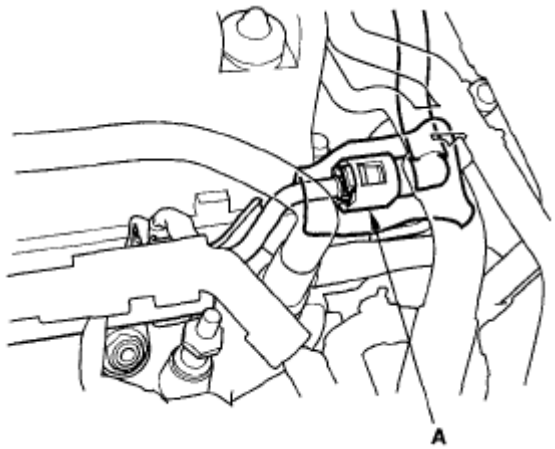

Fig. 31: Placing Rag Or Shop Towel Over Quick-Connect Fitting
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Disconnect the quick-connect fitting (A): Hold the connector (B) with one hand, and squeeze the retainer tabs (C) with the other hand to release them from the locking tabs (D). Pull the connector off.

NOTE:

- **Be careful not to damage the line (E) or other parts.**
- **Do not use tools.**
- **If the connector does not move, keep the retainer tabs pressed down, and alternately pull and push the connector until it comes off easily.**
- **Do not remove the retainer from the line; once removed, the retainer must be replaced with a new one.**

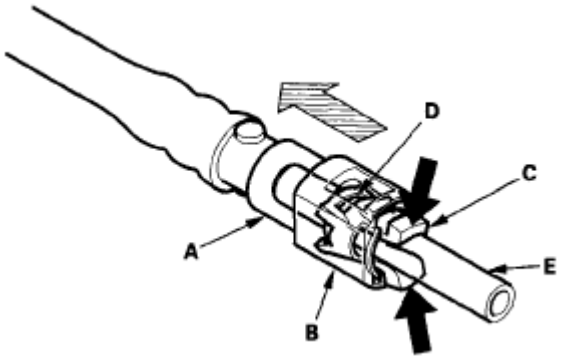

Fig. 32: Disconnecting Quick-Connect Fitting
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. After disconnecting the quick-connect fitting, check it for dirt or damage (see step 4 in **FUEL LINE/QUICK-CONNECT FITTING REMOVAL**).
13. Reconnect the negative cable to the battery, then do this:
14. Enter the anti-theft code for the audio system or the navigation system (if equipped), then enter the audio presets, Set the clock (on vehicles without navigation).

FUEL PRESSURE TEST

Special Tools Required

- Fuel pressure gauge 07406-004000B
- Fuel pressure gauge attachment set 07AAJ-S6MA150

1. Relieve the fuel pressure (see **FUEL PRESSURE RELIEVING**).
2. Disconnect the quick-connect fitting. Attach the fuel pressure gauge set and the fuel pressure gauge.

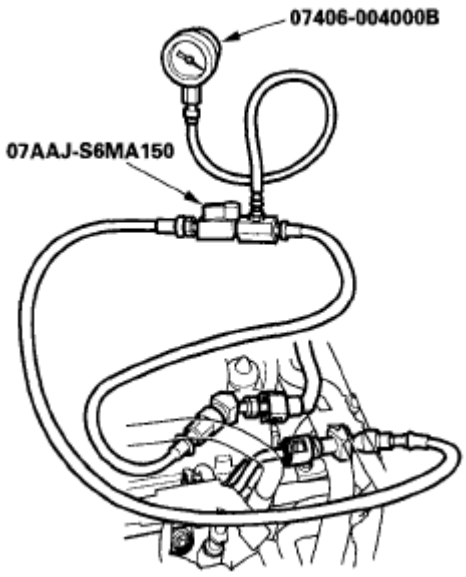

Fig. 33: Attaching Fuel Pressure Gauge Set And Fuel Pressure Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Start the engine, and let it idle.
   - If the engine starts, go to step 5.
   - If the engine does not start, go to step 4.
4. Check to see if the fuel pump is running: Listen to the fuel filler port with the fuel fill cap removed. The fuel pump should run for 2 seconds when the ignition switch is first turned on.
   - If the pump runs, go to step 5.
   - If the pump does not run, do the fuel pump circuit troubleshooting (see **FUEL PUMP CIRCUIT TROUBLESHOOTING**).
5. Read the fuel pressure gauge. The pressure should be 330-380 kPa (3.4-3.9 kgf/cm^2 , 48-55 psi).
   - If the pressure is OK, the test is complete.
   - If the pressure is out of specification, replace the fuel pressure regulator (see **FUEL PRESSURE REGULATOR REPLACEMENT**) and the fuel filter (see **FUEL FILTER REPLACEMENT**), then recheck the fuel pressure.

FUEL TANK DRAINING

1. Remove the fuel tank unit (see **REMOVAL**).
2. Using a hand pump, a hose, and a container suitable for fuel, draw the fuel from the fuel tank.
3. Reinstall the fuel tank unit (see **INSTALLATION**).

FUEL LINE INSPECTION

Check the fuel system lines and hoses for damage, leaks, and deterioration. Replace any damaged parts.

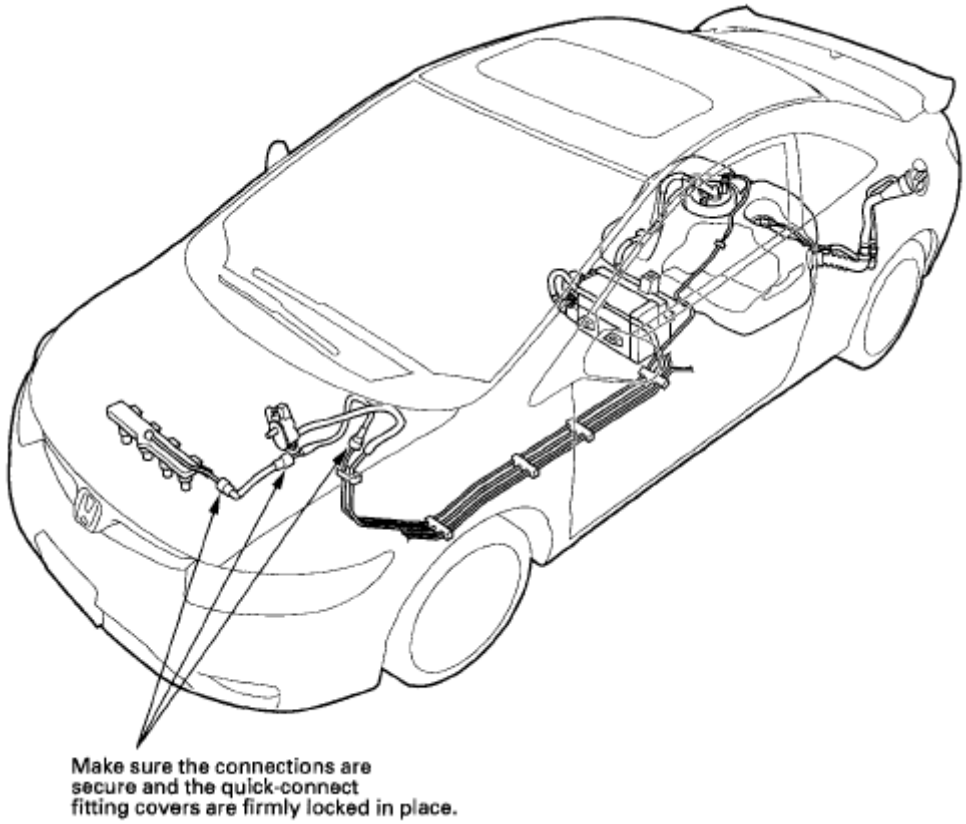

Fig. 34: Checking Fuel System Lines And Hoses
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Check all clamps, and make sure they are properly positioned and tightened.

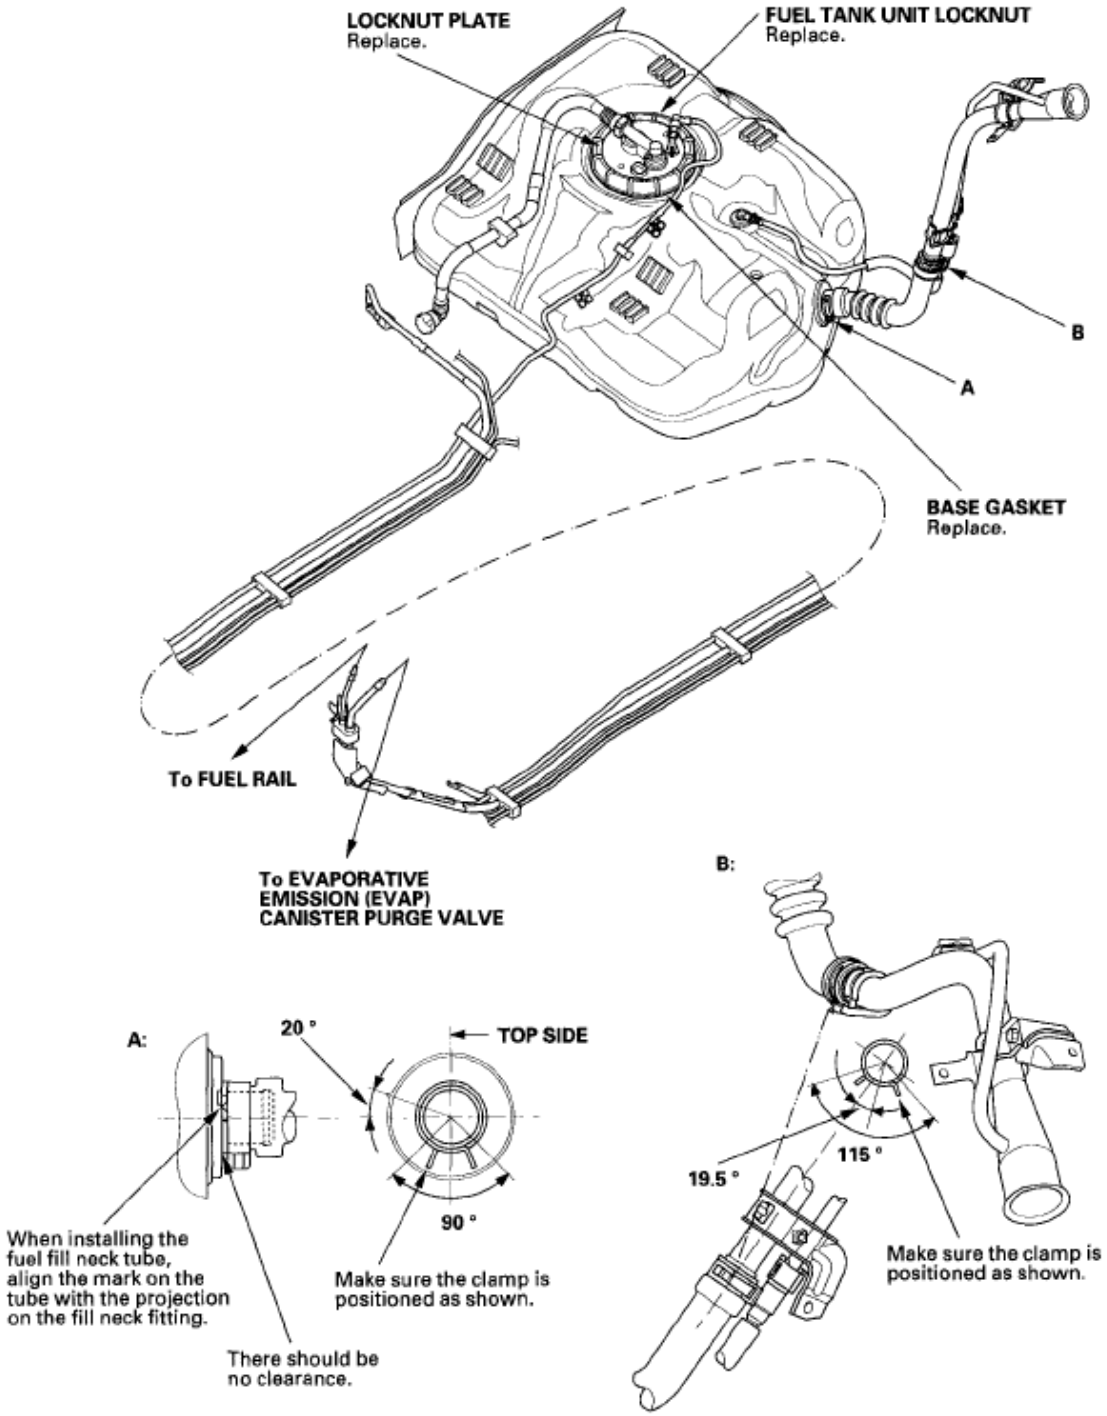

Fig. 35: Checking All Clamps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FUEL LINE/QUICK-CONNECT FITTING PRECAUTIONS

The fuel line/quick-connect fittings (A), (B), (C), (D), and (E) connect the fuel rail (F) to the fuel feed hoses (G), fuel feed hose A to fuel feed hose B (H), fuel feed hose B to the fuel line (I), the fuel line (J) to the fuel tank unit (K), the fuel vapor line (L) to the EVAP canister (M) and the fuel tank vapor recirculation tube (N) to the fuel fill pipe (0). When removing or installing the fuel feed hose, the fuel tank unit, or the fuel tank, it is necessary to disconnect or connect the quick-connect fittings. Pay attention to the following:

- The fuel feed hoses, fuel line, and quick-connect fittings are not heat-resistant; be careful not to damage them during welding or other heat-generating procedures.
- The fuel feed hoses, fuel line, and quick-connect fittings are not acid-proof; do not touch them with a shop towel that was used for wiping battery electrolyte. Replace them if they come in contact with electrolyte or something similar.
- When connecting or disconnecting the fuel feed hoses, fuel line, and quick-connect fittings, be careful not to bend or twist them excessively. Replace them if they are damaged.

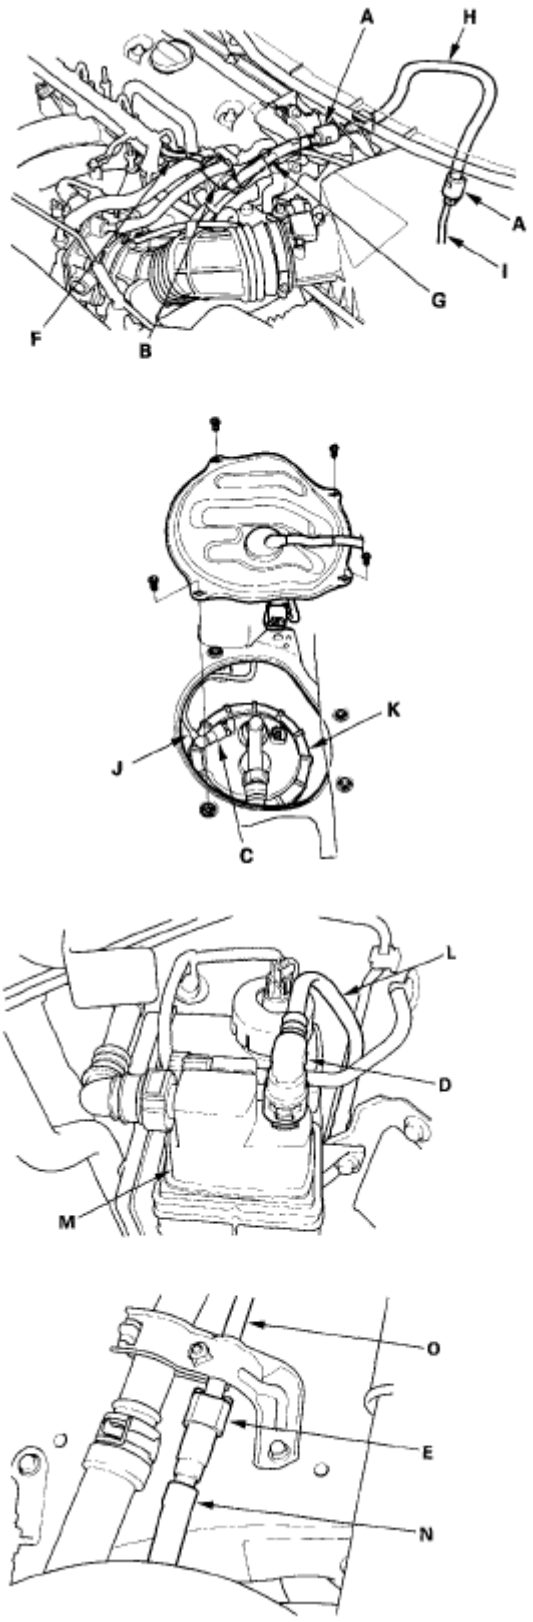

Fig. 36: Precautions For Fuel Line/Quick-Connect Fitting
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A disconnected quick-connect fitting can be reconnected, but the retainer on the mating line cannot be reused once it has been removed from the line. Replace the retainer when:

- replacing the fuel rail.
- replacing the fuel line.
- replacing the fuel pump.
- replacing the fuel filter.
- replacing the fuel gauge sending unit.
- replacing the EVAP purge line.
- replacing the EVAP canister.
- replacing the fuel tank.
- replacing the fuel fill pipe.
- it has been removed from the line.
- it is damaged.

FUEL LINE/QUICK-CONNECT FITTING

Location	Manufacturer	Retainer color	Line diameter
A	Tokai	Green	0.3 in. (6.3 mm)
B	Tokai	Blue green	0.3 in. (8 mm)
C	Sanoh	White	0.4 in. (9.5 mm)
D	Sanoh	White	0.5 in. (12 mm)
E	Tokai	Natural	0.5 in. (12 mm)

FUEL LINE/QUICK-CONNECT FITTING REMOVAL

NOTE: Before you work on the fuel lines and fittings, read the "Fuel Line/Quick-Connect Fitting Precautions" (see FUEL LINE/QUICK-CONNECT FITTING PRECAUTIONS).

1. Relieve the fuel pressure (see **FUEL PRESSURE RELIEVING**).
2. Check the fuel quick-connect fittings (A) for dirt, and clean them if needed.

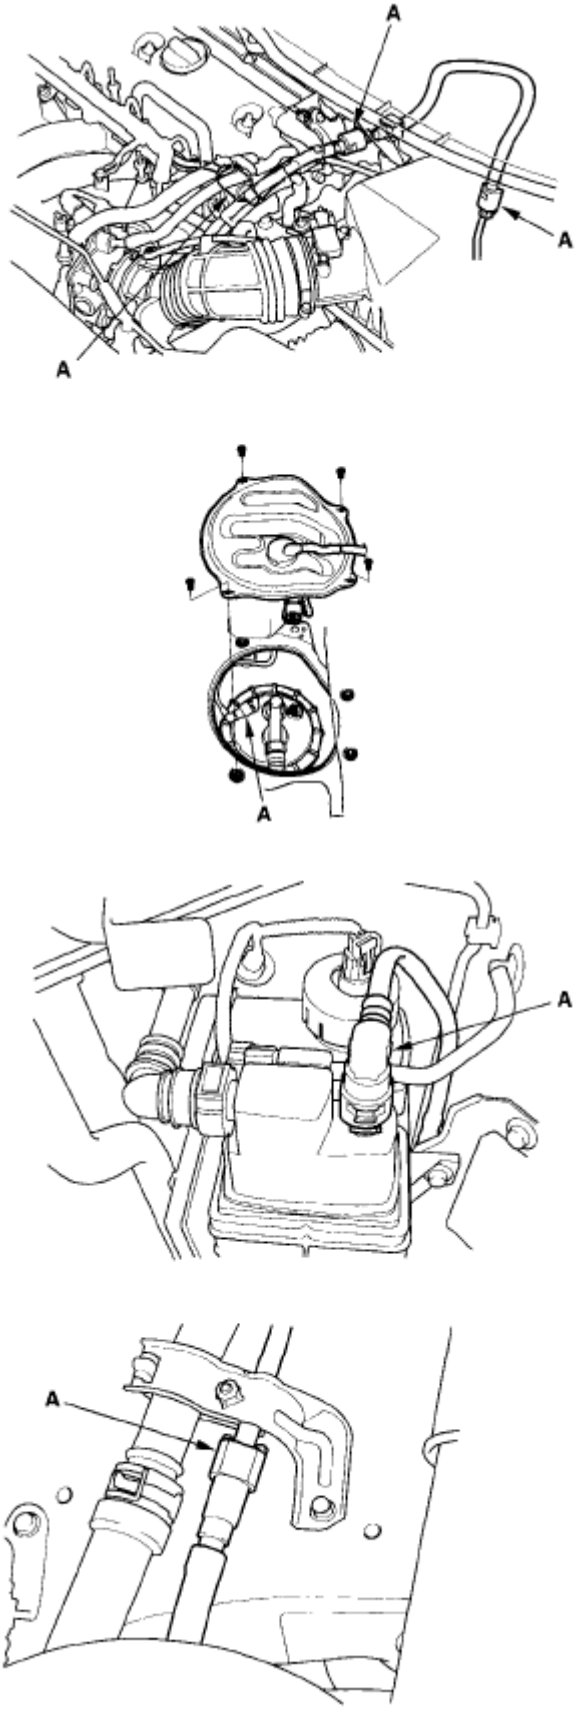

Fig. 37: Checking Fuel Quick-Connect Fittings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Place a rag or shop towel over the quick-connect fitting. Hold the connector (A) with one hand, and squeeze the retainer tabs (B) with the other hand to release them from the locking tabs (C). Pull the connector off.

NOTE:

- **Be careful not to damage the line (D) or other parts. Do not use tools.**
- **If the connector does not move, keep the retainer tabs pressed down, and alternately pull and push the connector until it comes off easily.**
- **Do not remove the retainer from the line; once removed, the retainer must be replaced with a new one.**

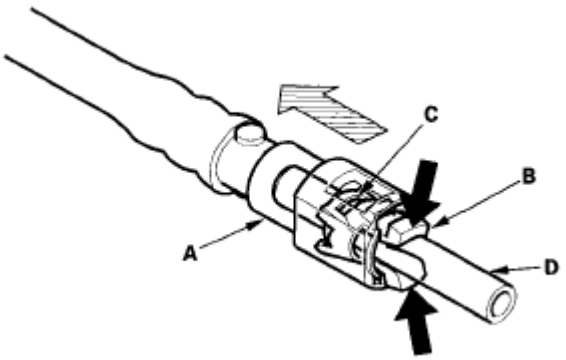

Fig. 38: Removing Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Check the contact area (A) of the line (B) for dirt or damage.
   - If it is dirty, clean the connector with pressure washer, and dry it with the compressed air.
   - If it is rusty or damaged, replace the fuel filter or the fuel feed line.

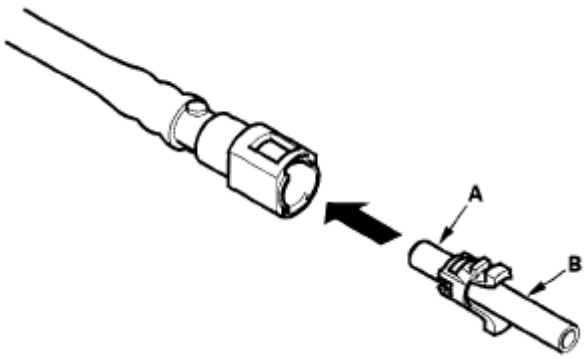

Fig. 39: Checking Contact Area Of Line
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. To prevent damage and keep foreign matter out, cover the disconnected connector and line ends with plastic bags (A).

NOTE: The retainer cannot be reused once it has been removed from the line.

Replace the retainer when:

- replacing the fuel rail.
- replacing the fuel feed line.
- replacing the fuel pump.
- replacing the fuel filter.
- replacing the fuel gauge sending unit.
- replacing the EVAP purge pipe.
- replacing the EVAP canister.
- replacing the fuel tank.
- replacing the fuel fill pipe.
- it has been removed from the line.
- it is damaged.

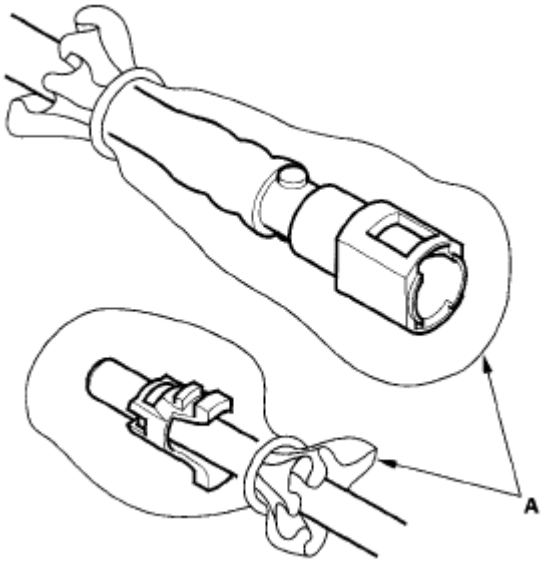

Fig. 40: Covering Disconnected Connector And Line Ends With Plastic Bags
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FUEL LINE/QUICK-CONNECT FITTING INSTALLATION

NOTE: Before you work on the fuel lines and fittings, read the "Fuel Line/Quick-Connect Fitting Precautions" (see FUEL LINE/QUICK-CONNECT FITTING PRECAUTIONS).

1. Check the contact area (A) of the line (B) for dirt or damage, and clean it if needed.

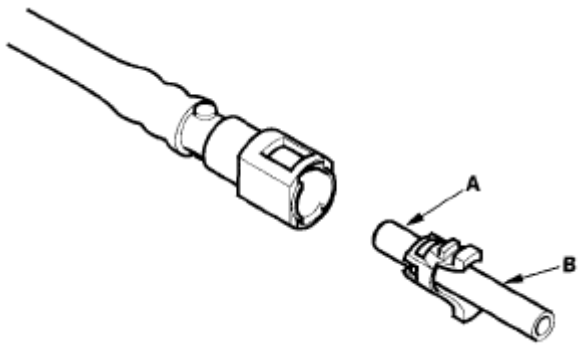

Fig. 41: Checking Contact Area Of Line
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert a new retainer (A) into the connector (B) if the retainer is damaged, or after:
   - replacing the fuel rail.
   - replacing the fuel feed line.
   - replacing the fuel pump.
   - replacing the fuel filter.
   - replacing the fuel gauge sending unit.
   - replacing the EVAP purge pipe.
   - replacing the EVAP canister.
   - replacing the fuel tank.
   - replacing the fuel fill pipe.
   - removing the retainer from the line.
   - Use the same manufacturer retainer and the same size retainer when the replacing the retainer (see **FUEL LINE/QUICK-CONNECT FITTING PRECAUTIONS**).

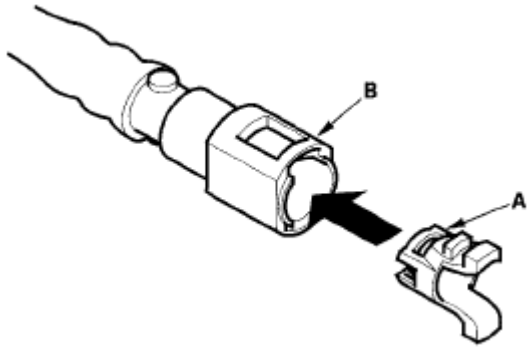

Fig. 42: Inserting Retainer Into Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Before connecting a new fuel tube/quick-connect fitting assembly (A), remove the old retainer from the mating line.

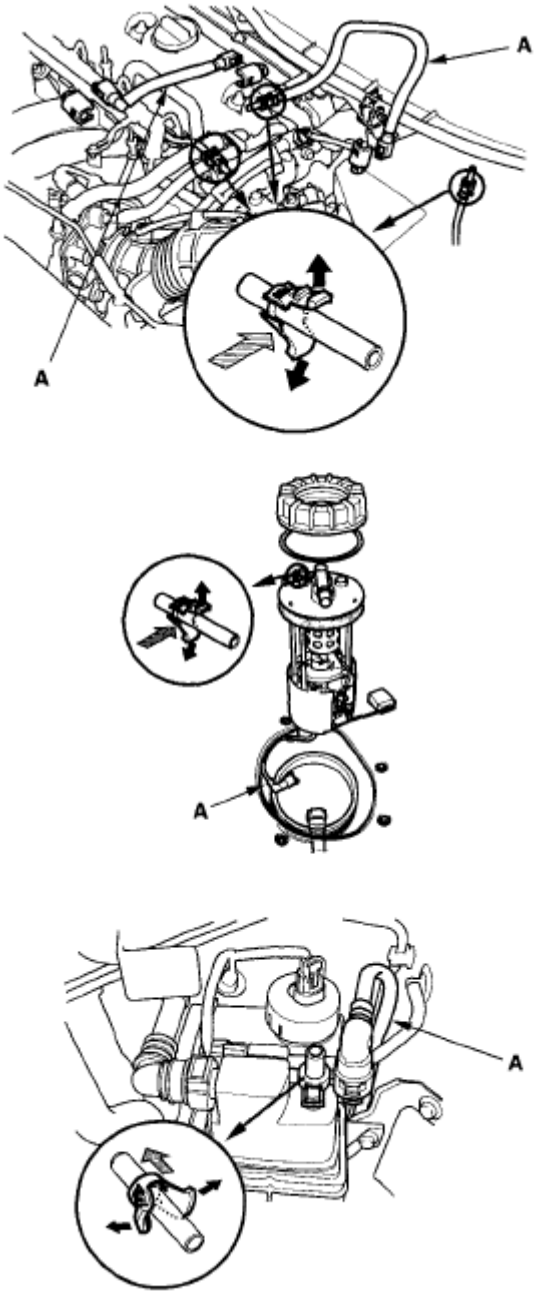

Fig. 43: Connecting Fuel Tube/Quick-Connect Fitting Assembly (1 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

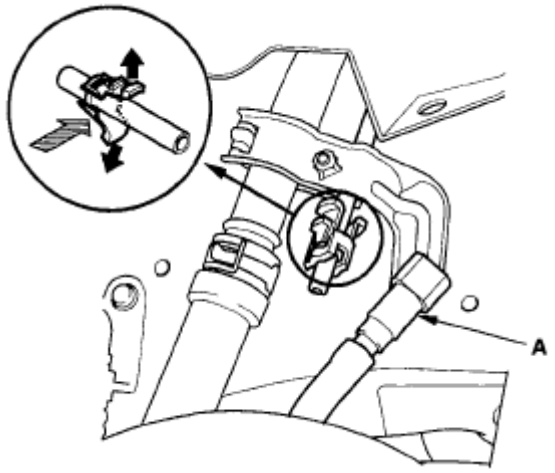

Fig. 44: Connecting Fuel Tube/Quick-Connect Fitting Assembly (2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Align the quick-connect fittings with the line (A), and align the retainer locking tabs (B) with the connector grooves (C). Then press the quick-connect fittings onto the line until both retainer tabs lock with a clicking sound.

NOTE: If it is hard to connect, put a small amount of new engine oil on the line end.

Connection with new retainer

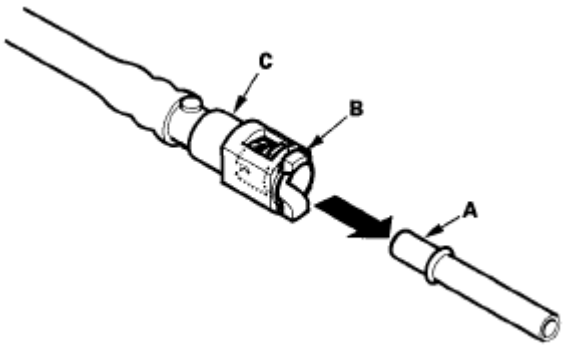

Fig. 45: Aligning Quick-Connect Fittings (Connection With New Retainer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Reconnection to existing retainer

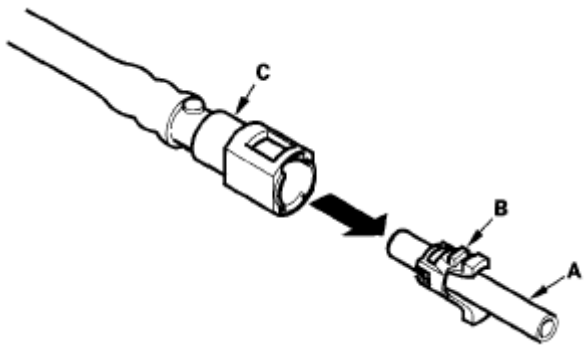

Fig. 46: Aligning Quick-Connect Fittings (Reconnection To Existing Retainer)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Connection to new fuel line

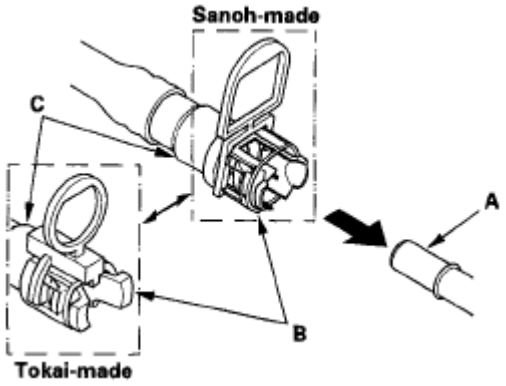

Fig. 47: Aligning Quick-Connect Fittings (Connection To New Fuel Line)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. When you reconnect the connector with the old retainer, make sure the connection is secure and the tabs are firmly locked into place; check visually and also by pulling the connector. When you replace the fuel line with a new one, make sure you remove the ring pull upwards after you confirm the connection is secure.

NOTE: Before you remove the ring pull, make sure the fuel line connection is secure. If the connection is not secure, the ring pull could break when you try to remove it.

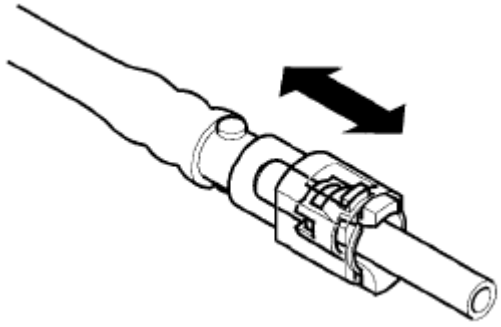

Fig. 48: Securing Connection And Tabs Firmly Locked Into Place

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Connection to new fuel line

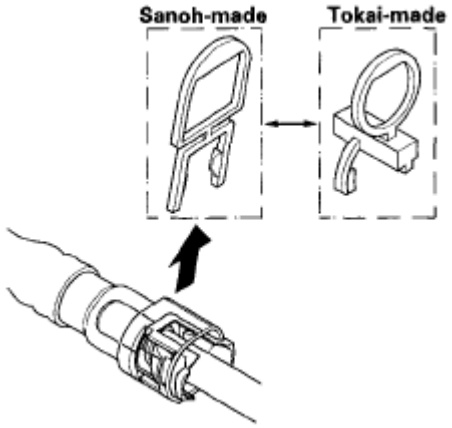

Fig. 49: Securing Connection And Tabs Firmly Locked Into Place (Connection To New Fuel Line)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Reconnect the negative cable to the battery, and turn the ignition switch ON (II) (but do not operate the starter motor). The fuel pump will run for about 2 seconds, and fuel pressure will rise. Repeat this two or three times, and check that there is no leakage in the fuel supply system.

FUEL TANK UNIT REMOVAL/INSTALLATION

Special Tools Required

Fuel pump module locknut wrench 07AAA-SNAA100

REMOVAL

1. Relieve the fuel pressure (see **FUEL PRESSURE RELIEVING**).
2. Remove the fuel fill cap.
3. Remove the rear seat cushion (see **REAR SEAT REMOVAL/INSTALLATION**).
4. Remove the rear floor upper cross-member (A).

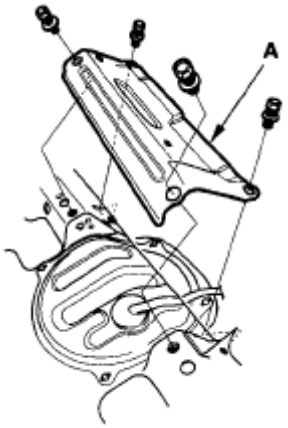

Fig. 50: Removing Rear Floor Upper Cross-Member
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the access panel (A) from the floor.

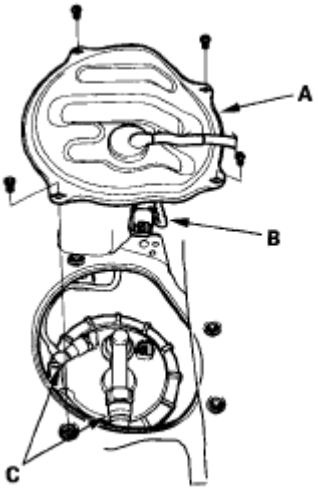

Fig. 51: Removing Access Panel From Floor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Disconnect the fuel tank unit 4P connector (B).
7. Disconnect the quick-connect fittings (C) from the fuel tank unit.
8. Using the special tool, loosen the locknut (A).

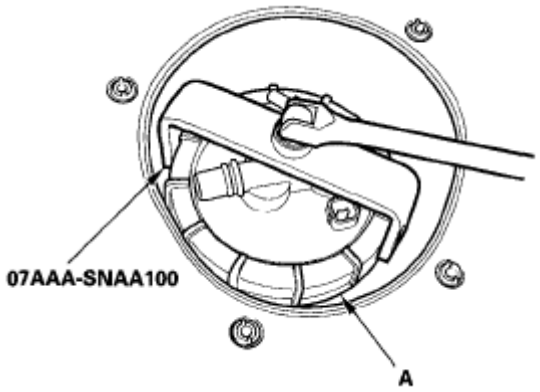

Fig. 52: Loosening Locknut Using Special Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the locknut (A) and the fuel tank unit (B).

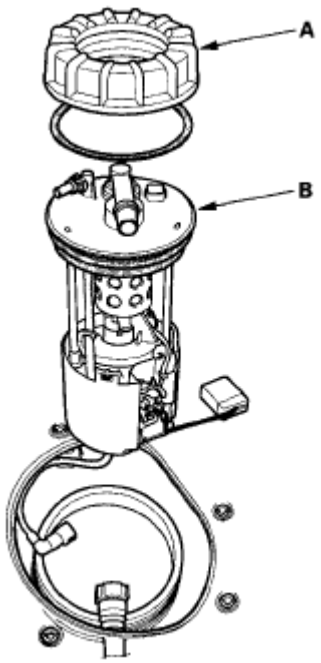

Fig. 53: Removing Locknut And Fuel Tank Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Temporarily attach a new base gasket (A) to the fuel tank unit (B), then insert the fuel tank unit partially into the fuel tank.
   - Be careful not to damage a new base gasket.
   - Be careful not to bend the fuel gauge sending unit.
   - Do not coat the base gasket with oil.

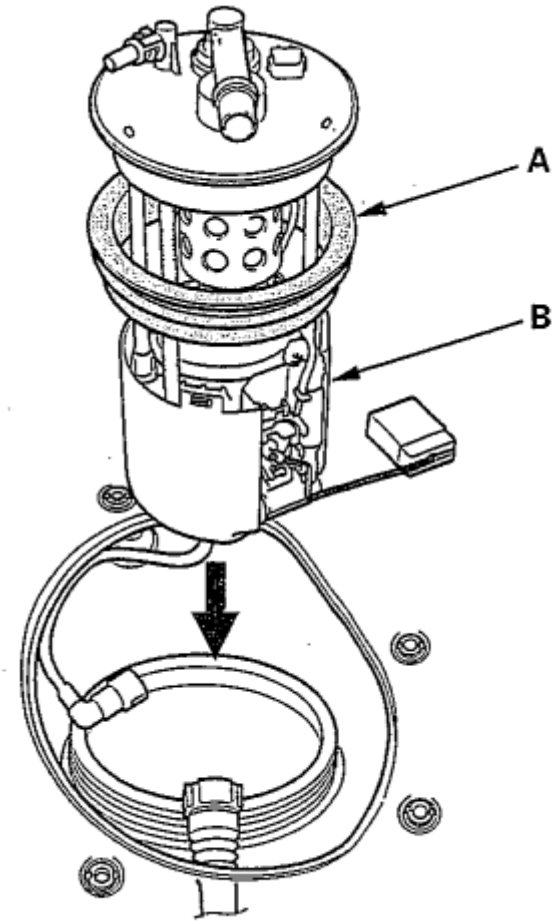

Fig. 54: Identifying Base Gasket And Fuel Tank Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transfer the base gasket (A) from the fuel tank unit onto the fuel tank.

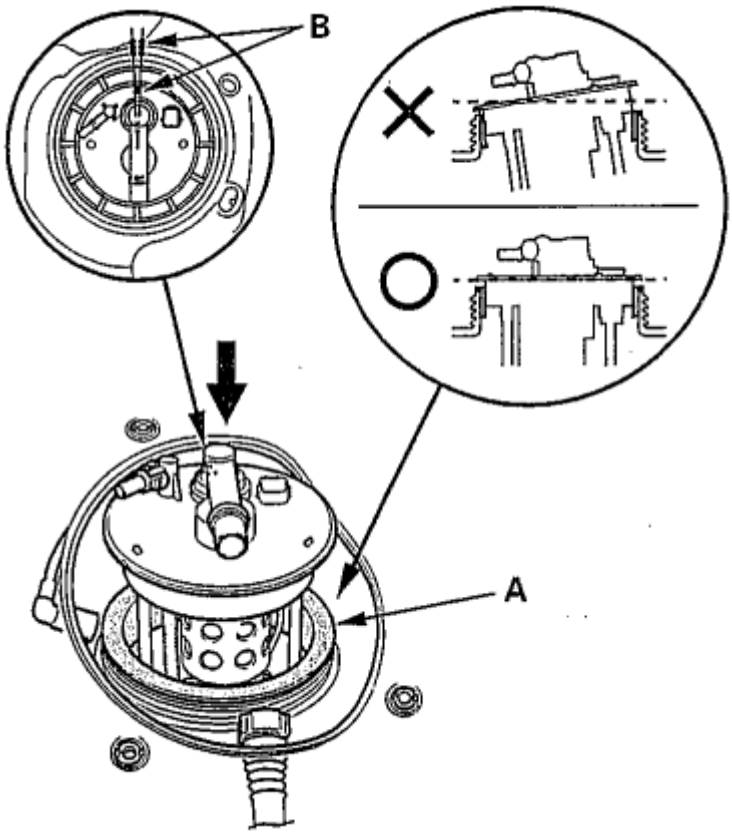

Fig. 55: Identifying Base Gasket From The Fuel Tank, Alignment Marks And Fuel Tank
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Align the marks (B) on the fuel tank and the fuel tank unit, then insert the fuel tank unit into the fuel tank until it sits on the base gasket.

NOTE: To prevent a fuel leak, check the base gasket, visually or by hand, to make sure it is not pinched

4. Install the new locknut plate (A) and the new locknut (B).

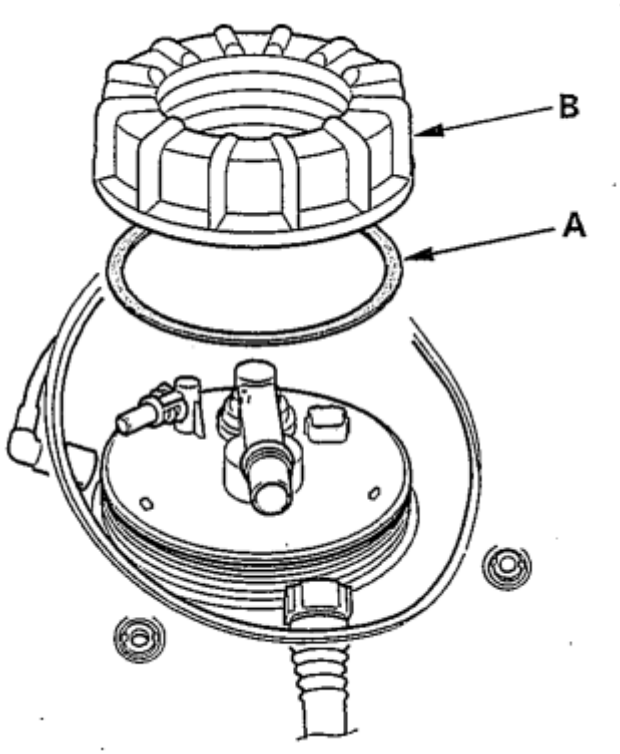

Fig. 56: Identifying Locknut Plate And The Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Using the special tool, tighten a locknut (A) to the specified torque.
   - After tightening, make sure the marks are still aligned.
   - After installation, check the base gasket, visually o by hand, to make sure it is not pinched.

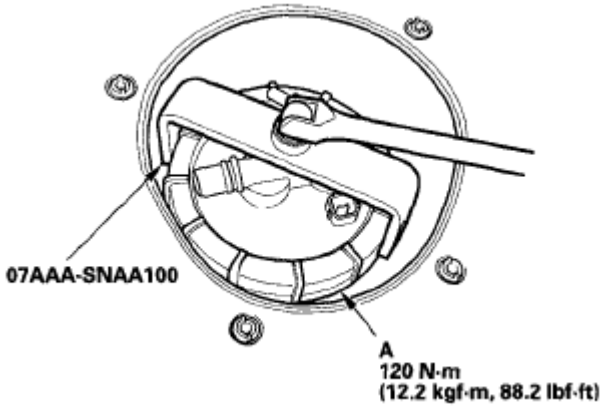

Fig. 57: Tightening Fuel Tank Unit Locknut (With Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Connect the fuel tank unit 4P connector, then connect the quick-connect fitting.
7. Reconnect the negative cable to the battery, and turn the ignition switch ON (II) (but do not operate the starter motor). The fuel pump will run for about 2 seconds, and fuel pressure will rise. Repeat this two or three times, then check that there is no leakage in the fuel supply system.
8. Install the access panel (A) to the floor.

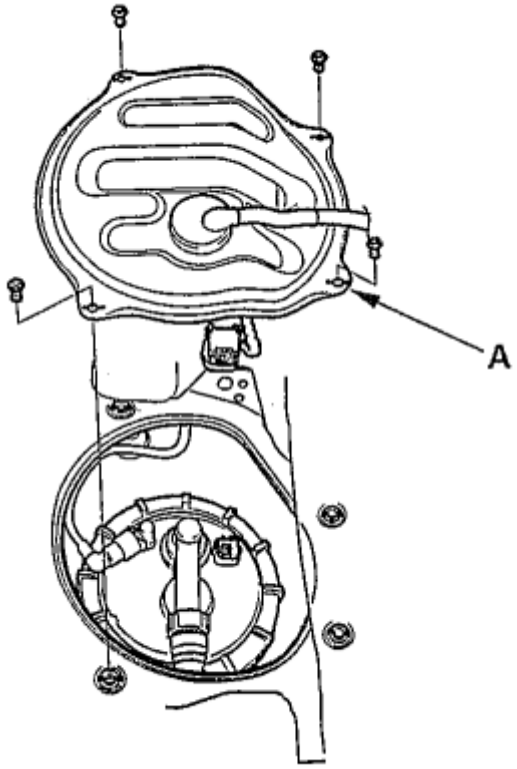

Fig. 58: Installing The Access Panel To The Floor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the rear floor upper cross-member (A).

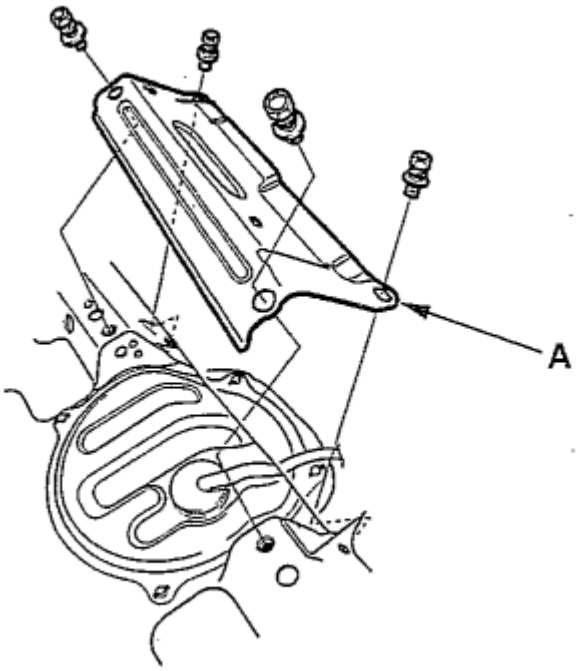

Fig. 59: Installing The Rear Floor Upper Cross-Member
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the rear seat cushion (see **SEAT CUSHION**)

FUEL PRESSURE REGULATOR REPLACEMENT

1. Remove the fuel tank unit (see **FUEL TANK UNIT REMOVAL/INSTALLATION**).
2. Remove the bracket (A).

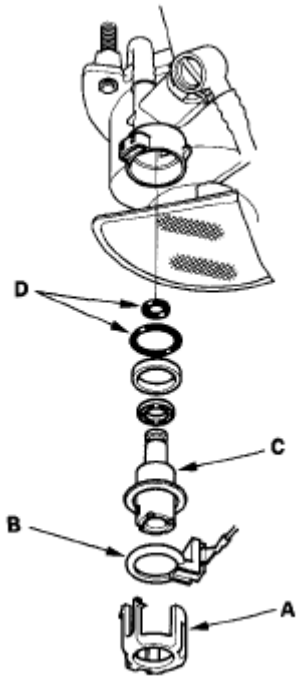

Fig. 60: Removing Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the ground ring (B).
4. Remove the fuel pressure regulator (C).
5. Install the parts in the reverse order of removal with new O-rings (D) and a new bracket (A). When installing the fuel tank unit, align the marks on the unit and the fuel tank (see **INSTALLATION**).

NOTE: Coat the O-rings with clean engine oil; do not use any other oil. Do not pinch the O-rings during installation.

FUEL FILTER REPLACEMENT

The fuel filter should be replaced whenever the fuel pressure drops below the specified value (see **FUEL PRESSURE TEST**), after making sure that the fuel pump and the fuel pressure regulator are OK.

1. Remove the fuel tank unit (see **FUEL TANK UNIT REMOVAL/INSTALLATION**).
2. Remove the fuel filter (A).

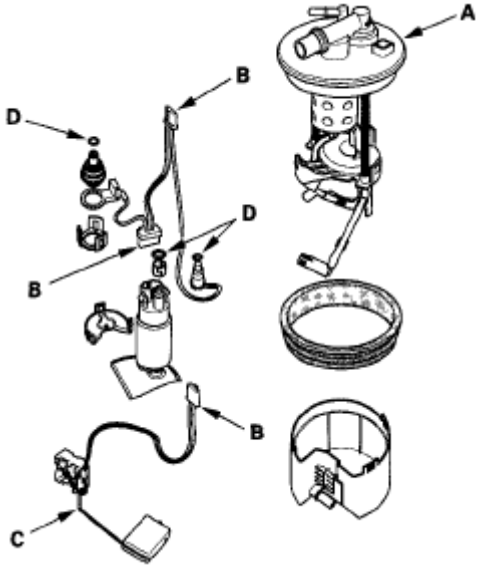

Fig. 61: Removing Fuel Filter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check these items before installing the fuel tank unit:
   - When connecting the wire harness, make sure the connection is secure and the connectors (B) are firmly locked into place.
   - When installing the fuel gauge sending unit (C), make sure the connection is secure and the connector is firmly locked into place. Be careful not to bend or twist it excessively.
4. Install the parts in the reverse order of removal with new O-rings (D). When installing the fuel tank unit, align the marks on the unit and the fuel tank (see **INSTALLATION**).

FUEL PUMP/FUEL GAUGE SENDING UNIT REPLACEMENT

1. Remove the fuel tank unit (see **FUEL TANK UNIT REMOVAL/INSTALLATION**).
2. Remove the fuel level sensor (fuel sending unit) (A) from the fuel tank unit (B).

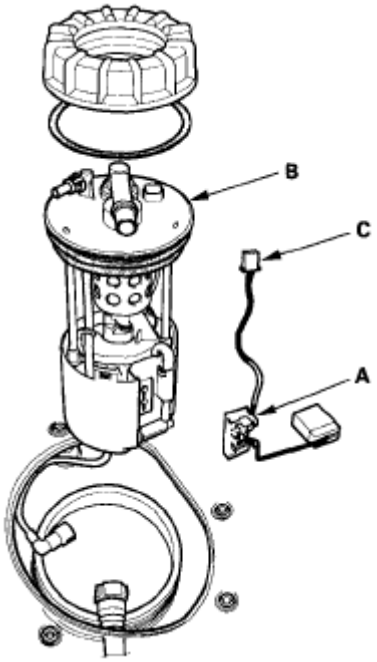

Fig. 62: Removing Fuel Level Sensor (Fuel Sending Unit)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check these items before installing the fuel tank unit:
   - When connecting the wire harness, make sure the connection is secure and the connector (C) are firmly locked into place.
   - When installing the fuel gauge sending unit, make sure the connection is secure and the connector is firmly locked into place. Be careful not to bend or twist it excessively.
4. Install the parts in the reverse order of removal. When installing the fuel tank unit, align the marks on the unit and the fuel tank (see **INSTALLATION**).

FUEL TANK REPLACEMENT

1. Drain the fuel tank (see **FUEL PRESSURE TEST**), then disconnect the fuel tank unit 4P connector (A) and quick-connect fitting (B).

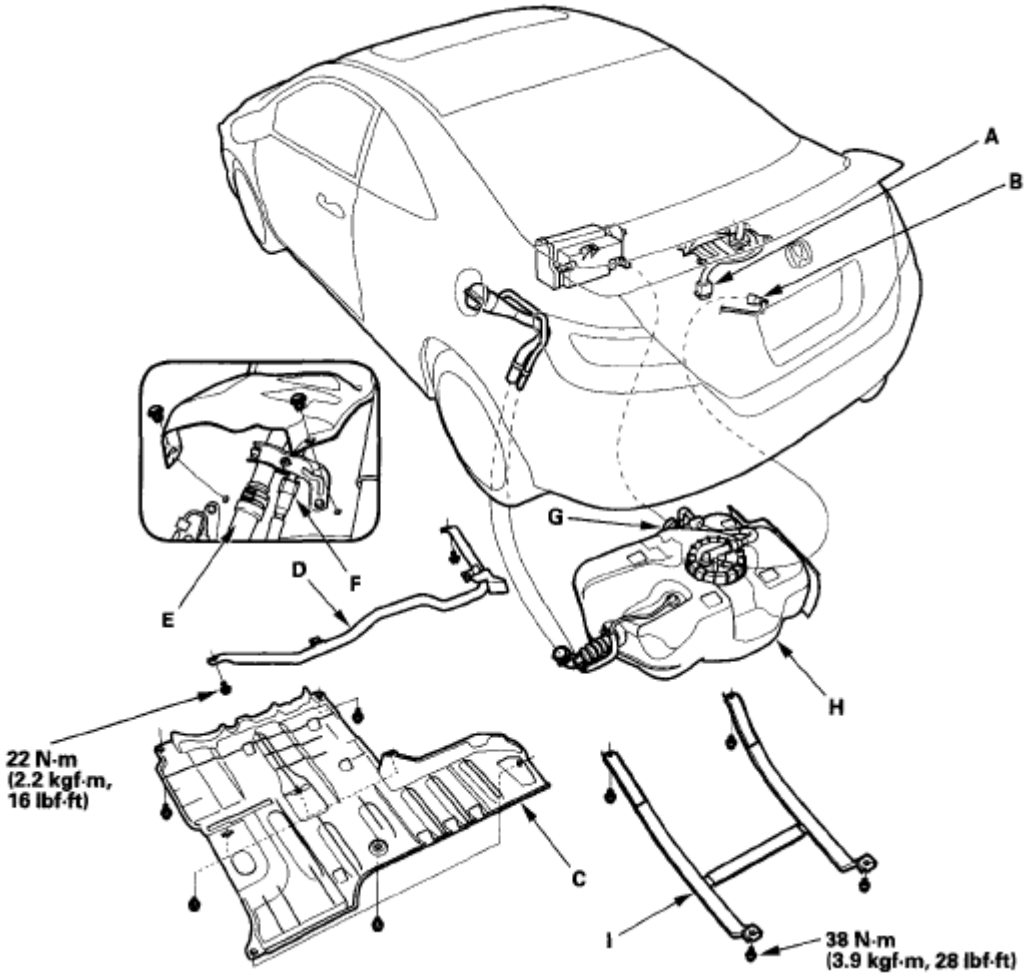

Fig. 63: Disconnecting Fuel Tank Unit 4P And Quick-Connect Fitting (With Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Lift the vehicle, and support it with jackstands.
3. Remove the cover (C), and the EVAP canister guard (D).
4. Disconnect the fuel fill tube (E). Slide back the clamps, then twist the hoses as you pull to avoid damaging them.
5. Disconnect the quick-connect fitting (F) and the fuel tank vapor recirculation tube (G).
6. Place a jack or other support under the tank (H).
7. Remove the strap bolts and the strap (I).
8. Remove the fuel tank.
9. Install the parts in the reverse order of removal.

FUEL GAUGE SENDING UNIT TEST

NOTE: For the fuel gauge system circuit diagram, refer to the (see CIRCUIT DIAGRAM - GAUGE CONTROL MODULE (TACH)).

1. Check the No. 10 METER (7.5 A) fuse in the under-dash fuse/relay box before testing.
2. Check for body electrical system DTCs.

- If no problem is found, go to step 3.
- If DTC B1175 or B1176 is indicated, go to the indicated DTC's troubleshooting.

3. Turn the ignition switch OFF.
4. Remove the rear seat cushion (see **REAR SEAT REMOVAL/INSTALLATION**).
5. Remove the rear floor upper cross-member (A).

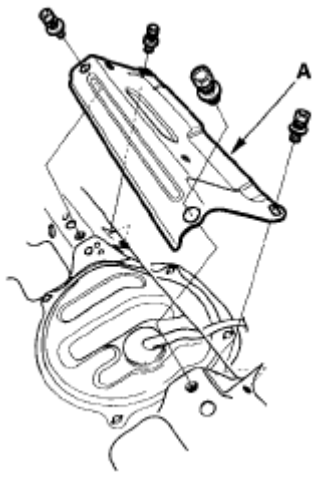

Fig. 64: Removing Rear Floor Upper Cross-Member
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the access panel (A) from the floor.

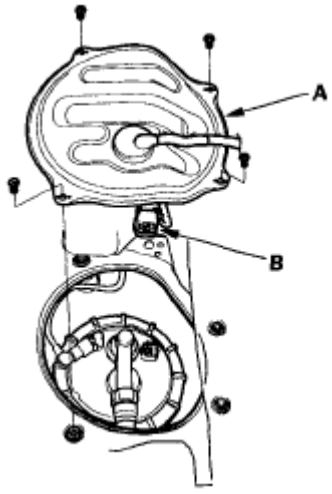

Fig. 65: Removing Access Panel From Floor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Disconnect the fuel tank unit 4P connector (B).
8. Measure voltage between fuel tank unit 4P connector terminals No. 1 and No. 3 with the ignition switch ON (II). There should be battery voltage.
   - If the voltage is OK, go to step 8.
   - If the voltage is not as specified, check for:
     - a short in the PUR (4-door; ORN) wire to ground.

- an open in the PUR (4-door: ORN) or ORN (4-door: LTGRN) wire.

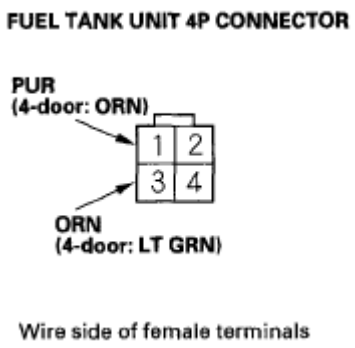

Fig. 66: Measuring Voltage Between Fuel Tank Unit 4P Connector Terminals No. 1 And No. 3 With Ignition Switch ON (II)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Turn the ignition switch OFF.
10. Remove the fuel tank unit from the fuel tank (see **FUEL TANK UNIT REMOVAL/INSTALLATION**).
11. Measure resistance between fuel tank unit 4P connector terminals No. 1 and No. 3 with the float at E (EMPTY), LOW (LOW FUEL INDICATOR), 1/2 (HALF FULL), and F (FULL) positions. If you do not get the following readings, replace the fuel gauge sending unit (see **FUEL PUMP/FUEL GAUGE SENDING UNIT REPLACEMENT**).

FUEL TANK UNIT 4P CONNECTOR TERMINALS NO. 1 AND NO. 3 FLOAT POSITION

Float Position	F 5.6 in. (139.8 mm)	1/2 2.9 in. (72.1 mm)	LOW 0.8 in. (19.5 mm)	E 0.4 in. (8.9 mm)
Resistance (ohms)	19 to 21	205.8 to 215.8	537.5 to 707	772 to 788

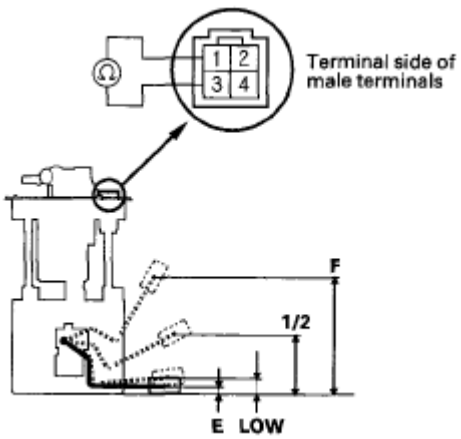

Fig. 67: Measuring Resistance Between Fuel Tank Unit 4P Connector Terminals No. 1 And No. 3
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Reconnect the fuel tank unit 4P connector.
13. Remove the No. 23 BACK UP (10 A) fuse from the under-hood fuse/relay box for at least 10 seconds,

then reinstall it.

14. Turn the ignition switch ON (II).
15. Check that the pointer of the fuel gauge indicates "F" with the float at F.
    - If the pointer of the fuel gauge does not indicate "F", replace the gauge assembly.
    - If the gauge is OK, the test is complete.

NOTE:

- **The pointer of the fuel gauge returns to the bottom of the gauge dial when the ignition switch is OFF, regardless of the fuel level.**
- **Remove the No. 23 BACK UP (10 A) fuse from the under-hood fuse/relay box for at least 10 seconds after completing troubleshooting, otherwise it may take up to 20 minutes for the fuel gauge to indicate the correct fuel level.**

LOW FUEL INDICATOR TEST

1. Do the gauge self-diagnostic function (see **SELF-DIAGNOSTIC FUNCTION**).
    - If the low fuel indicator flashes, go to step 2.
    - If the low fuel indicator does not flash, replace the gauge control module (tach) (see **TACHOMETER**).
2. Check for body electrical system DTCs.
    - If any DTCs are indicated, do the indicated DTC's troubleshooting.
    - If no DTCs are indicated, go to step 3.
3. Do the fuel gauge sending unit test (see **FUEL GAUGE SENDING UNIT TEST**).

2006-08 ENGINE PERFORMANCE

Fuel Supply System (R18A1) - Civic (Except Hybrid)

COMPONENT LOCATION INDEX

NOTE: Refer to the FUEL SUPPLY SYSTEM (GX) (SUPPLEMENT) article for additional information for the GX model.

DTC TROUBLESHOOTING

DTC P0461: FUEL LEVEL SENSOR (FUEL GAUGE SENDING UNIT) CIRCUIT RANGE/PERFORMANCE PROBLEM

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**

- **Because it requires 162 miles (260 km) of driving without refueling to complete this diagnosis, DTC P0461 cannot be duplicated during this troubleshooting.**

1. Test the fuel gauge sending unit (see **FUEL GAUGE SENDING UNIT TEST**).

   Is the fuel gauge sending unit OK?

   YES - Check for poor connections or loose terminals at the fuel gauge sending unit and the gauge assembly.

   NO - Replace the fuel gauge sending unit (see **FUEL PUMP/FUEL GAUGE SENDING UNIT REPLACEMENT**), then go to step 2.

2. Turn the ignition switch ON (II).
3. Reset the ECM/PCM with the HDS.
4. Do the ECM/PCM idle learn procedure (see **ECM/PCM IDLE LEARN PROCEDURE**).
5. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0461 indicated?

   YES - Check for poor connections or loose terminals at the fuel gauge sending unit and the gauge control module, then go to step 1.

   NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0462: FUEL LEVEL SENSOR (FUEL GAUGE SENDING UNIT) CIRCUIT LOW VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS, and wait 5 seconds.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0462 indicated?

   YES - Go to step 4.

   NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the gauge control module (tach) and the fuel gauge sending unit.

4. Turn the ignition switch OFF.
5. Remove the rear seat cushion (see **REAR SEAT REMOVAL/INSTALLATION**).
6. Remove the rear floor upper cross-member and the access panel from the floor (see **FUEL TANK UNIT REMOVAL/INSTALLATION**).

7. Disconnect the fuel tank unit 4P connector.
8. Turn the ignition switch ON (II).
9. Clear the DTC with the HDS, and wait 5 seconds.
10. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0463 indicated?

    YES - Replace the fuel gauge sending unit (see **FUEL PUMP/FUEL GAUGE SENDING UNIT REPLACEMENT**), then go to step 22.

    NO - Go to step 11.

11. Turn the ignition switch OFF.
12. Remove the gauge control module (tach) (see **TACHOMETER**).
13. Disconnect the gauge control module (tach) 36P connector.
14. Check for continuity between fuel tank unit 4P connector terminal No. 1 and body ground.

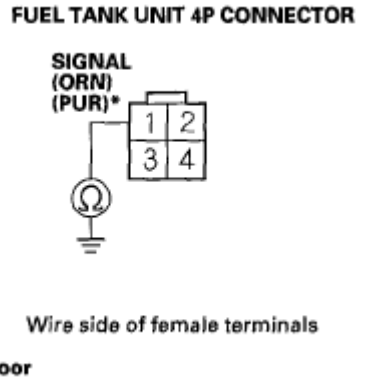

Fig. 3: Checking Continuity Between Fuel Tank Unit 4P Connector Terminal No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the gauge control module (tach) (signal line) and the fuel gauge sending unit, then go to step 23.

NO - Go to step 15.

15. Reconnect the gauge control module (tach) 36P connector.
16. Remove the fuel tank unit (see **FUEL TANK UNIT REMOVAL/INSTALLATION**).
17. Connect the fuel tank unit 4P connector.
18. Turn the ignition switch ON (II).
19. Clear the DTC with the HDS.
20. Set the float (A) to the E position.

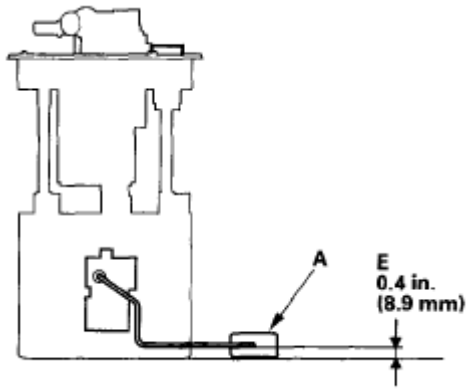

Fig. 4: Setting Float To E Position (With Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Check the fuel gauge.

    Does the gauge move to the empty position?

    YES - Go to step 29.

    NO - Replace the gauge control module (tach) (see **TACHOMETER**), then go to step 22.

22. Turn the ignition switch OFF.
23. Reconnect all connectors.
24. Install the parts in the reverse order of removal.
25. Turn the ignition switch ON (II).
26. Reset the ECM/PCM with the HDS.
27. Do the ECM/PCM idle learn procedure (see **ECM/PCM IDLE LEARN PROCEDURE**).
28. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0462 indicated?

    YES - Check for poor connections or loose terminals at the gauge control module (tach) and the fuel gauge sending unit, then go to step 1.

    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

29. Update the ECM/PCM if it does not have the latest software (see **UPDATING ECM/PCM**), or substitute a known-good ECM/PCM (see **SUBSTITUTING THE ECM/PCM**).
30. Reconnect all connectors.
31. Install the parts in the reverse order of removal.
32. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0462 indicated?

    YES - Check for poor connections or loose terminals at the gauge control module (tach) and the fuel

gauge sending unit. If the ECM/PCM was updated, substitute a known-good ECM/PCM (see **SUBSTITUTING THE ECM/PCM**), then recheck. If the ECM/PCM was substituted, go to step 1.

NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see **ECM/PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

DTC P0463: FUEL LEVEL SENSOR (FUEL GAUGE SENDING UNIT) CIRCUIT HIGH VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS, and wait 5 seconds.
3. Check for Temporary DTCs or DTCs with the HDS.

   Is DTC P0463 indicated?

   YES - Go to step 4.

   IMO-Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the gauge control module (tach) and the fuel gauge sending unit.

4. Turn the ignition switch OFF.
5. Remove the rear seat cushion (see **REAR SEAT REMOVAL/INSTALLATION**).
6. Remove the rear floor upper cross-member and the access panel from the floor (see **FUEL TANK UNIT REMOVAL/INSTALLATION**).
7. Disconnect the fuel tank unit 4P connector.
8. Connect fuel tank unit 4P connector terminal No. 3 to body ground with a jumper wire.

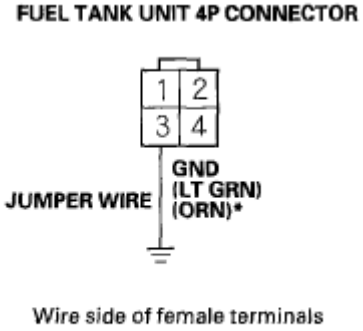

Fig. 5: Connecting Fuel Tank Unit 4P Connector Terminal No. 3 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the gauge control module (tach) (see **TACHOMETER**).

10. Disconnect the gauge control module (tach) 36P connector.
11. Check for continuity between gauge control module (tach) 36P connector terminal No. 33 and body ground.

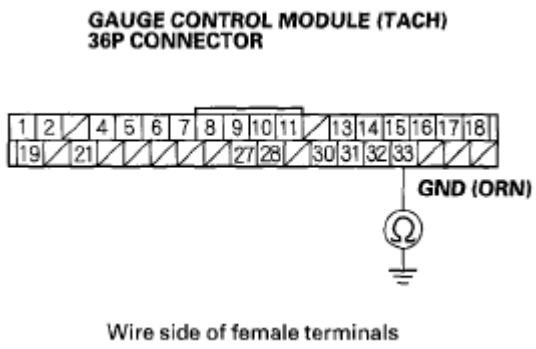

Fig. 6: Checking Continuity Between Gauge Control Module (TACH) Terminal No. 33 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 12.

NO - Repair open in the wire between the gauge control module (tach) (GND line) and the fuel gauge sending unit, then go to step 24.

12. Connect fuel tank unit 4P connector terminal No. 1 to body ground with a jumper wire.

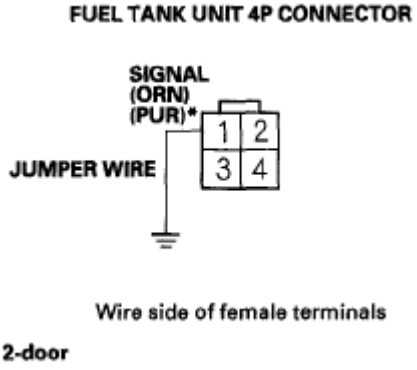

Fig. 7: Connecting Fuel Tank Unit 4P Connector Terminal No. 1 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Check for continuity between gauge control module (tach) 36P connector terminal No. 32 and body ground.

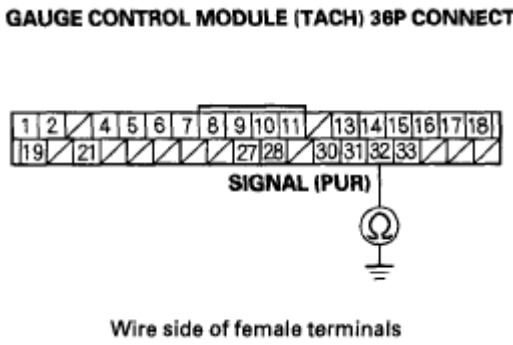

Fig. 8: Checking Continuity Between Gauge Control Module (TACH) Terminal No. 32 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 14.

NO - Repair open in the wire between the gauge control module (tach) (signal line) and the fuel gauge sending unit, then go to step 24.

14. Remove the jumper wire from the fuel tank unit 4P connector.
15. Remove the fuel tank unit (see **FUEL TANK UNIT REMOVAL/INSTALLATION**).
16. Test the fuel gauge sending unit (see **FUEL GAUGE SENDING UNIT TEST**).

Is the fuel gauge sending unit OK?

YES - Go to step 17.

NO - Replace the fuel gauge sending unit (see **FUEL PUMP/FUEL GAUGE SENDING UNIT REPLACEMENT**), then go to step 23.

17. Connect the fuel tank unit 4P connector.
18. Reconnect the gauge control module (tach) 36P connector.
19. Turn the ignition switch ON (II).
20. Clear the DTC with the HDS.
21. Set the float (A) to the F position.

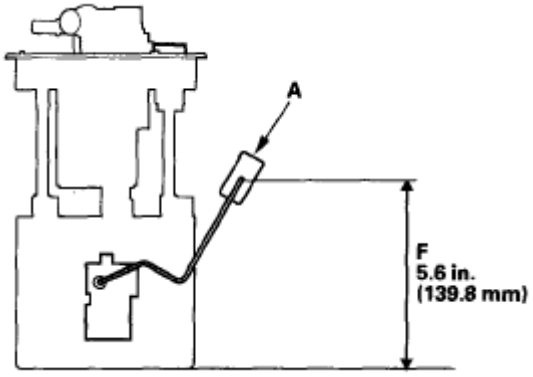

Fig. 9: Setting Float To F Position (With Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Check the fuel gauge.

    Does the gauge move to the full position?

    YES - Go to step 32.

    NO - Replace the gauge control module (tach) (see **TACHOMETER**), then go to step 23.

23. Turn the ignition switch OFF.
24. Reconnect all connectors.
25. Install the parts in the reverse order of removal.
26. Turn the ignition switch ON (II).
27. Reset the ECM/PCM with the HDS.
28. Do the ECM/PCM idle learn procedure (see **ECM/PCM IDLE LEARN PROCEDURE**).
29. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0463 indicated?

    YES - Check for poor connections or loose terminals at the gauge control module (tach) and the fuel gauge sending unit, then go to step 1.

    NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

30. Reconnect all connectors.
31. Install the parts in the reverse order of removal.
32. Update the ECM/PCM if it does not have the latest software (see **UPDATING ECM/PCM**), or substitute a known-good ECM/PCM (see **SUBSTITUTING THE ECM/PCM**).
33. Check for Temporary DTCs or DTCs with the HDS.

    Is DTC P0463 indicated?

    YES - Check for poor connections or loose terminals at the gauge control module (tach) and the fuel gauge sending unit. If the ECM/PCM was updated, substitute a known-good ECM/PCM (see

SUBSTITUTING THE ECM/PCM), then recheck. If the ECM/PCM was substituted, go to step 1.

NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see **ECM/PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTC's troubleshooting.

FUEL PUMP CIRCUIT TROUBLESHOOTING

If you suspect a problem with the fuel pump, check that the fuel pump actually runs; when it is on, you will hear some noise if you listen to the fuel fill port with the fuel fill cap removed. The fuel pump should run for 2 seconds when the ignition switch is first turned on. If the fuel pump does not make noise, check as follows:

1. Turn the ignition switch OFF.
2. Remove the under-dash fuse/relay box (see **REMOVAL AND INSTALLATION**), then remove PGM-FI main relay 2 (FUEL PUMP) (A) from the under-dash fuse/relay box.

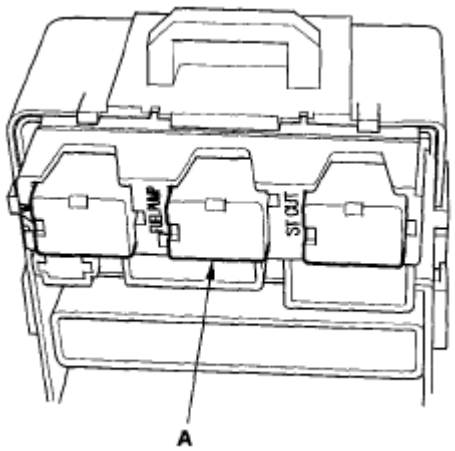

Fig. 10: Removing PGM-FI Main Relay (Fuel Pump)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Reinstall the under-dash fuse/relay box.
4. Turn the ignition switch ON (II).
5. Measure voltage between PGM-FI main relay 2 (FUEL PUMP) 4P connector terminal No. 4 and body ground.

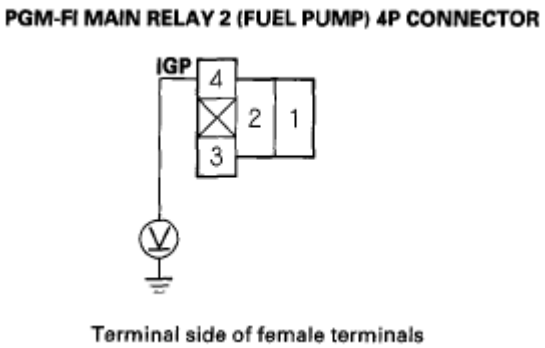

Fig. 11: Measuring Voltage Between PGM-FI Main Relay 2 (FUEL PUMP) 4P Connector

Terminal No. 4 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 12.

NO - Go to step 6.

6. Turn the ignition switch OFF.
7. Disconnect the under-hood fuse/relay box connector E (10P).
8. Disconnect C101 connector at left side of engine compartment; A/T model (see **CONNECTOR TO HARNESS INDEX**), M/T model (see **CONNECTOR TO HARNESS INDEX**).
9. Disconnect the under-dash fuse/relay box connector G (21P).
10. Connect under-dash fuse/relay box connector G (21P) terminal No. 4 to body ground with a jumper wire.

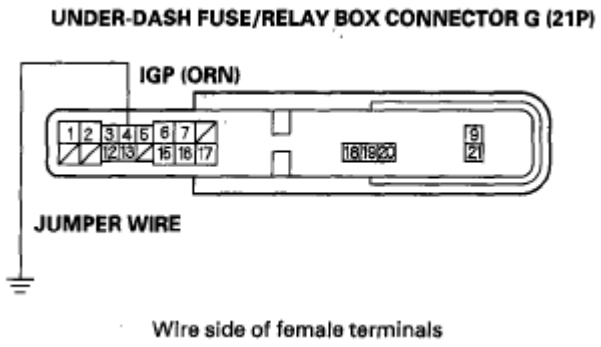

Fig. 12: Connecting Fuse/Relay Box Connector G (21P) Terminal No. 4 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Check for continuity between under-hood fuse/relay box connector E (10P) terminal No. 5 and body ground.

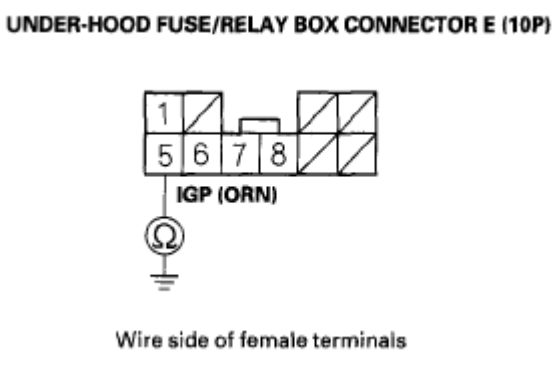

Fig. 13: Checking Continuity Between Fuse/Relay Box Connector E (10P) Terminal No. 5 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -

- Replace PGM-FI main relay 1.
- If needed, replace the under-hood fuse/relay box (see **REMOVAL AND INSTALLATION**).

NO - Repair open in the wire between the under-hood fuse/relay box and the under-dash fuse/relay box.

12. Measure voltage between PGM-FI main relay 2 (FUEL PUMP) 4P connector terminal No. 1 and body ground.

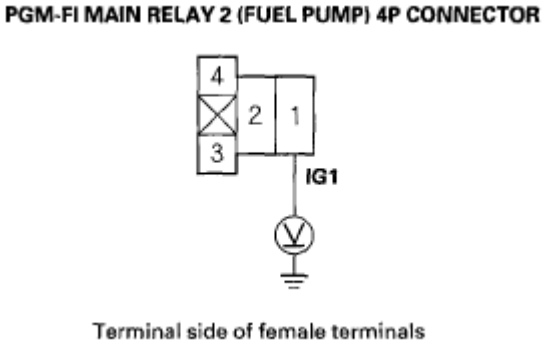

Fig. 14: Measuring Voltage Between PGM-FI Main Relay 2 (FUEL PUMP) 4P Connector Terminal No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 13.

NO -

- Check the No. 2 FUEL PUMP (15 A) fuse in the under-dash fuse/relay box.
- If needed, replace the under-dash fuse/relay box (see **REMOVAL AND INSTALLATION**).

13. Turn the ignition switch OFF.
14. Connect PGM-FI main relay 2 (FUEL PUMP) 4P connector terminal No. 3 to body ground with a jumper wire.

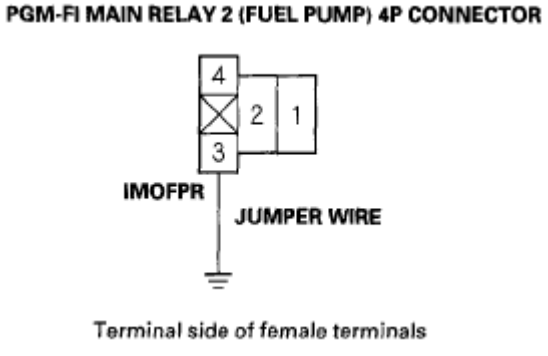

Fig. 15: Connecting PGM-FI Main Relay 2 (FUEL PUMP) 4P Connector Terminal No. 3 To Body Ground With Jumper Wire

Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Jump the SCS line with the HDS.
16. Disconnect ECM/PCM connector A (44P).
17. Check for continuity between body ground and ECM/PCM connector terminal A15.

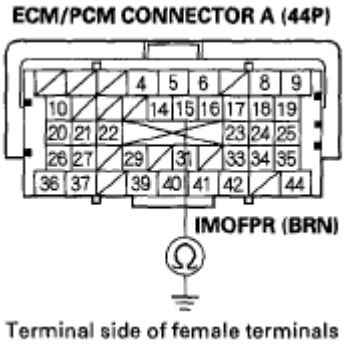

Fig. 16: Checking Continuity Between Body Ground And ECM/PCM Connector Terminal A15
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 18.

NO - Repair open in the wire between PGM-FI main relay 2 (FUEL PUMP) and the ECM/PCM (A15).

18. Remove the under-dash fuse/relay box (see **REMOVAL AND INSTALLATION**), then reinstall PGM-FI main relay 2 (FUEL PUMP).
19. Reinstall the under-dash fuse/relay box (see **REMOVAL AND INSTALLATION**).
20. Connect ECM/PCM connector terminal A6 to body ground with a jumper wire.

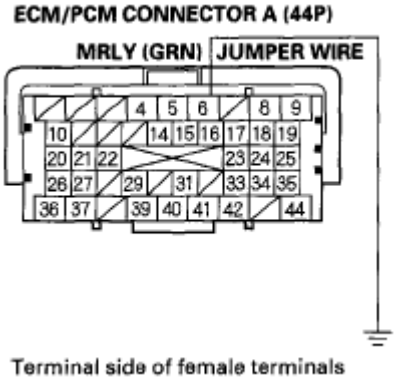

Fig. 17: Connecting ECM/PCM Connector Terminal A6 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Turn the ignition switch ON (II).
22. Measure voltage between ECM/PCM connector terminal A15 and body ground.

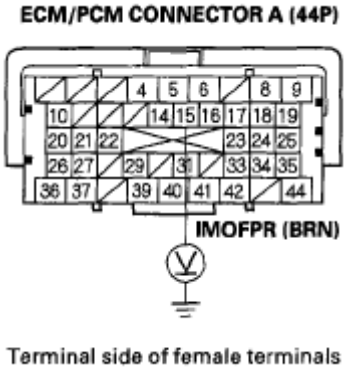

Fig. 18: Measuring Voltage Between ECM/PCM Connector Terminal A15 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 23.

NO - Replace PGM-FI main relay 2 (FUEL PUMP).

23. Turn the ignition switch OFF.
24. Reconnect ECM/PCM connector A (44P).
25. Open the SCS line with the HDS.
26. Turn the ignition switch OFF.
27. Turn the ignition switch ON (II), and measure voltage between under-dash fuse/relay box connector F (34P) terminal No. 10 and body ground within 2 seconds.

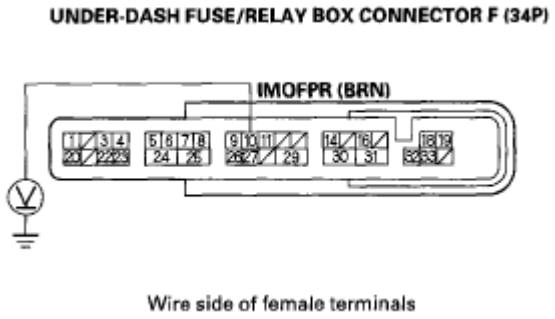

Fig. 19: Measuring Voltage Between Fuse/Relay Box Connector F (34P) Terminal No. 10 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Update the ECM/PCM if it does not have the latest software (see **UPDATING ECM/PCM**), or substitute a known-good ECM/PCM (see **SUBSTITUTING THE ECM/PCM**), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see **ECM/PCM REPLACEMENT**).

NO - Go to step 28.

28. Turn the ignition switch ON (II), and measure voltage between under-dash fuse/relay box connector F (34P) terminal No. 10 and body ground after 2 seconds.

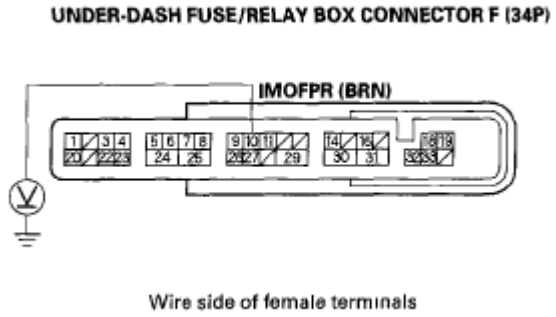

Fig. 20: Measuring Voltage Between Fuse/Relay Box Connector F Terminal No. 10 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 29.

NO - If needed, replace the under-dash fuse/relay box (see **REMOVAL AND INSTALLATION**), then go to step 29.

29. Turn the ignition switch OFF.
30. Remove the rear seat cushion (see **REAR SEAT REMOVAL/INSTALLATION**).
31. Remove the rear floor upper cross-member, then remove the access panel from the floor (see **FUEL TANK UNIT REMOVAL/INSTALLATION**).
32. Turn the ignition switch ON (II), and measure voltage between fuel tank unit 4P connector terminal No. 2 and body ground within 2 seconds.

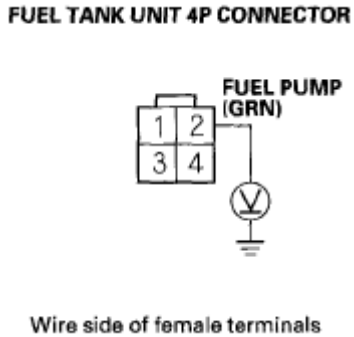

Fig. 21: Measuring Voltage Between Fuel Tank Unit 4P Connector Terminal No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 37.

NO - Go to step 33.

33. Turn the ignition switch OFF.
34. Remove PGM-FI main relay 2 (FUEL PUMP).
35. Connect PGM-FI main relay 2 (FUEL PUMP) 4P connector terminals No. 1 and No. 2 with a jumper wire.

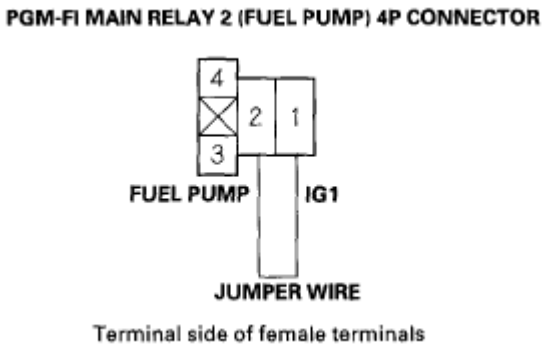

Fig. 22: Connecting PGM-FI Main Relay 4P Connector Terminals No. 1 And 2 With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

36. Turn the ignition switch ON (II), and measure voltage between fuel tank unit 4P connector terminal No. 2 and body ground within 2 seconds.

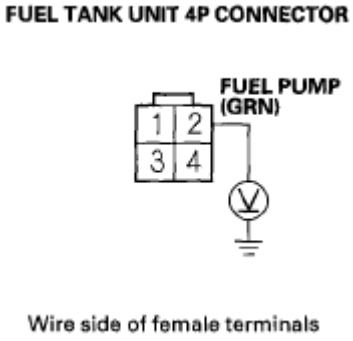

Fig. 23: Measuring Voltage Between Fuel Tank Unit 4P Connector Terminal No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Replace PGM-FI main relay 2 (FUEL PUMP).

NO - Repair open in the wire between PGM-FI main relay 2 (FUEL PUMP) and the fuel tank unit 4P connector.

37. Turn the ignition switch OFF.
38. Check for continuity between fuel tank unit 4P connector terminal No. 4 and body ground.

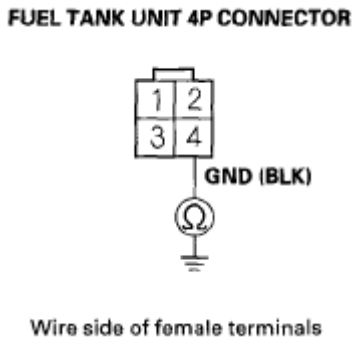

Fig. 24: Checking Continuity Between Fuel Tank Unit 4P Connector Terminal No. 4 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the fuel pump (see **FUEL PUMP/FUEL GAUGE SENDING UNIT REPLACEMENT**).

NO - Repair open in the wire between the fuel tank unit 4P connector and G601; 4-door (see **CONNECTOR TO HARNESS INDEX**), 2-door (see **CONNECTOR TO HARNESS INDEX**).

FUEL PRESSURE RELIEVING

Before disconnecting fuel lines or hoses, relieve pressure from the system by disabling the fuel pump and disconnecting the fuel tube/quick connect fitting in the engine compartment.

WITH THE HDS

1. Make sure you have the anti-theft code for the audio system or the navigation system (if equipped).
2. Turn the ignition switch OFF.
3. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

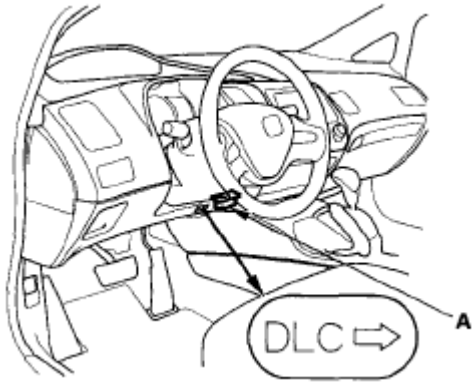

Fig. 25: Connecting HDS To DLC
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Turn the ignition switch ON (II).

5. Make sure the HDS communicates with the ECM/PCM and other vehicle systems. If it doesn't, go to the DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**).
6. Turn the ignition switch OFF.
7. Remove the fuel fill cap to relieve the pressure in the fuel tank.
8. Turn the ignition switch ON (II).
9. From the INSPECTION MENU of the HDS, select Fuel Pump OFF, then start the engine, and let it idle until it stalls.

NOTE:

- **Do not allow the engine to idle above 1,000 rpm or the ECM/PCM will continue to operate the fuel pump.**
- **A DTC or a Temporary DTC may be set during this procedure. Check for DTCs, and clear them as needed (see HDS CLEAR COMMAND).**

10. Turn the ignition switch OFF.
11. Disconnect the negative cable from the battery.
12. Remove the quick-connect fitting cover (A).

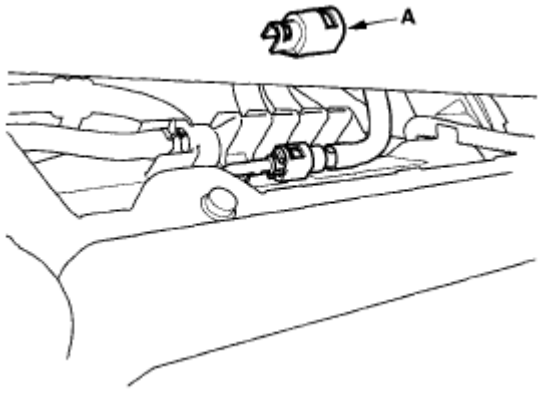

Fig. 26: Removing Quick-Connect Fitting Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Check the fuel quick-connect fitting for dirt, and clean it if needed.
14. Place a rag or shop towel over the quick-connect fitting (A).

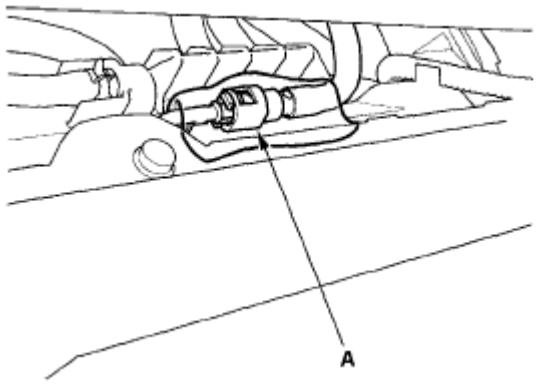

Fig. 27: Placing Rag Or Shop Towel Over Quick-Connect Fitting Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Disconnect the quick-connect fitting (A): Hold the connector (B) with one hand, and squeeze the retainer tabs (C) with the other hand to release them from the locking tabs (D). Pull the connector off.

NOTE:

- **Be careful not to damage the line (E) or other parts.**
- **Do not use tools.**
- **If the connector does not move, keep the retainer tabs pressed down, and alternately pull and push the connector until it comes off easily.**
- **Do not remove the retainer from the line; once removed, the retainer must be replaced with a new one.**

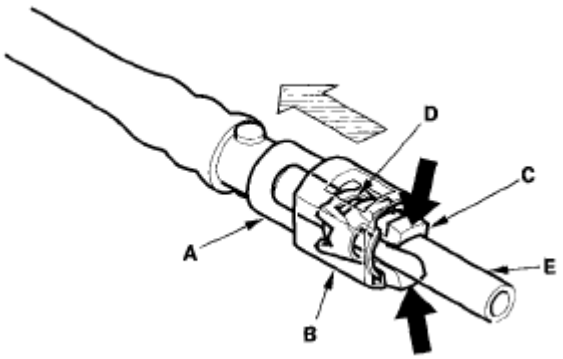

Fig. 28: Disconnecting Quick-Connect Fitting
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. After disconnecting the quick-connect fitting, check it for dirt or damage (see step 4 in **FUEL LINE/QUICK-CONNECT FITTING REMOVAL**).
17. Reconnect the negative cable to the battery, then do this:
18. Enter the anti-theft code for the audio system or the navigation system (if equipped), then enter the audio presets. Set the clock (on vehicles without navigation).

WITHOUT THE HDS

1. Remove the under-dash fuse/relay box (see **REMOVAL AND INSTALLATION**), then remove PGM-FI main relay 2 (FUEL PUMP) (A) from the under-dash fuse/relay box.

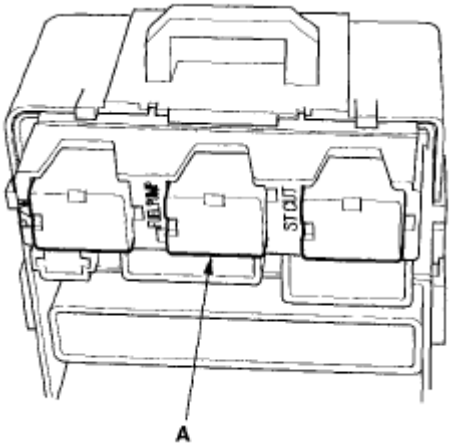

Fig. 29: Removing PGM-FI Main Relay (Fuel Pump)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Reinstall the under-dash fuse/relay box.
3. Start the engine, and let it idle until it stalls.

NOTE: If any DTCs are stored, clear and ignore them.

4. Turn the ignition switch OFF.
5. Remove the fuel fill cap.
6. Disconnect the negative cable from the battery.
7. Remove the quick-connect fitting cover (A).

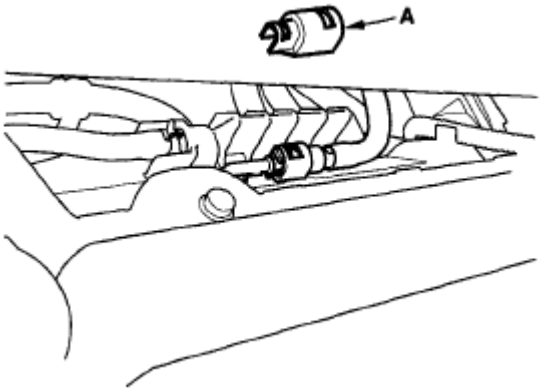

Fig. 30: Removing Quick-Connect Fitting Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Check the fuel quick-connect fitting for dirt, and clean it if needed.
9. Place a rag or shop towel over the quick-connect fitting (A).

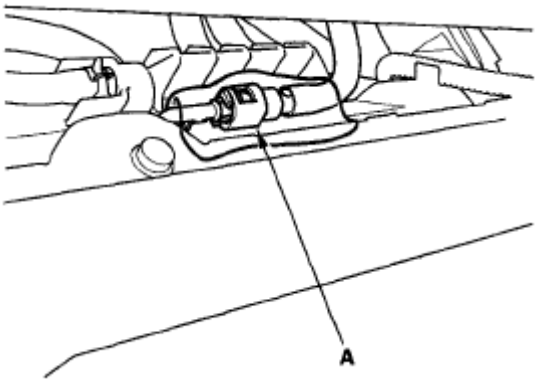

Fig. 31: Placing Rag Or Shop Towel Quick-Connect Fitting Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Disconnect the quick-connect fitting (A): Hold the connector (B) with one hand, and squeeze the retainer tabs (C) with the other hand to release them from the locking tabs (D). Pull the connector off.

NOTE:

- **Be careful not to damage the line (E) or other parts.**
- **Do not use tools.**
- **If the connector does not move, keep the retainer tabs pressed down, and alternately pull and push the connector until it comes off easily.**
- **Do not remove the retainer from the line; once removed, the retainer must be replaced with a new one.**

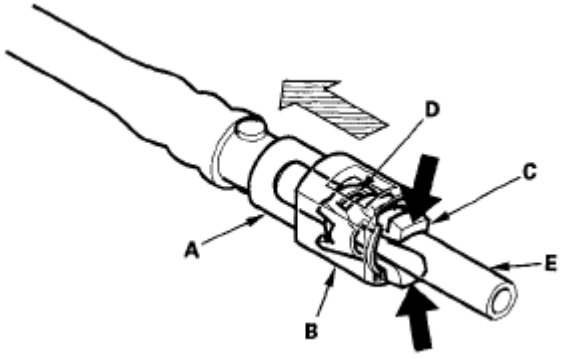

Fig. 32: Disconnecting Quick-Connect Fitting
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. After disconnecting the quick-connect fitting, check it for dirt or damage (see step 4 in **FUEL LINE/QUICK-CONNECT FITTING REMOVAL**).
12. Reconnect the negative cable to the battery, then do this:
13. Enter the anti-theft code for the audio system or the navigation system (if equipped), then enter the audio presets. Set the clock (on vehicles without navigation).

FUEL PRESSURE TEST

Special Tools Required

- Fuel pressure gauge 07406-004000B
- Fuel pressure gauge attachment set 07AAJ-S6MA150

1. Relieve the fuel pressure (see **FUEL PRESSURE RELIEVING**).
2. Disconnect the quick-connect fitting. Attach the fuel pressure gauge set and the fuel pressure gauge.

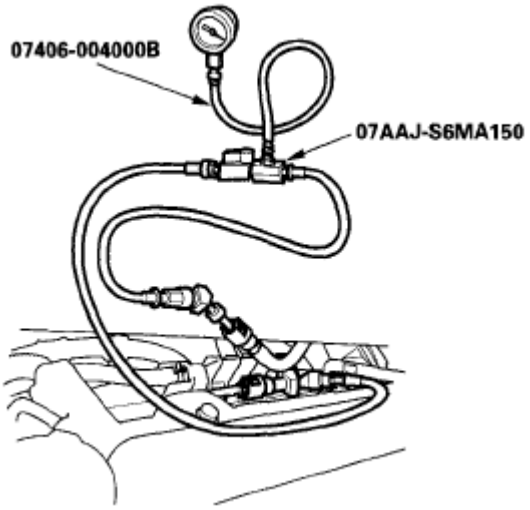

Fig. 33: Attaching Fuel Pressure Gauge Set And Fuel Pressure Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Start the engine, and let it idle.
   - If the engine starts, go to step 5.
   - If the engine does not start, go to step 4.
4. Check to see if the fuel pump is running: Listen to the fuel filler port with the fuel fill cap removed. The fuel pump should run for 2 seconds when the ignition switch is first turned on.
   - If the pump runs, go to step 5.
   - If the pump does not run, do the fuel pump circuit troubleshooting (see **FUEL PUMP CIRCUIT TROUBLESHOOTING**).
5. Read the fuel pressure gauge. The pressure should be 380-430 kPa (3.9-4.4 kgf/cm^2 , 55-63 psi).
   - If the pressure is OK, the test is complete.
   - If the pressure is out of specification, replace the fuel pressure regulator (see **FUEL PRESSURE REGULATOR REPLACEMENT**) and the fuel filter (see **FUEL PRESSURE REGULATOR REPLACEMENT**), then recheck the fuel pressure.

FUEL TANK DRAINING

1. Remove the fuel tank unit (see **FUEL TANK UNIT REMOVAL/INSTALLATION**).
2. Using a hand pump, a hose, and a container suitable for fuel, draw the fuel from the fuel tank.
3. Reinstall the fuel tank unit (see **INSTALLATION**).

FUEL LINE INSPECTION

Check the fuel system lines and hoses for damage, leaks, and deterioration. Replace any damaged parts.

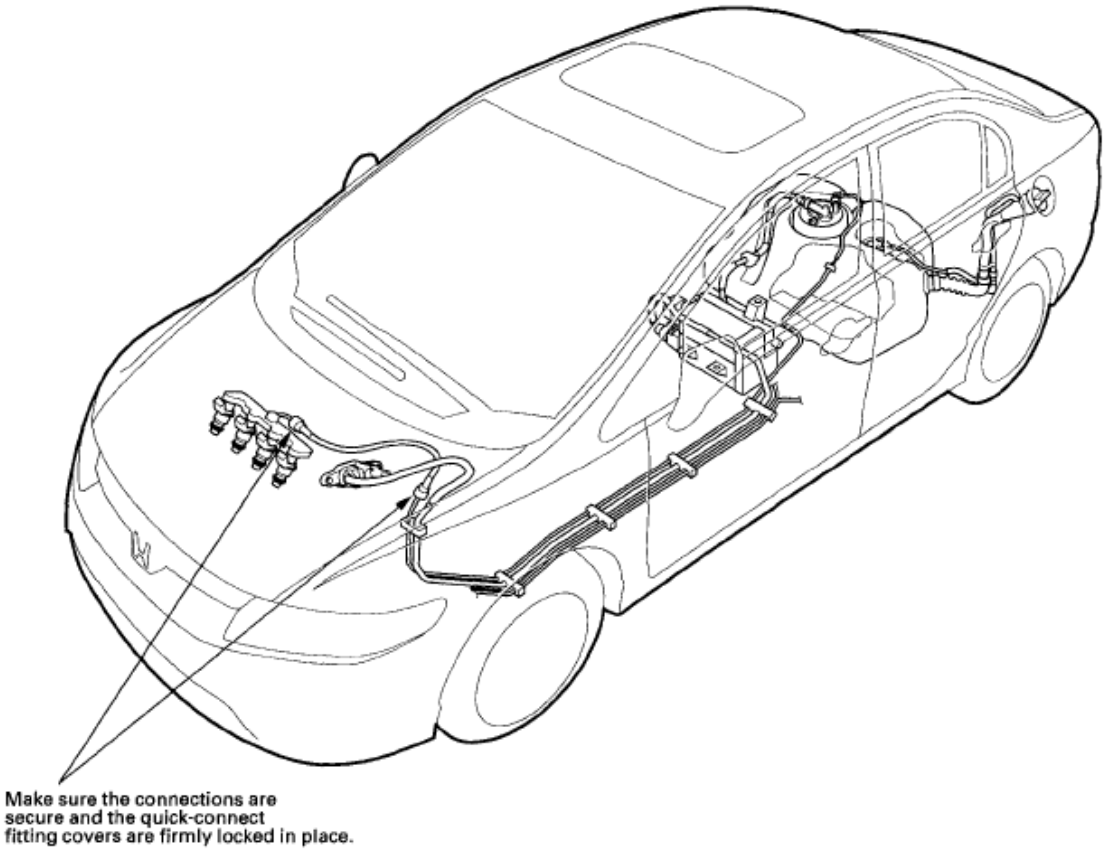

Fig. 34: Checking Fuel System Lines And Hoses
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Check all clamps, and make sure they are properly positioned and tightened.

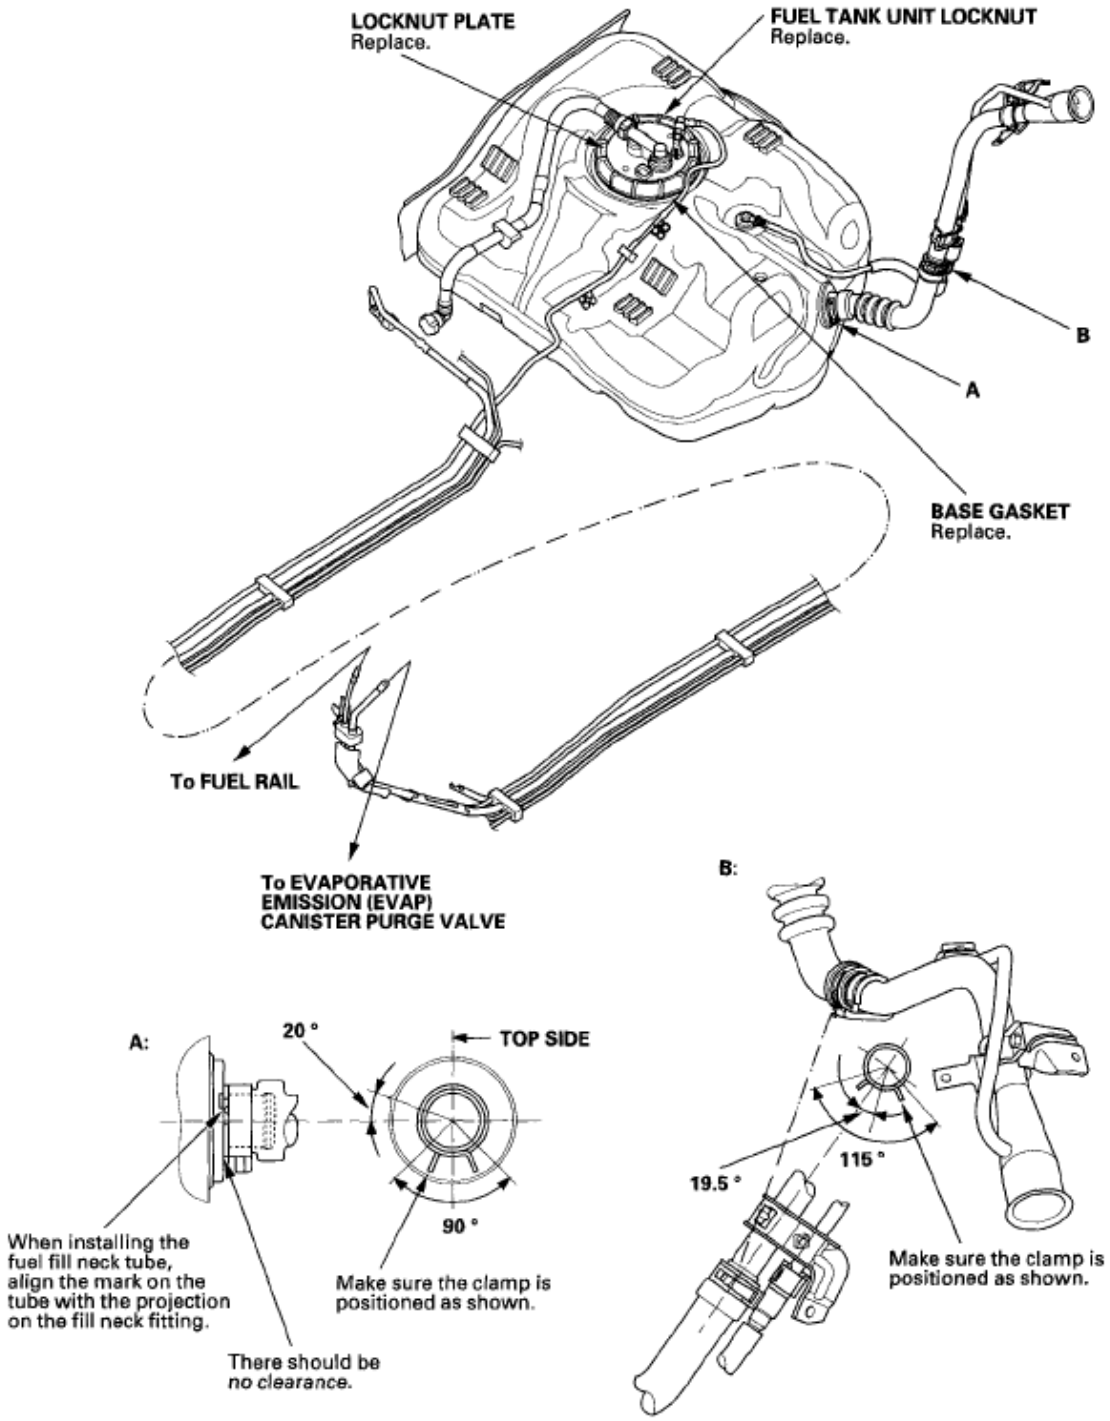

Fig. 35: Checking All Clamps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FUEL LINE/QUICK-CONNECT FITTING PRECAUTIONS

The fuel line/quick-connect fittings (A), (B), (C), and (D) connect the fuel rail (E) to the fuel feed hose (F), the fuel feed hose to the fuel line (G), the fuel line (H) to the fuel tank unit (I), the fuel vapor line (J) to the EVAP canister (K), and the fuel tank vapor recirculation tube (L) to the fuel fill pipe (M). When removing or installing the fuel feed hose, the fuel tank unit, or the fuel tank, it is necessary to disconnect or connect the quick-connect fittings. Pay attention to the following:

- The fuel feed hoses, fuel line, and quick-connect fittings are not heat-resistant; be careful not to damage them during welding or other heat-generating procedures.
- The fuel feed hoses, fuel line, and quick-connect fittings are not acid-proof; do not touch them with a shop towel that was used for wiping battery electrolyte. Replace them if they come in contact with electrolyte or something similar.
- When connecting or disconnecting the fuel feed hoses, fuel line, and quick-connect fittings, be careful not to bend or twist them excessively. Replace them if they are damaged.

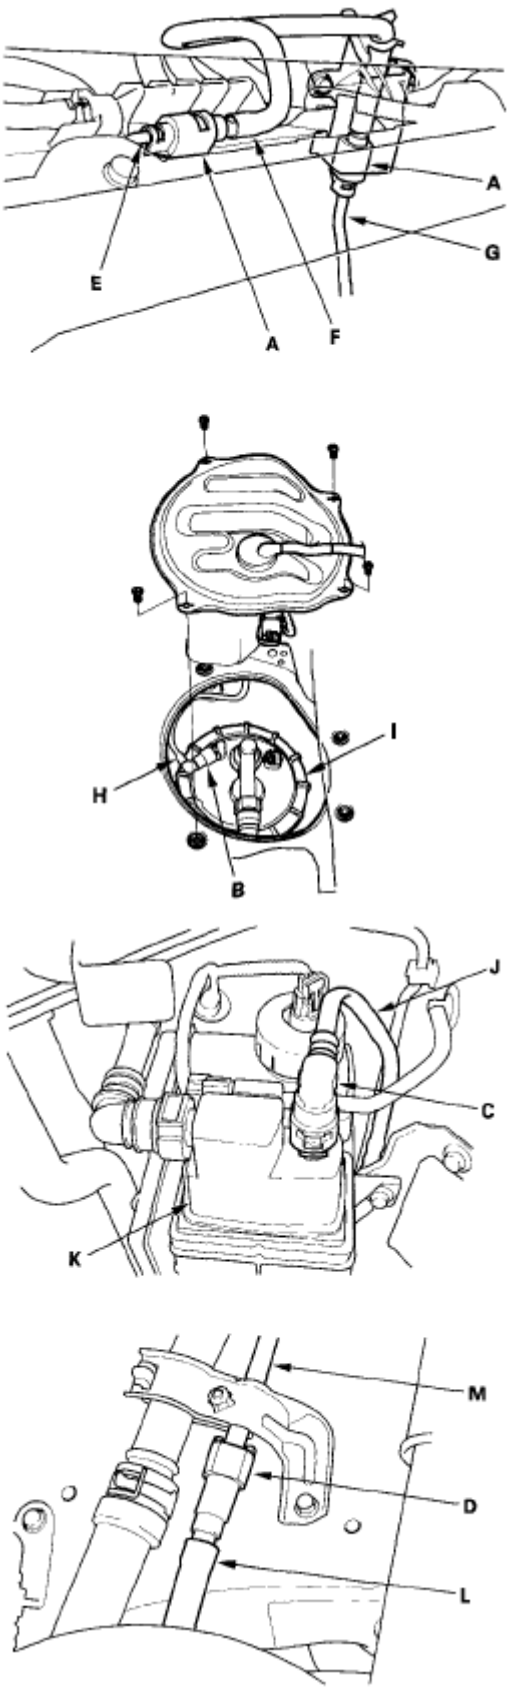

Fig. 36: Precautions For Fuel Line/Quick-Connect Fitting
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A disconnected quick-connect fitting can be reconnected, but the retainer on the mating line cannot be reused once it has been removed from the line. Replace the retainer when:

- replacing the fuel rail.
- replacing the fuel line.
- replacing the fuel pump.
- replacing the fuel filter.
- replacing the fuel gauge sending unit.
- replacing the EVAP purge line.
- replacing the EVAP canister.
- replacing the fuel tank.
- replacing the fuel fill pipe.
- it has been removed from the line.
- it is damaged.

FUEL LINE/QUICK-CONNECT FITTING

Location	Manufacturer	Retainer color	Line diameter
A	Tokai	Green	0.25 in. (6.3 mm)
B	Sanoh	White	0.4 in. (9.5 mm)
C	Sanoh	White	0.5 in. (12 mm)
D	Tokai	Natural	0.5 in. (12 mm)

FUEL LINE/QUICK-CONNECT FITTING REMOVAL

NOTE: Before you work on the fuel lines and fittings, read the "Fuel Line/Quick-Connect Fitting Precautions" (see FUEL LINE/QUICK-CONNECT FITTING PRECAUTIONS).

1. Relieve the fuel pressure (see **FUEL PRESSURE RELIEVING**).
2. Check the fuel quick-connect fittings (A) for dirt, and clean them if needed.

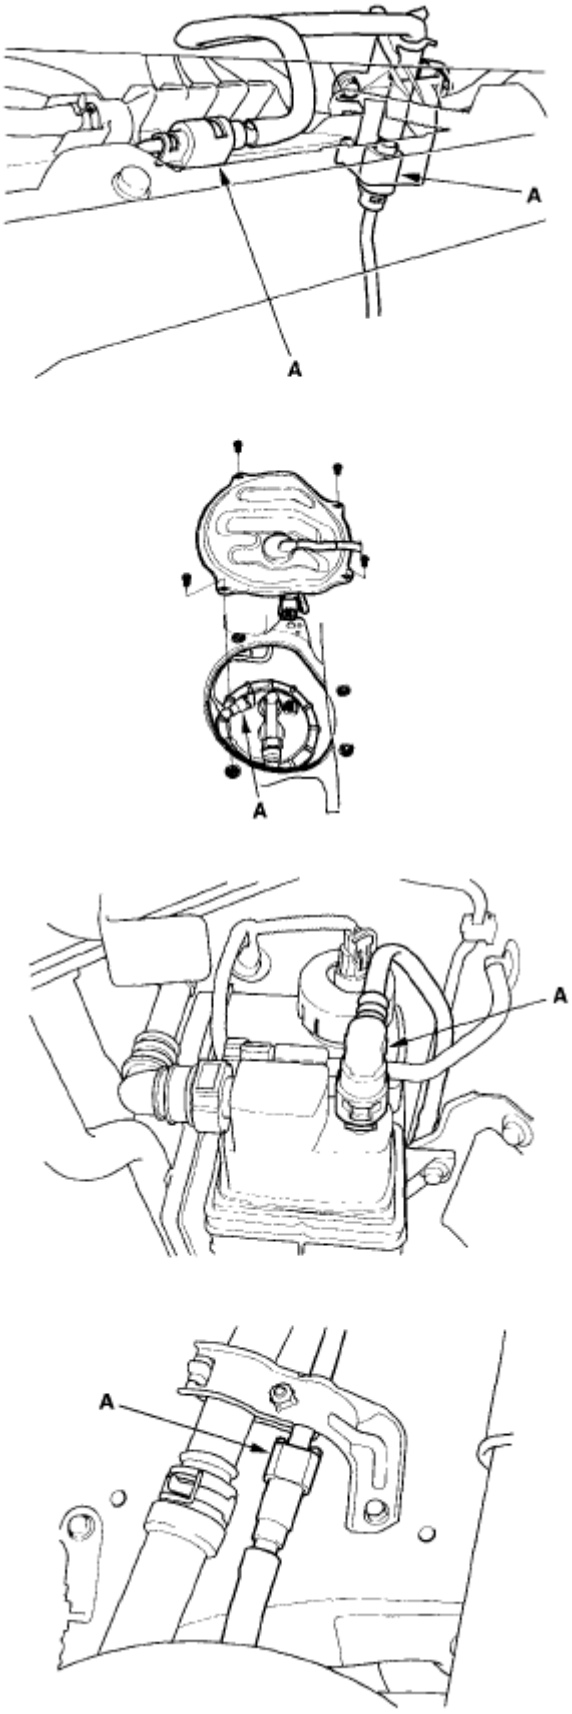

Fig. 37: Checking Fuel Quick-Connect Fittings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Place a rag or shop towel over the quick-connect fitting. Hold the connector (A) with one hand, and squeeze the retainer tabs (B) with the other hand to release them from the locking tabs (C). Pull the connector off.

NOTE:

- **Be careful not to damage the line (D) or other parts. Do not use tools.**
- **If the connector does not move, keep the retainer tabs pressed down, and alternately pull and push the connector until it comes off easily.**
- **Do not remove the retainer from the line; once removed, the retainer must be replaced with a new one.**

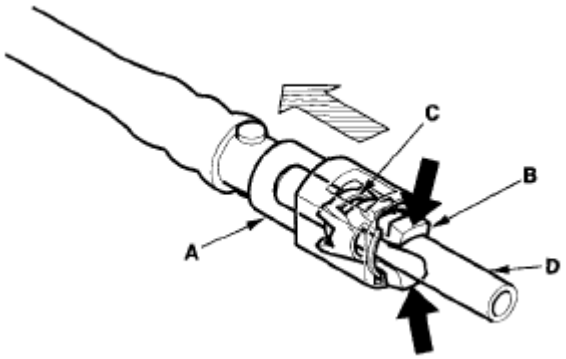

Fig. 38: Pulling Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Check the contact area (A) of the line (B) for dirt or damage.
   - If it is dirty, clean the connector with a pressure washer, and dry it with the compressed air.
   - If it is rusty or damaged, replace the fuel filter or the fuel feed line.

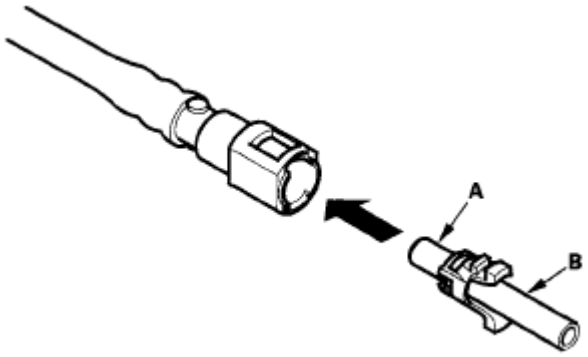

Fig. 39: Checking Contact Area Of Line
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. To prevent damage and keep foreign matter out, cover the disconnected connector and line ends with plastic bags (A).

NOTE: **The retainer cannot be reused once it has been removed from the line. Replace the retainer when:**

- **replacing the fuel rail.**
- **replacing the fuel feed line.**
- **replacing the fuel pump.**
- **replacing the fuel filter.**
- **replacing the fuel gauge sending unit.**
- **replacing the EVAP purge pipe.**
- **replacing the EVAP canister.**
- **replacing the fuel tank.**
- **replacing the fuel fill pipe.**
- **it has been removed from the line.**
- **it is damaged.**

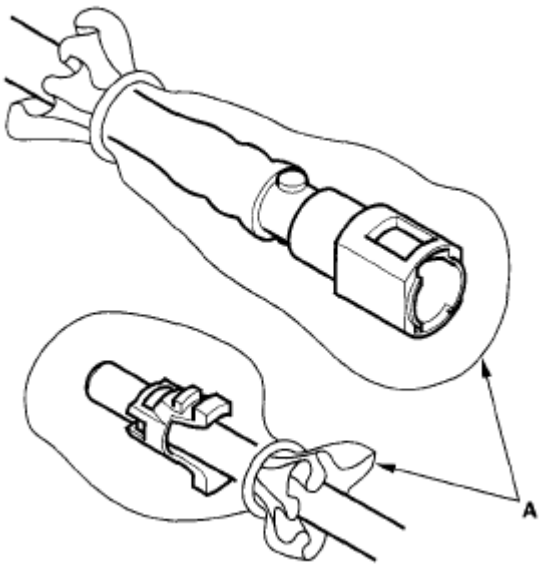

Fig. 40: Covering Connector And Line In Plastic Bags
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FUEL LINE/QUICK-CONNECT FITTING INSTALLATION

NOTE: Before you work on the fuel lines and fittings, read the "Fuel Line/Quick-Connect Fitting Precautions" (see FUEL LINE/QUICK-CONNECT FITTING PRECAUTIONS).

1. Check the contact area (A) of the line (B) for dirt or damage, and clean it if needed.

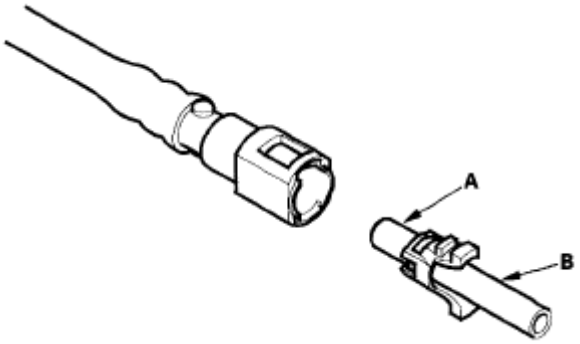

Fig. 41: Checking Contact Area And Line
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert a new retainer (A) into the connector (B) if the retainer is damaged, or after:
   - replacing the fuel rail.
   - replacing the fuel feed line.
   - replacing the fuel pump.
   - replacing the fuel filter.
   - replacing the fuel gauge sending unit.
   - replacing the EVAP purge pipe.
   - replacing the EVAP canister.
   - replacing the fuel tank.
   - replacing the fuel fill pipe.
   - removing the retainer from the line.
   - Use the same manufacturer retainer and the same size retainer when replacing the retainer (see **FUEL LINE/QUICK-CONNECT FITTING PRECAUTIONS**).

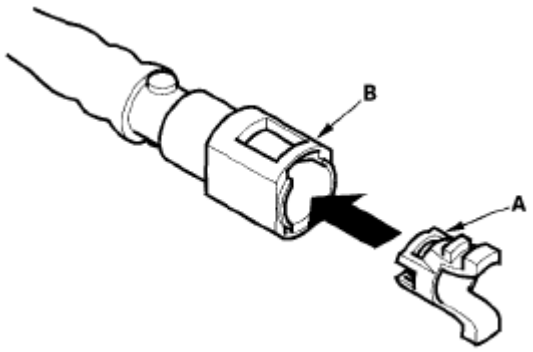

Fig. 42: Inserting Retainer Into Connector
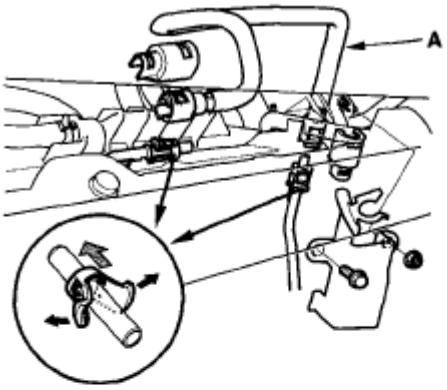
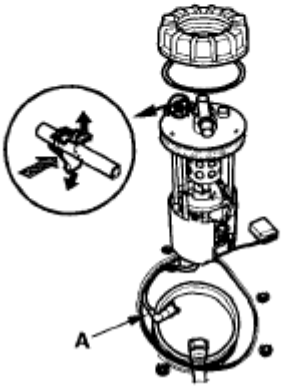
Courtesy of AMERICAN HONDA MOTOR CO., INC.

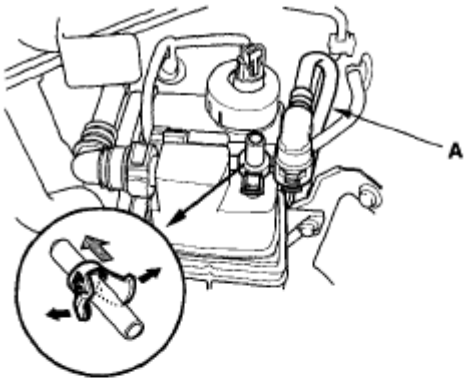
3. Before connecting a new fuel tube/quick-connect fitting assembly (A), remove the old retainer from the mating line.



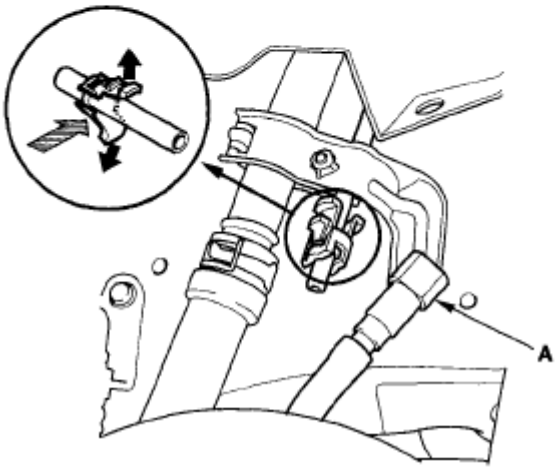
A



A



A



A

Fig. 43: Removing Old Retainer From Mating Line Before Connecting Fuel Tube/Quick-Connect Fitting Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Align the quick-connect fittings with the line (A), and align the retainer locking tabs (B) with the connector grooves (C). Then press the quick-connect fittings onto the line until both retainer tabs lock with a clicking sound.

NOTE: If it is hard to connect, put a small amount of new engine oil on the line end.

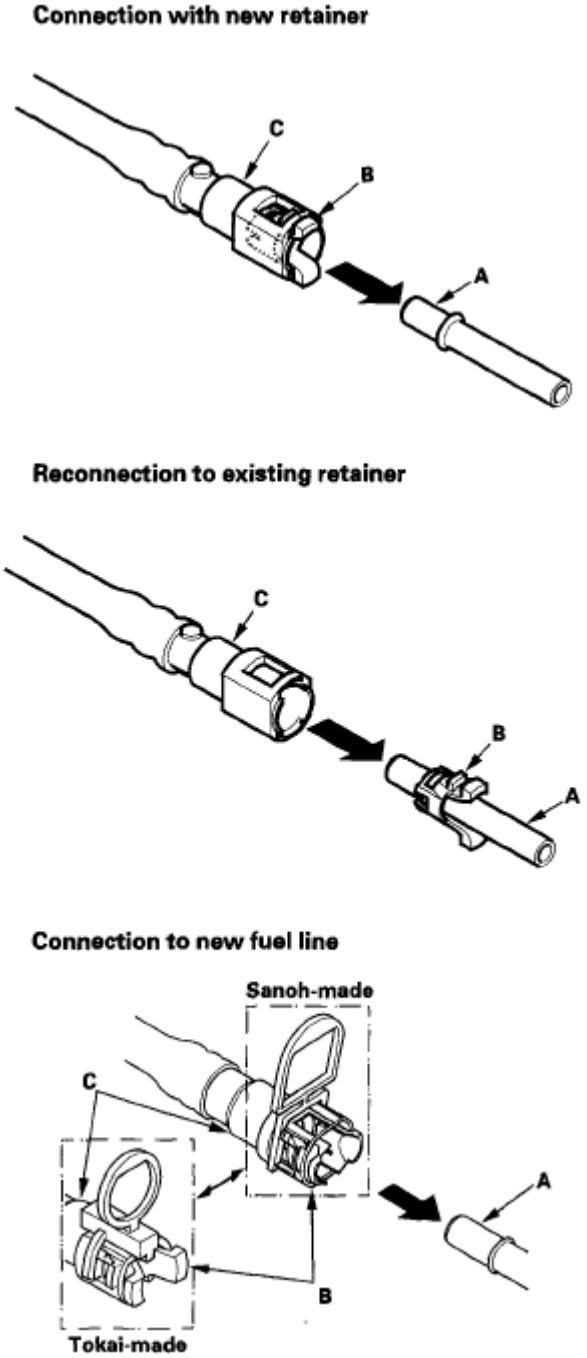


Fig. 44: Aligning Quick-Connect Fittings With Line And Retainer Locking Tabs With

Connector Grooves
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. When you reconnect the connector with the old retainer, make sure the connection is secure and the tabs are firmly locked into place; check visually and also by pulling the connector. When you replace the fuel line with a new one, make sure you remove the ring pull upwards after you confirm the connection is secure.

NOTE: Before you remove the ring pull, make sure the fuel line connection is secure. If the connection is not secure, the ring pull could break when you try to remove it.

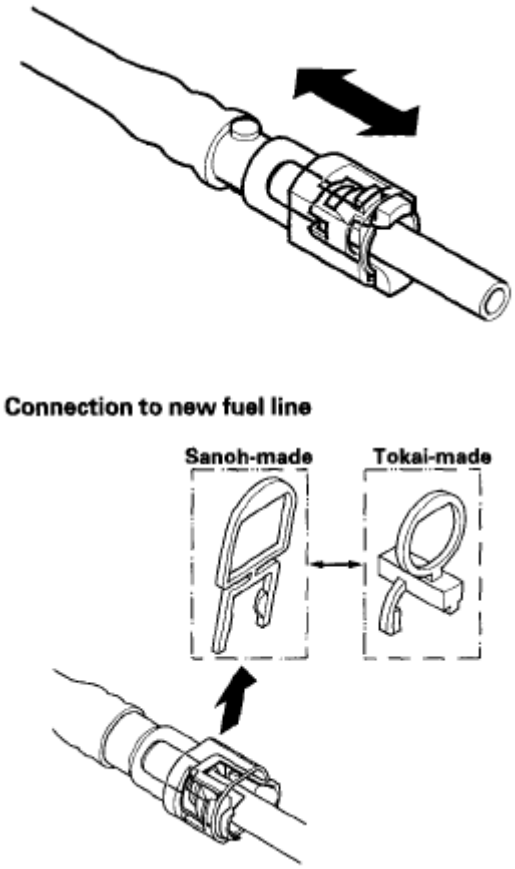

Fig. 45: Making Sure Connection Is Secure And Tabs Are Firmly Locked Into Place
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Reconnect the negative cable to the battery, and turn the ignition switch ON (II) (but do not operate the starter motor). The fuel pump will run for about 2 seconds, and fuel pressure will rise. Repeat this two or three times, and check that there is no leakage in the fuel supply system.

FUEL TANK UNIT REMOVAL/INSTALLATION

Special Tools Required

Fuel pump module locknut wrench 07AAA-SNAA100

REMOVAL

1. Relieve the fuel pressure (see **FUEL PRESSURE RELIEVING**).
2. Remove the rear seat cushion (see **REAR SEAT REMOVAL/INSTALLATION**).
3. Remove the rear floor upper cross-member (A).

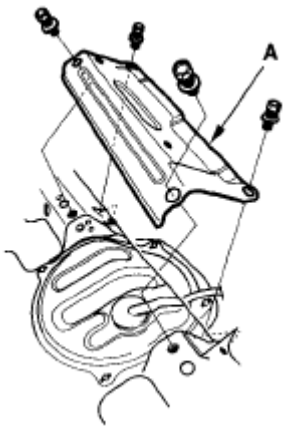

Fig. 46: Removing Rear Floor Upper Cross-Member Bolt And Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the access panel (A) from the floor.

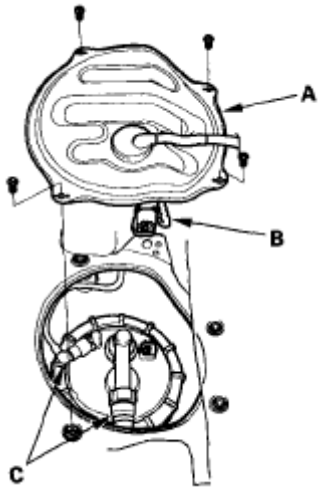

Fig. 47: Removing Access Panel From Floor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the fuel tank unit 4P connector (B).
6. Disconnect the quick-connect fittings (C) from the fuel tank unit.
7. Using the special tool, loosen the locknut (A).

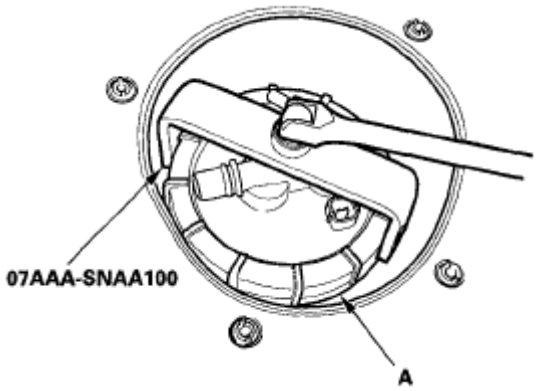

Fig. 48: Loosening Locknut Using Special Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the locknut (A) and the fuel tank unit (B).

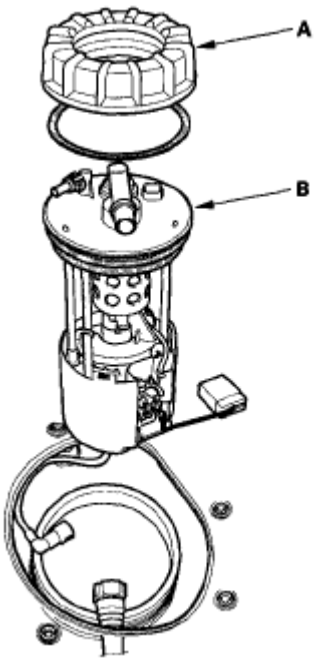

Fig. 49: Identifying Locknut And Fuel Tank Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Temporarily attach a new base gasket (A) to the fuel tank unit (B), then insert the fuel tank unit partially into the fuel tank.
   - Be careful not to damage a new base gasket.
   - Be careful not to bend the fuel gauge sending unit.
   - Do not coat the base gasket with oil.

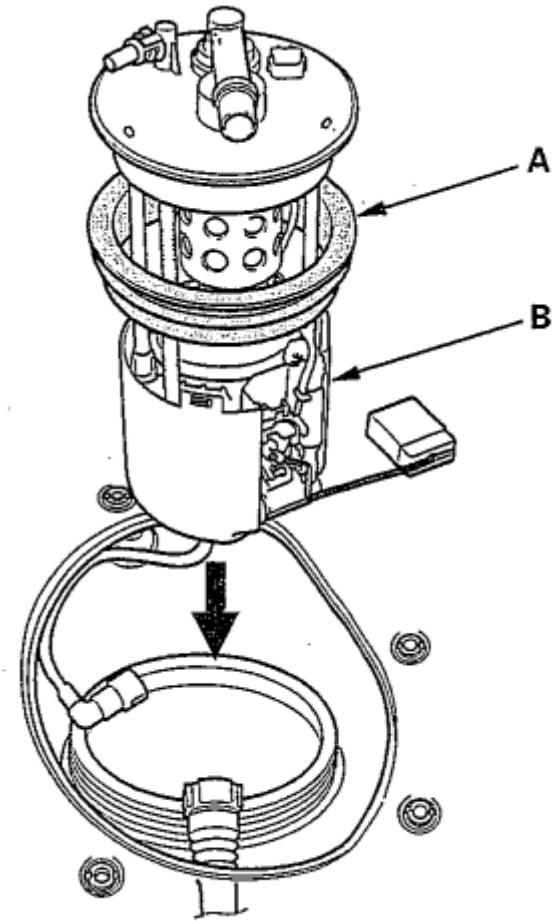

Fig. 50: Identifying Base Gasket And Fuel Tank Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transfer the base gasket (A) from the fuel tank unit onto the fuel tank.

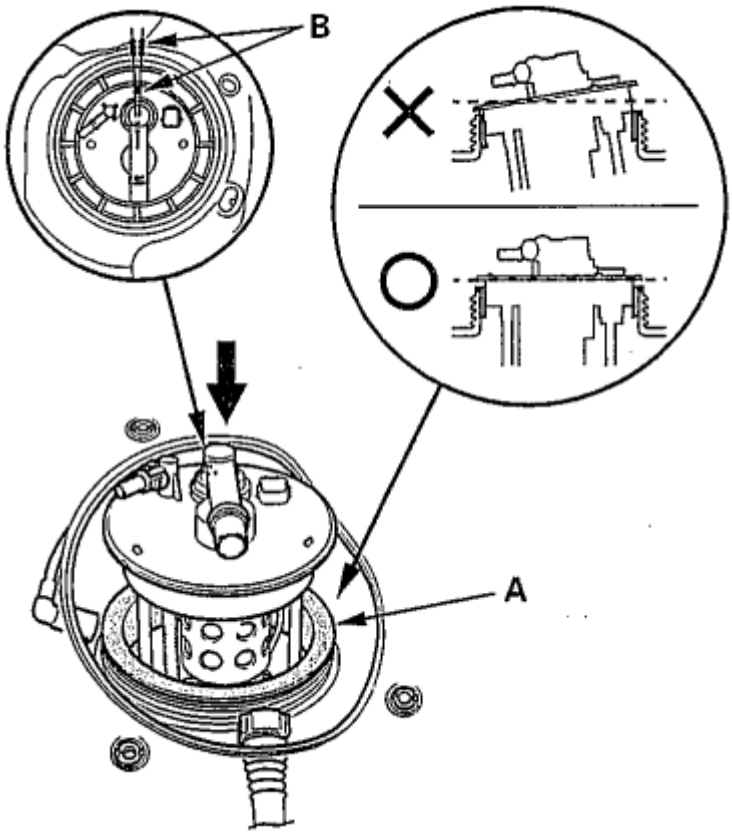

Fig. 51: Identifying Base Gasket From The Fuel Tank, Alignment Marks And Fuel Tank
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Align the marks (B) on the fuel tank and the fuel tank unit, then insert the fuel tank unit into the fuel tank until it sits on the base gasket.

NOTE: To prevent a fuel leak, check the base gasket, visually or by hand, to make sure it is not pinched

4. Install the new locknut plate (A) and the new locknut (B).

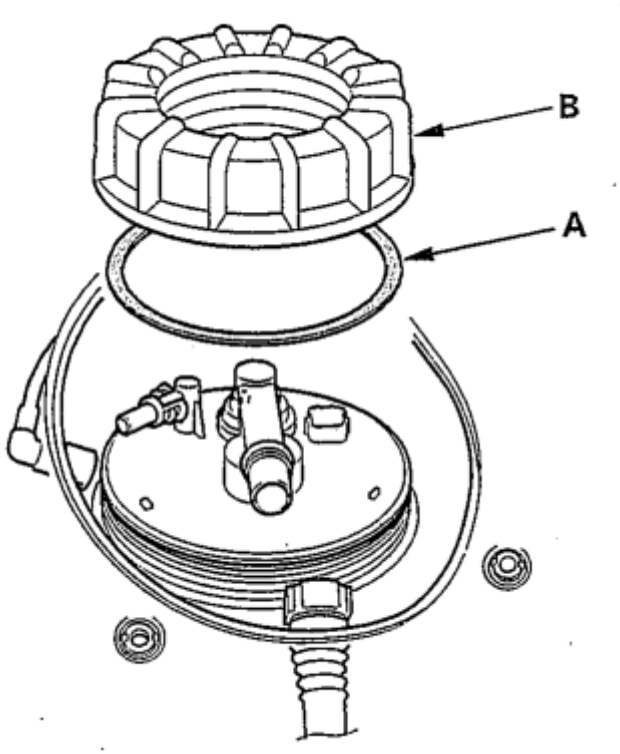

Fig. 52: Identifying Locknut Plate And The Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Using the special tool, tighten a locknut (A) to the specified torque.
   - After tightening, make sure the marks are still aligned.
   - After installation, check the base gasket, visually o by hand, to make sure it is not pinched.

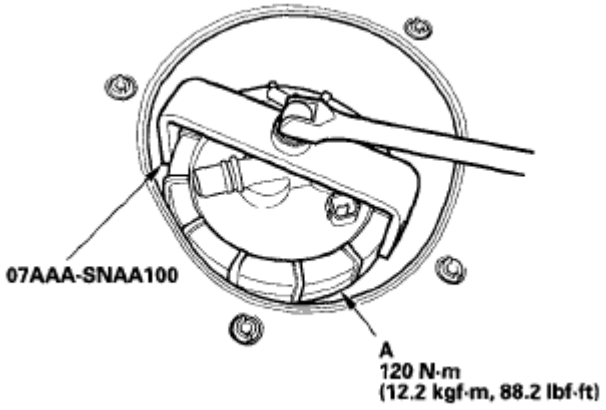

Fig. 53: Tightening Fuel Tank Unit Locknut (With Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Connect the fuel tank unit 4P connector, then connect the quick-connect fitting.
7. Reconnect the negative cable to the battery, and turn the ignition switch ON (II) (but do not operate the starter motor). The fuel pump will run for about 2 seconds, and fuel pressure will rise. Repeat this two or three times, then check that there is no leakage in the fuel supply system.
8. Install the access panel (A) to the floor.

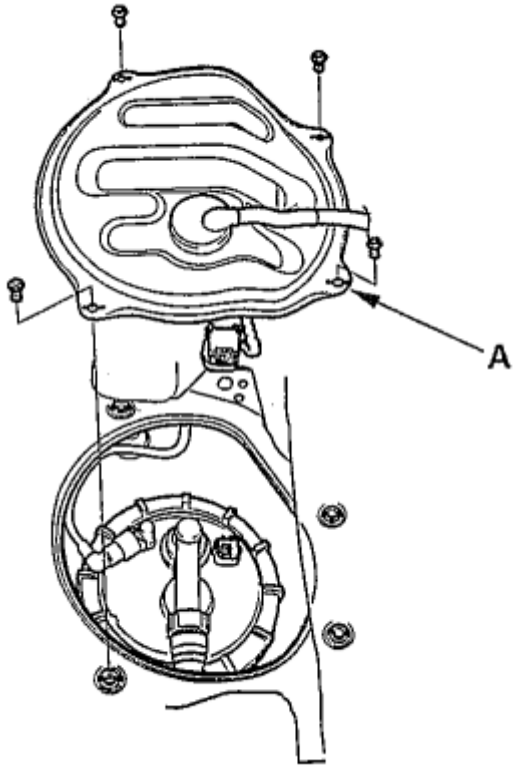

Fig. 54: Installing The Access Panel To The Floor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the rear floor upper cross-member (A).

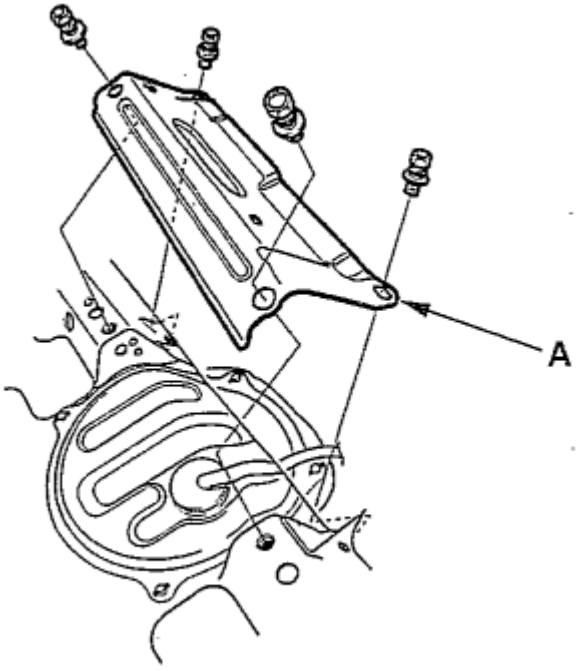

Fig. 55: Installing The Rear Floor Upper Cross-Member
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the rear seat cushion (see **SEAT CUSHION**)
11. Install the fuel fill cap.

FUEL PRESSURE REGULATOR REPLACEMENT

1. Remove the fuel tank unit (see **FUEL TANK UNIT REMOVAL/INSTALLATION**).
2. Remove the bracket (A).

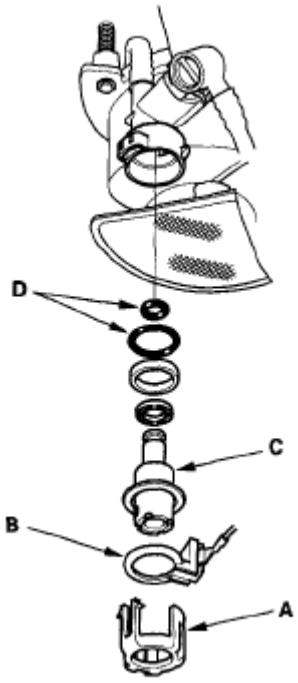

Fig. 56: Removing Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the ground ring (B).
4. Remove the fuel pressure regulator (C).
5. Install the parts in the reverse order of removal with new O-rings (D) and a new bracket (A). When installing the fuel tank unit, align the marks on the unit and the fuel tank (see **INSTALLATION**).

NOTE: Coat the O-rings with clean engine oil; do not use any other oil. Do not pinch the O-rings during installation.

FUEL FILTER REPLACEMENT

The fuel filter should be replaced whenever the fuel pressure drops below the specified value (see **FUEL PRESSURE TEST**), after making sure that the fuel pump and the fuel pressure regulator are OK.

1. Remove the fuel tank unit (see **FUEL TANK UNIT REMOVAL/INSTALLATION**).
2. Remove the fuel filter (A).

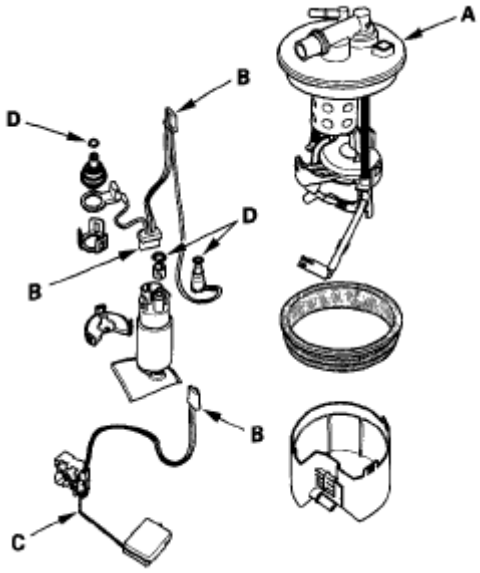

Fig. 57: Removing Fuel Filter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check these items before installing the fuel tank unit:
   - When connecting the wire harness, make sure the connection is secure and the connectors (B) are firmly locked into place.
   - When installing the fuel gauge sending unit (C), make sure the connection is secure and the connector is firmly locked into place. Be careful not to bend or twist it excessively.
4. Install the parts in the reverse order of removal with new O-rings (D). When installing the fuel tank unit, align the marks on the unit and the fuel tank (see **INSTALLATION**).

NOTE: Coat the O-rings with clean engine oil; do not use any other oil.

FUEL PUMP/FUEL GAUGE SENDING UNIT REPLACEMENT

1. Remove the fuel tank unit (see **FUEL TANK UNIT REMOVAL/INSTALLATION**).
2. Remove the fuel level sensor (fuel sending unit) (A) from the fuel tank unit (B).

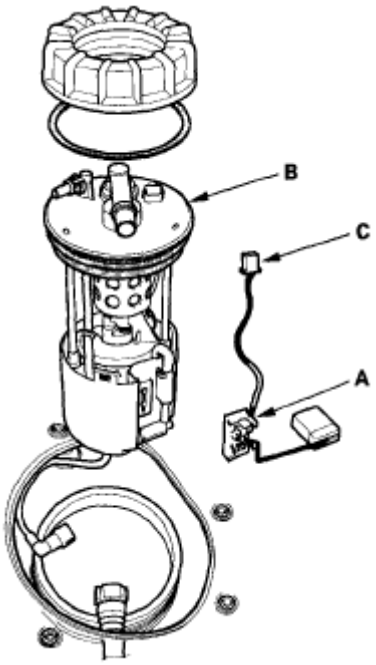

Fig. 58: Removing Fuel Level Sensor From Fuel Tank Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check these items before installing the fuel tank unit:
   - When connecting the wire harness, make sure the connection is secure and the connectors (C) are firmly locked into place.
   - When installing the fuel gauge sending unit, make sure the connection is secure and the connector is firmly locked into place. Be careful not to bend or twist it excessively.
4. Install the parts in the reverse order of removal. When installing the fuel tank unit, align the marks on the unit and the fuel tank (see **INSTALLATION**).

FUEL TANK REPLACEMENT

1. Drain the fuel tank (see **FUEL PRESSURE TEST**), then disconnect the fuel tank unit 4P connector (A) and the quick-connect fitting (B).

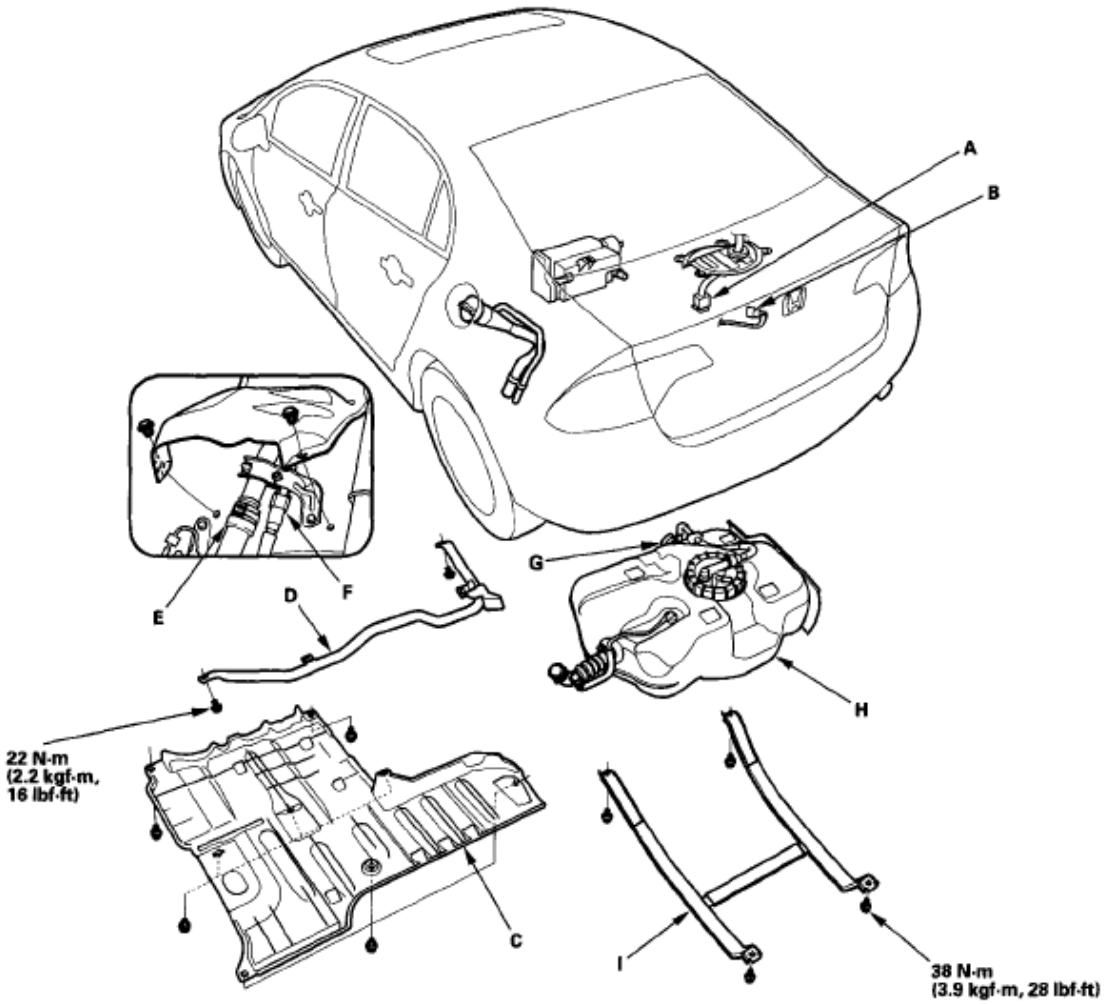

Fig. 59: Disconnecting Fuel Tank Unit 4P Connector And Quick-Connect Fitting (With Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Lift the vehicle, and support it with jackstands.
3. Remove the cover (C), and the EVAP canister guard (D).
4. Disconnect the fuel fill tube (E). Slide back the clamps, then twist the hoses as you pull to avoid damaging them.
5. Disconnect the quick-connect fitting (F) and the fuel tank vapor recirculation tube (G).
6. Place a jack or other support under the tank (H).
7. Remove the strap bolts and the strap (I).
8. Remove the fuel tank.
9. Install the parts in the reverse order of removal.

FUEL GAUGE SENDING UNIT TEST

NOTE: For the fuel gauge system circuit diagram, refer to the (see CIRCUIT DIAGRAM - GAUGE CONTROL MODULE (TACH)).

1. Check the No. 10 METER (7.5 A) fuse in the under-dash fuse/relay box before testing.
2. Check for body electrical system DTCs.
   - If no problem is found, go to step 3.
   - If DTC B1175 or B1176 is indicated, go to the indicated DTC's troubleshooting.
3. Turn the ignition switch OFF.
4. Remove the rear seat cushion (see **REAR SEAT REMOVAL/INSTALLATION**).
5. Remove the rear floor upper cross-member (A).

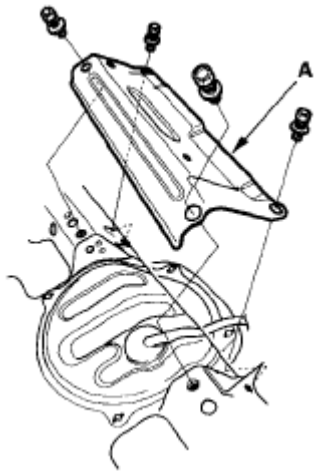

Fig. 60: Removing Rear Floor Upper Cross-Member
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the access panel (A) from the floor.

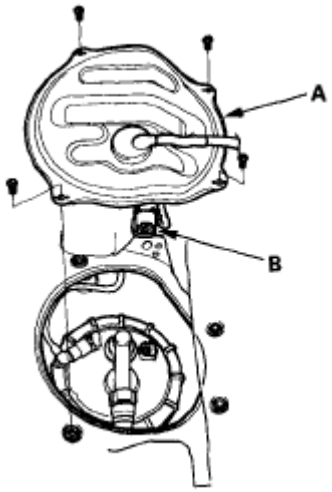

Fig. 61: Removing Access Panel From Floor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Disconnect the fuel tank unit 4P connector (B).
8. Measure voltage between fuel tank unit 4P connector terminals No. 1 and No. 3 with the ignition switch ON (II). There should be battery voltage.

- If the voltage is OK, go to step 9.
- If the voltage is not as specified, check for:
  - a short in the ORN (2-door: PUR) wire to ground.
  - an open in the ORN (2-door: PUR) or LT GRN (2-door: ORN) wire.

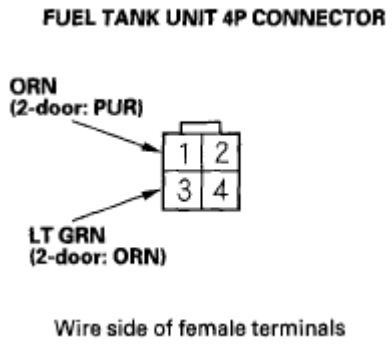

Fig. 62: Measuring Voltage Between Fuel Tank Unit 4P Connector Terminals No. 1 And 3 With Ignition Switch ON (II)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Turn the ignition switch OFF.
10. Remove the fuel tank unit from the fuel tank (see **FUEL TANK UNIT REMOVAL/INSTALLATION**).
11. Measure resistance between fuel tank unit 4P connector terminals No. 1 and No. 3 with the float at E (EMPTY), LOW (LOW FUEL INDICATOR), 1/2 (HALF FULL), and F (FULL) positions. If you do not get the following readings, replace the fuel gauge sending unit (see **FUEL PUMP/FUEL GAUGE SENDING UNIT REPLACEMENT**).

FLOAT POSITION RESISTANCE SPECIFICATION

Float Position	F 5.6 in. (139.8 mm)	1/2 2.9 in. (72.1 mm)	LOW 0.8 in. (19.5 mm)	E 0.4 in. (8.9 mm)
Resistance (ohms)	19 to 21	205.8 to 215.8	537.5 to 707	772 to 788

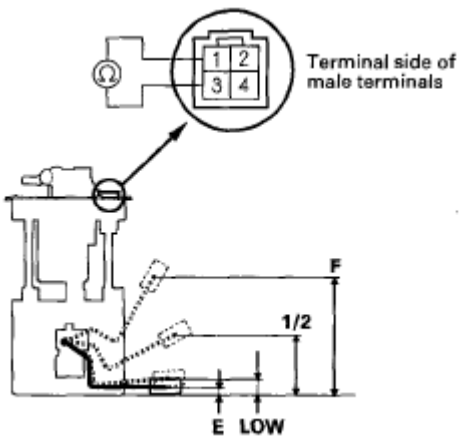

Fig. 63: Measuring Resistance Between Fuel Tank Unit 4P Connector Terminals No 1 And 3
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Reconnect the fuel tank unit 4P connector.
13. Remove the No. 23 BACK UP (10 A) fuse from the under-hood fuse/relay box for at least 10 seconds, then reinstall it.
14. Turn the ignition switch ON (II).
15. Check that the pointer of the fuel gauge indicates "F" with the float at F.
    - If the pointer of the fuel gauge does not indicate "F", replace the gauge assembly.
    - If the gauge is OK, the test is complete.

NOTE:

- **The pointer of the fuel gauge returns to the bottom of the gauge dial when the ignition switch is OFF, regardless of the fuel level.**
- **Remove the No. 23 BACK UP (10 A) fuse from the under-hood fuse/relay box for at least 10 seconds after completing troubleshooting, otherwise it may take up to 20 minutes for the fuel gauge to indicate the correct fuel level.**

LOW FUEL INDICATOR TEST

1. Do the gauge self-diagnostic function (see **SELF-DIAGNOSTIC FUNCTION**).
    - If the low fuel indicator flashes, go to step 2.
    - If the low fuel indicator does not flash, replace the gauge control module (tach) (see **TACHOMETER**).
2. Check for body electrical system DTCs.
    - If any DTCs are indicated, do the indicated DTC's troubleshooting.
    - If no DTCs are indicated, go to step 3.
3. Do the fuel gauge sending unit test (see **FUEL GAUGE SENDING UNIT TEST**).

2006-08 ENGINE

Ignition System (K20Z3) - Civic (Except Si)

COMPONENT LOCATION INDEX

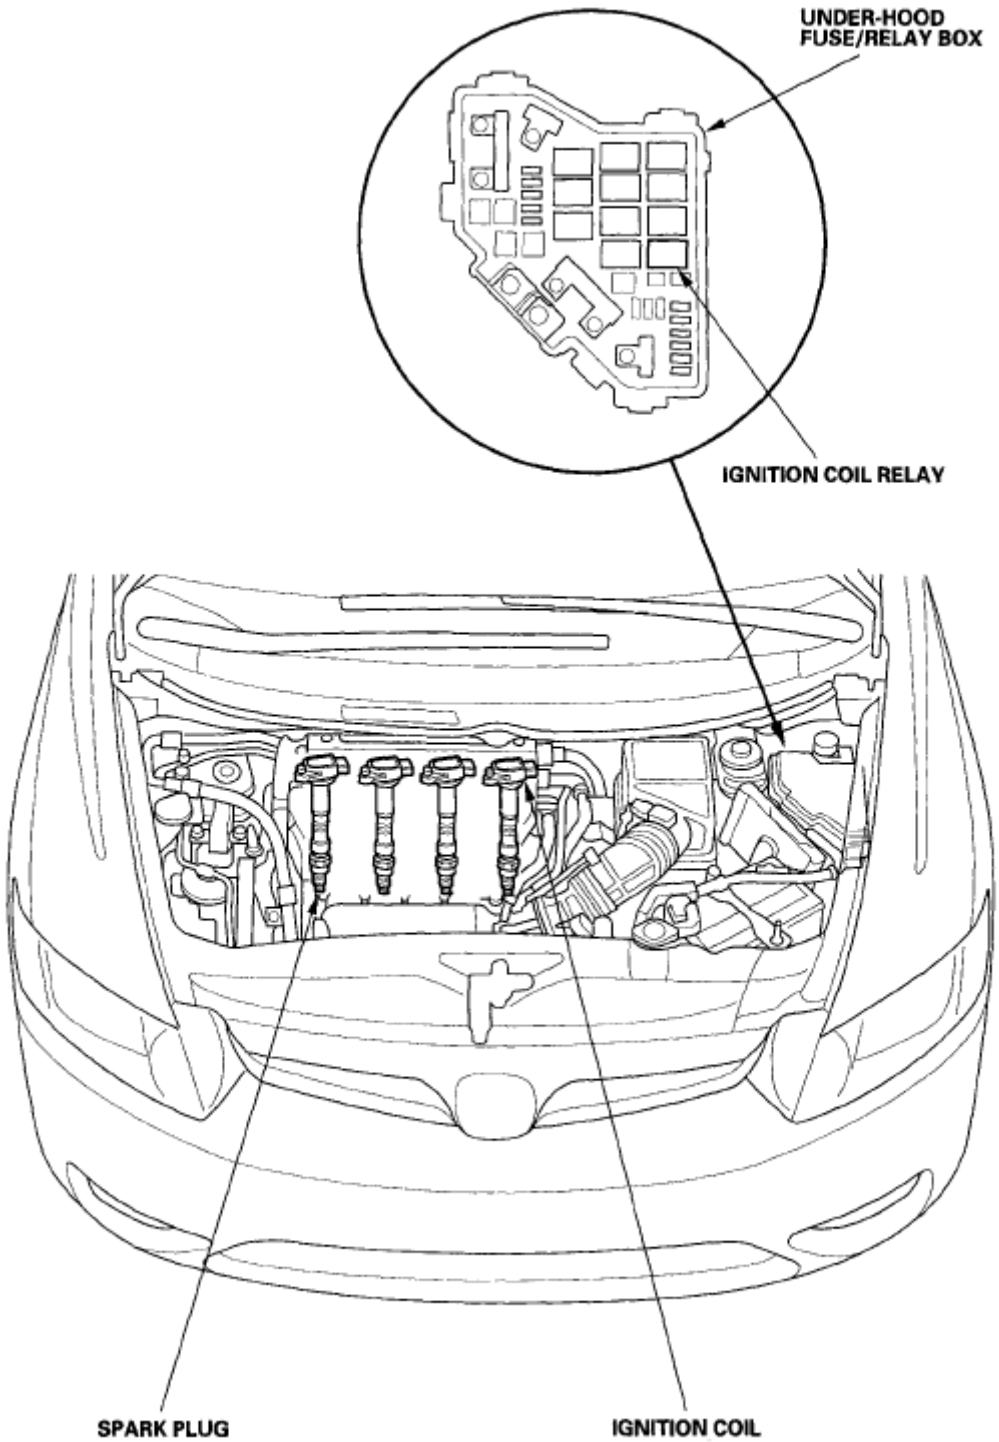

Fig. 1: Identifying Ignition System (K20Z3) Component Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CIRCUIT DIAGRAM

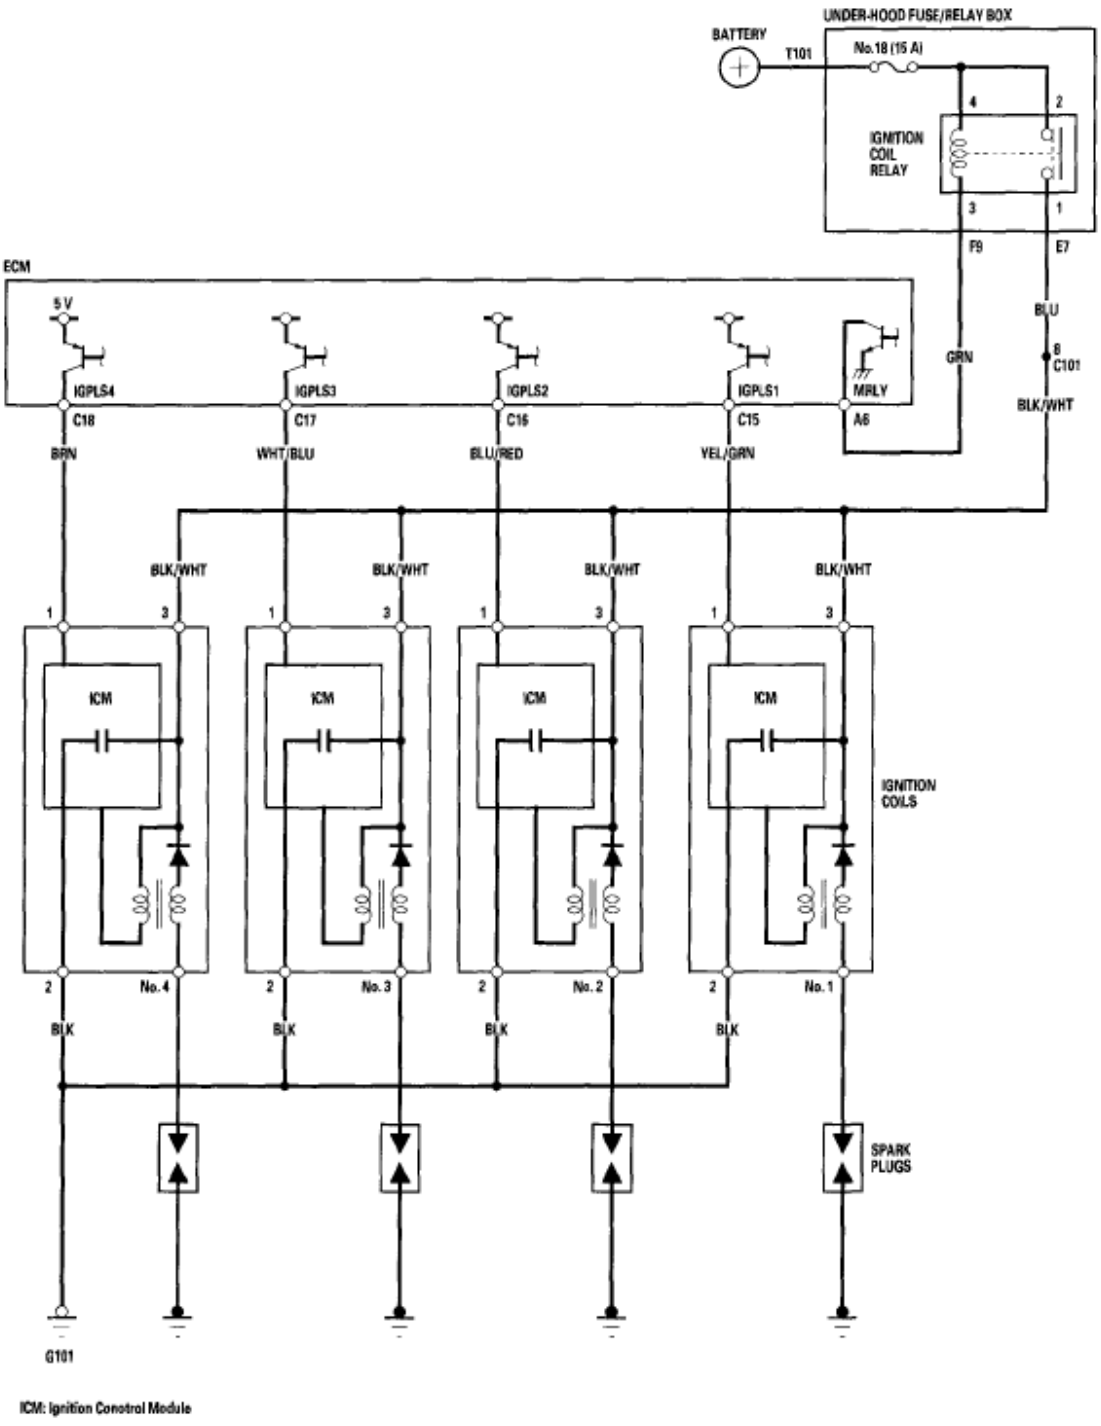

Fig. 2: Ignition System - Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

IGNITION TIMING INSPECTION

1. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 on **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
2. Turn the ignition switch ON (II).

3. Make sure the HDS communicates with the vehicle and the ECM. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Check for DTCs. If a DTC is present, diagnose and repair the cause before continuing with this test.
5. Start the engine. Hold the engine speed at 3,000 rpm without load (in neutral) until the radiator fan comes on, then let it idle.
6. Check the idle speed (see **IDLE SPEED INSPECTION**).
7. Jump the SCS line with the HDS.
8. Connect the timing light to the service loop (white tape).

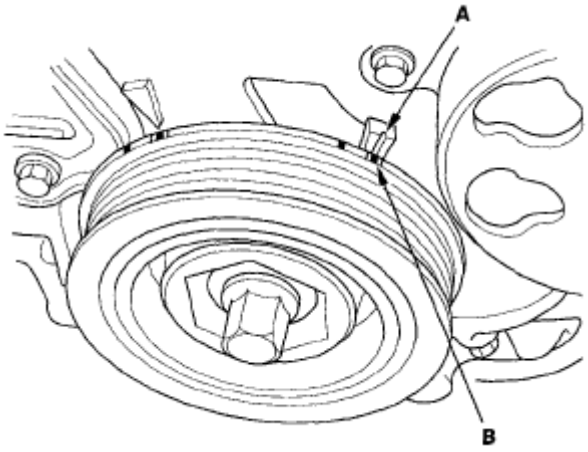

Fig. 3: Identifying Ignition Timing Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Aim the light toward the pointer (A) on the cam chain case. Check the ignition timing under a no load condition (headlights, blower fan, rear window defogger, and air conditioner are turned off).

   Ignition Timing:

   8 ° ±2 ° BTDC (RED mark (B)) at idle in Neutral

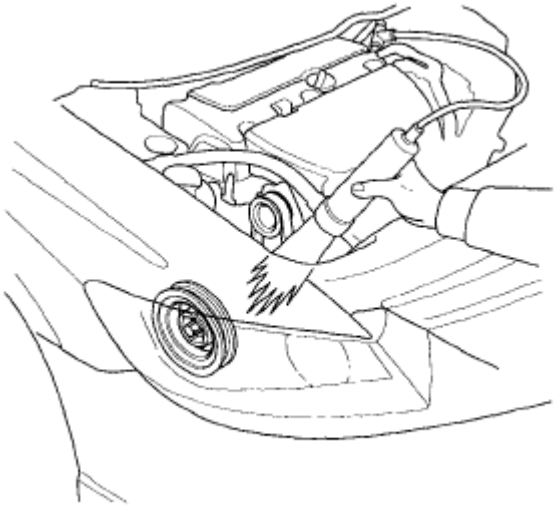

Fig. 4: Checking Ignition Timing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. If the ignition timing differs from the specification, check the cam timing. If the cam timing is OK, update the engine control module (ECM) if it does not have the latest software (see **UPDATING THE ECM**), or substitute a known-good ECM (see **SUBSTITUTING THE ECM**), then recheck. If the system work properly, and the ECM was substituted, replace the original ECM (see **ECM REPLACEMENT**).
11. Disconnect the HDS and the timing light.

IGNITION COIL REMOVAL/INSTALLATION

1. Remove the under-cowl panel (see **FRONT GRILLE COVER REPLACEMENT**).
2. Remove the ignition coil cover (A), disconnect the ignition coil connectors (B), then remove the ignition coils (C).

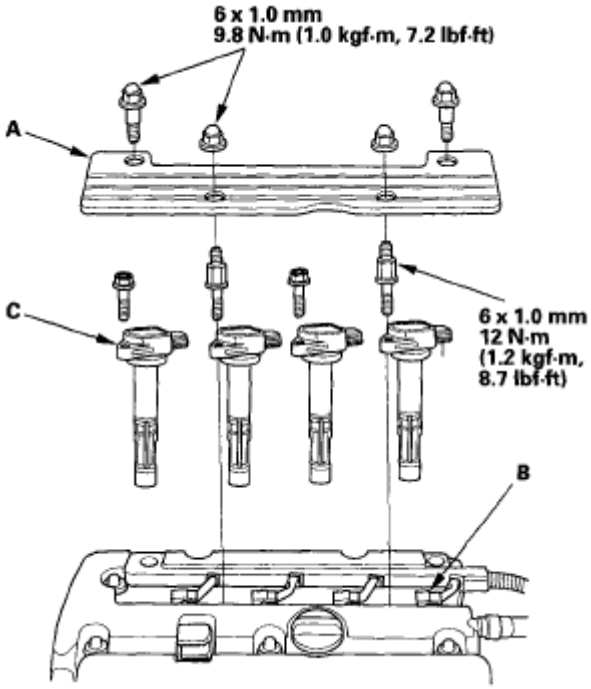

Fig. 5: Identifying Ignition Coil (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the ignition coils in the reverse order of removal.

IGNITION COIL RELAY CIRCUIT TROUBLESHOOTING

1. Check the No. 18 (15 A) fuse in the under-hood fuse/relay box.

   Is the fuse OK?

   YES -Go to step 2.

   NO -Replace the fuse.

2. Remove the ignition coil relay from the under-hood fuse/relay box, and test it (see **POWER RELAY**

TEST).

Is the relay OK?

YES -Go to step 3.

NO -Replace the ignition coil relay.

3. Measure the voltage between ignition coil relay 4P socket terminal No. 2 and body ground, then terminal No. 4 and body ground.

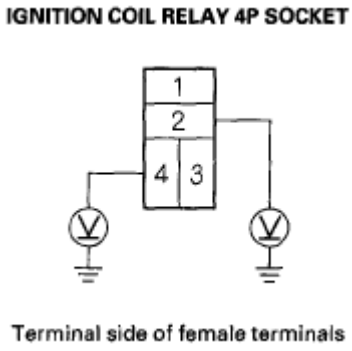

Fig. 6: Checking Voltage Between Ignition Coil Relay 4P Socket Terminal No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES -Go to step 4.

NO -Replace the under-hood fuse/relay box.

4. Check for continuity between ignition coil relay 4P socket terminal No. 2 and the No. 1 ignition coil 3P connector terminal No. 3.

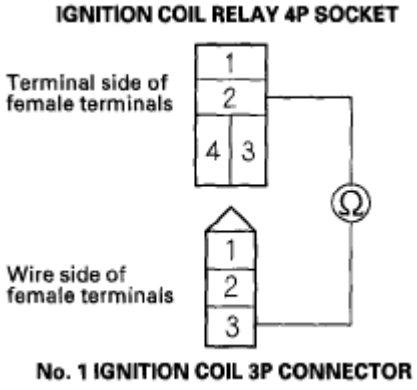

Fig. 7: Checking Continuity Between Ignition Coil Relay 4P Socket Terminal No. 2 And No. 1 Ignition Coil 3P Connector Terminal No. 3
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Go to step 5.

NO -Repair open in the wire between ignition coil relay 4P socket terminal No. 2 and ignition coil 3P connector terminal No. 3.

5. Check for continuity between each ignition coil 3P connector terminal No. 2 and the body ground.

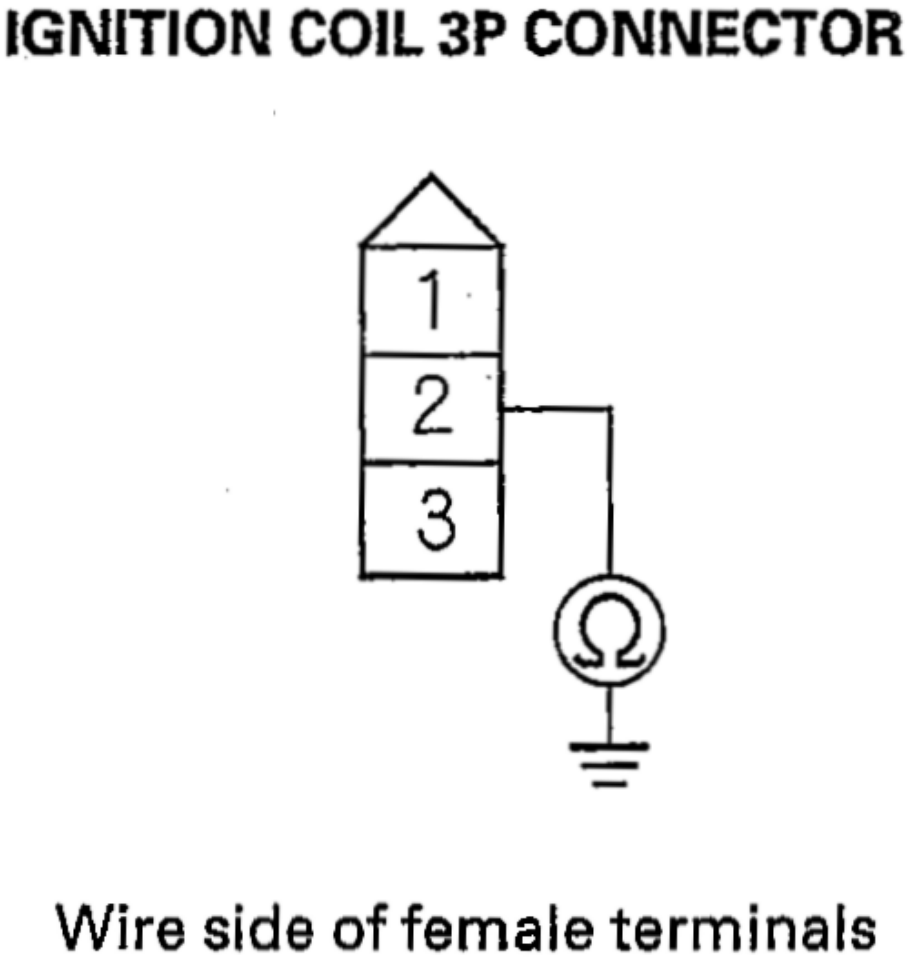

Fig. 8: Checking For Continuity Between Ignition Coil 3P Connector Terminal No. 2 And The Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Go to step 6.

NO -Repair open in the wire between ignition coil relay 3P socket terminal No. 2 and body ground.

6. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 on **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).

7. Turn the ignition switch ON (II).
8. Make sure the HDS communicates with the vehicle and the engine control module (ECM). If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
9. Jump the SCS line with the HDS, then turn the ignition switch OFF.

NOTE: This step must be done to protect the ECM from damage.

10. Disconnect ECM connector A (44P).
11. Check for continuity between ignition coil relay 4P socket terminal No. 3 and body ground.

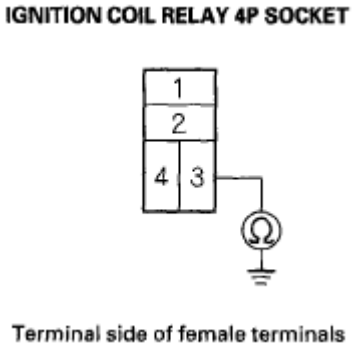

Fig. 9: Checking Continuity Between Ignition Coil Relay 4P Socket Terminal No. 3 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short in the wire between ignition coil relay 4P socket terminal No. 3 and ECM (A6).

NO -Go to step 11.

12. Check for continuity between ignition coil relay 4P socket terminal No. 3 and ECM connector terminal A6.

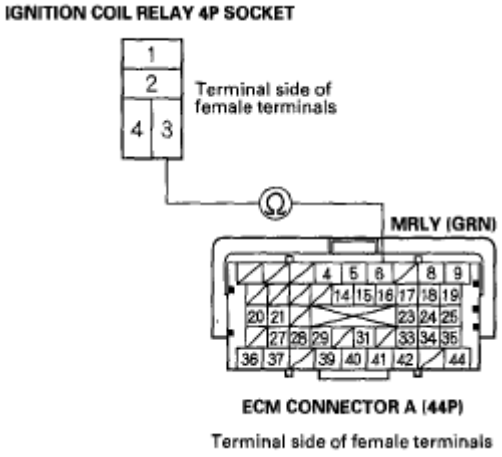

Fig. 10: Checking Continuity Between Ignition Coil Relay 4P Socket Terminal No. 3 And ECM Connector Terminal A6

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -The system is OK at this time. Check for loose or poor connections at the ignition coil relay and the ECM (A6).

NO -Repair open in the wire between ignition coil relay 4P socket terminal No. 3 and the ECM (A6).

SPARK PLUG INSPECTION

1. Remove the spark plugs and inspect the electrodes and ceramic insulator.
    - Burned or worn electrodes may be caused by:
        - Advanced ignition timing
        - Loose spark plug
        - Plug heat range too hot
        - Insufficient cooling
    - Fouled plugs may be caused by:
        - Retarded ignition timing
        - Oil in combustion chamber
        - Incorrect spark plug gap
        - Plug heat range too cold
        - Excessive idling/low speed running
        - Clogged air cleaner element
        - Deteriorated ignition coils

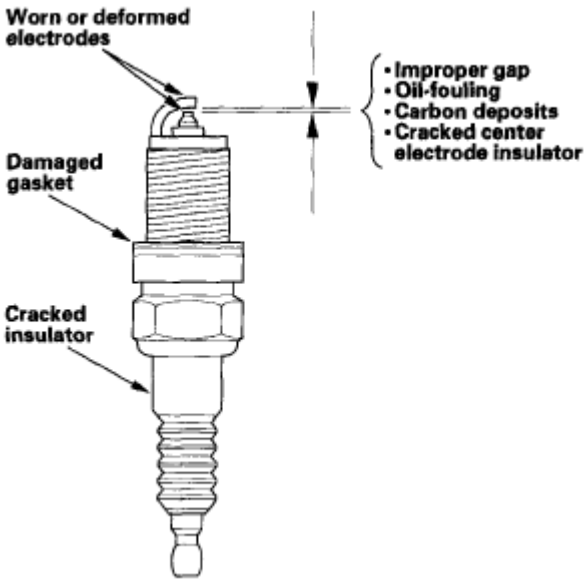

Fig. 11: Identifying Spark Plug Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. If the spark plug electrode is dirty or contaminated, clean the electrode with a plug cleaner.

NOTE:

- **Do not use a wire brush or scrape the iridium electrode since this will damage the electrode.**
- **When using a sand blaster spark plug cleaner, do not clean for more than 20 seconds to avoid damaging the electrode.**

3. Replace the plug at the specified interval, or if the center electrode is rounded (A), or if the spark plug gap (B) is out of specification. Use only the listed spark plugs.

NOTE: Do not adjust the gap of iridium tip plugs.

Spark Plugs

NGK: IFR7G11KS

DENSO: SK22PR-M11S

Electrode Gap

Standard (New): 1.0-1.1 mm (0.039-0.043 in.)

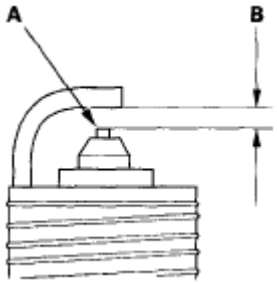

Fig. 12: Identifying Spark Plug Gap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Apply small amount of anti-seize compound to the plug threads, and screw the plugs into the cylinder head, finger-tight. Then torque them to 18 N.m (1.8 kgf.m, 13 lbf.ft).

2006-09 ENGINE

Ignition System (R18A1) - Civic (All Except Hybrid)

COMPONENT LOCATION INDEX

NOTE: **Go to IGNITION SYSTEM (GX) (SUPPLEMENT) article for additional information for the GX model.**

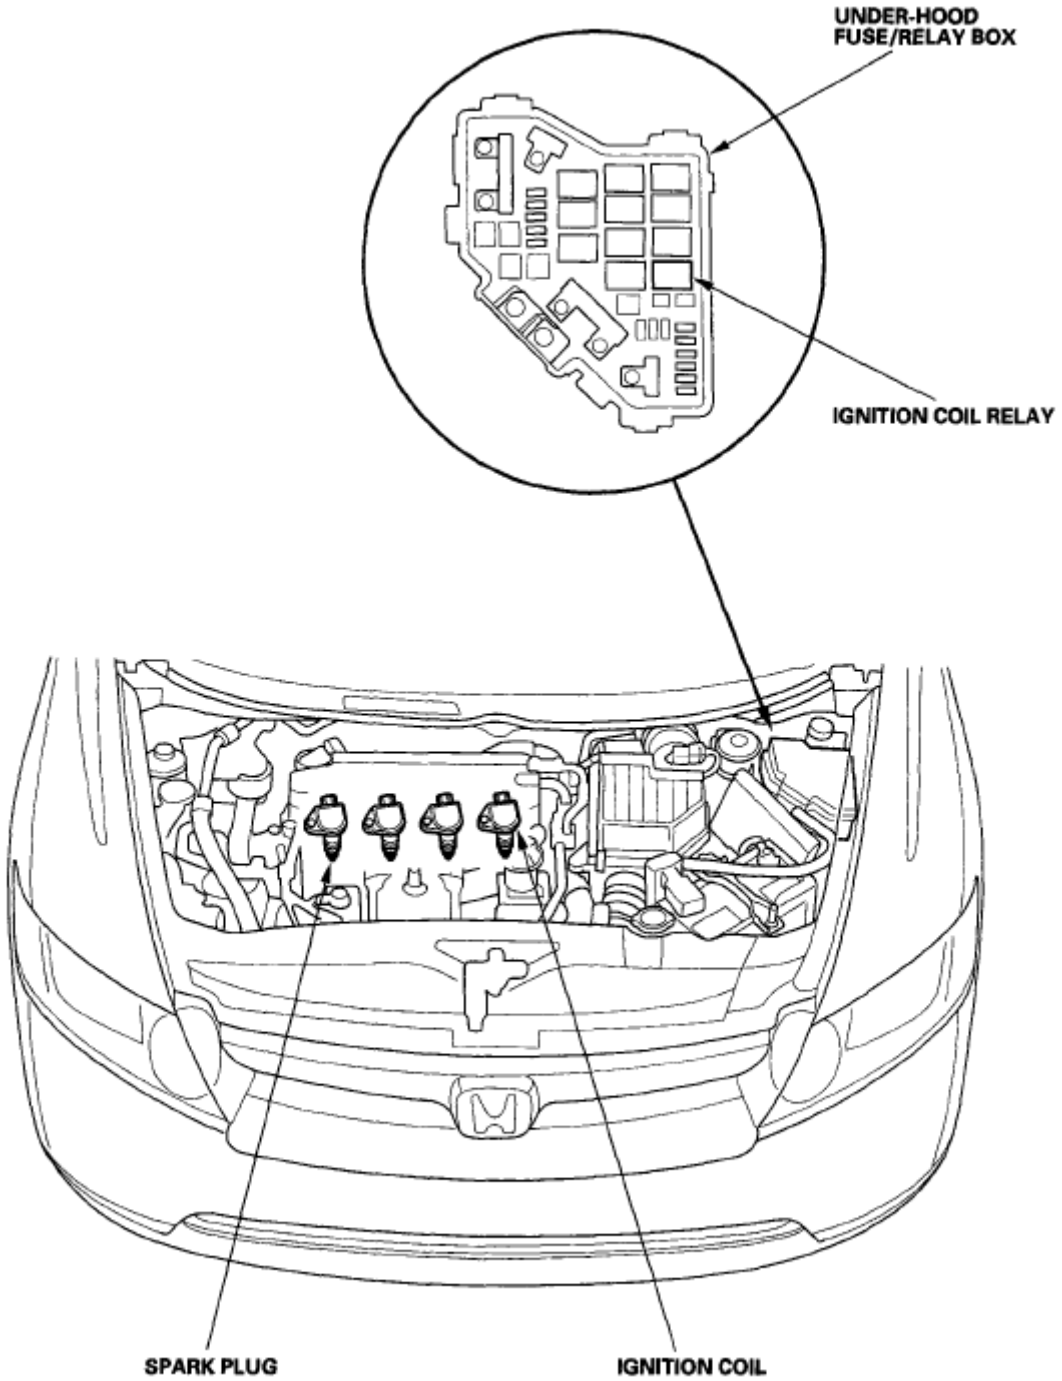

Fig. 1: Identifying Ignition System Component
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CIRCUIT DIAGRAM

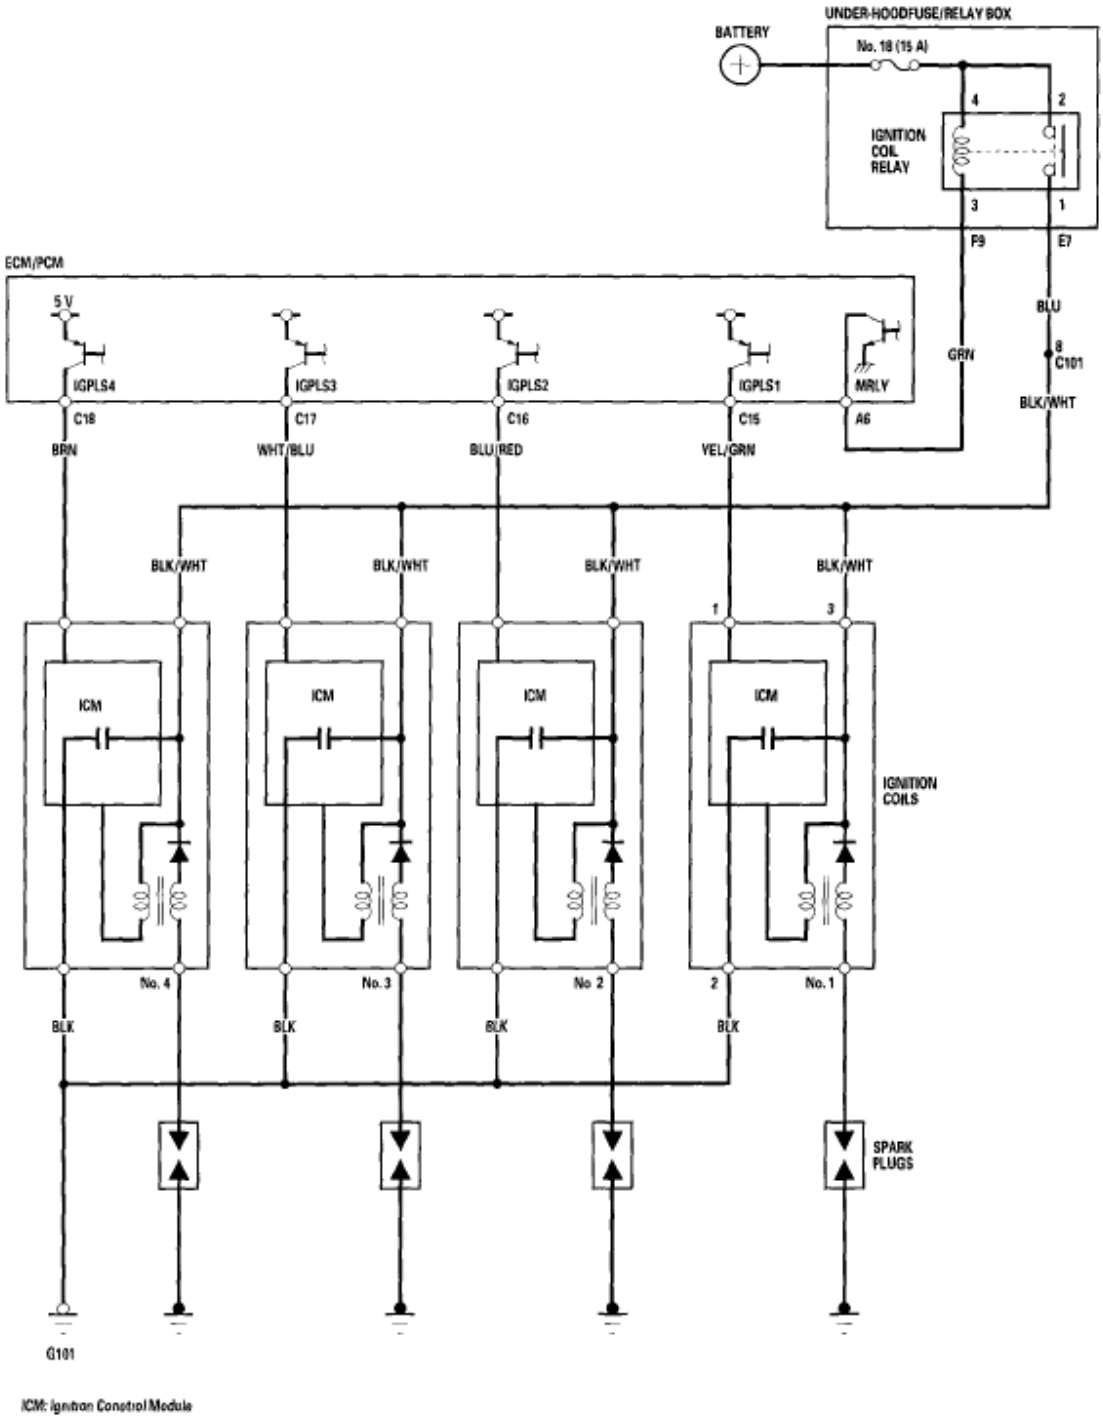

Fig. 2: Ignition System - Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

IGNITION TIMING INSPECTION

1. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 on **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
2. Turn the ignition switch ON (II).
3. Make sure the HDS communicates with the vehicle and the ECM/PCM. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Check for DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). If a DTC is present, diagnose and repair the cause before continuing with this test.
5. Start the engine. Hold the engine speed at 3,000 rpm without load (in the P or N position (A/T) or neutral (M/T)) until the radiator fan comes on, then let it idle.
6. Check the idle speed (see **IDLE SPEED INSPECTION**).
7. Jump the SCS line with the HDS.
8. Connect the timing light to the No. 1 ignition coil harness.
9. Aim the light toward the pointer (A) on the cam chain case. Check the ignition timing under a no load condition (headlights, blower fan, rear window defogger, and air conditioner are turned off).

Ignition Timing

M/T: 8 °±2 ° BTDC (RED mark (B) at idle in Neutral

A/T: 8 °±2 ° BTDC (RED mark (B) at idle in Park or Neutral

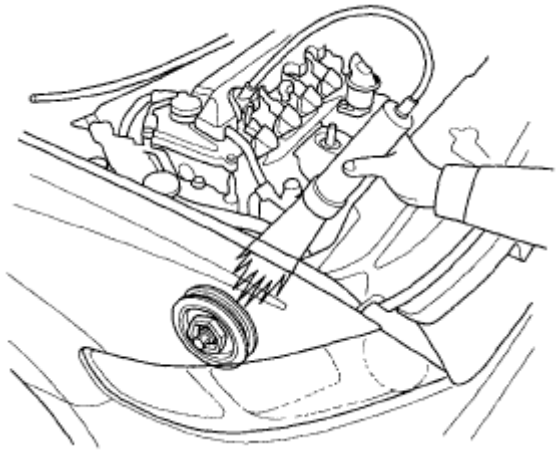

Fig. 3: Aiming Timing Light Toward Pointer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

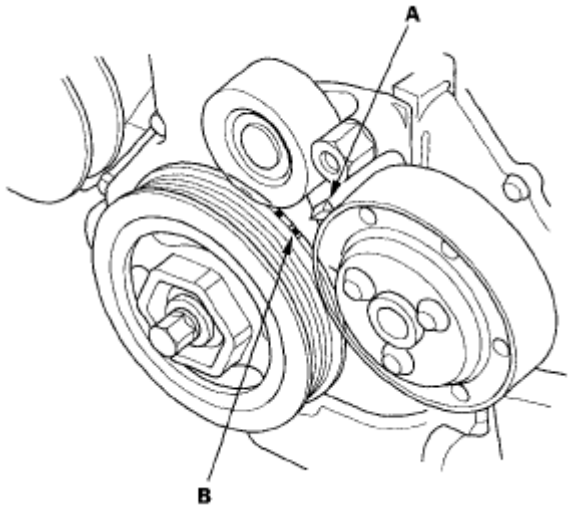

Fig. 4: Identifying Timing Marks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. If the ignition timing differs from the specification, check the cam timing. If the cam timing is OK, update the engine control module (ECM)/powertrain control module (PCM) if it does not have the latest software (see **UPDATING ECM/PCM**), or substitute a known-good ECM/PCM (see **SUBSTITUTING THE ECM/PCM**), then recheck. If the system works properly, and the ECM/PCM was substituted, replace the original ECM/PCM (see **ECM/PCM REPLACEMENT**).
11. Disconnect the HDS and the timing light.

IGNITION COIL REMOVAL/INSTALLATION

1. Disconnect the ignition coil connectors (A), then remove the ignition coils (B).

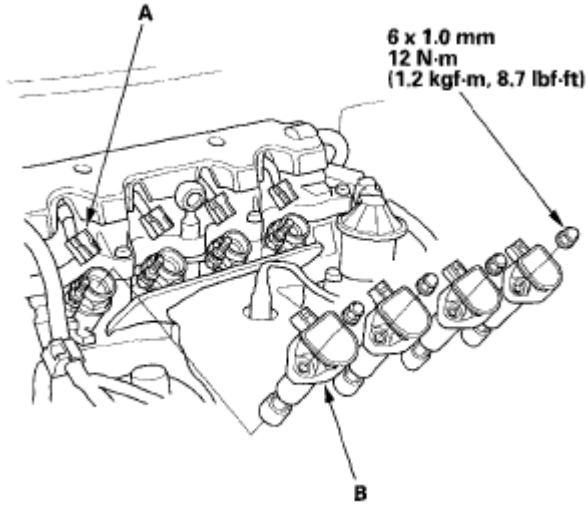

Fig. 5: Disconnecting Ignition Coil Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the ignition coils in the reverse order of removal.

IGNITION COIL RELAY CIRCUIT TROUBLESHOOTING

1. Check the No. 18(15 A) fuse in the under-hood fuse/relay box.

   Is the fuse OK?

   YES -Go to step 2.

   NO -Replace the fuse.

2. Remove the ignition coil relay from the under-hood fuse/relay box, and test it (see **POWER RELAY TEST**).

   Is the relay OK?

   YES -Go to step 3.

   NO -Replace the ignition coil relay.

3. Measure the voltage between ignition coil relay 4P socket terminal No. 2 and body ground, then terminal No. 4 and body ground.

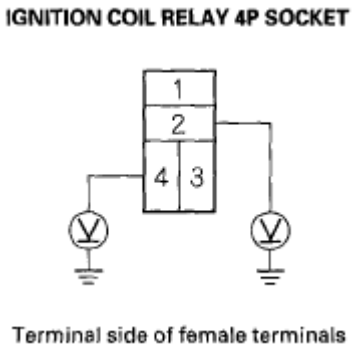

Fig. 6: Measuring Voltage Between Ignition Coil Relay 4P Socket Terminal No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   Is there battery voltage?

   YES -Go to step 4.

   NO -Replace the under-hood fuse/relay box.

4. Check for continuity between ignition coil relay 4P socket terminal No. 1 and the No. 1 ignition coil 3P connector terminal No. 3.

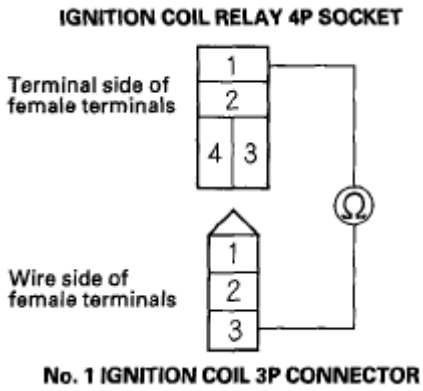

Fig. 7: Checking For Continuity Between Ignition Coil Relay 4P Socket Terminal No. 1
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Go to step 5.

NO -Repair open in the wire between ignition coil relay 4P socket terminal No. 1 and ignition coil 3P connector terminal No. 3.

5. Check for continuity between each ignition coil 3P connector terminal NO. 2 and the body ground.

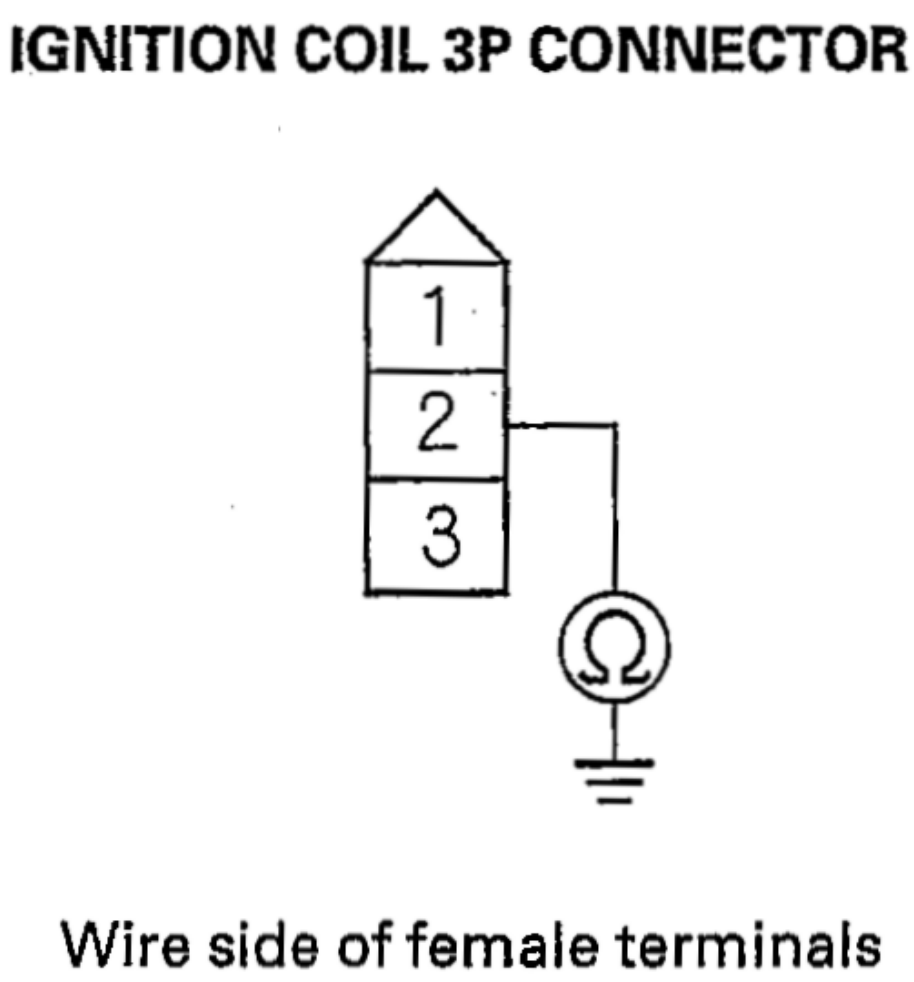

Fig. 8: Checking For Continuity Between Each Ignition Coil 3P Connector Terminal No. 2 And The Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Go to step 6.

NO -Repair open in the wire between ignition coil relay 3P socket terminal No. 2 and body ground.

6. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 on **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
7. Turn the ignition switch ON (II).
8. Make sure the HDS communicates with the vehicle and the engine control module (ECM)/powertrain control module (PCM). If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
9. Jump the SCS line with the HDS, then turn the ignition switch OFF.

NOTE: This step must be done to protect the ECM/PCM from damage.

10. Disconnect ECM/PCM connector A (44P).
11. Check for continuity between ignition coil relay 4P socket terminal No. 3 and body ground.

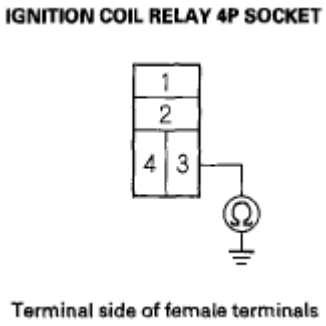

Fig. 9: Checking For Continuity Between Ignition Coil Relay 4P Socket Terminal No. 3 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short in the wire between ignition coil relay 4P socket terminal No. 3 and the ECM/PCM (A20).

NO -Go to step 11.

12. Check for continuity between ignition coil relay 4P socket terminal No. 3 and ECM/PCM connector terminal A20.

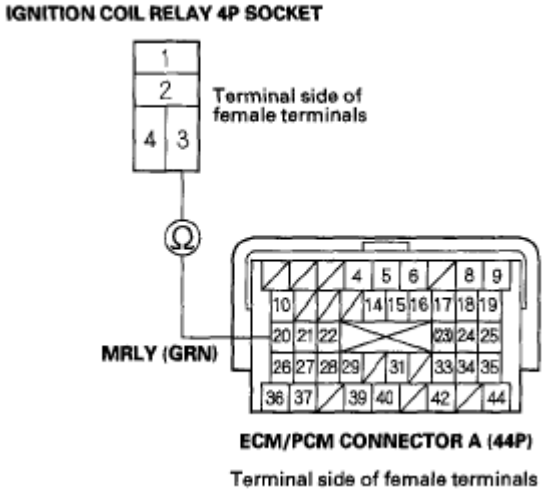

Fig. 10: Checking For Continuity Between Ignition Coil Relay 4P Socket Terminal No. 3
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -The system is OK at this time. Check for loose or poor connections at the ignition coil relay and the ECM/PCM (A20).

NO -Repair open in the wire between ignition coil relay 4P socket terminal No. 3 and the ECM/PCM

(A20).

SPARK PLUG INSPECTION

1. Remove the spark plugs and inspect the electrodes and the ceramic insulator.
    - Burned or worn electrodes may be caused by:
        - Advanced ignition timing
        - Loose spark plug
        - Plug heat range too hot
        - Insufficient cooling
    - Fouled plugs may be caused by:
        - Retarded ignition timing
        - Oil in combustion chamber
        - Incorrect spark plug gap
        - Plug heat range too cold
        - Excessive idling/low speed running
        - Clogged air cleaner element
        - Deteriorated ignition coils

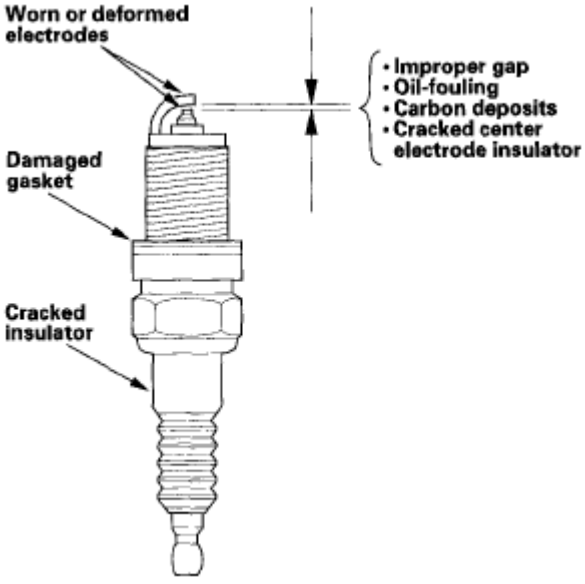

Fig. 11: Identifying Worn Or Deformed Electrodes, Damaged Gasket, Cracked Insulator And Improper Gap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. If the spark plug electrode is dirty or contaminated, clean the electrode with a plug cleaner.

NOTE:

- **Do not use a wire brush or scrape the iridium electrode since this will damage the electrode.**
- **When using a sand blaster spark plug cleaner, do not clean for more than 20 seconds to avoid damaging the electrode.**

3. Replace the plug at the specified interval, or if the center electrode is rounded (A), or if the spark plug gap is out of specification. Use only the listed spark plugs.

   NOTE: Do not adjust the gap (B) of iridium tip plugs.

   Spark Plugs

   NGK: IZFR6K11S

   DENSO: SKJ20DR-M11S

   Electrode Gap

   Standard (New): 1.0-1.1 mm (0.039-0.043 in.)

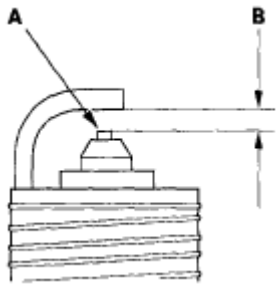

Fig. 12: Identifying Spark Plugs And Electrode Gap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Apply small amount of anti-seize compound to the plug threads, and screw the plugs into the cylinder head, finger-tight. Then torque them to 25 N.m (2.5 kgf.m, 18 lbf.ft).

2006-08 ENGINE

Engine Lubrication - Civic (All Except Hybrid & Si)

ENGINE LUBRICATION (R18A1)

SPECIAL TOOLS

Ref. No.	Tool Number	Description	Qty
①	07HAA-PJ70100	Oil Filter Wrench	1
②	07LAD-SM40100	Attachment, 60 mm	1
③	07749-0010000	Driver	1

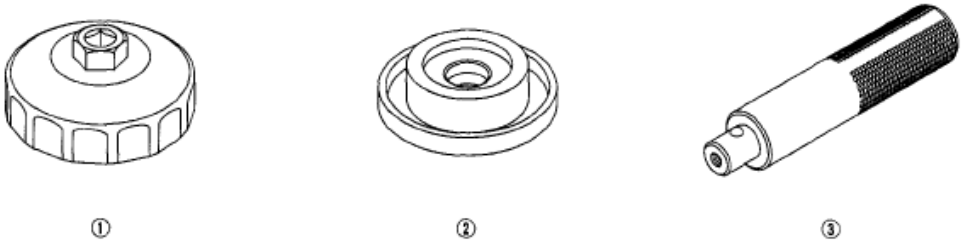

Fig. 1: Identifying Special Tools
Courtesy of AMERICAN HONDA MOTOR CO., INC.

COMPONENT LOCATION INDEX

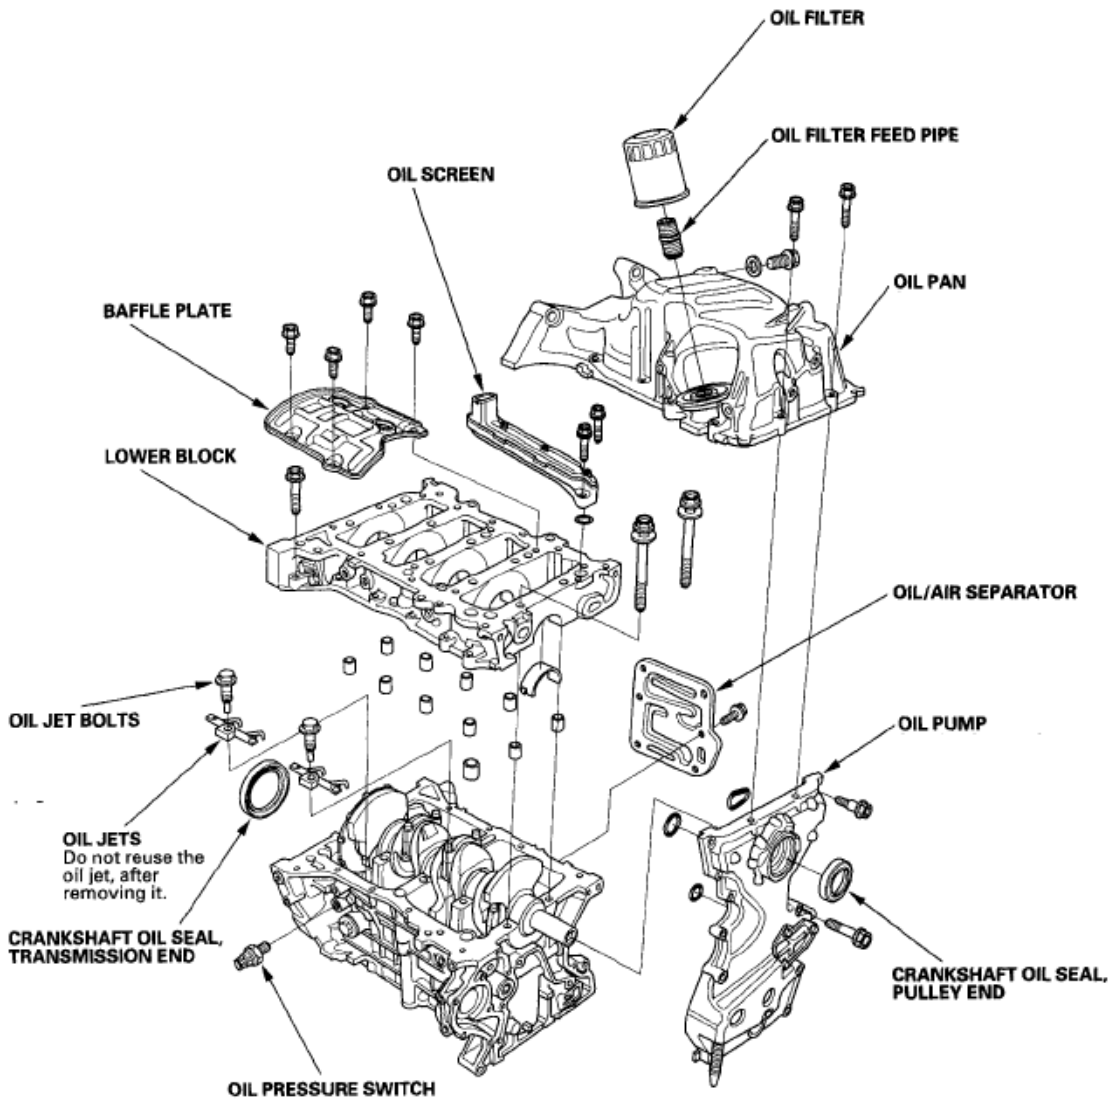

Fig. 2: Identifying Component Location Index
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYMPTOM TROUBLESHOOTING INDEX

SYMPTOM TROUBLESHOOTING INDEX

Symptom	Diagnostic procedure	Also check for
Excessive engine oil consumption	1. Check for loose of the engine oil fill cap, oil drain bolt, and oil filter. 2. Check for oil leaks. 3. Check for worn valve guide(s) (see **VALVE INSPECTION**) or worn valve stem seal(s) (see **VALVE, SPRING, AND VALVE SEAL REMOVAL**).	

	4. Check for damaged or worn piston ring(s) (see **PISTON RING REPLACEMENT**). 5. Check for damaged or worn engine internal parts (cylinder wall, pistons, etc.) (see **BLOCK AND PISTON INSPECTION**).	
Low oil pressure indicator does not come on with the ignition switch ON (II)	1. Do the low oil pressure indicator circuit troubleshooting (Open) (see **LOW OIL PRESSURE INDICATOR CIRCUIT TROUBLESHOOTING (OPEN)**). 2. Test the oil pressure switch (see **OIL PRESSURE SWITCH TEST**).	An open in the wire between the engine control module (ECM)/ powertrain control module (PCM) and the oil pressure switch
Low oil pressure indicator stays on	1. Check the engine oil level. 2. Do the low oil pressure indicator circuit troubleshooting (Short) (see **LOW OIL PRESSURE INDICATOR CIRCUIT TROUBLESHOOTING (SHORT)**). 3. Test the oil pressure switch (see **OIL PRESSURE SWITCH TEST**). 4. Check the engine oil pressure (see **OIL PRESSURE TEST**). 5. Check the oil filter for clogging. 6. Check the oil screen for clogging. 7. Check the relief valve. 8. Inspect the oil pump (see **OIL PUMP OVERHAUL**).	A wire shorted to ground between the ECM/PCM and the oil pressure switch

LOW OIL PRESSURE INDICATOR CIRCUIT DIAGRAM

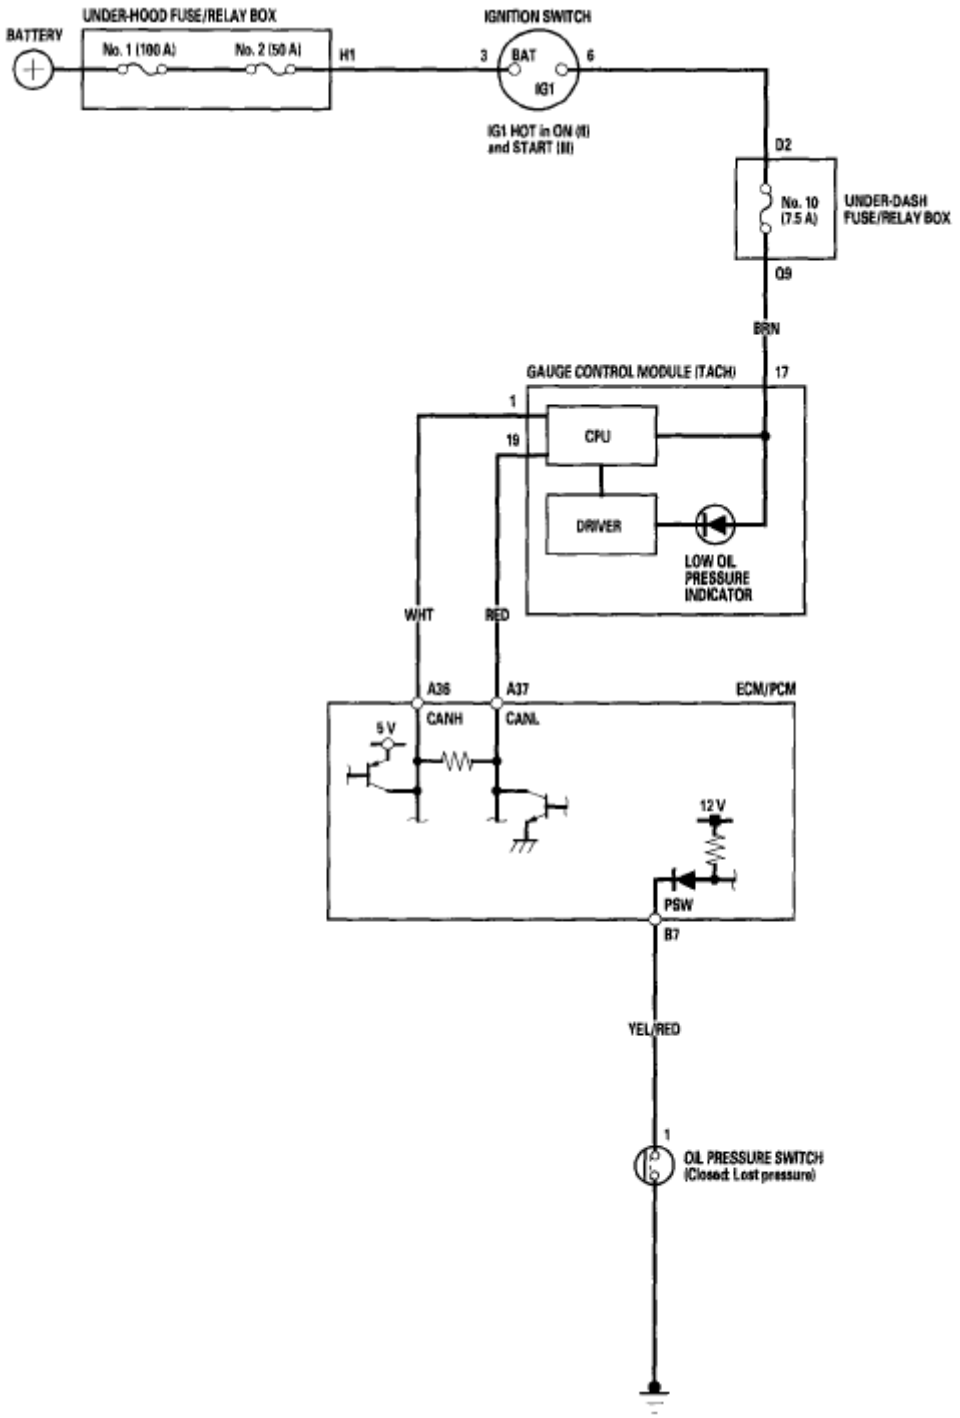

Fig. 3: Low Oil Pressure Indicator Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

LOW OIL PRESSURE INDICATOR CIRCUIT TROUBLESHOOTING (OPEN)

1. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 on **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
2. Turn the ignition switch ON (II).
3. Make sure the HDS communicates with the vehicle and the engine control module (ECM)/powertrain control module (PCM). If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT**

TROUBLESHOOTING).

4. Check for DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). If a DTC is present, diagnose, and repair the cause before continuing with this test.
5. Turn the ignition switch ON (II), select PGM-FI, and check the OIL PRESSURE SWITCH in the DATA LIST with the HDS.

   Is "ON" indicated?

   YES -Replace the gauge control module (tach) (see **REPLACEMENT**).

   NO -Go to step 6.

6. Turn the ignition switch to LOCK (0).
7. Check the oil pressure switch (see **OIL PRESSURE SWITCH TEST**).

   Is the oil pressure switch OK?

   YES -Go to step 7.

   NO -Replace the oil pressure switch (see **OIL PRESSURE SWITCH TEST**).

8. Turn the ignition switch ON (II), and jump the SCS line with the HDS, then turn the ignition switch OFF.

   NOTE: This step must be done to protect the ECM/PCM from damage.

9. Disconnect ECM/PCM connector B (44P) and oil pressure switch connector.
10. Check for continuity between ECM/PCM connector terminal B7 and the oil pressure switch connector.

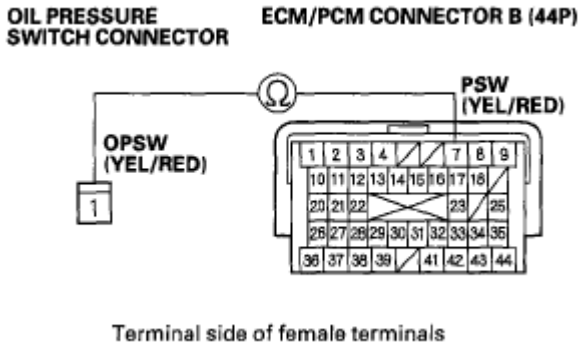

Fig. 4: Checking For Continuity Between ECM/PCM Connector Terminal B7 And Oil Pressure Switch Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Update the ECM/PCM if it does not have the latest software (see **UPDATING ECM/PCM**), or substitute a known-good ECM/PCM (see **SUBSTITUTING THE ECM/PCM**), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM

(see **ECM/PCM REPLACEMENT**).

NO -Repair open in the wire between the oil pressure switch and the ECM/PCM.

LOW OIL PRESSURE INDICATOR CIRCUIT TROUBLESHOOTING (SHORT)

1. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 on **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
2. Turn the ignition switch ON (II).
3. Make sure the HDS communicates with the vehicle and the engine control module (ECM)/powertrain control module (PCM). If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Check for DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). If a DTC is present, diagnose, and repair the cause before continuing with this test.
5. Start the engine, select PGM-FI, and check the OIL PRESSURE SWITCH in the DATA LIST with the HDS.

   Is "OFF" indicated?

   YES -Replace the gauge control module (tach) (see **REPLACEMENT**).

   NO -Go to step 6.

6. Turn the ignition switch OFF.
7. Disconnect the oil pressure switch connector.
8. Start the engine, and check the OIL PRESSURE SWITCH in the DATA LIST with the HDS.

   Is "OFF" indicated?

   YES -Go to step 9.

   NO -Go to step 11.

9. Turn the ignition switch to LOCK (0).
10. Check the oil pressure switch (see **OIL PRESSURE SWITCH TEST**).

    Is the oil pressure switch OK ?

    YES -Do the oil pressure test (see **OIL PRESSURE TEST**).

    NO -Replace the oil pressure switch (see **OIL PRESSURE SWITCH TEST**).

11. Turn the ignition switch ON (II), and jump the SCS line with the HDS, then turn the ignition switch OFF.

    NOTE: This step must be done to protect the ECM/PCM from damage.

12. Disconnect ECM/PCM connector B (44P) and the oil pressure switch connector.

13. Check for continuity between the oil pressure switch connector and body ground.

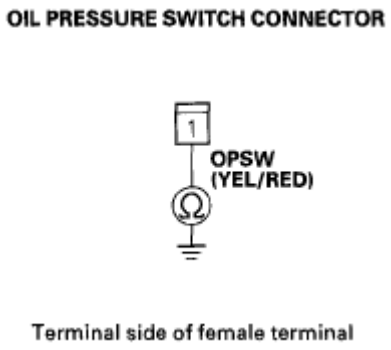

Fig. 5: Checking For Continuity Between Oil Pressure Switch Connector And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short to ground in the wire between the oil pressure switch and the ECM/PCM.

NO -Update the ECM/PCM if it does not have the latest software (see **UPDATING ECM/PCM**), or substitute a known-good ECM/PCM (see **SUBSTITUTING THE ECM/PCM**), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see **ECM/PCM REPLACEMENT**).

OIL PRESSURE SWITCH TEST

1. Remove the oil pressure switch connector (A) from the engine oil pressure switch (B).

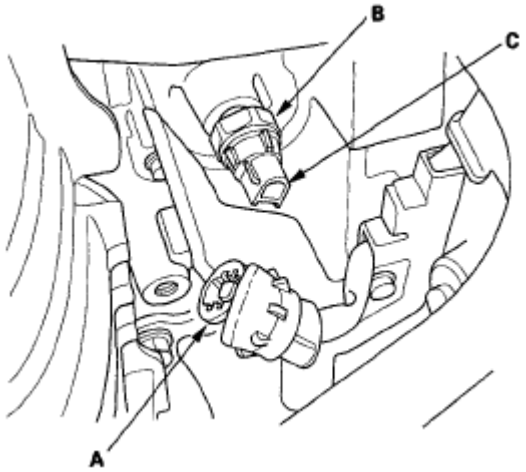

Fig. 6: Identifying Oil Pressure Switch Connector And Engine Oil Pressure Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Check for continuity between the positive terminal (C) and the engine (ground). There should be continuity with the engine stopped. There should be no continuity with the engine running.

OIL PRESSURE SWITCH REPLACEMENT

1. Disconnect the oil pressure switch connector, then remove the oil pressure switch.

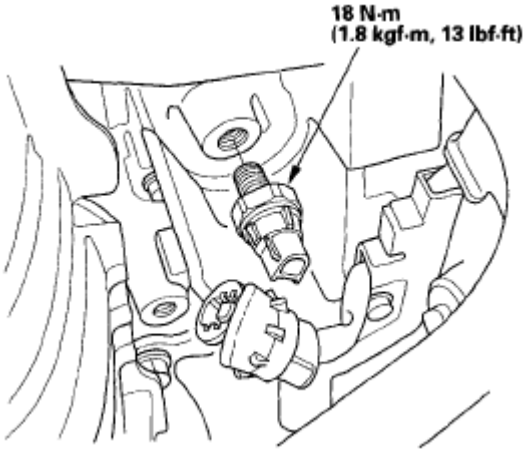

Fig. 7: Identifying Oil Pressure Switch (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove any old liquid gasket from the switch and switch mounting hole.
3. Apply very small amount of liquid gasket to the oil pressure switch threads, then install the oil pressure switch.

NOTE: Using too much liquid gasket may cause liquid gasket to enter the oil passage or the end of the new oil pressure switch.

OIL PRESSURE TEST

NOTE: If the low oil pressure indicator stays on with the engine running, check the engine oil level. If the oil level is correct:

1. Remove the engine oil pressure switch, then install an oil pressure gauge (A).

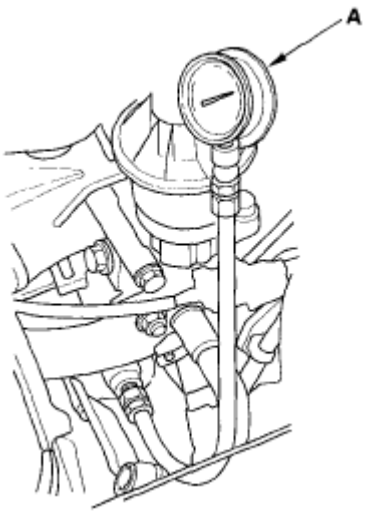

Fig. 8: Identifying Oil Pressure Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Start the engine. Shut it off immediately if the gauge registers no oil pressure. Repair the problem before continuing.
3. Allow the engine to reach operating temperature (fan comes on at least twice). The pressure should be:

   Engine Oil Temperature: 176°F (80°C)

   Engine Oil Pressure:

   At Idle: 70 kPa (0.7 kgf/^{cm} 2,10 psi) min.

   At 3,000 rpm: 340 kPa (3.5 kgf/cm^2 ,50 psi) min.

4. If the oil pressure is out of specifications, inspect these items:
   - Replace the oil filter (see **ENGINE OIL FILTER REPLACEMENT**).
   - Inspect the oil pressure relief valve (see **OIL PUMP OVERHAUL**).
   - Check the oil screen for clogging.
   - Inspect the oil pump (see **INSPECTION**).

ENGINE OIL REPLACEMENT

1. Warm up the engine.
2. Remove the drain bolt (A), and drain the engine oil.

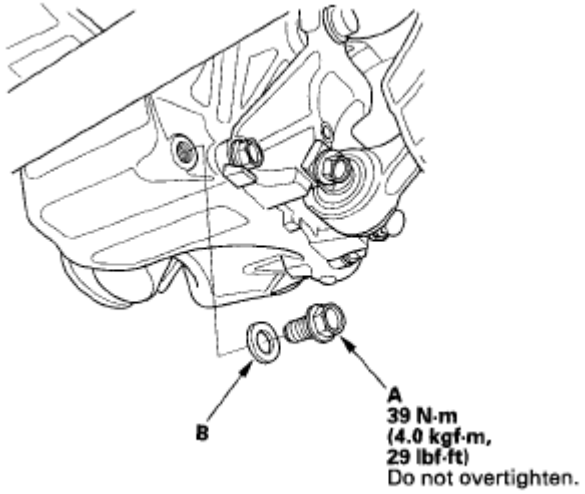

Fig. 9: Identifying Drain Bolt (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Reinstall the drain bolt with a new washer (B).
4. Refill the engine with the recommended oil (see **LUBRICANTS AND FLUIDS**).

   Capacity

   At Oil Change:

3.5 L (3.7 US qt)

At Oil Change including Filter:

3.7 L (3.9 US qt)

After Engine Overhaul:

4.5 L (4.8 US qt)

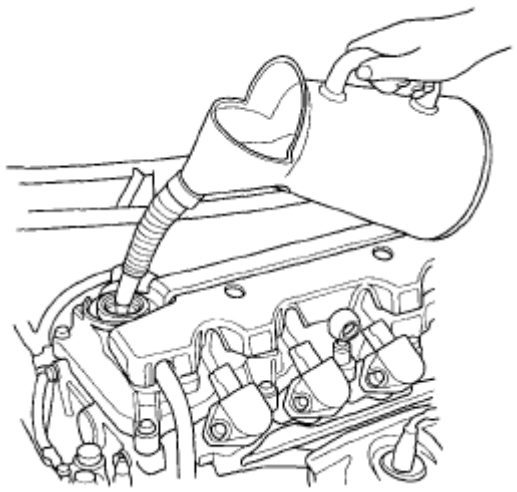

Fig. 10: Filling Engine With Recommended Oil
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. 2006 4-door model and 2007 2 and 4-door models: If the maintenance minder required to replace the engine oil, reset the maintenance minder (see **RESETTING THE MAINTENANCE INFORMATION DISPLAY**), then go to step 13. If the maintenance minder did not require to replace the engine oil, go to step 6.

   2006 2-door model: If the maintenance minder required to replace the engine oil, reset the maintenance minder (see **RESETTING THE MAINTENANCE INFORMATION DISPLAY**), then go to step 13. If the maintenance minder did not require to replace the engine oil, notify the customer that the maintenance minder term is not reset for the item that was replaced and the maintenance minder will show to replace the engine oil before the actual maintenance timing.

6. Connect the HDS to the data link connector (DLC) (see step 2 on **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
7. Turn the ignition switch ON (II).
8. Make sure the HDS communicates with the vehicle and the ECM/PCM. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
9. Select BODY ELECTRICAL with the HDS.
10. Select ADJUSTMENT in the GAUGES MENU with the HDS.
11. Select RESET in the MAINTENANCE MINDER with the HDS.
12. Select RESETTING THE ENGINE OIL LIFE with the HDS.

NOTE: If you changed the ATF at the same time with the engine oil, select RESETTING THE ENGINE OIL LIFE AND ATF with the HDS instead.

13. Run the engine for more than 3 minutes, then check for oil leakage.
14. Reset the maintenance information display (see **RESETTING THE MAINTENANCE INFORMATION DISPLAY**).

ENGINE OIL FILTER REPLACEMENT

Special Tools Required

Oil filter wrench 07HAA-PJ70100

1. Remove the oil filter with the oil filter wrench.
2. Inspect the filter to make sure the rubber seal is not stuck to the oil filter seating surface of the engine.
3. Inspect the threads (A) and rubber seal (B) on the new filter. Clean the seat on the oil pan, then apply a light coat of new engine oil to the filter rubber seal. Use only filters with a built-in bypass system.

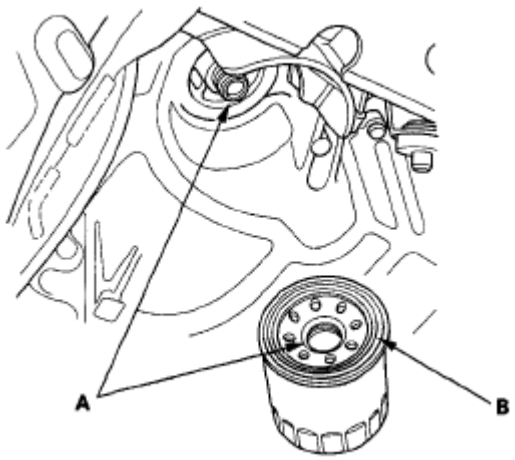

Fig. 11: Identifying Threads And Rubber Seal On Filter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the oil filter by hand.
5. After the rubber seal seats, tighten the oil filter clockwise with the oil filter wrench.

Tighten: 3/4 Turn Clockwise

Tightening Torque: 12 N.m (1.2 kgf.m, 8.7 lbf.ft)

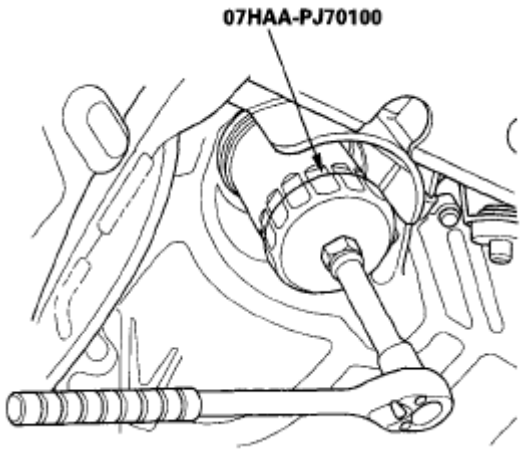

Fig. 12: Identifying Oil Filter Wrench
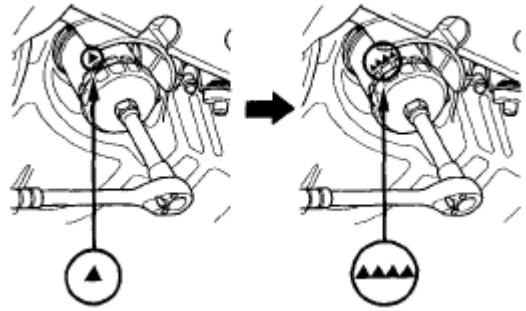
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If four numbers or marks (1 to 4 triangle symbols) are printed around the outside of the filter, you can use the following procedure to tighten the filter.
   - Spin the filter on until its seal lightly seats against the oil pan, and note which number or mark is at the bottom.
   - Tighten the filter by turning it clockwise three numbers or marks from the one you noted. For example, if triangle mark is at the bottom when the seal is lightly seated, tighten the filter until the triangle mark comes around to the bottom.



Number or Mark when rubber seal is seated	1 or ▼	2 or ▼▼	3 or ▼▼▼	4 or ▼▼▼▼
Number or Mark after tightening	4 or ▼▼▼▼	1 or ▼	2 or ▼▼	3 or ▼▼▼

Fig. 13: Identifying Filter Marks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. After installation, fill the engine with oil up to the specified level, run the engine for more than 3 minutes, then check for oil leakage.

OIL FILTER FEED PIPE REPLACEMENT

1. Remove the filter (see **ENGINE OIL FILTER REPLACEMENT**).
2. Remove the oil filter feed pipe.

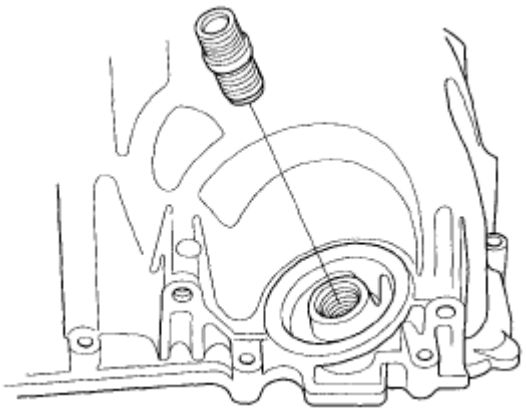


Fig. 14: Identifying Oil Filter Feed Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install two 20 x 1.5 mm nuts (A) onto the new oil filter feed pipe. Hold one nut with a wrench, then use a second wrench to tighten the other nut.

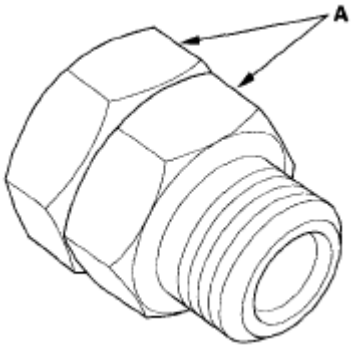

Fig. 15: Identifying Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the oil filter feed pipe to 49 N.m (5.0 kgf.m, 36 lbf.ft), then remove the nuts from the oil filter feed pipe.
5. Install the filter (see **ENGINE OIL FILTER REPLACEMENT**).

OIL JET REPLACEMENT

1. Remove the crankshaft from the engine block (see **CRANKSHAFT AND PISTON REMOVAL**).
2. Remove the oil jet bolts (A), then remove and discard the oil jets (B).

12 mm oil jet bolt

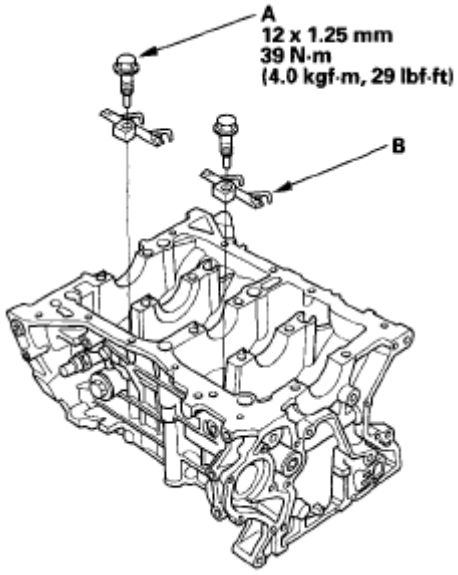

Fig. 16: Identifying Oil Jet Bolts And Oil Jets (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Carefully install the new oil jet, and tighten the oil jet bolt.
4. Install the crankshaft (see **CRANKSHAFT INSTALLATION**).

OIL JET BOLT INSPECTION

1. Remove the oil jet (see **OIL JET REPLACEMENT**).
2. Inspect the oil jet bolt as follows.

12 mm oil jet bolt

- Make sure that a 1.1 mm (0.04 in.) diameter drill will go through the oil intake (1.2 mm (0.05 in.) diameter). Make sure the check ball (A) moves smoothly and has a stroke of about 4.0 mm (0.16 in.).
- Check the oil jet operation with an air nozzle. It should take at least 310 kPa (3.2 kgf/cm^2 , 46 psi) to unseat the check ball.

8 mm oil jet bolt

- Make sure that a 1.1 mm (0.04 in.) diameter drill will go through the nozzle hole (A) (1.2 mm (0.05 in.) diameter).
- Insert the other end of a 0.9 mm (0.04 in.) drill into the oil intake (1.0 mm (0.04 in.) diameter). Make sure the check ball (B) moves smoothly and has a stroke of approximately 4.0 mm (0.16 in.).
- Check the oil jet operation with an air nozzle. It should take at least 310 kPa (3.2 kgf/cm^2 , 46 psi) to unseat the check ball.

NOTE: Replace the oil jet assembly if the nozzle is damaged or bent.

12 mm oil jet bolt

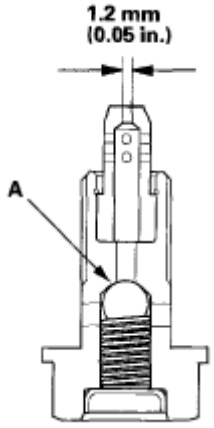

Fig. 17: Identifying Check Ball
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Carefully install the oil jet. The mounting torque is critical.

OIL PUMP OVERHAUL

Exploded View

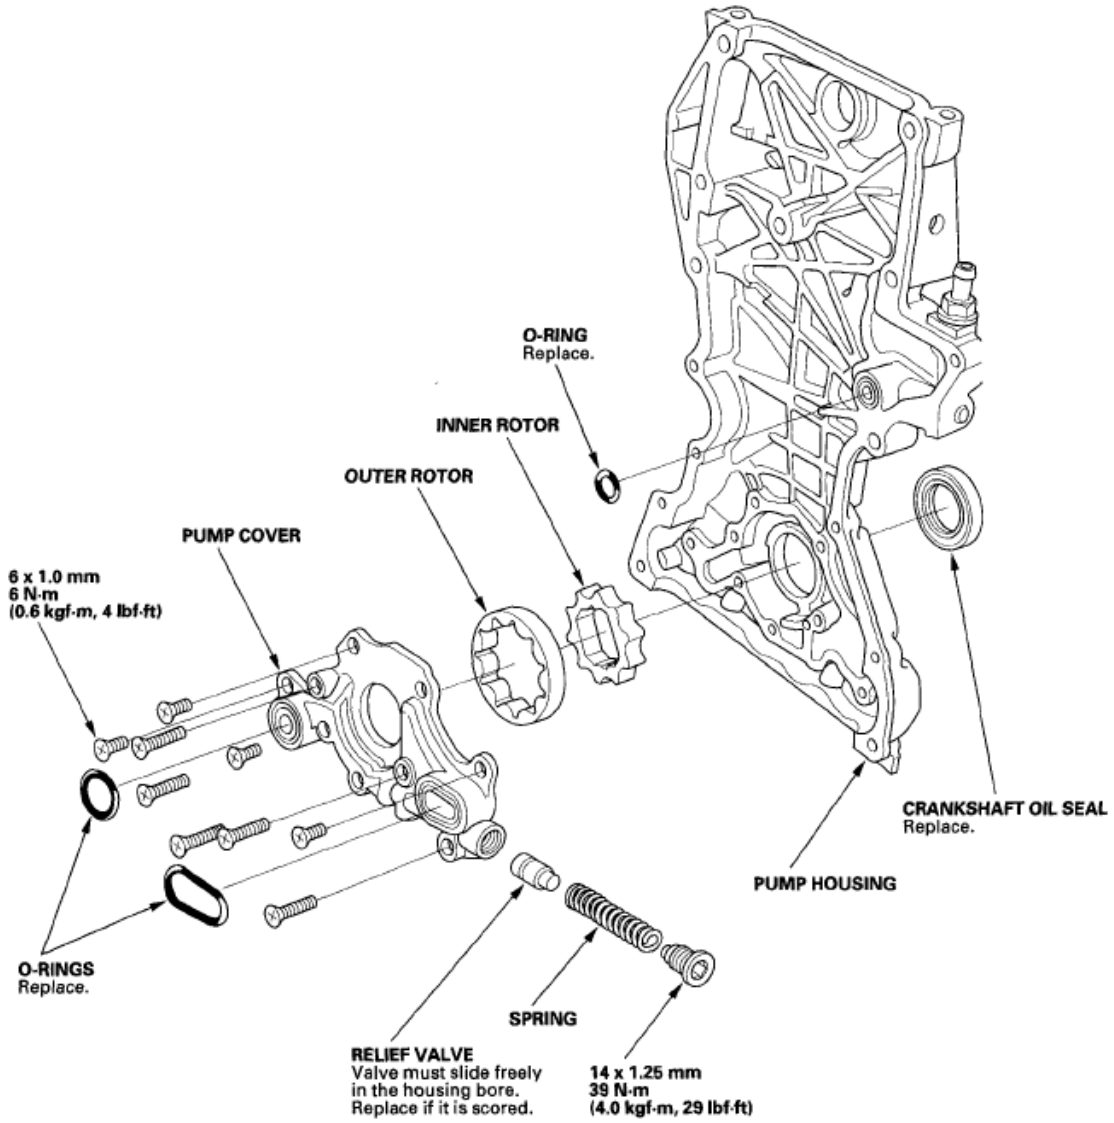

Fig. 18: Exploded View Of Oil Pump (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Removal

1. Remove the front wheels.
2. Remove the splash shield.
3. Remove the drive belt auto-tensioner (see **DRIVE BELT AUTO-TENSIONER REMOVAL/INSTALLATION**).
4. Remove the cylinder head cover (see **CYLINDER HEAD COVER REMOVAL**).
5. Remove the positive crankcase ventilation (PCV) hose.

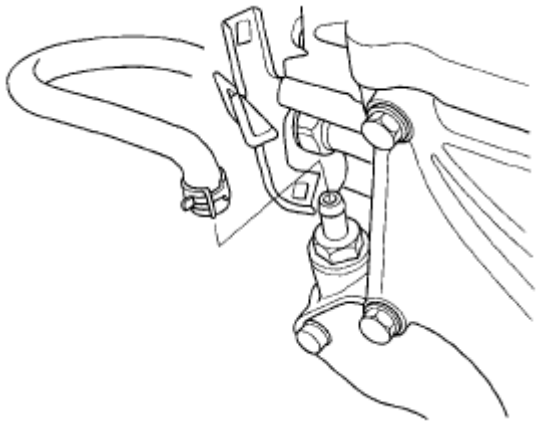

Fig. 19: Identifying Positive Crankcase Ventilation Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the crankshaft pulley (see **CRANKSHAFT PULLEY REMOVAL AND INSTALLATION**).
7. Support the engine with a jack and a wood block under the oil pan.
8. Remove the bolt (A) securing the A/C line, then remove the upper torque rod (B).

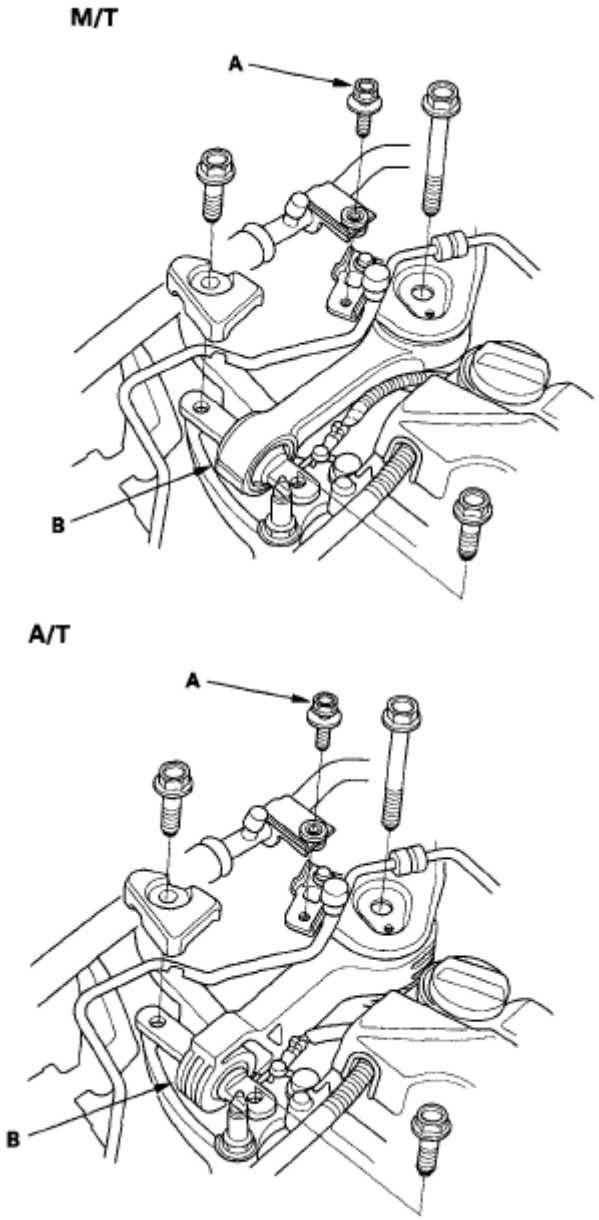

Fig. 20: Identifying Upper Torque Rod
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the ground cable (A), then remove the side engine mount bracket (B).

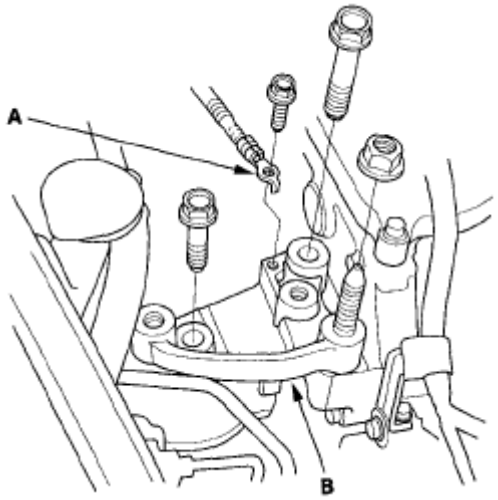

Fig. 21: Identifying Ground Cable And Side Engine Mount Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the oil pump.

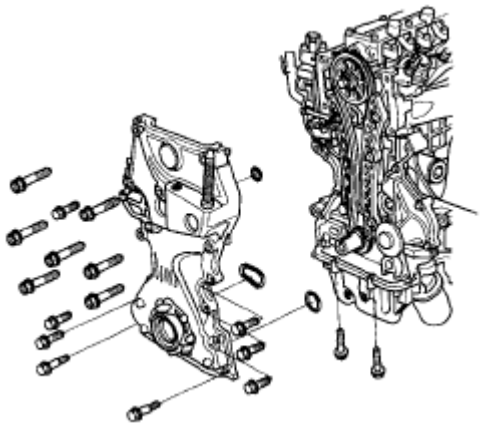

Fig. 22: Identifying Engine Front Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Inspection

1. Remove the screws from the pump housing, then separate the housing and cover.
2. Check the inner-to-outer rotor radial clearance between the inner rotor (A) and outer rotor (B). If the inner-to-outer rotor clearance exceeds the service limit, replace the oil pump assembly.

   Inner Rotor-to-Outer Rotor Radial Clearance

   Standard (New): 0.02-0.16 mm

   (0.001-0.006 in.)

   Service Limit: 0.20 mm (0.008 in.)

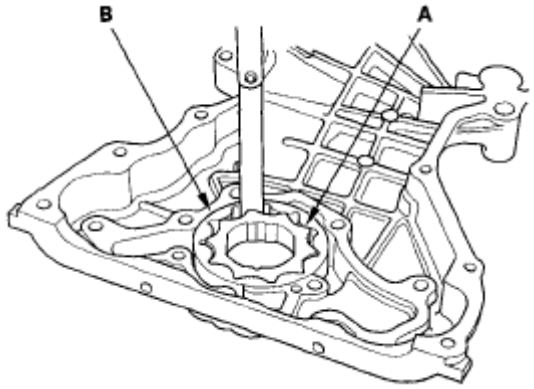

Fig. 23: Identifying Inner Rotor And Outer Rotor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check the housing-to-rotor axial clearance between the rotors (A) and pump housing (B). If the housing-to-rotor axial clearance exceeds the service limit, replace the oil pump assembly.

   Housing-to-Rotor Axial Clearance

   Standard (New): 0.02-0.07 mm

   (0.001-0.003 in.)

   Service Limit: 0.12 mm (0.005 in.)

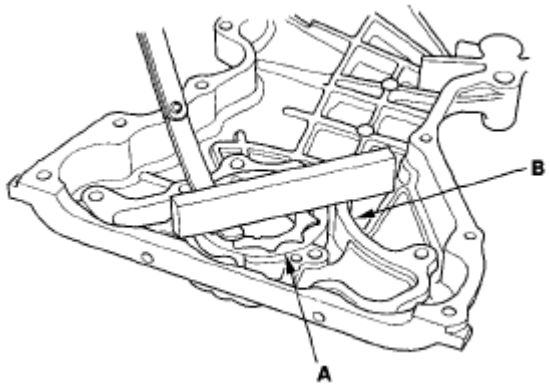

Fig. 24: Identifying Rotors And Pump Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Check the housing-to-outer rotor radial clearance between the outer rotor (A) and pump housing (B). If the housing-to-outer rotor radial clearance exceeds the service limit, replace the oil pump assembly.

   Housing-to-Outer Rotor Radial Clearance

   Standard (New): 0.100-0.175 mm

   (0.0039-0.0069 in.)

   Service Limit: 0.20 mm (0.008 in.)

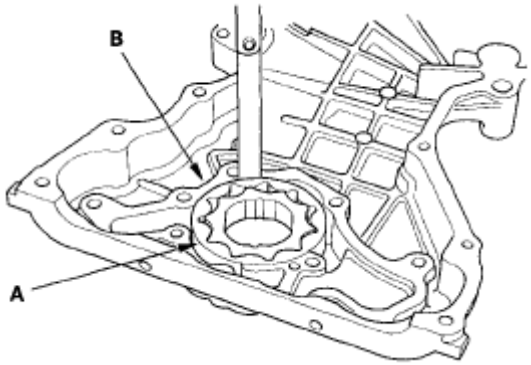

Fig. 25: Identifying Outer Rotor And Pump Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Inspect both rotors and pump housing for scoring or other damage. Replace the parts, if necessary.
6. Apply liquid thread lock to the pump housing screws, then install the oil pump cover.
7. Check that the oil pump turns freely.

Installation

1. Check the oil pump oil seal for damage. If the oil seal is damaged, replace the oil seal (see **PULLEY END CRANKSHAFT OIL SEAL INSTALLATION**).
2. Remove all of the old liquid gasket from the oil pump mating surfaces, bolts, and bolt holes.
3. Clean, and dry the oil pump mating surfaces.
4. Apply liquid gasket, P/N 08717-0004, 08718-0001, 08718-0002,08718-0003, or 08718-0009, evenly to the engine block mating surface of the oil pump.

NOTE:

- **If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply new liquid gasket.**

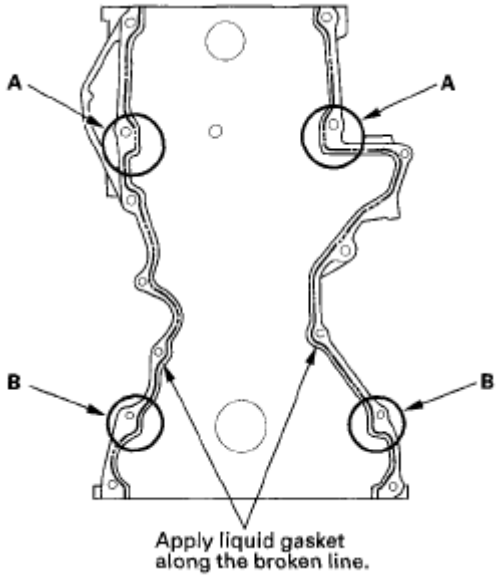

Fig. 26: Identifying Engine Block Upper Surface Contact Areas
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Apply liquid gasket to the engine block upper surface contact areas (A) on the oil pump, and lower block upper surface contact areas (B) on the oil pump.
6. Apply liquid gasket, P/N 08717-0004, 08718-0001, 08718-0002, 08718-0003, or 08718-0009, evenly to the oil pan mating surface of the oil pump.

NOTE:

- **If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply new liquid gasket.**

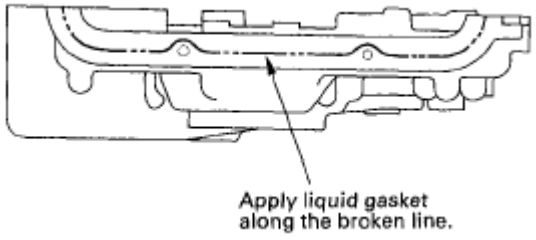

Fig. 27: Identifying Liquid Gasket Line
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install new O-rings (A) on the oil pump. Set the edge of the oil pump (B) to the edge of the oil pan (C), then install the oil pump on the engine block (D). Loosely install the dowel bolts (E), then tighten the 8 mm bolts (F). Tighten the 6 mm bolts (G) and dowel bolts. Wipe off the excess liquid gasket on the oil pan and oil pump mating area.

NOTE:

- **When installing the oil pump, do not slide the bottom surface onto the oil pan mounting surface.**

- **Wait at least 30 minutes to allow liquid gasket to cure before filling the engine with oil.**
- **Do not run the engine for at least 3 hours to allow liquid gasket to cure after installing the oil pump.**

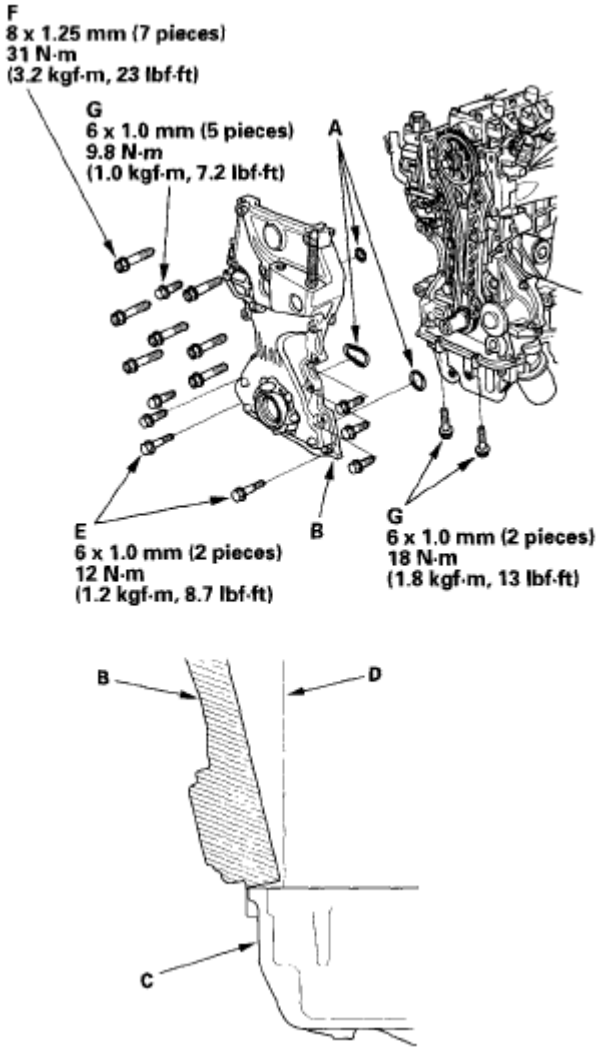

Fig. 28: Identifying O-Rings And Edge Of Oil Pump (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the side engine mount bracket (A), then loosely tighten the new bolt and nut (B), and loosely tighten the bolt (C).

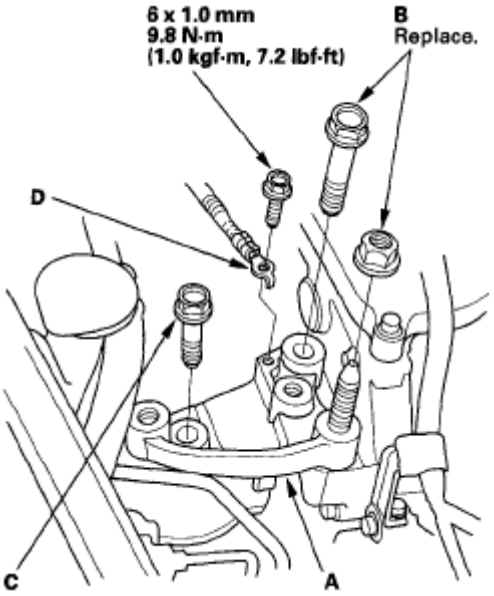

Fig. 29: Identifying Side Engine Mount Bracket (With Torque Specifications)
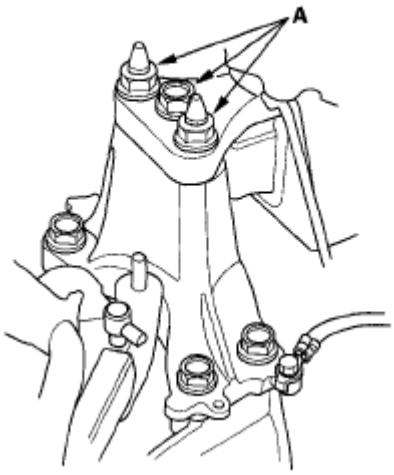
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the ground cable (D).
10. Remove the air cleaner assembly (see **THROTTLE BODY CLEANING**).
11. Loosen the transmission mounting bolt and nuts (A).

M/T



A/T

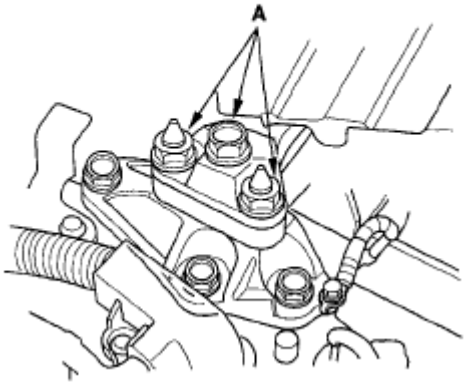


Fig. 30: Identifying Transmission Mounting Bolt And Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Raise the vehicle on the lift to full height.
13. Loosen the lower torque rod mounting bolt (A).

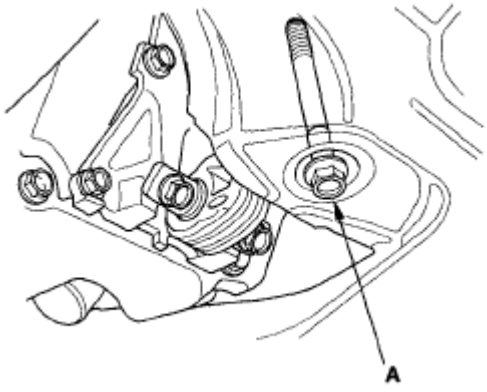

Fig. 31: Identifying Lower Torque Rod Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Lower the vehicle on the lift.

15. Tighten the side engine mount mounting bolts and nut.

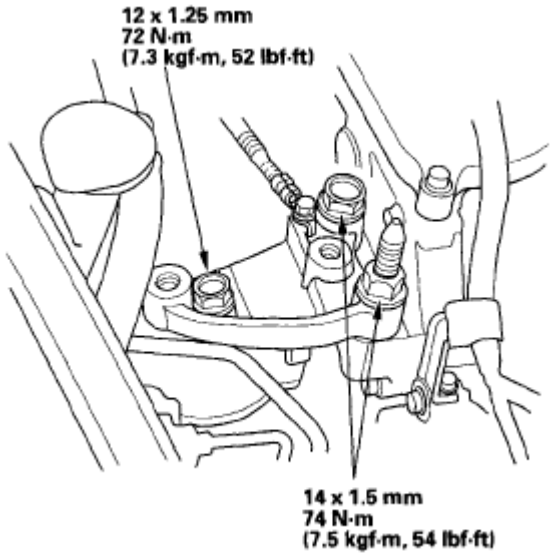

Fig. 32: Identifying Side Engine Mount Mounting Bolts And Nut (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Tighten the transmission mounting bolt and nuts.

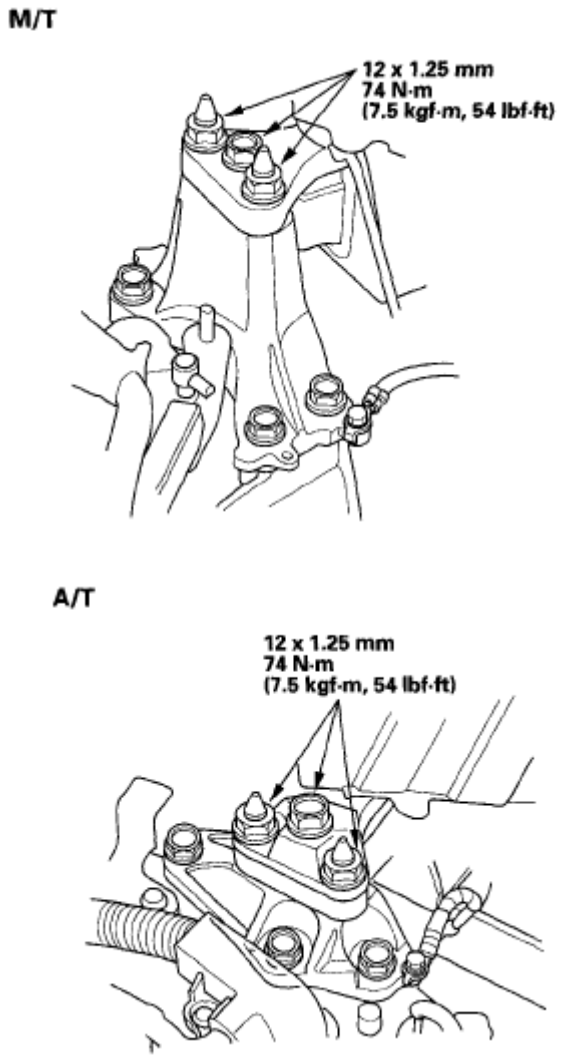

Fig. 33: Identifying Transmission Mounting Bolt And Nuts (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Raise the vehicle on the lift to full height.
18. Tighten the lower torque rod mounting bolt.

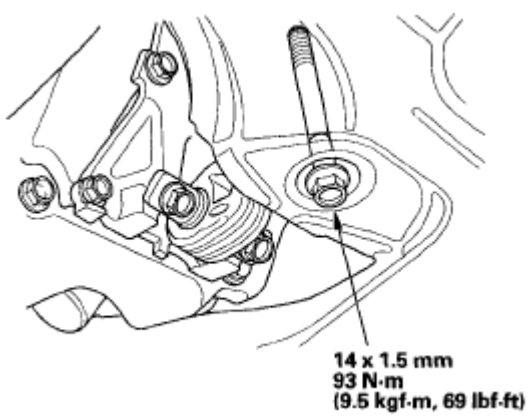

Fig. 34: Identifying Lower Torque Rod Mounting Bolt (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Lower the vehicle on the lift.
20. Install the air cleaner assembly (see **THROTTLE BODY CLEANING**).
21. Install the upper torque rod, then tighten the new upper torque rod mounting bolts in the numbered sequence shown.

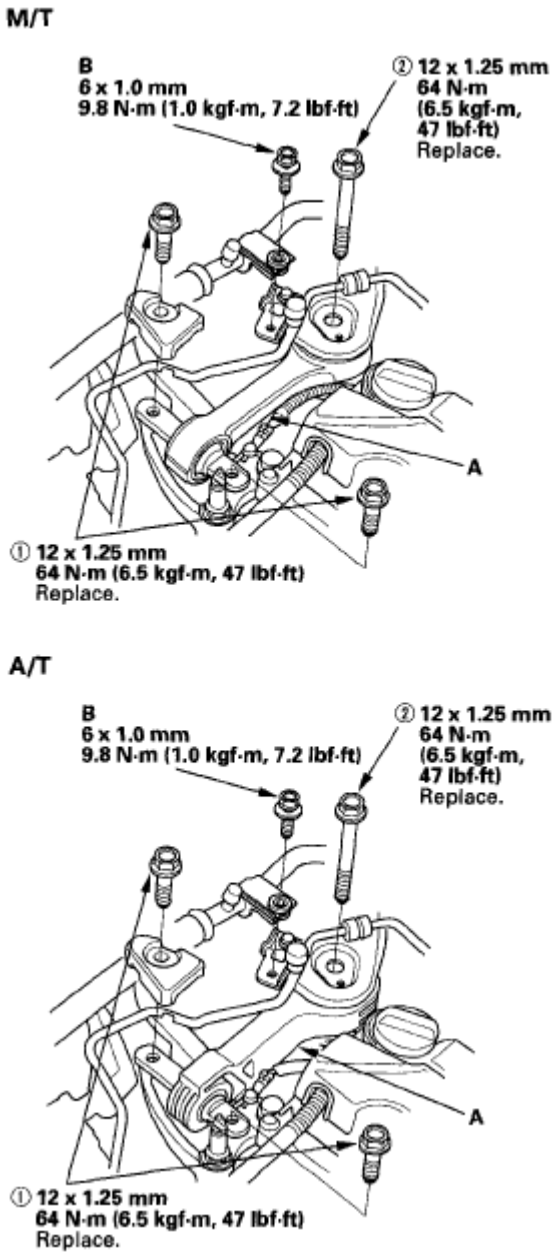

Fig. 35: Identifying Upper Torque Rod Mounting Bolts And Tightening Sequence (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Install the bolt (B) securing the A/C line.
23. Install the crankshaft pulley (see **INSTALLATION**).
24. Install the positive crankcase ventilation (PCV) hose.

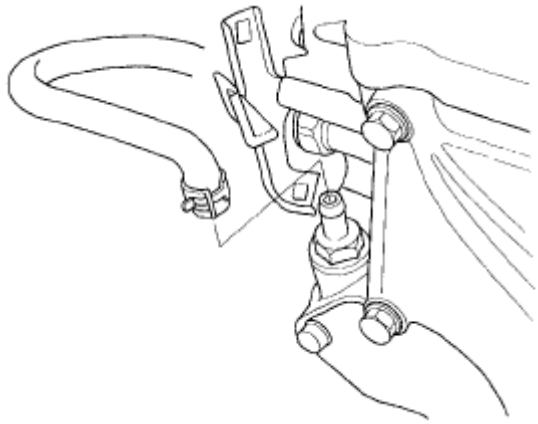

Fig. 36: Identifying Positive Crankcase Ventilation Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Install the cylinder head cover (see **CYLINDER HEAD COVER INSTALLATION**).
26. Install the drive belt auto-tensioner (see **DRIVE BELT AUTO-TENSIONER REMOVAL/INSTALLATION**).
27. Install the splash shield.
28. Install the front wheels.

PULLEY END CRANKSHAFT OIL SEAL INSTALLATION

Special Tools Required

- Driver 07749-0010000
- Attachment, 60 mm 07LAD-SM40100

1. Using the special tools, Gently tap in the new oil seal until the driver bottoms on the oil pump.

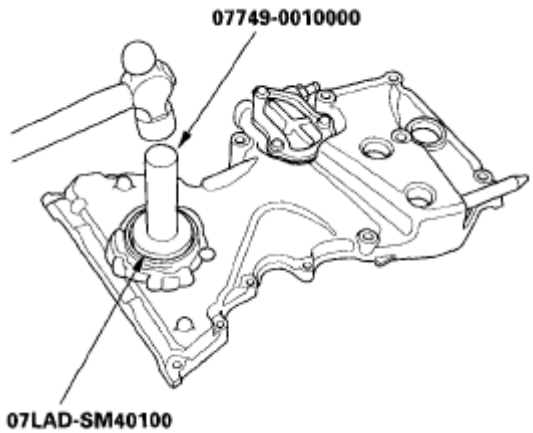

Fig. 37: Positioning Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

OIL/AIR SEPARATOR INSTALLATION

1. Remove all of the old liquid gasket from the oil/air separator mating surfaces, bolts, and bolt holes.

2. Clean, and dry the oil/air separator mating surfaces.
3. Apply liquid gasket, P/N 08717-0004,08718-0001, 08718-0002,08718-0003, or 08718-0009, evenly to the engine block mating surface of the oil/air separator.

NOTE:

- **If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply new liquid gasket.**

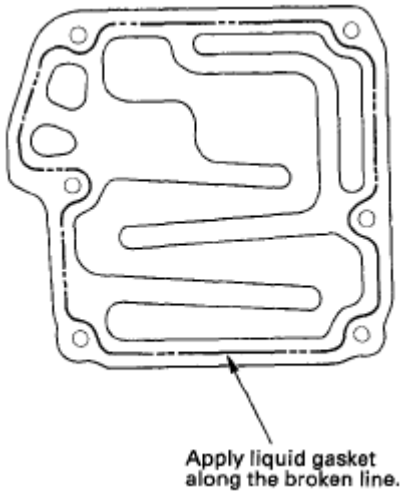

Fig. 38: Identifying Liquid Gasket Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the oil/air separator.

NOTE:

- **Wait at least 30 minutes to allow liquid gasket to cure before filling the engine with oil.**
- **Do not run the engine for at least 3 hours to allow liquid gasket to cure after installing the oil/air separator.**

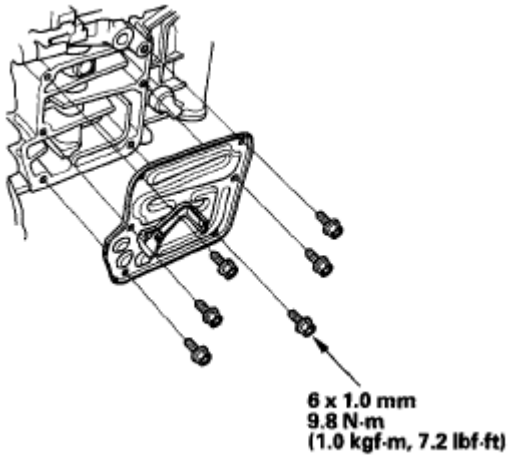

Fig. 39: Identifying Oil/Air Separator Bolts (With Torque Specifications)

COMPONENT LOCATION INDEX

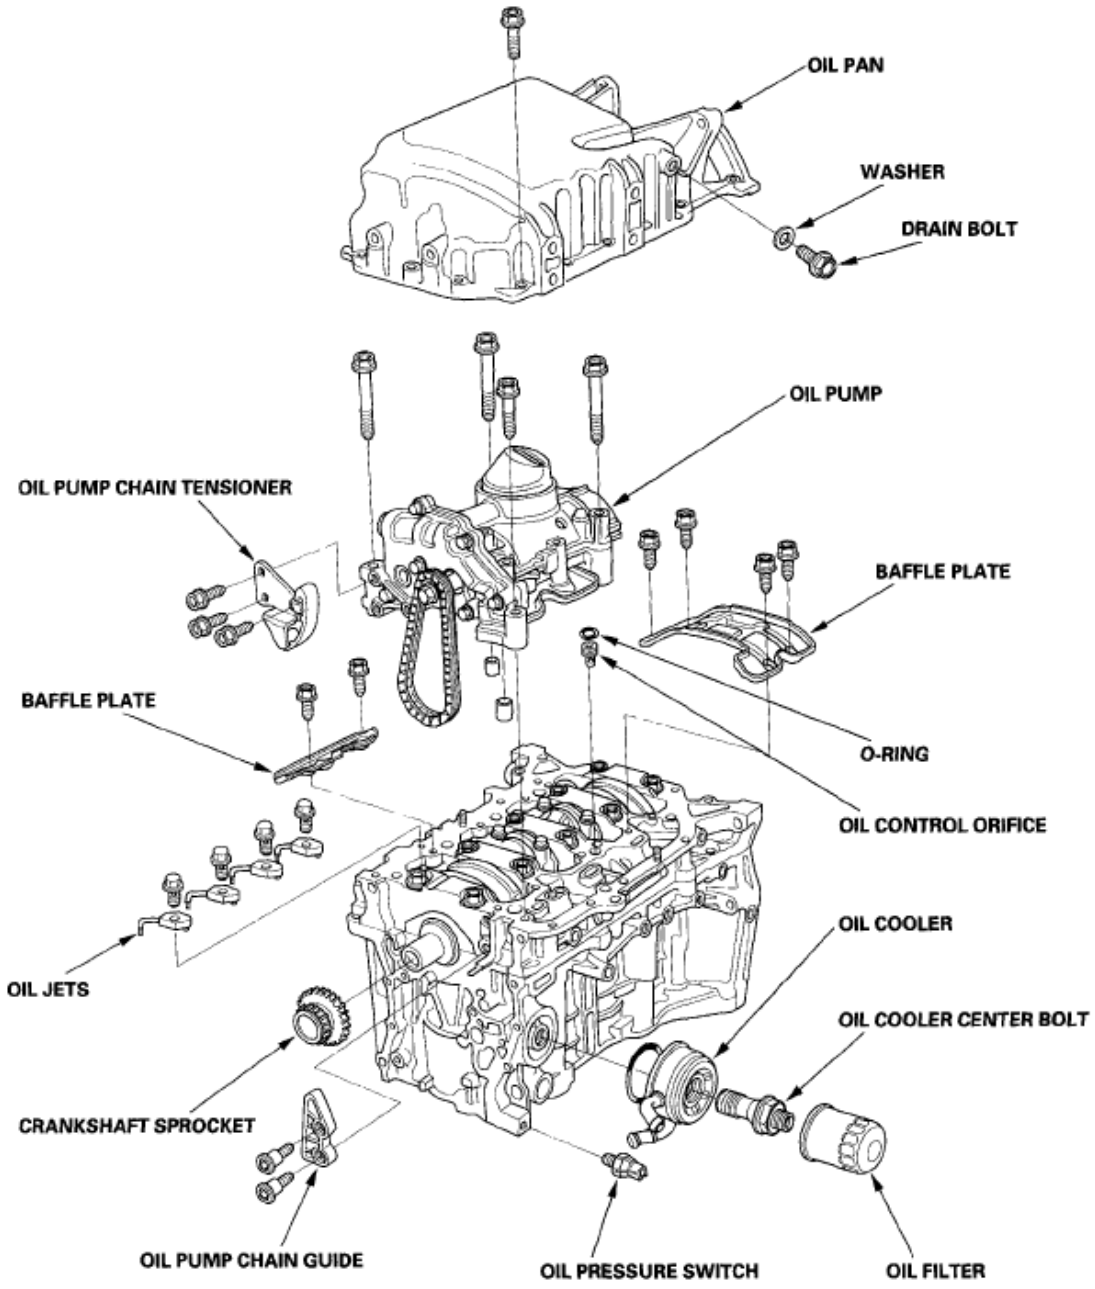

Fig. 41: Identifying Component Location Index
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYMPTOM TROUBLESHOOTING INDEX

SYMPTOM TROUBLESHOOTING INDEX

Symptom	Diagnostic procedure	Also check for
Excessive engine oil consumption	1. Check for loose of the engine oil fill cap, oil drain bolt, and oil filter. 2. Check for oil leaks.	

	3. Check for worn valve guide(s) (see **VALVE INSPECTION**) or worn valve stem seal(s) (see **VALVE, SPRING, AND VALVE SEAL REMOVAL**). 4. Check for damaged or worn piston ring(s) (see **PISTON RING REPLACEMENT**). 5. Check for damaged or worn engine internal parts (cylinder wall, pistons, etc.) (see **BLOCK AND PISTON INSPECTION**).	
Low oil pressure indicator does not come on with the ignition switch ON (II)	1. Do the low oil pressure indicator circuit troubleshooting (Open) (see **LOW OIL PRESSURE INDICATOR CIRCUIT TROUBLESHOOTING (OPEN)**). 2. Test the oil pressure switch (see **OIL PRESSURE SWITCH TEST**).	An open in the wire between the engine control module (ECM) and the oil pressure switch
Low oil pressure indicator stays on	1. Check the engine oil level. 2. Do the low oil pressure indicator circuit troubleshooting (Short) (see **LOW OIL PRESSURE INDICATOR CIRCUIT TROUBLESHOOTING (SHORT)**). 3. Test the oil pressure switch (see **OIL PRESSURE SWITCH TEST**). 4. Check the engine oil pressure (see **OIL PRESSURE TEST**). 5. Check the oil filter for clogging. 6. Check the oil screen for clogging. 7. Check the relief valve (see **OIL PUMP OVERHAUL**). 8. Test the oil pump (see **OIL PUMP INSPECTION**).	A wire shorted to ground between the ECM and the oil pressure switch

LOW OIL PRESSURE INDICATOR CIRCUIT DIAGRAM

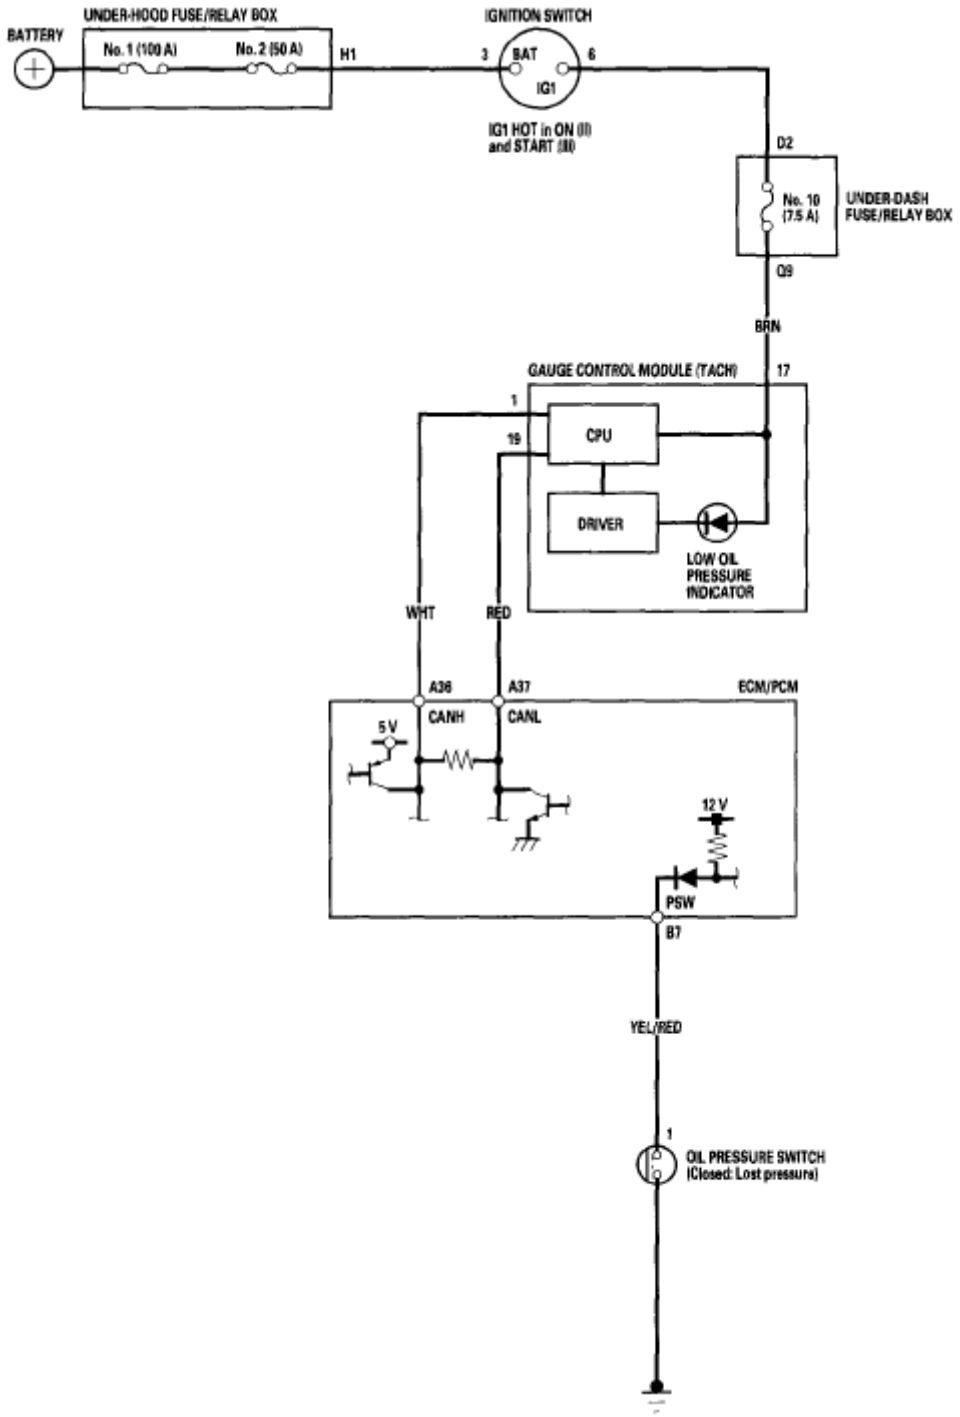

Fig. 42: Low Oil Pressure Indicator Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

LOW OIL PRESSURE INDICATOR CIRCUIT TROUBLESHOOTING (OPEN)

1. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 on **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
2. Turn the ignition switch ON (II).
3. Make sure the HDS communicates with the vehicle and the engine control module (ECM). If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).

4. Check for DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). If a DTC is present, diagnose, and repair the cause before continuing with this test.
5. Turn the ignition switch ON (II), select PGM-FI, and check the OIL PRESSURE SWITCH in the DATA LIST with the HDS.

   Is "ON" indicated?

   YES -Replace the gauge control module (tach) (see **REPLACEMENT**).

   NO -Go to step 6.

6. Turn the ignition switch to LOCK (0).
7. Check the oil pressure switch (see **OIL PRESSURE SWITCH TEST**).

   Is the oil pressure switch OK?

   YES -Go to step 7.

   NO -Replace the oil pressure switch (see **OIL PRESSURE SWITCH TEST**).

8. Turn the ignition switch ON (II), and jump the SCS line with the HDS, then turn the ignition switch OFF.

   NOTE: This step must be done to protect the ECM from damage.

9. Disconnect ECM connector B (44P) and the oil pressure switch connector.
10. Check for continuity between ECM connector terminal B7 and the oil pressure switch connector.

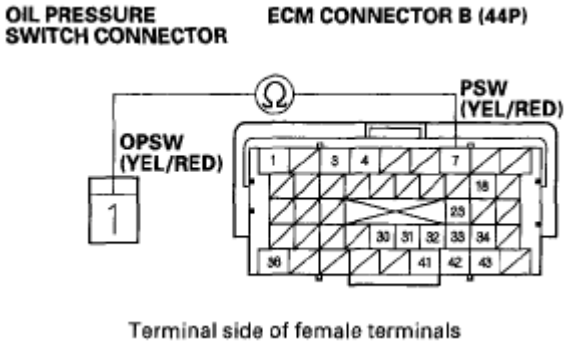

Fig. 43: Checking For Continuity Between ECM Connector Terminal B7 And Oil Pressure Switch Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Update the ECM if it does not have the latest software (see **UPDATING THE ECM**), or substitute a known-good ECM (see **SUBSTITUTING THE ECM**), then recheck. If the symptom/indication goes away with a known-good ECM, replace the original ECM (see **ECM REPLACEMENT**).

NO -Repair open in the wire between the oil pressure switch and the ECM.

LOW OIL PRESSURE INDICATOR CIRCUIT TROUBLESHOOTING (SHORT)

1. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 on **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
2. Turn the ignition switch ON (II).
3. Make sure the HDS communicates with the vehicle and the engine control module (ECM). If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Check for DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). If a DTC is present, diagnose, and repair the cause before continuing with this test.
5. Start the engine, select PGM-FI, and check the OIL PRESSURE SWITCH in the DATA LIST with the HDS.

   Is "OFF" indicated?

   YES -Replace the gauge control module (tach) (see **REPLACEMENT**).

   NO -Go to step 6.

6. Turn the ignition switch to LOCK (0).
7. Disconnect the oil pressure switch connector.
8. Start the engine, and check the OIL PRESSURE SWITCH in the DATA LIST with the HDS.

   Is "OFF" indicated?

   YES -Go to step 9.

   NO -Go to step 11.

9. Turn the ignition switch to LOCK (0).
10. Check the oil pressure switch (see **OIL PRESSURE SWITCH TEST**).

    Is the oil pressure switch OK?

    YES -Do the oil pressure test (see **OIL PRESSURE TEST**).

    NO -Replace the oil pressure switch (see **OIL PRESSURE SWITCH TEST**).

11. Turn the ignition switch ON (II), and jump the SCS line with the HDS, then turn the ignition switch OFF.

    NOTE: This step must be done to protect the ECM from damage.

12. Disconnect ECM connector B (44P) and the oil pressure switch connector.
13. Check for continuity between the oil pressure switch connector and body ground.

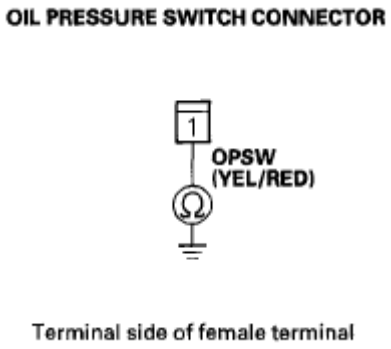

Fig. 44: Checking For Continuity Between Oil Pressure Switch Connector And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short in the wire between the oil pressure switch and the ECM.

NO -Update the ECM if it does not have the latest software (see **UPDATING THE ECM**), or substitute a known-good ECM (see **SUBSTITUTING THE ECM**), then recheck. If the symptom/indication goes away with a known-good ECM, replace the original ECM (see **ECM REPLACEMENT**).

OIL PRESSURE SWITCH TEST

1. Remove the oil pressure switch connector (A) from the engine oil pressure switch (B).

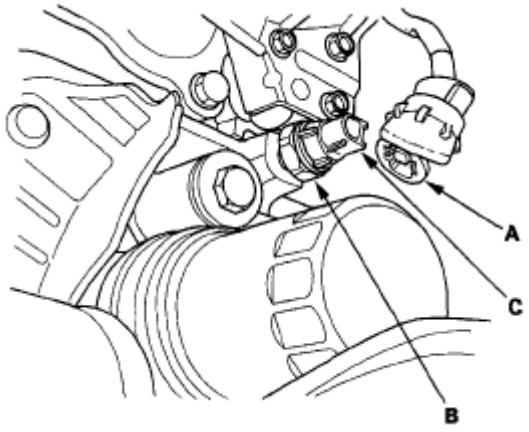

Fig. 45: Identifying Oil Pressure Switch Connector And Engine Oil Pressure Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Check for continuity between the positive terminal (C) and the engine (ground). There should be continuity with the engine stopped. There should be no continuity with the engine running.

OIL PRESSURE SWITCH REPLACEMENT

1. Disconnect the oil pressure switch connector, then remove the oil pressure switch.

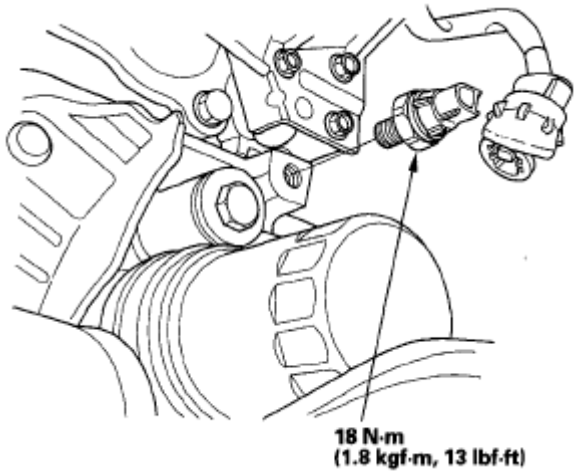

Fig. 46: Identifying Torque Specifications Of Oil Pressure Switch (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove any old liquid gasket from the switch and switch mounting hole.
3. Apply very small amount of liquid gasket to the oil pressure switch threads, then install the oil pressure switch.

NOTE: Using too much liquid gasket may cause liquid gasket to enter the oil passage or the end of the new oil pressure switch.

OIL PRESSURE TEST

NOTE: If the oil pressure warning light stays on with the engine running, check the engine oil level. If the oil level is correct:

1. Remove the engine oil pressure switch, and install an oil pressure gauge (A).

Fig. 47: Identifying Oil Pressure Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Start the engine. Shut it off immediately if the gauge registers no oil pressure. Repair the problem before continuing.
3. Allow the engine to reach operating temperature (fan comes on at least twice). The pressure should be:

   Engine Oil Temperature: 176°F (80°C)

   Engine Oil Pressure:

   At Idle: 70 kPa (0.7 kgf/cm^2 ,10 psi) min.

   At 3,000 rpm: 300 kPa (3.1 kgf/cm^2 ,44 psi) min.

4. If the oil pressure is out of specifications, inspect these items:
   - Replace the oil filter (see **ENGINE OIL FILTER REPLACEMENT**).
   - Inspect the oil pressure relief valve (see **OIL PUMP OVERHAUL**).
   - Check the oil screen for clogging.
   - Check the oil pump (see **OIL PUMP INSPECTION**).

ENGINE OIL REPLACEMENT

1. Warm up the engine.
2. Remove the drain bolt (A), and drain the engine oil.

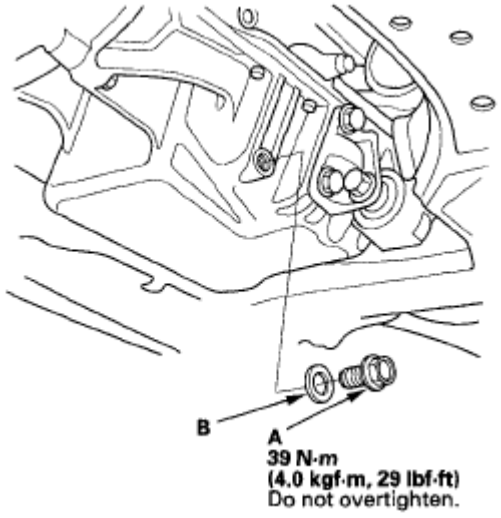

Fig. 48: Identifying Torque Specifications Of Drain Bolt (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Reinstall the drain bolt with a new washer (B).
4. Refill the engine with the recommended oil (see **LUBRICANTS AND FLUIDS**).

   Capacity

   At Oil Change: 4.2 L (4.4 US qt)

At Oil Change including Filter: 4.4 L (4.6 US qt)

After Engine Overhaul: 5.5 L (5.8 US qt)

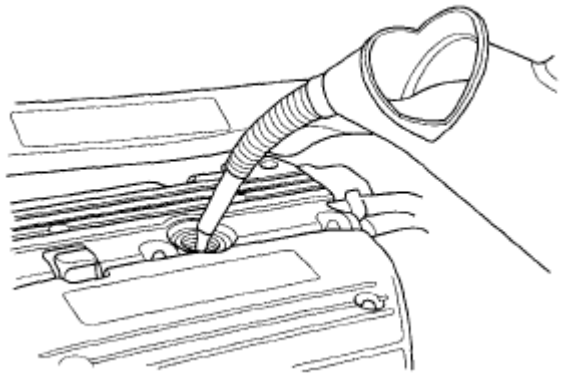

Fig. 49: Filling Engine With Recommended Oil
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the maintenance minder required to replace the engine oil, reset the maintenance minder (see **MAINTENANCE MINDER**), then go to step 8. If the maintenance minder did not require to remove the engine oil, go to step 6.
6. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 on **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
7. Turn the ignition switch ON (II).
8. Make sure the HDS communicates with the vehicle and the ECM. If it doesn't communicate, troubleshoot the DLC circuit (see **GENERAL TROUBLESHOOTING INFORMATION**).
9. Select BODY ELECTRICAL with the HDS.
10. Select ADJUSTMENT in the GAUGES MENU with the HDS.
11. Select RESET in the MAINTENANCE MINDER with the HDS
12. Select RESETTING THE ENGINE OIL LIFE with the HDS.
13. Run the engine for at least 3 minutes, then check for oil leakage.
14. Reset the maintenance information display (see **RESETTING THE MAINTENANCE INFORMATION DISPLAY**).

ENGINE OIL FILTER REPLACEMENT

Special Tools Required

Oil filter wrench 07HAA-PJ70100

1. Remove the oil filter with the special oil filter wrench.
2. Inspect the filter to make sure the rubber seal is not stuck to the oil filter seating surface of the engine.
3. Inspect the threads (A) and rubber seal (B) on the new filter. Clean the seat on the oil cooler, then apply a light coat of new engine oil to the filter rubber seal. Use only filters with a built-in bypass system.

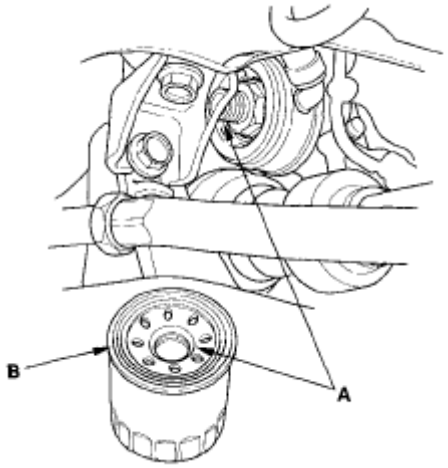

Fig. 50: Identifying Threads And Rubber Seal On Filter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the oil filter by hand.
5. After the rubber seal seats, tighten the oil filter clockwise with the oil filter wrench.

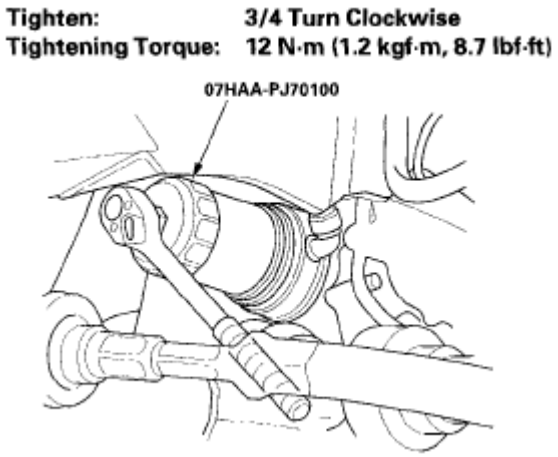

Fig. 51: Identifying Oil Filter Wrench (With Torque Specifications)
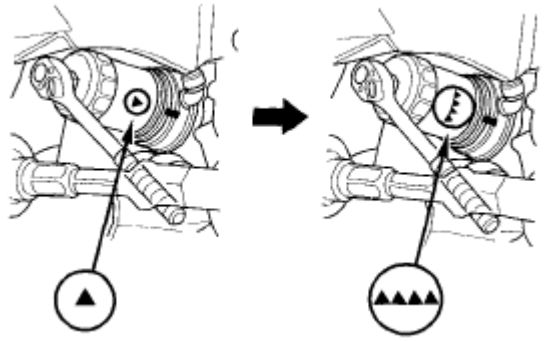
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If four numbers or marks (1 to 4 or dtrif to dtrif) are printed around the outside of the filter, use the following procedure to tighten the filter.
    - Spin the filter on until its seal lightly seats against the oil cooler, and note which number or mark is at the bottom.
    - Tighten the filter by turning it clockwise three numbers or marks from the one you noted. For example, if number 2 is at the bottom when the seal is seated, tighten the filter until the number 1 comes around the bottom.



Number or Mark when rubber seal is seated	1 or ▼	2 or ▼▼	3 or ▼▼▼	4 or ▼▼▼▼
Number or Mark after tightening	4 or ▼▼▼▼	1 or ▼	2 or ▼▼	3 or ▼▼▼

Fig. 52: Identifying Marks On Filter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. After installation, fill the engine with oil up to the specified level, run the engine for more than 3 minutes, then check for oil leakage.

Oil Cooler Replacement

1. Remove the oil filter (see **ENGINE OIL FILTER REPLACEMENT**).
2. Remove the oil cooler bypass hoses (A) and oil cooler center bolt (B), then remove the oil cooler (C).

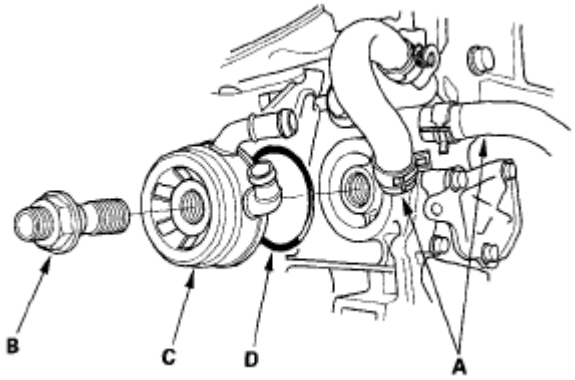


Fig. 53: Identifying Oil Cooler Center Bolt And Oil Cooler
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the oil cooler using a new O-ring (D). Tighten the oil cooler center bolt to 74 N.m (7.5 kgf.m, 54 lbf.ft).
4. Install the oil filter (see **ENGINE OIL FILTER REPLACEMENT**).

OIL JET INSPECTION

1. Remove the oil jet, and inspect it as follows.
   - Make sure that a 1.1 mm (0.04 in.) diameter drill will go through the nozzle hole (A) (1.2 mm (0.05 in.) diameter).
   - Insert the other end of a 1.1 mm (0.04 in.) drill into the oil intake (1.2 mm (0.05 in.) diameter). Make sure the check ball (B) moves smoothly and has a stroke of approximately 4.0 mm (0.16 in.).
   - Check the oil jet operation with an air nozzle. It should take at least 200 kPa (2.0 kgf/cm^2 ,28 psi) to unseat the check ball.

NOTE: Replace the oil jet assembly if the nozzle is damaged or bent.

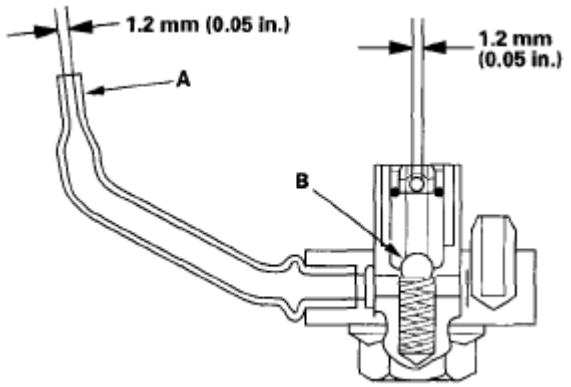

Fig. 54: Identifying Nozzle Hole Drill Diameter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Carefully install the oil jet. The mounting torque is critical.

   Torque: 16 N.m (1.6 kgf.m, 12 lbf.ft)

OIL PUMP OVERHAUL

Exploded View

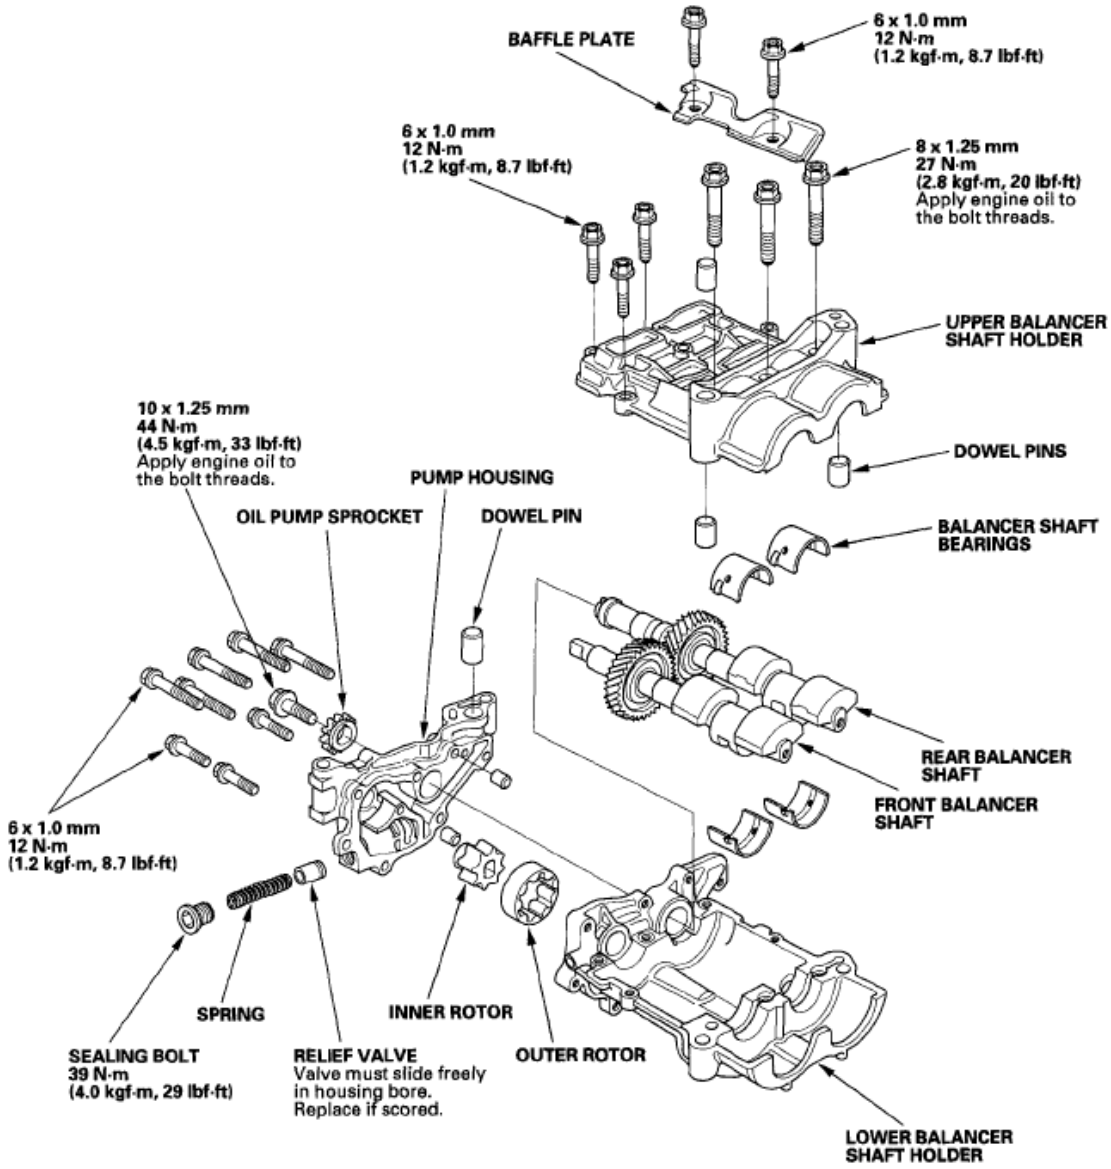

Fig. 55: Exploded View Of Oil Pump (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Oil Pump Removal

1. Turn the crankshaft pulley so its top dead center (TDC) mark (A) lines up with the pointer (B).

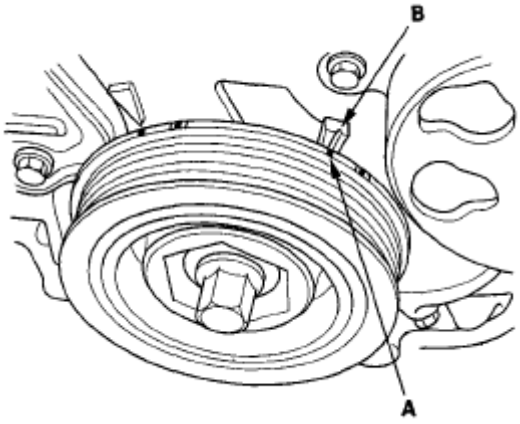

Fig. 56: Identifying Crankshaft Pulley Top Dead Center Mark Lines Up With Pointer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the oil pan (see **OIL PAN REMOVAL**).
3. Remove and discard the oil pump chain tensioner.

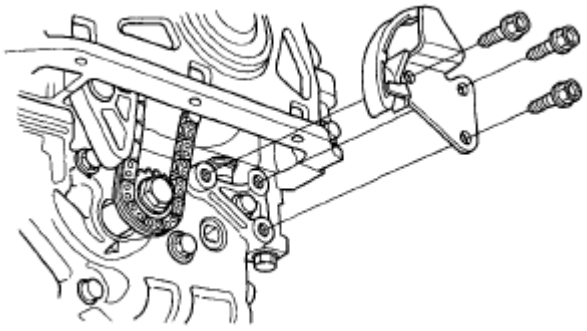

Fig. 57: Identifying Oil Pump Chain Tensioner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. To hold the rear balancer shaft, insert a 6 mm pin driver (A) into the maintenance hole in the lower balancer shaft holder and through the rear balancer shaft.

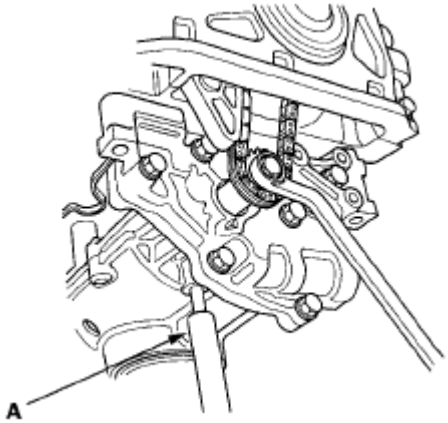

Fig. 58: Identifying Pin Driver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Loosen the oil pump sprocket mounting bolt.
6. Remove the oil pump sprocket (A), then remove the oil pump(B).

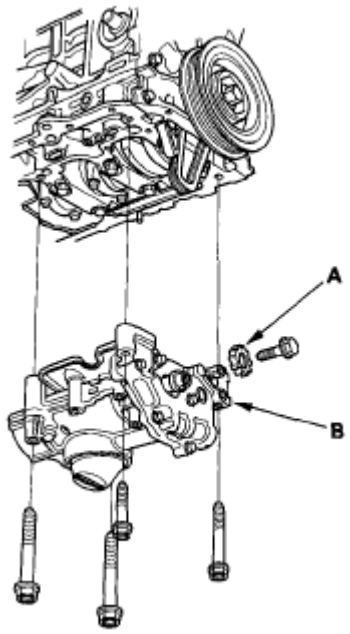

Fig. 59: Identifying Oil Pump Sprocket And Oil Pump
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Oil Pump Inspection

1. Remove the pump housing.

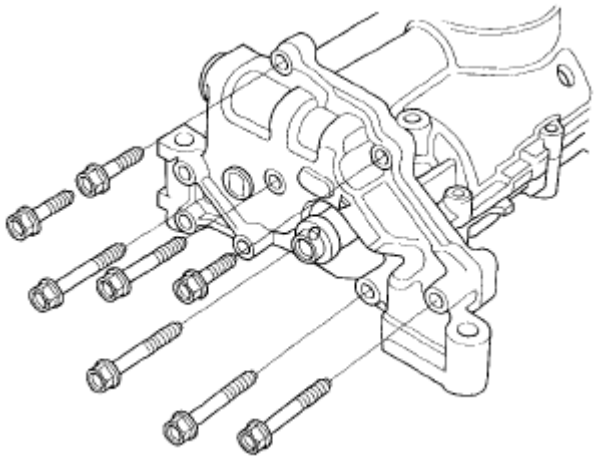

Fig. 60: Identifying Pump Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Check the inner-to-outer rotor radial clearance between the inner rotor (A) and outer rotor (B). If the inner-to-outer rotor radial clearance exceeds the service limit, replace the oil pump.

Inner Rotor-to-Outer Rotor Radial Clearance Standard (New): 0.06-0.16 mm (0.002-0.006 in.)
Service Limit: 0.20 mm (0.008 in.)

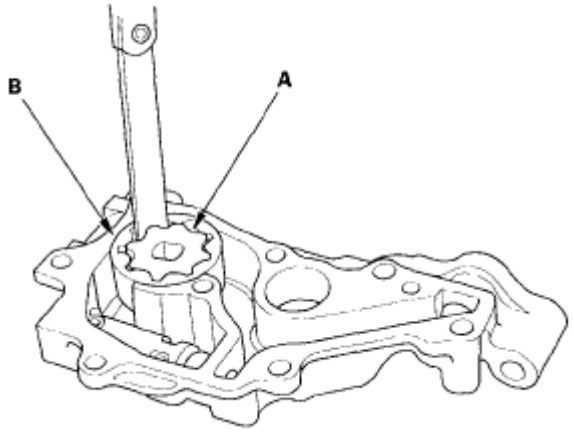

Fig. 61: Identifying Inner Rotor And Outer Rotor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check the housing-to-rotor axial clearance between the rotor (A) and pump housing (B). If the housing-to-rotor axial clearance exceeds the service limit, replace the oil pump.

   Housing-to-Rotor Axial Clearance

   Standard (New): 0.035-0.070 mm (0.0014-0.0028 in.)

   Service Limit: 0.12 mm (0.005 in.)

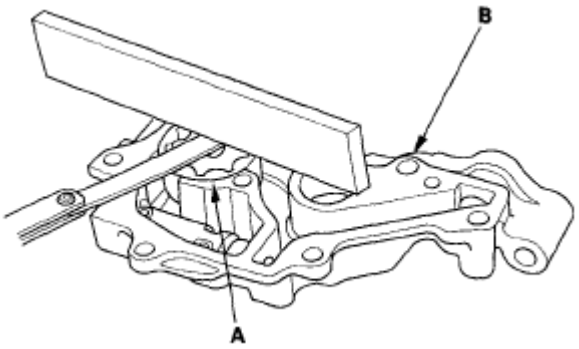

Fig. 62: Identifying Rotor And Pump Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Check the housing-to-outer rotor radial clearance between the outer rotor (A) and pump housing (B). If the housing-to-outer rotor radial clearance exceeds the service limit, replace the oil pump.

   Housing-to-Outer Rotor Radial Clearance

   Standard (New): 0.15-0.21 mm (0.006-0.008 in.)

   Service Limit: 0.23 mm (0.009 in.)

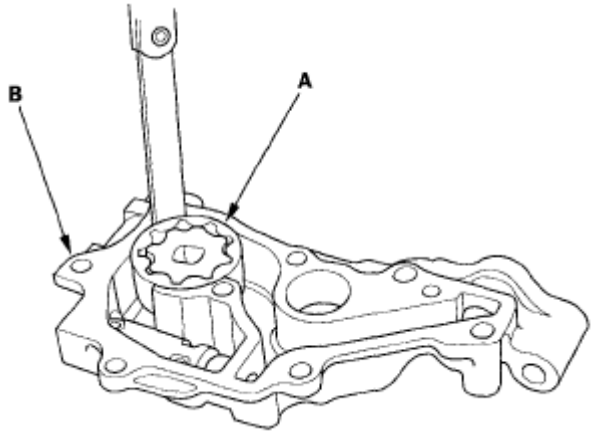

Fig. 63: Identifying Outer Rotor And Pump Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Inspect both rotors and the pump housing for scoring or other damage. Replace parts if necessary.

Balancer Shaft Inspection

1. Seat the balancer shaft by pushing it away from the oil pump sprocket end of the oil pump.
2. Zero the dial indicator against the end of the balancer shaft, then push the balancer shaft back and forth and read the end play.

Balancer Shaft End Play

Front Balancer Shaft:

Standard (New): 0.063-0.108 mm

(0.0025-0.0043 in.)

Service Limit: 0.14 mm (0.0055 in.)

Rear Balancer Shaft:

Standard (New): 0.063-0.108 mm

(0.0025-0.0043 in.)

Service Limit: 0.14 mm (0.0055 in.)

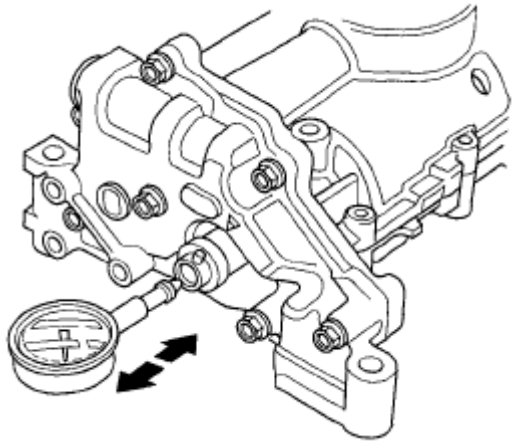

Fig. 64: Identifying Zero Dial Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the baffle plate (A) and upper balancer shaft holder (with bearings) (B), then remove the front balancer shaft (C) and rear balancer shaft (D).

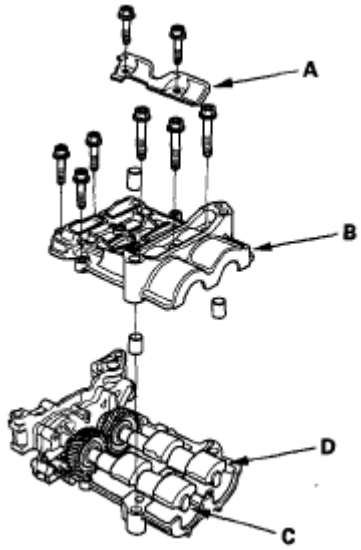

Fig. 65: Identifying Baffle Plate And Upper Balancer Shaft Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Measure the inner diameter of the No. 1 bearing for the front balancer shaft hole and the rear balancer shaft hole.

Bearing Inner Diameter

Front:

Standard (New): 20.000-20.020 mm

(0.7874-0.7882 in.)

Service Limit: 20.03 mm (0.789 in.)

Rear:

Standard (New): 24.000-24.020 mm

(0.9449-0.9457 in.)

Service Limit: 24.03 mm (0.946 in.)

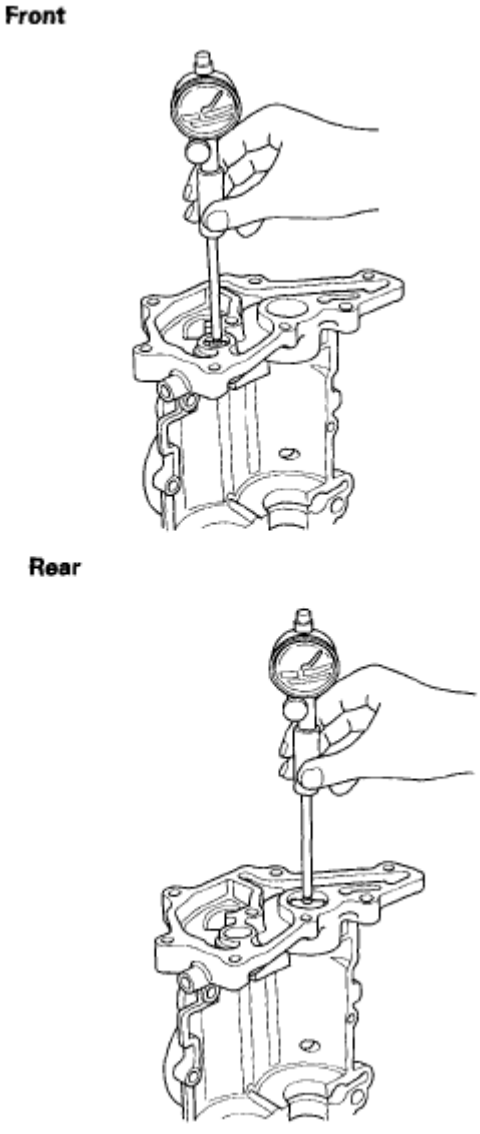

Fig. 66: Measuring Inner Diameter Of No. 1 Bearing For Front Balancer Shaft Hole And Rear Balancer Shaft Hole
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Measure the diameters of the No. 1 journals on the front balancer shaft and rear balancer shaft.

Journal Diameter

Front:

Standard (New): 19.938-19.950 mm

(0.7850-0.7854 in.)

Service Limit: 19.92 mm (0.784 in.)

Rear:

Standard (New): 23.938-23.950 mm

(0.9424-0.9429 in.)

Service Limit: 23.92 mm (0.942 in.)

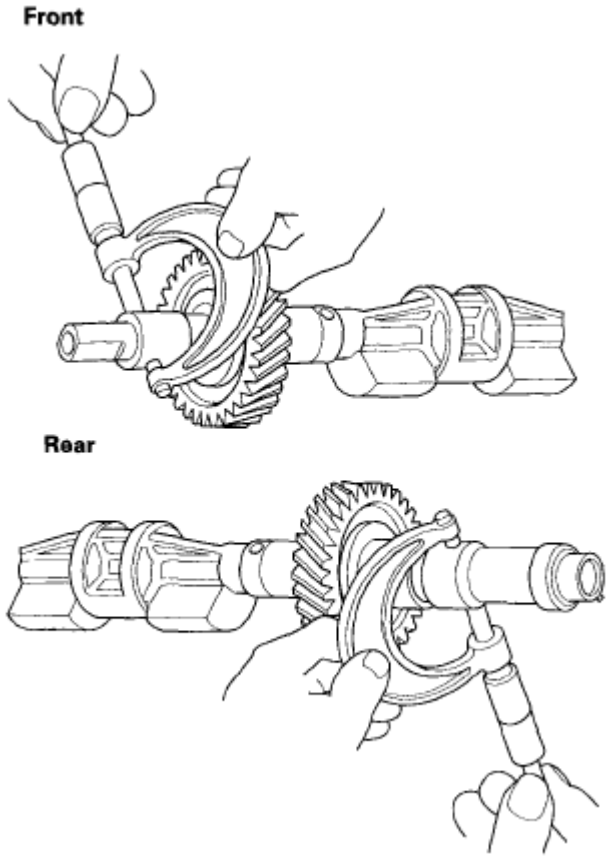

Fig. 67: Measuring Diameters Of No. 1 Journals On Front Balancer Shaft And Rear Balancer Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Clean both balancer shaft No. 2 journals and bearing halves with a clean shop towel.
7. Place one strip of plastigage across each No. 2 journal.
8. Reinstall the bearings and upper balancer shaft holder, then torque the bolts.

NOTE: Do not rotate the balancer shafts during inspection.

9. Remove the upper balancer shaft holder and bearings again, and measure the widest part with the

plastigage. If the balancer shaft No. 2 journal oil clearance is out-of-tolerance, install new bearings, and recheck. If it is still out-of-tolerance, replace the balancer shafts.

No. 2 Journal Oil Clearance

Standard (New): 0.060-0.120 mm

(0.0024-0.0047 in.)

Service Limit: 0.15 mm (0.006 in.)

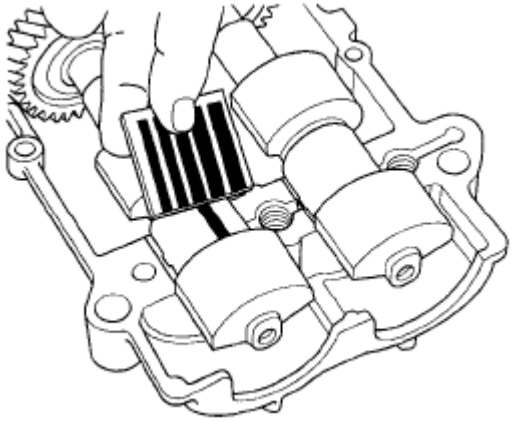

Fig. 68: Measuring Widest Part With Plastigage
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Align the punch mark on the rear balancer shaft in the center of the two punch marks on the front balancer shaft, then install the balancer shafts on the lower balancer shaft holder.

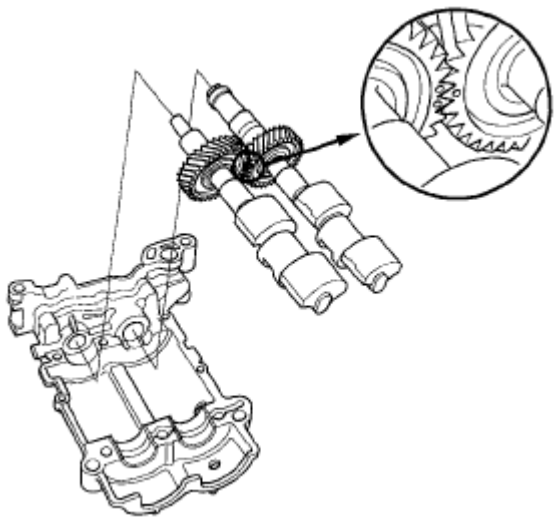

Fig. 69: Aligning Punch Mark On Rear Balancer Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Apply engine oil to the threads of the 8 mm bolts (A).

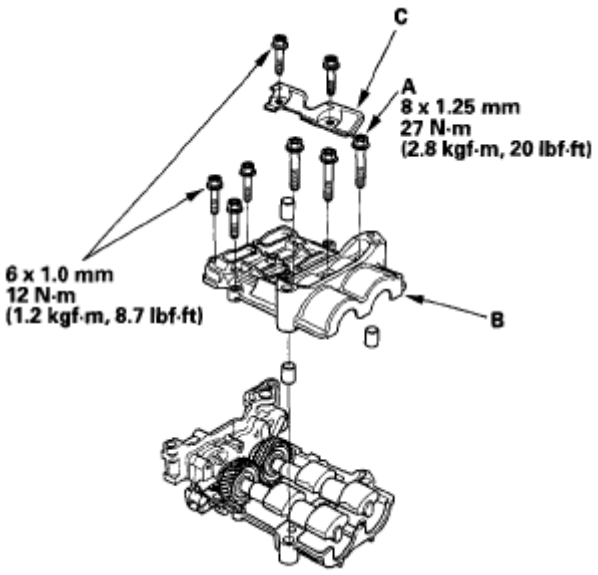

Fig. 70: Identifying Upper Balancer Shaft Holder Bolts (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install the upper balancer shaft holder (B) and baffle plate (C).
13. Install the pump housing.

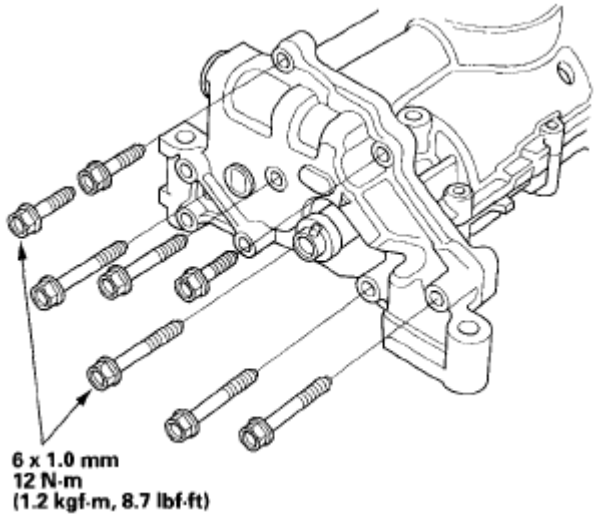

Fig. 71: Identifying Pump Housing Bolts (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

OIL PUMP INSTALLATION

1. Make sure the No. 1 piston top dead center (TDC) mark (A) lines up with the pointer (B).

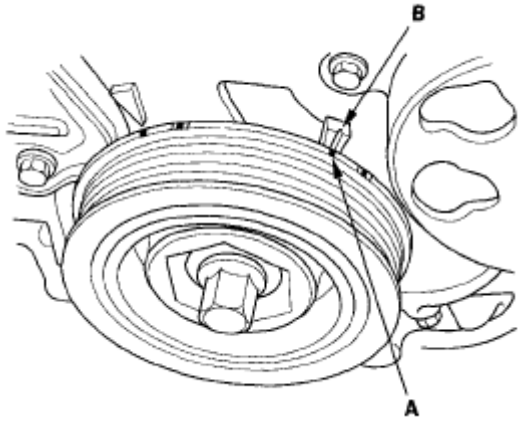

Fig. 72: Positioning Top Dead Center Mark Lines Up With Pointer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Align the dowel pin (A) on the rear balancer shaft with the mark (B) on the oil pump.

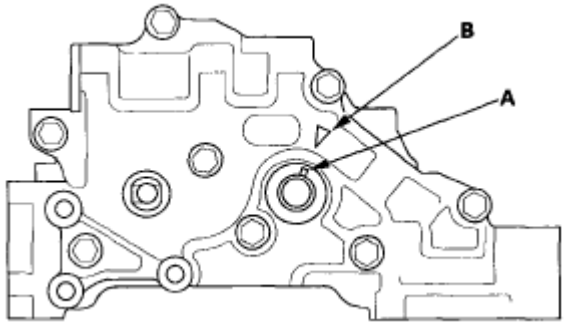

Fig. 73: Aligning Dowel Pin On Rear Balancer Shaft With Mark On Oil Pump
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. To hold the rear balancer shaft, insert a 6 mm pin driver (A) into the maintenance hole in the lower balancer shaft holder and through the rear balancer shaft.

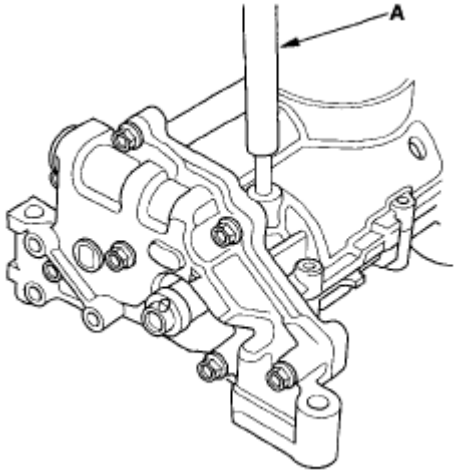

Fig. 74: Identifying Pin Driver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Apply engine oil to the threads of the oil pump sprocket mounting bolt (A).

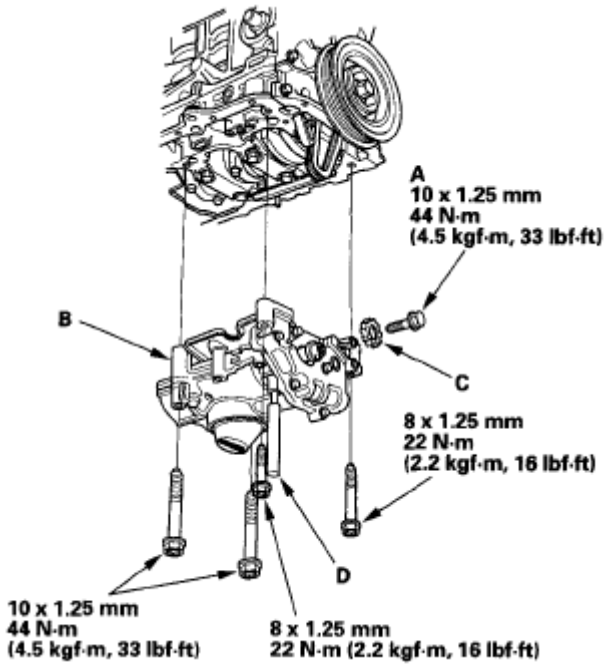

Fig. 75: Identifying Oil Pump Sprocket Mounting Bolt (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Loosely install the oil pump (B), then install the oil pump sprocket (C).
6. Remove the pin driver (D).
7. Tighten the oil pump mounting bolts.
8. Squeeze the new oil pump chain tensioner (A), then install the set clip (B) on it as shown.

NOTE: The set clip is supplied with the oil pump chain tensioner.

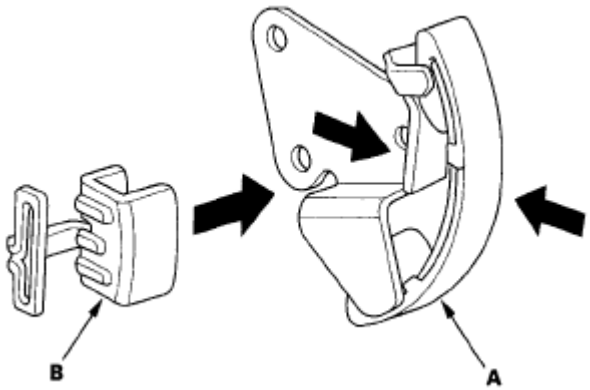

Fig. 76: Identifying Oil Pump Chain Tensioner And Set Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the new oil pump chain tensioner.

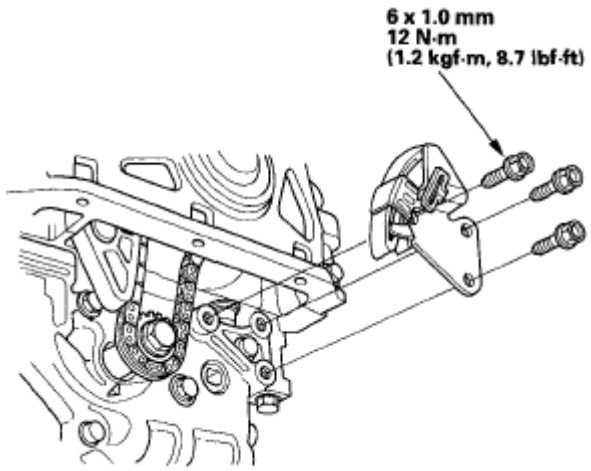

Fig. 77: Identifying Oil Pump Chain Tensioner Bolt (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the set clip from the oil pump chain tensioner.

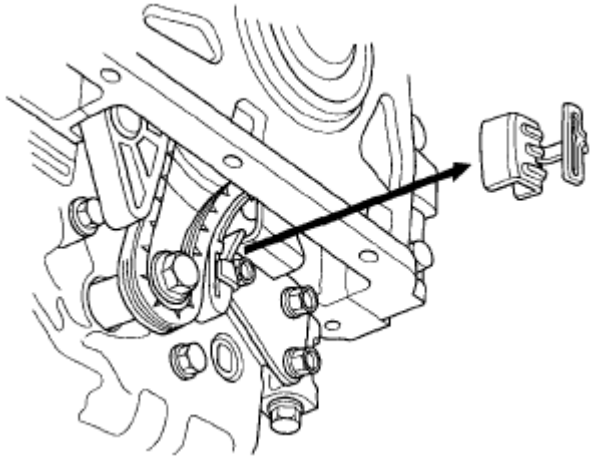

Fig. 78: Identifying Set Clip Of Oil Pump Chain Tensioner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the oil pan (see **OIL PAN INSTALLATION**).

2006-08 ENGINE

Cylinder Head - Civic (Except Hybrid)

CYLINDER HEAD (R18A1)

NOTE: Refer to the CYLINDER HEAD (GX) (SUPPLEMENT) article for additional information for the GX model.

ENGINE COMPRESSION INSPECTION

NOTE: After this inspection, you must reset the engine control module (ECM)/ powertrain control module (PCM), otherwise the ECM/PCM will continue to stop the injectors from functioning.

1. Warm up the engine to normal operating temperature (cooling fan comes on).
2. Turn the ignition switch OFF.
3. Connect the HDS to the data link connector (DLC) (see step 2 on **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
4. Turn the ignition switch ON (II).
5. Make sure the HDS communicates with the vehicle and the ECM/PCM. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).

6. Select PGM-FI, INSPECTION, then ALL INJECTORS OFF function on the HDS.
7. Turn the ignition switch to LOCK (0).
8. Remove the four ignition coils (see **IGNITION COIL REMOVAL/INSTALLATION**).
9. Remove the four spark plugs.
10. Attach the compression gauge to a spark plug hole.

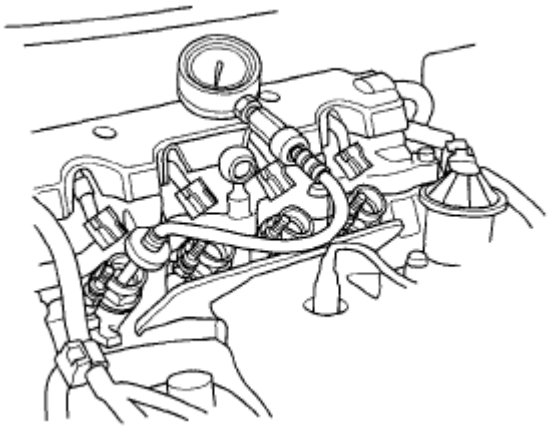

Fig. 5: Attaching Compression Gauge To Spark Plug Hole
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Open the throttle fully, crank the engine with the starter motor and measure the compression.

    Compression Pressure:

    Above 880 kPa (9.0 kgf/cm^2 , 128 psi)

12. Measure the compression on the remaining cylinders.

    Maximum Variation:

    Within 200 kPa (2.0 kgf/cm^2 , 28 psi)

13. If the compression is not within specifications, check the following items, then remeasure the compression.
    - Damaged or worn valves and seats
    - Damaged cylinder head gasket
    - Damaged or worn piston rings
    - Damaged or worn piston and cylinder bore
14. Remove the compression gauge from the spark plug hole.
15. Install the four spark plugs (see **SPARK PLUG INSPECTION**).
16. Install the four ignition coils (see **IGNITION COIL REMOVAL/INSTALLATION**).
17. Select ECM/PCM reset (see **ECM/PCM RESET**) to cancel the ALL INJECTORS OFF function on the HDS.
18. Do the ECM/PCM idle learn procedure (see **ECM/PCM IDLE LEARN PROCEDURE**).

VTEC ROCKER ARM TEST

Special Tools Required

Air pressure regulator 07AAJ-PNAA101

1. Start the engine, and let it run for 5 minutes, then turn OFF the ignition switch.
2. Remove the cylinder head cover (see **CYLINDER HEAD COVER REMOVAL**).
3. Set the No. 1 piston at top dead center (TDC) (see step 2).
4. Move the intake secondary rocker arm A for the No. 1 cylinder. The secondary rocker arm A should move independently of the secondary rocker arm B.
   - If the intake secondary rocker arm A moves freely, go to step 5.
   - If the intake secondary rocker arm A does not move, remove the secondary rocker arms as an assembly, then check that the pistons in the secondary rocker arms move smoothly. If any rocker arm needs replacing, replace the secondary rocker arms as an assembly, and retest.

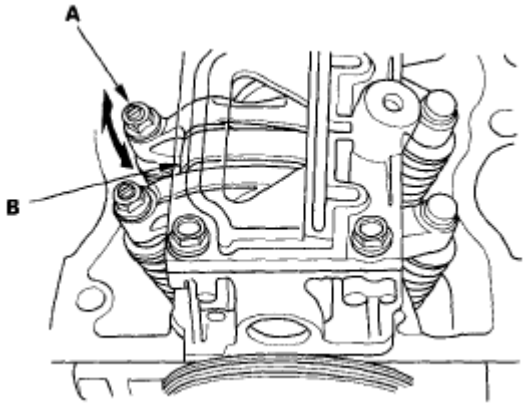

Fig. 6: Identifying Intake Secondary Rocker Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Repeat step 4 on the remaining intake secondary rocker arms with each piston at TDC. When all the secondary rocker arms pass the test, go to step 6.
6. Check that the air pressure on the shop air compressor gauge indicates over 400 kPa (4.0 kgf/cm^2 , 57 psi).
7. Inspect the valve clearance (see **VALVE CLEARANCE ADJUSTMENT**).
8. Install a 10 x 1.0 mm adapter to the inspection hole, then connect the air pressure regulator.

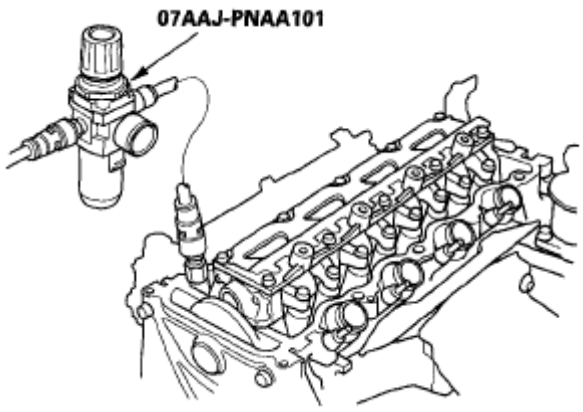

Fig. 7: Identifying Special Tools
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Loosen the valve on the regulator, and apply the specified air pressure.

   Specified Air Pressure:

   290 kPa (3.0 kgf/cm^2 , 42 psi)

10. With the specified air pressure applied, move the intake secondary rocker arm A for the No. 1 cylinder. The secondary rocker arm A and secondary rocker arm B should move together.

    If the intake secondary rocker arm A does not move, remove the secondary rocker arms as an assembly, and check that the pistons in the secondary rocker arms move smoothly. If any rocker arm needs replacing, replace the secondary rocker arms as an assembly, and retest.

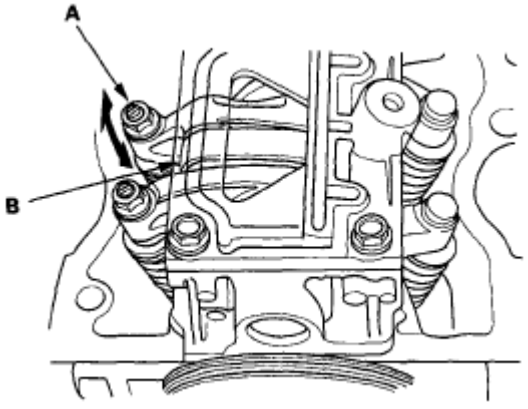

Fig. 8: Identifying Intake Secondary Rocker Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Remove the air pressure regulator and the 10 x 1.0 mm adapter.
12. Install the cylinder head cover (see **CYLINDER HEAD COVER INSTALLATION**).

VALVE CLEARANCE ADJUSTMENT

NOTE: Adjust the valves only when the cylinder head temperature is less than 100°F

(38°C).

1. Remove the cylinder head cover (see **CYLINDER HEAD COVER REMOVAL**).
2. Set the No. 1 piston at top dead center (TDC). The "UP" mark (A) on the camshaft sprocket should be at the top, and the TDC grooves (B) on the camshaft sprocket should line up with the top edge of the head.

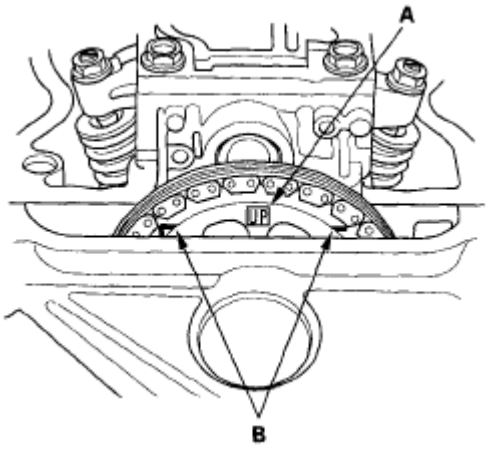

Fig. 9: Identifying UP Mark On Camshaft Sprocket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Select the correct thickness feeler gauge for the valves you're going to check.

Valve Clearance

Intake: 0.18-0.22 mm (0.007-0.009 in.)

Exhaust: 0.23-0.27 mm (0.009-0.011 in.)

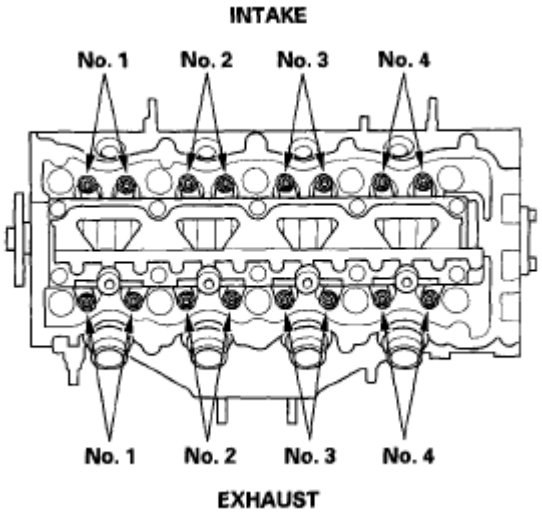

Fig. 10: Identifying Intake And Exhaust Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Insert the feeler gauge (A) between the adjusting screw and the end of the valve stem on No. 1 cylinder and slide it back and forth; you should feel a slight amount of drag.

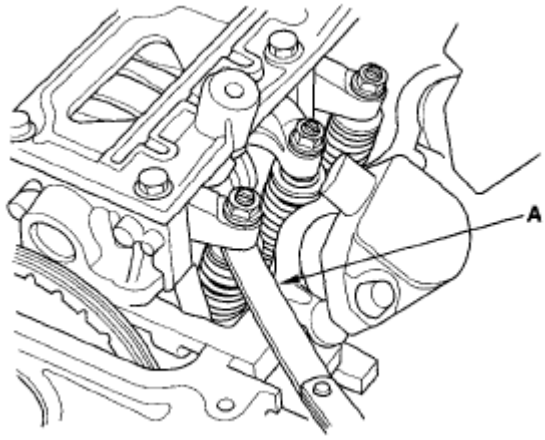

Fig. 11: Identifying Feeler Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If you feel too much or too little drag, loosen the locknut, and turn the adjusting screw (A) until the drag on the feeler gauge is correct.

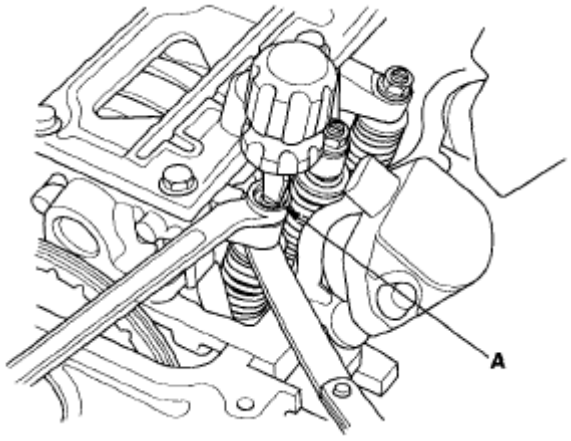

Fig. 12: Identifying Adjusting Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Tighten the locknut and recheck the clearance. Repeat the adjustment, if necessary.
7. Tighten the locknut.

Specified Torque:

7 x 0.75 mm

14 N.m (1.4 kgf.m, 10 lbf.ft)

8. Recheck the valve clearance. Repeat the adjustment if necessary.
9. Rotate the crankshaft clockwise. Align the No. 3 piston TDC groove (A) on the camshaft sprocket

with the top edge of the head.

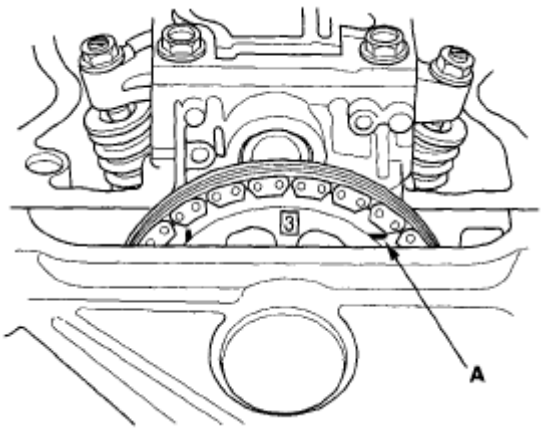

Fig. 13: Aligning No. 3 Piston TDC Groove On Camshaft Sprocket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Check, and if necessary, adjust the valve clearance on No. 3 cylinder.
11. Rotate the crankshaft clockwise. Align the No. 4 piston TDC groove (A) on the camshaft sprocket with the top edge of the head.

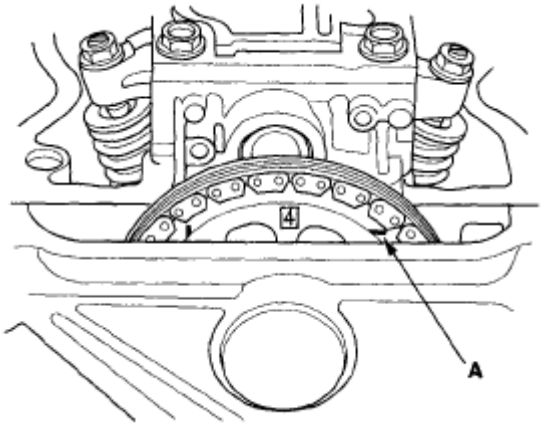

Fig. 14: Aligning No. 4 Piston TDC Groove On Camshaft Sprocket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Check, and if necessary, adjust the valve clearance on No. 4 cylinder.
13. Rotate the crankshaft clockwise. Align the No. 2 piston TDC groove (A) on the camshaft sprocket with the top edge of the head.

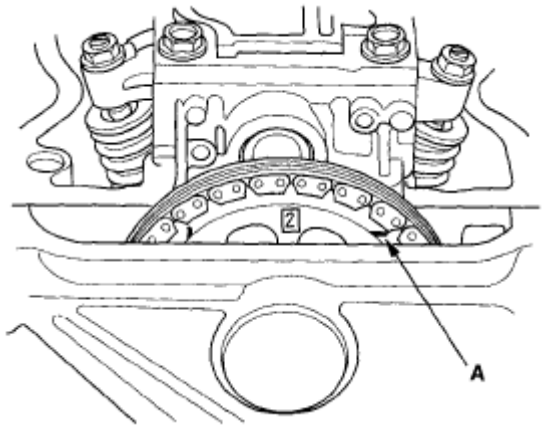

Fig. 15: Aligning No. 2 Piston TDC Groove On Camshaft Sprocket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Check, and if necessary, adjust the valve clearance on No. 2 cylinder.
15. Install the cylinder head cover (see **CYLINDER HEAD COVER INSTALLATION**).

CRANKSHAFT PULLEY REMOVAL AND INSTALLATION

Special Tools Required

- Holder handle 07JAB-001020A
- Crankshaft pulley holder 070AB-RJA0100
- Socket, 19 mm 07JAA-001020A, or a commercially available 19 mm socket

Removal

1. Remove the right front wheel.
2. Remove the drive belt (see **DRIVE BELT INSPECTION**).
3. Hold the pulley with the holder handle (A) and holder (B).

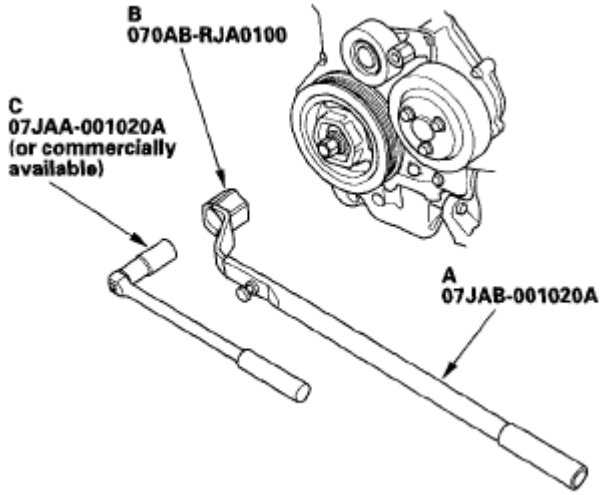

Fig. 16: Identifying Special Tools
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the bolt with a heavy duty 19 mm socket (C) and breaker bar, then remove the crankshaft pulley.

Installation

1. Clean the crankshaft pulley (A), crankshaft (B), bolt (C), and washer (D). Lubricate with new engine oil as shown.

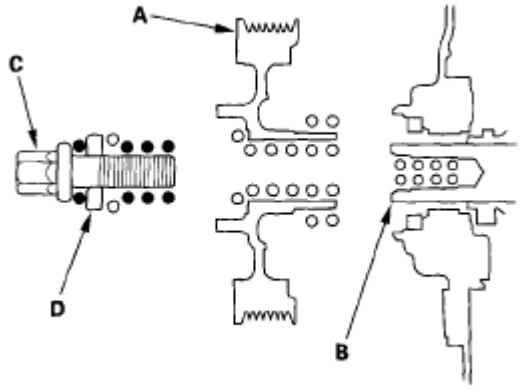

Fig. 17: Identifying Crankshaft Pulley Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the crankshaft pulley, and hold the pulley with the handle (A) and holder attachment (B).

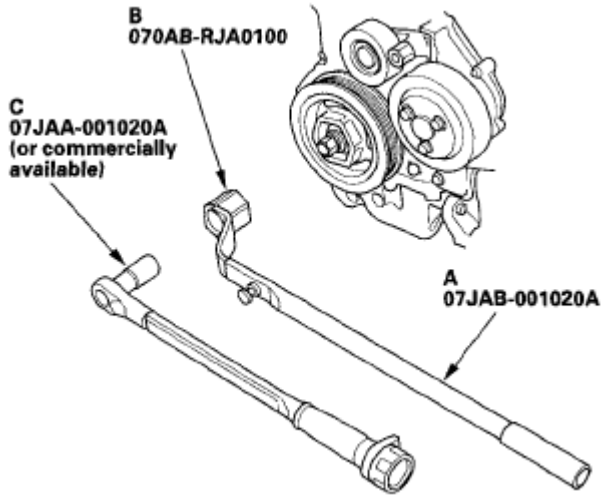

Fig. 18: Identifying Special Tools
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Tighten the bolt to 69 N.m (7.0 kgf.m, 51 lbf.ft) with a torque wrench and 19 mm socket (C). Do not use an impact wrench.
4. Mark the bolt head (A) and the crankshaft pulley (B) as shown, then tighten the bolt an additional 90° (The mark on the bolt head line up with the mark on the crankshaft pulley).

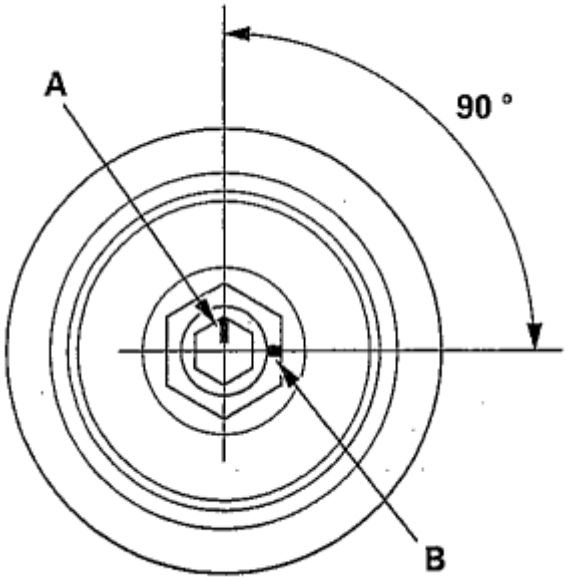

Fig. 19: Marking The Bolt Head And The Crankshaft Pulley
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the drive belt (see **DRIVE BELT INSPECTION**).
6. Install the right front wheel.

CAM CHAIN REMOVAL

NOTE: Keep the cam chain away from magnetic fields.

1. Remove the front wheels.
2. Remove the splash shield.
3. Remove the drive belt auto-tensioner (see **DRIVE BELT AUTO-TENSIONER REMOVAL/INSTALLATION**).
4. Remove the cylinder head cover (see **CYLINDER HEAD COVER REMOVAL**).
5. Set the No. 1 piston at top dead center (TDC). The "UP" mark (A) on the camshaft sprocket should be at the top, and the TDC grooves (B) on the camshaft sprocket should line up with the top edge of the head.

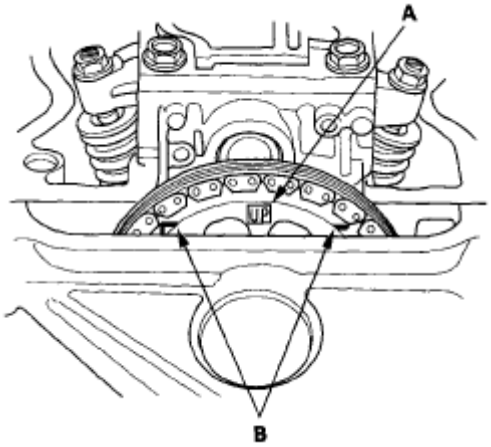

Fig. 20: Identifying UP Mark On Camshaft Sprocket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the positive crankcase ventilation (PCV) hose.

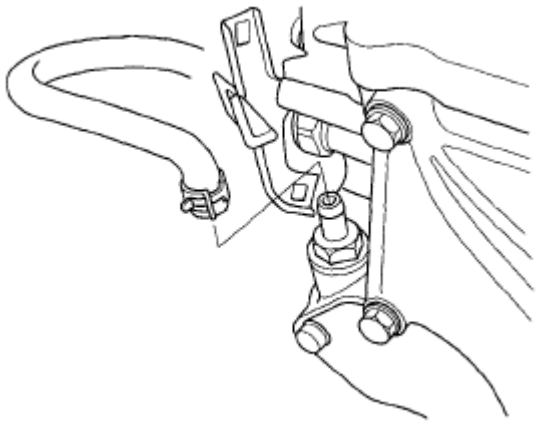

Fig. 21: Identifying Positive Crankcase Ventilation (PCV) Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the crankshaft pulley (see **CRANKSHAFT PULLEY REMOVAL AND INSTALLATION**).
8. Support the engine with a jack and a wood block under the oil pan.
9. Remove the bolt (A) securing the A/C line, then remove the upper torque rod (B).

M/T

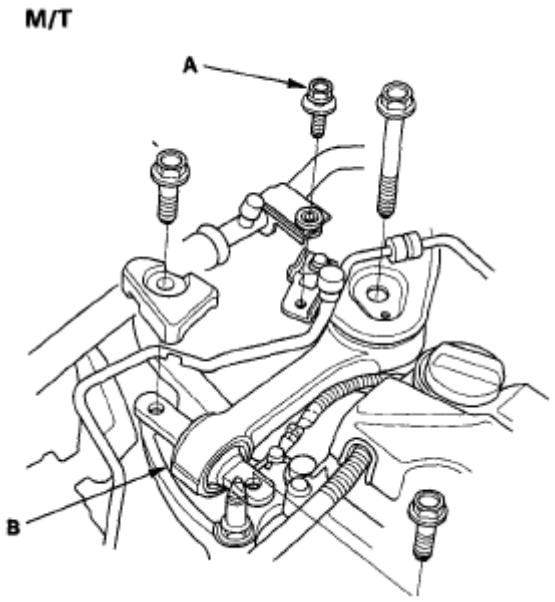

Fig. 22: Identifying A/C Line Bolt - M/T
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T

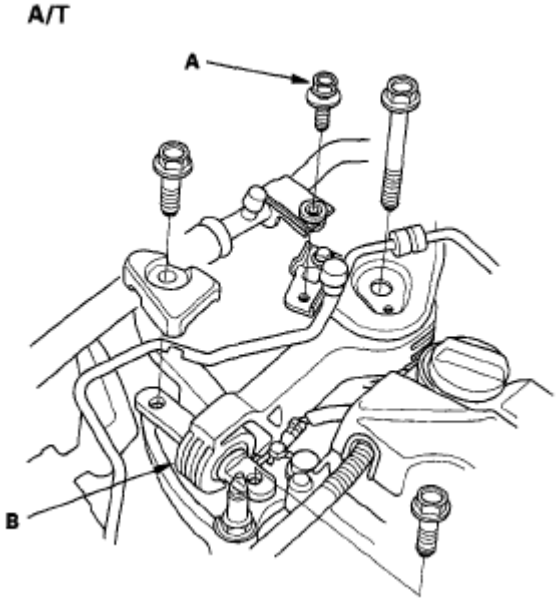

Fig. 23: Identifying A/C Line Bolt - A/T
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the ground cable (A), then remove the side engine mount bracket (B).

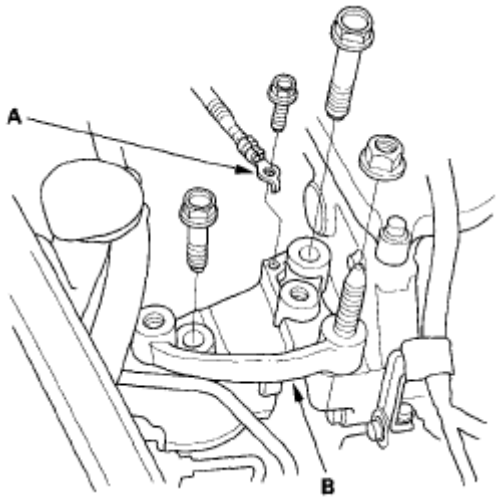

Fig. 24: Identifying Ground Cable And Side Engine Mount Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Remove the oil pump.

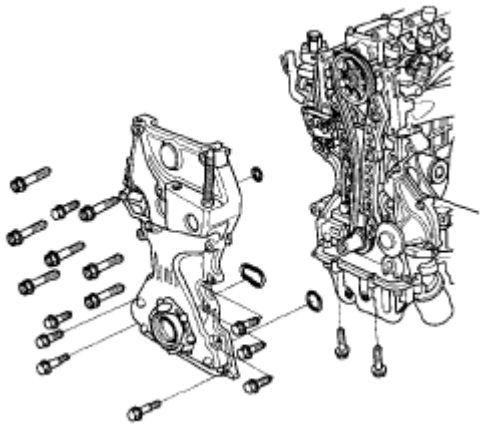

Fig. 25: Identifying Oil Pump
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Measure the tensioner rod length between the tensioner body and bottom of the flat surface section on the tensioner rod. If the length is more than the service limit, replace the cam chain.

    Tensioner Rod Length

    Service Limit: 14.5 mm (0.57 in.)

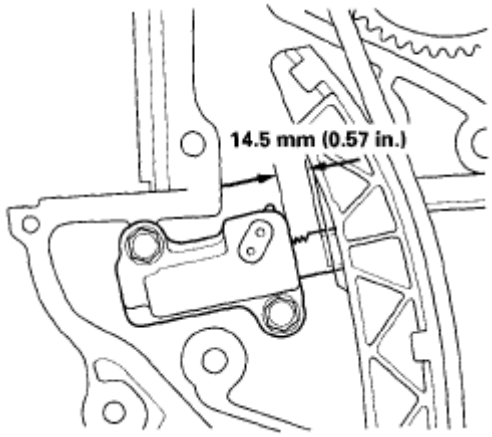

Fig. 26: Measuring Tensioner Rod Length Between Tensioner Body And Bottom Of Flat Surface Section On Tensioner Rod
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Loosely install the crankshaft pulley.
14. Turn the crankshaft counterclockwise to compress the auto-tensioner.

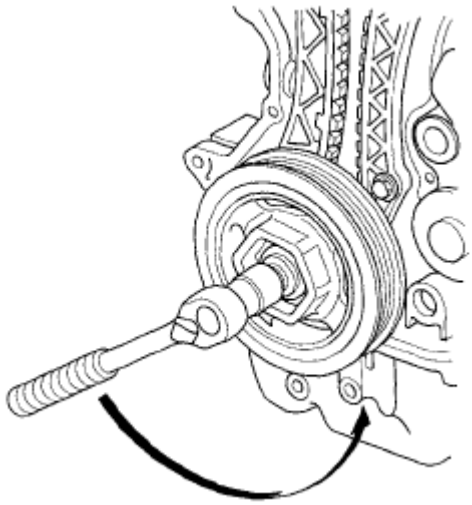

Fig. 27: Turning Crankshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Align the holes on the lock (A) and the auto-tensioner (B), then insert a 1.0 mm (0.04 in.) diameter pin (C) into the holes. Turn the crankshaft clockwise to secure the pin.

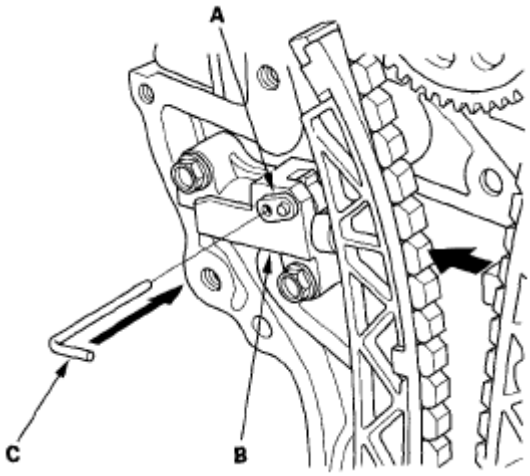

Fig. 28: Aligning Holes On Lock And Auto-Tensioner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Remove the auto-tensioner.

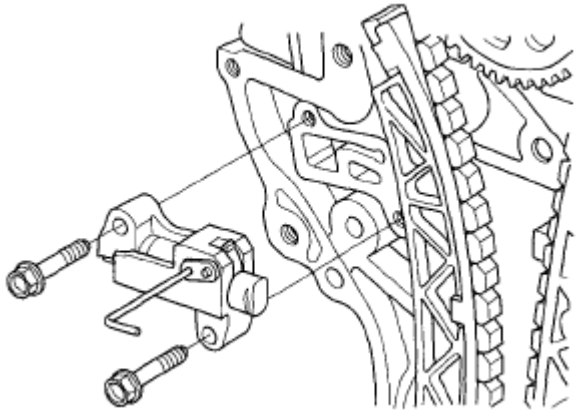

Fig. 29: Identifying Auto-Tensioner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Remove the crankshaft pulley.
18. Remove the cam chain guide (A) and cam chain tensioner arm (B).

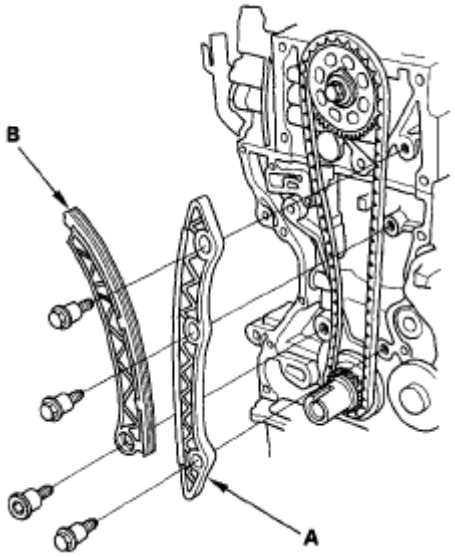

Fig. 30: Identifying Cam Chain Guide
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Remove the cam chain.

CAM CHAIN INSTALLATION

NOTE: Keep the cam chain away from magnetic fields.

1. Set the crankshaft to top dead center (TDC). Align the TDC mark (A) on the crankshaft sprocket with the pointer (B) on the engine block.

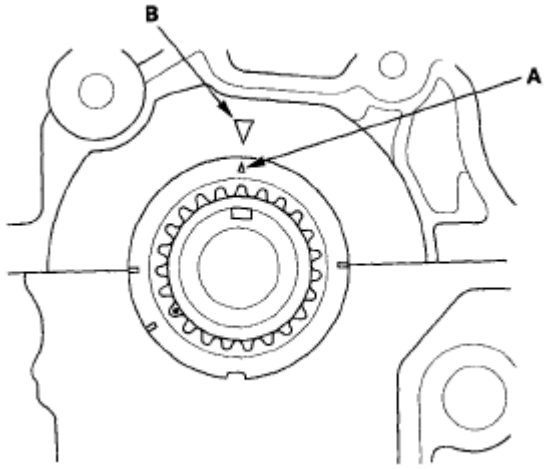

Fig. 31: Aligning TDC Mark On Crankshaft Sprocket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Set the camshaft to TDC. The "UP" mark (A) on the camshaft sprocket should be at the top, and the TDC grooves (B) on the camshaft sprocket should line up with the top edge of the head.

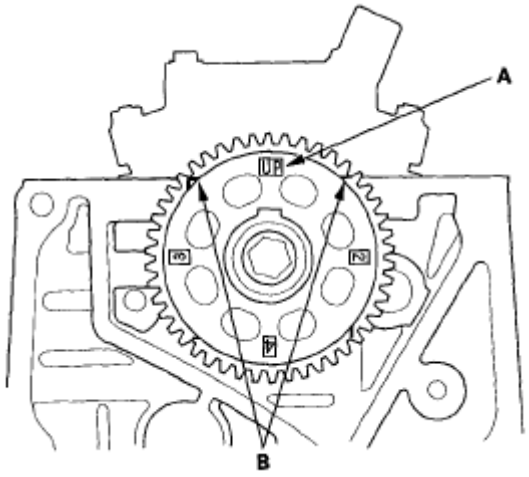

Fig. 32: Identifying UP Mark On Camshaft Sprocket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the cam chain on the crankshaft sprocket with the colored piece (A) aligned with the mark (B) on the crankshaft sprocket.

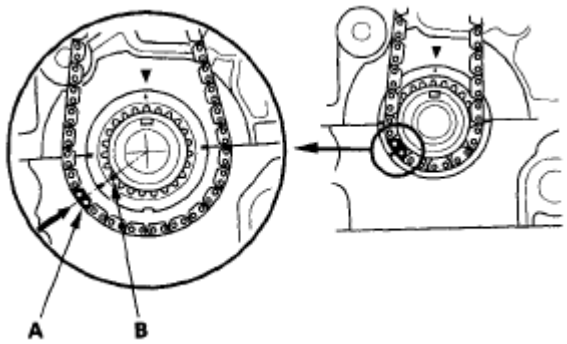

Fig. 33: Aligning Mark On Crankshaft Sprocket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the cam chain on the camshaft sprocket with the colored link plate (A) aligned with the mark (B) on the camshaft sprocket.

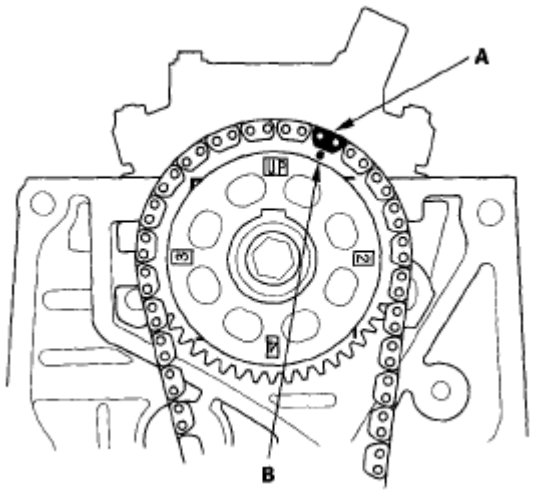

Fig. 34: Identifying Colored Link Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the cam chain guide (A) and cam chain tensioner arm (B).

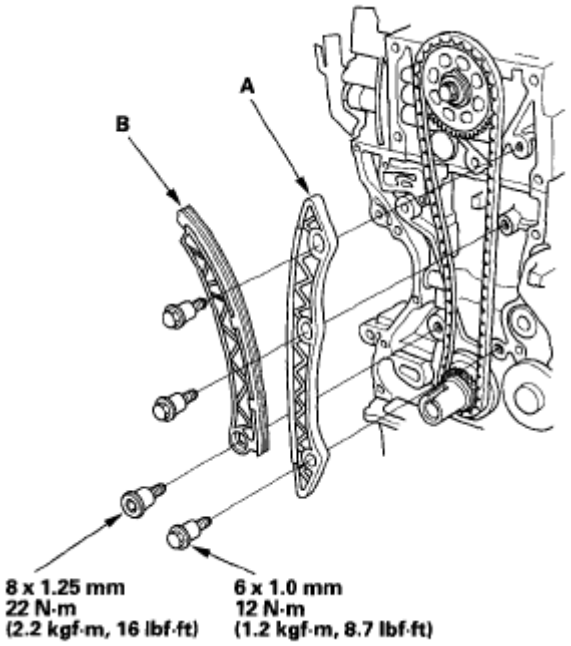

Fig. 35: Identifying Cam Chain Guide
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the auto-tensioner.

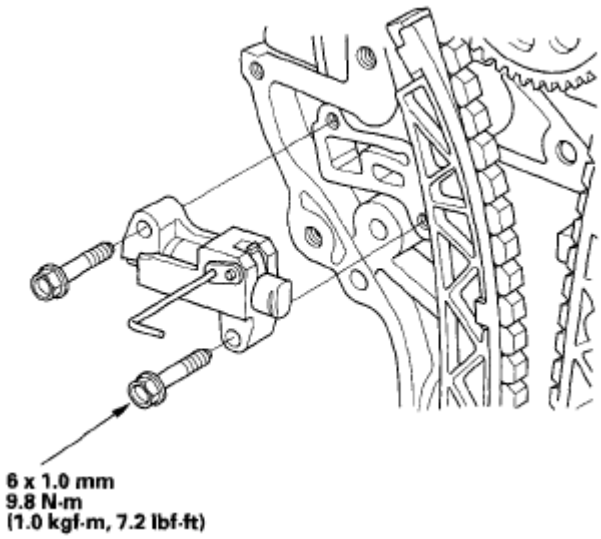

Fig. 36: Identifying Auto-Tensioner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the pin or lock pin from the auto-tensioner.

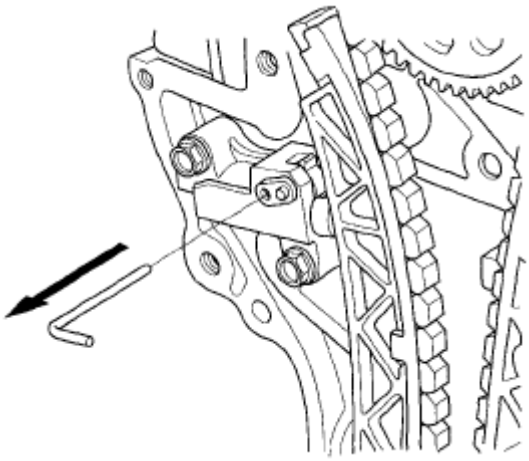

Fig. 37: Locating Pin Or Lock Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Check the oil pump oil seal for damage. If the oil seal is damaged, replace the oil seal (see **PULLEY END CRANKSHAFT OIL SEAL INSTALLATION**).
9. Remove all of the old liquid gasket from the oil pump mating surfaces, bolts, and bolt holes.
10. Clean, and dry the oil pump mating surfaces.
11. Apply liquid gasket, P/N 08717-0004, 08718-0001, 08718-0002, 08718-0003, or 08718-0009, evenly to the engine block mating surface of the oil pump.

NOTE:

- **If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply new liquid gasket.**

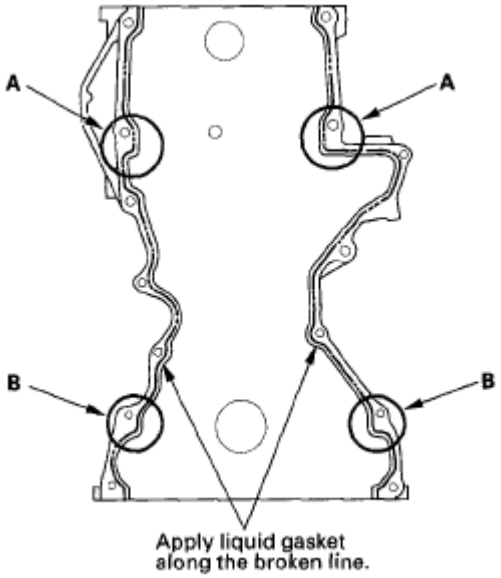

Fig. 38: Identifying Applying Area Of Liquid Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Apply liquid gasket to the engine block upper surface contact areas (A) on the oil pump and lower block upper surface contact areas (B) on the oil pump.
13. Apply liquid gasket, P/N 08717-0004, 08718-0001, 08718-0002, 08718-0003, or 08718-0009, evenly to the oil pan mating surface of the oil pump.

NOTE:

- **If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply new liquid gasket.**

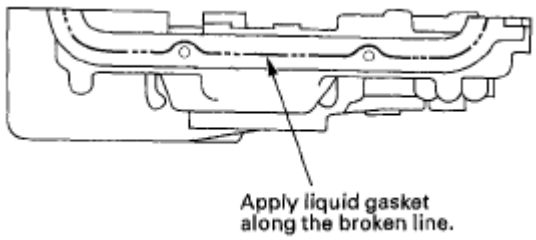

Fig. 39: Identifying Applying Liquid Gasket Broken Line
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Install new O-rings (A) on the oil pump. Set the edge of the oil pump (B) to the edge of the oil pan (C), then install the oil pump on the engine block (D). Loosely install the dowel bolts (E), then tighten the 8 mm bolts (F). Tighten the 6 mm bolts (G) and dowel bolts. Wipe off the excess liquid gasket on the oil pan and oil pump mating area.

NOTE:

- **When installing the oil pump, do not slide the bottom surface onto the oil pan mounting surface.**
- **Wait at least 30 minutes to allow liquid gasket to cure before filling the engine with oil.**
- **Do not run the engine for at least 3 hours to allow liquid gasket to cure after installing the oil pump.**

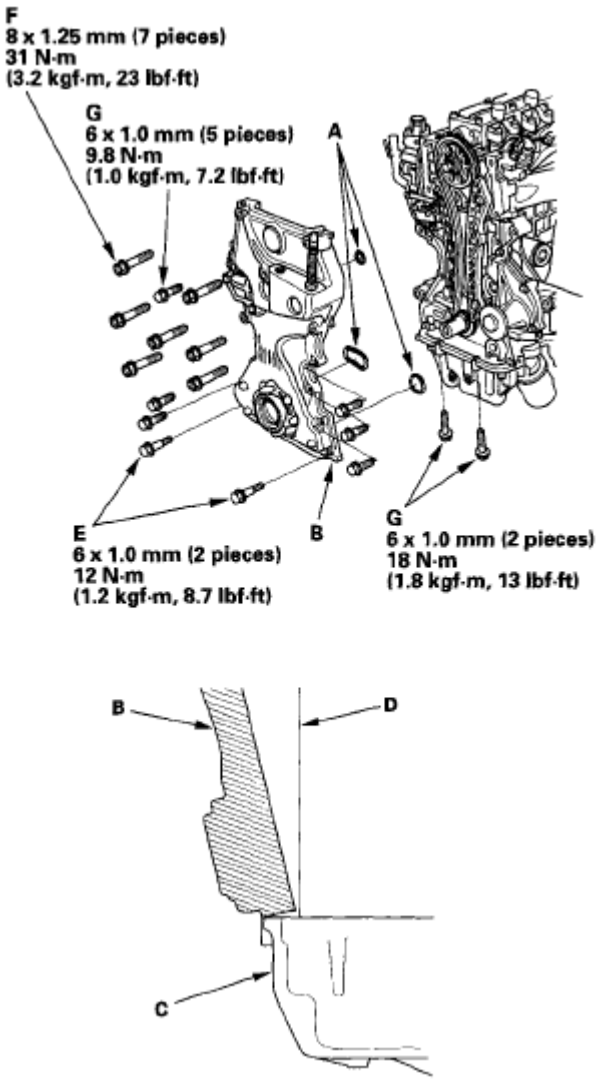

Fig. 40: Installing Oil Pump (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Install the side engine mount bracket (A), then loosely tighten the new bolt and nut (B), and loosely tighten the bolt (C).

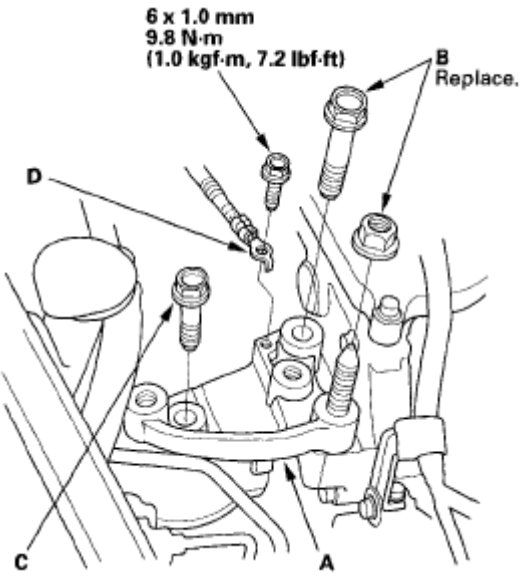

Fig. 41: Identifying Side Engine Mount Bracket (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Install the ground cable (D).
17. Remove the air cleaner assembly (see **THROTTLE BODY CLEANING**).
18. Loosen the transmission mounting bolt and nuts (A).

M/T

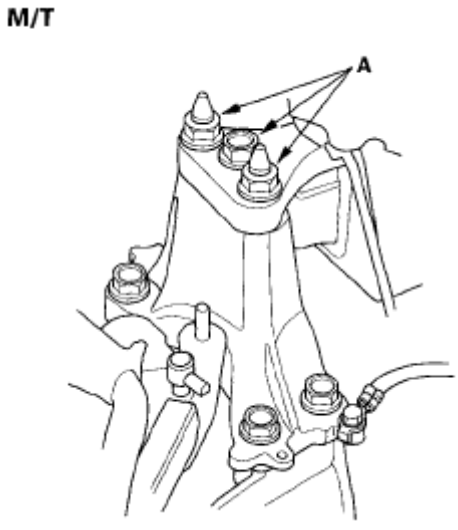

Fig. 42: Identifying Transmission Mounting Bolt And Nuts - M/T
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T

A/T

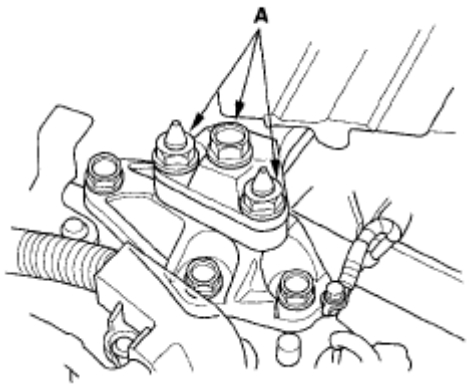

Fig. 43: Identifying Transmission Mounting Bolt And Nuts - A/T
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Raise the vehicle on the lift to full height.
20. Loosen the lower torque rod mounting bolt (A).

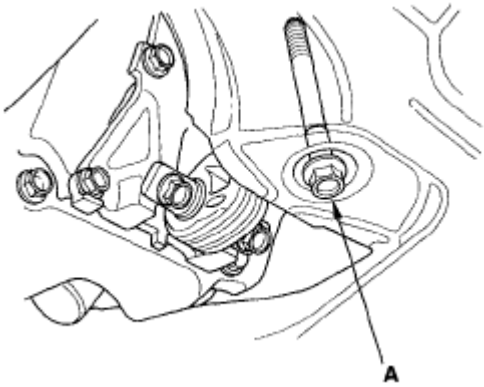

Fig. 44: Identifying Lower Torque Rod Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Lower the vehicle on the lift.
22. Tighten the side engine mount mounting bolts and nut.

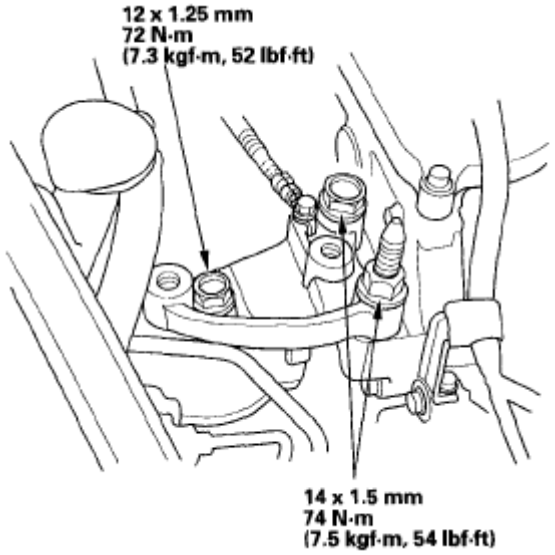

Fig. 45: Identifying Side Engine Mount Mounting Bolts And Nut (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Tighten the transmission mounting bolt and nuts.

M/T

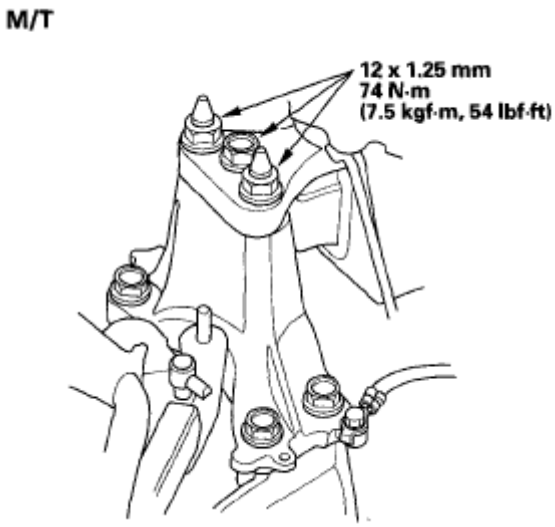

Fig. 46: Identifying Transmission Mounting Bolt And Nuts - M/T (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T

A/T

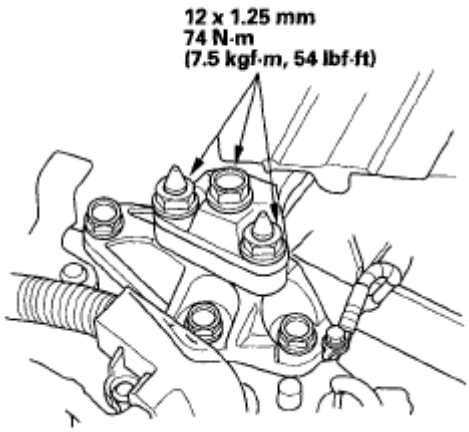

Fig. 47: Identifying Transmission Mounting Bolt And Nuts - A/T (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Raise the vehicle on the lift to full height.
25. Tighten the lower torque rod mounting bolt.

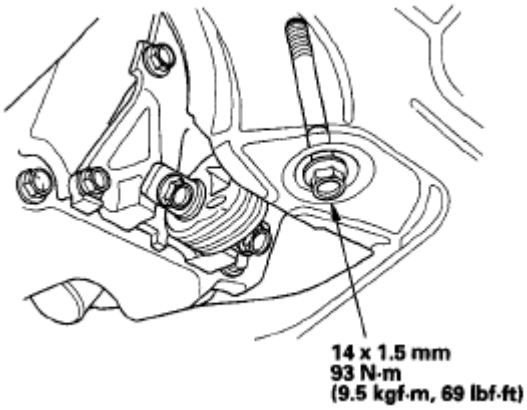

Fig. 48: Identifying Lower Torque Rod Mounting Bolt (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Lower the vehicle on the lift.
27. Install the air cleaner assembly (see **THROTTLE BODY CLEANING**).
28. Install the upper torque rod (A), then tighten the new upper torque rod mounting bolts in the numbered sequence shown.

M/T

M/T

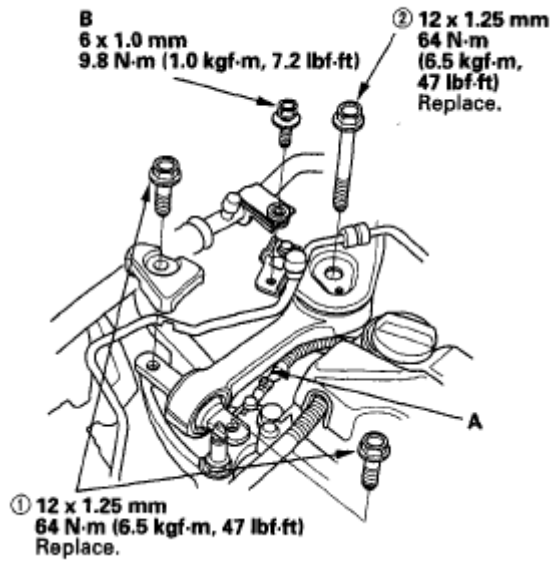

Fig. 49: Identifying Upper Torque Rod Mounting Bolts - M/T (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T

A/T

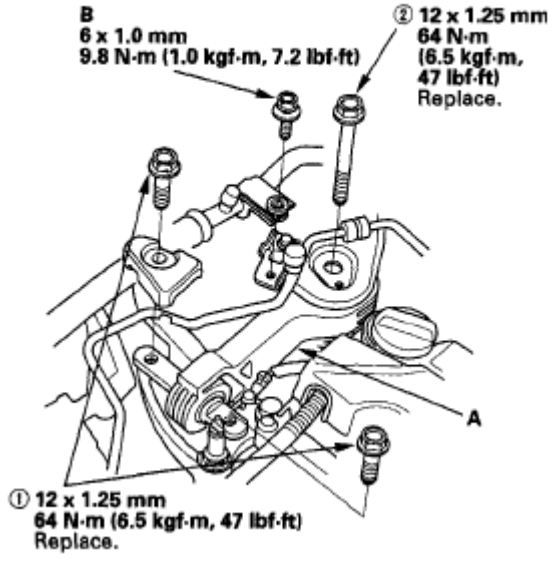

Fig. 50: Identifying Upper Torque Rod Mounting Bolts - A/T (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. Install the bolt (B) securing the A/C line.
30. Install the crankshaft pulley (see **INSTALLATION**).
31. Install the positive crankcase ventilation (PCV) hose.

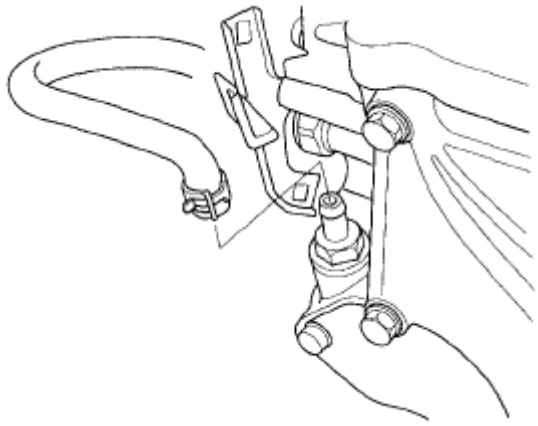

Fig. 51: Identifying Positive Crankcase Ventilation (PCV) Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

32. Install the cylinder head cover (see **CYLINDER HEAD COVER INSTALLATION**).
33. Install the drive belt auto-tensioner (see **DRIVE BELT AUTO-TENSIONER REMOVAL/INSTALLATION**).
34. Install the splash shield.
35. Install the front wheels.
36. Do the crankshaft position (CKP) pattern clear/CKP pattern learn procedure (see **ECM/PCM RESET**).

AUTO-TENSIONER REMOVAL AND INSTALLATION

Removal

1. Remove the chain case cover.

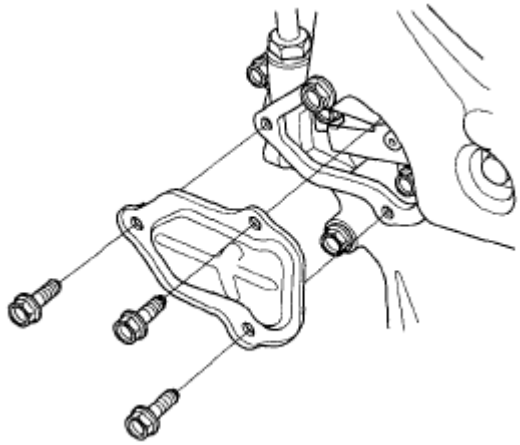

Fig. 52: Identifying Chain Case Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the crankshaft counterclockwise to compress the auto-tensioner.

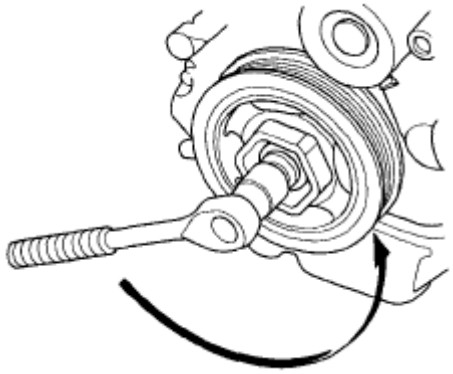

Fig. 53: Turning Crankshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Align the holes on the lock (A) and the auto-tensioner (B), then insert a 1.0 mm (0.04 in.) diameter pin (C) into the holes. Turn the crankshaft clockwise to secure the pin.

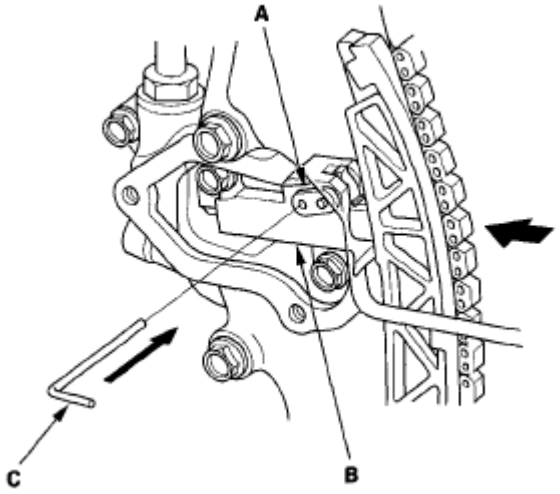

Fig. 54: Aligning Holes On Lock And Auto-Tensioner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the auto-tensioner.

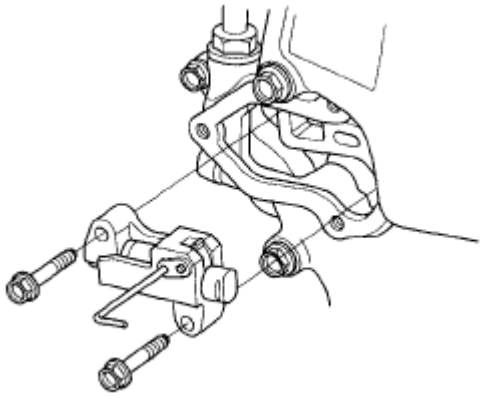

Fig. 55: Identifying Auto-Tensioner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Installation

1. Install the auto-tensioner.

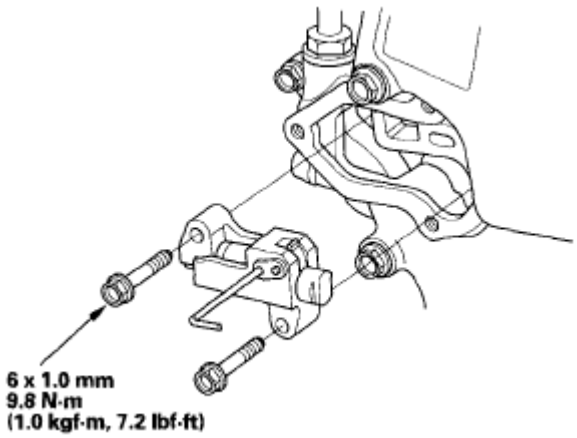

Fig. 56: Identifying Auto-Tensioner (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the pin from the auto-tensioner.

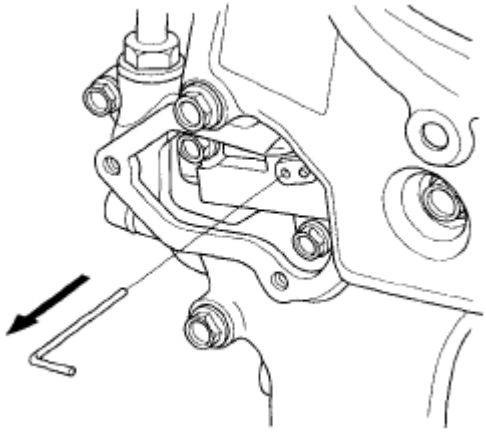

Fig. 57: Identifying Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove all of the old liquid gasket from the chain case cover mating surfaces, bolts, and bolt holes.
4. Clean and dry the chain case cover mating surfaces.
5. Apply liquid gasket, P/N 08717-0004, 08718-0001, 08718-0002, 08718-0003, or 08718-0009, evenly to the oil pump mating surface of the chain case cover.

NOTE: Do not install components if too much time has passed after applying the liquid gasket (for P/N 08718-0002, no more than 4 minutes, for all others, no more than 5 minutes). Instead, remove the old residue and reapply the liquid gasket.

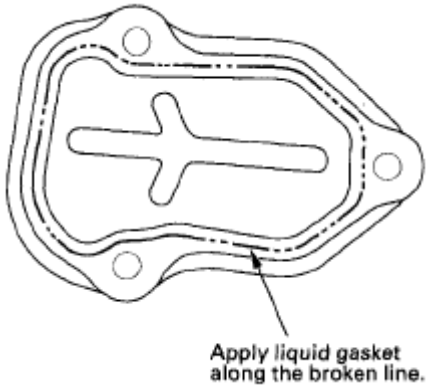

Fig. 58: Identifying Broken Line Of Liquid Gasket Applying Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the chain case cover.

NOTE:

- **Wait at least 30 minutes to allow liquid gasket to cure before filling the engine with oil.**
- **Do not run the engine for at least 3 hours to allow liquid gasket to cure after installing the chain case.**

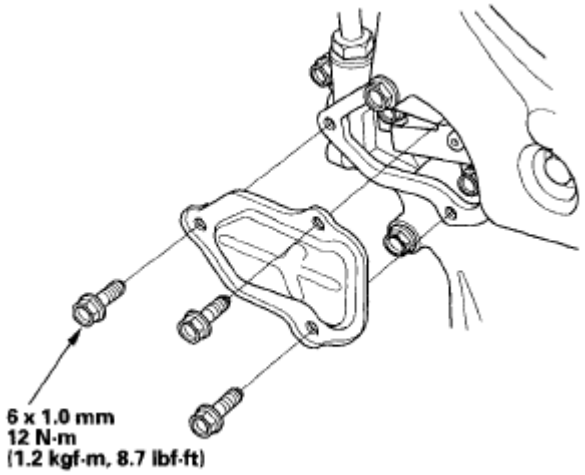

Fig. 59: Identifying Chain Case Cover (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CYLINDER HEAD COVER REMOVAL

1. Remove the harness cover.

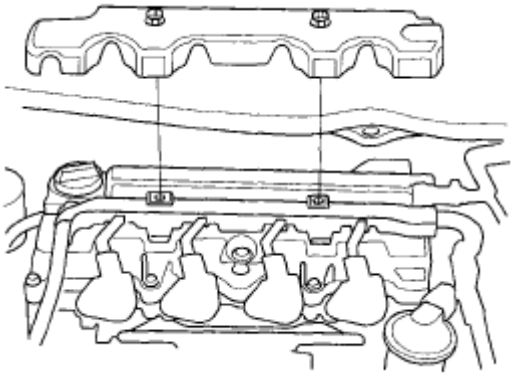

Fig. 60: Identifying Harness Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the injector cover.

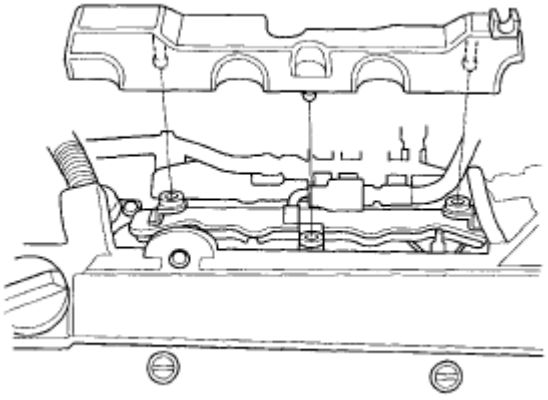

Fig. 61: Identifying Injector Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the four ignition coil connectors. Remove the four bolts (A) securing the harness holders, then remove the front harness holder (B) from the bracket.

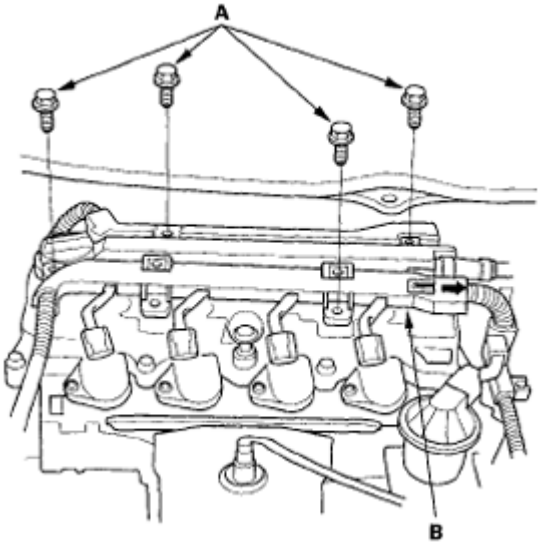

Fig. 62: Identifying Harness Holders Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the alternator connector (A) and BLK wire (B) from the alternator.

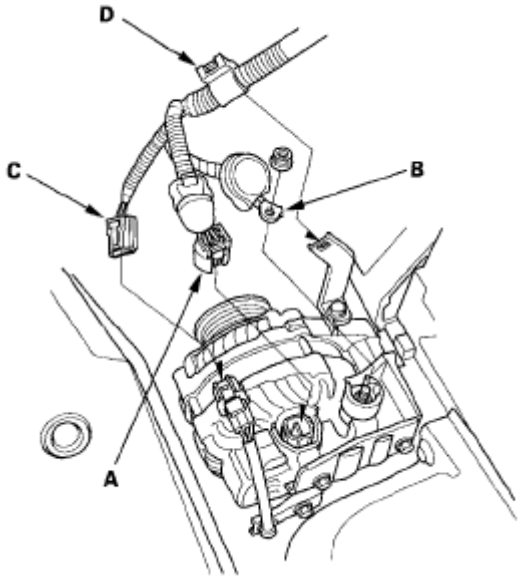

Fig. 63: Identifying Alternator Connector And BLK Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the A/C compressor clutch connector (C), and remove the harness clamp (D).
6. Remove the dipstick (A) and breather hose (B).

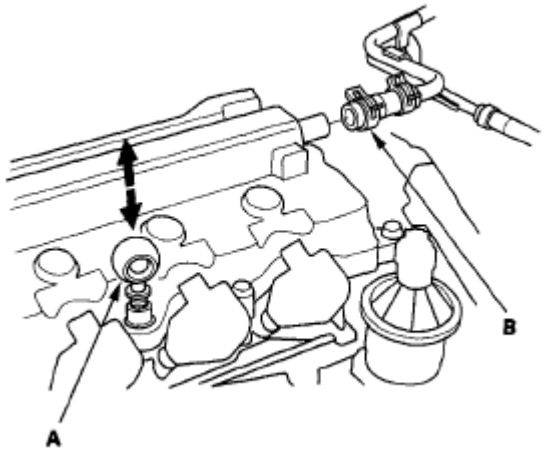

Fig. 64: Identifying Dipstick And Breather Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the cylinder head cover.

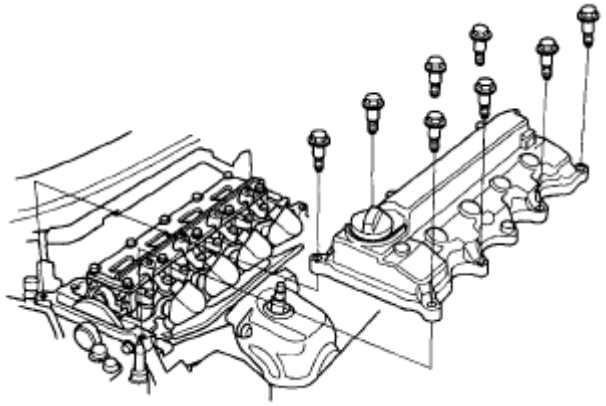

Fig. 65: Identifying Cylinder Head Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CYLINDER HEAD COVER INSTALLATION

1. Thoroughly clean the head cover gasket and the groove.
2. Install the head cover gasket (A) in the groove of the cylinder head cover (B).

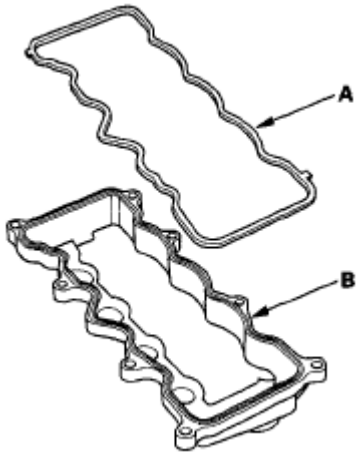

Fig. 66: Identifying Head Cover Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check that the mating surfaces are clean and dry.
4. Apply liquid gasket, P/N 08717-0004, 08718-0001, 08718-0002, 08718-0003, or 08718-0009, on the oil pump mating areas.

NOTE:

- **If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply new liquid gasket.**

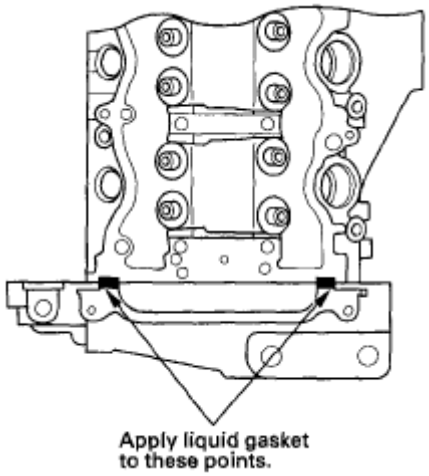

Fig. 67: Identifying Liquid Gasket Applying Points
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the cylinder head cover, and tighten the bolts in two or three steps. In the final step, tighten all the bolts, in sequence, to 9.8 N.m (1.0 kgf.m, 7.2 lbf.ft).

NOTE:

- **Wait at least 30 minutes to allow liquid gasket to cure before filling the engine with oil.**
- **Do not run the engine for at least 3 hours to allow liquid gasket to cure after installing the head cover.**

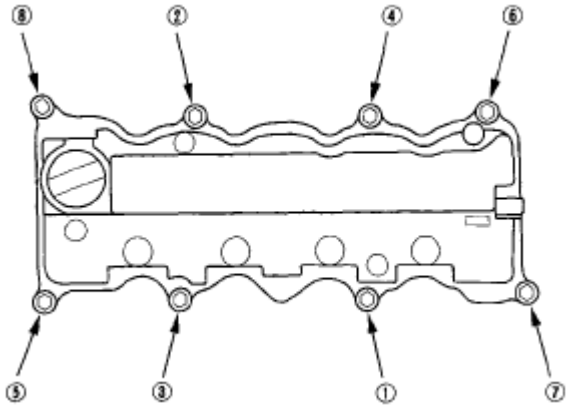

Fig. 68: Identifying Bolts Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the dipstick (A) and breather hose (B).

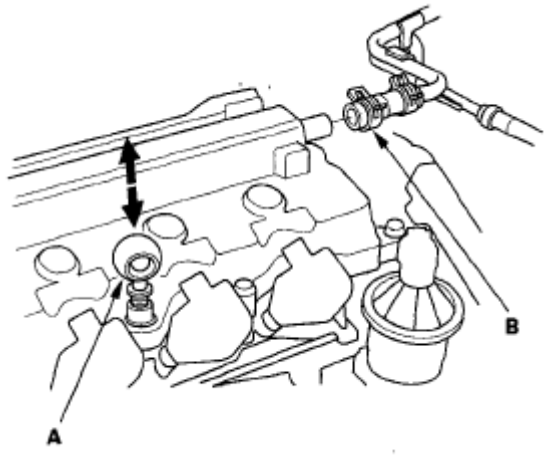

Fig. 69: Identifying Dipstick And Breather Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Connect the alternator connector (A) and BLK wire (B) to the alternator.

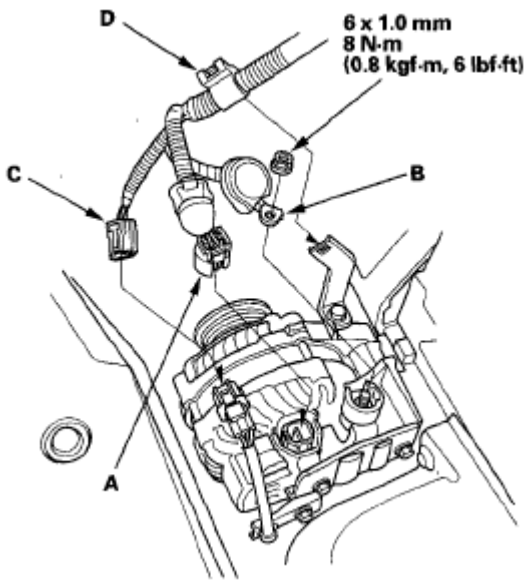

Fig. 70: Identifying Alternator Connector And BLK Wire (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Connect the A/C compressor clutch connector (C), and install the harness clamp (D).
9. Install the front harness holder (A) to the bracket, then tighten the four bolts (B) securing the harness holders.

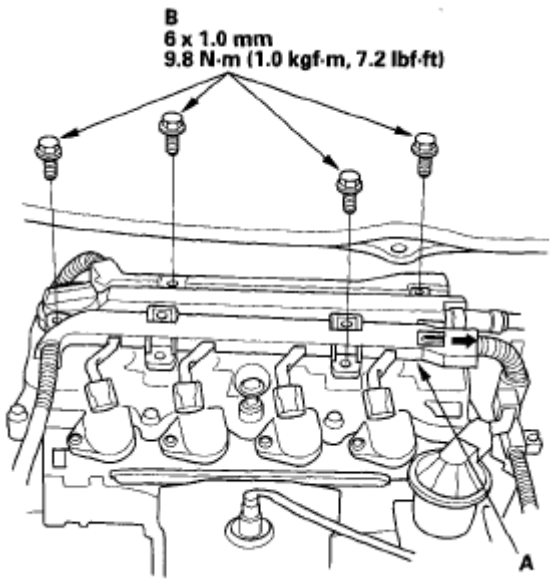

Fig. 71: Identifying Front Harness Holder (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Connect the four ignition coil connectors.
11. Install the injector cover.

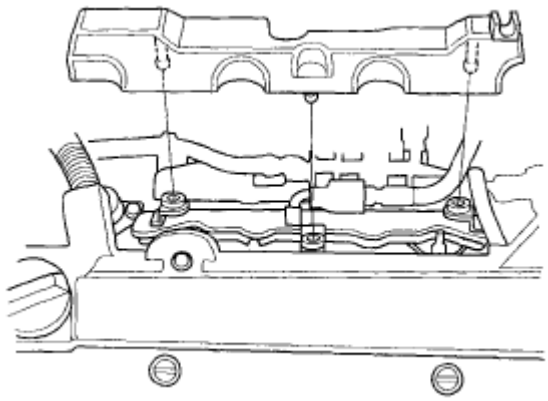

Fig. 72: Identifying Injector Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install the harness cover.

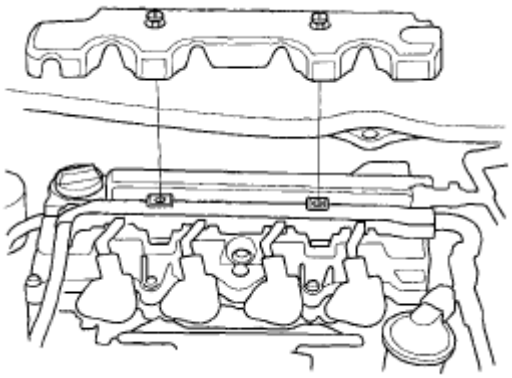

Fig. 73: Identifying Harness Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CYLINDER HEAD REMOVAL

NOTE:

- **Use fender covers to avoid damaging painted surfaces.**
- **To avoid damaging the wiring and terminals, unplug the wiring connectors carefully while holding the connector portion.**
- **To avoid damaging the cylinder head, wait until the engine coolant temperature drops below 100°F (38°C) before loosening the cylinder head bolts.**
- **Mark all wiring and hoses to avoid misconnection. Also, be sure that they do not contact other wiring or hoses, or interfere with other parts.**

1. Make sure you have the anti-theft code for the audio system and the navigation system (if equipped), then write down the audio presets.
2. Relieve the fuel pressure (see **FUEL PRESSURE RELIEVING**).
3. Disconnect the negative cable from the battery.
4. Drain the engine coolant (see **COOLANT REPLACEMENT**).
5. Remove the drive belt (see **DRIVE BELT INSPECTION**).
6. Remove the intake manifold (see **REMOVAL**).
7. Remove the harness clamps (A), and remove the positive crankcase ventilation (PCV) hose from the clamp (B).

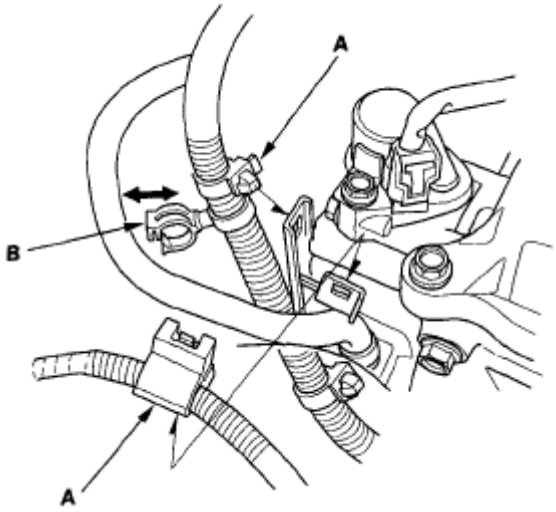

Fig. 74: Identifying Positive Crankcase Ventilation Hose Clamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the air cleaner housing bracket (A), then remove the harness holder (B) from the cylinder head.

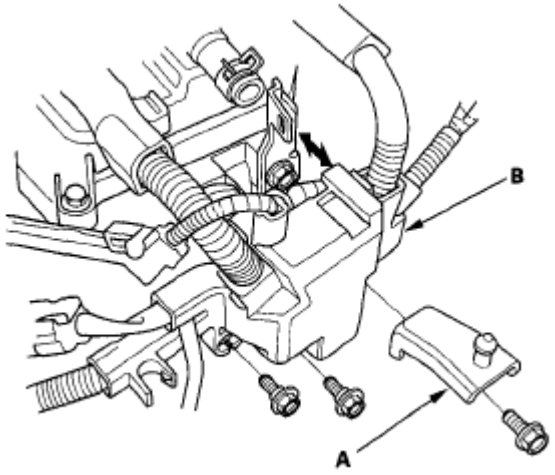

Fig. 75: Identifying Air Cleaner Housing Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. M/T model: Remove the upper radiator hose (A) and heater hose (B).

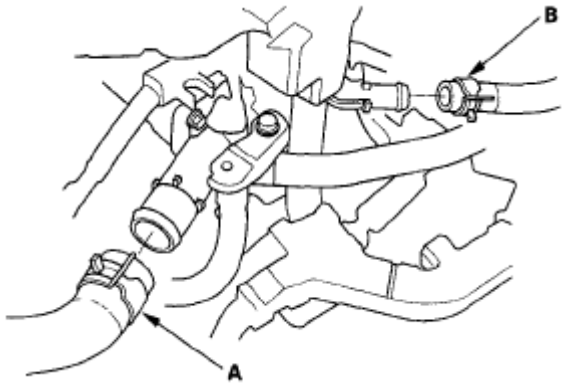

Fig. 76: Identifying Upper Radiator Hose And Heater Hose - M/T Model
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. A/T model: Remove the upper radiator hose (A), heater hose (B), and water bypass hose (C).

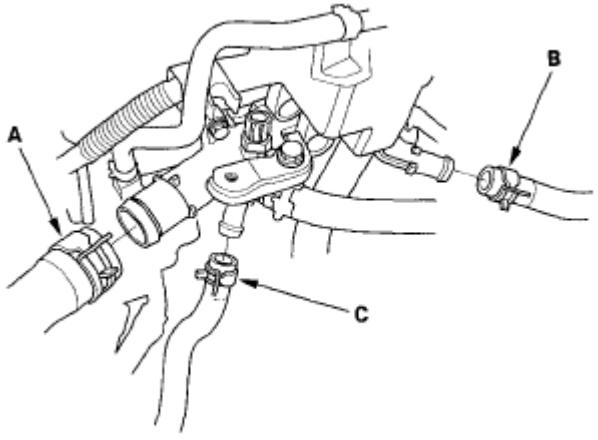

Fig. 77: Identifying Upper Radiator Hose And Heater Hose - A/T Model
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Remove the engine wire harness connectors and wire harness clamps from the cylinder head.
    - Four fuel injector connectors
    - Engine coolant temperature (ECT) sensor 1 connector
    - Air fuel ratio (A/F) sensor connector
    - Secondary heated oxygen sensor (secondary HO2S) connector
    - Exhaust gas recirculation (EGR) valve connector
    - Rocker arm oil control solenoid connector
    - Rocker arm oil pressure switch connector
12. Remove the four ignition coils (see **IGNITION COIL REMOVAL/INSTALLATION**).
13. Remove the three way catalytic converter (TWC) (see **CATALYTIC CONVERTER REMOVAL/INSTALLATION**).
14. Remove the thermostat housing (see **THERMOSTAT HOUSING REMOVAL AND INSTALLATION**).
15. Remove the cam chain (see **CAM CHAIN REMOVAL**).
16. Remove the cylinder head bolts. To prevent warpage, unscrew the bolts, in sequence, 1/3 of a turn at a

time; repeat the sequence until all bolts are loosened.

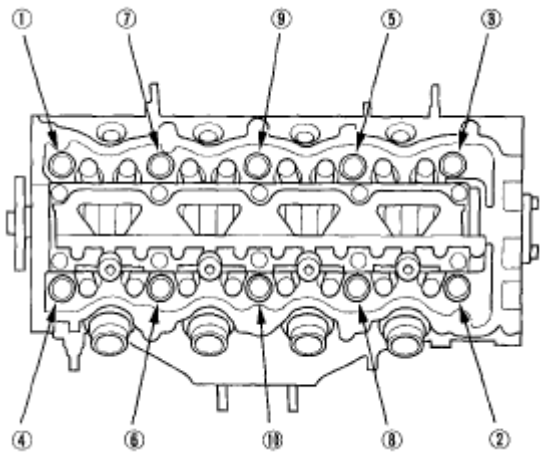

Fig. 78: Identifying Cylinder Head Bolts Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Remove the cylinder head.

CMP PULSE PLATE REMOVAL AND INSTALLATION

Removal

1. Remove the air cleaner assembly (see **THROTTLE BODY CLEANING**).
2. Remove the air cleaner housing bracket (A), then remove the harness holder (B) from the cylinder head.

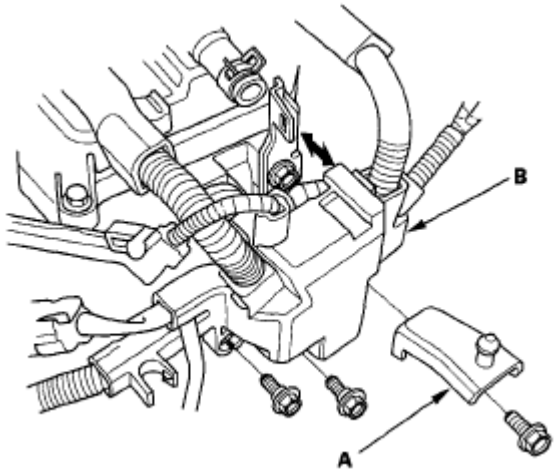

Fig. 79: Identifying Air Cleaner Housing Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rocker arm assembly (see **ROCKER ARM ASSEMBLY REMOVAL**).
4. Remove the camshaft thrust cover.

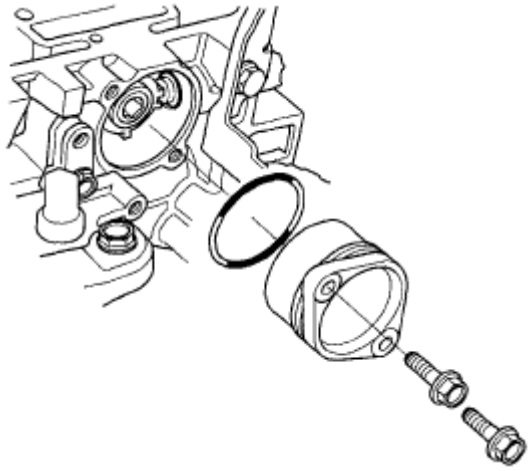

Fig. 80: Identifying Camshaft Thrust Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Hold the camshaft with a 27 mm open-end wrench, then loosen the bolt.

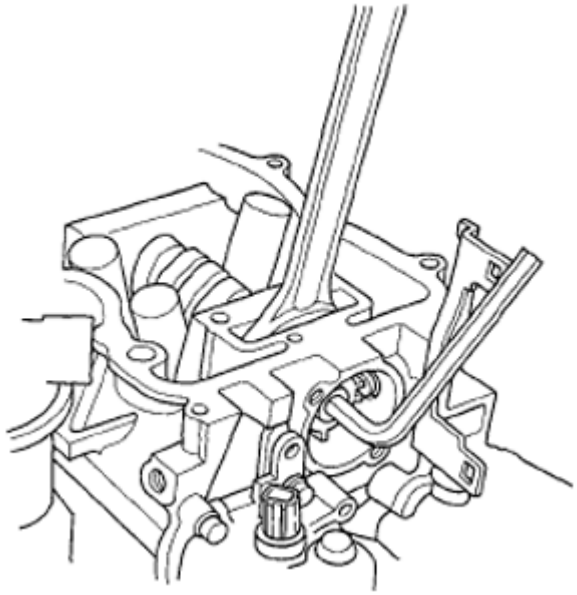

Fig. 81: Holding Camshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the camshaft position (CMP) pulse plate.

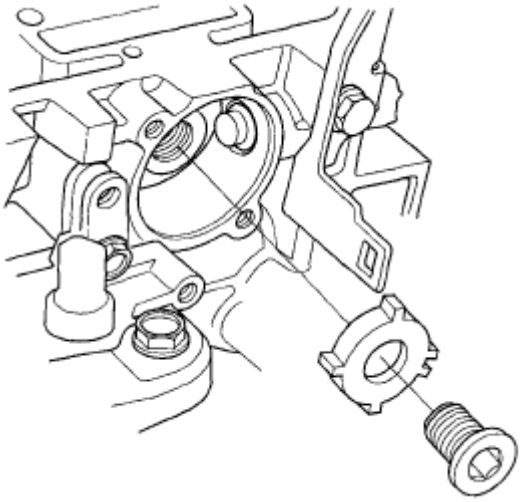

Fig. 82: Identifying Camshaft Position Pulse Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Installation

1. Install the CMP pulse plate.

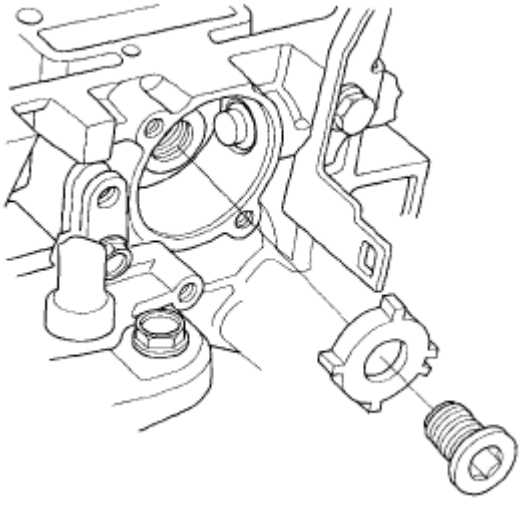

Fig. 83: Identifying CMP Pulse Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Hold the camshaft with a 27 mm open-end wrench, then tighten the bolt.

   Specified Torque:

   14 x 1.5 mm

   34 N.m (3.5 kgf.m, 25 lbf.ft)

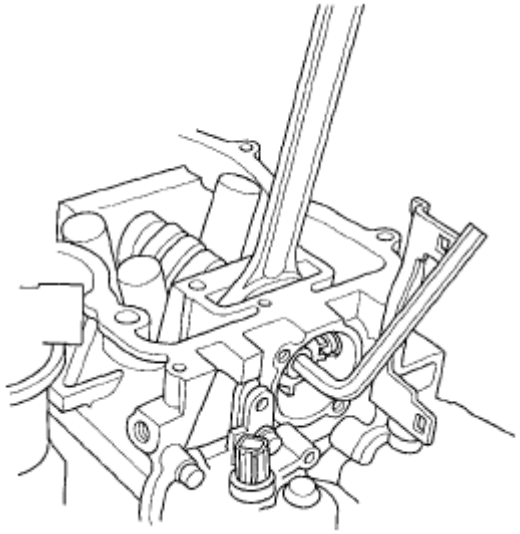

Fig. 84: Holding Camshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the camshaft thrust cover (A), use a new O-ring (B).

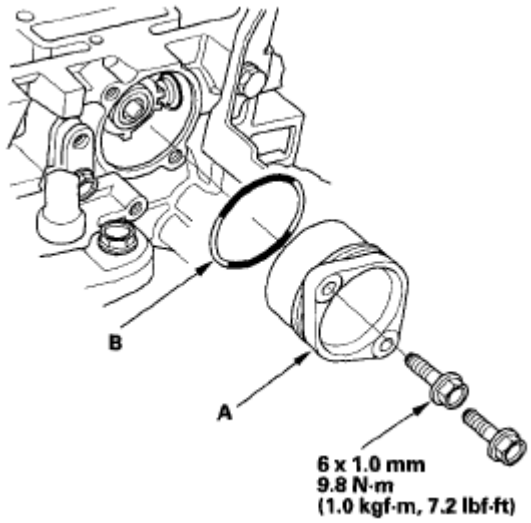

Fig. 85: Identifying Camshaft Thrust Cover (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the rocker arm assembly (see **CAMSHAFT INSTALLATION**).
5. Install the harness holder (A) on the cylinder head, then Install the air cleaner housing bracket (B).

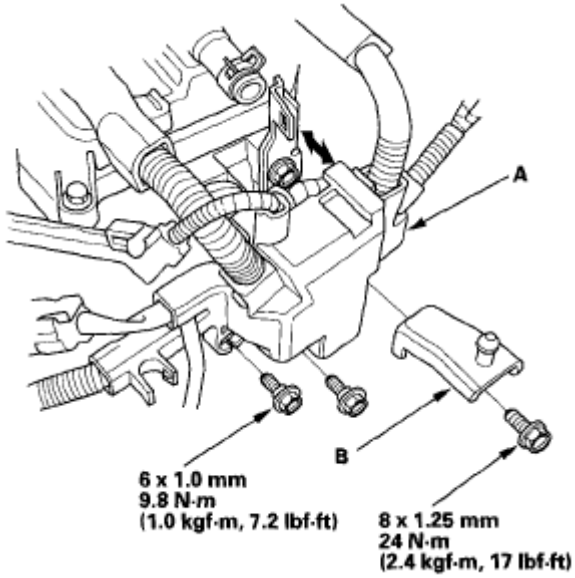

Fig. 86: Identifying Air Cleaner Housing Bracket (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the air cleaner assembly (see **THROTTLE BODY CLEANING**).

CAMSHAFT SPROCKET REMOVAL AND INSTALLATION

Removal

1. Remove the cam chain (see **CAM CHAIN REMOVAL**).
2. Remove the rocker arm assembly (see **ROCKER ARM ASSEMBLY REMOVAL**).
3. Hold the camshaft with a 27 mm open-end wrench, then loosen the bolt.

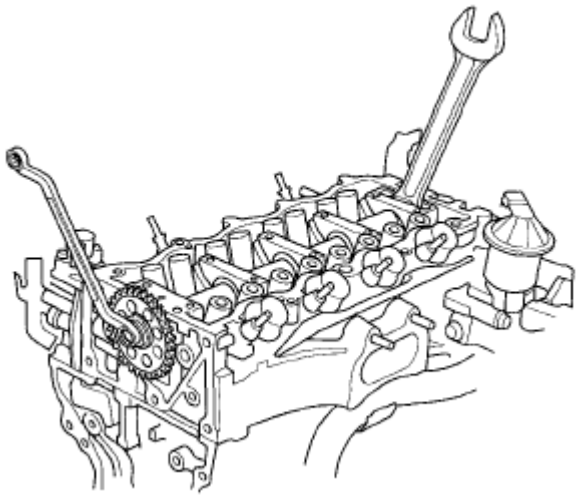

Fig. 87: Holding Camshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the camshaft sprocket.

Installation

1. Install the camshaft sprocket.
2. Apply new engine oil to the threads of the camshaft sprocket mounting bolt, and install it. Hold the camshaft with a 27 mm open-end wrench, then tighten the bolt.

   Specified Torque:

   10 x 1.25 mm

   56 N.m (5.7 kgf.m, 41 lbf.ft)

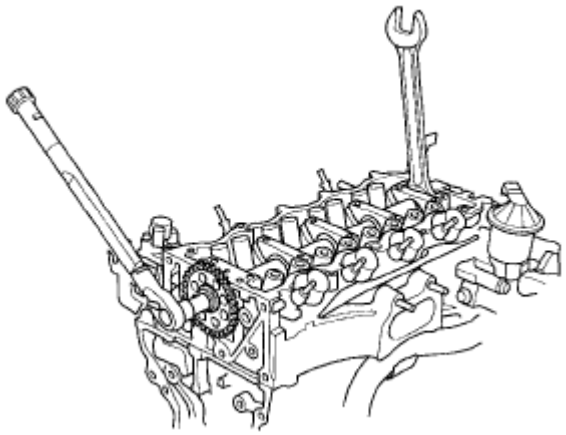

Fig. 88: Tightening Camshaft Sprocket Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the rocker arm assembly (see **CAMSHAFT INSTALLATION**).
4. Install the cam chain (see **CAM CHAIN INSTALLATION**).

CYLINDER HEAD INSPECTION FOR WARPAGE

1. Remove the cylinder head (see **CYLINDER HEAD REMOVAL**).
2. Inspect the camshaft (see **CAMSHAFT INSPECTION**).
3. Check the cylinder head for warpage. Measure along the edges, and three ways across the center.
   - If warpage is less than 0.08 mm (0.003 in.) cylinder head resurfacing is not required.
   - If warpage is between 0.08 mm (0.003 in.) and 0.2 mm (0.008 in.), resurface the cylinder head.
   - Maximum resurface limit is 0.2 mm (0.008 in.) based on a height of 115 mm (4.53 in.).

   Cylinder Head Height

   Standard (New): 114.95-115.05 mm (4.526-4.530 in.)

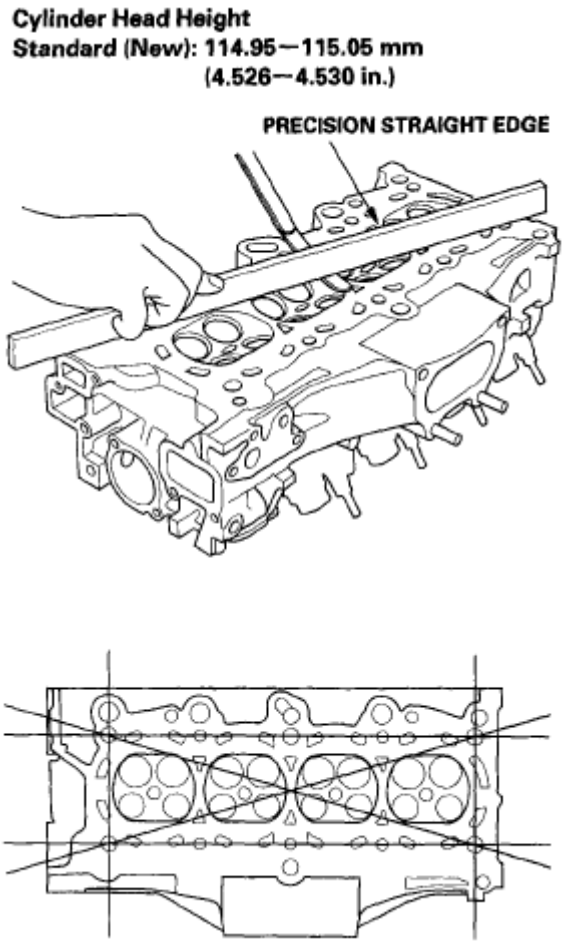

Fig. 89: Checking Cylinder Head For Warpage (With Specification)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ROCKER ARM ASSEMBLY REMOVAL

1. Remove the cylinder head cover (see **CYLINDER HEAD COVER REMOVAL**).
2. Loosen the rocker arm adjusting screws (A).

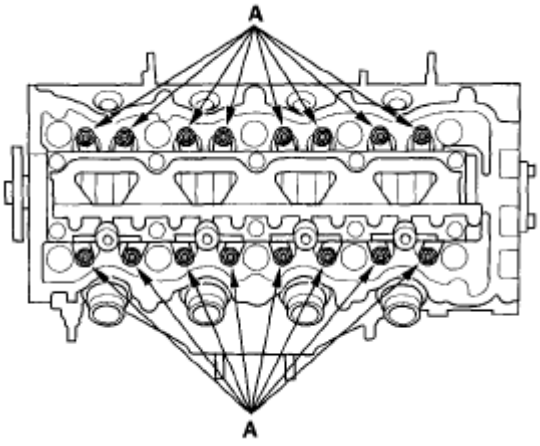

Fig. 90: Identifying Rocker Arm Adjusting Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the lost motion holder bolts. To prevent damaging the lost motion holder and rocker shaft, unscrew the bolts, in sequence, two turns at a time.

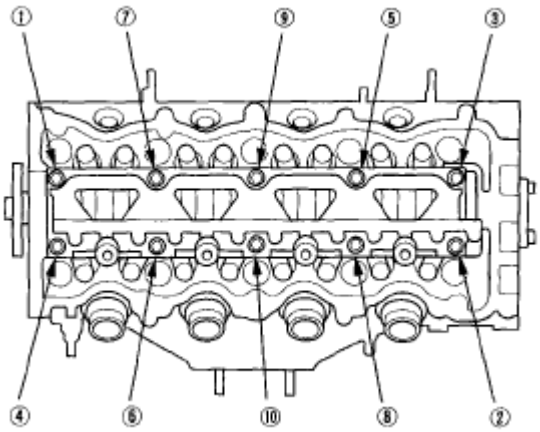

Fig. 91: Identifying Bolts Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the lost motion holder (A) and lost motion assemblies (B).

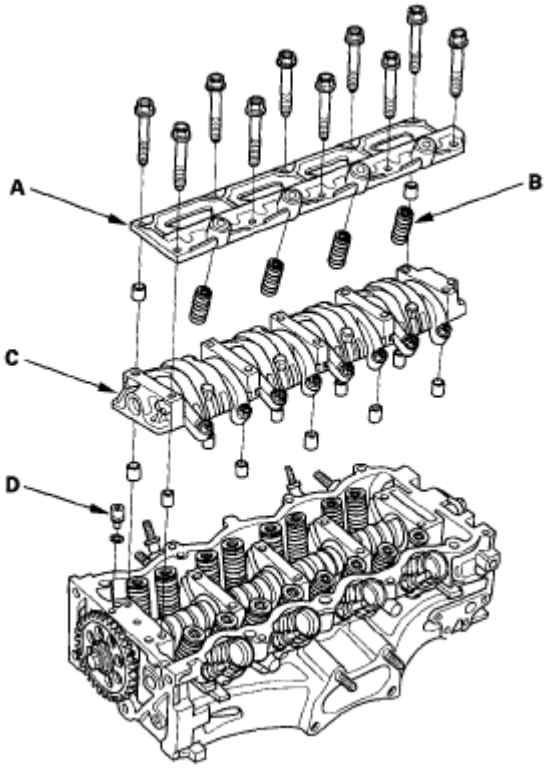

Fig. 92: Identifying Lost Motion Holder And Lost Motion Assemblies
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the rocker arm assembly (C), then remove the oil control orifice (D).

ROCKER ARM AND SHAFT DISASSEMBLY/REASSEMBLY

NOTE:

- **Identify each part as it is removed so that each item can be reinstalled in its original position.**
- **Inspect the rocker arm shaft and rocker arms (see ROCKER ARM AND SHAFT INSPECTION).**
- **If reused, the rocker arms must be installed in the same positions.**
- **When removing, or installing the rocker arm assembly, do not remove the camshaft holder bolts. The bolts will keep the holders and rocker arms on the shaft.**
- **Remove the rocker shaft bolt before removing the rocker shaft from the No. 5 rocker shaft holder.**
- **Prior to reassembling, clean all the parts in solvent, dry them, and apply new engine oil to any contact points.**
- **Bundle the intake secondary rocker arms with rubber bands to keep them together as a set.**
- **When replacing the intake rocker arm assembly, remove the fastening hardware from the new intake rocker arm assembly.**

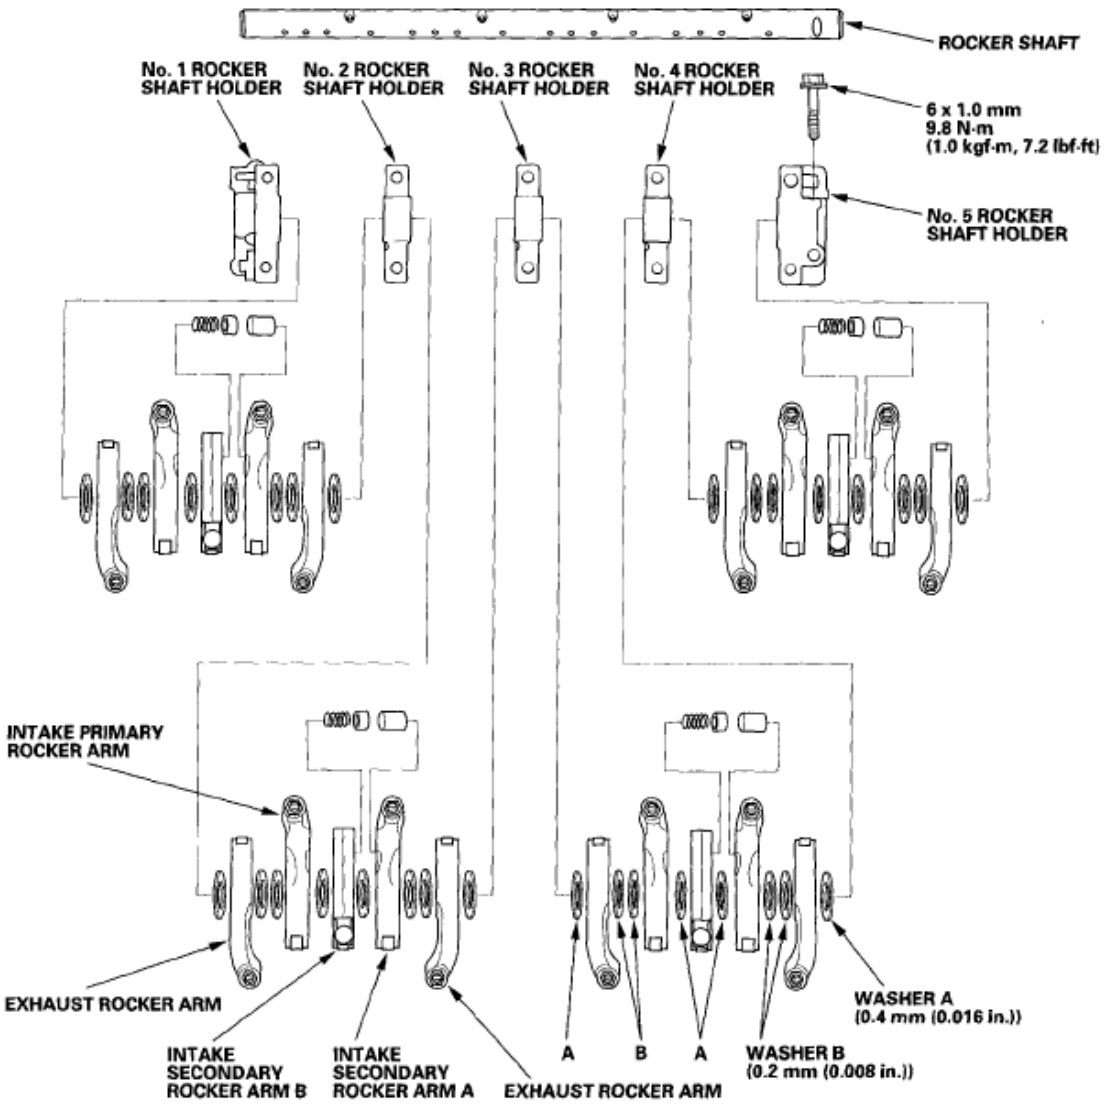

Fig. 93: Exploded View Of Rocker Arm And Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ROCKER ARM AND SHAFT INSPECTION

1. Remove the rocker arm assembly (see **ROCKER ARM ASSEMBLY REMOVAL**).
2. Disassemble the rocker arm assembly (see **ROCKER ARM AND SHAFT DISASSEMBLY/REASSEMBLY**).
3. Measure the diameter of the shaft at the first rocker location.

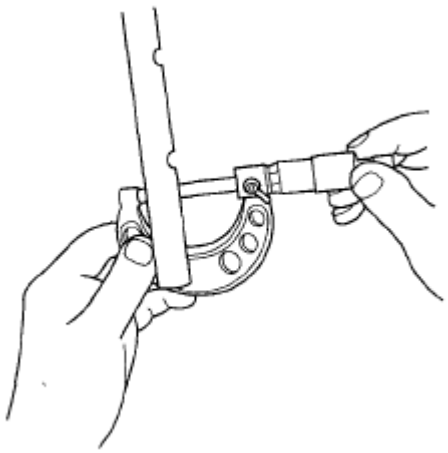

Fig. 94: Measuring Diameter Of Shaft First Rocker Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Zero the gauge (A) to the shaft diameter.

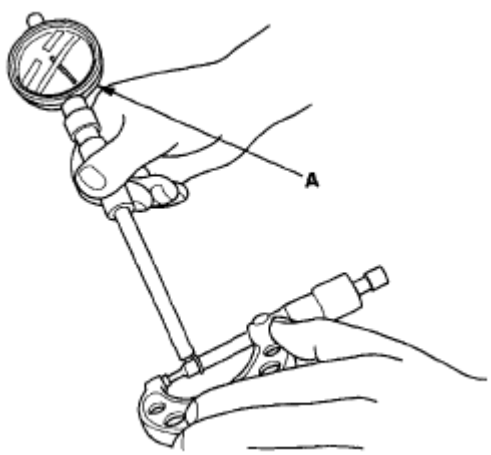

Fig. 95: Checking Shaft Diameter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Measure the inside diameter of the rocker arm, and check it for an out-of-round condition.

Rocker Arm-to-Shaft Clearance

Standard (New): 0.019-0.050 mm (0.0007-0.0020 in.)

Service Limit: 0.08 mm (0.0031 in.)

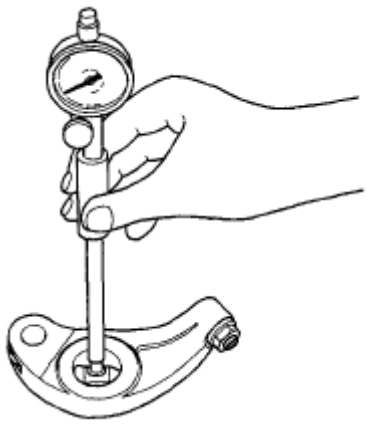

Fig. 96: Measuring Inside Diameter Of Rocker Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Repeat for all rockers and both shafts. If the clearance is beyond the service limit, replace the rocker shaft and all out of service limit rocker arms. If any intake secondary rocker arm needs replacement, replace the secondary rocker arms as an assembly.

VTEC Rocker Arms

7. Inspect the rocker arm pistons (B). Push on them manually. If they do not move smoothly, replace the rocker arm set.

NOTE:

- **Apply new engine oil to the pistons when reassembling.**
- **When reassembling secondary rocker arm A, carefully apply air pressure to the oil passage of the rocker arm.**

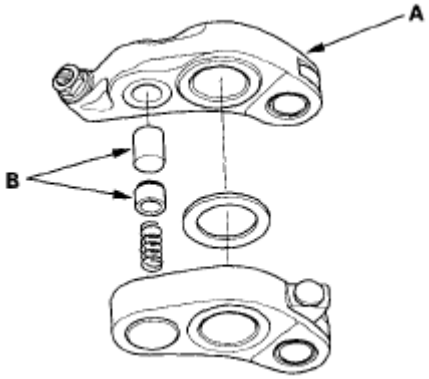

Fig. 97: Identifying Secondary Rocker Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Reassemble the rocker arm assembly (see **ROCKER ARM AND SHAFT DISASSEMBLY/REASSEMBLY**).
9. Install the rocker arm assembly (see **CAMSHAFT INSTALLATION**).

CAMSHAFT REMOVAL

1. Remove the cylinder head (see **CYLINDER HEAD REMOVAL**).
2. Remove the rocker arm assembly (see **ROCKER ARM ASSEMBLY REMOVAL**).
3. Remove the camshaft sprocket (see **CAMSHAFT SPROCKET REMOVAL AND INSTALLATION**).
4. Remove the camshaft position (CMP) sensor (see **CKP SENSOR REPLACEMENT**).
5. Remove the camshaft thrust cover (A), then pull out the camshaft (B).

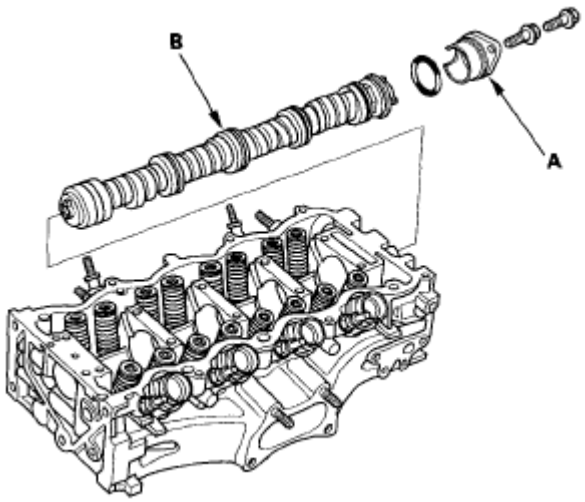

Fig. 98: Identifying Camshaft Thrust Cover And Camshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CAMSHAFT INSPECTION

1. Remove the camshaft sprocket (see **CAMSHAFT SPROCKET REMOVAL AND INSTALLATION**).
2. Remove the rocker arm assembly (see **ROCKER ARM ASSEMBLY REMOVAL**).
3. Put the rocker shaft holders on the cylinder head, then tighten the bolts, in sequence, to the specified torque.

   Specified Torque:

   6 x 1.0 mm

   15 N.m (1.5 kgf.m, 11 lbf.ft)

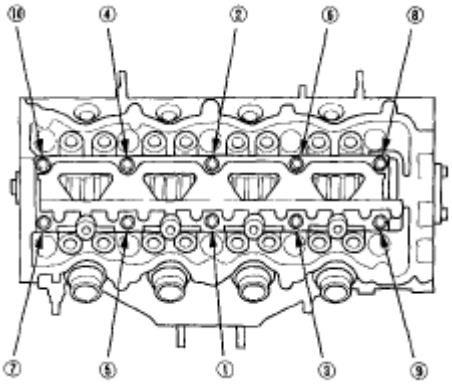

Fig. 99: Identifying Bolts Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Seat the camshaft by pushing it toward the rear of the cylinder head.
5. Zero the dial indicator against the end of the camshaft. Push the camshaft back and forth, and read the end play. If the end play is beyond the service limit, replace the thrust cover and recheck. If it is still beyond the service limit, replace the camshaft.

   Camshaft End Play

   Standard (New): 0.050-0.250 mm (0.002-0.010 in.)

   Service Limit: 0.4 mm (0.02 in.)

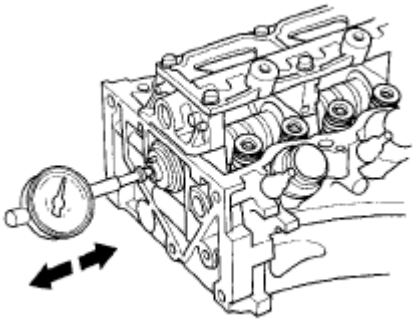

Fig. 100: Measuring Camshaft End Play
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the camshaft (see **CAMSHAFT INSPECTION**).
7. Wipe the camshaft clean, then inspect the lift ramps. Replace the camshaft if any lobes are pitted, scored, or excessively worn.
8. Measure the diameter of each camshaft journal.

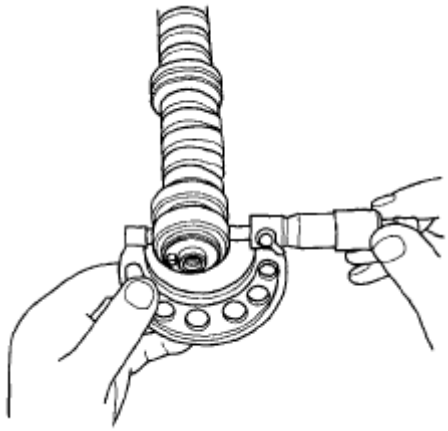

Fig. 101: Measuring Diameter Of Camshaft Journal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Zero the gauge to the journal diameter.

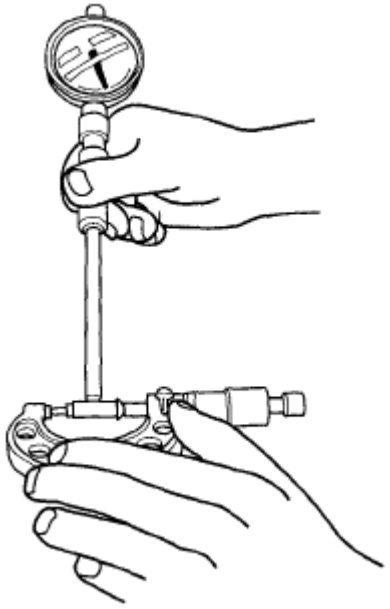

Fig. 102: Checking Journal Diameter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Clean the camshaft bearing surfaces in the cylinder head. Measure the inside diameter of each camshaft bearing surface, and check for an out-of-round condition.
    - If the camshaft-to-holder clearance is within limits, go to step 12.
    - If the camshaft-to-holder clearance is beyond the service limit, and the camshaft has been replaced, replace the cylinder head.
    - If the camshaft-to-holder clearance is beyond the service limit, and the camshaft has not been replaced, go to step 11.

Camshaft-to-Holder Oil Clearance

Standard (New): 0.045-0.084 mm (0.0018-0.0033 in.)

Service Limit: 0.15 mm (0.006 in.)

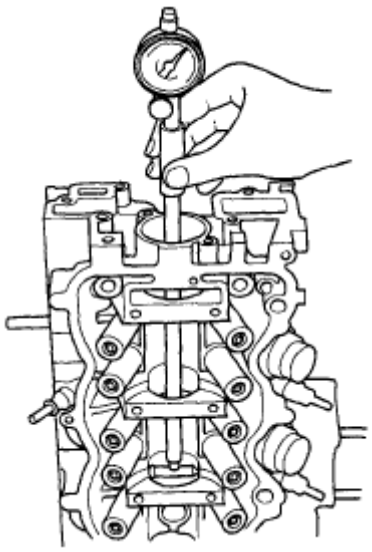

Fig. 103: Checking Camshaft-To-Holder Oil Clearance
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Check the total runout with the camshaft supported on V-blocks.
    - If the total runout of the camshaft is within the service limit, replace the cylinder head.
    - If the total runout is beyond the service limit, replace the camshaft, and recheck the oil clearance. If the oil clearance is still out of tolerance, replace the cylinder head.

Camshaft Total Runout

Standard (New): 0.03 mm (0.001 in.) max.

Service Limit: 0.04 mm (0.002 in.)

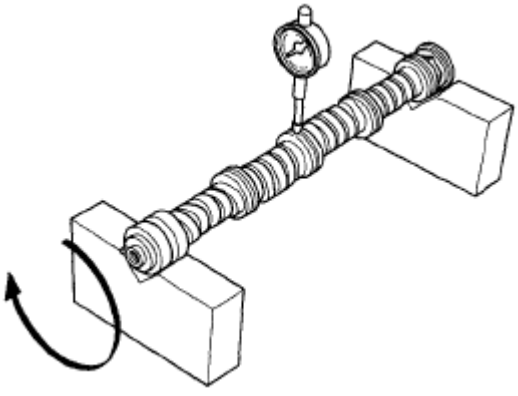

Fig. 104: Checking Camshaft Total Runout
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Measure cam lobe height.

CAM LOBE HEIGHT STANDARD

	INTAKE	EXHAUST
PRI	35.754 mm (1.4076 in.)	
SEC A	35.358 mm (1.3920 in.)	35.813 mm (1.4100 in.)
SEC B	36.027 mm (1.4184 in.)	

PRI: Primary

EX: Exhaust

SEC: Secondary

C/C: Cam Chain

IN: Intake

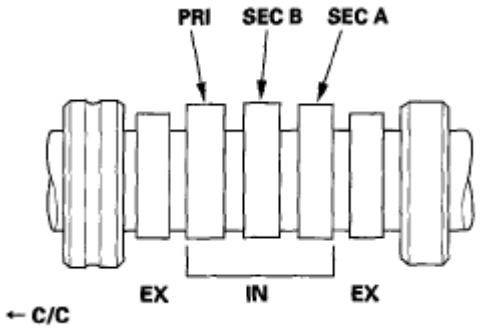

Fig. 105: Checking Cam Lobe Height
Courtesy of AMERICAN HONDA MOTOR CO., INC.

VALVE, SPRING, AND VALVE SEAL REMOVAL

Special Tools Required

Valve spring compressor attachment 07757-PJ1010A

Identify the valves and valve springs as they are removed so that each item can be reinstalled in its original position.

1. Remove the cylinder head (see **CYLINDER HEAD REMOVAL**).
2. Using an appropriate-sized socket (A), and plastic mallet (B), lightly tap the valve retainer to loosen the valve cotters.

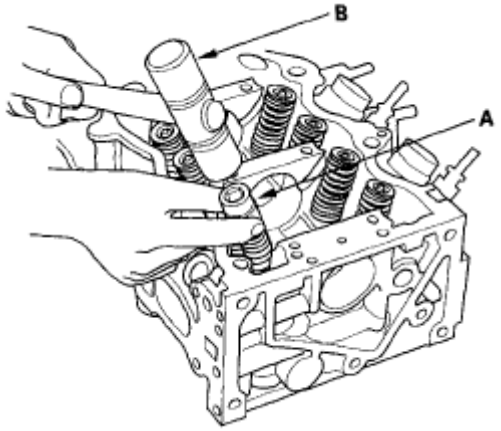

Fig. 106: Tapping Valve Retainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the valve spring compressor attachment and valve spring compressor. Compress the spring, and remove the valve cotters.

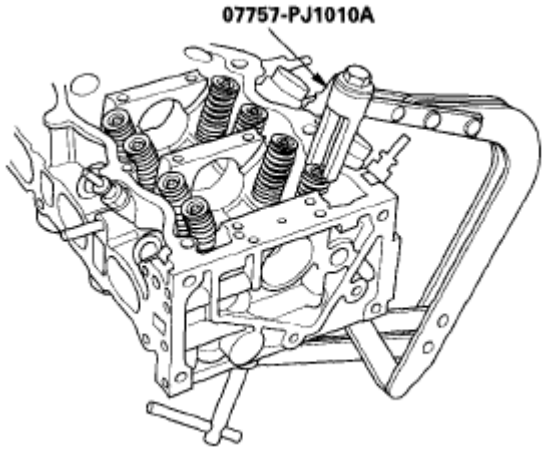

Fig. 107: Compressing Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the valve spring compressor, valve spring compressor attachment, spring retainer, and spring.
5. Install the valve guide seal remover (A).

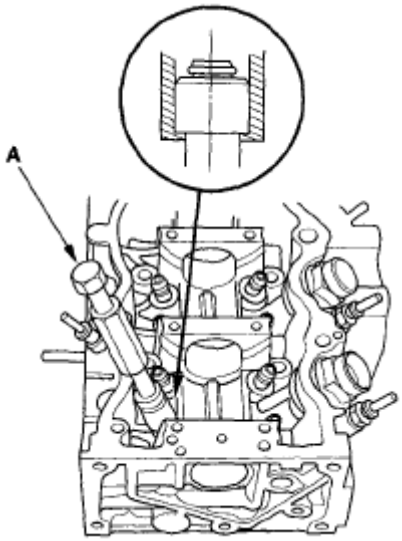

Fig. 108: Identifying Valve Guide Seal Remover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the valve seal.

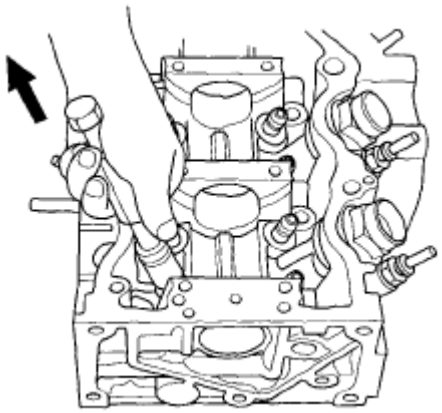

Fig. 109: Identifying Valve Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the valve spring seat and valve.

VALVE INSPECTION

1. Remove the valves (see **VALVE, SPRING, AND VALVE SEAL REMOVAL**).
2. Measure the valve in these areas.

Intake Valve Dimensions

A Standard (New): 31.85-32.15 mm (1.254-1.267 in.)

B Standard (New): 116.40-117.00 mm (4.583-4.606 in.)

C Standard (New): 5.48-5.49 mm (0.2157-0.2161 in.)

C Service Limit: 5.45 mm (0.215 in.)

Exhaust Valve Dimensions

A Standard (New): 25.90-26.10 mm (1.020-1.028 in.)

B Standard (New): 115.65-116.25 mm (4.553-4.577 in.)

C Standard (New): 5.45-5.46 mm (0.2146-0.2150 in.)

C Service Limit: 5.42 mm (0.213 in.)

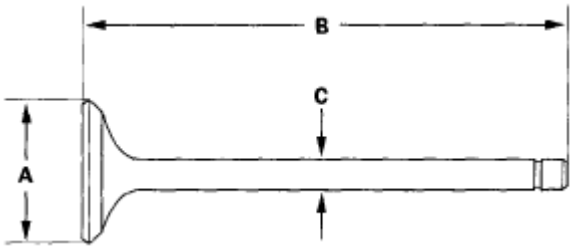

Fig. 110: Measuring Exhaust Valve Dimensions
Courtesy of AMERICAN HONDA MOTOR CO., INC.

VALVE STEM-TO-GUIDE CLEARANCE INSPECTION

1. Remove the valves (see **VALVE, SPRING, AND VALVE SEAL REMOVAL**).
2. Slide the valve out of its guide about 10 mm (0.39 in.), then measure the guide-to-stem clearance with a dial indicator while rocking the stem in the direction of normal thrust (wobble method).
   - If the measurement exceeds the service limit, recheck it using a new valve.
   - If the measurement is now within the service limit, reassemble using a new valve.
   - If the measurement with a new valve still exceeds the service limit, go to step 3.

Intake Valve Stem-to-Guide Clearance

Standard (New): 0.04-0.10 mm (0.002-0.004 in.)

Service Limit: 0.16 mm (0.006 in.)

Exhaust Valve Stem-to-Guide Clearance

Standard (New): 0.10-0.16 mm (0.004-0.006 in.)

Service Limit: 0.22 mm (0.009 in.)

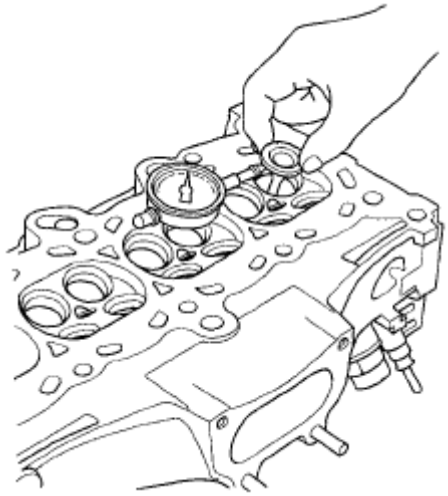

Fig. 111: Checking Intake Valve Stem-To-Guide Clearance
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Subtract the valve stem O.D. (measured with a micrometer) from the valve guide I.D. (measured with an inside micrometer or ball gauge). Take the measurements in three places along the valve stem and three places inside the valve guide. The difference between the largest guide measurement and the smallest stem measurement should not exceed the service limit.

   Intake Valve Stem-to-Guide Clearance

   Standard (New): 0.02-0.05 mm (0.0008-0.0020 in.)

   Service Limit: 0.08 mm (0.003 in.)

   Exhaust Valve Stem-to-Guide Clearance

   Standard (New): 0.05-0.08 mm (0.0020-0.0031 in.)

   Service Limit: 0.11 mm (0.004 in.)

VALVE GUIDE REPLACEMENT

Special Tools Required

- Valve guide driver, 5.5 mm 07742-0010100
- Valve guide reamer, 5.5 mm 07HAH-PJ7A100

1. Inspect the valve stem-to-guide clearance (see **VALVE INSPECTION**).
2. As illustrated, use a commercially available air-impact valve guide driver (A) modified to fit the diameter of the valve guides. In most cases, the same procedure can be done using the special tool and a conventional hammer.

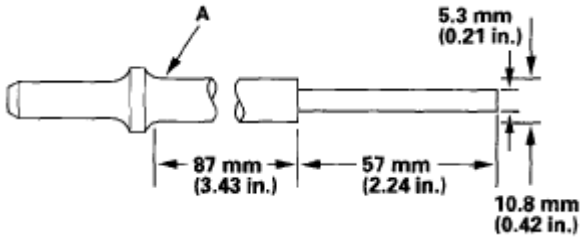

Fig. 112: Identifying Air-Impact Valve Guide Driver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Select the proper replacement guides, and chill them in the freezer section of a refrigerator for about an hour.
4. Use a hot plate or oven to evenly heat the cylinder head to 300°F (150°C. Monitor the temperature with a cooking thermometer. Do not get the head hotter than 300°F (150°C); excessive heat may loosen the valve seats.

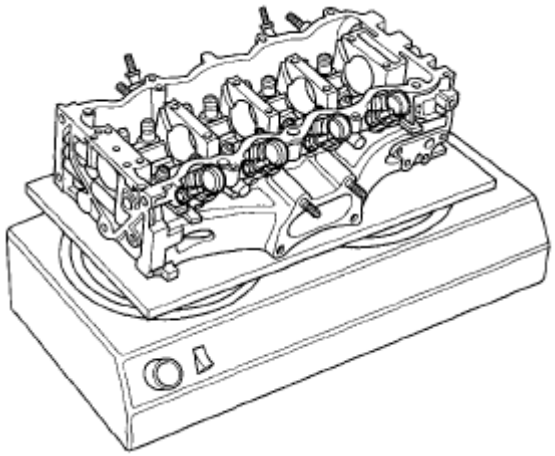

Fig. 113: Heating Cylinder Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Working from the camshaft side, use the driver and an air hammer to drive the guide about 2 mm (0.1 in.) towards the combustion chamber. This will knock off some of the carbon and make removal easier. Hold the air hammer directly in line with the valve guide to prevent damaging the driver. Wear safety goggles or a face shield.
6. Turn the head over, and drive the guide out toward the camshaft side of the head.

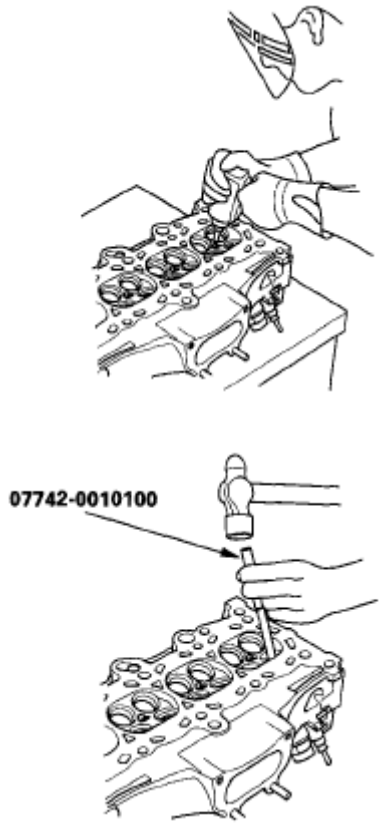

Fig. 114: Tapping Valve Guide
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. If a valve guide still won't move, drill it out with a 8 mm (5/16 in.) bit, then try again.

NOTE: Drill guides only in extreme cases; you could damage the cylinder head if the guide breaks.

8. Take out the new guide(s) from the freezer, one at a time, as you need them.
9. Apply a thin coat of new engine oil to the outside of the new valve guide. Install the guide from the camshaft side of the head; use the valve guide driver to drive the guide to the specified installed height (A) of the guide (B). If you have all 16 guides to do, you may have to reheat the head.

Valve Guide Installed Height 18.25-18.75 mm (0.719-0.738 in.)

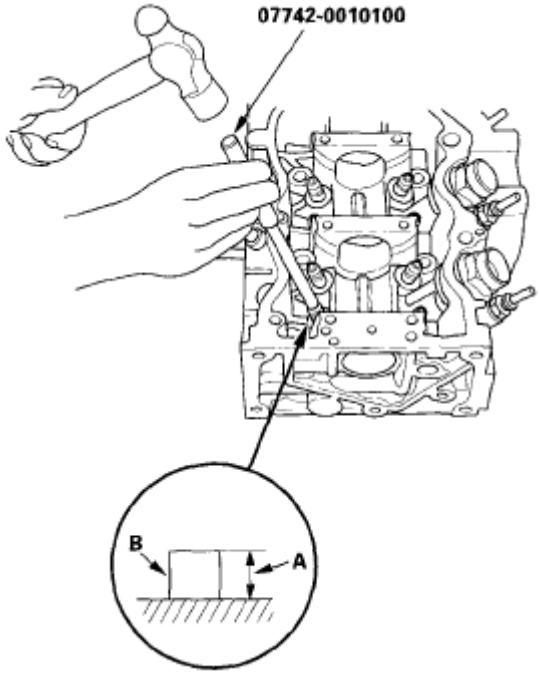

Fig. 115: Identifying Valve Guide Installed Height
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Coat both the reamer and the valve guide with cutting oil.
11. Rotate the reamer clockwise to the full length of the valve guide bore.

Fig. 116: Rotating Reamer To Valve Guide Bore
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Continue to rotate the reamer clockwise while drawing it from the bore.
13. Thoroughly wash the guide in detergent and water to remove any cutting residue.
14. Check the clearance with a valve (see **VALVE INSPECTION**). Verify that a valve slides into the intake and exhaust valve guides without getting stuck.

VALVE SEAT RECONDITIONING

1. Inspect the valve stem-to-guide clearance (see **VALVE INSPECTION**). If the valve guides are worn, replace them (see **VALVE GUIDE REPLACEMENT**) before cutting the valve seats.
2. Renew the valve seats in the cylinder head using a valve seat cutter.

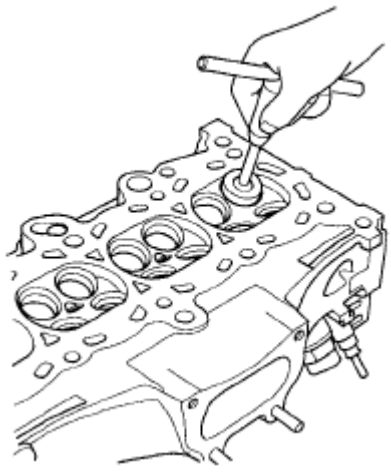

Fig. 117: Cutting Valve Seats Using Valve Seat Cutter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Carefully cut a 45° seat, removing only enough material to ensure a smooth and concentric seat.
4. Bevel the upper edge of the seat with the 30 ° cutter and the lower edge of the seat with the 60 ° cutter. Check the width of the seat and adjust accordingly.

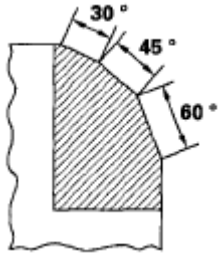

Fig. 118: Identifying Bevel Upper Edge Of Seat Angle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Make one more very light pass with the 45° cutter to remove any possible burrs caused by the other cutters.

Valve Seat Width

Intake:

Standard (New): 0.85-1.15 mm (0.033-0.045 in.)

Service Limit: 1.6 mm (0.06 in)

Exhaust:

Standard (New): 1.25-1.55 mm (0.049-0.061 in.)

Service Limit: 2.0 mm (0.08 in.)

6. After resurfacing the seat, inspect it for even valve seating. Apply Prussian Blue compound (A) to the valve face. Insert the valve in its original location in the head, then lift it and snap it closed against the seat several times.

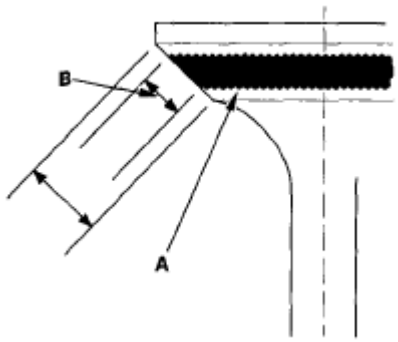

Fig. 119: Identifying Valve Seat Width
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. The actual valve seating surface (B), as shown by the blue compound, should be centered on the seat.
   - If it is too high (closer to the valve stem), you must make a second cut with the 60° cutter to move it down, then one more cut with the 45° cutter to restore seat width.
   - If it is too low (closer to the valve edge), you must make a second cut with the 30° cutter to move it up, then one more cut with the 45° cutter to restore seat width.

NOTE: The final cut should always be made with the 45° cutter.

8. Insert the intake and exhaust valves in the head, and measure the valve stem installed height (A).

Intake Valve Stem Installed Height

Standard (New): 67.2-67.4 mm (2.646-2.654 in.)

Service Limit: 67.7 mm (2.665 in.)

Exhaust Valve Stem Installed Height

Standard (New): 58.4-58.6 mm (2.299-2.307 in.)

Service Limit: 58.9 mm (2.319 in.)

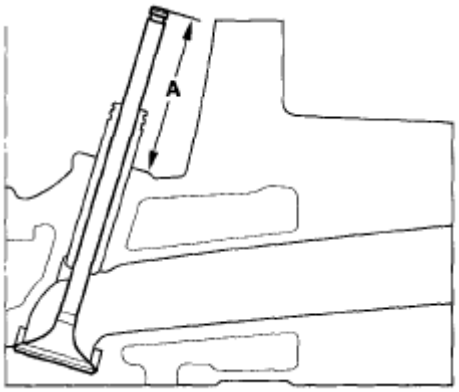

Fig. 120: Measuring Intake Valve Stem Installed Height
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. If the valve stem installed height is beyond the service limit, replace the valve and recheck. If it is still beyond the service limit, replace the cylinder head; the valve seat in the head is too deep.

VALVE, SPRING, AND VALVE SEAL INSTALLATION

Special Tools Required

- Stem seal driver 07PAD-0010000
- Valve spring compressor attachment 07757-PJ1010A

1. Coat the valve stems with new engine oil. Install the valves in the valve guides.
2. Check that the valves move up and down smoothly.
3. Install the spring seats on the cylinder head.
4. Install the new valve seals (A) using the stem seal driver (B).

NOTE: Exhaust valve seals (C) have a black spring (D), and intake valve seals (E) have a white spring (F); they are not interchangeable.

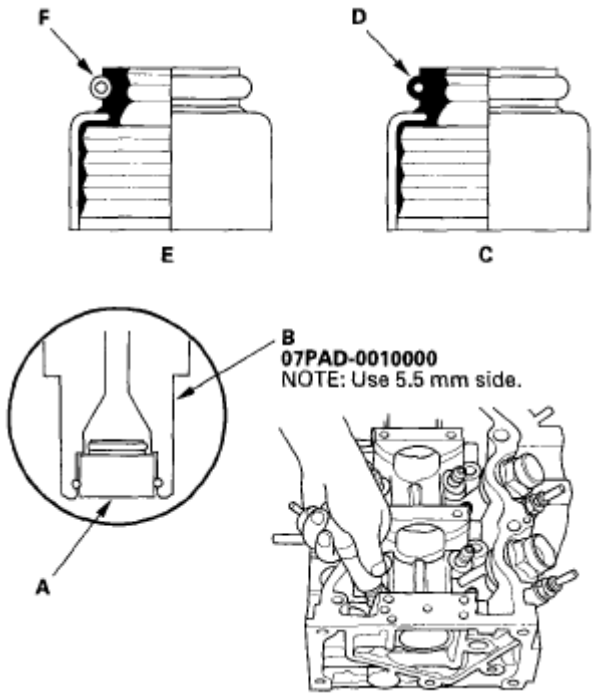

Fig. 121: Identifying Valve Seals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the valve spring and valve retainer. Place the end of the valve spring with the closely wound coils toward the cylinder head.
6. Install the valve spring compressor attachment and valve spring compressor. Compress the spring, and install the valve cotters.

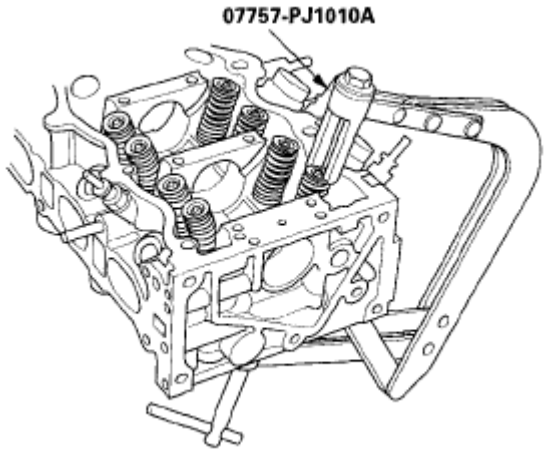

Fig. 122: Compressing Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the valve spring compressor and valve spring compressor attachment.
8. Lightly tap the end of each valve stem two or three times with a plastic mallet (A) to ensure proper seating of the valve and valve cotters. Tap the valve stem only along its axis so you do not bend the stem.

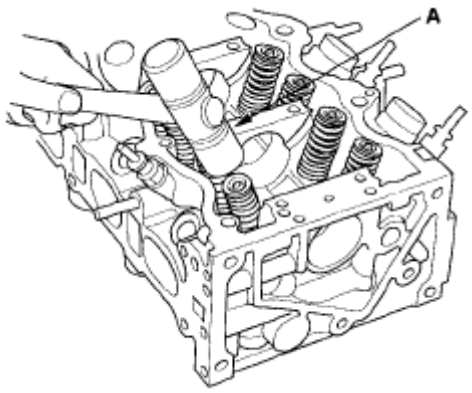

Fig. 123: Tapping End Of Valve Stem
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CAMSHAFT INSTALLATION

1. Install the camshaft (A) into the cylinder head, then install the camshaft thrust cover (B) with new O-ring (C).

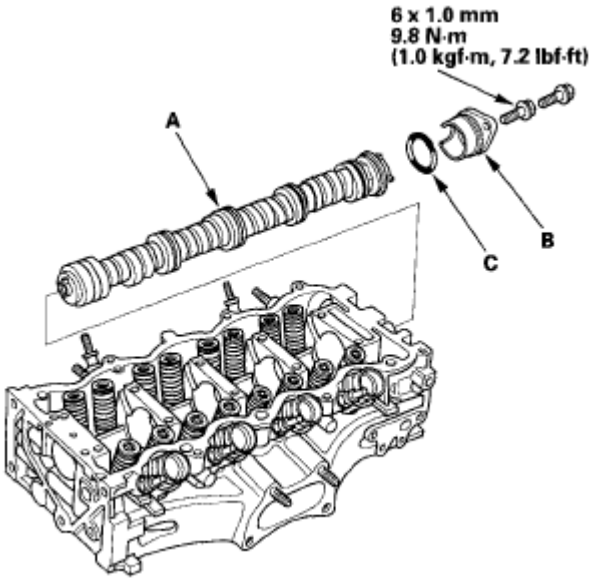

Fig. 124: Identifying Camshaft And Camshaft Thrust Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the camshaft position (CMP) sensor with a new O-ring (see **CKP SENSOR REPLACEMENT**).
3. Install the camshaft sprocket (see **CAMSHAFT SPROCKET REMOVAL AND INSTALLATION**).
4. Install the rocker arm assembly (see **CAMSHAFT INSTALLATION**).
5. Install the cylinder head (see **CYLINDER HEAD INSTALLATION**).

ROCKER ARM ASSEMBLY INSTALLATION

1. If the rocker arm assembly is disassembled, reassemble the rocker arm assembly (see **ROCKER**

ARM AND SHAFT DISASSEMBLY/REASSEMBLY).

2. Install the oil control orifice (A) with a new O-ring (B), then install the rocker arm assembly (C).

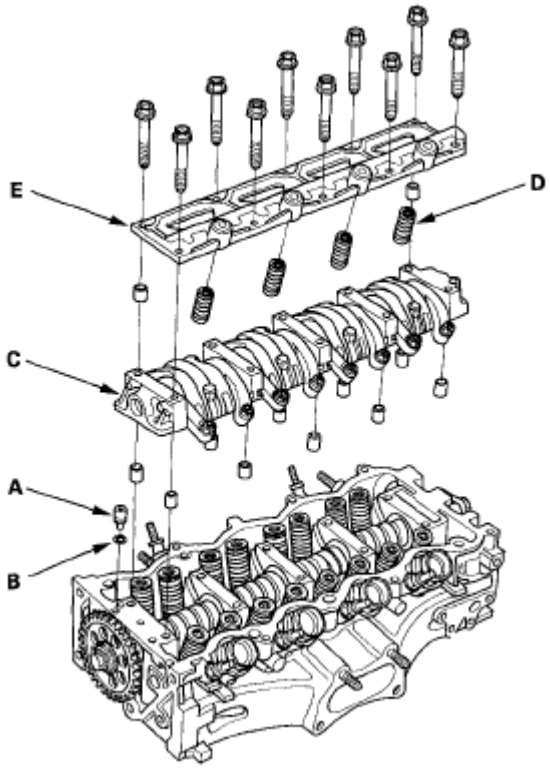

Fig. 125: Identifying Rocker Arm Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the lost motion assembles (D) and the lost motion holder (E).
4. Tighten each bolts two turns at a time in sequence.

Specified Torque:

6 x 1.0 mm 15 N.m (1.5 kgf.m, 11 lbf.ft)

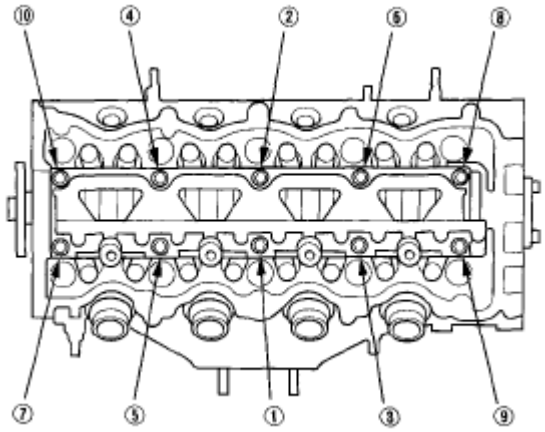

Fig. 126: Identifying Bolt Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Adjust the valve clearance (see **VALVE CLEARANCE ADJUSTMENT**).
6. Install the cylinder head cover (see **CYLINDER HEAD COVER INSTALLATION**).

CYLINDER HEAD INSTALLATION

1. Clean the cylinder head and engine block surface.
2. Install the new coolant separator (A) in the engine block when replacing the engine block.

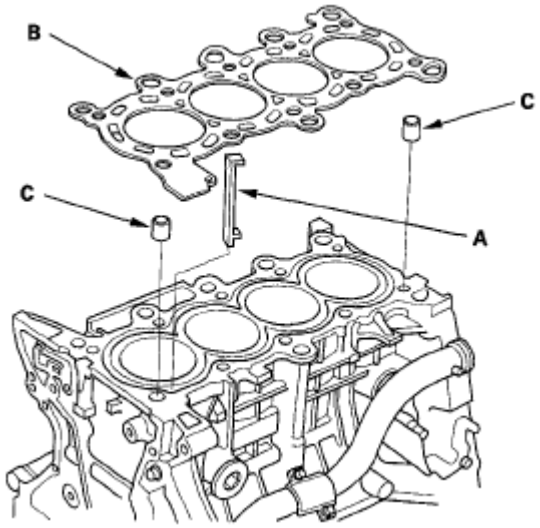

Fig. 127: Identifying Coolant Separator And Cylinder Head Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the new cylinder head gasket (B) and dowel pins (C) on the engine block. Always use a new cylinder head gasket.
4. Set the crankshaft to top dead center (TDC). Align the TDC mark (A) on the crankshaft sprocket with the pointer (B) on the engine block.

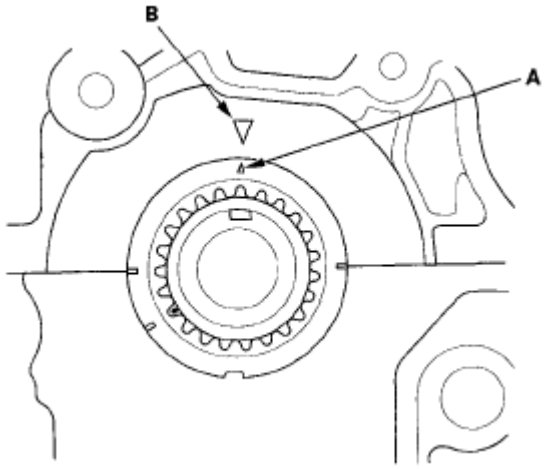

Fig. 128: Aligning TDC Mark On Crankshaft Sprocket With Pointer On Engine Block
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Set the camshaft TDC. The "UP" mark (A) on the camshaft sprocket should be at the top, and the

TDC grooves (B) on the camshaft sprocket should line up with the top edge of the head.

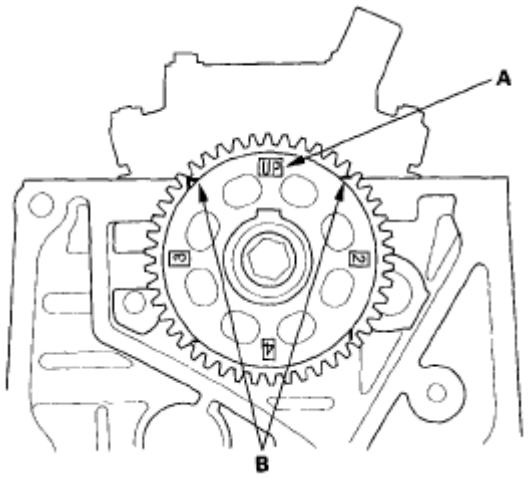

Fig. 129: Identifying UP Mark On Camshaft Sprocket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the cylinder head on the engine block.
7. Measure the diameter of each cylinder head bolt at point A and point B.

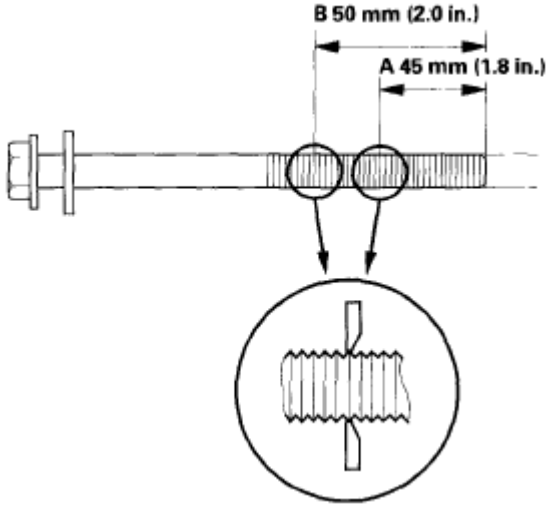

Fig. 130: Measuring Diameter Of Cylinder Head Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. If either diameter is less than 10.6 mm (0.42 in.), replace the cylinder head bolt.
9. Apply new engine oil to the threads and under the bolt heads of all cylinder head bolts.
10. Tighten the cylinder head bolts in sequence to 39 N.m (4.0 kgf.m, 29 lbf.ft). Use a beam-type torque wrench. When using a preset-type torque wrench, be sure to tighten slowly and do not overtighten. If a bolt makes any noise while you are torquing it, loosen the bolt and retighten it from the first step.

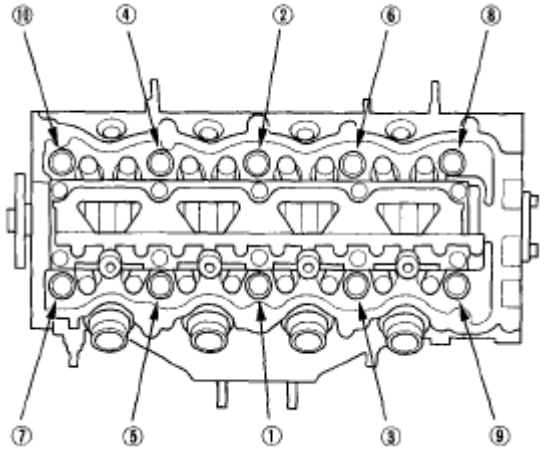

Fig. 131: Identifying Bolts Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. After torquing, tighten all cylinder head bolts in two steps (90° per step). If you are using a new cylinder head bolt, tighten the bolt an extra 60 °.

NOTE: Remove the cylinder head bolt if you tightened it beyond the specified angle, and go back to step 7 of the procedure. Do not loosen it back to the specified angle.

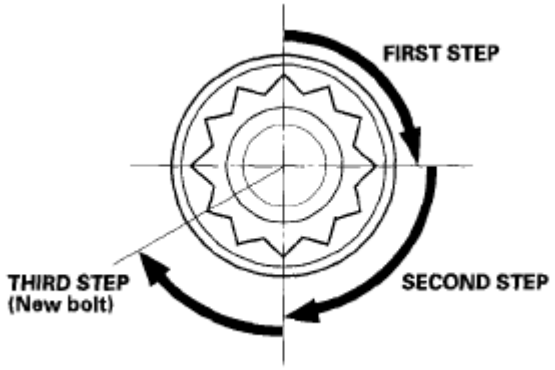

Fig. 132: Identifying Bolt Tightening Step
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install the cam chain (see **CAM CHAIN INSTALLATION**).
13. Adjust the valve clearance (see **VALVE CLEARANCE ADJUSTMENT**).
14. Install the cylinder head cover (see **CYLINDER HEAD COVER INSTALLATION**).
15. Install the thermostat housing (see **INSTALLATION**).
16. Install the three way catalytic converter (TWC) (see **CATALYTIC CONVERTER REMOVAL/INSTALLATION**).
17. Connect the engine wire harness connectors, and install the wire harness clamps to the cylinder head.
    - Four fuel injector connectors
    - Engine coolant temperature (ECT) sensor 1 connector
    - Air fuel ratio (A/F) sensor connector

- Secondary heated oxygen sensor (secondary HO2S) connector
- Exhaust gas recirculation (EGR) valve connector
- Rocker arm oil control solenoid connector
- Rocker arm oil pressure switch connector

18. M/T model: Install the upper radiator hose (A) and heater hose (B).

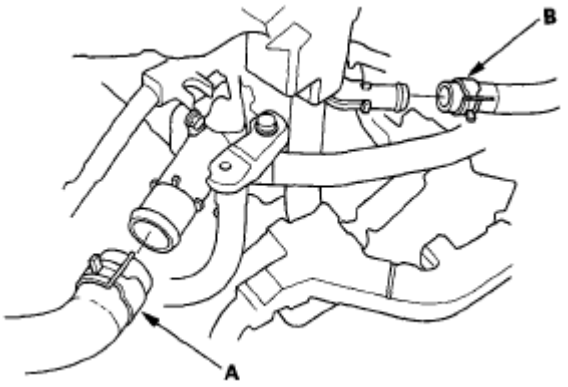

Fig. 133: Identifying Upper Radiator Hose - M/T
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. A/T model: Install the upper radiator hose (A), heater hose (B), and water bypass hose (C).

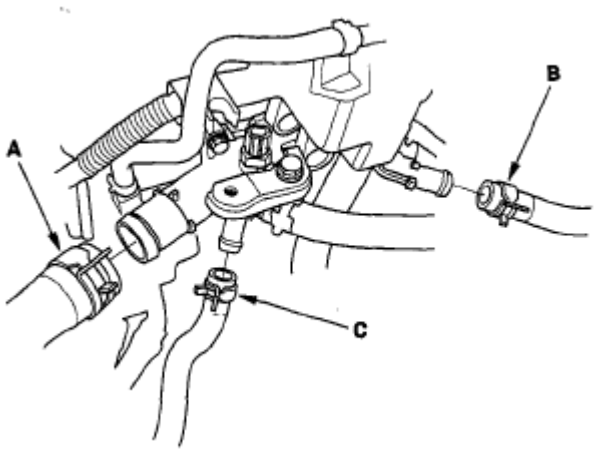

Fig. 134: Identifying Upper Radiator Hose - A/T
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Install the harness holder (A) on the cylinder head, then install the air cleaner housing bracket (B).

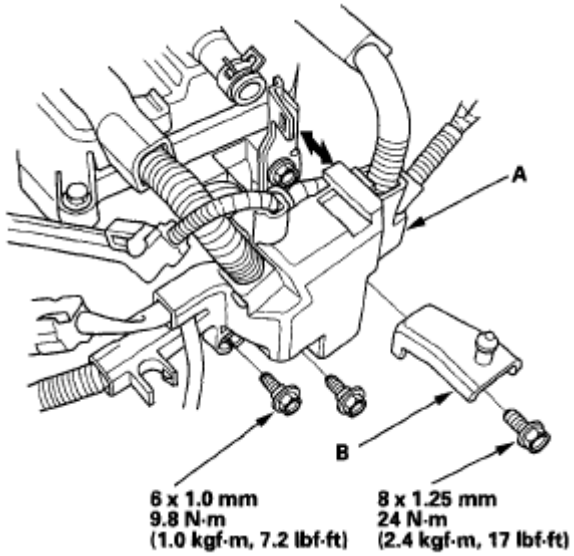

Fig. 135: Identifying Air Cleaner Housing Bracket (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Install the harness clamps (A), and remove the positive crankcase ventilation (PCV) hose from the clamp (B).

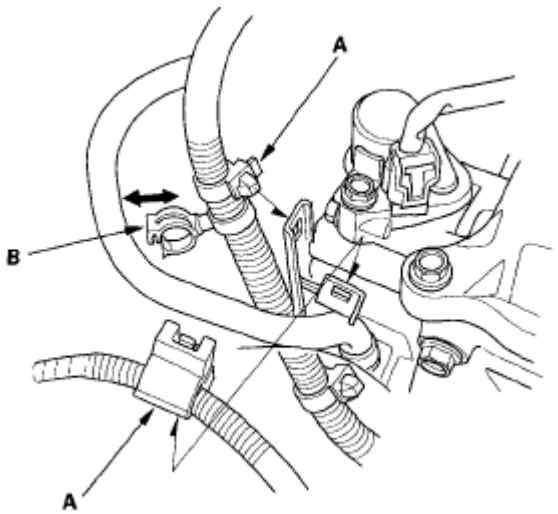

Fig. 136: Identifying Positive Crankcase Ventilation Hose Clamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Install the intake manifold (see **INSTALLATION**).
23. Install the drive belt (see **DRIVE BELT INSPECTION**).
24. Clean the battery posts and cable terminals. Assemble them, and apply grease to prevent corrosion.
25. After installation, check that all tubes, hoses, and connectors are installed correctly.
26. Inspect for fuel leaks. Turn the ignition switch ON (II) (do not operate the starter) so the fuel pump runs for about 2 seconds and pressurizes the fuel line. Repeat this operation two or three times, then check for fuel leakage at any point in the fuel line.
27. Refill the radiator with engine coolant, and bleed air from the cooling system with the heater valve open (see step 8 on **COOLANT REPLACEMENT**).

28. Do the crankshaft position (CKP) pattern clear/CKP pattern learn procedure (see **ECM/PCM RESET**).
29. Inspect the idle speed (see **IDLE SPEED INSPECTION**).
30. Inspect the ignition timing (see **IGNITION TIMING INSPECTION**).
31. Enter the anti-theft code for the audio system and the navigation system (if equipped), then enter the audio presets.
32. Set the clock.

CYLINDER HEAD (K20Z3)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

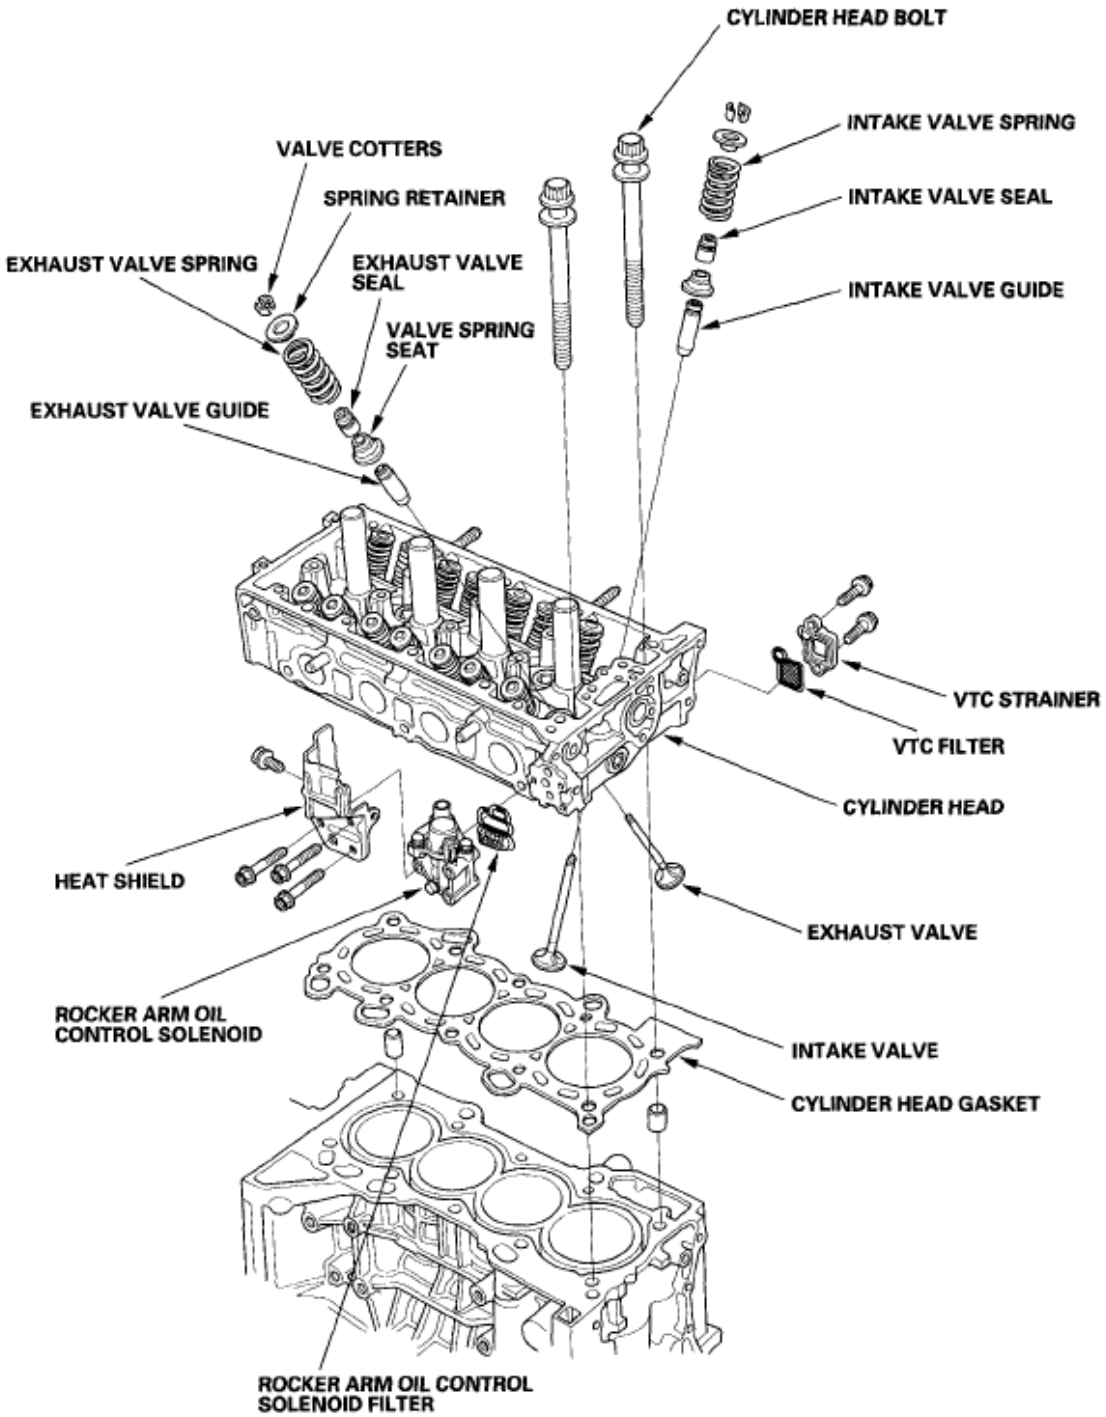

Fig. 140: Identifying Cylinder Head Component Location (3 Of 3)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ENGINE COMPRESSION INSPECTION

NOTE: After this inspection, you must reset the engine control module (ECM), otherwise the ECM will continue to stop the injectors from functioning.

1. Warm up the engine to normal operating temperature (cooling fan comes on).
2. Turn the ignition switch OFF.

3. Connect the HDS to the data link connector (DLC) (see step 2 on **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
4. Turn the ignition switch ON (II).
5. Make sure the HDS communicates with the vehicle and the ECM. If it doesn't troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
6. Select PGM-FI, INSPECTION, then ALL INJECTORS OFF on the HDS.
7. Turn the ignition switch to LOCK (0).
8. Remove the four ignition coils (see **IGNITION COIL REMOVAL/INSTALLATION**).
9. Remove the four spark plugs.
10. Attach the compression gauge to the spark plug hole.

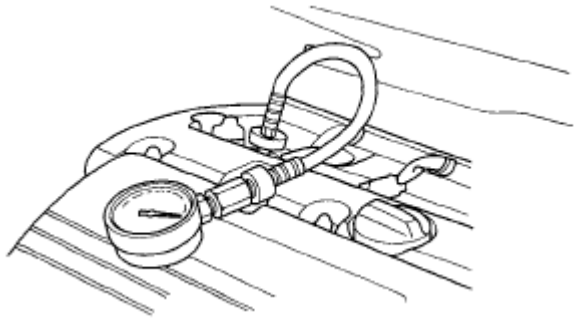

Fig. 141: Attaching Compression Gauge To Spark Plug Hole
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Open the throttle fully, then crank the engine with the starter motor and measure the compression.

    Compression Pressure:

    Above 930 kPa (9.5 kgf/cm^2 , 135 psi)

12. Measure the compression on the remaining cylinders.

    Maximum Variation:

    Within 200 kPa (2.0 kgf/cm^2 , 28 psi)

13. If the compression is not within specifications, check the following items, then remeasure the compression.
    - Damaged or worn valves and seats
    - Damaged cylinder head gasket
    - Damaged or worn piston rings
    - Damaged or worn piston and cylinder bore
14. Remove the compression gauge from the spark plug hole.
15. Install the four spark plugs (see **SPARK PLUG INSPECTION**).
16. Install the four ignition coils (see **IGNITION COIL REMOVAL/INSTALLATION**).
17. Select the ECM reset (see **HDS CLEAR COMMAND**) to cancel the ALL INJECTORS OFF

function on the HDS.

18. Do the ECM idle learn procedure (see **ECM IDLE LEARN PROCEDURE**).

VTEC ROCKER ARM TEST

Special Tools Required

- Air pressure regulator 07AAJ-PNAA101
- VTEC air adapter 07ZAJ-PNAA101
- VTEC air stopper 07ZAJ-PNAA200
- Air joint adapter 07ZAJ-PNAA300

1. Start the engine and let it run for 5 minutes, then turn the ignition switch OFF.
2. Remove the cylinder head cover (see **CYLINDER HEAD COVER REMOVAL**).
3. Set the No. 1 piston at TDC (see step 6).
4. Move the secondary rocker arm (A) for No. 1 cylinder. The secondary rocker arm should move independently of the mid rocker arm (B).
   - If the secondary rocker arm does not move, remove the mid, primary, and secondary rocker arms as an assembly, and check that the pistons in the rocker arms move smoothly. If any rocker arm needs replacing, replace the mid, primary, and secondary rocker arms as an assembly, and test.
   - If the secondary rocker arm moves freely, go to step 5.

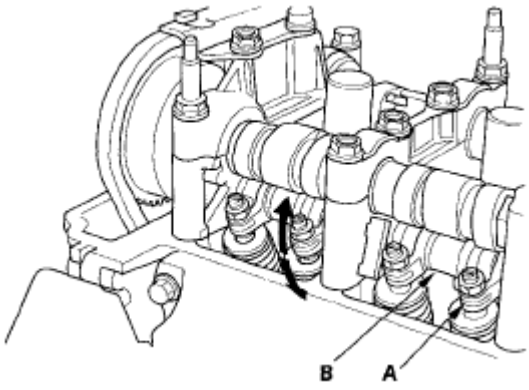

Fig. 142: Identifying Mid, Primary And Secondary Rocker Arms
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Repeat step 4 on the remaining secondary rocker arms with each piston at TDC. When all the secondary rocker arms pass the test, go to step 6.
6. Check that the air pressure on the shop air compressor gauge indicates over 400 kPa (4.0 kgf/cm^2 , 57 psi).
7. Inspect the valve clearance (see **VALVE CLEARANCE ADJUSTMENT**).
8. Remove the sealing bolt (A) from the relief hole, and install the VTEC air stopper (B).

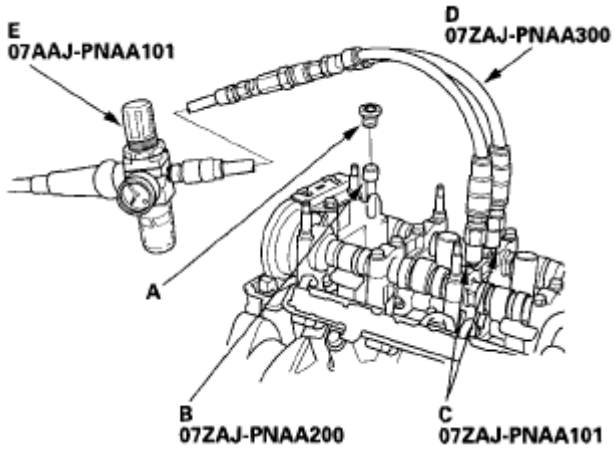

Fig. 143: Identifying Special Tools
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the No. 2 and No. 3 camshaft holder bolts, and install the VTEC air adapters (C) finger-tight.
10. Connect the air joint adapter (D) and air pressure regulator (E).
11. Loosen the valve on the regulator, and apply the specified air pressure.

Specified Air Pressure: 290 kPa (3.0 kgf/cm^2 , 42 psi)

NOTE: If the synchronizing piston does not move after applying air pressure; move the rocker arm up and down manually by rotating the crankshaft clockwise.

12. With the specified air pressure applied, move the secondary rocker arm (A) for the No. 1 cylinder. The mid rocker arm (B), primary rocker arm (C), and secondary rocker arm should move together.
    - If the mid and primary rocker arms do not move together with the secondary rocker arm, remove the mid, primary, and secondary rocker arms as an assembly, and check that the pistons in the rocker arms move smoothly. If any rocker arm needs replacing, replace the mid, primary, and secondary rocker arms as an assembly, and retest.

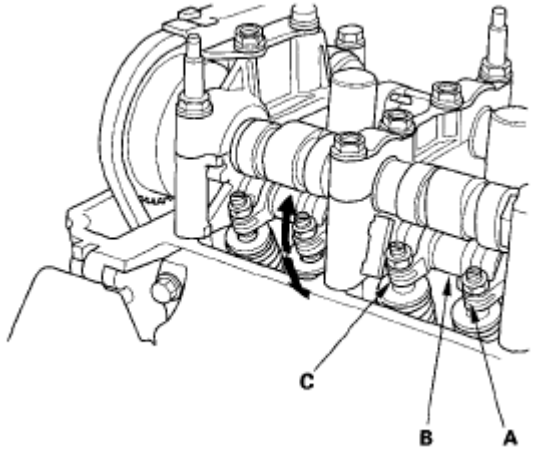

Fig. 144: Identifying Mid, Primary And Secondary Rocker Arms
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Remove the special tools.
14. Tighten the camshaft holder mounting bolts to 22 N.m (2.2 kgf.m, 16 lbf.ft).
15. Tighten the sealing bolt to 20 N.m (2.0 kgf.m, 14 lbf.ft).
16. Install the cylinder head cover (see **CYLINDER HEAD COVER INSTALLATION**).

VTC ACTUATOR INSPECTION

1. Remove the cam chain (see **CAM CHAIN REMOVAL**).
2. Loosen the rocker arm adjusting screws (see step 2).
3. Remove the camshaft holder (see step 3).
4. Remove the intake camshaft.
5. Check that the variable valve timing control (VTC) actuator is locked by turning the VTC actuator clockwise and counterclockwise. If the VTC actuator is not locked, replace the VTC actuator.
6. Seal the advance holes (A) and retard holes (B) in the No. 1 camshaft journal with tape.

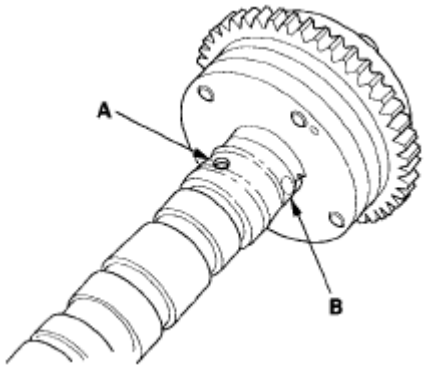

Fig. 145: Identifying Advance And Retard Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Punch a hole in the tape over one of the advance holes.
8. Apply air to the advance hole to release the lock.

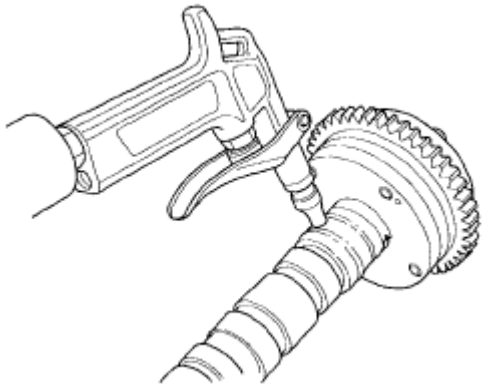

Fig. 146: Applying Air To Advance Hole
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Check that the VTC actuator moves smoothly. If the VTC actuator does not move smoothly, replace

the VTC actuator.

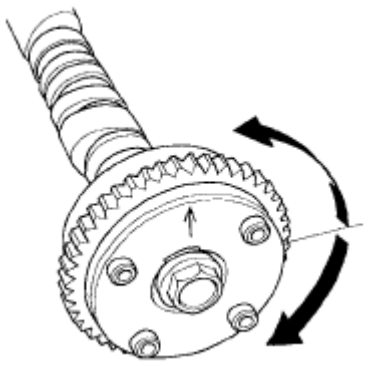

Fig. 147: Identifying VTC Actuator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the tape and adhesive reside from the No. 1 camshaft journal.
11. Make sure the punch marks on the VTC actuator and exhaust camshaft sprocket are facing up, then set the camshafts in the rocker shaft holder (see step 6).
12. Set the camshaft holders and chain guide B in place (see step 7).
13. Tighten the camshaft holder bolts to the specified torque (see step 8).
14. Hold the camshaft, and turn the VTC actuator clockwise until you hear it click. Make sure to lock the VTC actuator by turning it.
15. Install the cam chain (see **CAM CHAIN INSTALLATION**).
16. Adjust the valve clearance (see **VALVE CLEARANCE ADJUSTMENT**).

VALVE CLEARANCE ADJUSTMENT

Special Tools Required

- Adjuster 07MAA-PR70110
- Locknut wrench 07MAA-PR70120

NOTE: Adjust the valves only when the cylinder head temperature is less than 100°F (38°C).

1. Remove the cylinder head cover (see **CYLINDER HEAD COVER REMOVAL**).
2. Set the No. 1 piston at top dead center (TDC). The punch mark (A) on the variable valve timing control (VTC) actuator and the punch mark (B) on the exhaust camshaft sprocket should be at the top. Align the TDC marks (C) on the VTC actuator and exhaust camshaft sprocket.

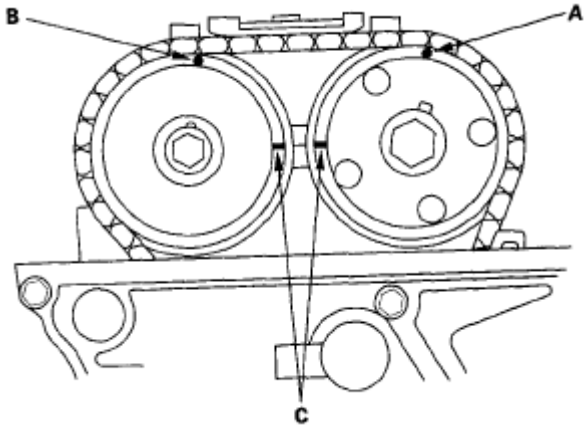

Fig. 148: Aligning TDC Marks On VTC Actuator And Exhaust Camshaft Sprocket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Select the correct thickness feeler gauge for the valves you're going to check.

   Valve Clearance

   Intake: 0.21-0.25 mm (0.008-0.010 in.)

   Exhaust: 0.25-0.29 mm (0.010-0.011 in.)

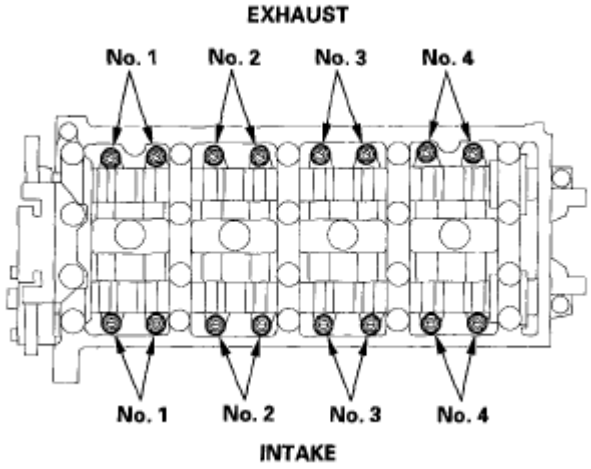

Fig. 149: Identifying Intake And Exhaust Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Insert the feeler gauge (A) between the adjusting screw (B) and the end of the valve stem, and slide it back and forth; you should feel a slight amount of drag.

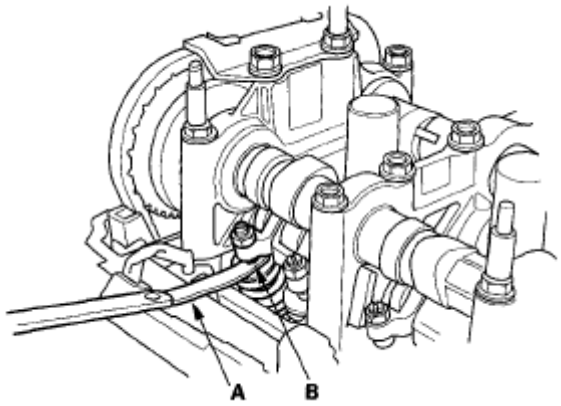

Fig. 150: Identifying Feeler Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If you feel too much or too little drag, loosen the locknut with the special tools, and turn the adjusting screw until the drag on the feeler gauge is correct.

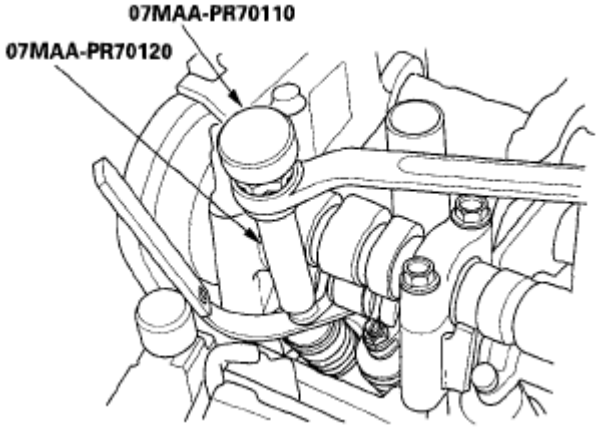

Fig. 151: Identifying Adjusting Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Tighten the locknut to 20 N.m (2.0 kgf.m, 14 lbf.ft), and recheck the clearance. Repeat the adjustment if necessary.
7. Rotate the crankshaft 180° clockwise (camshaft pulley turns 90°).

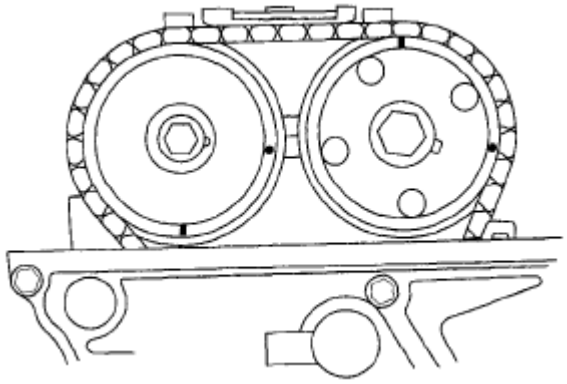

Fig. 152: Rotating Crankshaft

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Check and, if necessary, adjust the valve clearance on No. 3 cylinder.
9. Rotate the crankshaft 180° clockwise (camshaft pulley turns 90°).

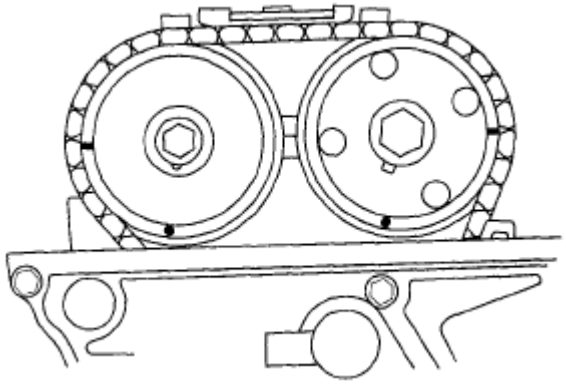

Fig. 153: Rotating Crankshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Check and, if necessary, adjust the valve clearance on No. 4 cylinder.
11. Rotate the crankshaft 180° clockwise (camshaft pulley turns 90°).

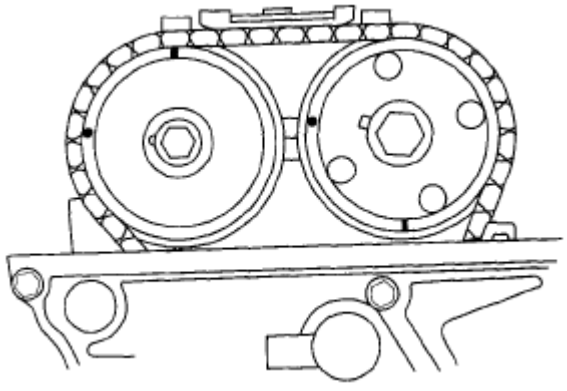

Fig. 154: Rotating Crankshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Check and, if necessary, adjust the valve clearance on No. 2 cylinder.
13. Install the cylinder head cover (see **CYLINDER HEAD COVER INSTALLATION**).

CRANKSHAFT PULLEY REMOVAL AND INSTALLATION

Special Tools Required

- Holder handle 07JAB-001020A
- Crankshaft pulley holder 070AB-RJA0100
- Socket, 19 mm 07JAA-001020A or a commercially available 19 mm socket

Removal

1. Remove the front wheels.
2. Remove the splash shield .
3. Remove the drive belt (see **DRIVE BELT INSPECTION**).
4. Hold the pulley with holder handle (A) and holder attachment (B).

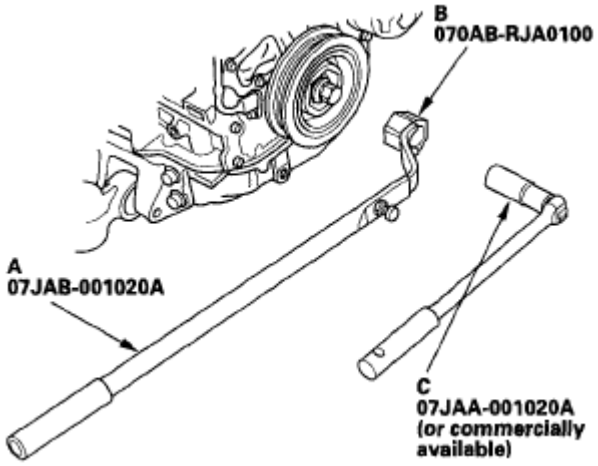

Fig. 155: Identifying Special Tools
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the bolt with a 19 mm socket (C) and breaker bar, then remove the crankshaft.

Installation

1. Clean the crankshaft pulley (A), crankshaft (B), bolt (C), and washer (D). Lubricate as shown.

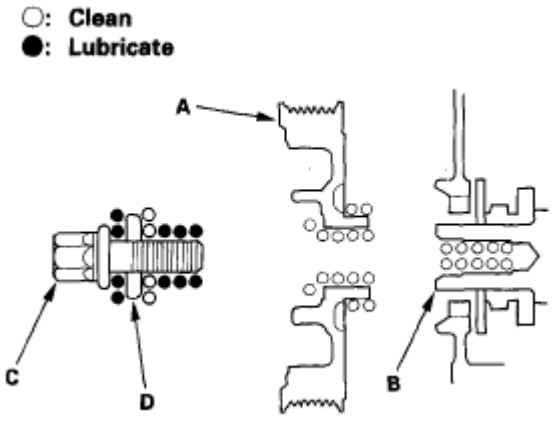

Fig. 156: Identifying Crankshaft Pulley Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the crankshaft pulley, and hold the pulley with holder handle (A) and holder attachment (B).

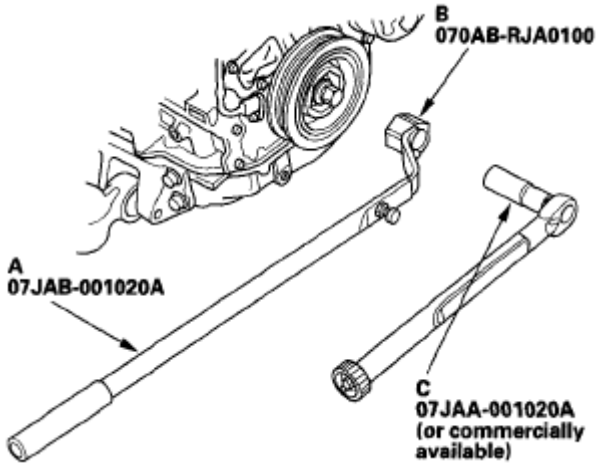

Fig. 157: Identifying Special Tools
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Tighten the bolt to 49 N.m (5.0 kgf.m, 36 lbf.ft) with a torque wrench and 19 mm socket (C). Do not use an impact wrench.
4. Mark the bolt head (A) and the crankshaft pulley (B) as shown, them tighten the bolt an additional 90° (The mark on the bolt head line up with the mark on the crankshaft pulley).

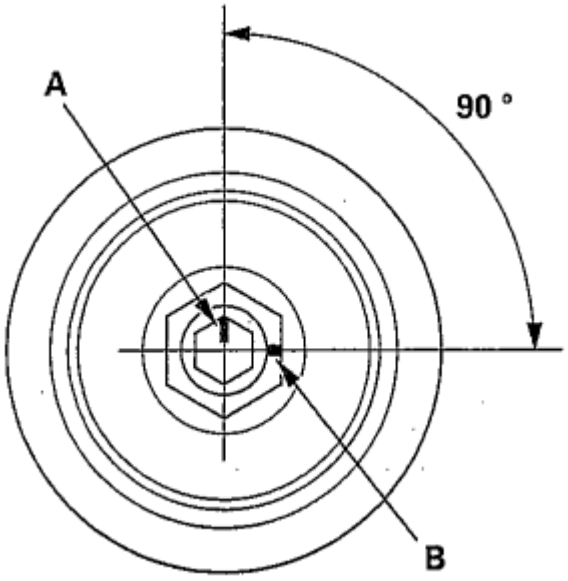

Fig. 158: Marking The Bolt Head And The Crankshaft Pulley
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the drive belt (see **DRIVE BELT INSPECTION**).
6. Install the splash shield .
7. Install the right front wheel.

CAM CHAIN REMOVAL

NOTE: Keep the cam chain away from magnetic fields.

1. Remove the front wheels.
2. Remove the splash shield .
3. Drain the engine coolant (see **COOLANT CHECK**).
4. Remove the drive belt (see **DRIVE BELT INSPECTION**).
5. Remove the cylinder head cover (see **CYLINDER HEAD COVER REMOVAL**).
6. Set the No. 1 piston at top dead center (TDC). The punch mark (A) on the variable valve timing control (VTC) actuator and the punch mark (B) on the exhaust camshaft sprocket should be at the top. Align the TDC marks (C) on the VTC actuator and exhaust camshaft sprocket.

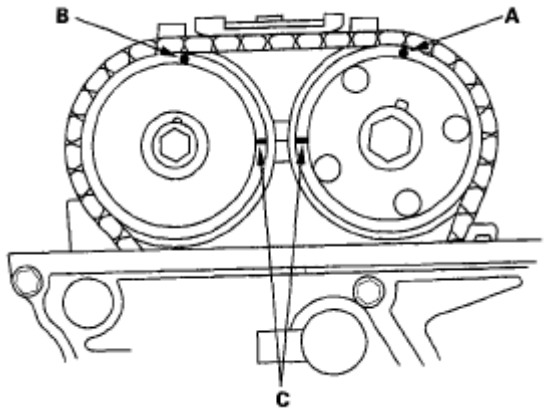

Fig. 159: Aligning TDC Marks On VTC Actuator And Exhaust Camshaft Sprocket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the oil cooler hose joint pipe from the water pump.

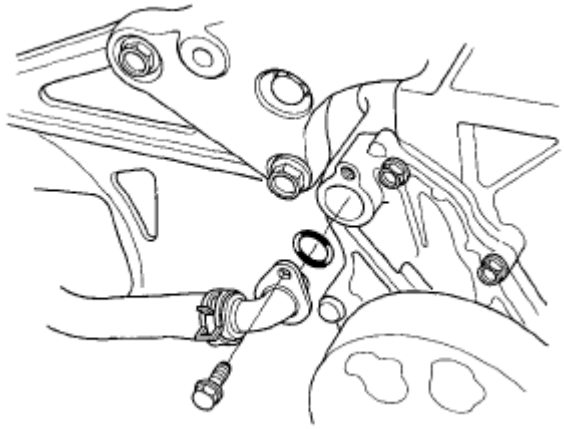

Fig. 160: Identifying Oil Cooler Hose Joint Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Disconnect the crankshaft position (CKP) sensor connector (A) and VTC oil control solenoid valve connector (B).

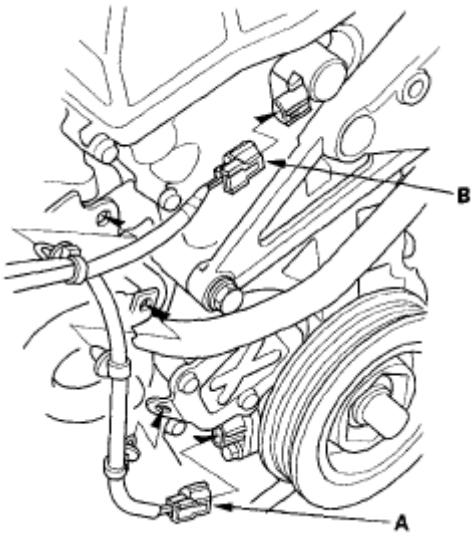

Fig. 161: Identifying Crankshaft Position (CKP) Sensor Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the VTC oil control solenoid valve (see **VTC OIL CONTROL SOLENOID VALVE REMOVAL/TEST/INSTALLATION**).
10. Remove the crankshaft pulley (see **CRANKSHAFT PULLEY REMOVAL AND INSTALLATION**).
11. Support the engine with a jack and a wood block under the oil pan.
12. Remove the upper torque rod (A).

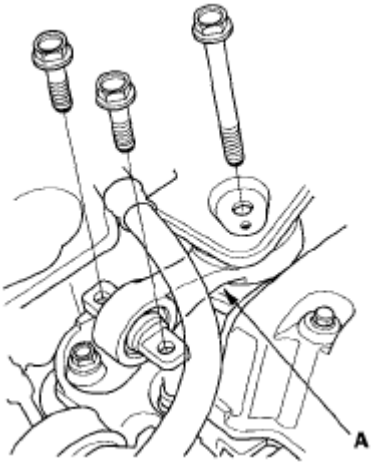

Fig. 162: Identifying Upper Torque Rod
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Remove the ground cable (A), then remove the side engine mount bracket (B).

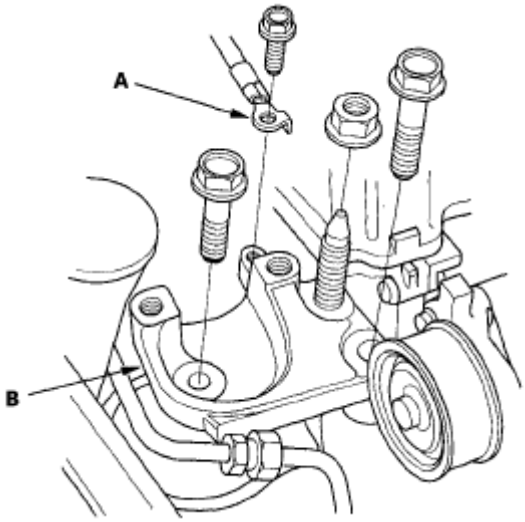

Fig. 163: Identifying Ground Cable And Side Engine Mount Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Remove the side engine mount bracket.

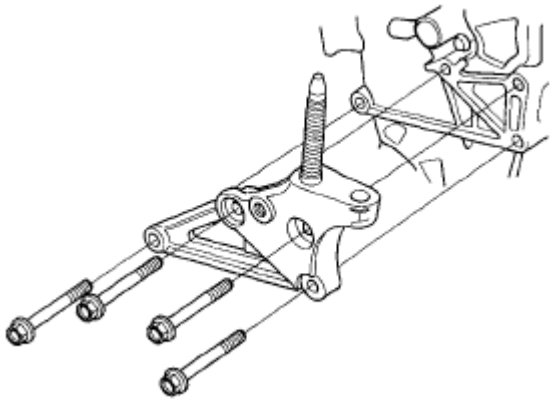

Fig. 164: Identifying Side Engine Mount Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Remove the cam chain case.

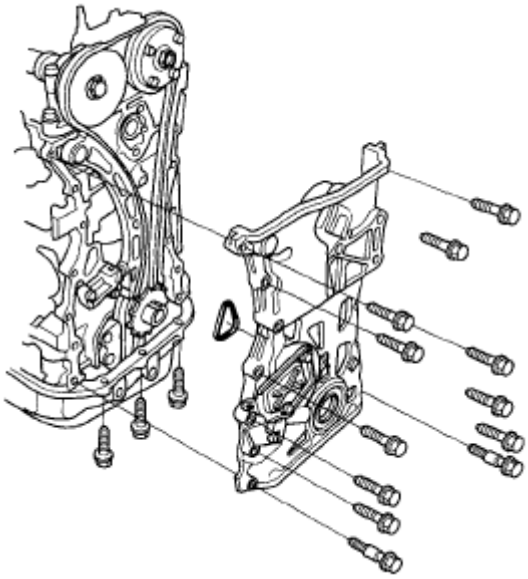

Fig. 165: Identifying Cam Chain Case
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Loosely install the crankshaft pulley.
17. Turn the crankshaft counterclockwise to compress the auto-tensioner.

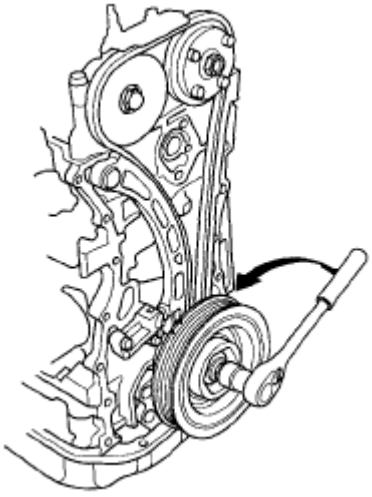

Fig. 166: Turning Crankshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Align the holes on the lock (A) and the auto-tensioner (B), then insert a 1.2 mm (0.05 in.) diameter pin or lock pin (P/N 14511-PNA-003) (C) into the holes. Turn the crankshaft clockwise to secure the pin.

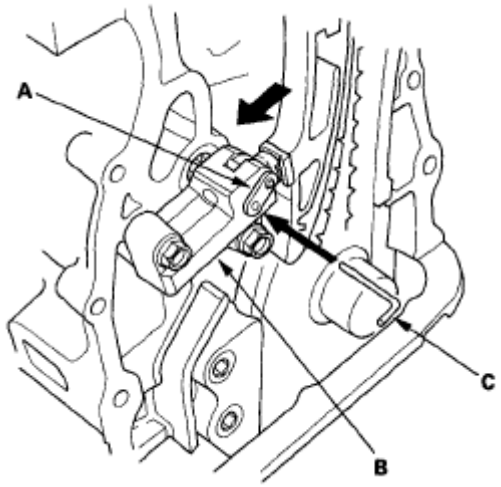

Fig. 167: Aligning Holes On Lock And Auto-Tensioner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Remove the auto-tensioner.

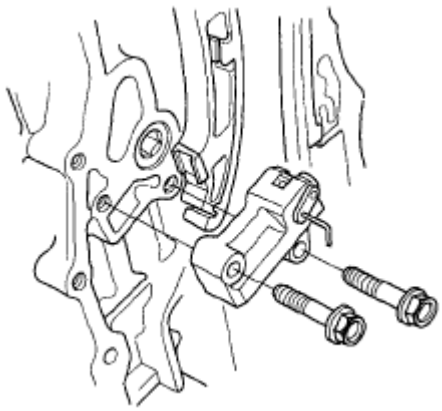

Fig. 168: Identifying Auto-Tensioner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Remove the crankshaft pulley.
21. Remove the cam chain guide B.

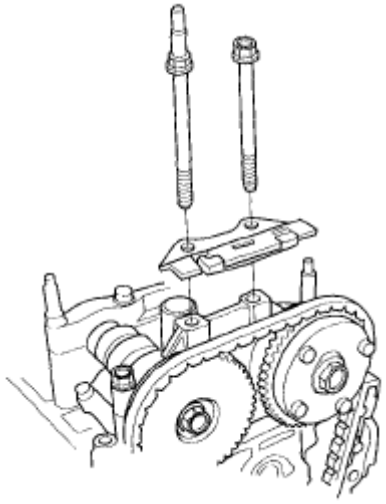

Fig. 169: Identifying Cam Chain Guide
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Remove the cam chain guide A (A) and tensioner arm (B).

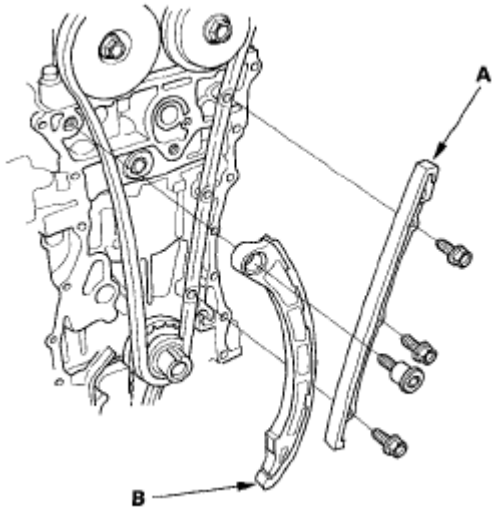

Fig. 170: Identifying Cam Chain Guide And Tensioner Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Remove the cam chain.

CAM CHAIN INSTALLATION

NOTE:

- **Keep the cam chain away from magnetic fields.**
- **Before this procedure, check that the variable valve timing control (VTC) actuator is locked by turning the VTC actuator counterclockwise. If not locked, turn the VTC actuator clockwise until it stops, then recheck it. If it is still not locked, replace the VTC actuator.**

1. Set the crankshaft to top dead center (TDC). Align the TDC mark (A) on the crankshaft sprocket with the pointer (B) on the engine block.

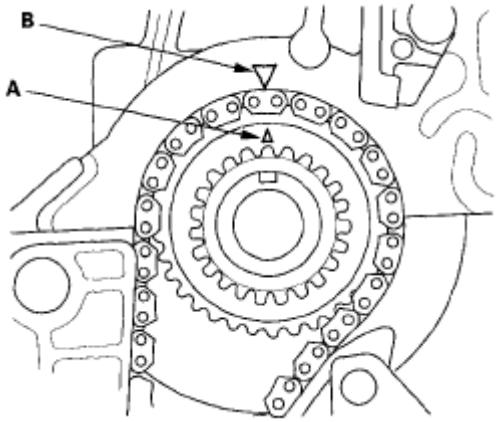

Fig. 171: Aligning TDC Mark On Crankshaft Sprocket With Pointer On Engine Block
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Set the camshafts to TDC. The punch mark (A) on the variable valve timing control (VTC) actuator and the punch mark (B) on the exhaust camshaft sprocket should be at the top. Align the TDC marks (C) on the VTC actuator and exhaust camshaft sprocket.

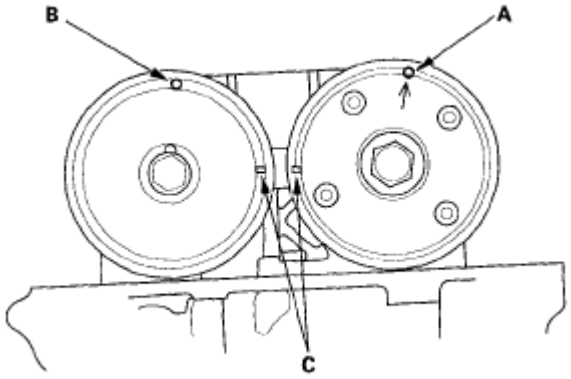

Fig. 172: Aligning TDC Marks On VTC Actuator And Exhaust Camshaft Sprocket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. To hold the intake camshaft, insert a cam holder sets (07AAB-RWCA120) (A) into the maintenance hole in camshaft position (CMP) pulse plate A (B) and through No. 5 rocker shaft holder (C).

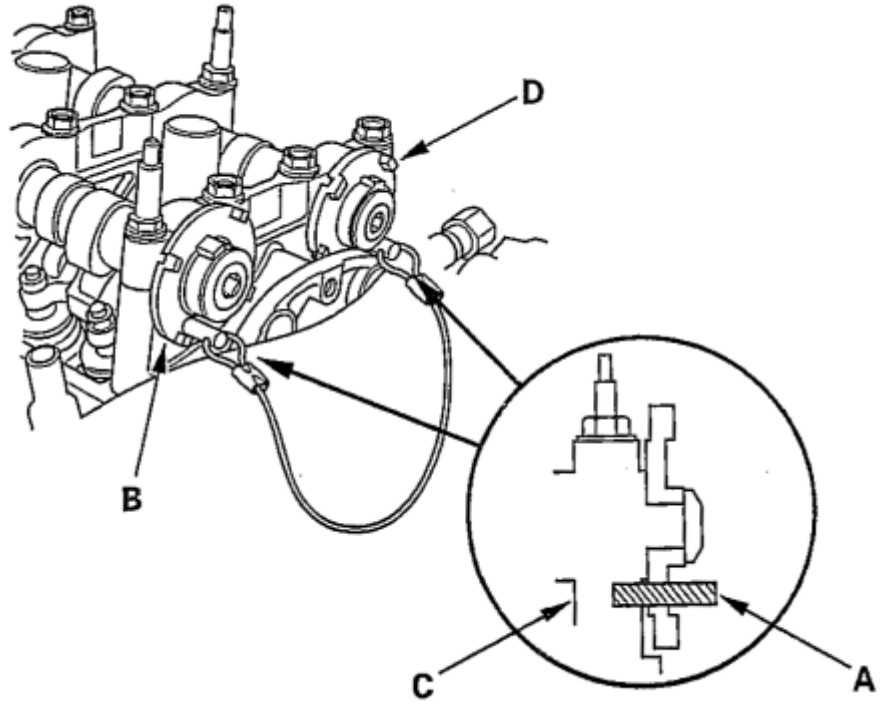

Fig. 173: Cam Holder Sets Inserted Into The Maintenance Hole In Camshaft Position Pulse Plate A And Through No. 5 Rocker Shaft Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. To hold the exhaust camshaft, cam holder sets (A) into the maintenance hole in CMP pulse plate B (D) and through No. 4 rocker shaft holder (C).
5. Install the cam chain on the crankshaft sprocket with the colored link plate (A) aligned with the mark (B) on the crankshaft sprocket.

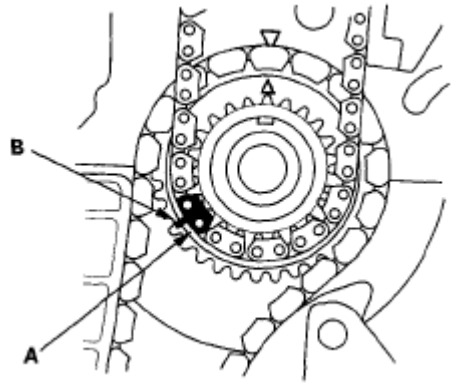

Fig. 174: Identifying Colored Link Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the cam chain on the VTC actuator and the exhaust camshaft sprocket with the punch marks (A) aligned with the two colored link plates (B).

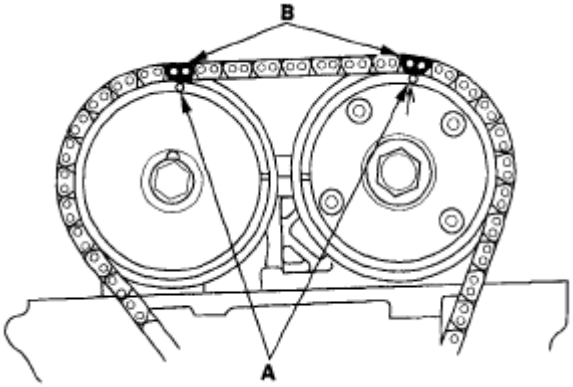

Fig. 175: Identifying Colored Link Plates
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the cam chain guide A (A) and tensioner arm (B).

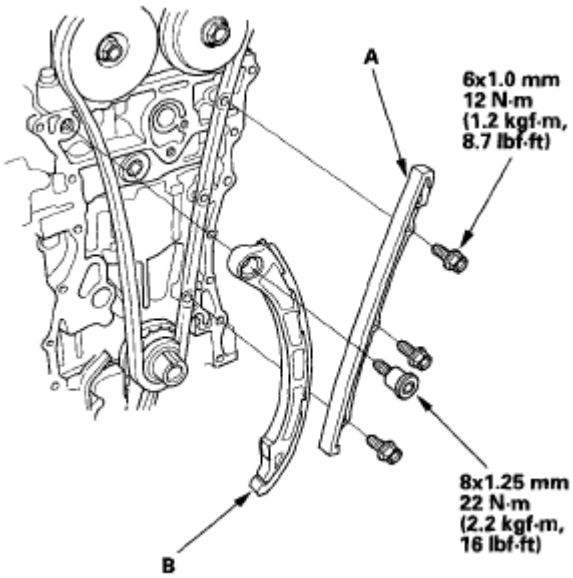

Fig. 176: Identifying Cam Chain Guide And Tensioner Arm (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the auto-tensioner.

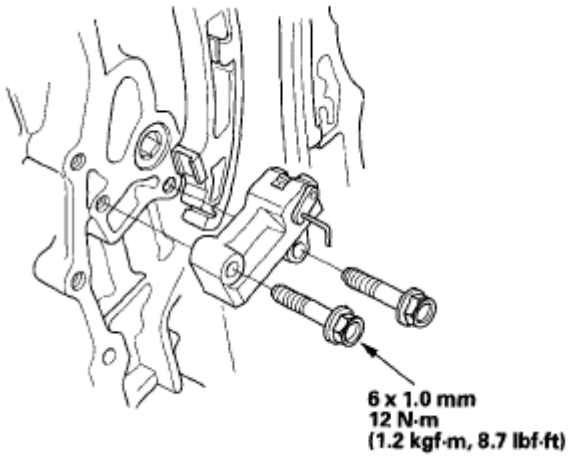

Fig. 177: Identifying Auto-Tensioner (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the cam chain guide B.

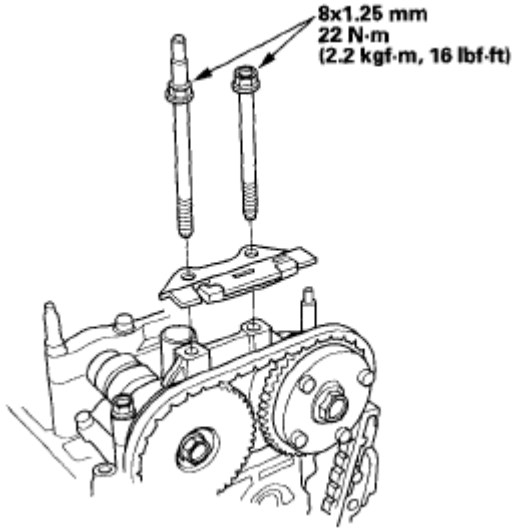

Fig. 178: Identifying Cam Chain Guide (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the pin or lock pin (P/N 14511-PNA-003) from the auto-tensioner.

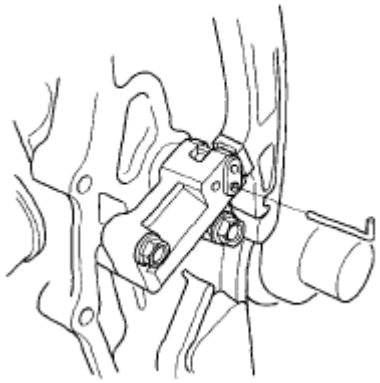

Fig. 179: Identifying Lock Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Remove the cam holder sets.

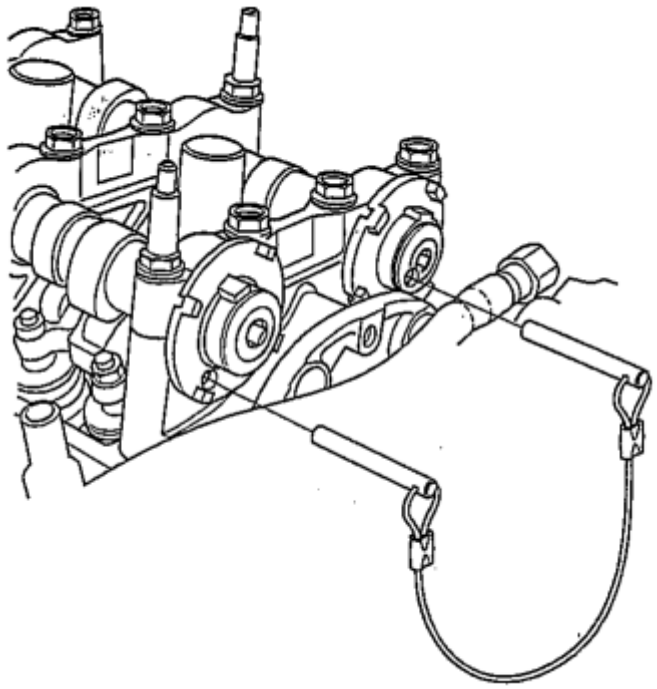

Fig. 180: Removing the cam holder sets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install the CKP pulse plate.

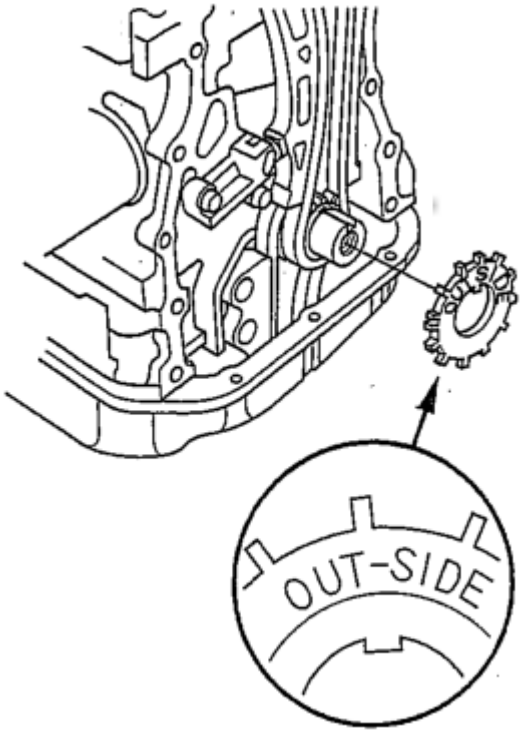

Fig. 181: Installing The CKP Pulse Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Check the chain case oil seal for damage. If the oil seal is damaged, replace the chain case oil seal (see **CHAIN CASE OIL SEAL INSTALLATION**).
14. Remove old liquid gasket from the chain case mating surfaces, bolts, and bolt holes.
15. Clean, and dry the chain case mating surfaces.
16. Apply liquid gasket, P/N 08717-0004,08718-0001, 08718-0002,08718-0003, or 08718-0009, evenly to the engine block mating surface of the chain case.

NOTE:

- **If you apply liquid gasket, P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply new liquid gasket.**

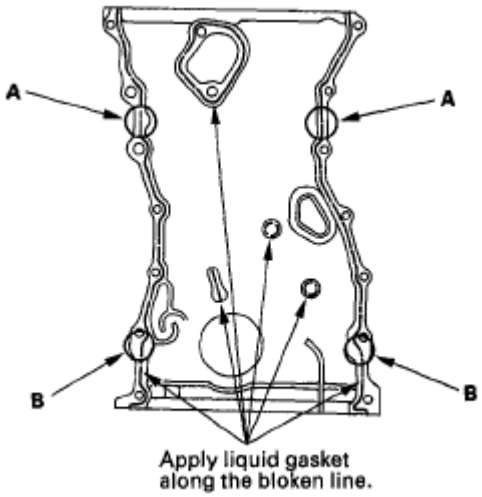

Fig. 182: Identifying Liquid Gasket Applying Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Apply liquid gasket to the engine block upper surface contact areas (A) on the chain case and lower block upper surface contact areas (B) on the chain case.
18. Apply liquid gasket, P/N 08717-0004, 08718-0001, 08718-0002, 08718-0003, or 08718-0009, evenly to the oil pan mating surface of the chain case.

NOTE:

- **If you apply liquid gasket, P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residual, then reapply new liquid gasket.**

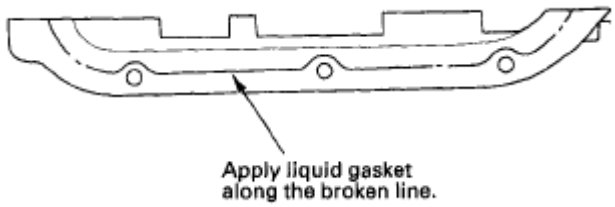

Fig. 183: Identifying Broken Line Of Liquid Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Install a new O-ring (A) on the chain case. Set the edge of the chain case (B) to the edge of the oil pan (C), then install the chain case on the engine block (D). Wipe off the excess liquid gasket on the oil pan and chain case mating area.

NOTE:

- **When installing the chain case, do not slide the bottom surface onto the oil pan mounting surface.**
- **Wait at least 30 minutes to allow liquid gasket to cure before filling the engine with oil.**
- **Do not run the engine for at least 3 hours to allow liquid gasket to cure after installing the chain case.**

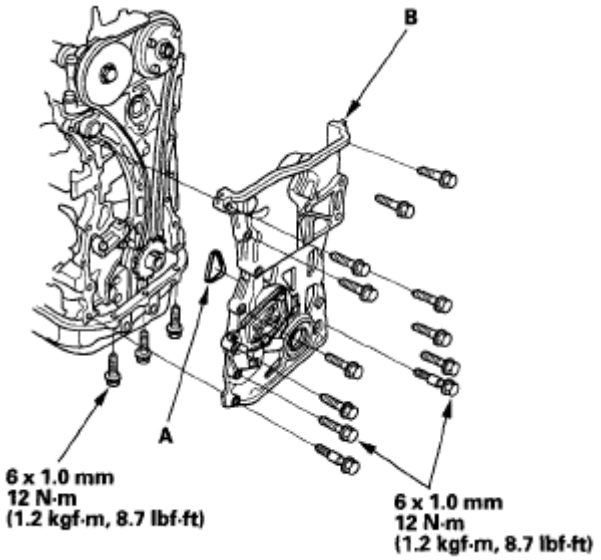

Fig. 184: Identifying Chain Case (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

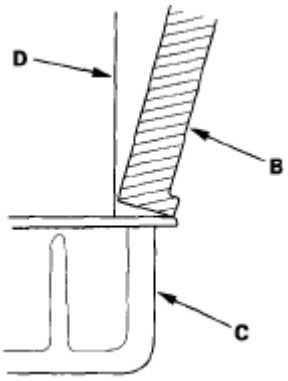

Fig. 185: Identifying Oil Pan
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Install the side engine mount bracket.

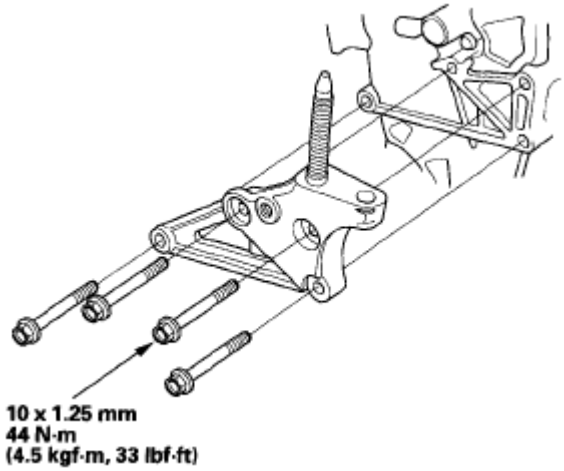

Fig. 186: Identifying Side Engine Mount Bracket (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Install the side engine mount bracket (A), then loosely tighten the new bolt and nut (B), and loosely tighten the bolt (C).

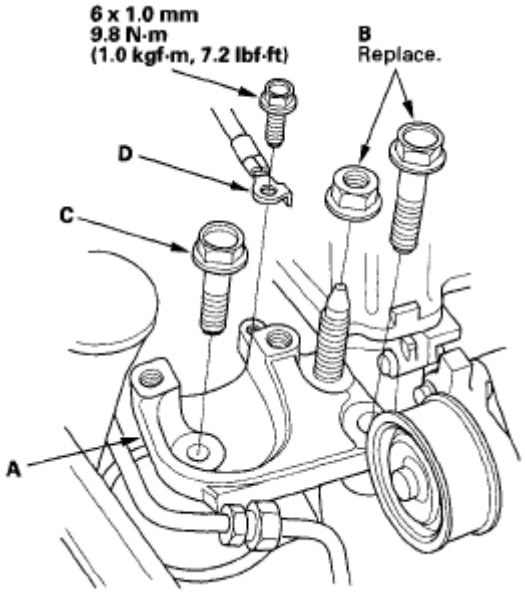

Fig. 187: Identifying Side Engine Mount Bracket (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Install the ground cable (D).
23. Remove the air cleaner assembly (see **AIR CLEANER REMOVAL/INSTALLATION**).
24. Loosen the transmission mounting bolt and nuts (A).

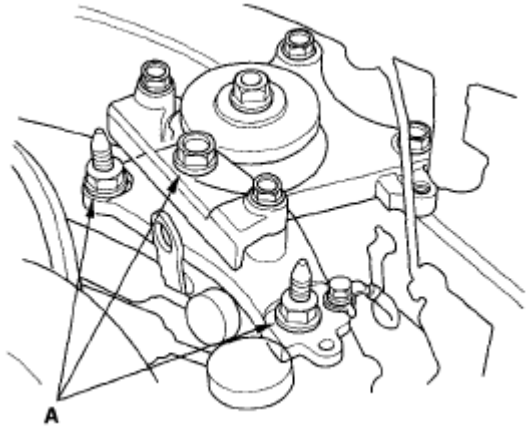

Fig. 188: Identifying Transmission Mounting Bolt And Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Raise the vehicle on the lift to full height.
26. Loosen the lower torque rod mounting bolt (A).

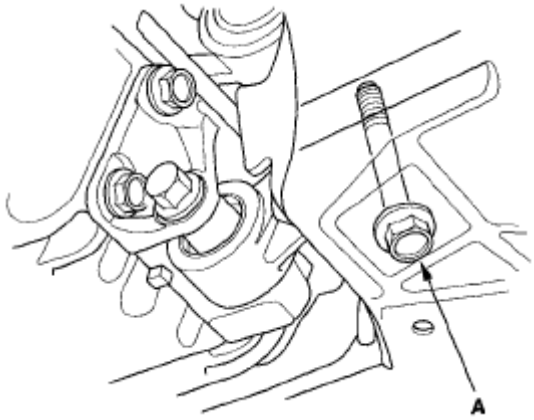

Fig. 189: Identifying Lower Torque Rod Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Loosen the front mount mounting bolt (A).

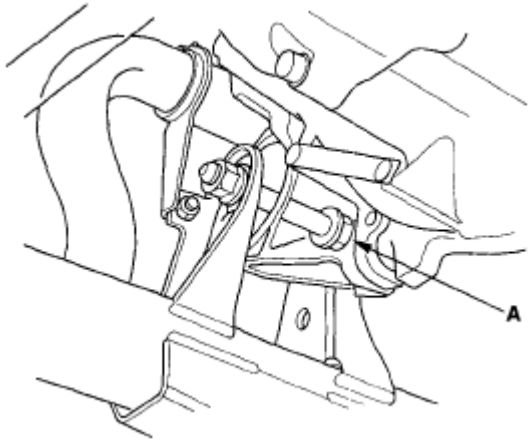

Fig. 190: Identifying Front Mount Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Lower the vehicle on the lift.
29. Tighten the side engine mount mounting bolts and nut.

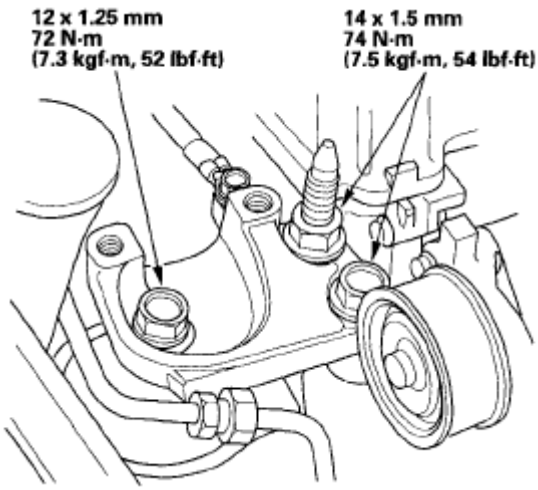

Fig. 191: Identifying Side Engine Mount Mounting Bolts And Nut (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

30. Tighten the transmission mounting bolt and nuts.

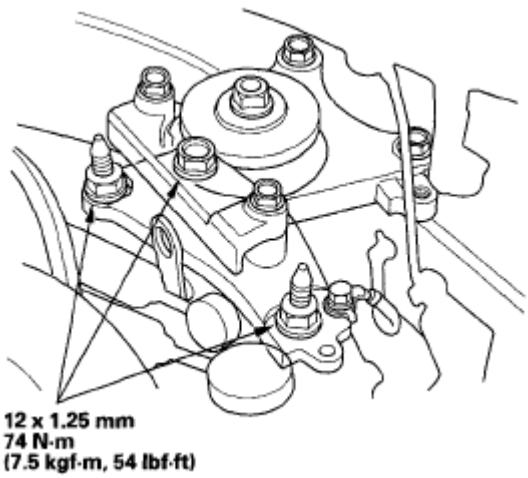

Fig. 192: Identifying Transmission Mounting Bolt And Nuts (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

31. Raise the vehicle on the lift to full height.
32. Tighten the lower torque rod mounting bolt.

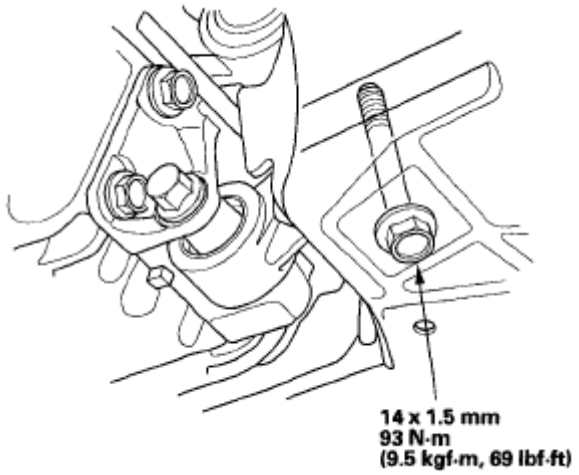

Fig. 193: Identifying Lower Torque Rod Mounting Bolt (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

33. Lower the vehicle on the lift.
34. Install the air cleaner assembly (see **AIR CLEANER REMOVAL/INSTALLATION**).
35. Install the upper torque rod, then tighten the new upper torque rod mounting bolts in the numbered sequence shown.

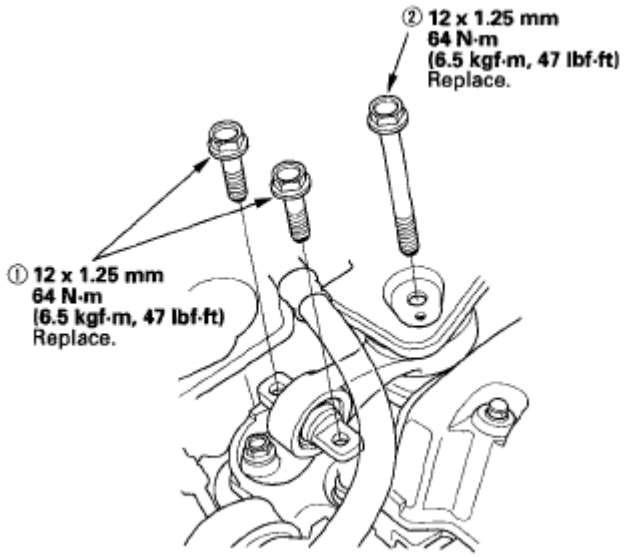

Fig. 194: Identifying Upper Torque Rod Mounting Bolts (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

36. Raise the hoist to full height, and tighten the front mount mounting bolt.

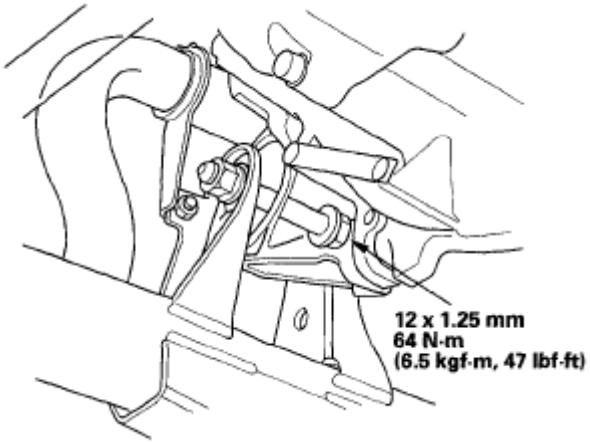

Fig. 195: Identifying Front Mount Mounting Bolt (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

37. Install the crankshaft pulley (see **CAM CHAIN REMOVAL**).
38. Install the splash shield .
39. Lower the vehicle on the lift.
40. Install the variable valve timing control (VTC) oil control solenoid valve (see **VTC OIL CONTROL SOLENOID VALVE REMOVAL/TEST/INSTALLATION**).
41. Connect the crankshaft position (CKP) sensor connector (A) and VTC oil control solenoid valve connector (B).

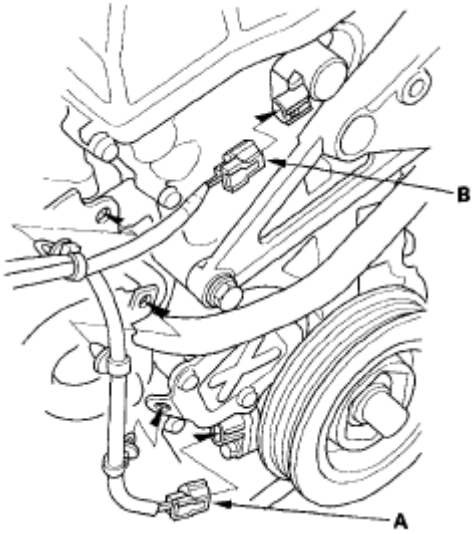

Fig. 196: Identifying Crankshaft Position (CKP) Sensor Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

42. Install the oil cooler hose joint pipe (A) with a new O-ring (B).

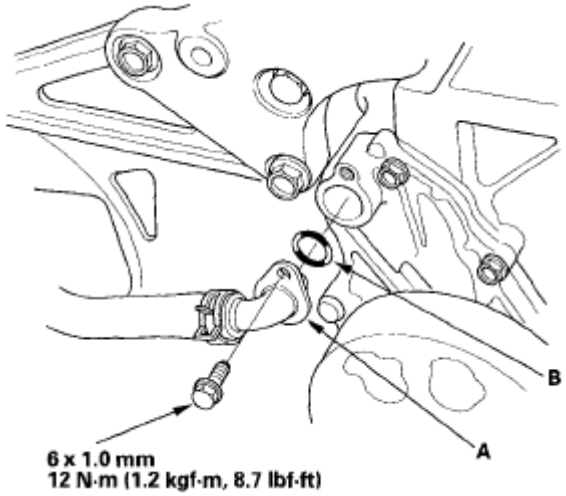

Fig. 197: Identifying Oil Cooler Hose Joint Pipe (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

43. Install the cylinder head cover (see **CYLINDER HEAD COVER INSTALLATION**).
44. Install the drive belt (see **DRIVE BELT INSPECTION**).
45. Refill the radiator with engine coolant, and bleed air from the cooling system with the heater valve open (see step 6 on **COOLANT CHECK**).
46. Do the CKP pattern clear/CKP learn procedure (see **HDS CLEAR COMMAND**).

AUTO-TENSIONER REMOVAL AND INSTALLATION

Removal

1. Remove the chain case cover.

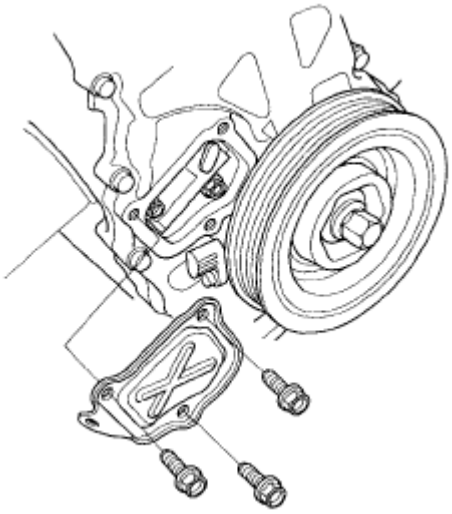

Fig. 198: Identifying Chain Case Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the crankshaft counterclockwise to compress the auto-tensioner.

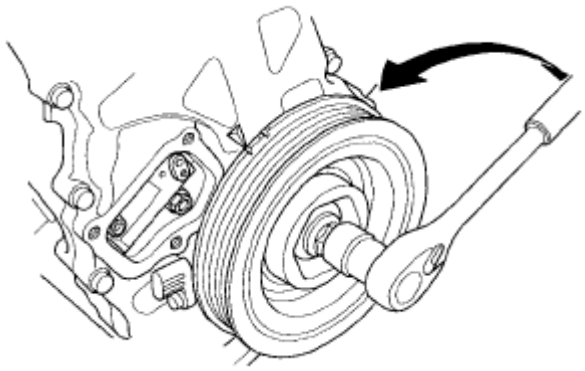

Fig. 199: Turning Crankshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Align the holes on the lock (A) and the auto-tensioner (B), then insert a 1.2 mm (0.05 in.) diameter pin or lock pin (P/N 14511-PNA-003) (C) into the holes. Turn the crankshaft clockwise to secure the pin.

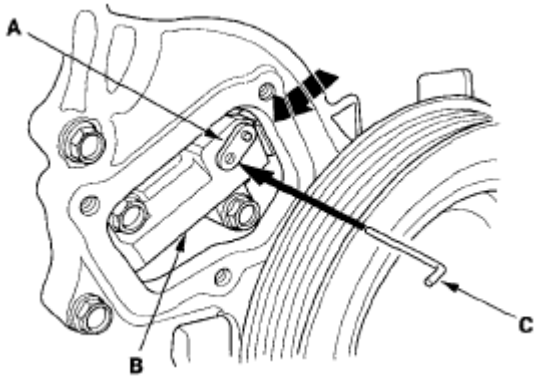

Fig. 200: Aligning Holes On Lock And Auto-Tensioner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the auto-tensioner.

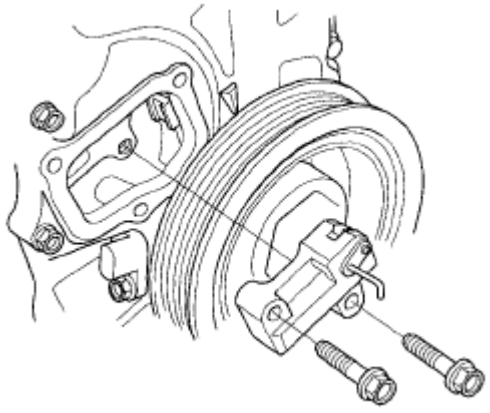

Fig. 201: Identifying Auto-Tensioner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Installation

1. Install the auto-tensioner.

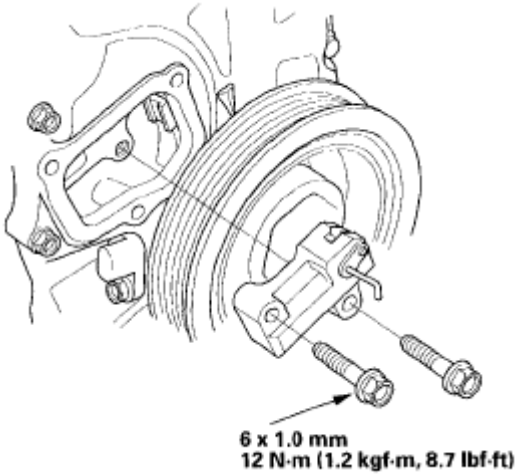

Fig. 202: Identifying Auto-Tensioner (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the pin or lock pin (P/N 14511-PNA-003) from the auto-tensioner.

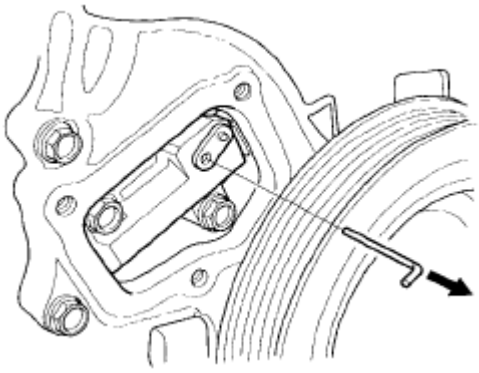

Fig. 203: Identifying Lock Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove all of the old liquid gasket from the chain case cover mating surfaces, bolts, and bolt holes.
4. Clean, and dry the chain case cover mating surfaces.
5. Apply liquid gasket, P/N 08717-0004, 08718-0001, 08718-0002, 08718-0003, or 08718-0009, evenly to the chain case mating surface of the chain case cover.

NOTE:

- **If you apply liquid gasket, P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residual, then reapply new liquid gasket.**

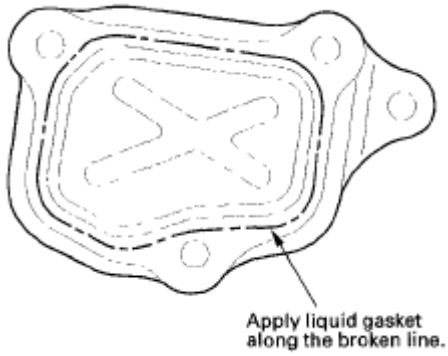

Fig. 204: Identifying Liquid Gasket Applying Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the chain case cover.

NOTE:

- **Wait at least 30 minutes to allow liquid gasket to cure before filling the engine with oil.**
- **Do not run the engine for at least 3 hours to allow liquid gasket to cure after installing the chain case cover.**

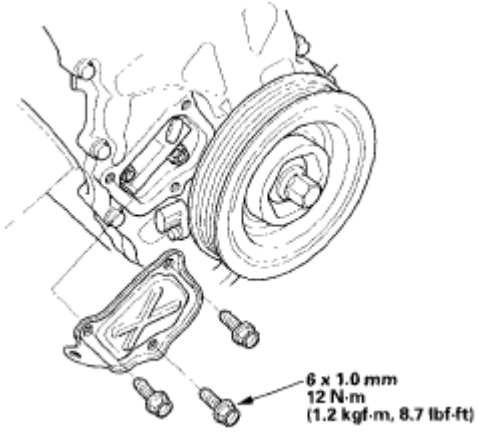

Fig. 205: Identifying Chain Case Cover (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CHAIN CASE OIL SEAL INSTALLATION

Special Tools Required

- Driver 07749-0010000
- Attachment, 52 x 55 mm 07746-0010400

1. Use the special tools to drive a new oil seal squarely into the chain case to the specified installed height.

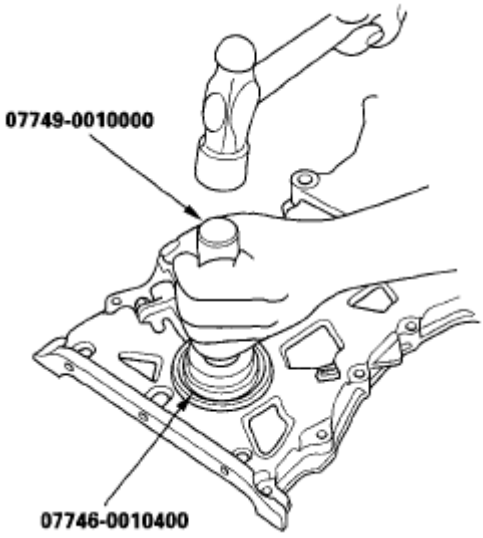

Fig. 206: Installing Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Measure the distance between the chain case surface and oil seal.

   Oil Seal Installed Height:

   33.0-33.7 mm (1.30-1.33 in.)

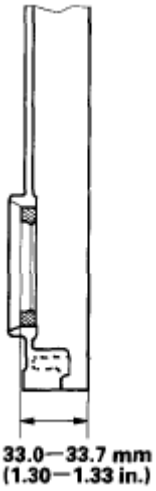

Fig. 207: Measuring Distance Between Chain Case Surface And Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CAM CHAIN INSPECTION

1. Remove the front wheels.
2. Remove the splash shield .
3. Drain the engine coolant (see **COOLANT CHECK**).
4. Remove the drive belt (see **DRIVE BELT INSPECTION**).
5. Remove the cylinder head cover (see **CYLINDER HEAD COVER REMOVAL**).

6. Set the No. 1 piston at top dead center (TDC). The punch mark on the variable valve timing control (VTC) actuator and the punch mark on the exhaust camshaft sprocket should be at the top. Align the TDC marks on the VTC actuator and exhaust camshaft sprocket (see step 6).
7. Remove the oil cooler hose joint pipe from the water pump (see step 7).
8. Disconnect the crankshaft position (CKP) sensor connector and VTC oil control solenoid valve connector (see step 8).
9. Remove the VTC oil control solenoid valve (see **VTC OIL CONTROL SOLENOID VALVE REMOVAL/TEST/INSTALLATION**).
10. Remove the crankshaft pulley (see **CRANKSHAFT PULLEY REMOVAL AND INSTALLATION**).
11. Support the engine with a jack and a wood block under the oil pan.
12. Remove the upper torque rod (see step 12).
13. Remove the ground cable, then remove the side engine mount bracket (see step 13).
14. Remove the side engine mount bracket (see step 14).
15. Remove the cam chain case (see step 15).
16. Measure the tensioner rod length between the tensioner body and bottom of the flat surface section on the tensioner rod. If the length is more than the service limit, replace the cam chain and the oil pump chain.

    Tensioner Rod Length

    Service Limit: 13.5 mm (0.53 in.)

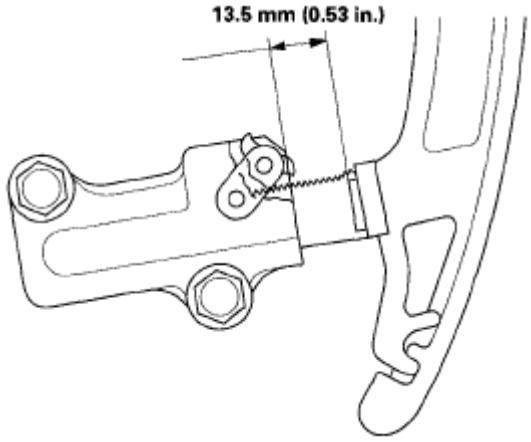

Fig. 208: Checking Tensioner Rod Length
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Check the chain case oil seal for damage. If the oil seal is damaged, replace the chain case oil seal (see **CHAIN CASE OIL SEAL INSTALLATION**).
18. Remove all of the old liquid gasket from the chain case mating surfaces, bolt and bolt holes.
19. Clean, and dry the chain case mating surfaces.
20. Apply liquid gasket, P/N 08717-0004,08718-0001, 08718-0002, 08718-0003, or 08718-0009, evenly to the engine block mating surface of the chain case (see step 16).

NOTE:

- **If you apply liquid gasket, P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residual, then reapply new liquid gasket.**

21. Apply liquid gasket to the engine block upper surface contact areas on the chain case and lower block upper surface contact areas on the chain case (see step 17).
22. Apply liquid gasket, P/N 08717-0004,08718-0001, 08718-0002,08718-0003, or 08718-0009, evenly to the oil pan mating surface of the chain case (see step 18).

NOTE:

- **If you apply liquid gasket, P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residual, then reapply new liquid gasket.**

23. Install the new O-ring on the chain case. Set the edge of the chain case to the edge of the oil pan, then install the chain case on the engine block (see step 19). Wipe off the excess liquid gasket on the oil pan and chain case mating area.

NOTE:

- **When installing the chain case, do not slide the bottom surface onto the oil pan mounting surface.**
- **Wait at least 30 minutes to allow liquid gasket to cure before filling the engine with oil.**
- **Do not run the engine for at least 3 hours to allow liquid gasket to cure after installing the chain case.**

24. Install the side engine mount bracket (see step 20).
25. Install the side engine mount bracket, then loosely tighten the new bolt and nut, and loosely tighten the bolt. Install the ground cable (see step 21).
26. Remove the air cleaner assembly (see **AIR CLEANER REMOVAL/INSTALLATION**).
27. Loosen the transmission mounting bolt and nuts (see step 24).
28. Raise the hoist to full height.
29. Loosen the lower torque rod mounting bolt (see step 26).
30. Loosen the front mount mounting bolt (see step 27).
31. Lower the vehicle on the hoist.
32. Tighten the side engine mount mounting bolts and nut (see step 29).
33. Tighten the transmission mounting bolt and nuts (see step 30).
34. Raise the vehicle on the lift to full height.
35. Tighten the lower torque rod mounting bolt (see step 32).
36. Lower the vehicle on the lift.
37. Install the air cleaner assembly (see **AIR CLEANER REMOVAL/INSTALLATION**).
38. Install the upper torque rod, then tighten the new upper torque rod mounting bolts in the numbered

sequence shown (see step 35).

39. Raise the vehicle on the lift to full height, and tighten the front mount mounting bolt (see step 36).
40. Install the splash shield .
41. Lower the vehicle on the lift.
42. Install the variable valve timing control (VTC) oil control solenoid valve (see **VTC OIL CONTROL SOLENOID VALVE REMOVAL/TEST/INSTALLATION**).
43. Connect the crankshaft position (CKP) sensor connector and VTC oil control solenoid valve connector (see step 41).
44. Install the oil cooler hose joint pipe to the water pump (see step 42).
45. Install the crankshaft pulley (see **CAM CHAIN REMOVAL**).
46. Install the cylinder head cover (see **CYLINDER HEAD COVER INSTALLATION**).
47. Install the drive belt (see **DRIVE BELT INSPECTION**).
48. Refill the radiator with engine coolant, and bleed air from the cooling system with the heater valve open (see step 6 on **COOLANT CHECK**).
49. Do the CKP pattern clear/CKP learn procedure (see **HDS CLEAR COMMAND**).

CKP PULSE PLATE REPLACEMENT

1. Remove the front wheels.
2. Remove the splash shield .
3. Drain the engine coolant (see **COOLANT CHECK**).
4. Remove the drive belt (see **DRIVE BELT INSPECTION**).
5. Remove the cylinder head cover (see **CYLINDER HEAD COVER REMOVAL**).
6. Set the No. 1 piston at top dead center (TDC). The punch mark on the variable valve timing control (VTC) actuator and the punch mark on the exhaust camshaft sprocket should be at the top. Align the TDC marks on the VTC actuator and exhaust camshaft sprocket (see step 6).
7. Remove the oil cooler hose joint pipe from the water pump (see step 7).
8. Disconnect the crankshaft position (CKP) sensor connector and VTC oil control solenoid valve connector (see step 8).
9. Remove the VTC oil control solenoid valve (see **VTC OIL CONTROL SOLENOID VALVE REMOVAL/TEST/INSTALLATION**).
10. Remove the crankshaft pulley (see **CRANKSHAFT PULLEY REMOVAL AND INSTALLATION**).
11. Support the engine with a jack and a wood block under the oil pan.
12. Remove the upper torque rod (see step 12).
13. Remove the ground cable, then remove the side engine mount bracket (see step 13).
14. Remove the side engine mount bracket (see step 14).
15. Remove the cam chain case (see step 15 .
16. Remove the CKP pulse plate.

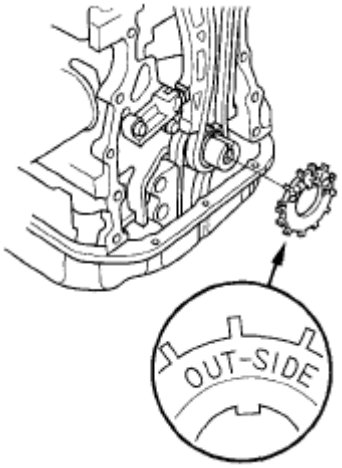

Fig. 209: Identifying CKP Pulse Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Install the CKP pulse plate.
18. Check the chain case oil seal for damage. If the oil seal is damaged, replace the chain case oil seal (see **CHAIN CASE OIL SEAL INSTALLATION**).
19. Remove all of the old liquid gasket from the chain case mating surfaces, bolt and bolt holes.
20. Clean, and dry the chain case mating surfaces.
21. Apply liquid gasket, P/N 08717-0004, 08718-0001, 08718-0002, 08718-0003, or 08718-0009, evenly to the engine block mating surface of the chain case (see step 16).

NOTE:

- **If you apply liquid gasket, P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residual, then reapply new liquid gasket.**

22. Apply liquid gasket to the engine block upper surface contact areas on the chain case and lower block upper surface contact areas on the chain case (see step 17).
23. Apply liquid gasket, P/N 08717-0004,08718-0001, 08718-0002, 08718-0003, or 08718-0009, evenly to the oil pan mating surface of the chain case (see step 18).

NOTE:

- **If you apply liquid gasket, P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residual, then reapply new liquid gasket.**

24. Install a new O-ring on the chain case. Set the edge of the chain case to the edge of the oil pan, then install the chain case on the engine block (see step 19). Wipe off the excess liquid gasket on the oil pan and chain case mating area.

NOTE:

- **When installing the chain case, do not slide the bottom surface**

onto the oil pan mounting surface.

- **Wait at least 30 minutes to allow liquid gasket to cure before filling the engine with oil.**
- **Do not run the engine for at least 3 hours to allow liquid gasket to cure after installing the chain case.**

25. Install the side engine mount bracket (see step 20).
26. Install the side engine mount bracket, then loosely tighten the new bolt and nut, and loosely tighten the bolt. Install the ground cable (see step 21).
27. Remove the air cleaner assembly (see **AIR CLEANER REMOVAL/INSTALLATION**).
28. Loosen the transmission mounting bolt and nuts (see step 24).
29. Raise the vehicle on the lift to full height.
30. Loosen the lower torque rod mounting bolt (see step 26).
31. Loosen the front mount mounting bolt (see step 27 on).
32. Lower the vehicle on the lift.
33. Tighten the side engine mount mounting bolts and nut (see step 29 on).
34. Tighten the transmission mounting bolt and nuts (see step 30 on).
35. Raise the vehicle on the lift to full height.
36. Tighten the lower torque rod mounting bolt (see step 32 on).
37. Lower the vehicle on the lift.
38. Install the air cleaner assembly (see **AIR CLEANER REMOVAL/INSTALLATION**).
39. Install the upper torque rod, then tighten the new upper torque rod mounting bolts in the numbered sequence shown (see step 35 on).
40. Raise the vehicle on the lift to full height, and tighten the front mount mounting bolt (see step 36 on).
41. Install the splash shield .
42. Lower the vehicle on the lift.
43. Install the variable valve timing control (VTC) oil control solenoid valve (see **VTC OIL CONTROL SOLENOID VALVE REMOVAL/TEST/INSTALLATION**).
44. Connect the crankshaft position (CKP) sensor connector and VTC oil control solenoid valve connector (see step 41 on).
45. Install the oil cooler hose joint pipe to the water pump (see step 42 on).
46. Install the crankshaft pulley (see **CAM CHAIN REMOVAL**).
47. Install the cylinder head cover (see **CYLINDER HEAD COVER INSTALLATION**).
48. Install the drive belt (see **DRIVE BELT INSPECTION**).
49. Refill the radiator with engine coolant, and bleed air from the cooling system with the heater valve open (see step 6 on **COOLANT CHECK**).
50. Do the CKP pattern clear/CKP learn procedure (see **HDS CLEAR COMMAND**).

CYLINDER HEAD COVER REMOVAL

1. Remove the engine cover.

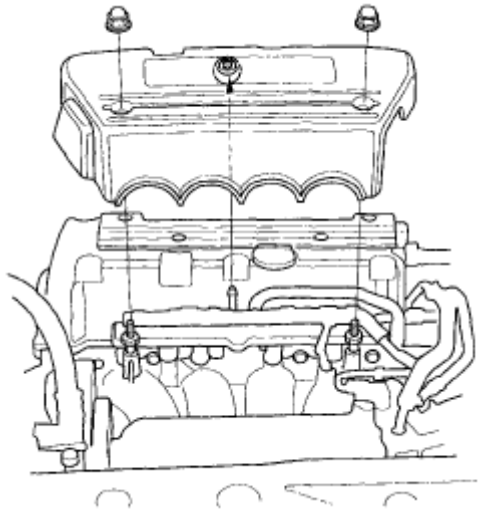

Fig. 210: Identifying Engine Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the four ignition coils (see **IGNITION COIL REMOVAL/INSTALLATION**).
3. Disconnect the evaporative emission (EVAP) canister purge valve connector.
4. Remove the dipstick (A) and the breather hose (B).

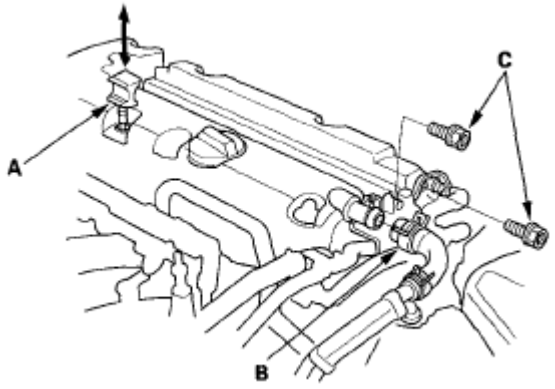

Fig. 211: Identifying Dipstick And Breather Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove two bolts (C) securing the evaporative emission (EVAP) canister purge valve bracket.
6. Remove the cylinder head cover.

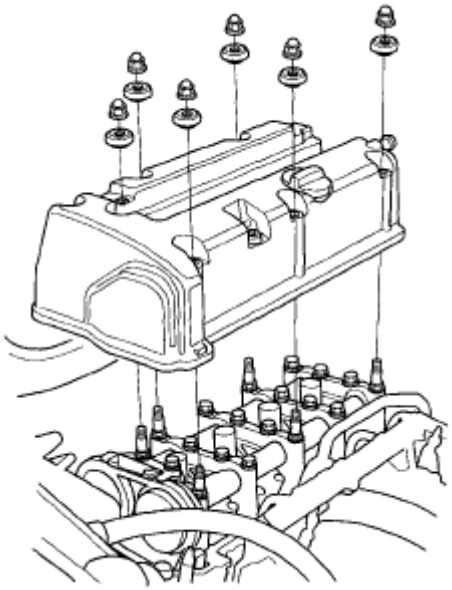

Fig. 212: Identifying Cylinder Head Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CYLINDER HEAD COVER INSTALLATION

1. Thoroughly clean the head cover gasket and the groove.
2. Install the head cover gasket (A) in the groove of the cylinder head cover (B).

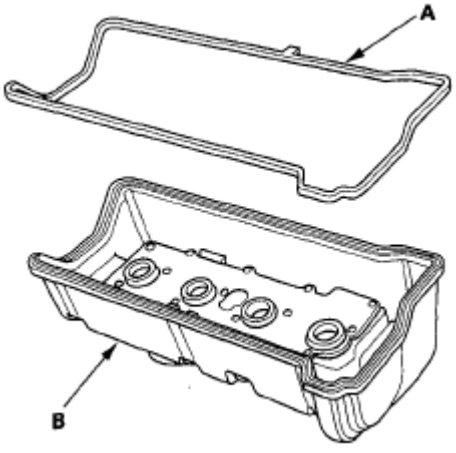

Fig. 213: Identifying Head Cover Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check that the mating surfaces are clean and dry.
4. Apply liquid gasket, P/N 08717-0004, 08718-0001, 08718-0002, 08718-0003, or 08718-0009, on the chain case and the No. 5 rocker shaft holder mating areas.

NOTE:

- **If you apply liquid gasket, P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket,**

remove the old liquid gasket and residual, then reapply new liquid gasket.

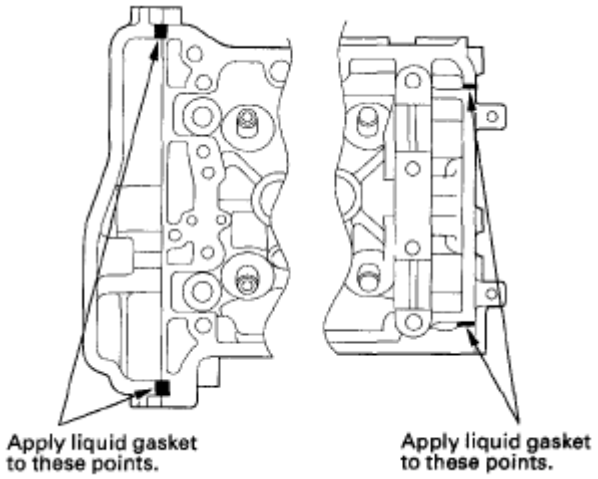

Fig. 214: Identifying Liquid Gasket Applying Points
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Set the spark plug seals (A) on the spark plug tubes. Place the cylinder head cover (B) on the cylinder head, then slide the cover slightly back and forth to seat the head cover gasket.

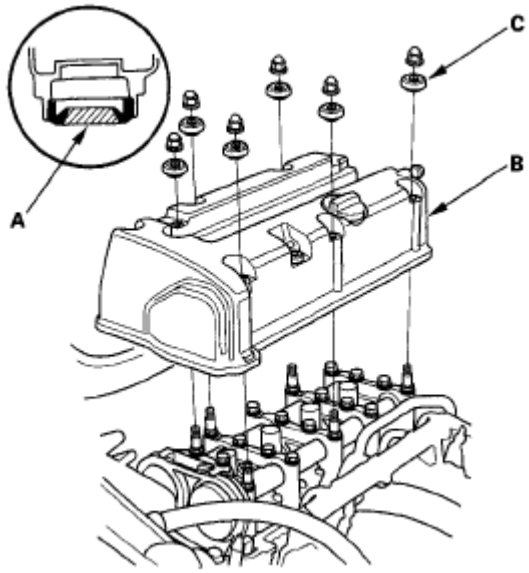

Fig. 215: Identifying Spark Plug Seals And Cylinder Head Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Inspect the cover washers (C). Replace any washer that is damaged or deteriorated.
7. Tighten the bolts in two or three steps. In the final step tighten all bolts, in sequence, to 12 N.m (1.2 kgf.m, 8.7 lbf.ft).

NOTE:

- **Wait at least 30 minutes to allow liquid gasket to cure before filling the engine with oil.**

- **Do not run the engine for at least 3 hours to allow liquid gasket to cure after installing the head cover.**

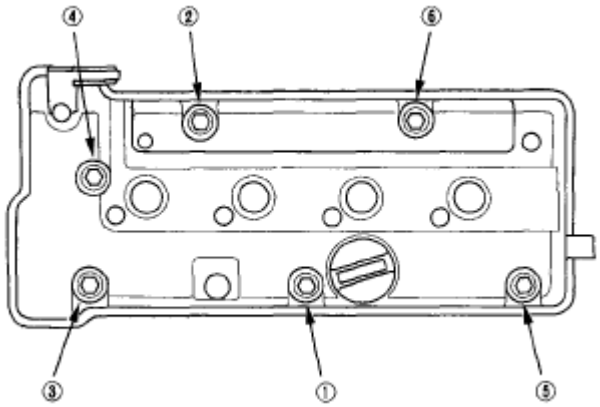

Fig. 216: Identifying Cylinder Head Cover Bolts Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install two bolts (A) securing the evaporative emission (EVAP) canister purge valve bracket.

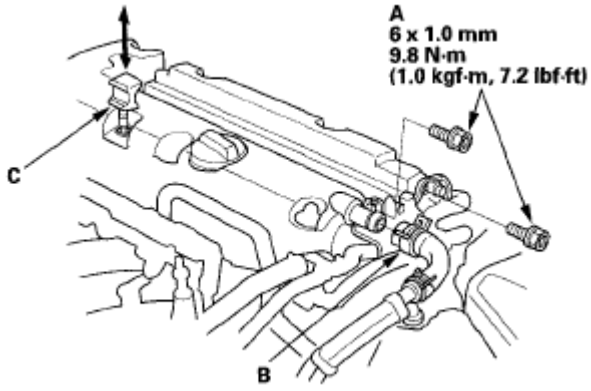

Fig. 217: Identifying Breather Hose And Dipstick (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the breather hose (B) and the dipstick (C).
10. Connect the evaporative emission (EVAP) canister purge valve connector.
11. Install the four ignition coils, (see **IGNITION COIL REMOVAL/INSTALLATION**).
12. Install the engine cover.

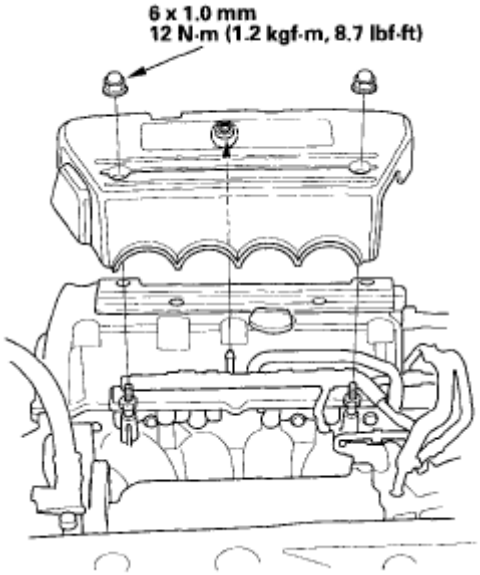

Fig. 218: Identifying Engine Cover (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CYLINDER HEAD REMOVAL

NOTE:

- **Use fender covers to avoid damaging painted surfaces.**
- **To avoid damaging the wiring and terminals, unplug the wiring connectors carefully while holding the connector portion.**
- **To avoid damaging the cylinder head, wait until the engine coolant temperature drops below 100°F (38°C) before loosening the cylinder head bolts.**
- **Mark all wiring and hoses to avoid misconnection. Also, be sure that they do not contact other wiring or hoses, or interfere with other parts.**

1. Relieve fuel pressure (see **FUEL PRESSURE RELIEVING**).
2. Drain the engine coolant (see **COOLANT CHECK**).
3. Remove the air cleaner assembly (see **AIR CLEANER REMOVAL/INSTALLATION**).
4. Remove the drive belt (see **DRIVE BELT INSPECTION**).
5. Remove the intake manifold (see **REMOVAL**).
6. Remove the exhaust manifold (see **EXHAUST MANIFOLD REMOVAL AND INSTALLATION**).
7. Remove the evaporative emission (EVAP) canister hose (A) and brake booster vacuum hose (B).

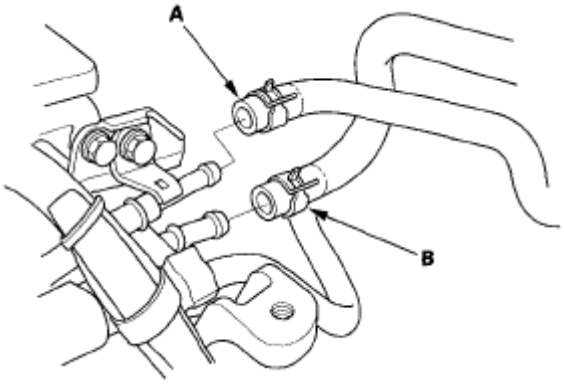

Fig. 219: Identifying Evaporative Emission (EVAP) Canister Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the quick-connect fitting cover (A), then disconnect the fuel feed hose (see **FUEL LINE/QUICK-CONNECT FITTING REMOVAL**).

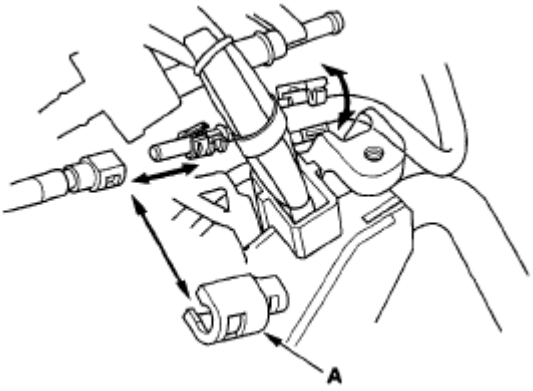

Fig. 220: Identifying Quick-Connect Fitting Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the harness holder (A) from the bracket, then remove the harness holder bracket (B).

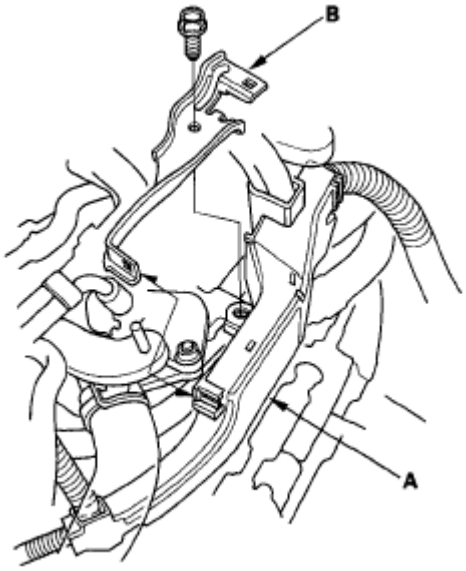

Fig. 221: Identifying Harness Holder Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the upper radiator hose (A) and heater hoses (B).

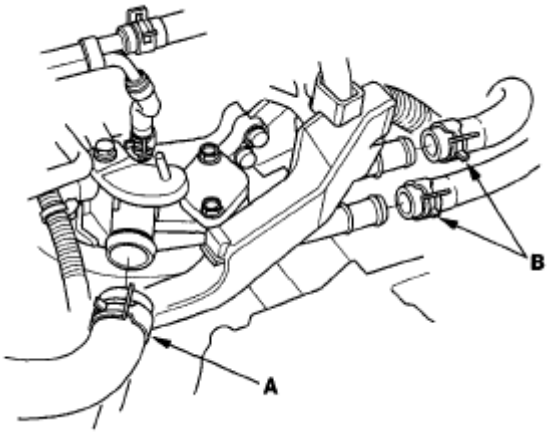

Fig. 222: Identifying Upper Radiator Hose And Heater Hoses
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Remove the bolt securing the connecting pipe.

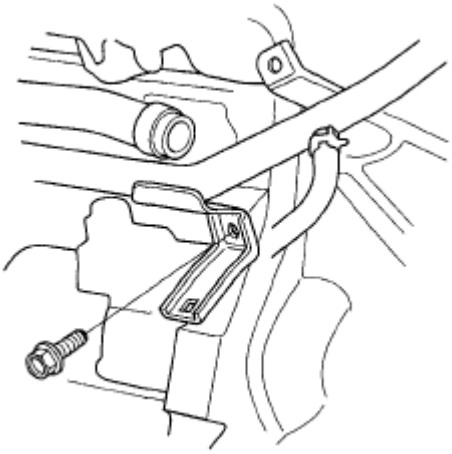

Fig. 223: Identifying Connecting Pipe Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Remove the engine wire harness connectors and wire harness clamps from the cylinder head.
    - Four fuel injector connectors
    - Engine coolant temperature (ECT) sensor 1 connector
    - Camshaft position (CMP) sensor A (Intake) connector
    - Camshaft position (CMP) sensor B (Exhaust) connector
    - Rocker arm oil control solenoid connector
    - Rocker arm oil pressure switch connector
    - EVAP canister purge valve connector
13. Remove the cam chain (see **CAM CHAIN REMOVAL**).

14. Remove the rocker arm assembly (see **ROCKER ARM ASSEMBLY REMOVAL**).
15. Remove the cylinder head bolts. To prevent warpage, unscrew the bolts in sequence 1/3 turn at a time; repeat the sequence until all bolts are loosened.

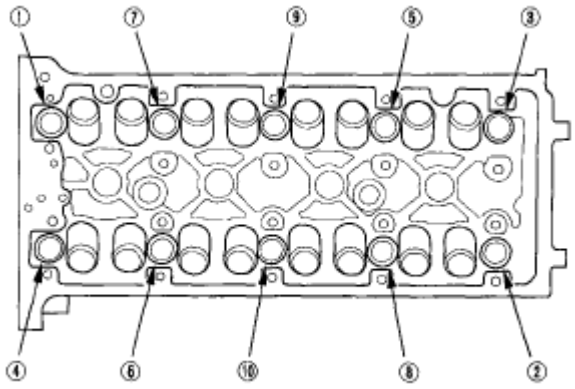

Fig. 224: Identifying Cylinder Head Bolts Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Remove the cylinder head.

CMP PULSE PLATE A REPLACEMENT

1. Remove the cylinder head cover (see **CYLINDER HEAD COVER REMOVAL**).
2. Remove camshaft position (CMP) sensor A (see **CMP SENSOR A REPLACEMENT**).
3. Hold the camshaft with a 27 mm open-end wrench, then loosen the bolt.

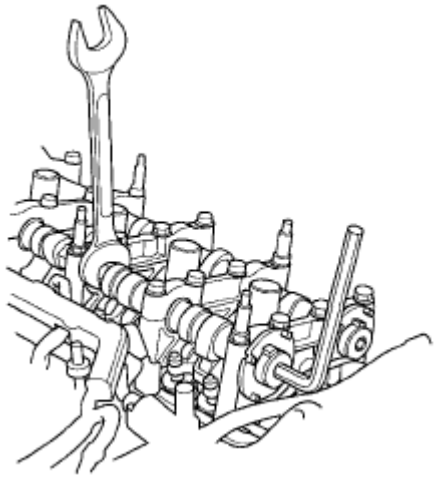

Fig. 225: Holding Camshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove camshaft position (CMP) pulse plate A.

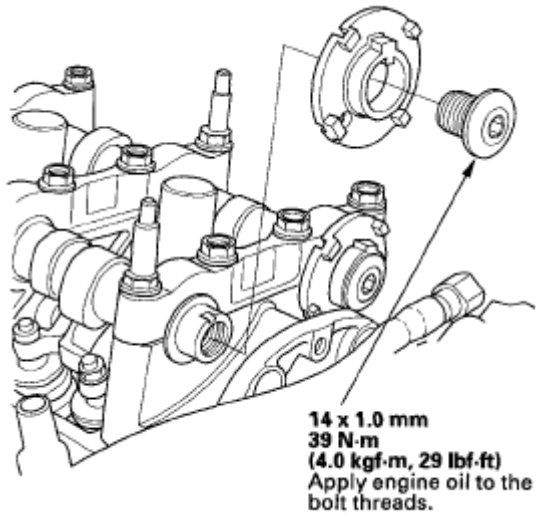

Fig. 226: Identifying Camshaft Position (CMP) Pulse Plate A (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install CMP pulse plate A in the reverse order of removal.

CMP PULSE PLATE B REPLACEMENT

1. Remove the cylinder head cover (see **CYLINDER HEAD COVER REMOVAL**).
2. Remove camshaft position (CMP) sensor B (see **CMP SENSOR B REPLACEMENT**).
3. Hold the camshaft with a 27 mm open-end wrench, then loosen the bolt.

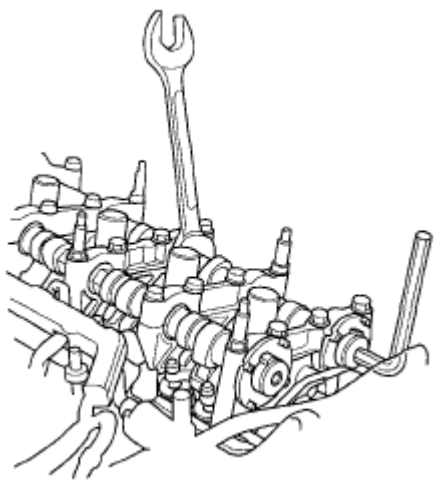

Fig. 227: Identifying Hold Camshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove camshaft position (CMP) pulse plate B.

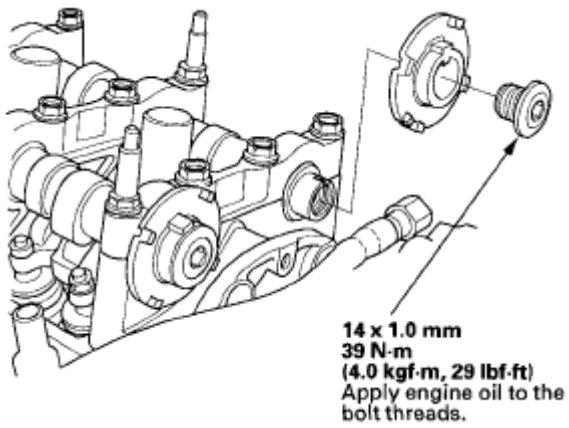

Fig. 228: Identifying Camshaft Position (CMP) Pulse Plate B (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install CMP pulse plate B in the reverse order of removal.

VTC ACTUATOR, EXHAUST CAMSHAFT SPROCKET REPLACEMENT

Removal

1. Remove the cam chain (see **CAM CHAIN REMOVAL**).
2. Hold the camshaft with a 27 mm open-end wrench, then loosen the variable valve timing control (VTC) actuator mounting bolt and exhaust camshaft sprocket mounting bolt.

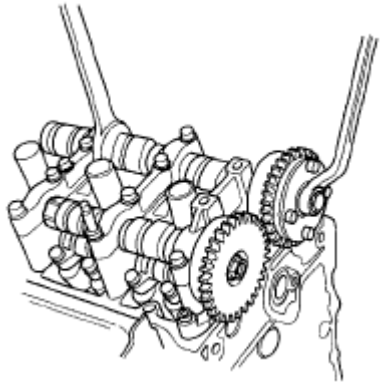

Fig. 229: Removing Exhaust Camshaft Sprocket Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. To the VTC actuator is reused, do the following steps.
   - 1 Remove the intake camshaft, and seal the advance holes and retard holes in the No. 1 camshaft journal with tape (see step 6).
   - 2 Punch a hole in the tape over one of the advance holes (see step 7).
   - 3 Apply air to the advance hole to release the lock (see step 8).
   - 4 Remove the tape from the No. 1 camshaft journal.
4. Remove the VTC actuator and exhaust camshaft sprocket.

Installation

1. Install the VTC actuator and exhaust camshaft sprocket.

NOTE: Install the VTC actuator to unlock position.

2. Apply engine oil to the threads of the VTC actuator mounting bolt and exhaust camshaft mounting bolt, then install them.
3. Hold the camshaft with an open-end wrench, then tighten the bolts.

Specified Torque

VTC Actuator Mounting Bolt:

12 x 1.25 mm

113 N.m (11.5 kgf.m, 83 lbf.ft)

Exhaust Camshaft Sprocket Mounting Bolt: 10 x 1.25 mm

72 N.m (7.3 kgf.m, 53 lbf.ft)

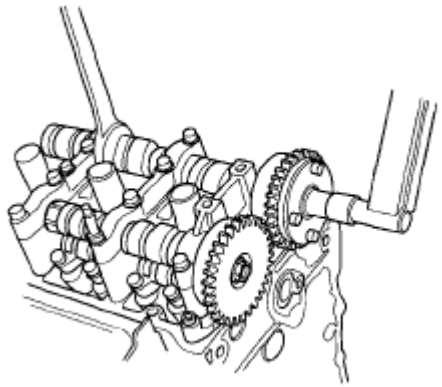

Fig. 230: Installing Exhaust Camshaft Sprocket Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Hold the camshaft, and turn the VTC actuator clockwise until you hear it click. Make sure to lock the VTC actuator by turning it.
5. Install the cam chain (see **CAM CHAIN INSTALLATION**).

CYLINDER HEAD INSPECTION FOR WARPAGE

1. Remove the cylinder head (see **CYLINDER HEAD REMOVAL**).
2. Inspect the camshaft (see **CAMSHAFT INSPECTION**).
3. Check the cylinder head for warpage. Measure along the edges, and three ways across the center.
   - If warpage is less than 0.05 mm (0.002 in.), cylinder head resurfacing is not required.
   - If warpage is between 0.05 mm (0.002 in.) and 0.2 mm (0.008 in.), resurface the cylinder head.
   - Maximum resurface limit is 0.2 mm (0.008 in.) based on a height of 104 mm (4.09 in.).

Cylinder Head Height

Standard (New): 103.95-104.05 mm (4.093-4.096 in.)

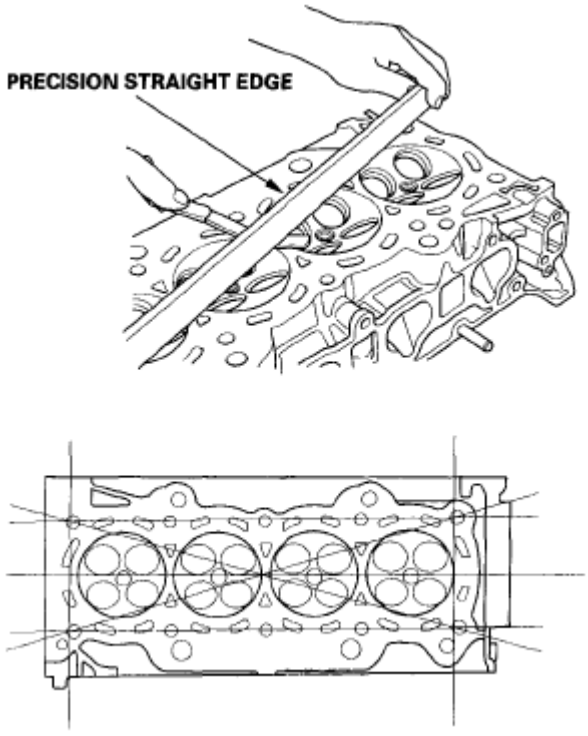

Fig. 231: Checking Cylinder Head For Warpage
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ROCKER ARM ASSEMBLY REMOVAL

1. Remove the cam chain (see **CAM CHAIN REMOVAL**).
2. Loosen the rocker arm adjusting screws (A).

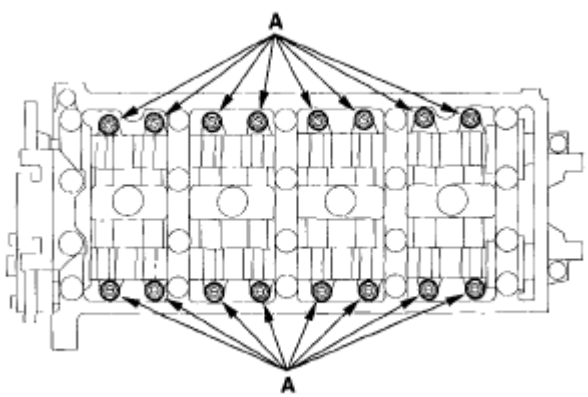

Fig. 232: Identifying Rocker Arm Adjusting Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the camshaft holder bolts. To prevent damaging the camshafts, unscrew the bolts, in sequence, two turns at a time.

NOTE: Bolt (1) is not on all engines.

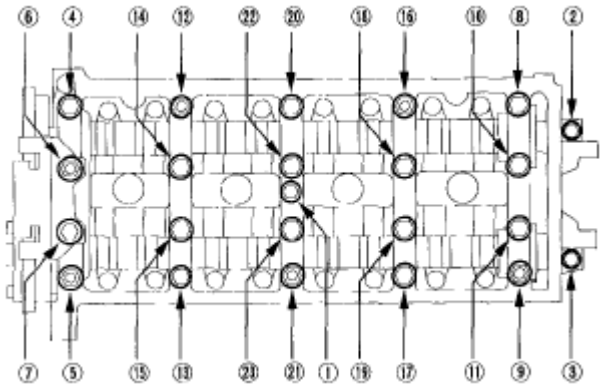

Fig. 233: Identifying Camshaft Holder Bolts Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the cam chain guide B, camshaft holders, and camshafts.
5. Insert the bolts (A) into the rocker shaft holder, then remove the rocker arm assembly (B).

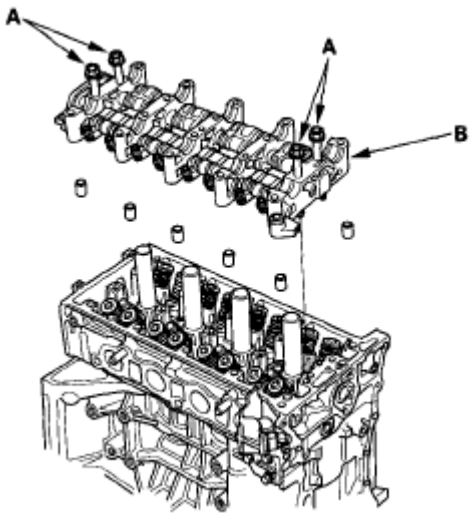

Fig. 234: Identifying Rocker Arm Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ROCKER ARM AND SHAFT DISASSEMBLY/REASSEMBLY

NOTE:

- **Identify each part as it is removed so that each item can be installed.**
- **Inspect the rocker arm shaft and rocker arms (see ROCKER ARM AND SHAFT INSPECTION).**
- **If reused, the rocker arms must be installed in the same positions.**
- **When removing, or installing the rocker arm assembly, do not remove the camshaft holder bolts. The bolts will keep the holders and rocker arms on the shaft.**
- **Prior to reassembling, clean all the parts in solvent, dry them, and apply**

lubricant to any contact points.

- **Bundle the rocker arms with rubber bands to keep them together as a set.**
- **When replacing the VTEC rocker arm assembly, remove the fastening hardware from the new VTEC rocker arm assembly.**

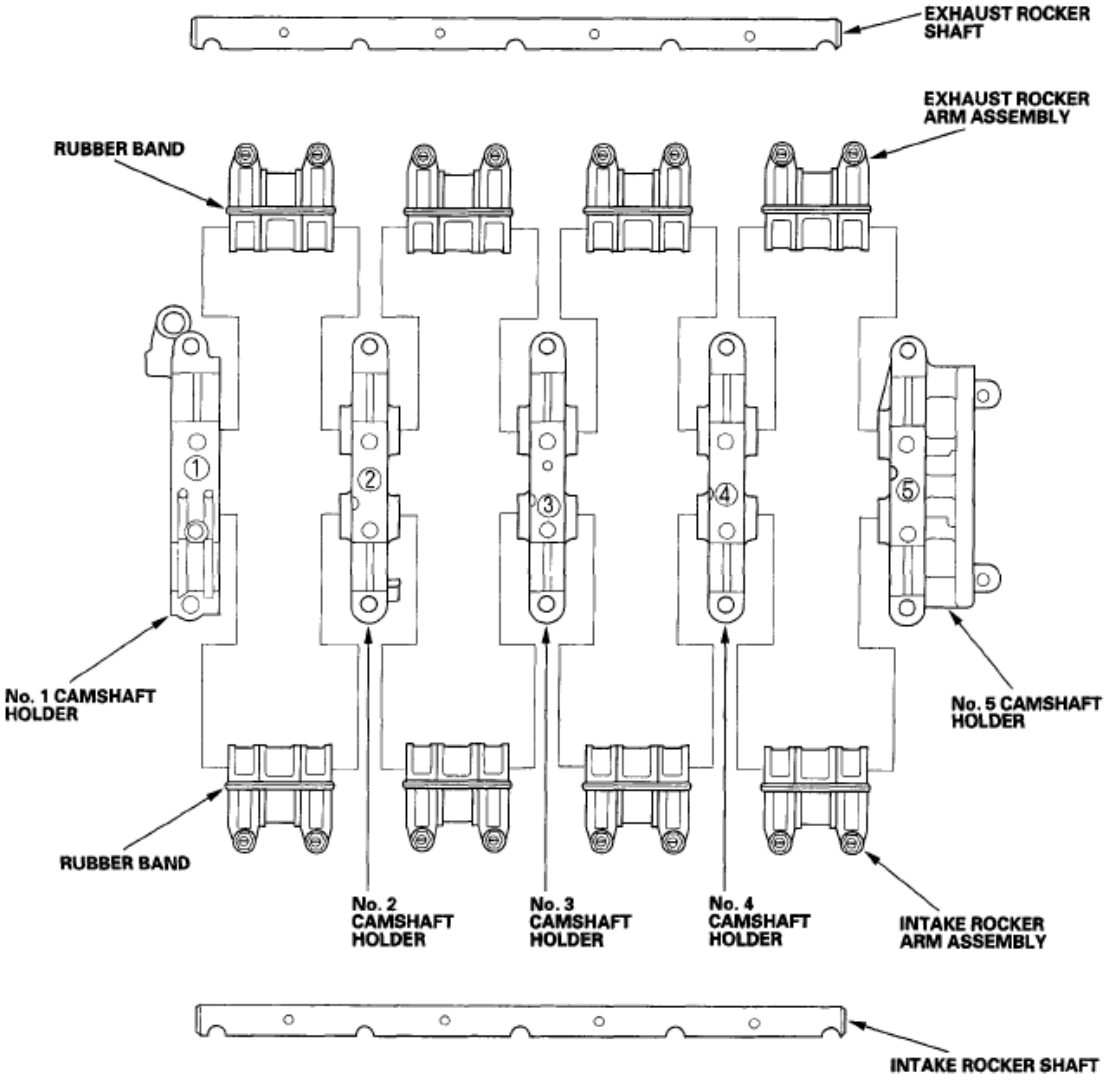

Fig. 235: Exploded View Of Rocker Arm And Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ROCKER ARM AND SHAFT INSPECTION

1. Remove the rocker arm assembly (see **ROCKER ARM ASSEMBLY REMOVAL**).
2. Disassemble the rocker arm assembly (see **ROCKER ARM AND SHAFT DISASSEMBLY/REASSEMBLY**).
3. Measure the diameter of the shaft at the first rocker location.

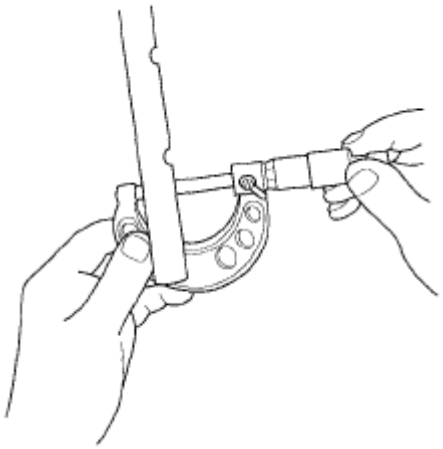

Fig. 236: Measuring Diameter Of Shaft At First Rocker Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Zero the gauge (A) to the shaft diameter.

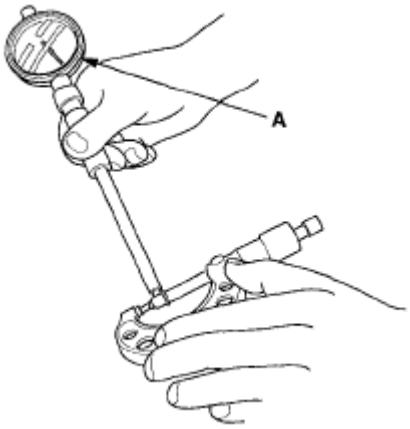

Fig. 237: Checking Shaft Diameter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Measure the inside diameter of the rocker arm, and check it for an out-of-round condition.

   Rocker Arm-to-Shaft Clearance

   Standard (New): 0.025-0.052 mm (0.0010-0.0020 in.)

   Service Limit: 0.08 mm (0.003 in.)

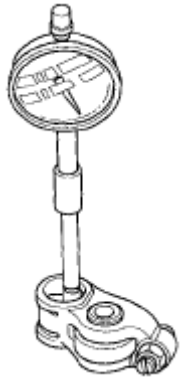

Fig. 238: Measuring Inside Diameter Of Rocker Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Repeat for all rocker arms and both shafts. If the clearance is beyond the service limit, replace the rocker shaft and all out of service limit rocker arms. If any VTEC rocker arm needs replacement, replace the rocker arms (primary, mid, and secondary), as a set.
7. Inspect the rocker arm pistons (A). Push each piston manually.

   If it does not move smoothly, replace the rocker arm set.

NOTE: Apply oil to the pistons when reassembling.

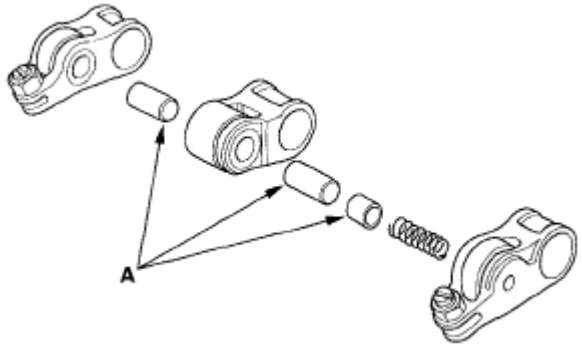

Fig. 239: Identifying Rocker Arm Pistons
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the rocker arm assembly (see **ROCKER ARM ASSEMBLY INSTALLATION**).

CAMSHAFT INSPECTION

NOTE: Do not rotate the camshaft during inspection.

1. Remove the rocker arm assembly (see **ROCKER ARM ASSEMBLY REMOVAL**).
2. Put the rocker shaft holders, camshaft, and camshaft holders on the cylinder head, then tighten the bolts in sequence to the specified torque.

NOTE: If the engine does not have bolt (21), skip it and continue the torque sequence.

Specified Torque

8x1.25 mm

22 N.m (2.2 kgf.m, 16 lbf.ft)

6 x 1.0 mm

12 N.m (1.2 kgf.m, 8.7 lbf.ft)

6 x 1.0 mm Bolts: (21), (22), (23)

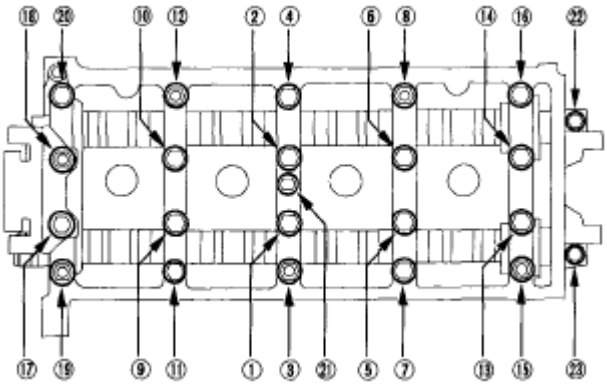

Fig. 240: Identifying Cylinder Head Bolts Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Seat the camshaft by pushing it away from the camshaft pulley end of the cylinder head.
4. Zero the dial indicator against the end of the camshaft, then push the camshaft back and forth and read the end play. If the end play is beyond the service limit, replace the cylinder head and recheck. If it is still beyond the service limit, replace the camshaft.

Camshaft End Play

Standard (New): 0.05-0.20 mm (0.002-0.008 in.)

Service Limit: 0.4 mm (0.02 in.)

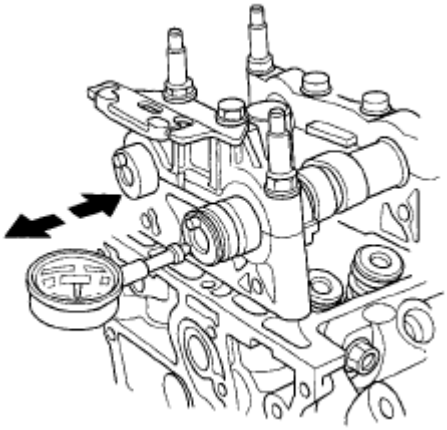

Fig. 241: Measuring Camshaft End Play
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Unscrew the camshaft holder bolts two turns at a time, in a crisscross pattern. Then remove the camshaft holders from the cylinder head.
6. Lift the camshafts out of the cylinder head, wipe them clean, then inspect the lift ramps. Replace the camshaft if any lobes are pitted, scored, or excessively worn.
7. Clean the camshaft journal surfaces in the cylinder head, then set the camshafts back in place. Place a plastigage strip across each journal.
8. Install the camshaft holders, then tighten the bolts to the specified torque as shown in step 2.
9. Remove the camshaft holders. Measure the widest portion of plastigage on each journal.
   - If the camshaft-to-holder clearance is within limits, go to step 11.
   - If the camshaft-to-holder clearance is beyond the service limit and the camshaft has been replaced, replace the cylinder head.
   - If the camshaft-to-holder clearance is beyond the service limit and the camshaft has not been replaced, go to step 10.

Camshaft-to-Holder Oil Clearance

Standard (New):

No. 1 Journal: 0.030-0.069 mm

(0.001-0.003 in.)

No. 2, 3, 4, 5 Journals: 0.060-0.099 mm

(0.002-0.004 in.)

Service Limit: 0.15 mm (0.006 in.)

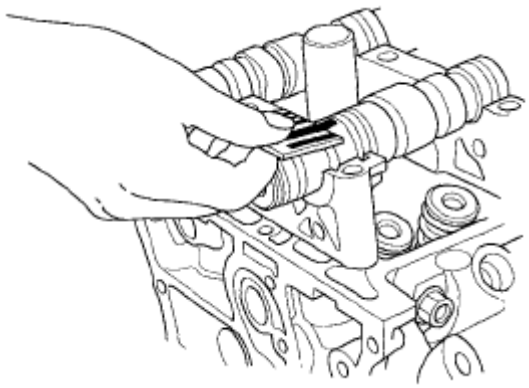

Fig. 242: Checking Camshaft-To-Holder Oil Clearance
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Check the total runout with the camshaft supported on V-blocks.
    - If the total runout of the camshaft is within the service limit, replace the cylinder head.
    - If the total runout is beyond the service limit, replace the camshaft and recheck the camshaft-to-

holder oil clearance. If the oil clearance is still beyond the service limit, replace the cylinder head.

Camshaft Total Runout

Standard (New): 0.03 mm (0.001 in.) max.

Service Limit: 0.04 mm (0.002 in.)

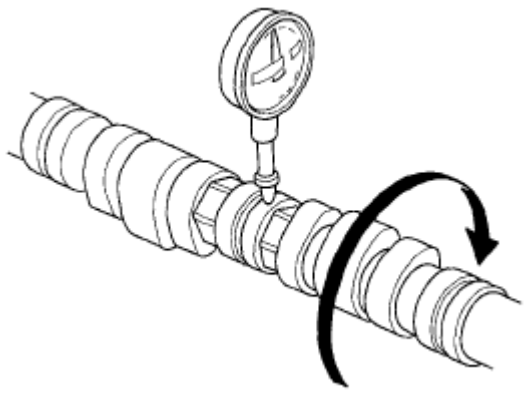

Fig. 243: Measuring Camshaft Total Runout
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Measure cam lobe height.

CAM LOBE HEIGHT STANDARD

	INTAKE	EXHAUST
PRI	32.791 mm (1.2910 in.)	32.772 mm (1.2902 in.)
MID	35.534 mm (1.3990 in.)	34.768 mm (1.3688 in.)
SEC	32.678 mm (1.2865 in.)	32.661 mm (1.2859 in.)

PRI: Primary

C/C: Cam Chain

MID: Mid

SEC: Secondary

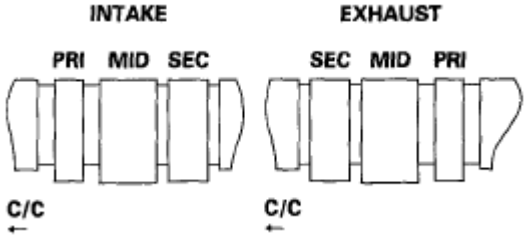

Fig. 244: Measuring Cam Lobe Height
Courtesy of AMERICAN HONDA MOTOR CO., INC.

VALVE, SPRING, AND VALVE SEAL REMOVAL

Special Tools Required

Valve spring compressor attachment 07757-PJ1010A

Identify the valves and valve springs as they are removed so that each item can be reinstalled in its original position.

1. Remove the cylinder head (see **CYLINDER HEAD REMOVAL**).
2. Using an appropriate-sized socket (A) and plastic mallet (B), lightly tap the valve retainer to loosen the valve cotters.

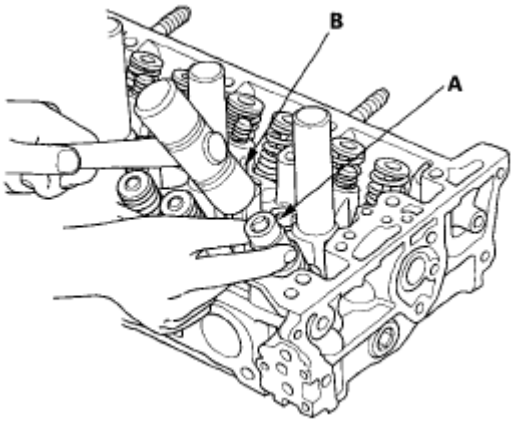

Fig. 245: Tapping Valve Retainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the valve spring compressor attachment and valve spring compressor. Compress the spring, and remove the valve cotters.

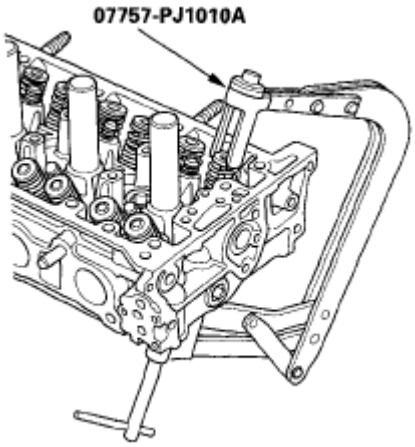

Fig. 246: Compressing Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the valve spring compressor attachment and valve spring compressor, then remove the valve retainer and valve spring.

5. Install the valve guide seal remover.

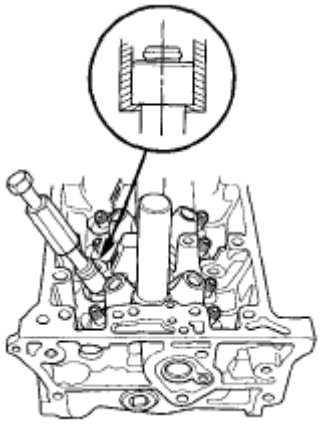

Fig. 247: Identifying Valve Guide Seal Remover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the valve seal.

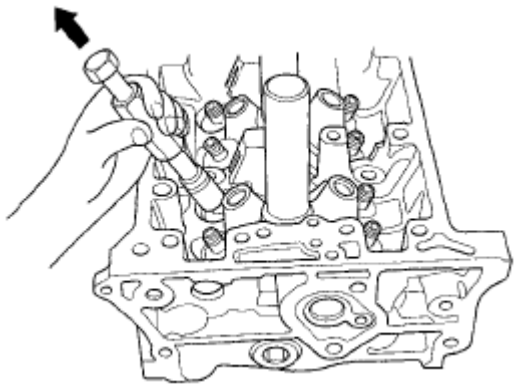

Fig. 248: Identifying Valve Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

VALVE INSPECTION

1. Remove the valves (see **VALVE, SPRING, AND VALVE SEAL REMOVAL**).
2. Measure the valve in these areas.

Intake Valve Dimensions

A Standard (New): 34.85-35.15 mm (1.372-1.384 in.)

B Standard (New): 108.5-109.1 mm (4.272-4.295 in.)

C Standard (New): 5.475-5.485 mm (0.2156-0.2159 in.)

C Service Limit: 5.445 mm (0.214 in.)

Exhaust Valve Dimensions

A Standard (New): 29.90-30.10 mm (1.177-1.185 in.)

B Standard (New): 108.4-109.0 mm (4.268-4.291 in.)

C Standard (New): 5.450-5.460 mm (0.2146-0.2150 in.)

C Service Limit: 5.42 mm (0.213 in.)

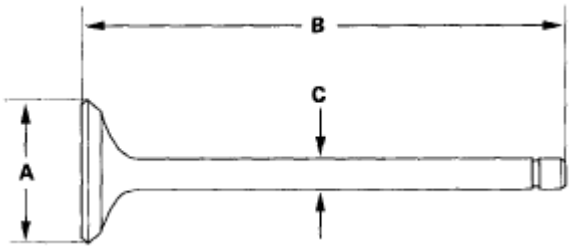

Fig. 249: Identifying Exhaust Valve Dimensions
Courtesy of AMERICAN HONDA MOTOR CO., INC.

VALVE STEM-TO-GUIDE CLEARANCE INSPECTION

1. Remove the valves (see **VALVE, SPRING, AND VALVE SEAL REMOVAL**).
2. Slide the valve out of its guide about 10 mm (0.39 in.), then measure the guide-to-stem clearance with a dial indicator while rocking the stem in the direction of normal thrust (wobble method).
   - If the measurement exceeds the service limit, recheck it using a new valve.
   - If the measurement is now within the service limit, reassemble using a new valve.
   - If the measurement with a new valve still exceeds the service limit, go to step 3.

Intake Valve Stem-to-Guide Clearance

Standard (New): 0.06-0.11 mm (0.002-0.004 in.)

Service Limit: 0.16 mm (0.006 in.)

Exhaust Valve Stem-to-Guide Clearance

Standard (New): 0.11-0.16 mm (0.004-0.006 in.)

Service Limit: 0.22 mm (0.009 in.)

Fig. 250: Checking Intake Valve Stem-To-Guide Clearance

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Subtract the O.D. of the valve stem, measured with a micrometer, from the I.D. of the valve guide, measured with an inside micrometer or ball gauge. Take the measurements in three places along the valve stem and three places inside the valve guide. The difference between the largest guide measurement and the smallest stem measurement should not exceed the service limit.

   Intake Valve Stem-to-Guide Clearance

   Standard (New): 0.030-0.055 mm (0.0012-0.0022 in.)

   Service Limit: 0.08 mm (0.003 in.)

   Exhaust Valve Stem-to-Guide Clearance

   Standard (New): 0.055-0.080 mm (0.0022-0.0031 in.)

   Service Limit: 0.11 mm (0.004 in.)

VALVE GUIDE REPLACEMENT

Special Tools Required

- Valve guide driver, 5.5 mm 07742-0010100
- Valve guide reamer, 5.5 mm 07HAH-PJ7A100

1. Inspect valve stem-to-guide clearance (see **VALVE INSPECTION**).
2. As illustrated, use a commercially available air-impact valve guide driver (A) modified to fit the diameter of the valve guides. In most cases, the same procedure can be done using the special tool and a conventional hammer.

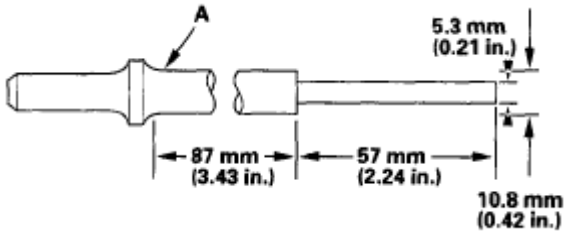

Fig. 251: Identifying Air-Impact Valve Guide Driver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Select the proper replacement guides, and chill them in the freezer section of a refrigerator for about an hour.
4. Use a hot plate or oven to evenly heat the cylinder head to 300°F (150°C). Monitor the temperature with a cooking thermometer. Do not get the head hotter than 300°F (150°C); excessive heat may loosen the valve seats.

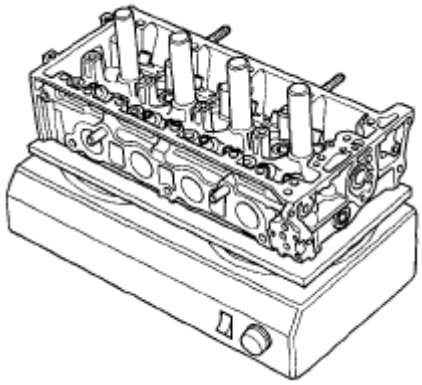

Fig. 252: Heating Cylinder Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Working from the camshaft side, use the driver and an air hammer to drive the guide about 2 mm (0.1 in.) towards the combustion chamber. This will knock off some of the carbon and make removal easier. Hold the air hammer directly in line with the valve guide to prevent damaging the driver.
6. Turn the head over, and drive the guide out toward the camshaft side of the head.

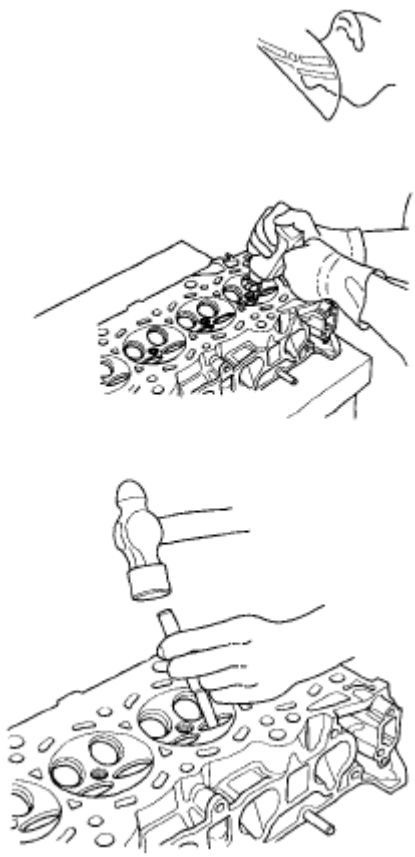

Fig. 253: Tapping Valve Guide
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. If a valve guide won't move, drill it out with a 8 mm (5/16 in.) bit, then try again. Drill guides only in extreme cases; you could damage the cylinder head if the guide breaks.
8. Take out the new guide(s) from the freezer, one at a time, as you need them.

9. Apply a thin coat of clean engine oil to the outside of the new valve guide. Install the guide from the camshaft side of the head; use the special tool to drive the guide in to the specified installed height (A) of the guide (B). If you have all 16 guides to do, you may have to reheat the head.

   Valve Guide Installed Height

   Intake: 15.2-16.2 mm (0.598-0.638 in.)

   Exhaust: 15.5-16.5 mm (0.610-0.650 in.)

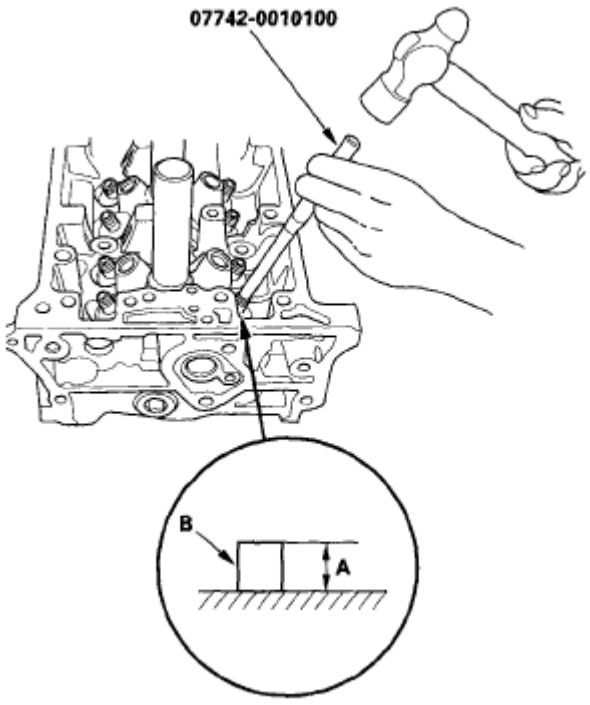

Fig. 254: Identifying Valve Guide Installed Height
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Coat both reamer and the valve guide with cutting oil.
11. Rotate the reamer clockwise the full length of the valve guide bore.

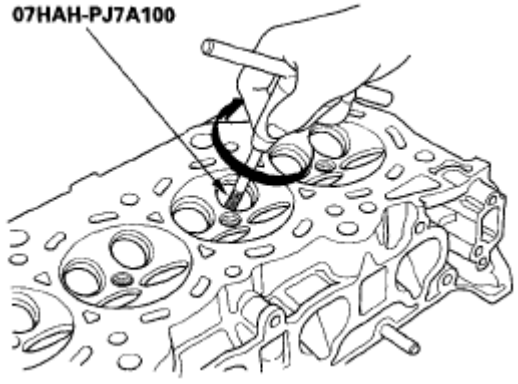

Fig. 255: Rotating Reamer To Full Length Of Valve Guide Bore
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Continue to rotate the reamer clockwise while removing it from the bore.
13. Thoroughly wash the guide in detergent and water to remove any cutting residue.
14. Check the clearances with a valve (see **VALVE INSPECTION**). Verify that a valve slides into the intake and exhaust valve guides without getting stuck.
15. Inspect the valve seating. if necessary, renew the valve seat using a valve seat cutter (see **Valve Seat Reconditioning**).

VALVE SEAT RECONDITIONING

1. Inspect the valve stem-to-guide clearance (see **VALVE INSPECTION**). If the valve guides are worn, replace them (see **VALVE GUIDE REPLACEMENT**) before cutting the valve seats.
2. Renew the valve seats in the cylinder head using a valve seat cutter.

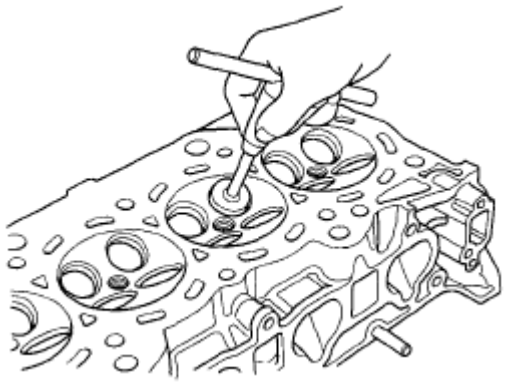

Fig. 256: Cutting Valve Seats Using Valve Seat Cutter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Carefully cut a 45 ° seat, removing only enough material to ensure a smooth and concentric seat.
4. Bevel the upper and lower edges at the angles shown in the illustration. Check the width of the seat and adjust accordingly.

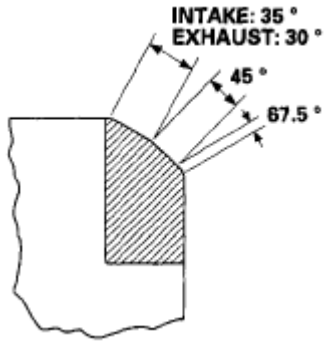

Fig. 257: Identifying Bevel Upper And Lower Edges Angles
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Make one more very light pass with the 45 ° cutter to remove any possible burrs caused by the other cutters.

Valve Seat Width

Standard (New): 1.25-1.55 mm (0.049-0.061 in.)

Service Limit: 2.00 mm (0.079 in.)

6. After resurfacing the seat, inspect for even valve seating: Apply Prussian Blue compound (A) to the valve face. Insert the valve in its original location in the head, then lift it and snap it closed against the seat several times.

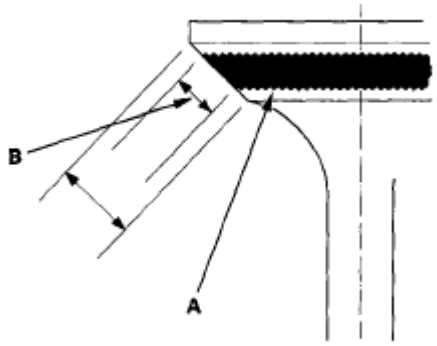

Fig. 258: Identifying Valve Seat Width
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. The actual valve seating surface (B), as shown by the blue compound, should be centered on the seat.
   - If it is too high (closer to the valve stem), you must make a second cut with the 67.5° cutter to move it down, then one more cut with the 45 ° cutter to restore seat width.
   - If it is too low (close to the valve edge), you must make a second cut with the 35 ° cutter (intake side) or the 30° cutter (exhaust side) to move it up, then make one more cut with the 45° cutter to restore seat width.

NOTE: The final cut should always be made with the 45° cutter.

8. Insert the intake and exhaust valves in the head, and measure valve stem installed height (A).

Intake Valve Stem Installed Height

Standard (New): 44.0-44.5 mm (1.73-1.75 in.)

Service Limit: 44.7 mm (1.76 in.)

Exhaust Valve Stem Installed Height Standard (New): 44.1-44.6 mm (1.74-1.76 in.)

Service Limit: 44.8 mm (1.76 in.)

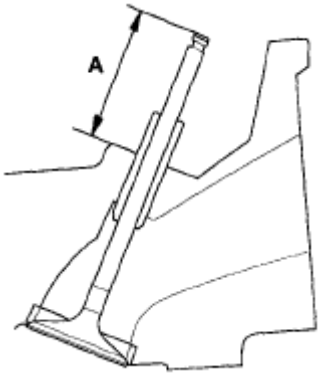

Fig. 259: Identifying Exhaust Valve Stem Installed Height
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. If valve stem installed height is beyond the service limit, replace the valve and recheck. If it is still beyond the service limit, replace the cylinder head; the valve seat in the head is too deep.

VALVE, SPRING, AND VALVE SEAL INSTALLATION

Special Tools Required

- Stem seal driver 07PAD-0010000
- Valve spring compressor attachment 07757-PJ1010A

1. Coat the valve stems with engine oil. Install the valves in the valve guides.
2. Check that the valves move up and down smoothly.
3. Install the spring seats on the cylinder head.
4. Install the new valve seals (A) using the stem seal driver (B).

NOTE: The exhaust valve seal (C) has a black spring (D), and the intake valve seal (E) has a white spring (F). They are not interchangeable.

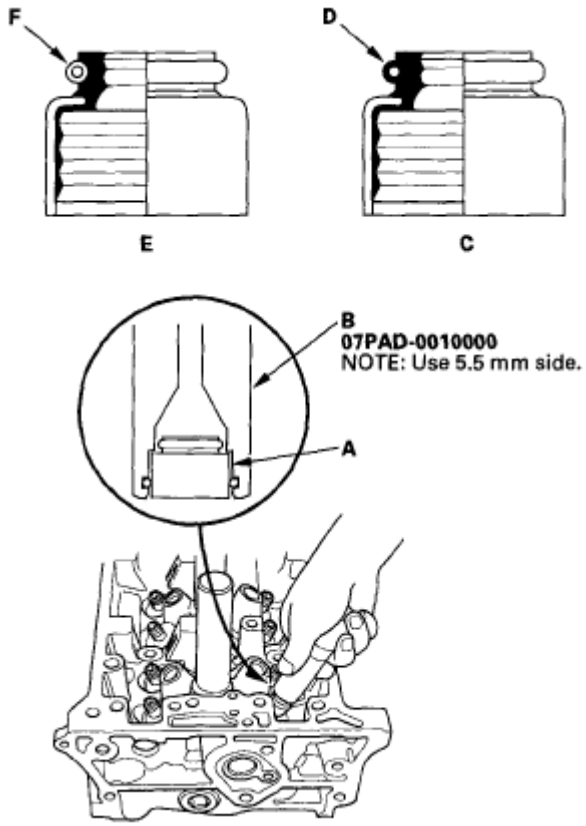

Fig. 260: Identifying Valve Seals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the valve spring and spring retainer. Place the end of the valve spring with closely wound coils toward the cylinder head.
6. Install the valve spring compressor attachment and valve spring compressor. Compress the spring, and install the valve cotters.

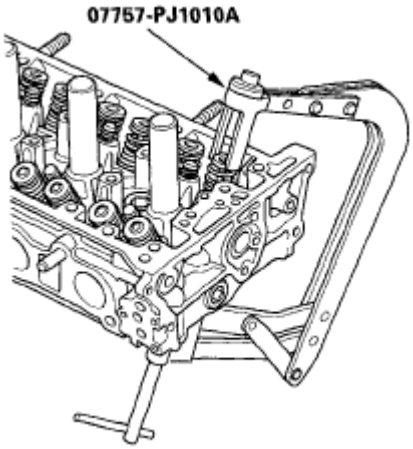

Fig. 261: Compressing Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the valve spring compressor and valve spring compressor attachment.
8. Lightly tap the end of each valve stem two or three times with a plastic mallet (A) to ensure proper

seating of the valve and valve cotters. Tap the valve stem only along its axis so you do not bend the stem.

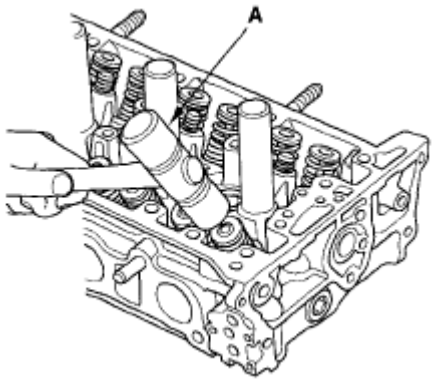

Fig. 262: Tapping Valve Stem
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ROCKER ARM ASSEMBLY INSTALLATION

1. Reassemble the rocker arm assembly (see **ROCKER ARM AND SHAFT DISASSEMBLY/REASSEMBLY**).
2. Clean and dry the No. 5 rocker shaft holder mating surface.
3. Apply liquid gasket, P/N 08717-0004, 08718-0001, 08718-0002, 08718-0003, or 08718-0009, evenly to the cylinder head mating surface of the No. 5 rocker shaft holder.

NOTE:

- **If you apply liquid gasket, P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residual, then reapply new liquid gasket.**

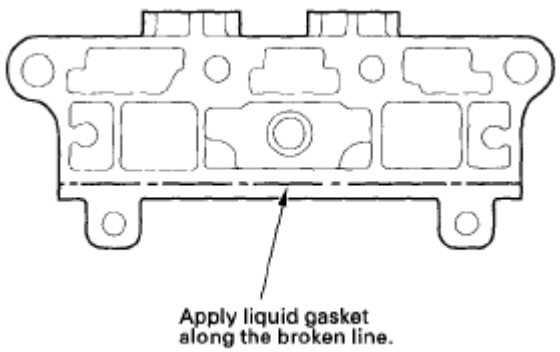

Fig. 263: Identifying Liquid Gasket Applying Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Insert the bolts (A) into the rocker shaft holder, then install the rocker arm assembly (B) on the cylinder head.

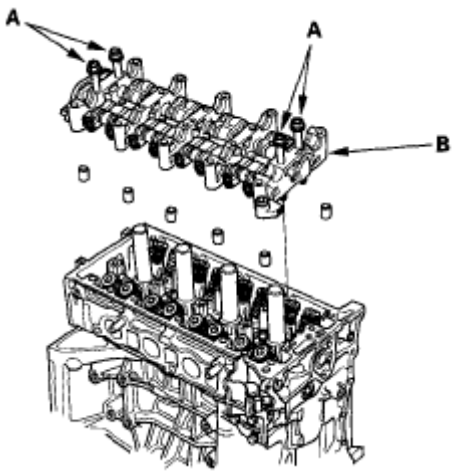

Fig. 264: Identifying Rocker Arm Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the bolts from the rocker shaft holder.
6. Make sure the punch marks on the variable valve timing control (VTC) actuator and exhaust camshaft sprocket are facing up, then set the camshafts (A) in the holder.

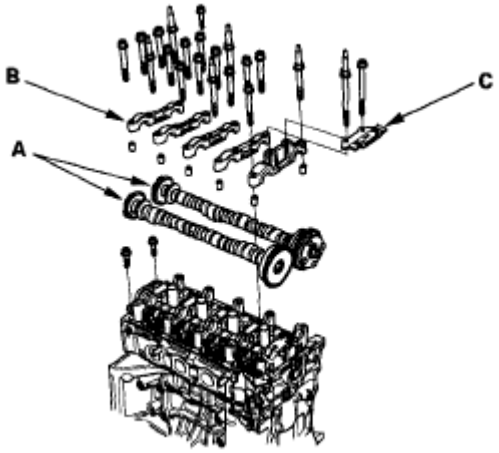

Fig. 265: Identifying Camshafts And Camshaft Holders
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Set the camshaft holders (B) and cam chain guide B (C) in place.
8. Tighten the bolts in sequence to the specified torque.

NOTE: If the engine does not have bolt (21), skip it and continue the torque sequence.

Specified Torque

8 x 1.25 mm

22 N.m (2.2 kgf.m, 16 lbf.ft)

6 x 1.0 mm

12 N.m (1.2 kgf.m, 8.7 lbf.ft)

6 x 1.0 mm Bolts: (21), (22), (23)

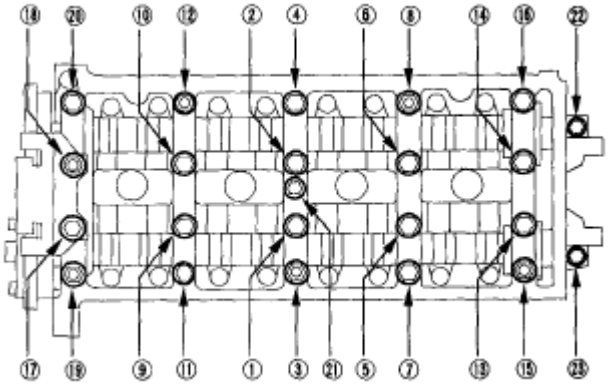

Fig. 266: Identifying Bolts Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the cam chain (see **CAM CHAIN INSTALLATION**), and adjust the valve clearance (see **VALVE CLEARANCE ADJUSTMENT**).

CYLINDER HEAD INSTALLATION

1. Install the new coolant separator in the engine block when replacing the engine block.

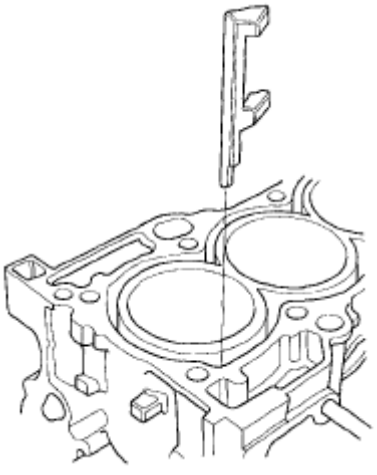

Fig. 267: Identifying Coolant Separator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Clean the cylinder head and engine block surface.
3. Install the new cylinder head gasket (A) and dowel pins (B) on the engine block. Always use a new cylinder head gasket.

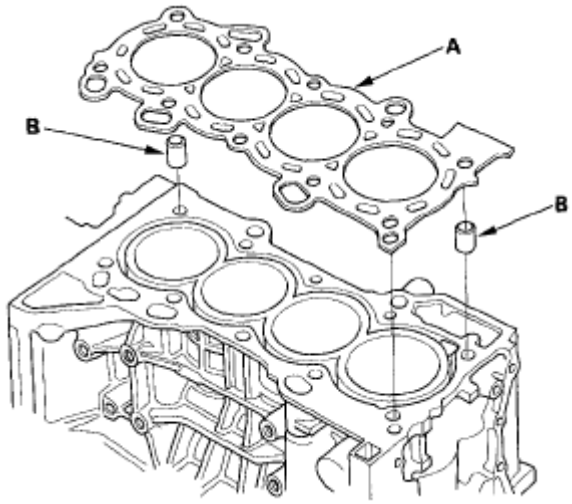

Fig. 268: Identifying Cylinder Head Gasket And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Set the crankshaft to top dead center (TDC). Align the TDC mark (A) on the crankshaft sprocket with the pointer (B) on the engine block.

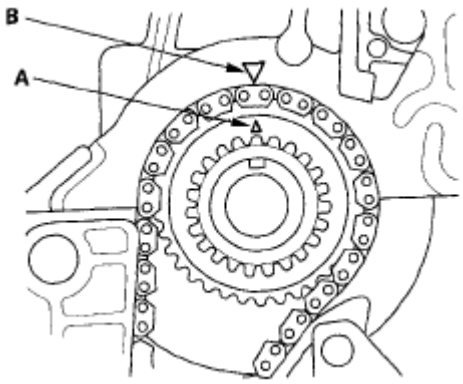

Fig. 269: Aligning TDC Mark On Crankshaft Sprocket With Pointer On Engine Block
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the cylinder head on the engine block.
6. Measure the diameter of each cylinder head bolt at point A and point B.

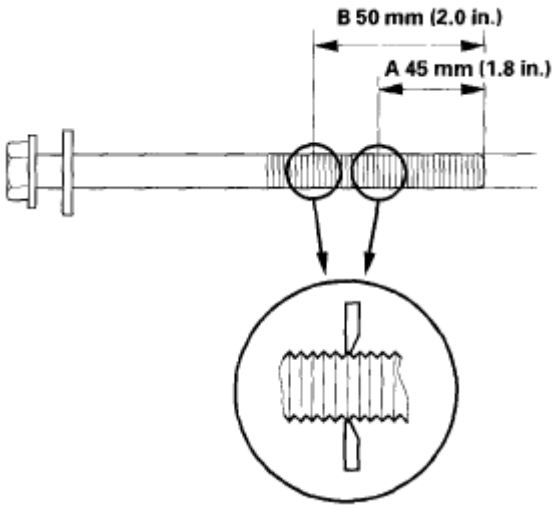

Fig. 270: Measuring Diameter Of Cylinder Head Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. If either diameter is less than 10.6 mm (0.42 in.), replace the cylinder head bolt.
8. Apply engine oil to the threads and under the bolt heads of all cylinder head bolts.
9. Tighten the cylinder head bolts in sequence to 39 N.m (4.0 kgf.m, 29 lbf.ft). Use a beam-type torque wrench. When using a preset-type torque wrench, be sure to tighten slowly and do not overtighten. If a bolt makes any noise while you are torquing it, loosen the bolt and retighten it from the first step.

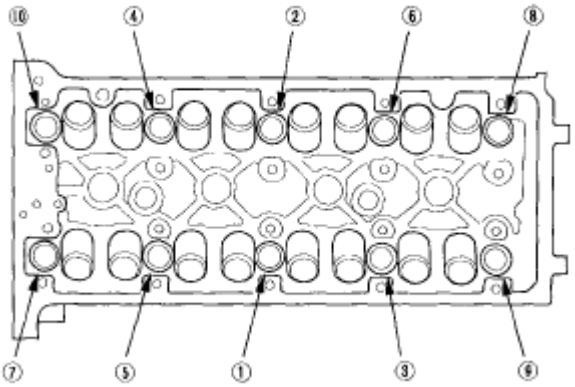

Fig. 271: Identifying Cylinder Head Bolts Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. After torquing, tighten all cylinder head bolts in two steps (90° per step). If you are using a new cylinder head bolt, tighten the bolt an extra 90°.

NOTE: Remove the cylinder head bolt if you tightened it beyond the specified angle, and go back to step 6 of the procedure. Do not loosen it back to the specified angle.

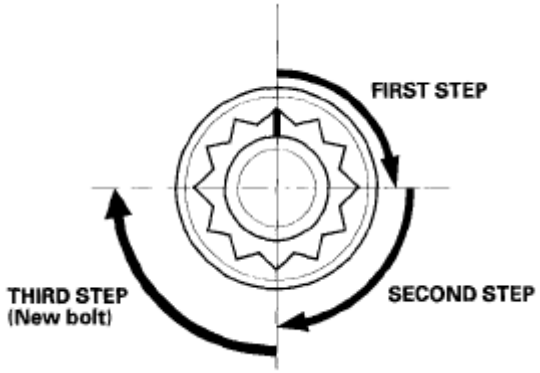

Fig. 272: Identifying Cylinder Head Bolt Tightening Step
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the rocker arm assembly (see **ROCKER ARM ASSEMBLY INSTALLATION**).
12. Install the cam chain (see **CAM CHAIN INSTALLATION**).
13. Connect the engine wire harness connectors, and install the wire harness clamps to the cylinder head.
    - Four fuel injector connectors
    - Engine coolant temperature (ECT) sensor 1 connector
    - Camshaft position (CMP) sensor A (Intake) connector
    - Camshaft position (CMP) sensor B (Exhaust) connector
    - Rocker arm oil control solenoid connector
    - Rocker arm oil pressure switch connector
    - EVAP canister purge valve connector
14. Install the bolt securing the connecting pipe.

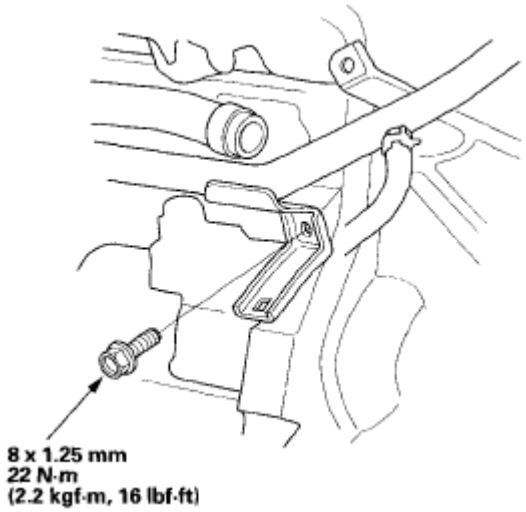

Fig. 273: Identifying Connecting Pipe Bolt (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Install the upper radiator hose (A) and heater hoses (B).

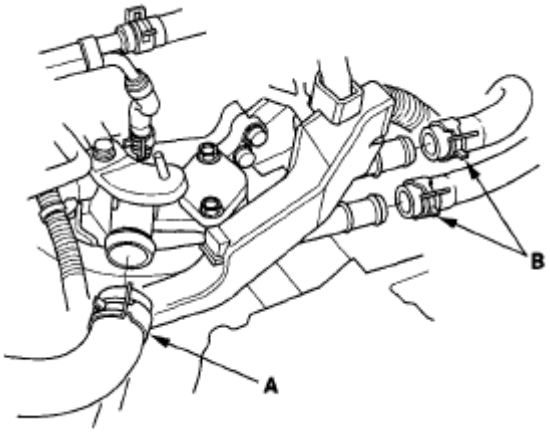

Fig. 274: Identifying Upper Radiator And Heater Hoses
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Install the harness holder bracket (A), then install the harness holder (B).

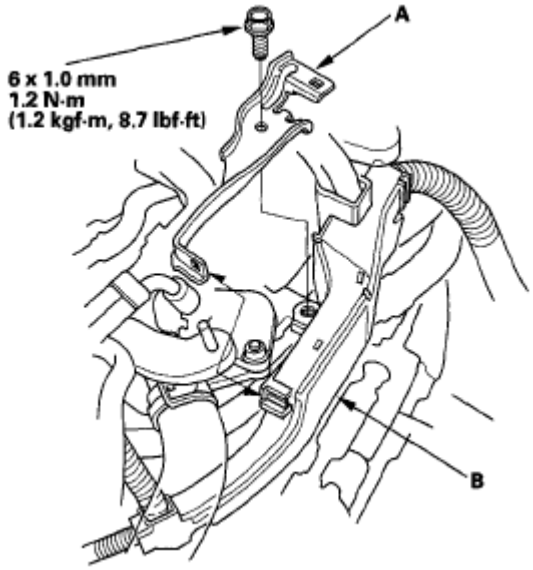

Fig. 275: Identifying Harness Holder Bracket (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Connect the fuel feed hose (see **FUEL LINE/QUICK-CONNECT FITTING INSTALLATION**), then install the quick-connect fitting cover (A).

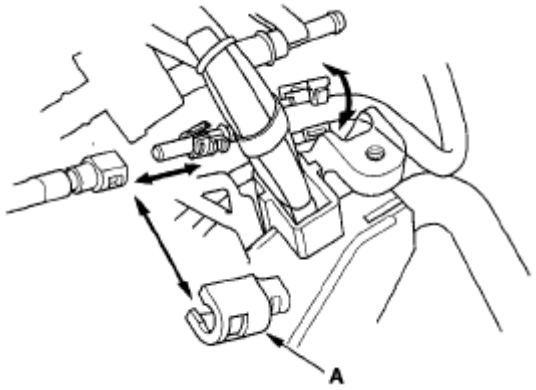

Fig. 276: Identifying Quick-Connect Fitting Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Install the evaporative emission (EVAP) canister hose (A) and brake booster vacuum hose (B).

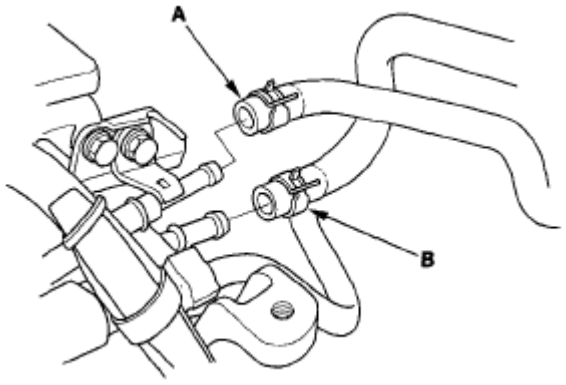

Fig. 277: Identifying Evaporative Emission (EVAP) Canister Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Install the exhaust manifold (see **EXHAUST MANIFOLD REMOVAL AND INSTALLATION**).
20. Install the intake manifold (see **INSTALLATION**).
21. Install the drive belt (see **DRIVE BELT INSPECTION**).
22. Install the air cleaner assembly (see **AIR CLEANER REMOVAL/INSTALLATION**).
23. After installation, check that all tubes, hoses and connectors are installed correctly.
24. Inspect for fuel leaks. Turn the ignition switch ON (II) (do not operate the starter) so that the fuel pump runs for about 2 seconds and pressurizes the fuel line. Repeat this operation two or three times, then check for fuel leakage at any point in the fuel line.
25. Refill the radiator with engine coolant, and bleed the air from the cooling system with the heater valve open (see step 6 on **COOLANT CHECK**).
26. Do the crankshaft position (CKP) pattern clear/CKP pattern learn procedure (see **HDS CLEAR COMMAND**).
27. Inspect the idle speed (see **IDLE SPEED INSPECTION**).
28. Inspect the ignition timing (see **IGNITION TIMING INSPECTION**).

SEALING BOLT INSTALLATION

NOTE: When installing the sealing bolt, always use a new washer.

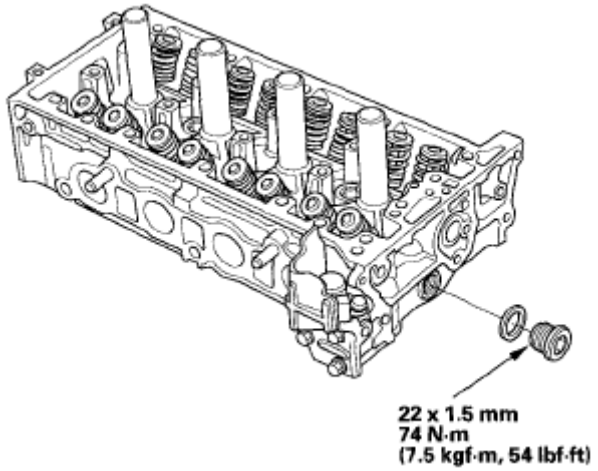

Fig. 278: Identifying Sealing Bolt (With Torque Specifications)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2006-08 ENGINE

Engine Assembly - Civic (Except Hybrid)

ENGINE ASSEMBLY (R18A1)

NOTE: Go to ENGINE ASSEMBLY (GX) (SUPPLEMENT) article for additional information for the GX model.

SPECIAL TOOLS

Ref. No.	Tool Number	Description	Qty
①	07AAK-SNAA120	Universal Eyelet	1
②	07AAK-SNAA400	1.8 Support Eyelet	1
③	07AAK-SNAA500	1.8 Support Bolt	1

Fig. 1: Identifying Special Tools
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ENGINE REMOVAL

Special Tools Required

- Universal eyelet 07AAK-SNAA120
- 1.8 support eyelet 07AAK-SNAA400
- 1.8 support bolt 07AAK-SNAA500
- Front subframe adapter VSB02C000016 *
- 2006 Civic engine hanger VSB02C000025 *
- Engine support hanger, A and Reds AAR-T-12566 *

* : Available through Honda Tool and Equipment Program, 1-888-424-6857

NOTE:

- **Use fender covers to avoid damaging painted surfaces.**
- **To avoid damaging the wiring and terminals, unplug the wiring connectors carefully while holding the connector portion.**
- **Mark all wiring and hoses to avoid misconnection. Also, be sure that they do not contact other wiring or hoses, or interfere with other parts.**

1. Make sure you have the anti-theft code for the audio system and the navigation system (if equipped), then write down the audio presets.

2. Secure the hood in the wide open position (support rod in the lower hole).

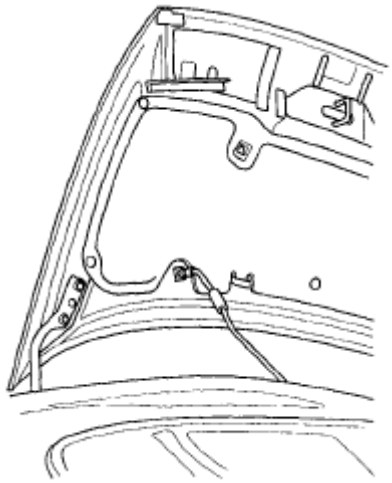

Fig. 2: Identifying Support Rod In Lower Hole
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Relieve the fuel pressure (see **FUEL PRESSURE RELIEVING**).
4. Disconnect the negative cable from the battery, then disconnect the positive cable.
5. Remove the battery.
6. Remove the air cleaner assembly (see **THROTTLE BODY CLEANING**).
7. Remove the cowl cover and under-cowl panel (see **FRONT GRILLE COVER REPLACEMENT**).
8. Remove the injector cover.

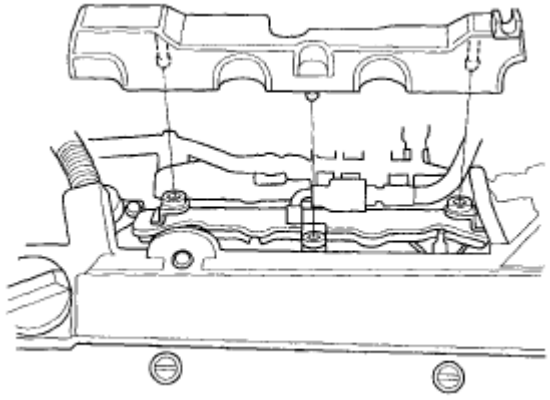

Fig. 3: Identifying Injector Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the quick-connect fitting cover (A), then disconnect the fuel feed hose (see **FUEL LINE/QUICK-CONNECT FITTING REMOVAL**).

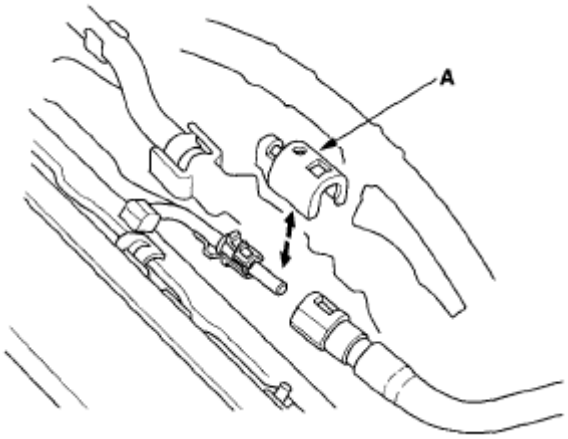

Fig. 4: Identifying Quick-Connect Fitting Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the evaporative emission (EVAP) canister hose (A), brake booster vacuum hose (B), and power steering (P/S) hose clamp (C).

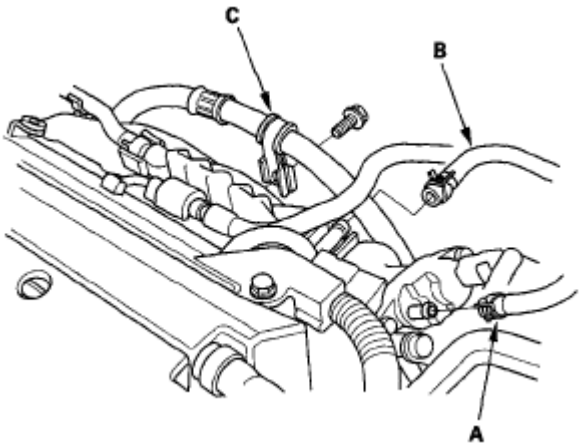

Fig. 5: Identifying Evaporative Emission (EVAP) Canister Hose And Brake Booster Vacuum Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Remove the battery cables (A) from the under-hood fuse/relay box.

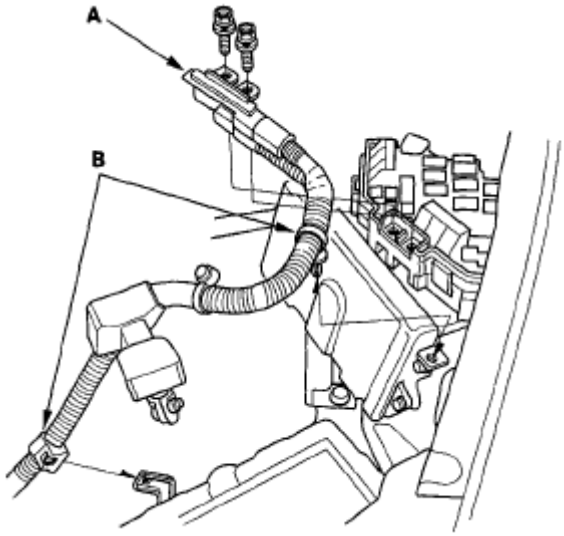

Fig. 6: Identifying Battery Cables And Harness Clamps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Remove the harness clamps (B).
13. Remove the engine control module (ECM)/powertrain control module (PCM) cover (A), then remove the three bolts (B) securing the ECM/PCM.

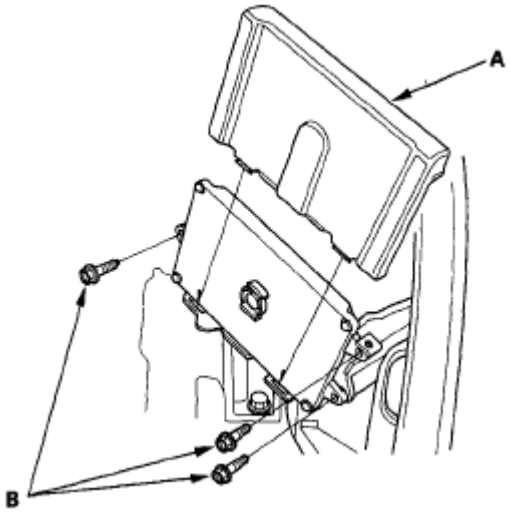

Fig. 7: Identifying Control Module (PCM) Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Disconnect the ECM/PCM connectors (A) and the engine wire harness connectors (B).

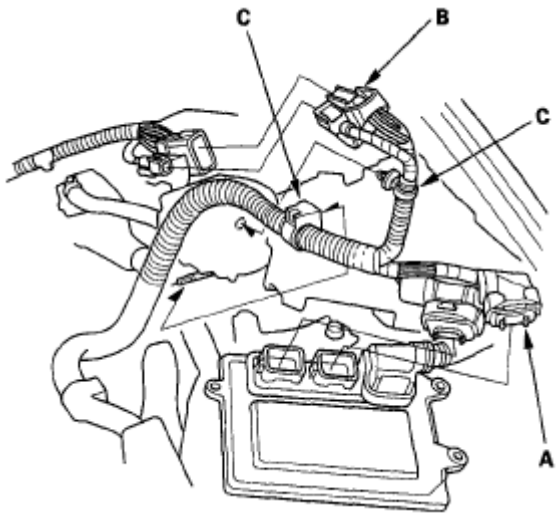

Fig. 8: Identifying ECM/PCM Connectors And Engine Wire Harness Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Remove the harness clamps (C).
16. M/T model: Remove the two bolts (A) securing the harness holder, then remove the harness clamp (B).

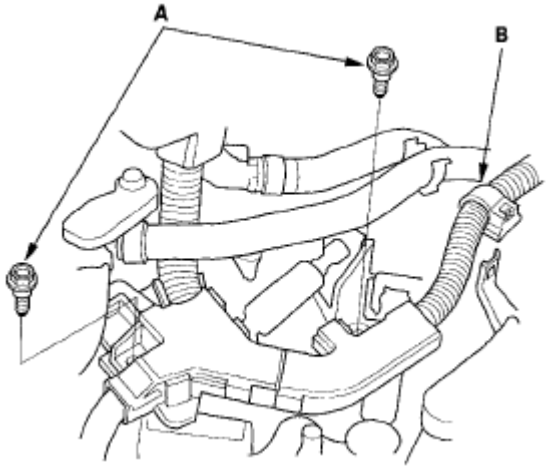

Fig. 9: Identifying Harness Clamp Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. M/T model: Remove the shift cable (see step 9 on **TRANSMISSION REMOVAL**).
18. M/T model: Remove the clutch slave cylinder, and the clutch line bracket mounting bolt (see step 7 on **TRANSMISSION REMOVAL**).
19. Remove the drive belt (see **DRIVE BELT INSPECTION**).
20. Remove the radiator cap.
21. Raise the vehicle on the lift to full height.
22. Remove the front wheels.
23. Remove the splash shield.

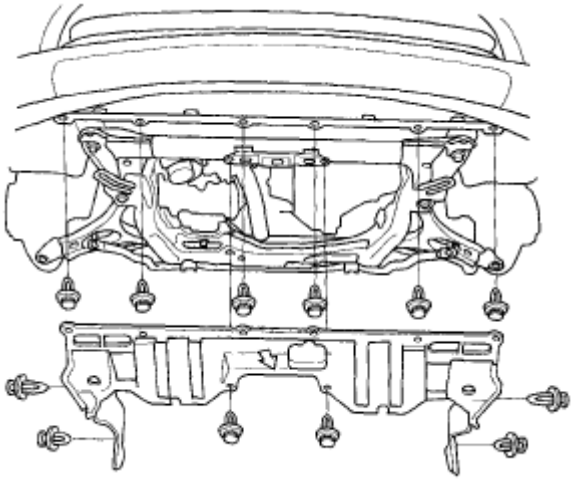

Fig. 10: Identifying Splash Shield
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Loosen the drain plug in the radiator, and drain the engine coolant (see **COOLANT REPLACEMENT**).
25. Drain the engine oil (see **OIL PRESSURE TEST**).
26. Drain the transmission fluid:
    - Manual transmission (see step 3 on **TRANSMISSION REMOVAL**)
    - Automatic transmission (see step 3 on **ATF REPLACEMENT**)
27. Remove exhaust pipe A.

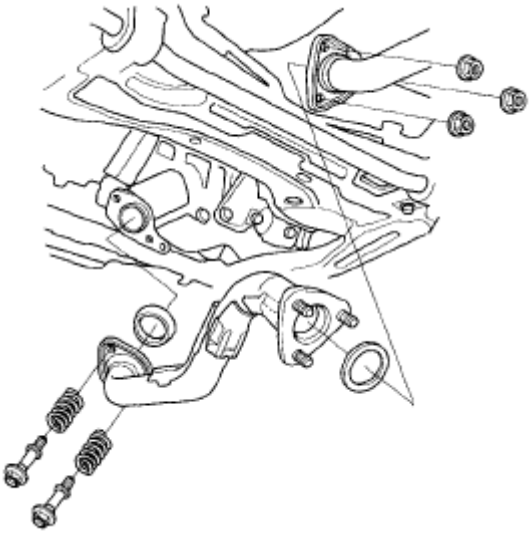

Fig. 11: Identifying Exhaust Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. A/T model: Remove the shift cable (see step 41 on **TRANSMISSION REMOVAL**).
29. Separate the stabilizer links (see **STABILIZER LINK REMOVAL/INSTALLATION**).
30. Separate the knuckles from the lower arms (see step 5 on **DRIVESHAFT REMOVAL**).
31. Remove the driveshafts (see step 8 on **DRIVESHAFT REMOVAL**). Coat all precision-finished

surfaces with clean engine oil. Tie plastic bags over the driveshaft ends.

32. Remove the power steering (P/S) pump without disconnecting the P/S hoses from the pump.

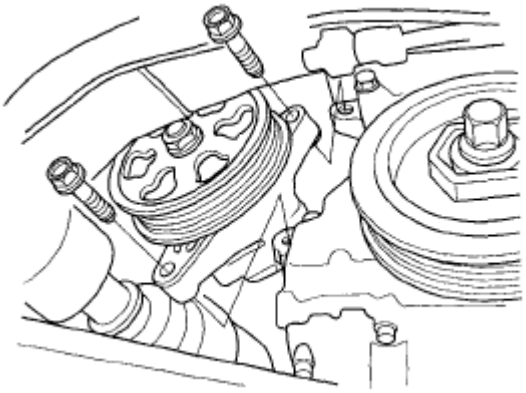

Fig. 12: Identifying Power Steering (P/S) Pump
Courtesy of AMERICAN HONDA MOTOR CO., INC.

33. Unclamp the power steering fluid line clamp (A) on the front subframe, and remove the P/S line mounting bolts (B).

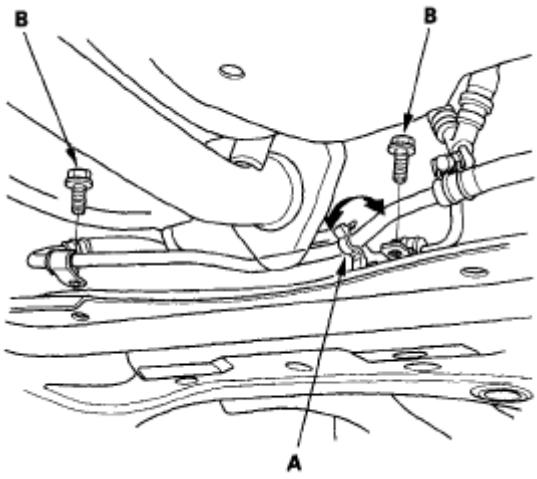

Fig. 13: Identifying P/S Line Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

34. Remove the steering gearbox mounting bolt (A), then remove the steering gearbox stiffener (B).

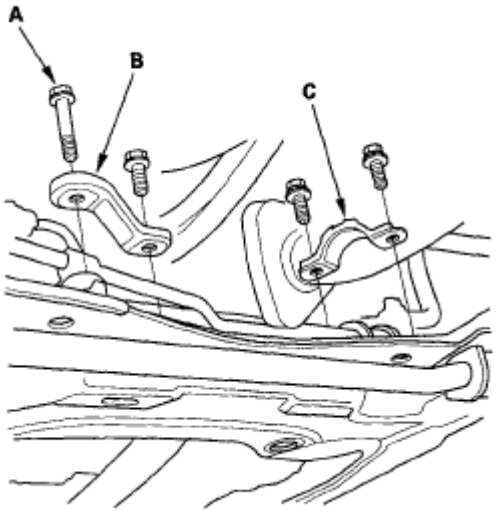

Fig. 14: Identifying Steering Gearbox Stiffener And Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

35. Remove the steering gearbox bracket (C).
36. Remove the steering gearbox mounting bolts (A), then remove the steering gearbox stiffener (B).

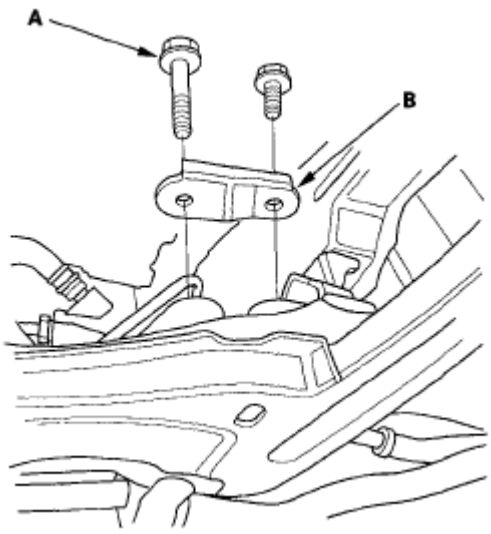

Fig. 15: Identifying Steering Gearbox Stiffener And Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

37. Lower the vehicle on the lift.
38. Remove the radiator (see **RADIATOR AND FAN REPLACEMENT**).
39. Disconnect the A/C compressor clutch connector (A), then remove the harness clamp (B).

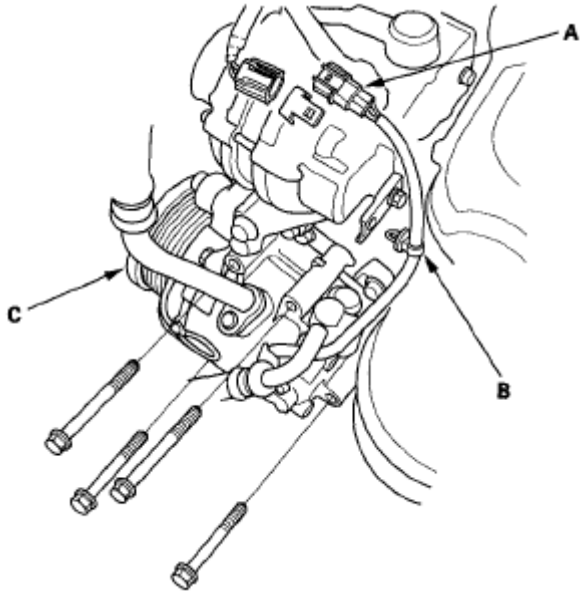

Fig. 16: Identifying A/C Compressor Clutch Connector And Harness Clamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

40. Remove the A/C compressor (C) without disconnecting the A/C hoses.
41. Remove the heater hoses.

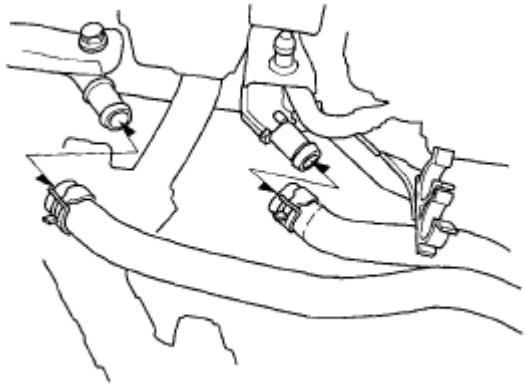

Fig. 17: Identifying Heater Hoses
Courtesy of AMERICAN HONDA MOTOR CO., INC.

42. Remove the air cleaner housing mounting bracket (A), and install support eyelet (B) behind the breather pipe (C) and down to the threaded hole (D) on the cylinder head.

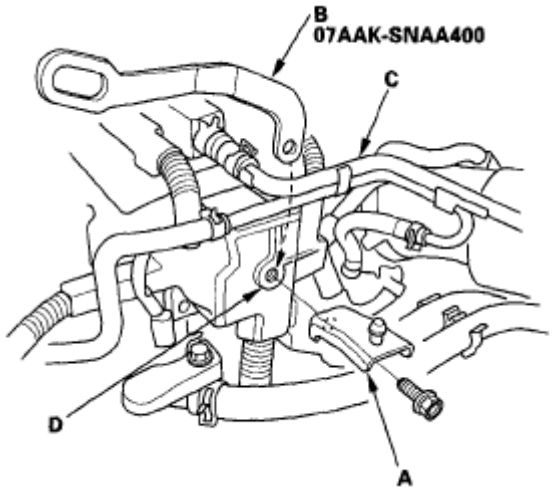

Fig. 18: Identifying Air Cleaner Housing Mounting Bracket And Support Eyelet
Courtesy of AMERICAN HONDA MOTOR CO., INC.
